HUMAN GENETICS AND GENOMICS (HGG)

HGG 601. Seminar/Journal Club. 1 Credit Hour.
All registered students must participate in the Seminar/Journal Club. Students are required to review published papers and discuss in detail the findings described therein.

Components: SEM.
Grading: SUS.
Typically Offered: Fall & Spring.

HGG 621. Fundamentals Of Genetic Epidemiology. 3 Credit Hours.
This class is a survey of introductory topics in genetic epidemiology and statistical genetics. Basic concepts and methods will be covered including introduction to genetic linkage and genetic association including candidate gene analysis and genome-wide studies, gene-environment interactions, quantitative trait analysis, and rare variant analysis. The course will consist of a combination of lectures and computational laboratory assignments, with some discussion from the primary scientific literature. There will be several lab assignments (requiring use of laptops), one exam, and two in-class paper discussions. Details on the assignments will be posted to BlackBoard.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

HGG 630. Variation and Disease. 2 Credit Hours.
This course provides an overview of the science of genetics, including historical and modern approaches, with emphasis on the underlying mechanisms of human genomic variation and their relation to human disease. After taking this course the student will be able to list the different types of human genomic variation, explain the mechanism by which each occurs, and discuss the consequences of the variation. Where appropriate, specific examples of human disorders will be related to the variation. Topics include: chromosomal, biochemical, and DNA sequence variation, mitochondrial genome variation and epigenetic effects. The course structure consists of a combination of lectures and discussion of primary literature.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

HGG 631. Genes in Populations. 3 Credit Hours.
The course explores the relevant history and principals governing the behavior of genes in human populations. Topics include Hardy-Weinberg equilibrium; Mendelian, complex and quantitative traits; principals of selection and change in populations, neutral theory; and molecular evolution of gene families. The course is lecture based with supplemental readings.

Components: LAB.
Grading: GRD.
Typically Offered: Fall.

HGG 640. Family Studies and Genetic Analysis. 2 Credit Hours.
This course will cover the analysis of genetic data in family based data sets. Topics include: heritability, segregation analysis and linkage analysis. This course includes a computer lab component in which students will learn to use the relevant analytic programs.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

HGG 650. Advanced Topics in Molecular Genetics. 3 Credit Hours.
Topics include human microRNAs, the neurobiology of aging, structural variation, modern genome technology, among others. The course structure consists of discussions and analysis of primary literature.

Components: LEC.
Grading: SUS.
Typically Offered: Spring.

HGG 660. Bioinformatics Theory and Practice. 3 Credit Hours.
This course covers a gradient of basic to advanced bioinformatics theory, data mining, and analysis. Each class will include a lecture to explain the concepts, followed by a hands-on lab session with worksheets and exercises. Early lectures will cover in-depth searching of the major databases, alignments, and motif discovery. These themes will recur with the applications of these and other algorithms to gene expression analysis, next generation sequencing data and its analysis, and analysis of variation. Freely available web resources will be used wherever possible, and the students will learn how to use perl for some bioinformatics applications.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

HGG 680. Genome Ethics and Public Policy. 3 Credit Hours.
This course explores current and future applications of human genetics as they pertain to the health and identity of individuals and society. Topics to be covered will include the science of genetic testing, the ethical, legal and social issues related to such testing, living with a genetic diagnosis, the factors influencing the use of human genetic information, and evolving direct-to-consumer genetic testing services. The emphasis will be on real life examples and experiences, with a primary goal of helping students explore how their life, and the society in which we live, will be affected by genetic information. Policy themes include: the role of society in regulating the use of genetic testing and genetic information, implications of genetic testing for people with disabilities, role of the media in public genetic education, legal issues associated with the use of genetic information (e.g. discrimination, duty to warn, wrongful birth), and the role of eugenics in today's society.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

HGG 681. Human Genetics Clinical Rotation. 1 Credit Hour.
The HGG graduate students participate in medical genetics clinic post clinical rounds, metabolic-sign out and journal clubs. During clinic students observe clinical evaluations and counseling, and participate in weekly didactic sessions with faculty and residents.

Components: CLN.
Grading: SUS.
Typically Offered: Fall & Spring.
HGG 689. Human Genetics and Genomics Teaching Practicum. 1 Credit Hour.
HGG students serve one semester as a teaching assistant for a core course. This experience will include giving at least one lecture, leading small group discussions, and holding regular office hours to discuss student questions. This will generally take place in the student's third or fourth year, and will be graded as a one-credit pass-fail course.
Components: PRA.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

HGG 830. Doctoral Dissertation- Pre Candidacy. 1-12 Credit Hours.
1-12 credit course for Doctoral candidates working on pre-candidacy dissertation.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

HGG 840. Doctoral Dissertation - Post Candidacy. 1-12 Credit Hours.
1-12 credit course for Doctoral Candidates working on dissertation post candidacy.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

HGG 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for Ph.D, after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. Credit not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
