PH.D. IN BIOSTATISTICS

The Ph.D. in Biostatistics, offered through the Division of Biostatistics in the Department of Public Health Sciences at the Miller School of Medicine, provides a flexible curriculum to cover the basics.

Admitted PhD students are expected to take a full suite of courses including several iterations of the seminar course, a consulting practicum (or advanced computing course), and a series of four to six courses that ensure the candidate has studied a subject matter discipline within biomedical research. PhD students are also expected to take high-level courses in statistical theory, survival analysis, and high-dimensional and complex data not generally taken by MS students. A sample program can be found at http://www.biostat.med.miami.edu/academics/phd-in-biostatistics.

PhD students are expected to pass a first-year exam between their first two years of study and to be examined on a thesis proposal normally at the end of their third year of study.

To obtain detailed program curricula on the Master of Science and PhD in Biostatistics, please contact our offices at the address below or visit our website at http://www.biostat.med.miami.edu/
