Under the leadership of Collegiate Studies, the College of Arts and Sciences offers the Bachelor of General Studies (BGS) degree program through the DCIE, which provides a solid and rigorous, interdisciplinary academic experience for adult students. It is designed specifically for adults who have previously attended college but have not yet completed their undergraduate degrees, as well as for those who have never had the opportunity to pursue post-secondary studies. Admitted students may attend in either a part-time of full-time status. Prospective students are eligible for admission if graduated from high school at least four years ago, have not attended the University of Miami during the past calendar year, have a minimum of 2.2 grade-point average on previous college work, and are U.S. citizens or permanent residents. Students must be pursuing first undergraduate degree.

The BGS curriculum allows an individual the flexibility to design an area of concentration to enhance professional or personal goals. Designed to strengthen critical thinking and writing skills of the students, each course is taught by University of Miami faculty who are committed to the adult student.

Advisors offer personalized attention in career exploration and academic advising and discuss educational alternatives with potential students. Every effort is made to ensure that the process - from admission to registration - is efficient, convenient, and flexible. Students may complete their degree by attending online and on-campus courses.

To underscore its commitment to the adults in our community, the University offers a special tuition to students in the Bachelor of General Studies program which enables the adult, part-time student to pursue this degree at an affordable tuition rate.

The admission process takes into consideration that one’s grade-point average, while significant, is only one factor in determining an applicant’s qualification for acceptance. Therefore, an advising session with an enrollment advisor from DCIE will be scheduled, by calling Collegiate Studies at 305-284-4000, to supplement the information you provide on the BGS application form (https://bgs.dcie.miami.edu/apply_now/how_to_apply/).

Requirements for Graduation

I. Candidates for the Bachelor of General Studies (BGS) degree must complete the required credit hours and achieve the quality point average specified for students in the University at large as stated in the section Academic Regulations and Procedures. Candidates must earn a C or better in approved classes of their Area of Concentration. Exempted is interpreted to refer exclusively to those exemptions provided under the following headings:

1. Advanced Standing and Placement (Credit Hour Granted);
2. Credit by Examination;
3. Advanced Placement (by proficiency examination);

II. Except where a required course is one designated to correct a deficiency in his/her college preparation, the student may apply the credit hours of any required course from which he is exempted toward the credit hours for that subject as a general requirement for graduation, toward the 120 credit hours required for graduation. (See Departmental Proficiency Examinations.) An exemption may be granted for ENG 105, but these credit hours may not be applied towards the 120 required for graduation.
### III. Credit Only

Only free electives may be taken under this option. Courses which satisfy the major, the distributions of the School, the General Education Requirements of the University or any course for which a C or better is required may not be taken for credit only.

</table>

1. During the first year of enrollment in the School.
2. The candidate designs an area of concentration that meets his/her professional and personal goals. The course of study is reviewed and approved by the Dean and/or Director of the program. Candidates must earn a C or better in approved classes.
3. ENG 333 Writing the Research Paper is a Pre-requisite to completing courses in Area of Concentration and/ or Secondary Focus.
4. Secondary Focus courses are especially designated to complement the AOC, enhance professional knowledge, cultural perspective and its relation to contemporary society.

### Mission

The mission of the BGS program is to provide adult learners (over age 22) with a pathway to a high quality, flexibly scheduled undergraduate education tailored to their academic and career goals.

### Goals

This program balances student interests, represented by their areas of concentration, with intellectually broadening interdisciplinary coursework, and it advances their written communication skills.
Student Learning Outcomes

• Students will demonstrate advanced levels of written communication.
• Students will demonstrate in depth knowledge of historical, social and cultural perspectives and their relation to contemporary society.
• Students will demonstrate their critical thinking abilities.

Credit Certificate Programs
miami.edu/ccp

Not everyone needs or wants a complete degree program. Recognizing this, the DCIE - in cooperation with several other colleges and schools of the University - offers special Credit Certificate Programs.

Focusing on a single subject, these certificate programs allow students to concentrate on courses that offer the specific knowledge and skills needed for career advancement. All courses are taught by University of Miami faculty at the undergraduate level and are taken for academic credit hour.

Each certificate program varies in the number of required credit hours. While required courses are noted, students may work with an advisor in developing an individually-designed program.

If accepted to the Credit Certificate Program (CCP) a student will acknowledge that in order to receive the certificate they must remain continuously enrolled in the Credit Certificate Program Plan earning the required number of credits/courses. If a student becomes enrolled in another academic program plan (graduate or undergraduate) before completing the Credit Certificate Program the student will automatically be discontinued in the Credit Certificate Program and will no longer be eligible to receive the Certificate.

Credit certificate programs are currently available in the following subject areas:

Certificate in Accounting

The Undergraduate Certificate in Accounting is awarded by the Division of Continuing and International Education and the Department of Accounting. It is designed for those who hold at least an undergraduate degree (preferably in business) from an accredited college or university, and whose present interest or occupation is accounting. The program requires students to take the same 24 credit hours of accounting courses (as listed below) required for the undergraduate major in Accounting.

To sit for the Certified Public Accountant (CPA) examination in Florida, students must have completed 120 credit hours, including 24 credit hours of accounting (above the elementary level) and 24 credit hours of business courses, including a minimum of six credit hours of business law. There are additional educational requirements to become licensed as a Certified Public Accountant in Florida. Students may wish to consider either the Graduate Certificate in Accounting or the Graduate Certificate in Taxation (offered by the School of Business) to meet those additional education requirements.

Business Technology

The Business Technology (previously CIS) program is designed to provide a broad background in business computer information systems and to develop the technical skills one needs to stay competitive in this challenging field. The program will be of particular benefit to programmers and to management information systems analysts. The certificate is awarded by the DCIE and the Department of Business Technology upon the successful completion of 18 credit hours as listed below.

Intensive Language Institute

The Intensive Language Institute (ILI) offers comprehensive language instruction for academic, professional, and personal purposes. It is part of the Division of Continuing and International Education. Our offices are located in 111 Allen Hall. Inquires about any of our programs may be directed to 305-284-2752.

Intensive English Program (IEP)
The Intensive English Program prepares students to successfully participate in the academic environment by providing instruction in English language and academic study skills. Courses are offered at five levels of instruction. Students are given a placement test upo
arrival to determine the most appropriate level of study. The skills-based curriculum integrates reading and writing, listening and speaking into one complete program of study. Specialized classes vary by level focusing on the needs of the language learners. Satisfactory completion of the highest level meets the English language requirement for acceptance to undergraduate programs at the University.

The Intensive English Program was founded in 1951 and is accredited by the Commission on English Language Program Accreditation. Additional information can be found at www.miami.edu/iep (https://iep.dcie.miami.edu/) or by writing to iep@miami.edu (http://bulletin.miami.edu/undergraduate-academic-programs/continuing-international-education/intensive-language-institute/www.miami.edu/iep/).

Customized Language Courses
Customized language instructional packages are offered in Spanish, Portuguese, Italian, French, and English as a Second Language throughout the year. Instruction focuses on meaningful communication in the chosen language and is tailored for the participants. Specialized classes may focus on fluency/conversation, accent reduction, TOEFL preparation, medical Spanish, business English and/or legal English. Customized language courses can take place on or off campus, are tailored for individuals, groups, and organizations, and are built to deliver targeted language training needs.

Intensive Legal English
Our Intensive Legal English courses are part of a three-semester program designed for students who need to improve their English proficiency before they embark on studying for their International Law LLM. (http://www.law.miami.edu/academics/international-graduate-law-programs/international-law-llm-with-intensive-english/) with a specialization in U.S. and Transnational Law for Foreign Lawyers. During their first semester, students take coursework in English and Law before enrolling full-time in their LL.M. program during their subsequent semesters. Applicants who meet all admission requirements other than the English Language Proficiency requirement will be considered for admission. See https://www.law.miami.edu/academics/llm/intensive-legal-english-plus-llm-program (https://www.law.miami.edu/academics/llm/intensive-legal-english-plus-llm-program/) for more information.

English for Graduate Business Studies
The English for Graduate Business Studies program is an intensive English program designed to prepare international students for the rigors of a graduate business school environment. This 4-week intensive program is specifically designed to refine the oral communication and writing skills of international students with an advanced level of English who have been admitted to a graduate program at the Miami Business School. This program is offered during the summer semester prior to the start to of the fall term at Miami before they are assigned a teaching load. The SPEAK test, the institutional form of the Test of Spoken English (TSE) is a recorded and timed test developed by the Educational Testing Service (ETS) and is used in this assessment. Students who do not successfully pass the SPEAK test are eligible to demonstrate their spoken English through a teaching demonstration before a panel. They are also eligible to take an English course specifically developed for graduate teaching assistants. This 10-week course is taught in a blended format each semester, depending on demand, and is designed to improve English oral communication and presentation skills. To register for this course, please contact the Intensive English Program at 305-284-2752 or visit https://www.dcie.miami.edu/language-programs/english/english-for-international-teaching-assistants/index.html (https://www.dcie.miami.edu/language-programs/english/english-for-international-teaching-assistants/).

Intensive Spanish Program
An intensive Spanish certificate program is offered several times a year and is an immersion-style language program. For further information about the Spanish program please contact us at 305-284-2752 or visit http://continue.miami.edu/en/packagedetail.aspx?p=103 (http://continue.miami.edu/en/packagedetail.aspx?p=103/).

Intensive English Academy
The Intensive English Academy offers a 2-week summer course for international high school students. International high school students experience student life on our diverse college campus while improving their English language skills in preparation for college. Students enrolled in the Intensive English Academy (IEA) live in a residence hall on-campus with Summer Scholars Program (https://ssp.dcie.miami.edu/) students. They are integrated in all Summer Scholars Program activities, which provide an ideal opportunity to immerse themselves in campus culture with students from the United States and around the world. For more information about this program, please call 305-284-2752 or visit https://iep.dcie.miami.edu/new-students/other-english-programs/iea/index.html (https://iep.dcie.miami.edu/new-students/other-english-programs/iea/).

Education and Human Development
http://www.education.miami.edu

Introduction
The School of Education and Human Development (SEHD) offers undergraduate majors in:
The degrees of Master of Science in Education, Specialist in Education, Doctor of Education, and Doctor of Philosophy are available in various departments within the School. These programs are under the supervision of the Dean of the Graduate School and the School of Education and Human Development Sr. Associate Dean for Graduate Studies.

Vision/Mission
Our vision is to be a center of excellence in the study, promotion and integration of educational, psychological, and physical well-being in multicultural communities.

Our mission is to produce knowledge and prepare the next generation of leaders, researchers, and agents of change and well-being in education and the community.

Academic Policies

Academic Integrity Statement
Academic integrity is fundamental to scholarship, good citizenry, and individual success. All students in the School of Education and Human Development are expected to abide by the University of Miami Honor Code (https://doso.studentaffairs.miami.edu/_assets/pdf/policies/student_rights_and_responsibilities_handbook.pdf#page=10). It was established "to preserve the academic integrity of the student body, to encourage consistent ethical behavior among under graduates, and to foster a climate of fair competition." Please become thoroughly familiar with the provisions of the Code, academic dishonesty and violations of the Honor Code will not be tolerated.

Admission
Applications for incoming freshman are processed and reviewed by the Office of Admission.

Application to the Bachelor of Science in Education program is requested by February 1st.

Early application is encouraged.

Transfer students: The academic accomplishments of each transfer student will be evaluated on an individual basis. A 3.0 GPA is recommended for transfer admission.

Application deadline for transfer students is March 1st.

Students admitted into the SEHD programs are held to the program requirements stated in the Bulletin for that term.

Student Responsibilities
Students are responsible for planning their own programs and for meeting degree requirements. It is the student’s responsibility to understand and fully comply with the provisions set forth in this Bulletin and written changes to their program of study. Written requests for variation from program or school requirements are reviewed by an administrative committee.

Matriculated students who elect to transfer courses from another institution over a summer or intersession term, must receive departmental or program approval prior to enrolling in the course. Students are responsible for adhering to the residency rule which states that the last 45 consecutive credits must be earned at UM.

A student advising compact specifies the dual responsibilities between students and advisors in each program.

Transfer Approval for Coursework from other Institutions
The Associate Dean for Undergraduate Academic Services makes the final determination for transfer course equivalency. Transfer courses for minors and cognates will not be accepted once students have matriculated to the University of Miami. New transfer students may be awarded a maximum of one course toward a cognate (3 credits) and a maximum of two courses or 6 credits toward a minor.

The school has a very strict transfer policy regarding on-line course work from matriculated students. Students must present a syllabus for course evaluations.

Students who are transferring into the Department of Teaching and Learning’s Elementary Education/Special Education program, must submit official scores of the General Knowledge Test (GKT); first of the required tests for the Florida Teacher Certification Exams (FTCE). Students who do not submit these scores will not be allowed to enroll in any TAL course.

Academic Progress and Probation
The School will review each student’s record at the end of each semester.

When a student’s semester or cumulative average is less than stated below, or progress toward degree completion is unsatisfactory, the student will be placed on academic probation or warning in accordance with the School of Education and Human Development policies and procedures.

Students on probation are not permitted to enroll in more than 12 credit hours, shall make arrangements to meet on a monthly basis with their academic advisor, and may have a STOP placed on their future enrollment until grades are further reviewed. The following criteria will determine probationary status.

<table>
<thead>
<tr>
<th>Credit Hours Earned</th>
<th>CGPA</th>
<th>CGPA (Exercise Physiology Majors Only)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fewer than 30 credit hours</td>
<td>1.7</td>
<td>2.0</td>
</tr>
<tr>
<td>30-59 credit hours</td>
<td>2.0</td>
<td>2.5</td>
</tr>
<tr>
<td>60+ credit hours</td>
<td>2.3</td>
<td>2.5</td>
</tr>
</tbody>
</table>

Note: There are different retention and probation policies for Athletic Training majors. Please see the Athletic Training (p. 409) website or the Athletic Training Guidelines Manual for this and other important information regarding the requirements for completion of the Athletic Training major.
Note: The minimum GPA required for graduation from a Teacher Education Program is 2.5.

Subject to Dismissal
A student who remains on academic probation twice during their undergraduate studies can be designated as “Subject to Dismissal” and will be dismissed the following semester if not removed from probationary status. It is not required to be on this status to be dismissed from the School of Education and Human Development or from the University of Miami.

Academic Dismissal
A student in the School of Education and Human Development whose CGPA or progress toward degree completion, falls below the level of the minimum standards of the University of Miami and/or the School of Education and Human Development, may be dismissed. Faculty may recommend that a student be dismissed from a program due to academic concerns.

Students should familiarize themselves with their program’s undergraduate handbook that outlines specific student responsibilities. Student responsibilities include but are not limited to appropriate dress and professional conduct when working in an internship, research, or field experience capacity. Students may be dismissed from a program by the department’s faculty for violations outlined in the handbook.

Accreditation
Kinesiology and Sport Sciences offers the Athletic Training Program that is accredited by the Commission on Accreditation of Athletic Training Education (CAATE); the Sport Administration Program is approved by the North American Society of Sport Management.

The Department of Teaching and Learning in The School of Education and Human Development offers Teacher Education Programs approved by the Florida Department of Education. In conjunction with the Phillip and Patricia Frost School of Music, the School of Education and Human Development offers Teacher Education Programs in Music Education at the undergraduate and graduate levels. Students who successfully complete their program of studies and submit an application to the Florida Department of Education - Bureau of Educator Certification are eligible to receive a Professional Teaching Certificate.

The policy for practicum, internship and clinical lab credit hours will vary by program. Please check the specific program requirements with your academic advisor or program director.

The Foote Fellows Honor Program reflects the educational vision of former University of Miami President Edward T. Foote, who retired in 2000 after serving the University for twenty years. President Foote passed away in the spring, 2016 but his legacy lives on through the Foote Fellow Honor Program that recognizes the most educationally accomplished students at the University of Miami. Foote Fellows have distinguished themselves both in and out of the classroom at their previous schools, are self-motivated, and think independently. Foote Fellows enjoy unmatched freedom and flexibility to explore a multitude of educational resources within the curricular framework of their school or college. Many Foote Fellows leverage this opportunity to pursue additional majors and/or minors and to study abroad.

The School of Education and Human Development (SEHD) offers a first year interdisciplinary seminar exclusively for Foote Fellows lead by the dean of the school.

Foote Fellows have preferential advising for course registration with their advisor, Associate Dean, Gina Astorini. Dean Astorini assists Foote Fellows to chart their academic path and to attain access to distinctive learning opportunities at the University, such as special school-based seminars, faculty-mentored research, networking opportunities, and off-campus internships. They also have early registration appointments thus providing optimal access to the most exciting and popular courses on campus.

Foote Fellows are invited to participate in the Research Honors Program. This is a two year program where students complete the following components:

• 2 consecutive semesters of faculty mentored research (2-credits each semester)
• A Thesis (20 page minimum-faculty mentored)
• Seminar and poster presentation at the Undergraduate Research, Creativity and Innovation Forum in the spring
• Students who complete the program will have their transcripts stamped with Research Honors Designation.

The SEHD has partnered with the Melissa Institute of Miami. The Melissa Institute, conducts research and sponsors conferences, forums and seminars throughout the year addressing school bullying, domestic violence, prevention, education, awareness and community engagement directed at reducing violence. The SEHD, through the generosity of the Melissa Institute, offers complimentary tickets to Foote Fellow students in our program to attend these conferences/seminars during the semester.

Foote Fellows are invited to join advanced, interdisciplinary Foote Fellow seminars taught by leading faculty members from across the University. An example is Books That Matter, a rigorous seminar in non-fiction reading that is offered in sessions for first-year and for upper-class students. Additionally, Foote Fellows benefit from early move-in to the residential colleges and receive focused advising on post-baccalaureate distinguished fellowships and awards.

The Foote Fellow Program will provide an enriching experience for students who have been accepted by UM.

Honors Program in Exercise Physiology (HPEP)
The Kinesiology and Sport Sciences Department offers an accelerated Master degree program for students who have completed their 4-year undergraduate program in Exercise Physiology or Athletic Training. It allows students to complete their Master degree in any of the Exercise Physiology tracks (Clinical and Applied Exercise Physiology, Strength and Conditioning, and Nutrition for Health and Human Performance) within one year of their BS degree obtained in that major.

The additional year of study will enable students to complete all requirements leading to a Master of Science degree in Exercise Physiology in the School of Education and Human Development, (M.S. Ed.), in 5 years. To be considered, applicants must be in the top 10% of their high school graduating class. Students must have an SAT score of 1000 or an ACT score of 30 and an unweighted minimum GPA of 3.0 or above. The Exercise Physiology and HPEP application forms and supporting materials must be submitted no later than August 1st of the applicant’s senior year. A review of completed applications will begin by the end of September.
Educational and Psychological Studies

Dept. Code: EPS

Bachelor of Science in Education: Human and Social Development

The major in Human and Social Development (HSD) focuses on the promotion of healthy development and well-being. It prepares students to work with people in multiple contexts and settings:

- health and human services
- schools, universities, and community programs
- government and non-government agencies
- grass-roots movements
- socially responsible business and entrepreneurial organizations

By exploring the scholarly and practical interconnections among individual, interpersonal, social, and community approaches to change, students learn to identify barriers to well-being and to implement effective change-oriented strategies and policies. HSD coursework emphasizes theory, research, and skills. It culminates in a practicum in a setting related to students’ area of interest and prepares them for both graduate studies and careers.

Students choose between three areas of concentration (tracks).

- **Track I: Individual and Relational Development (Track Code: HSDI)**
  This track emphasizes individual, relational, and family well-being. Focusing on context and diversity in mental health and on strength-based, preventive, and empowering approaches, courses cover family studies, counseling theories and techniques, interviewing skills, and the basics of human service work. Students are well-prepared for graduate study in the helping professions and careers in health and human services.

- **Track II: Community and Program Development (Track Code: HSDC)**
  This track promotes healthy individual and community development by emphasizing how social, institutional, and community dynamics affect personal well-being. Stressing the role of non-government agencies in fostering well-being for people with diverse backgrounds, HSDC prepares students to diagnose institutional and community challenges and offer strategies for positive change. Courses include community-focused planning, needs assessment, and change strategies and nonprofit program development, implementation, and evaluation. Students are well prepared for graduate study in community psychology and public policy and careers in community organizations.

- **Track III: Human and Social Development Studies (Track Code: HSDS)**
  This is a general track which offers a menu of courses relating to individual and community development. HSDS students are free to combine classes from the Individual (HSDI) and Community (HSDC) tracks. This track meets the needs of students who seek greater flexibility in course work and are less concerned with specializing in the individual or community tracks.

HSD students must declare an approved second major or a minor either in the School of Education or through any other school or college.

Requirements for Graduation

Bachelor of Science in Education

I. Candidates for B.S.Ed. in the School of Education and Human Development must complete the credit hours of work and achieve the quality point average specified for students in the University at large as stated in the section ACADEMIC REGULATIONS AND PROCEDURES, subject to regulations concerning the major specified in departmental and program sections of this Bulletin.

Exempted is interpreted to refer exclusively to those exemptions provided under the following headings:

- Advanced Standing and Placement (Credit Hour Granted);
- Credit by Examination;
- Advanced Placement (by proficiency examination);
- Statement of Foreign Language Requirements;

II. Except where a required course is one designated to correct a deficiency in his/her college preparation, the student may apply the credit hours of any required course from which he is exempted toward the credit hours specified for that subject as a general requirement for graduation and, upon payment of a recording fee, toward the 120 credit hours required for graduation. (See Departmental Proficiency Examinations.) An exemption may be granted for ENG 105, but these credit hours may not be applied toward the 120 credit hours required for graduation.

III. Credit Only. Only free electives may be taken under this option. Courses which satisfy the major, minor, the distributions of the School, the General Education Requirements of the University or any course for which a C or better is required may not be taken for credit only.

IV. Transferred credit hour may not count toward the completion of a major without the written approval of the Associate Dean of the School of Education and Human Development.

V. Required Areas of Study

1. **English Composition 3 – 6 credit hours**
   Students fulfill this requirement by satisfactorily completing ENG 105 and ENG 106 or its equivalent. Appropriate Advanced Placement (AP) or International Baccalaureate (IB) scores in English composition may be used to satisfy the ENG 105/ENG 106 requirement. An appropriate score on the SAT or ACT verbal examination may earn a student exemption from, but not credit hour in, ENG 105. Appropriate scores on other tests determined by the Department of English may earn a student exemption from, but not credit hour in, ENG 105. Courses satisfying the English Composition requirement may not be used to fulfill the Advanced Writing and Communication Requirement.

2. **Mathematics**
   B.S.Ed. degree candidates in the Department of Educational and Psychological Studies are required to take EPS 351. This course fulfills a Math requirement for the HSD major. Prior to taking EPS 351, students must complete MTH 101 or be exempt from MTH 101 based on any of the following tests: AP IB, or an examination administered by the Department of Mathematics.

3. **Foreign Languages (not applicable)**

Areas of Knowledge and Cognate Requirements

The University of Miami’s General Education requirements ensure that graduates have acquired essential intellectual skills and have engaged a range of academic disciplines. All new students will fulfill the General
Education requirements by selecting a **Cognate**, which is a cluster of courses arranged by their content, field and interest.

- A cognate is a group of at least three related courses for at least 9 credit hours.
- The courses in a cognate are related in a topical, thematic, interdisciplinary, sequential, or other such fashion, so that completion of a cognate provides coherent depth of knowledge in the area.
- Students must take three cognates to fulfill the Areas of Knowledge requirement,
  - one in the **Arts & Humanities (A&H)**,
  - one in **People & Society (P&S)**, and
  - one in **Science, Technology, Engineering & Mathematics (STEM)**.
- Each cognate has course options that allow students to complete the cognate in ways that meet their individual interests, while staying within the coherent focus of the cognate.
- In addition to the cognates that have been designed by faculty, each major and minor fulfills the cognate requirement in that one area.
  - Exercise Physiology and Athletic Training majors will fulfill the STEM cognate.
  - Sport Administration, Human and Social Development, and Elementary/ESE majors will fulfill the P&S cognate.
- An approved list of cognates can be found on the University of Miami website.

VI. Advanced Writing and Communication Skills Requirement

Every student majoring in Human and Social Development, will meet the Advanced Writing and Communication Requirement upon fulfillment of their major courses. These courses have a prerequisite requirement of ENG 105 and ENG 106 and will be identified as either writing intensive or as an oral/verbal communication proficiency course or both. Digital competency for both written and oral competencies will be assessed. Writing intensive courses require a minimum of 2500 written words; assignments will be assessed for analytical ability, synthesis of information, grammar, content and style. Courses designated as an oral/verbal proficiency class will provide students an opportunity to demonstrate their presentation skills using accurate standard English structure and syntax, non-verbal cues and gestures, as well as audience appropriate language. Courses in the HSD major which meet the Advanced Writing and Communication Skills Requirement are EPS 321, EPS 371 and EPS 579.

VII. Major in Human and Social Development

- Every candidate for the B.S.Ed. degree in the Department of Educational and Psychological Studies must choose a major in Human and Social Development.
- Students choose among three areas of concentration:
  - Track I – Individual and Relational Development (HSDI);
  - Track II – Community and Program Development (HSDC);
  - Track III – Human and Social Development Studies (HSDS).
  - To find the requirements for the major, consult this Bulletin under the discipline concerned, and confer with the designated departmental representative.
- Students majoring in HSD must complete a Diversity requirement that is fulfilled by taking one of the following courses: EPS 411, EPS 412, or EPS 430. Students should discuss this requirement with their advisor.
- HSD majors must maintain a minimum overall grade point average of 2.0 with a grade of "C" or better in all courses in the major.
- HSD students must declare an approved second major or a minor in the School of Education and Human Development or through any other UM school or college.

VIII. Minor

B.S.Ed. majors in Human and Social Development are required to declare a minor.

IX. Electives

Electives may be chosen from any courses offered by the University. The student should consult an advisor before selecting elective courses. At least 6 credit hours must be at the 300 level or above.

X. Senior Assessment

Seniors are required to participate in the General Education Assessment prior to graduation as part of the SACS review process.

Mission
The major in Human and Social Development (HSD) seeks to train leading thinkers, professionals, and future scholars in the pursuit of innovative, scientific, and practical approaches to the promotion of healthy development and well-being. Students are exposed to scholarly and applied knowledge bases regarding the interconnectedness of personal, interpersonal, institutional, and community change, barriers to healthy development and well-being at these levels, and strategies and policies that promote well-being in individuals, families, and communities.

Goals
The HSD major prepares students to enter competitive graduate programs and to work with people in multiple contexts and settings, including:

- health and human services
- schools, universities, and community programs
- government and non-government agencies
- grass-roots movements
- socially responsible corporations.

Student Learning Outcomes
- Students will demonstrate in-depth knowledge of the field including intrapersonal, interpersonal, institutional, and community development and well-being; common barriers to well-being at various ecological levels; and strategies to promote healthy development and well-being in individuals, institutions, and communities.
- Students will demonstrate reflective and critical thinking skills.
- Students will demonstrate superior and skillful writing proficiency using language and grammar accurately, efficiently and effectively.

Mission
The major in Human and Social Development (HSD) seeks to train leading thinkers, professionals, and future scholars in the pursuit of innovative, scientific, and practical approaches to the promotion of healthy development and well-being. Students are exposed to scholarly and applied knowledge bases regarding the interconnectedness of personal, interpersonal, institutional, and community change, barriers to healthy development and well-being at these levels, and strategies and policies that promote well-being in individuals, families, and communities.

Goals
The HSD major prepares students to enter competitive graduate programs and to work with people in multiple contexts and settings, including:

- health and human services
- schools, universities, and community programs
- government and non-government agencies
- grass-roots movements
- socially responsible corporations.

Student Learning Outcomes
- Students will demonstrate in-depth knowledge of the field including intrapersonal, interpersonal, institutional, and community development and well-being; common barriers to well-being at various ecological levels; and strategies to promote healthy development and well-being in individuals, institutions, and communities.
- Students will demonstrate reflective and critical thinking skills.
- Students will demonstrate superior and skillful writing proficiency using language and grammar accurately, efficiently and effectively.

The requirements of the minor are 15 credit hours with a grade of C or better.

Nine of these 15 credit hours must be earned at the University of Miami; with prior approval, three of these nine may be taken through the UM Study Abroad Program.

All transfer course equivalencies, (up to 6 credits), must be approved by the EPS department.

* The undergraduate coursework in Human and Social Development is open to all qualified University of Miami students.

** Determination for using these courses as a minor, as a specialization, and/or as electives in any program, is made by the individual student's degree granting college or school.

Kinesiology and Sport Sciences

Dept. Code: KIN

The School of Education and Human Development offers undergraduate studies in the Kinesiology and Sport Sciences Department. The Department provides some of the strongest programs in the field, providing a structured classroom setting immersed in theory and knowledge with clinical and practical experiences. The department is committed to fostering unique and collaborative efforts within our diverse University community. Students are encouraged to engage in various work and clinical experiences including opportunities at the Medical School, the Miami Project to cure paralysis, UM Varsity Athletics Department, South Florida sports industry, Sports Medicine Clinics, Veterans Administration Hospital, and local high schools. Students can choose to major in one of the following areas:

- Athletic Training (Admission to the Undergraduate program in Athletic Training is suspended)
- Exercise Physiology (with a pre-medical or pre-physical therapy track)
- Sport Administration

Bachelor of Science in Education

I. Candidates for B.S.Ed. in the School of Education and Human Development must complete the credit hours of work and achieve the quality point average specified for students in the University at large as stated in the section ACADEMIC REGULATIONS AND PROCEDURES, subject to regulations concerning the major specified in departmental and program sections of this Bulletin. Exempted is interpreted to refer exclusively to those exemptions provided under the following headings:

- Advanced Standing and Placement (Credit Hour Granted);
- Credit by Examination;
- Advanced Placement (by proficiency examination);
- Statement of Foreign Language Requirements;

II. Except where a required course is one designated to correct a deficiency in his/her college preparation, the student may apply the credit hours of any required course from which he is exempted toward the credit hours specified for that subject as a general requirement for graduation and, upon payment of a recording fee, toward the 120 credit hours required for graduation. (See Departmental Proficiency Examinations.) An exemption may be granted for ENG 105, but these credit hours may not be applied toward the 120 credit hours required for graduation.

III. Credit Only

Only free electives may be taken under this option. Courses which satisfy the major, minor, the distributions of the School, the General Education Requirements of the University or any course for which a C or better is required may not be taken for credit only.

IV. Transferred credit hour may not count toward the completion of a major without the written approval of the Associate Dean of the School of Education and Human Development.
V. Required Areas of Study.

1. **English Composition**
   Students must take ENG 105 and ENG 106 (or their equivalent) during the first year of enrollment in the School. Admission to ENG 105 requires a placement score acceptable to the Department of English. Students whose placement scores are deemed unacceptably low will be required to take the non-credit course, ENG 103, before taking ENG 105 and ENG 106. Students whose placement scores are high may be exempt from ENG 105 but not from ENG 106 or its equivalent.

2. **Mathematics**
   B.S.Ed. degree candidates must complete MTH 113 or higher. Students who do not place directly into MTH 113 must enroll in either MTH 099 or MTH 101 based on results of placement tests. Statistics does not satisfy the Math requirement. B.S. in Athletic Training and B.S. in Exercise Physiology have different Math requirements. Please see specific program requirements.

3. **Foreign Languages (applicable to Sport Administration majors only)**
   Students must earn at least 3 credit hours of a foreign language at the 200 course level or higher. Special 200-level courses are required of native speakers who choose to fulfill the language requirement. Two semesters of American Sign Language constitutes an acceptable alternative for the Foreign Language Requirement.

### Areas of Knowledge and Cognate Requirements

The University of Miami's General Education requirements ensure that graduates have acquired essential intellectual skills and have engaged a range of academic disciplines. All new students will fulfill the General Education requirements by selecting a Cognate, which is a cluster of courses arranged by their content, field and interest.

- A cognate is a group of at least three related courses for at least 9 credit hours.
- The courses in a cognate are related in a topical, thematic, interdisciplinary, sequential, or other such fashion, so that completion of a cognate provides coherent depth of knowledge in the area.
- Students must take three cognates to fulfill the Areas of Knowledge requirement, one in the **Arts & Humanities (A&H)**, one in **People & Society (P&S)**, and one in **Science, Technology, Engineering & Mathematics (STEM)**.
- Each cognate has course options that allow students to complete the cognate in ways that meet their individual interests, while staying within the coherent focus of the cognate.
- In addition to the cognates that have been designed by faculty, each major and minor fulfills the cognate requirement in one area.
  - Exercise Physiology and Athletic Training majors will fulfill the STEM cognate.
  - Sport Administration, Human and Social Development, and Elementary/ESE majors will fulfill the P&S cognate.
- An approved list of cognates can be found on the University of Miami website.

VI. Advanced Writing and Communication Requirement

Every student majoring in a program from the Kinesiology and Sport Sciences Department will meet the Advanced Writing and Communication Requirement upon fulfillment of the courses for that major. These courses have a prerequisite of ENG 105 and ENG 106 and will be identified as either writing intensive or as an oral/verbal communication proficiency course or both. Digital competency for both written and oral components will be assessed. Writing intensive courses require a minimum of 2500 written words; assignments will be assessed for analytical ability, synthesis of information, grammar, content and style. Courses designated as an oral/verbal proficiency class will provide students an opportunity to demonstrate their presentation skills using accurate standard English structure and syntax, non-verbal cues and gestures, as well as audience appropriate language. The following courses meet the Advanced Writing and Communication Skills Requirement for the major:

- **Athletic Training:** KIN 250 and KIN 260
- **Exercise Physiology:** KIN 365 and KIN 457
- **Sport Administration:** KIN 308 and KIN 498

VII. Majors

Every candidate for the B.S. Athletic Training degree must choose Athletic Training as a major. Every candidate for the B.S.EXPH degree must choose Exercise Physiology as a major. Every candidate for the B.S.Ed. degree must choose a major in Sport Administration. To find the requirements for the major, consult this Bulletin under the discipline concerned, and confer with the designated departmental representative.

The choice of majors should be made no later than the beginning of the junior year and must be approved by the major department. Any student making unsatisfactory progress in a major may be required to change his/her major or to relinquish candidacy for the degree.

Students who are majoring in either Athletic Training or Exercise Physiology must be Students in the School of Education and Human Development. Students who are double majoring with any program must have the first major declared as either Athletic Training of Exercise Physiology.

VIII. Minors

B.S.Ed. majors in Sport Administration and B.S. EXPS majors in Exercise Physiology are required to declare a minor. Sport Administration students require department approval before declaring a minor. Exercise Physiology students may choose not to declare a minor if following the pre-med track. Students must complete all of the pre-med courses in order to be waived from the minor requirement. Please consult an advisor for clarification of this requirement.

Athletic Training majors are not required to have a minor.

IX. Electives

Electives may be chosen from any courses offered by the University. The student should consult an advisor before selecting elective courses. At least 6 credit hours must be at the 300 level or above.

X. Senior Assessment

Seniors are required to participate in the General Education Assessment prior to graduation as part of the SACS review process.

### Minors

A minor in any of the three areas below consists of 15 credit hours:

- Exercise Physiology
- Sport Administration
Sports Medicine

• A grade of C or better is required for each course applied toward the minor; the overall grade point average for the minor must be 2.5 or above.
• The undergraduate coursework in Exercise Physiology, Sports Medicine, and Sport Administration are open to all qualified University of Miami students. A student can minor in either Exercise Physiology or Sports Medicine but not both.
• Athletic Training majors are not allowed to minor in Sports Medicine.
• Determination for using these courses as a minor, as a specialization, and/or as electives in any program, is made by the individual student's degree granting college or school.
• Seniors are required to participate in the General Education Assessment as part of the SACS review process.

• Sport Administration (p. 417)
• Sports Medicine (p. 417)

B.S.A.T. Athletic Training

The Athletic Training program at the University of Miami is an undergraduate education program that has been accredited by CAATE. The program is designed to provide a structured classroom and clinical experience to prepare students to become eligible to sit for the Board of Certification exam; Didactic courses are sequenced to maximize student learning. Please see the Athletic Training website or the Athletic Training Guidelines Manual for the course sequence form and other important information regarding the requirements for completion of the Athletic Training major.

• A degree in Athletic Training requires a major GPA of 3.0 or higher and an overall GPA of 2.5 or higher.
• Seniors are required to participate in the General Education Assessment prior to graduation as part of the SACS accreditation review process.
• Students must successfully meet all of the retention requirements outlined in the Athletic Training Education Program (ATEP) handbook in order to continue in the major.

B.S.E.D. Sport Administration

The Sport Administration major at the University of Miami is an undergraduate education program designed to prepare students for careers in the sport industry. The program is committed to the professional development of students so that competencies and skills relevant to the Sport Industry can be acquired over time. Specific
competencies in organization, ethics, marketing, leadership and legal issues are emphasized.

- Field experience and internships are an essential component of the major. The KIN department is actively engaged in placing students in visible sports settings and appropriate sport environments so that students acquire relevant competencies and gain pragmatic hands-on experiences that are necessary for success in today's sport industry.
- The Sport Administration major is a 42 credit hour major in Kinesiology coursework plus a class in public speaking (COS 211).
- Students are required to meet a foreign language component. This may be satisfied with two semesters of American Sign Language (TAL 107 and TAL 207), or any intermediate course (200+) in a foreign language that is offered at UM.
- Sport Administration students may elect to participate in Kinesiology Department’s sponsored Study Abroad opportunities that will count toward their major or minor requirements. Please consult with the academic advisor for the Sport Administration Program.
- Students transferring from another college or university must have a cumulative GPA of 2.5 or above in order to be considered for admission to the major.
- Students are required to complete a 9-credit internship upon successful completion of ALL coursework for the Sport Administration Major. Exceptions to this policy must be approved by the Undergraduate Program Director and the Associate Dean.
- A minor in any field is required. A Business minor is suggested to complement the Sport Administration major and provide a well-rounded comprehensive background to the Sport Administration field.
- Students pursuing a degree in Sport Administration must receive a grade of C or higher in KIN 201 in order to continue with the major. Students are allowed to retake KIN 201 to achieve the minimum C grade only once per University of Miami policy.
- The Writing Requirement (Upper Level Communication Requirement) is satisfied by taking the following two courses in the major:
- KIN 308
- KIN 498
- Students will be allowed to retake a course once.
- All 400-level courses are restricted to declared Sport Administration majors and minors only.
- A degree in Sport Administration requires a major GPA of 2.5 or higher and an overall GPA of 2.3 or higher.
- KIN 306 and KIN 308 may not be taken in the same semester and must be taken during junior year. KIN 308 must be taken before KIN 410.
- A grade of C or better is required for each course applied toward the major.
- Study Abroad opportunities offered that are led by Sport Administration faculty may count toward the SPAD major or minor. Please see an advisor for more information.

### Mission

The University of Miami Sport Administration program strives to be an international leader in the training of a diverse student population seeking careers in the sport industry. The program will prepare the next generation of leaders, researchers, and agents of change and well-being in the sport community, to promote knowledge within the widespread realm of the sport sciences and prepare graduates for careers in the sport industry and academia, reflective of our multicultural community.

### Goals

The University of Miami program in Sport Administration prepares individuals for a wide variety of career options in this field according to their personal and professional goals.

### Student Learning Outcomes

- Students will demonstrate an overall knowledge and understanding of the core concepts and practical skills in Sport Administration.
- Students will demonstrate strong written communication skills.
- Students will demonstrate strong oral communication skills.

### B.S. in Exercise Physiology

The Undergraduate program in Exercise Physiology at the University of Miami, is designed for students to acquire a sound knowledge base in the sciences followed by the application of that knowledge base to human movement, exercise and sports performance. Clinical laboratory experiences supplement applied scientific theory in a rigorous academic setting.

- Students may pursue a pre-med track concurrent with the Exercise Physiology major and should inform their advisor if selecting this track.
- Students are required to complete a minimum of 8 credits in chemistry. The academic advisor will advise on the correct sequence of chemistry based on the individual student’s career goals.
- Exercise Physiology requires that students maintain a major GPA of 2.75. Students with a major GPA below 2.75 will have one semester to raise their GPA to meet the requirement. Failure to do so may lead to dismissal from the major.
- Students transferring from another college or university must have a cumulative GPA of 3.0 or above in order to be considered for admission to the major.
- Students who meet the above requirements and select Exercise Physiology as their major, must transfer into the School of Education and Human Development and set Exercise Physiology as the first major.
- A grade of “C” or better is required for each course applied toward the major. Students are allowed to retake a course one time.
- All 100 level courses and KIN 202, KIN 212, are open to non-majors. All other courses are open to majors and minors only. KIN 202 is only open to science majors.
- Students MAY NOT take KIN 150 and KIN 202 as course material overlaps.
- All 300- and 400-level courses except those in a STEM cognate, are restricted to declared Exercise Physiology majors only.
- KIN 399 should be taken in the Spring semester of the junior year.
- Seniors are required to participate in the General Education Assessment prior to graduation as part of the SACS accreditation review process.

### Honors Program in Exercise Physiology (HPEP)

KIN 458 will be available for honors credit for Exercise Physiology students provided the following stipulations are met:

1. The course is under the direction of a full-time faculty member in Exercise Physiology.
2. The student completes an honors project permission form and submits this form to the instructor within the first three weeks of the semester.

3. The student completes assigned writing credit work by the end of the semester.

4. Assignments completed for honors credit hour are sent to the University of Miami Writing Center for review.

The University of Miami currently offers an accelerated programs for undergraduate Exercise Physiology majors who want to obtain a Master's Degree in Exercise Physiology, Strength & Conditioning/Fitness Entrepreneurship, or Nutrition for Health & Human Performance. This can be done by taking one additional year of graduate courses. These students must take two graduate courses in Exercise Physiology in their senior undergraduate year in order to earn an M.S.Ed. degree in one additional year. Please visit our website (http://www.education.miami.edu) for additional information on the accelerated master's programs. To be eligible students must apply for admission to the accelerated master's program no later than the end of the Fall semester of their senior year.

**Chemistry Requirement**

Choose one of the following combinations: 8

Combination 1

| CHM 111 | Principles of Chemistry I and Chemistry Laboratory I | 3 |
| CHM 112 | Principles of Chemistry II and Chemistry Laboratory II | 3 |

**Combination 2**

| CHM 103 | Chemistry for the Health Sciences I  | 3 |
| CHM 104 | Chemistry for the Health Sciences II and Chemistry for the Health Sciences I (Laboratory) | 3 |

**Combination 3**

| CHM 111 | Principles of Chemistry I and Chemistry Laboratory I | 3 |
| CHM 104 | Chemistry for the Health Sciences II and Chemistry for the Health Sciences II (Laboratory) | 3 |

**Calculus**

| MTH 161 | Calculus I                                      | 4 |

**Statistics and Research Methods**

| EPS 351 | Introduction to Statistics and Research Design | 3 |
| KIN 415 | Evidence Based Sports Medicine                  | 3 |

**Additional Required Courses**

| ENG 105 | English Composition I                          | 3 |
| ENG 106 | English Composition II                         | 3 |
| UMX 100 | The University of Miami Experience             | 0 |

| Cognate Courses | 18 |
| Electives/Pre-Med | 16 |
| Minor/Pre-Med | 15 |

**Total Credit Hours**

120

1 All students who are majoring in Exercise Physiology must earn 8 credit hours in chemistry. The chemistry requirement may be fulfilled by any 8 credit hours in chemistry, provided that the courses are not repeated or considered an equivalent of one another. Please see an advisor for proper chemistry course placement.

**Mission**

The mission of the Exercise Physiology, B.S., is to provide a fundamental working knowledge of the field in order to obtain a career in outside employment, work in professional services and/or enter higher institutions of learning in this or other health-related fields.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate the ability to critique research evidence in key areas of human physiology, which pertain to optimal health and the etiology of common disease.
- Students will be able to explain the physiological bases for a test accurately describe test administration procedures, interpret data collected during each laboratory session and explain these results as they relate to their own performance and in comparison to specific clinical populations and discuss the importance of each test as an acute and chronic measure of performance.

**Minor in Exercise Physiology**

A minor in Exercise Physiology is open to all students at the University of Miami. Students should complete the required 5 courses in order to earn the EXPH minor. Athletic Training students are not eligible for the EXPH minor.

* Students must complete KIN 201 with a C grade or higher. Students select an additional 4 classes for a total of 15 credits to complete the minor. A minimum grade of C or higher is required for all classes taken toward the Sport Administration minor. Students minoring in Sport Administration may take KIN 297 for a maximum of 3 credits to count toward the minor. Students may take KIN 297 for an additional 3 credits toward general electives with the approval of the Internship Coordinator for Sport Administration.

* A minor in Sports Medicine is available to all students at the University of Miami. Students should take the following 5 courses in the course list for a total of 15 credits. A grade of C or higher is required in each course.
** Please note that students majoring in Athletic Training are ineligible for the Sports Medicine minor.
*** KIN 370 Sociocultural Aspects of Sports Medicine may be substituted for one of the courses listed above for the minor.

Teaching and Learning

Dept. Code: TAL

The Department of Teaching and Learning offers a Bachelor of Science in Education Degree in Elementary Education (K-6)/Exceptional Student Education (K-12) with ESOL (English for Speakers of Other Languages, K12) and Reading (K-12) endorsements.

The Department offers two minors:

1. A traditional Education Minor consisting of 12 credit hours and
2. A Professional Training Option minor of 18 credit hours that fulfills the State of Florida “Professional Training Option” (PTO) for teaching in secondary-schools. Candidates must select a minor area of study in English, math, Secondary Science or Secondary Social studies or other areas of recognized certification. In order to obtain teaching credentials from the State of Florida, a PTO completer must successfully teach in an accredited school in Florida for one academic year.

Teacher Preparation Programs

One of the roles of the School of Education and Human Development is to serve as the professional school to conduct and coordinate programs for the preparation of teachers and other educational personnel at the University of Miami. Membership is held in the American Association of Colleges for Teacher Education, the National Association of State Directors of Teacher Education & Certification and in the Florida Association of Colleges for Teacher Educators. Teacher Preparation Programs (TPP) are accredited by the Florida Department of Education for the preparation of elementary/exceptional student education teachers, secondary teachers, music teachers and other school service personnel.

Professional Development Schools

Bel-Aire Elementary, Henry S. West Laboratory Elementary, Sunset Elementary, Ponce de Leon Middle School and Booker T. Washington Senior High School are operated by Miami-Dade County Public Schools. These schools provide the most up-to-date teaching environments, both in terms of design and curriculum, in partnership with the University of Miami. Students are welcomed at these facilities for field experiences and student teaching, and both students and faculty have the opportunity to contribute to the high quality functioning of these professional development schools.
Teacher Preparation Programs

Teacher Preparation Programs/majors in Elementary/Exceptional Student Education and Secondary Education that lead to professional certification and applicable endorsements are approved by the Florida Department of Education (FLDOE). Please be advised that the State may implement new requirements for certification. **These requirements will be mandatory with or without notice in this bulletin.** The student is responsible for securing the application for certification and submitting the necessary documents and fees to the Florida Department of Education to obtain certification and endorsement. The DOE Certification Ombudsman in the School of Education and Human Development is available to assist with certification and re-certification matters.

Academic Policies

Admission

Selection for the Teaching Profession

The faculty of the School of Education and Human Development conceives its ultimate obligation to be to the children, adolescents, and adults who will be taught by teachers who have completed teacher preparation programs at the University. The quality of students admitted into the teacher education curriculum is as important as the skills, content, and concepts to be learned.

Students who intend to transfer to the University of Miami into the School of Education and Human Development’s accredited program must take the General Knowledge Test (GKT) that is part of the Florida Teacher Certification Exam (FTCE). Official GKT results must be sent to the Associate Dean for Undergraduate Education prior to enrolling in any Teaching and Learning Course.

Most courses in the teacher education program require school site-based field experiences, culminating in a full-time 15-week internship. School districts require a criminal background check for field placement students and interns. Fingerprinting and FBI background check procedures are at the applicant’s expense. Students with felony arrests may wish to consider these requirements carefully and, if necessary, seek advice from an advisor in the School before applying for admission to the program. Students without a valid social security number will not be eligible for placement in the school district.

All students who wish to be considered for admission and/or retention in curricula leading to Florida Teacher Certification will be formally screened at certain points in their program of study with respect to the following criteria:

1. Admission to Teacher Candidacy (see requirements below).
2. Acceptable grade point averages (C or better for courses in the major).
3. Acceptable evaluations by University of Miami faculty.
4. Evaluations by clinical faculty at various field experience sites.
5. Satisfactory progress toward the completion of the Florida Educators Accomplished Practices requirement.

Students who receive a grade below C in their Student Teaching semester will not be recommended for teacher certification.

Note: The Associate Dean of the School of Education & Human Development and the Chairperson of the Department of Teaching and Learning (TAL) jointly approve appeals to the above policies.

Requirements for Admission to Teacher Candidacy

2. Completion of 45 credit hours. In addition, transfer students must have a minimum of 9 credit hours of acceptable credit earned at the University of Miami.
3. A 2.5 GPA in education core courses. No education classes lower than C.
4. A 2.5 GPA in the content area teaching major (for secondary education majors).
5. Completion of the Course Advisement Plan (CAP).
6. Completion of at least one Field Experience requirement.
7. Further enrollment in teacher education course work offered by the School of Education and Human Development is contingent upon the student meeting requirements 1-6 above.
8. All students must successfully complete M-DCPS fingerprinting process. Forms are available in the Office of Undergraduate Academic Services.

NOTE: Appeals to the policies stated 1-6 above must be directed to the Associate Dean of the School of Education and Human Development.

Please note: Students may not register for any class above TAL 420 without admission to Teacher Candidacy.

Requirements for Admission to Student Teaching

Students submit a formal application to the Department of TAL for admission to Student Teaching. Application materials are available and are to be completed by students no later than October 15 (Fall semester) or March 15 (Spring semester).

The following requirements must be met:

1. Admission to a Teacher Preparation Program (Teacher Candidacy).
2. Completion of application for admission to Student Teaching
3. Approval of the Associate Dean for Undergraduate Studies and the Department of TAL Chairperson.
4. Recommendations from two members of the faculty familiar with the student’s academic proficiency. One of these must be from a faculty member in the School of Education and Human Development.
5. Earned a minimum of 90 credit hours.
6. Submission of the Florida Educator’s Accomplished Practices (FEAP) Portfolio via Live Text to the Assistant Director of Accreditation in the Department of TAL. The FEAP Portfolio must include evidence at the indicator level in the first five FEAPs.
7. All Elementary/ESE majors must have completed ALL of the courses for the Elementary/ESE major.
8. Earned a minimum of 2.5 grade point average in core courses offered by the School of Education and Human Development.
9. A grade of C or better is required of each course applied to the major.
10. Earned a minimum of a 2.5 grade point average overall.
11. Successfully completed pre-internship field experiences.
12. Demonstrate satisfactory progress towards the completion of the FEAP requirement, as indicated in #6 above.
13. Passed the Florida General Knowledge Test.
14. Taken and passed one of the following exams: the Professional Education Test or the Subject Area Exam in either Elementary Education (K-6) or ESE (K-12).
NOTE: A MAXIMUM OF 12 CREDIT HOURS MAY BE TAKEN DURING THE STUDENT TEACHING SEMESTER. No outside job may be held or additional classes taken during the Student Teaching semester.

NOTE: The Associate Dean and the Chairperson of TAL in the School of Education and Human Development must approve appeals to the above policies.

Students must complete the FEAPs and the P-12 Student Impact Project requirements. Monitoring of FEAPs and progress made toward program completion in the Teacher Education program will occur at the following checkpoints:

1. TAL 306, and TAL 429; and application to student teaching
2. Students enrolled in all teacher-education programs will submit complete portfolios at the end of TAL 480/TAL 580.

In addition, students enrolled in all teacher-education programs will submit e-portfolios via Live Text as follows

- TAL 306 Field Experience Seminar I (Must submit artifacts in order to receive a passing grade).
- TAL 429 Field Experience Seminar II (Must submit artifacts in order to receive a passing grade).
- Seniors are required to participate in the General Education Assessment prior to graduation as a part of the SACS review process.

Licensure/Certification Information

Only students who have completed all requirements for any State approved degree or certificate program will have their transcripts stamped as meeting State approved requirements for certification as well as appropriate endorsements. Students must meet requirements of the School of Education and Human Development as well as the college or school issuing the second major. Evidence of successful completion of all twelve Florida Educator Accomplished Practices is required to receive the FLDOE stamp on the graduate’s final transcript.

Transcript stamp is contingent upon the student taking at least half of the coursework in teacher education at the University of Miami, including the Student Teaching component. At least half of the coursework in the students teaching content area(s) must be taken at the University of Miami in the School of Education and Human Development, Frost School of Music, or other UM schools or colleges as determined by the program in which the student is enrolled.

Department’s Honor Code, Ethics FEAP and Plagiarism Policy

At a minimum, students will receive an automatic FAIL for any assignment that shows even minimal evidence of any of the violations listed in the Student Handbook such as cheating, plagiarism, misrepresentation, collusion, falsification of data and documents, or fabrication of findings. The student will not be allowed to improve that grade and the Ethics FEAP will be marked as permanently failed in the student’s portfolio record.

The professor of record will have absolute discretion to judge the severity of an offense involving plagiarism and/or violation of The Honor Code, including extending the penalty to an F in the course.

Students will receive an automatic FAIL on any assignment or action which shows a violation to the Ethics FEAP. Either the TAL Chair or the Dean’s office may refer a student to the University Honors Council. Consequence for violating the Honor Code include disciplinary warning, disciplinary probation, suspension or expulsion from the university.

For further information, address all inquiries to:
Dr. Gina F. Astorini Associate Dean School of Education and Human Development PO. Box 248065 University of Miami Coral Gables, Florida 33124 Telephone: (305) 284-3711

**Majors in Teaching and Learning**

- B.S.E.D. in Elementary/Exceptional Student Education (ESE) with ESOL and Reading Endorsements (p. 419)

**Minor in Teaching and Learning**

- Education (p. 422)

**Certificate in Teaching and Learning**

- Professional Training Option (p. 423)

**B.S.E.D. Elementary/Exceptional Student Education (ESE) with ESOL and Reading Endorsements**

The Department of Teaching and Learning offers a major in Elementary/Exceptional Student Education that leads to certification in Elementary Education (K-6)/ESE (K-12) with ESOL and Reading endorsements. The requirements for Elementary/ESE Education are a major in Elementary/ESE Education and a minor outside of the Department of Teaching and Learning.

**Requirements for Graduation**

**Bachelor of Science in Education**

I. Candidates for B.S.Ed. in the School of Education and Human Development must complete the credit hours of work and achieve the quality point average specified for students in the University at large as stated in the section ACADEMIC REGULATIONS AND PROCEDURES, subject to regulations concerning the major specified in departmental and program sections of this Bulletin.

**Exemption**

Exempted is interpreted to refer exclusively to those exemptions provided under the following headings:

1. Advanced Standing and Placement (Credit Hour Granted);
2. Credit by Examination;
3. Advanced Placement (by proficiency examination);
4. Statement of Foreign Language Requirements;

**Florida Teacher Certification (FTCE)**

Students must pass the Professional Education, General Knowledge and Subject Area tests of the Florida Teacher Certification Examination (FTCE).

**Florida Educator Accomplished Practices (FEAPS)**

Students must complete the Florida Educator Accomplished Practices (FEAPs) and the P-12 Student Impact Project requirements. Monitoring of FEAPs and progress made toward program completion in the Teacher...
Education program will occur at the following checkpoints: Students enrolled in all teacher-education programs will submit complete portfolios at

1. application to student teaching and
2. at the end of TAL 480/TAL 580.

In addition, students enrolled in all teacher-education programs will submit e-portfolios via Live Text as follows

- TAL 306 Field Experience Seminar I (Must submit artifacts in order to receive a passing grade).
- TAL 429 Field Experience Seminar II (Must submit artifacts in order to receive a passing grade).

**Departmental Proficiency Examinations**

Except where a required course is one designated to correct a deficiency in his/her college preparation, the student may apply the credit hours of any required course from which he is exempted toward the credit hours specified for that subject as a general requirement for graduation and, upon payment of a recording fee, toward the 120 credit hours required for graduation. (See Departmental Proficiency Examinations.) An exemption may be granted for ENG 105, but these credit hours may not be applied toward the 120 credit hours required for graduation.

**Credit Only**

Only free electives may be taken under this option. Courses which satisfy the major, minor, the distributions of the School, the General Education Requirements of the University or any course for which a C or better is required may not be taken for credit only.

**Transfer Credit**

Transferred credit hours may not count toward the completion of a major without the written approval of the Associate Dean of the School of Education and Human Development.

**Transfer Students**

Transfer Students must take the General Knowledge Test (GKT), of the Florida Teacher Certification Exam, before enrolling in any Teaching and Learning Course. Students may submit their scores directly to the Associate Dean of the School of Education and Human Development.

**Required Areas of Study**

**English Composition** 3 – 6 credit hours

Students fulfill this requirement by satisfactorily completing ENG 105 and ENG 106 or its equivalent. Appropriate Advanced Placement (AP) or International Baccalaureate (IB) scores in English composition may be used to satisfy the ENG 105/ENG 106 requirement. An appropriate score on the SAT or ACT verbal examination may earn a student exemption from, but not credit hour in, ENG 105. Appropriate scores on other tests determined by the Department of English may earn a student exemption from, but not credit hour in, ENG 105. Courses satisfying the English Composition requirement may not be used to fulfill the Writing Across the Curriculum Required Area of Study.

**Mathematics**

B.S.Ed. degree candidates must complete MTH 113 or higher. Students who do not place directly into MTH 113 must enroll in either MTH 099 or MTH 101 based on results of placement tests.

**Foreign Languages** (not applicable)

**Areas of Knowledge and Cognate Requirements**

The University of Miami’s General Education requirements ensure that graduates have acquired essential intellectual skills and have engaged a range of academic disciplines. All new students will fulfill the General Education requirements by selecting a Cognate, which is a cluster of courses arranged by their content, field and interest.

- A cognate is a group of at least three related courses for at least 9 credit hours.
- The courses in a cognate are related in a topical, thematic, interdisciplinary, sequential, or other such fashion, so that completion of a cognate provides coherent depth of knowledge in the area.
- Student must take three cognates to fulfill the Areas of Knowledge requirement,
  - one in the Arts & Humanities (A&H),
  - one in People & Society (P&S), Satisfied by the Elementary Education/Special Education major.
  - one in Science, Technology, Engineering & Mathematics (STEM).
- Each cognate has course options that allow students to complete the cognate in ways that meet their individual interests, while staying within the coherent focus of the cognate.
- In addition to the cognates that have been designed by faculty, each major and minor fulfills the cognate requirement in one area.
  - Exercise Physiology and Athletic Training majors will fulfill the STEM cognate.
  - Sport Administration, Human and Social Development, and Elementary/ESE majors will fulfill the P&S cognate.
- An approved list of cognates can be found on the University of Miami website.

**Writing**

Every student majoring in Teaching and Learning, will meet the Advanced Writing and Communication Requirement upon fulfillment of their major courses. These courses have a prerequisite requirement of ENG 105 and ENG 106 and will be identified as either writing intensive or as an oral/verbal communication proficiency course or both. Digital competency for both written and oral competencies will be assessed. Writing intensive courses require a minimum of 2500 written words; assignments will be assessed for analytical ability, synthesis of information, grammar, content and style. Courses designated as an oral/verbal proficiency class will provide students an opportunity to demonstrate their presentation skills using accurate standard English structure and syntax, non-verbal cues and gestures, as well as audience appropriate language. Courses for the TAL Major which meet the Advanced Writing and Communication Skills Requirement are TAL 332 and TAL 428

**Majors**

Every candidate for the B.S.Ed. degree in the Department of Teaching and Learning must choose a major in Elementary/Exceptional Student Education (ESE) with ESOL and Reading endorsements.

**Minors**

Every candidate for a B.S. Ed. in Elementary Education/ESE must select a minor outside of the department of TAL.

**Electives**

Electives may be chosen from any courses offered by the University. The student should consult an advisor before selecting elective courses. At least 6 credit hours must be at the 300 level or above. Students may
select elective course credits beyond the major, minor and general education requirements to complete a total of 120 credits required for the degree.

Note: Common prerequisites and total length for state-approved teacher education programs are subject to revision based on legislative and State of Florida Department of Education rule changes.

### General Education Assessment

Seniors are required to participate in the General Education Assessment prior to graduation as a part of the SACS review process.

Please note: Students may not register for any class above TAL 332 without admission to Teacher Candidacy. Please see the requirements for Teacher Candidacy on the TAL Department page (p. 417).

Please note: Students are strongly encouraged to register for TAL 203 and TAL 324.

Mission
The mission of the University of Miami (UM) School of Education and Human Development is to prepare the next generation of leaders, researchers, and agents of change and well-being in education and the community. The Department of Teaching and Learning (TAL) is the unit that oversees all Teacher Preparation Programs at UM.

Goals
The goal of Teacher Preparation Programs in the Teaching & Learning Department is to prepare University of Miami students to teach K-12 students in Elementary/Exceptional Student Education with ESOL & Reading Endorsement. The major, once completed, leads to eligibility for State of Florida Professional Teaching Certification.

Student Learning Outcomes
- Students in the Elementary/Exceptional Student Education with ESOL & Reading Endorsement Program will demonstrate in-depth knowledge in their area of specialization by correctly answering 80% of the questions on the Florida Teacher Certification Examinations (FTCE) by the time they graduate.
- Students will demonstrate Mastery of the Florida Educator Accomplished Practices.
- Students will demonstrate knowledge of Pedagogy and Effective Teaching Practices.

1. All courses must be passed with a C or high with a minimum of 2.5 GPA for the minor.
2. It is strongly recommended that students enroll in courses for this minor which do not include Field Experience. Please see an advisor for a list of those courses.
3. TAL 107, TAL 207, TAL 307, TAL 407, and TAL 191 do NOT count toward the minor.
4. This minor does not lead to teaching credentials.

Professional Training Option Minor
The Professional Training Option (PTO) is a Florida Department of Education approved pathway for non-education majors to complete the Professional Education component, one of the requirements to become a certified teacher in the State of Florida. Please be advised that students seeking the PTO must be majoring or minoring in a teachable subject. The PTO is an 18 credit minor.

Students must pass the specified tests of the Florida Teacher Certification Exam. These tests include the General Knowledge Test (all four sections) and the Subject Area Exam of the student’s discipline area (Biology, English, Math etc...). These tests must be passed prior to graduation in order to be eligible for the State of Florida Stamp applied to transcripts.

All courses must be passed with a C or high with a minimum of 2.5 GPA for the minor.

Students must pass all 4 sections of the General Knowledge Exam (GKT), part of the FTCE, in order to be eligible for 400 level courses or higher.

### Professional Training Option Certificate

The Professional Training Option (PTO) is a Florida Department of Education approved pathway for non-education majors to complete the Professional Education component, one of the requirements to become a certified teacher in the State of Florida. Please be advised that students seeking the PTO must be majoring in a teachable area in order to participate in the program.

The PTO minor consists of 18 credit hours passed with a C or higher with an overall GPA of 2.5 or higher. Upon successful completion of the coursework and passing the required Florida Teacher Certification Exams (FTCE) student’s UM transcripts will indicate that the student has completed a Florida State-approved PTO program. Students will then be eligible to apply for a 3-year Temporary Teaching Certificate in the State of Florida. There is a one-year of successful teaching requirement in an accredited school in Florida in order to apply for a Professional Teaching Certificate. Please note: Students must have passing scores on the FTCE prior to graduation in order to be eligible for the PTO Stamp.

Mission

The College of Engineering is committed to educating tomorrow's technology leaders for career success.

The objective of the College of Engineering is to serve society by offering high quality educational programs in the professional areas that it covers, and by performing research and community service, with high professional standards. The College is dedicated to educating engineers to deal with the major issues of society over the next generation - enhancing competitiveness, advancing health care, coming into harmony with the environment, utilizing technology for humankind's benefit, and supporting a sophisticated infrastructure. The goal of the faculty is to prepare students to be employed effectively in manufacturing, consulting, construction, information technology, service industries, and those related to the medical industry and health care, in roles involving planning, design and implementation at all levels of decision making. Students are broadly prepared in technical, leadership, and management skills. Student development accrues both inside and outside the classroom, with input from faculty, employers, alumni, and other students. They are made acutely aware of environmental and international perspectives. Professional competence in the traditional sense is complemented by a broad capability to function in society. The College places great emphasis on providing students with a learning experience which will enable them to develop productive careers while creating engineering solutions to problems of our society. Learning is centered around real life experiences, which involve an understanding of science, mathematics, social values, and aesthetics, to produce economical solutions to physical problems which society encounters. Protection and enhancement of the environment is stressed at all levels, and emphasis is placed on the creative application of knowledge which will improve the quality of life.

Department and Programs

The College of Engineering has five departments:

- Biomedical Engineering,
- Civil, Architectural, and Environmental Engineering,
- Electrical and Computer Engineering,
- Industrial Engineering,
- Mechanical and Aerospace Engineering

offering curricula leading to Bachelor of Science degrees in the following fields:

- Aerospace Engineering,
- Architectural Engineering,
- Biomedical Engineering,
- Civil Engineering,
- Computer Engineering,
- Electrical Engineering,
- Engineering Science,
- Environmental Engineering,
- Industrial Engineering,
- Mechanical Engineering.

Interdisciplinary areas of study, areas of specialization within departments, and study in two entirely different areas are available through options, concentrations and dual degree programs.

Accreditation

The programs in Aerospace Engineering, Architectural Engineering, Biomedical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Environmental Engineering, Industrial Engineering, and Mechanical Engineering are accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (http://www.abet.org) (ABET)

415 North Charles Street
Baltimore, MD 21201
telephone: 410-347-7700

The program in Engineering Science is not accredited.

The College offers graduate programs leading to degrees both in the traditional and interdisciplinary areas of study. Programs leading to the M.S. degree may include specialization in the following areas of study: Aerospace Engineering, Architectural Engineering, Civil Engineering, Electrical and Computer Engineering, Engineering Management, Environmental Engineering, Industrial Engineering, Mechanical Engineering, Medical Informatics, Structural Engineering, and Thermal and Fluid Sciences.

Engineering Laboratories

The College of Engineering maintains a variety of well-equipped laboratories adequate for undergraduate instruction and providing for graduate and sponsored research.

Computer Laboratory
- Clarke Computational Laboratory
- Computer Graphics Laboratory

Biomedical Engineering Laboratories
- Biomedical Design and Instrumentation Laboratory
- Biomaterials/Circulatory Assist Device Laboratory
- Biomedical Atomic Force Microscopy Laboratory
- Biomedical Optics Laboratory
- Biomedical Optical Engineering Laboratory
- Joint Bioengineering and Endourology Laboratory
- Measurements Laboratory
- Medical Imaging Laboratory
- Neuropsychoesthetics Research Group
- Neurosensory Engineering Laboratory
- Stem Cell and Mechanobiology Laboratory
- Tissue Biomechanics Laboratory
- Tissue Engineering Laboratory

Civil, Architectural and Environmental Engineering Laboratories
- Environmental Engineering Laboratory
- Geotechnical Engineering Laboratory
- Mechanics of Solids and Materials Laboratory
• Structures and Materials Laboratory
• Sustainable Building Systems Laboratory

**Electrical and Computer Engineering Laboratories**
• Electronics Laboratory
• Wireless Communications Laboratory
• Digital Signal Processing Laboratory
• Electrical Machinery Laboratory
• Digital Design Laboratory
• Microprocessor Laboratory
• Photonics and Micro-Devices Laboratory
• Distributed Decision Environments Laboratory
• Underwater Imaging Laboratory
• Networks Laboratory
• Embedded Systems Laboratory
• Computer Vision and Image Processing Laboratory
• Information Technology Laboratory
• Multimedia Laboratory
• Digital Audio and Speech Processing Laboratory
• Optics and Fiber Communications Laboratory
• ECE Computer Laboratory
• Nanophotonics and Devices Laboratory
• MEMS and VLSI Laboratory

**Industrial Engineering Laboratories**
• Computer Integrated Manufacturing Laboratory
• Industrial Hygiene Laboratory
• Biomechanics and Gait Laboratory
• Human Factors and Aging Research Laboratory
• Productivity Research Laboratory
• Work Design Laboratory
• Work Physiology Laboratory
• Systems and Operations Research Laboratory
• Industrial Ventilation Laboratory
• Robotics Laboratory

**Mechanical and Aerospace Engineering Laboratories**
• Aerospace Materials Simulation Laboratory
• Aerodynamics and Computational Fluid Dynamics Laboratory
• Design and Manufacturing Laboratory
• Fuel Cells Laboratory
• Thermo-Fluid Mechanics Laboratory
• Integrated Nano-Bio-Systems Laboratory
• Internal Combustion Laboratory
• Materials Laboratory
• Materials Modeling Laboratory
• Measurements Laboratory
• Multifunctional Composite Materials Laboratory
• Optimization and Reliability Laboratory
• Robotics and Intelligent Systems Engineering Laboratory
• Stress Analysis Laboratory
• Tissue Biomechanics Laboratory
• Wind Tunnel Laboratory

---

**Academic Policies**

**Admission**

Admission to the College of Engineering is covered under the section on Admission to the University in the General Information section of this Bulletin. Algebra, trigonometry, analytic geometry, chemistry, computer literacy, and physics are high school subjects that are appropriate for students planning on entering the College.

The academic work of each transfer student will be evaluated on an individual basis, and the student will be enrolled in the College at an appropriate level.

**Requirements for Graduation**

The College believes that emphasis should be placed on the student’s ultimate level of attainment in selected subject areas. For those students whose preparation is advanced beyond that of the average secondary school graduate, the University provides proficiency examinations and schedules the students for more advanced work. Graduation for these students may be accelerated. For those students whose secondary school preparation has not provided an adequate background, the University offers preparatory courses. Graduation for these students may be delayed accordingly.

The student’s program of study is selected jointly with an adviser, with special attention to the individual student’s needs. Flexibility is ordinarily possible within the framework of sound education in the essential fundamentals and within the development of depth in selected fields of design and analysis. An examination of a typical curriculum given under the various department sections of this Bulletin shows that there is a strong common core of studies. Therefore, students uncertain of their ultimate field of specialization retain a high degree of mobility to enable them to transfer from one curriculum to another.

Each student must demonstrate upon admission an adequate preparation in the necessary skills of reading, writing, and mathematics. Placement test scores will indicate which, if any, supplementary courses must be taken the first semester. Although these courses are recorded for University credit hour, the student must take the full curriculum, as listed, in addition to these courses. Students not prepared in these areas are advised to make every effort to correct deficiencies before the first semester.

Completion of any of the prescribed curricula, except Engineering Science, with an overall grade point average of at least 2.0 (C) in all course work, to include all accepted work from other institution(s), is the basic requirement for graduation in the College. An average of C also must be attained in all work attempted at the University of Miami and the professional studies. The Engineering Science curriculum, because of its special purpose, has a higher requirement, i.e., a grade point average of 3.0 (B).

The requirements for graduation as specified by each Department and Program reflect the general education requirements of the University of Miami and the requirements of the appropriate accrediting agencies. The curricula contain required courses and elective courses. No course required for graduation may be taken under the credit-no credit (Credit-Only) option.

Students are expected to make satisfactory progress toward graduation by meeting the criteria established above. Whenever a student fails to demonstrate positive academic progress, he/she may be placed...
on academic probation or dismissed by the College of Engineering Scholastic Standards and Advising (SSA) Committee.

**General Educational Requirements**

**Areas of Knowledge**

Students at the College of Engineering fulfill the Areas of Knowledge requirement by completing three **cognates**, one from each of the three areas of the university curriculum:

- Arts & Humanities;
- People & Society; and
- Science, Technology, Engineering & Mathematics.

For students in the College of Engineering, their engineering major will count as a cognate in Science, Technology, Engineering & Mathematics. These students have to complete a cognate in People & Society and Arts & Humanities.

A cognate is a group of at least three courses for at least nine credit hours, related in a topical, thematic, interdisciplinary, sequential, or other fashion, so that completion of a cognate provides coherent depth of knowledge. Each cognate has course options that allow students to complete the cognate in a manner that meets their interests, while staying within the coherent focus of the cognate. While students are required to take three cognates to fulfill the Areas of Knowledge requirement, there is no limit to the number of additional cognates students may complete. All cognates completed by students are listed on the students’ transcripts, thus certifying their depth of knowledge in those areas.

The university offers a large number and range of cognates. All approved cognates are visible in a cognate search engine (at [www.miami.edu/cognates](http://www.miami.edu/cognates)) that allows students to search for cognates based on cognate features, cognate courses, and keywords. Each cognate is administered by a department or program that is designated as the Responsible Academic Unit (RAU) for the cognate. Inquiries regarding a cognate should be directed to the cognate’s RAU.

Engineering students satisfy the University’s Advanced Writing and Communication Skills requirement by completing a set of classroom courses, laboratory courses and design courses where they learn effective oral, graphical and technical writing skills. These requirements are specified under each department.

The student’s official records are maintained by the Office of Enrollment Services. It is the student’s obligation to take the initiative to assure that all requirements are being met in conformity with his/her own graduation plans.

**Degree Programs**

**Dual Majors**

Dual majors are offered for engineering students with strong interest in related fields of study such as Physics or Mathematics. In order to obtain a dual major in one of these areas, the student will have to obtain, in parallel, a degree in one of the engineering programs, plus additional course work approved by the dual majors department. Further information on this dual major program may be obtained from the Dean’s Office of the College.

**Minors**

Minors are offered by the College of Engineering. The departments of:

- Civil, Architectural, and Environmental Engineering,
- Electrical and Computer Engineering,
- Industrial Engineering, and
- Mechanical Engineering

offer minors with various areas of specialization. Details of each area of concentration and its requirements may be found under each departmental listing.

Engineering students can earn a minor offered by any other College/School within the University of Miami, including the College of Engineering. In cases where the major degree requirements satisfy some of the requirements for the minor, at least six credit hours beyond the major degree requirements must be taken in the minor subject area to earn a minor. Minors in Engineering require a minimum GPA of 2.0 in the courses required for the minor.

**Departmental Honors Program**

A student in the College of Engineering may graduate with Departmental Honors noted upon his/her diploma and transcript upon fulfillment of the following requirements:

1. Completion of at least 18 credit hours of course work in honors courses and/or in courses at the 500 level, including 6 credit hours in independent study, senior thesis, or designated advanced or special honors courses specified by the department, with grades of at least B in these 6 credit hours.
2. Attainment of at least a 3.4 overall grade point average. Transfer students must also attain at least a 3.4 grade point average in all work taken at the University of Miami.
3. Attainment of at least a 3.5 average in the departmental major courses.
4. A written request from the student to the departmental faculty during his/her semester of expected graduation stating the desire to graduate with Departmental Honors, and specifying those courses taken in compliance with section (A) above.

**Certificate Programs in Engineering**

In cooperation with the University's School of Continuing Studies, the College of Engineering offers practicing engineers advanced or specialized training without having to meet the stringent entrance requirements of the Graduate School. Persons holding Bachelor's degrees, registered as Professional Engineers, or possessing equivalent qualifications can be granted Certificates of Proficiency by the University after completing fifteen credit hours of course work in a specified field of engineering. Study programs are arranged on an individual basis by each student and his/her advisor. Detailed information on Certificate Programs can be requested from the Office of the Dean of Engineering.

**The Internship Cooperative Program**

The Cooperative Program takes its name from the close cooperation that exists between the College and participating employers. This arrangement attempts to insure that each student's academic and work experience will integrate and contribute significantly to his/her overall growth and professional development. Interviews and screening by both the employer and Cooperative Program personnel attempt to match the needs of the employer carefully with the interests and capability of the student.
Advantages to the Student
1. Offers on-the-job experience to supplement the academic degree program.
2. Offers potential long term career employment with the Cooperative Program employer.
3. The experience obtained makes the student, upon graduation, potentially much more valuable to any future employer. Upon completion of an appropriate amount and level of experience, graduation in the Cooperative Program may be recognized by a special seal on the student’s diploma.
4. Helps the student to verify whether or not his/her career or specialty choice is correct.
5. Tends to increase motivation and to make academic studies more meaningful.
6. Earnings from Cooperative Program employment can cover a significant portion of the student’s college expenses.
7. Certain work experience may shorten the experience requirements, after graduation, for eligibility for professional registration.
8. Helps to develop the students understanding of human relations and the lifelong need of learning to balance appropriately the demands on ones time of multiple duties such as studying, employment, daily necessities, family obligations, etc.

Advantages to the Employer
1. Offers an opportunity to recruit and screen potential employees in the fields of engineering.
2. The Cooperative Program maintains an up-to-date roster of available undergraduate and graduate students, many with previous experience. This roster offers employers means of obtaining employees to meet fluctuating work loads, on relatively short notice.
3. Students in the Cooperative Program can provide good company public relations with their classmates.
4. Participation in a Cooperative Program serves the profession by providing opportunities for many capable and well deserving young persons to attend a University, who otherwise might lack the financial ability or motivation to attend.

Types of Cooperative Program Arrangements
Continuous Work-Study
An arrangement involving a combination of part-time employment (15 or more hours per week) and a credit hour academic load which is appropriately reduced from the normal full-time load to balance the employment duties. Full-time employment may be undertaken during the summer period. Two students may be used during the year to share the hours of a full-time position (20 hours each student). In some instances, an individual student will hold a full-time position and carry a light academic load in evening and/or early morning classes.

Alternating Work-Study
An arrangement involving two students alternating full-time employment and full-time study. Students alternate positions of work and study at the end of each semester (including the summer), and thereby provide the equivalent employee time of a full-time position year-round.

Student Eligibility for the Program
University of Miami students enrolled in the College of Engineering are eligible to enter the Cooperative Program. Initial entry into the Program is limited to superior students. Normally, work assignments are not given until the equivalent of one or two semesters of full-time academic work is completed. Currently, most students in the Program are under continuous work-study arrangements.

Study Abroad Programs
The College of Engineering encourages its students to take advantage of one of the University of Miami’s numerous study abroad options in Latin America, Europe, Asia, Australia and the Middle East, especially through partners in the Global Engineering Education Exchange (GE3). Of particular interest to Engineering students are the following: internships (unpaid and paid) in Spain, England, France, Argentina, Colombia, Chile, and Australia in which professional work experience is carried out abroad; course work at Engineering schools abroad for a semester or an academic year; summer programs in intensive Language instruction, Humanities and Social Sciences abroad. The cost of attending these programs is equivalent to University of Miami tuition and fees. Almost all University of Miami financial aid is granted. With prior approval and detailed curriculum advice, courses taken abroad will apply towards graduation.

The Management of Technology Supplemental Program
The objective of this program is to educate engineers in how to exploit their technological knowledge. This is a vital, but often neglected, link in achieving competitiveness in the global marketplace. The basic premise motivating this approach is the recognition that in today’s world, technology is the backbone of the business enterprise system and that wealth can only be created through production of goods and services. This program will educate engineers in a multitude of subjects bridging the gap between product technology, production technology and the marketplace, which is the ultimate customer of engineering contributions.

The program consists of four courses:
1. Quality in Design of Products and Production Systems
2. Entrepreneurship for Engineers
3. Production Systems Design

A project is required at the end of the program, but is threaded throughout the program starting with the first course. Upon completion of the program, the student will receive a special certificate of completion. This program is available to all qualified students in all departments of the College of Engineering.

Admission to the Program
Admission to this supplemental program will be by application submitted by the candidate or by nomination by an advisor or department chair. All applications will be reviewed by a standing committee. Students must meet the prerequisite of each course before enrolling in it.

Requirements for the Certificate
The program is an add-on to existing curriculum. Students must complete all courses designated in order to qualify for the certificate. A notation will be made on the student’s transcript recognizing their completion of the special program. No designation will be made on the diploma.
Course Sequence
Courses are recommended to be taken in the sequence indicated above.

Team Work
Students will be encouraged to work on projects in teams. Multidisciplinary teams will also be encouraged.

The College is primarily housed in the J. Neville McArthur Building. Completed in 1959 and renovated in 1984, this attractive building is the gift of the late J. Neville McArthur, who was a member of the Board of Trustees and a prominent citizen and dairyman. The Engineering Addition is also a gift of the McArthur family. Students in the College of Engineering come from all parts of the United States and from many nations throughout the world, comprising one of the most diverse and cosmopolitan engineering student bodies in the country.

Combined BS/MS Program
The College offers a five-year Bachelor of Science and Master of Science BS/MS degree program in Architectural Engineering, Biomedical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Environmental Engineering, Industrial Engineering, and Mechanical Engineering. This program is specifically designed for those students who want to pursue their graduate study as they are completing their undergraduate study. Both degrees are awarded at the completion of required coursework for both the BS and MS degrees. The special conditions and processes for the five-year BS/MS Program are as follows:

Requirements
You must be an undergraduate student in the College of Engineering (CoE). A master's degree is considered the first professional degree in engineering. The Admission Committee will carefully review academic credentials for admission into our M.S. program. Students should discuss the program and possibility of entering with an academic adviser. Completed applications are due prior to the beginning of your junior year.

Application Process
Interested CoE students must complete the application process during their "junior" year. Applicants will need to provide all the required documentation outlined on the on-line graduate application including 3 recommenders, a UM transcript sent directly from the UM Office of the Registrar and official GRE test scores of 300 or higher sent directly from ETS, the testing agency. An admission decision will not be made until all required application materials have been received and processed for review by the Admission Committee.

Financial Implications
Many financial aid programs, including those offered by the University and the federal and state governments are restricted to coursework required to complete an undergraduate degree. For further information contact the University of Miami Financial Aid Office.

Once admitted into BS-MS program
In your senior year when you have a full time undergraduate status, you may take a maximum of twelve (12) graduate credit hours (a maximum of six (6) credit hours per semester) with approval of your academic advisor. In order to register for these classes, you must complete and submit the UM Graduate School "Application for Undergraduate to Take Graduate Course" special form.

During your last one or two semesters, when you are taking graduate course work only, register as a graduate student.

A student wishing to withdraw from the BS/MS Program without the MS degree must complete all the requirements for the BS degree.

To qualify for the MS degree, the student must meet all the pertinent Graduate School requirements, including an acceptable score on the GRE (Graduate Record Examination) and a minimum of 3.0 GPA in the credit hours applied toward the MS degree.

The student is awarded both the BS and MS degrees at the end of the fifth year when all degree requirements are satisfied.

The Doctor of Philosophy Degree is currently offered in the area of:

- Biomedical Engineering
- Civil Engineering
- Electrical and Computer Engineering
- Ergonomics and Human Factors
- Industrial Engineering
- Mechanical Engineering

The Ph.D. programs in Interdepartmental Graduate Studies permit, with approval of the Graduate Council, highly qualified students to pursue a privileged individualized program which cuts across disciplinary lines.

The Bulletin of the Graduate School (p. 802) presents more detailed information on these graduate programs.

The College is primarily housed in the J. Neville McArthur Building. Completed in 1959 and renovated in 1984, this attractive building is the gift of the late J. Neville McArthur, who was a member of the Board of Trustees and a prominent citizen and dairyman. The Engineering Addition is also a gift of the McArthur family. Students in the College of Engineering come from all parts of the United States and from many nations throughout the world, comprising one of the most diverse and cosmopolitan engineering student bodies in the country.

Foote Fellows in CoE
The Foote Fellows Honors Program recognizes the most educationally accomplished incoming students at the University of Miami. Foote Fellows have distinguished themselves both in and out of the classroom at their previous schools, are self-motivated, and think independently. Admission to the Foote Fellows Honors Program is by invitation.

Foote Fellows in the College of Engineering are exempt from the Cognates Program of General Education requirements within the curricular framework of their major. Within the curricular framework of their majors, Foote Fellows enjoy unmatched freedom and flexibility to explore a multitude of educational resources. Many Foote Fellows leverage this opportunity to take additional majors and/or minors and to study abroad.

At each of the nine undergraduate schools at the University of Miami, a dedicated adviser helps Foote Fellows chart their academic path and attain access to distinctive learning opportunities at the University, such as special school-based seminars, faculty-mentored research, networking opportunities, and off-campus internships.

Foote Fellows also will be invited to join advanced, interdisciplinary Foote Fellow seminars taught by leading faculty members from across the
University. An example is Books That Matter, a rigorous seminar in non-fiction reading that is offered in sessions for first-year and for upper-class students. Freshman Foote Fellows benefit from early move-in to the residential colleges. Further, Foote Fellows receive focused advising on post-baccalaureate distinguished fellowships and awards.

The Foote Fellows Honors Program reflects the educational vision of former University of Miami President Edward T. Foote, who retired in 2000 after serving the University for twenty years.

Biomedical Engineering

http://www.miami.edu/bme

Dept. Code: BME

Introduction

Biomedical engineering is a multidisciplinary field that addresses problems at the interface of engineering, medicine, and the life sciences. Examples include the design of medical devices, implants and prostheses; the development of new biomaterials or drug delivery systems; the engineering of cells and tissues; the design of optical and laser systems for diagnostic and therapy; the development of medical imaging systems and algorithms for medical image processing; and the acquisition, interpretation and use of physiological signals to assess and control physiological function, such as the use of brain signals to control movement in brain computer interfaces. Biomedical engineering has an impact on virtually all fields of medicine.

The Department of Biomedical Engineering at the University of Miami was formally created in 1979 as a graduate program. The four-year undergraduate program leading to the B.S degree in BME was established approximately ten years later to address the need for professional biomedical engineers. The undergraduate BME program at the University of Miami was the first of its kind in Florida, with the first class of B.S.B.E. students graduating in 1993. It has been continuously accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board of Engineering and Technology (ABET) since 1997. The Department of Biomedical Engineering also offers graduate courses leading to the Master of Science and Doctor of Philosophy degrees and it includes a graduate program in Medical Physics. The PhD program in Biomedical Engineering is also a degree-granting program of the University’s MD/PhD program. In addition, qualified undergraduate students may apply for the combined BS/MS program (details are provided following the curricula for the BS degrees).

Graduates of the biomedical engineering undergraduate program find employment in industry or continue their studies either in graduate school or in a professional school in medicine and other health-related disciplines (such as dentistry, optometry, orthotics), law or business.

Some special features of the program include the small class size and open-door policy of the faculty, which facilitates student-faculty interaction. The Department has very strong ties with the University of Miami Miller School of Medicine and with industry. Undergraduate students have a wide range of research and internship opportunities in some of the leading research laboratories in their respective field. The Department strongly encourages undergraduate student participation in research and professional activities.

Program Description

Curriculum

The two educational objectives of the Biomedical Engineering program are achieved via the implementation of a curriculum with four parallel concentrations which include a common core and concentration-specific courses. The core curriculum is designed to provide a broad foundation in the basic sciences and in engineering. Concentration-specific courses provide the depth required to be proficient engineers.

The four concentrations are:

- Biomaterials and Tissue (B)
- Electrical (E),
- Mechanical (M),
- Premedical (P)

The Biomaterials and Tissue concentration provides training in the fundamental aspects of cell and tissue biology, design of biomaterial scaffolds and implants, and the application of tissue engineered constructs toward repair, restoration, and regeneration of damaged cells, tissues and organs. The Electrical concentration provides training in the fundamental aspects of electronics and signal processing, design of instrumentation, sensors, imaging systems and neural interfaces, and the application of biomedical technology to the measurement, control and rehabilitation of tissue and organ function. The Mechanical concentration provides training in the fundamental aspects of solid, fluid, and computational mechanics, design and modeling of biomedical devices such as artificial implants, and prostheses and the application of biomechanical principles toward assessment and restoration of tissue and organ function. The Premedical concentration is designed for students who plan to seek admission to medical school. In addition to providing core training in biomedical engineering, the Premedical concentration ensures that students meet the general requirements for admission to medical school.

The curriculum is designed to provide all graduates with the analytical and design skills required to formulate and solve problems at the interface of engineering, medicine and the life sciences. Required courses in the humanities and social sciences provide students with an awareness of social, ethical and environmental issues related to their profession. The curriculum has been carefully designed with the prerequisite structure in mind so that students have to draw from previously acquired knowledge to complete the upper level course requirements successfully. The curriculum includes two or three technical electives selected by the student based on their individual professional interests. The curriculum places a special emphasis on written and oral communication skills. Many of the Biomedical Engineering courses, as well as the capstone design project, include a requirement for a written term paper and oral presentation on a course-related topic related to the class.

Advanced Writing and Communication Skills

Biomedical Engineering students satisfy the University’s Advanced Writing and Communication Skills requirement by completing a set of classroom courses, laboratory courses and design courses where they learn effective oral, graphical and technical writing skills. Biomedical Engineering students acquire Advanced Writing and Communication skills in the following core courses:
Degree Programs

The department offers one degree program with four concentrations: Electrical, Mechanical, Biomaterials and Tissue, and Premed. A list of the core science and engineering courses common to all four concentrations is provided below, followed by a tabular listing of the course requirements for the degree Bachelor of Science in Biomedical Engineering for each concentration.

### Dual Major

The College of Engineering offers a dual major in Biomedical Engineering for students that are majoring in another engineering Department. In order to obtain the dual major in Biomedical Engineering, the student will have to obtain, in parallel, a major in one of the fundamental engineering programs, plus 24 credit hours of course work, including 19 credit hours of required course work and 5 credit hours of elective course work from the lists given below. Of this total of 24 credit hours, at least 12 have to be at the level of 400 and above.

The required courses for the dual major are:

</tbody>
</table>

**Total Credit Hours**: 19

The electives are to be chosen from the BME course list.

### Departmental Honors

Upon request departmental honor is noted in a student’s diploma and transcript upon fulfillment of the requirements specified in the College Bulletin.

### Majors in Biomedical Engineering

The four concentrations in Biomedical Engineering include 112 core credits, with the remaining 21 credits pertaining to each concentrations. The core credits include General Education (24), Common-Core Math Science (39), and Common-Core Engineering (49). The table below details the common-core courses.

- B.S. in Biomedical Engineering - Biomaterials and Tissue Concentration (p. 431)
- B.S. in Biomedical Engineering - Electrical Concentration (p. 432)
- B.S. in Biomedical Engineering - Mechanical Concentration (p. 434)
- B.S. in Biomedical Engineering - Premed Concentration (p. 436)

### Dual B.S./M.S. Degrees in Biomedical Engineering

- B.S./M.S. in Biomedical Engineering - Electrical Concentration (p. 440)
- B.S./M.S. in Biomedical Engineering - Mechanical Concentration (p. 442)
- B.S./M.S. in Biomedical Engineering - Biomaterials and Tissue Concentration (p. 438)
- B.S./M.S. in Biomedical Engineering - Premed Concentration (p. 444)
B.S. in Biomedical Engineering - Biomaterials and Tissue
Curriculum Requirements

In addition to the Common-Core courses, students in the Biomaterials and Tissue concentration are required to complete the following courses:

Mission
The mission of the biomedical engineering program is to prepare students to become knowledgeable and skilled engineers with an understanding of the ethical and other professional aspects of biomedical engineering. Design skills and an ability to work both independently and as part of a team are emphasized.

Goals
The educational objectives of the program are to graduate engineers who will apply their knowledge, technical skills, and ability to solve problems at the interface of engineering and life sciences. Within a few years after graduation they will be:

1. Working as professionals in biomedical engineering or related fields.
2. Continuing their education to advance their careers through professional development activities or through the pursuit of advanced degrees.

Student Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

B.S. in Biomedical Engineering - Electrical

Curriculum Requirements
In addition to the Common-Core courses, students in the Electrical concentration are required to complete the following courses:

<table>

Credit Hours: 16

Total Credit Hours: 133

1. PS/HA Cognate: Students must complete a minimum of 1 People & Society (PS) cognate and 1 Humanities & Arts (HA) cognate, to be selected from the list of available cognates (http://www.miami.edu/index.php/registrar/cognates/). Each cognate should be a minimum of 3 courses (9 credit hours).

2. Technical Electives are chosen from the BME course offerings (300 level and above) with the approval of the advisor. Any other courses selected need to be approved by the advisor and the chairperson.

3. Technical Elective Labs are selected from BME 507, BME 567, BME 303, ECE 203, or BME 395.

Mission

The mission of the biomedical engineering program is to prepare students to become knowledgeable and skilled engineers with an understanding of the ethical and other professional aspects of biomedical engineering. Design skills and an ability to work both independently and as part of a team are emphasized.

Goals

The educational objectives of the program are to graduate engineers who will apply their knowledge, technical skills, and ability to solve problems at the interface of engineering and life sciences. Within a few years after graduation they will be:

1. Working as professionals in biomedical engineering or related fields.
2. Continuing their education to advance their careers through professional development activities or through the pursuit of advanced degrees.

Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

B.S. in Biomedical Engineering - Premed

Curriculum Requirements

In addition to the Common-Core courses, students in the Pre-Med concentration are required to complete the following courses:

<table>

Student Learning Outcomes

at the interface of engineering and life sciences. Within a few years after will apply their knowledge, technical skills, and ability to solve problems

The educational objectives of the program are to graduate engineers who

independently and as part of a team are emphasized.

Biomedical engineering. Design skills and an ability to work both

requirements of their medical school of interest to verify Adv.

Science Lab Elective is selected from a science lab

and welfare, as well as global, cultural, social, environmental, and
economic factors.

An ability to acquire and apply new knowledge as needed, using

B.S./M.S. in Biomedical Engineering

- Biomaterials and Tissue Concentration

• Juniors from any of the four BME Concentrations who have

maintained at least a 3.0 CGPA have the option to apply for admission to the combined BS-MS in Biomedical Engineering program.

• Those who are accepted into this accelerated program must maintain at least a 3.0 CGPA and a minimum of a 3.0 GPA for the final 30 credit hours to meet the requirements of the Graduate School.

• The participants complete BME 705 in lieu of BME 402/BME 403.

• Up to 6 credit hours of Technical electives earned during the fourth year can be counted toward the 30 credit hours required for the MS degree. If their schedule allows, students may be able to complete an additional 3 credits of graduate classes during their fourth year.

• Students must be registered for a minimum of 12 undergraduate credit hours per semester in their fourth year.

• Students can register for a maximum of 6 graduate credit hours in each semester of their fourth year.

• If a student needs to withdraw from the BS/MS BME program then all the requirements for the specific BS BME Concentration must be completed for graduation with the BS BME degree.

- PHY 225  University Physics III Lab 1
- PS/HA Cognate 1

**Additional Requirements**

- ENG 105  English Composition I 3
- ENG 107  English Composition II: Science and Technology 3
- Arts and Humanities Cognate 9
- People and Society Cognate 9
- Undergraduate Elective 0-6

Total Credit Hours 154-166

---

**B.S./M.S. in Biomedical Engineering - Electrical Concentration**

**Course**  
**Title**  
**Credit Hours**

**Freshman Year**

**Fall**

- BME 111  Introduction to Engineering I 3
- ENG 105  English Composition I 3
- MTH 151  Calculus I for Engineers 5
- PHY 221  University Physics I 3
- PS/HA Cognate 1

**Credit Hours** 17

**Spring**

- BME 112  Introduction to Biomedical Engineering 2
- CHM 111  Principles of Chemistry I 3
- CHM 113  Chemistry Laboratory I 1
- ENG 107  English Composition II: Science and Technology 3
- MTH 162  Calculus II 4
- PHY 222  University Physics II 3
- PHY 224  University Physics II Lab 1

**Credit Hours** 17

**Sophomore Year**

**Fall**

- BIL 150  General Biology 4
- BIL 151  General Biology Laboratory 1
- CHM 112  Principles of Chemistry II 3
- CHM 114  Chemistry Laboratory II 1
- ECE 201  Electrical Circuit Theory 3
- ECE 202  Electronics I 3
- ECE 315  Digital Design Laboratory 1

**Credit Hours** 15

**Junior Year**

**Fall**

- BME 312  Biomedical Statistics and Data Analysis 3
- BME 375  Fundamentals of Biomechanics 3
- BME 450  Biomedical Transport Phenomena 3
- ECE 202  Electronics I 3
- ECE 211  Logic Design 3
- PS/HA Cognate 1

**Credit Hours** 18

**Spring**

- BME 330  Foundations of Medical Imaging 3
- BME 335  Biomaterials 3
- BME 401  Biomedical Design 3
- BME 440  Biomedical Measurements 4
- ECE 315  Digital Design Laboratory 1
- PS/HA Cognate 1

**Credit Hours** 17

**Senior Year**

**Fall**

- BME 470  Biomedical Signal Analysis 3
- BME 507  LabView Applications for Biomedical Engineering 1
- BME 512  Regulatory Control of Biomedical Devices 3
- PS/HA Cognate 1
- Undergraduate Elective 0-3
- BME 705  Senior Design Project 3
- Technical Elective (Graduate) 4

**Credit Hours** 16-19

**Spring**

- BME 480  Biomedical Instrumentation 3
- BME 540  Microcomputer-Based Medical Instrumentation 3
- BME 541  Medical Electronic Systems Laboratory 2
- Technical Elective Lab 2

**Credit Hours** 1
B.S./M.S. in Biomedical Engineering - Mechanical Concentration

- Juniors from any of the four BME Concentrations who have maintained at least a 3.0 CGPA have the option to apply for admission to the combined BS-MS in Biomedical Engineering program.
- Those who are accepted into this accelerated program must maintain at least a 3.0 CGPA and a minimum of a 3.0 GPA for the final 30 credit hours to meet the requirements of the Graduate School.
- The participants complete BME 705 in lieu of BME 402/BME 403.
- Up to 6 credit hours of Technical electives earned during the fourth year can be counted toward the 30 credit hours required for the MS degree. If their schedule allows, students may be able to complete an additional 3 credits of their graduate classes during their fourth year.
- Students must be registered for a minimum of 12 undergraduate credit hours per semester in their fourth year.
- Students can register for a maximum of 6 graduate credit hours in each semester of their fourth year.
- If a student needs to withdraw from the BS/MS BME program then all the requirements for the specific BS BME Concentration must be completed for graduation with the BS BME degree.

1 PS/HA Cognate: Students must complete a minimum of 1 People & Society (PS) cognate and 1 Humanities & Arts (HA) cognate, to be selected from the list of available cognates (http://www.miami.edu/index.php/registrar/cognates/). Each cognate should be a minimum of 3 courses (9 credit hours).
2 Technical Elective Labs are selected from BME 506, BME 566 or BME 395.
3 The undergraduate elective is any undergraduate level course with a number of credit hours sufficient to ensure that the student is enrolled for a total of 12 undergraduate credit hours during each semester of the senior year. The undergraduate elective can be any undergraduate class, but students are encouraged to select an engineering or science course.
4 All Technical Electives are taken as graduate courses. They are graduate-level courses (600 level and above) chosen from the BME course offerings with the approval of the advisor. Non-BME courses need to be approved by the advisor and the chairperson.

### B.S./M.S. in Biomedical Engineering - Premed Concentration

- **Technical Elective**: Students must complete a minimum of 1 People & Society (PS) cognate and 1 Humanities & Arts (HA) cognate, to be selected from the list of available cognates (http://www.miami.edu/index.php/registrar/cognates/). Each cognate should be a minimum of 3 courses (9 credit hours).
- **Technical Elective Labs**: Technical Elective Labs are selected from BME 507, BME 566 or BME 395.
- The undergraduate elective is any undergraduate level course with a number of credit hours sufficient to ensure that the student is enrolled for a total of 12 undergraduate credit hours each semester of the senior year. The undergraduate elective can be any undergraduate class, but students are encouraged to select an engineering or science course.
- **Advanced Bioscience Elective**: All Technical Electives are taken as graduate courses. They are graduate-level courses (600 level and above) chosen from the BME course offerings with the approval of the advisor. Non BME Courses need to be approved by the advisor and the chairperson.

Environmental engineers are leaders in the application of engineering principles to improve and maintain the environment for the protection of human health, for the protection of nature's beneficial ecosystems, and for environment-related enhancement of the quality of human life. Environmental engineers are employed by government agencies, consulting firms, and universities.

Advanced Writing and Communication Skills

Civil, Architectural, and Environmental Engineering students satisfy the University's Advanced Writing and Communication Skills requirement by completing a set of classroom courses, laboratory courses, and design courses where they learn effective oral, graphical and technical writing skills. Civil, Architectural, and Environmental Engineering students acquire Advanced Writing and Communication skills in the following core courses:

- CAE 111 - Introduction to Engineering
- CAE 212 - Structures Laboratory (Civil and Architectural Engineering)
- CAE 345 - Environmental Laboratory (Environmental Engineering)
- CAE 371 - Geotechnical Laboratory (Civil and Architectural Engineering)
- CAE 402 - Professional Engineering Practice

**Majors in Civil, Architectural, and Environmental Engineering**

- B.S. in Civil Engineering (p. 449)
- B.S. in Architectural Engineering (p. 447)
- B.S. in Environmental Engineering (p. 451)

**Dual B.S./M.S. Degrees in Civil, Architectural, and Environmental Engineering**

The Department offers three 5-Year Programs leading to B.S. and M.S. degrees (BSCE-MSCE, BSAE-MSAE, BSEnE-MSCE), and a 6-Year program leading to a Bachelor of Science in Architectural Engineering and a Master of Architecture.

- B.S./M.S. in Civil Engineering (p. 456)
- B.S./M.S. in Architectural Engineering (p. 455)
- B.S. in Environmental Engineering/M.S. in Civil Engineering (p. 457)
- B.S. in Architectural Engineering and Master of Architecture Dual Degree Program (p. 453)
Minor in Civil, Architectural, and Environmental Engineering

- Civil Engineering (p. 457)
- Architectural Engineering (p. 457)
- Environmental Engineering (p. 458)

B.S. in Architectural Engineering

The Architectural Engineering curriculum provides an integrated educational experience in mathematics, basic sciences, humanities, social sciences, engineering sciences, and architectural engineering design. The Architectural Engineering program integrates design applications across the curriculum, beginning with building construction and architectural design in the sophomore year, and continuing with structural, building mechanical and electrical systems design, and construction management in the junior and senior years. The curriculum culminates with a major comprehensive design experience that includes applications from the major specialty areas of architectural engineering.

Graduate study is offered leading to the degree of Master of Science in Architectural Engineering (p. 815). For detailed information on graduate studies, see the Graduate Studies Bulletin.

*Internships, Practical Training, or other types of practicum are neither required nor optional credit-earning components in the established undergraduate curriculum. Credit earned through these experiences via UMI 305 will not count towards any CAE degree requirements.*
Mission
The mission of the Department of Civil, Architectural, and Environmental Engineering is to:

- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering that will prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research that will advance the body of knowledge and improve the quality of human life;
- Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

Goals
The educational objectives of the Architectural Engineering Program are to have graduates who within the first several years following graduation are either

1. Working as a professional in an area closely related to architectural engineering, or
2. Pursuing a graduate or professional degree.

Student Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
Curriculum Requirements

Science in Civil Engineering is shown below. A tabular listing of the course requirements for the degree of Bachelor of information on graduate studies, see the Graduate Studies Bulletin. Graduate study is offered leading to the degrees of engineering.

The curriculum culminates with a major senior-level design project that integrates engineering sciences with design applications in the areas of structural, environmental, geotechnical, and water resources engineering. The Civil Engineering curriculum provides an integrated educational experience in mathematics, basic sciences, humanities, social sciences, engineering sciences, and civil engineering design. The first two years of the Civil Engineering curriculum provide a strong foundation in mathematics, basic sciences, and engineering sciences. During the next two years of the four-year program, the Civil Engineering curriculum integrates engineering sciences with design applications in the areas of structural, environmental, geotechnical, and water resources engineering. The curriculum culminates with a major senior-level design project that includes design applications from the major specialty areas of civil engineering.

Graduate study is offered leading to the degrees of Master of Science and Doctor of Philosophy in Civil Engineering (p. 815). For detailed information on graduate studies, see the Graduate Studies Bulletin.

A tabular listing of the course requirements for the degree of Bachelor of Science in Civil Engineering is shown below.

1. Only offered once a year
2. To be selected from lists of approved People and Society (PS)/Humanities and Arts (HA) cognates, Technical, CEN Technical, and Basic Science electives. Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours)
3. CAE 520 or CAE 521

### Mission

The mission of the Department of Civil, Architectural & Environmental Engineering is to:

- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering to prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research to advance the body of knowledge and improve the quality of human life; and
- Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

### Goals

The educational objectives of the Civil Engineering Program are to have graduates who within the first several years following graduation are either

1. Working as a professional in an area closely related to civil engineering, or
2. Pursuing a graduate or professional degree.

### Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety,
and welfare, as well as global, cultural, social, environmental, and economic factors.

3. An ability to communicate effectively with a range of audiences.

4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

B.S. in Environmental Engineering

The Environmental Engineering curriculum provides an integrated educational experience in mathematics, basic sciences, humanities, social sciences, engineering sciences, and environmental engineering design. The first two years of the Environmental Engineering curriculum provide a strong foundation in mathematics, basic sciences, and engineering sciences. The next two years of the four-year program, integrate engineering sciences with design applications with particular emphasis in the areas of water and wastewater engineering.

Design courses emphasize an integrated approach that considers all environmental media in the prevention and control of environmental problems. The curriculum culminates with a major senior-level design project that includes design applications from the major specialty areas of environmental engineering.

1 Only offered once a year.
2 To be selected from approved lists of People and Society (https://cognates.miami.edu/explore/People%20/Society) (PS)/Humanities and Arts (https://cognates.miami.edu/explore/Arts%20/Humanities) (HA) cognates and Biology Electives.
3 Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours).
4 CAE 540, CAE 533 and CAE 542 offered on a 3-semester rotation. Students must take these three courses.

* Note: students must select the RSMAS course from the list of required (non-elective) courses in either the Ocean Engineering Track or the Marine Policy Track. A minor in Marine Science will be awarded for 15 credit hours of MSC, OCE or other RSMAS courses provided these include MSC 111, MSC 301 and at least 6 credit hours at the 300 level or higher. Required courses in the track count towards the 6 credit hours at the 300 level or higher.

**Mission**

The mission of the Department of Civil, Architectural, and Environmental Engineering is to:

- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering that will prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research that will advance the body of knowledge and improve the quality of human life;
Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

Goals

The educational objectives of the Environmental Engineering Program are to have graduates who within the first several years following graduation are either

1. Working as a professional in an area closely related to the water environment, or
2. Pursuing a graduate or professional degree.

Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

B.S. in Architectural Engineering/ Master of Architecture

A six-year dual-degree program leading to a Bachelor of Science in Architectural Engineering and a Master of Science in Architecture is available. The program is open to exceptional students who are admitted to the graduate program at the end of their junior year. Upon completion of this program, graduates are eligible for professional registration as both an engineer and an architect. The course requirements for the BSAE/MArch program are shown in the Plan of Study.

1  Shared BSAE/M.Arch Curriculum
2  M.Arch Curriculum
* To be selected from a People and Society (PS) Cognate
$ Only offered one per year.

B.S./M.S. in Architectural Engineering

This 5-Year program is open to students who are admitted to the graduate program at the end of their junior year. Students applying for this program should have a minimum grade point average of 3.0, and score more than 310 on the Graduate Record Examination. The course requirements for the MS portion of the five-year BS/MS programs can be met as follows:

**Minor in Architectural Engineering**

**Curriculum Requirements**

A minor in Civil, Architectural, and Environmental Engineering requires 15 credit hours passed with a grade of C or higher. Students are required to satisfy the prerequisites for all courses, and are required to complete the core course, CAE 210 (http://bulletin.miami.edu/search/?search=cae+210/), plus an additional 12 or 13 credit hours within an area of specialization. The additional credits required for minors in civil, architectural, and environmental engineering are as follows:

Electrical and Computer Engineering

Introduction

Electrical and Computer Engineering are complementary disciplines that are at the forefront of the continuing development and evolution of our modern technological society. Electrical and computer engineers have initiated and contributed to the development of such important and diverse areas as integrated electronics and photonics, telecommunication systems and computer networks, computer hardware and software, image processing and computer vision, automation and robotics, electrical power generating and transmission systems, as well as participated in the development of significant applications to biotechnology. These technologies have significantly transformed how our evolving society will live, learn, work, communicate and do business in the 21st century and are critical to the development of a sustainable world economy. It is an exciting and challenging discipline offering a variety of rewarding career paths. The Department of Electrical and Computer Engineering offers a number of innovative academic and research programs to help prepare students to achieve a variety of career goals.

The Department offers two undergraduate degree programs as well as two five year BS/MS degree programs:

- Bachelor of Science in Electrical Engineering degree program (B.S.E.E.)
- Bachelor of Science in Computer Engineering degree program (B.S.Cp.E.)
- Bachelor of Science in Computer Engineering/Master of Science in Electrical and Computer Engineering (B.S.Cp.E./M.S.E.C.E.)
- Bachelor of Science in Electrical Engineering/Master of Science in Electrical and Computer Engineering (B.S.E.E./M.S.E.C.E.)

The Electrical Engineering and the Computer Engineering degree programs are accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

In addition, the Department offers graduate courses leading to the:

- Degree of Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), and the
- Doctor of Philosophy degree (Ph.D.).

For further information see the Bulletin of the Graduate School (p. 802).

Bachelor of Science in Electrical Engineering (B.S.E.E.)

This degree program endeavors to achieve its objectives by imparting to its students the fundamental principles underlying modern electrical engineering, along with the necessary skills and experiences to apply standard practices, methodologies and available tools for solving electrical engineering problems. The major areas of Electrical Engineering include electronics, analog and digital circuits, microprocessors, communications and control systems. The design sequence is spread throughout the educational experience curricula, culminating in the two-semester senior design project. Graduates are expected to keep pace with this rapidly evolving discipline. To this end, the faculty stresses

1 Two of the selected courses must add up to 6 credit hours
the importance of continued education and life-long professional development by trying to instill in their students a sense of excitement for the prospects of this evolving technology, tempered by a strong sense of responsibility and concern for its potential impacts on society.

**Degree Program**

The Electrical Engineering degree program has three options:

1. Electrical Engineering Option (p. 461)
2. Audio Engineering Option (p. 463)
3. Electrical Engineering Pre-Med Option (p. 465)

These options require specialized courses as well as the 49 Engineering Credit Hours required in the accredited Electrical Engineering degree program.

**Double Degree Program - B.S.E.E. & B.S.B.E.**

A BME student who satisfies the requirement of the Bachelor of Science in Biomedical Engineering (B.S.B.E.) degree with electrical orientation as described in this Bulletin may also qualify for the B.S.E.E. degree by taking the following additional courses:

<table>

**Bachelor of Science in Computer Engineering (B.S.Cp.E.)**

Computer engineering is a rapidly changing and evolving discipline driven by new technological developments and marketplace conditions. To adequately train students to meet the challenges of the future and to assume leadership roles in the practice of computer engineering, the department offers an up-to-date curriculum that reflects new technological developments that have the potential for significantly impacting professional practice in the industry. The curriculum is constantly updated to incorporate new technological, scientific and economic developments.

Alternatively, students can earn a Bachelor of Science in Computer Engineering under the Software Engineering option, which is primarily focused on the systematic and disciplined development of software systems. This option focuses on the application of computer engineering and computer science principles and practices to the creation, operation, and maintenance of software applications and systems.

**Degree Program**

This degree program endeavors to achieve its objectives by imparting to its students the fundamental principles underlying modern computer engineering, along with the necessary skills and experiences to apply standard practices, methodologies and modern tools for solving computer engineering problems.

The computer engineering design sequence is spread throughout the curriculum, culminating in a two semester senior design project.

Graduates are expected to keep pace with this rapidly-evolving discipline. To this end, the faculty stress the importance of continued education and life-long professional development, by trying to instill in the students a sense of excitement for the prospects of this evolving technology, tempered by a strong sense of responsibility and concern for its potential impacts on society.

The Computer Engineering degree program has three options:

1. Computer Engineering Option (p. 471)
2. Software Engineering Option (p. 473)
3. Computer Engineering Pre-Med Option (p. 475)

These options require a common engineering core, which is followed by specialized courses in each area along with elective courses.

**Dual Majors**

Computer Engineering or Electrical Engineering students who want to do additional majors or minors must meet with their academic advisor to plan out their course work.

Computer Engineering students wanting to do Computer Science as a second major must:

1. Have an additional 6 advisor-approved technical credit hours beyond that required for the CE major, and
2. Take PHI 115.

**Five-Year Dual B.S./M.S. Degrees**

**Purpose**

Intended for exceptional students to acquire both a Bachelor of Science and a Master of Science degree simultaneously, in five years rather than the 4 plus 2 years (approximately) it normally requires.

**Requirements**

You must be an undergraduate student in the College of Engineering (CoE). A master's degree is considered the first professional degree in engineering. The Admission Committee will carefully review academic credentials for admission into our M.S. program. Students should discuss the program and possibility of entering with an academic adviser. Completed applications are due prior to the beginning of the final exams in your junior year.

Get the application form (it is different for US students and International students) from the CoE Office of Research and Graduate Studies, fill it out and then return it to the same office. The application fee is waived for currently enrolled students in the CoE.
Take the GRE Examination before the end of your senior year and attain a combined score of more than 1000 on the Verbal and Quantitative portions. You must have a cumulative GPA of at least 3.0 at the time of application.

For further information about admission into the graduate school see the Bulletin of the Graduate School (p. 802).

For more detailed information about the CoE Five-Year programs, please refer to the College of Engineering Bulletin section (p. 428). The Department of Electrical and Computer Engineering has two Five-Year degree programs, B.S.Cp.E./M.S.E.C.E. and B.S.E.E./M.S.E.C.E. Each of these programs has two options listed below.

The B.S.Cp.E./M.S.E.C.E. program has two options:
1. Computer Engineering Option (p. 477)
2. Software Engineering Option (p. 478)

The B.S.E.E./M.S.E.C.E. program has two options:
1. Audio Engineering Option (p. 468)
2. Electrical Engineering Option (p. 467)

Departmental Laboratories
The Department maintains a variety of well-equipped laboratories and computers adequate for undergraduate instruction and graduate research. The laboratories and computer facilities include:

- Computer Vision and Image Processing Laboratory
- Digital Audio and Speech Processing Laboratory
- Digital Signal Processing Laboratory
- Digital Systems Design Laboratory
- Electronics Laboratory
- Electro-Optics and Micro-Devices Laboratory
- Embedded Systems Laboratory
- Fortinet Cyber Security Laboratory
- Information Technology Laboratory
- Microprocessor Laboratory
- Multimedia Laboratory (Arnold Center for Confluent Media Studies)
- Networks Laboratory
- Optics and Fiber Communications Laboratory
- Underwater Imaging Laboratory

Advanced Writing and Communication Skills

Electrical and Computer Engineering students satisfy the University’s Advanced Writing and Communication Skills requirement by completing a set of classroom, laboratory, and design procedures where they learn effective oral, graphical and technical writing skills. Electrical and Computer Engineering students acquire Advanced Writing and Communication skills in the following core courses: ECE 212, ECE 481 and ECE 482.

Internship Program

The Department of Electrical and Computer Engineering encourages its students to take advantage of the College of Engineering Internship Cooperative Program with Industry.

Students may pursue an internship either on a part-time or a full-time arrangement. Students who wish to intern full-time for one semester or for twelve weeks in the summer may apply to earn as much as 3 credit hours that could be applied to their degree requirement as a Technical Elective. Students interested in such a possibility need to submit a proposal to the ECE Department describing the type of work they expect to accomplish approved by the industrial supervisor. If the proposal is approved the student will be assigned a Faculty Supervisor and will be able to register under ECE 499. At the end of the Internship Program, the student is expected to submit to the ECE Department a technical report with comments from the student industrial supervisor. The Faculty advisor will review the report and submit the appropriate grade for ECE 499.

NOTE 1: An ECE course for which another ECE course is a prerequisite may not be taken unless the student has completed the ECE prerequisite course with a grade of C- or better.

NOTE 2: All ECE courses at the 300 level or above must be taken at UM.

Departmental Honors

See College of Engineering (p. 424) section.

Majors/Options in Electrical and Computer Engineering

Electrical Engineering

• B.S. in Electrical Engineering (p. 461)
• B.S. in Electrical Engineering - Audio Engineering Option (p. 463)
• Electrical Engineering - Pre-Medical Option (p. 465)

Computer Engineering

• B.S. in Computer Engineering (p. 471)
• B.S. in Computer Engineering - Software Engineering Option (p. 473)
• Computer Engineering - Pre-Medical Option (p. 475)

Dual B.S./M.S. Degrees in Electrical and Computer Engineering

• B.S./M.S. in Electrical Engineering (p. 467)- Five Year Dual Degree Program (p. 467)
• B.S./M.S. in Electrical Engineering (p. 467) (p. 468)- Audio Engineering Option (p. 468) - (p. 468)Five Year Dual Degree Program (p. 467)
• B.S./M.S. (p. 467) in (p. 477)Computer Engineering (p. 477)- (p. 477)Five Year Dual Degree Program (p. 467)
• B.S./M.S. in (p. 478)Computer Engineering - Software Engineering Option (p. 478) - (p. 478)Five Year Dual Degree Program (p. 467)

Minors in Electrical and Computer Engineering

• Electrical Engineering (p. 470)
• Computer Engineering (p. 480)

B.S. in Electrical Engineering

Electrical Engineering is concerned with the design, analysis and implementation of a variety of systems, components and devices, primarily of an electrical or electronic nature, which form the cornerstone of our complex and technologically oriented society. For example, this ranges from small-scale integrated electronics and photonics systems and devices, the technological drivers of the information technology revolution, to large-scale electrical power systems and power generators, which supply the nation’s energy needs and form the basis for sustained economic growth. Furthermore, Electrical engineering also involves the design of micro and nano devices, integrated circuits, hardware, and large-scale systems for telecommunications and networking that engender our increasingly networked life. Therefore, electrical engineering is a vast and rich discipline involved in the design of systems, components, and devices for a variety of applications and areas such as portable electronics (e.g., cell phones), communications and networks, biomedical sensing and medical systems, energy harvesting, next generation displays, lasers, optical and wireless transmission, audio/video compression and recognition, radar and tracking/guidance systems, and remote sensing systems.

The University of Miami’s electrical engineering curriculum is focused on the fundamentals of the discipline, in the first two years building a firm foundation in mathematics, basic science, and basic engineering principles such as basic circuits, electronics, software and programming, computer hardware, and signal and system analysis. The students build upon this foundation through more advanced courses and focused specialization, culminating in a capstone major design experience. We continually update our curriculum and laboratories to incorporate new scientific and technological developments, and industry practices. Our graduates have gone on to successful careers in industry, or to graduate school in science and engineering, as well as law school, business school, and medical school.

Student Learning Outcomes

We expect that our alumni will exhibit the following:

1. Successful careers in dynamic and multidisciplinary technical fields with the ability to apply engineering practices within societal, global, and environmental contexts in an ethical manner.
2. Continuous professional improvement through life-long learning including but not limited to the admission to and completion of professional or graduate studies of the highest standard.

Goals

We expect that our alumni will exhibit the following:

1. Successful careers in dynamic and multidisciplinary technical fields with the ability to apply engineering practices within societal, global, and environmental contexts in an ethical manner.
2. Continuous professional improvement through life-long learning including but not limited to the admission to and completion of professional or graduate studies of the highest standard.

Mission

The mission of the Department of Electrical and Computer Engineering is to achieve and maintain, through a continuous improvement process, excellence in undergraduate and graduate education, research, and service to the community and the nation. We endeavor to accomplish this by providing high-quality education and research programs which will impart the requisite knowledge and skills to our students enabling them to assume leadership roles in contributing to the advancement of the underlying electrical and computer engineering technologies which sustain the current world economy, to promote a strong commitment to life-long learning, to prepare them for a variety of alternative career paths and to participate as responsible citizens in a rapidly changing and shrinking global community.

B.S. in Electrical Engineering - Audio Engineering Option

Audio Engineering at the University of Miami was established 1992. The program brings together faculty expertise from Electrical and Computer Engineering and from the Frost School of Music. It uniquely meets the needs of industry, training professionals with solid foundations in technical areas where sound and acoustics play a key role. Students gain theoretical knowledge from engineering and music, along with analytical, technical and design skills that can only be acquired with an engineering degree.

Fully ABET-accredited, the Audio Engineering curriculum combines traditional electrical engineering areas such as electronics, digital systems, microprocessors and digital signal processing with audio studies in acoustics, digital speech and audio, and acoustic transducers. Students work in modern laboratory facilities where they can experiment with electronics, digital design, microprocessors, audio recording, audio synthesis and acoustics. UM Audio Engineering graduates are audio-specialized electrical engineers who are highly sought-after by the industry.

During its 27 successful years, Audio Engineering at UM has produced an impressive group of alumni successful careers in music, gaming and entertainment, telecommunications, the analog and digital electronics, computer and software industries, and in the biomedical systems and instrumentation industry. Many have pursued graduate degrees at other top universities. The program implements continuous improvements, including innovative teaching and hands-on audio engineering design projects, as well as ever-deeper links with industry.

Mission

The mission of the Department of Electrical and Computer Engineering is to achieve and maintain, through a continuous improvement process, excellence in undergraduate and graduate education, research, and service to the community and the nation. We endeavor to accomplish this by providing high-quality education and research programs which will impart the requisite knowledge and skills to our students enabling them to assume leadership roles in contributing to the advancement of
the underlying electrical and computer engineering technologies which sustain the current world economy, to promote a strong commitment to life-long learning, to prepare them for a variety of alternative career paths and to participate as responsible citizens in a rapidly changing and shrinking global community.

Goals
We expect that our alumni will exhibit the following:

1. Successful careers in dynamic and multidisciplinary technical fields with the ability to apply engineering practices within societal, global, and environmental contexts in an ethical manner.
2. Continuous professional improvement through life-long learning including but not limited to the admission to and completion of professional or graduate studies of the highest standard.

Student Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Electrical Engineering - Pre-Med Option
Our Department offers a pre-medical option that allows motivated students to obtain the rigorous education of a bachelors degree in electrical engineering while simultaneously completing the basic science requirements necessary for applying to medical or dental school. Much of the excitement in engineering involves applications of electrical and computer engineering to problems in health, such as the development of nano-scale biosensors, or the signal processing analysis of DNA sequences. The pre-med option allows students to learn the fundamentals of Electrical and Computer Engineering while preparing them for entry into either medical school, advanced graduate study, or industry.

**B.S./M.S. in Electrical Engineering**

This is a structured and integrated program of 151 credit hours. Students may pursue this program from either of the undergraduate option available for Electrical Engineering Majors. It includes two required courses, ECE 715 and ECE 716, as well as the selection of advanced technical electives.

Note the following:

- At least 30 credit hours must be at the graduate (600 or 700) level. Of these, at least 12 credit hours must be in courses open to graduate students only (700 level).
- Interested ECE Juniors with cumulative GPA above 3.0 may declare their intent to participate by submitting an official application to the Departmental Graduate Committee for admission into the M.S.E.C.E. portion of the program.
- A student wishing to drop out of the five-year program without the M.S.E.C.E. degree could receive the B.S.E.E. degree after completing all its requirements, including the senior design project.
- All students must take the Graduate Record Examination (G.R.E.) before beginning their fifth-year courses.
- To qualify for the M.S.E.C.E. degree, students must meet all the pertinent Graduate School requirements, including an acceptable G.R.E. score and a minimum of 3.0 GPA in the 30 credit hours applied towards the M.S.E.C.E. degree.
- The student is awarded both the B.S.E.E. and the M.S.E.C.E. degrees after the requirements for both degrees are satisfied.

For more information about the BS/MS Program please refer to the College of Engineering Section (p. 428).

1 See description of electives under the Departmental Electives Section.
2 Offered only in the Fall semester.
3 Should be taken as Graduate (G) courses.

**Suggested Plan of Study**

The first three years are the same as in the undergraduate B.S.E.E. program with 97 credit hours. The remaining 55 credit hours shown below should include at least ten graduate courses of which, at least four are at
the 700 level. Also see description of electives under the Electrical and Computer Engineering Section.

Minor in Electrical Engineering

Requirements

Students must follow these guidelines in order to qualify for this minor:

- No more than 6 credits hours may be taken outside the ECE department.
- Students must maintain a minimum 2.0 grade point average in all ECE courses taken.
- Students with a major in Computer Engineering wishing to add a minor in Electrical Engineering must take 6 Electrical Engineering course credit hours in addition to those needed to satisfy their degree requirements.

Curriculum Requirements

Students wishing to minor in Electrical Engineering should satisfy a 15 credit hour requirement specified as follows:
Select a minimum of 8 credit hours of electrical engineering electives of the following:

- ECE 206: Circuits, Signals, and Systems
- ECE 211: Logic Design
- ECE 212: Processors: Hardware, Software, and Interfacing
- ECE 301: Electromagnetic Field Theory
- ECE 302: Electronics II
- ECE 303: Electronics Laboratory
- ECE 308: Linear Control Systems
- ECE 336: Discrete-Time Signals and Systems
- ECE 404: Communication Systems
- ECE 405: Solid-State Electronics
- ECE 417: Embedded Microprocessor System Design
- ECE 436: Digital Signal Processing
- ECE 454: Digital System Design and Testing
- ECE 502: Engineering Acoustics
- ECE 503: Laser Communications
- ECE 504: Fundamentals of Optical Imaging
- ECE 505: Semiconductor Photonic Devices
- ECE 506: Microfabrication
- ECE 532: VLSI Systems
- ECE 533: Random Signals and Noise
- ECE 538: Introduction to Digital Image Processing
- ECE 543: BioNanotechnology
- ECE 540: Digital Speech and Audio Processing

Total Credit Hours: 15

B.S. in Computer Engineering

Computer engineering is concerned with the characterization, design, analysis and implementation of hardware, software and the overall architecture of computers and computer systems, and with the development of applications enabled by such configurations. This ranges from embedded microprocessors and associated software supporting a variety of familiar devices, to large-scale distributed computer systems interconnected by high-speed telecommunication networks controlled by sophisticated communication protocols. Since modern electronic computing systems are digital in nature, the program provides in-depth coverage of a range of topics dealing with digital information processing systems. Among the topics covered are digital system design, computer organization and architecture, operating systems, software engineering, programming, data structures, algorithms, database systems, microprocessor-based systems, and embedded systems.

The department also offers electives in digital communications, computer networks, wireless and mobile networks, very large scale integration (VLSI), microelectronics, nanotechnology, application specific integrated circuits (ASIC), microelectromechanical systems (MEMS), image processing and computer vision, artificial intelligence, machine learning, data mining, agent technology, and cybersecurity (application, information, network, systems security etc.).

### Mission

The mission of the Department of Electrical and Computer Engineering is to achieve and maintain, through a continuous improvement process, excellence in undergraduate and graduate education, research, and service to the community and the nation. We endeavor to accomplish this by providing high-quality education and research programs which will impart the requisite knowledge and skills to our students enabling them to assume leadership roles in contributing to the advancement of the underlying electrical and computer engineering technologies which sustain the current world economy, to promote a strong commitment to life-long learning, to prepare them for a variety of alternative career paths and to participate as responsible citizens in a rapidly changing and shrinking global community.

### Goals

We expect that our alumni will exhibit the following:

1. Successful careers in dynamic and multidisciplinary technical fields with the ability to apply engineering practices within societal, global, and environmental contexts in an ethical manner.
2. Continuous professional improvement through life-long learning including but not limited to the admission to and completion of professional or graduate studies of the highest standard.

### Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety,
and welfare, as well as global, cultural, social, environmental, and economic factors.

3. An ability to communicate effectively with a range of audiences.

4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**B.S. in Computer Engineering - Software Engineering Option**

Software Engineering is concerned primarily with the systematic and disciplined approach to developing software systems. It requires the application of both computer engineering and computer science principles and practices to the creation, operation, and maintenance of software systems and applications. The Software Engineering Option of the Bachelor of Science in Computer Engineering degree at the University of Miami is a unique interdisciplinary program developed and administered collaboratively by the Department of Electrical and Computer Engineering and the Department of Computer Science.

This Option prepares students for successful careers in software engineering. Software systems are becoming increasingly complex, and emerging technologies are pushing the boundaries of reusable components and software quality assurance. To prepare students to meet these challenges, this Option establishes a solid foundation of software system fundamentals, coupled with strong hands-on experience and an understanding of professional practice and conduct.

In addition to the core curriculum in software engineering, students are introduced to the paradigms of real-time, adaptive, and collaborative software systems, through a wide range of technical elective courses from both the Department of Electrical and Computer Engineering and the Department of Computer Science. Students may also use courses from other departments with academic advisor approval. The technical electives allow students to apply the knowledge they have gained to different application areas. This provides valuable hands-on experience in contemporary application areas, which enhances the students’ potential career development opportunities.

Students pursuing the Software Engineering Option of the Bachelor of Science in Computer Engineering degree must earn at least 15 credit hours in Computer Science as part of their degree requirements.

6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Computer Engineering - Pre-Med Option

Our Department offers a pre-medical option that allows motivated students to obtain the rigorous education of a bachelor's degree in computer engineering while simultaneously completing the basic science requirements necessary for applying to medical or dental school. Much of the excitement in engineering involves applications of electrical and computer engineering to problems in health, such as the development of nano-scale biosensors, or the signal processing analysis of DNA sequences or the development and/or use of new hardware and software tools to better serve both medical professionals and patients. With the rapid advancement and application of technology in the medical field, the pre-med option ensures that students learn and understand the fundamentals of Electrical and Computer Engineering while preparing them for entry into either medical school, advanced graduate study, or industry.

**Total Credit Hours:** 138

---

1. See description of electives under the Departmental Electives Section.  
2. CE Core Elective is selected from ECE 302 (http://bulletin.miami.edu/search/?P=ECE%20302/), ECE 454 (http://bulletin.miami.edu/search/?P=ECE%20454/), ECE 455 (http://bulletin.miami.edu/search/?P=ECE%20455/), ECE 412 (http://bulletin.miami.edu/search/?P=ECE%20412/)
3. Advanced Bioscience Elective is to be chosen from BMB 260 (http://bulletin.miami.edu/search/?P=BMB%20260/), BIL 250 (http://bulletin.miami.edu/search/?P=BIL%20250/), BIL 255 (http://bulletin.miami.edu/search/?P=BIL%20255/), BIL 268 (http://bulletin.miami.edu/search/?P=BIL%20268/), or BMB 401 (http://bulletin.miami.edu/search/?P=BMB%20401/), in consultation with their academic advisor. Students should verify admission requirements of their medical school of interest to verify Adv. Bioscience requirements.  
4. Students in the Premed Concentration are highly encouraged to choose cognates that include PSY 110 (http://bulletin.miami.edu/search/?P=PSY%20110/), and SOC 101 (http://bulletin.miami.edu/search/?P=SOC%20101/)
5. Offered only in the Fall semester.

### Mission

The mission of the Department of Electrical and Computer Engineering is to achieve and maintain, through a continuous improvement process, excellence in undergraduate and graduate education, research, and service to the community and the nation. We endeavor to accomplish this by providing high-quality education and research programs which will impart the requisite knowledge and skills to our students enabling them to assume leadership roles in contributing to the advancement of the underlying electrical and computer engineering technologies which sustain the current world economy, to promote a strong commitment to life-long learning, to prepare them for a variety of alternative career paths and to participate as responsible citizens in a rapidly changing and shrinking global community.

### Goals

We expect that our alumni will exhibit the following:

1. Successful careers in dynamic and multidisciplinary technical fields with the ability to apply engineering practices within societal, global, and environmental contexts in an ethical manner.
2. Continuous professional improvement through life-long learning including but not limited to the admission to and completion of professional or graduate studies of the highest standard.

### Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**B.S./M.S. in Computer Engineering**

This is a structured and integrated program of 154 credit hours. Students may pursue this program from either of the undergraduate options available for Computer Engineering Majors. It includes two required courses, ECE 715 and ECE 716 as well as the selection of advanced technical electives.

- At least 30 credit hours must be at the graduate (600 or 700) level. Of these, at least 12 credit hours must be in courses open to graduate students only (700 level).
- Interested Computer Engineering juniors with cumulative GPA above 3.0 may declare their intent to participate by submitting an official application to the Departmental Graduate Committee for admission into the M.S.E.C.E. portion of the program.
- A student wishing to drop out of the five-year program without the M.S.E.C.E. degree could receive the B.S.Cp.E. degree after completing all its requirements, including the senior design project.
- All students must take the Graduate Record Examination (G.R.E.) before beginning their fifth-year courses.
- To qualify for the M.S.E.C.E. degree, students must meet all the pertinent Graduate School requirements, including an acceptable GRE score and a minimum of 3.0 GPA in the 30 credit hours applied towards the M.S.E.C.E. degree.
- The student is awarded both the B.S.Cp.E. and the M.S.E.C.E. degrees after the requirements for both degrees are satisfied.

For more information about the BS/MS Program please refer to the College of Engineering Section (p. 428).

Minor in Computer Engineering

Requirements

Students must follow these guidelines in order to qualify for this minor:

- No more than 6 credits hours may be taken outside the ECE department.
- Students must maintain a minimum 2.0 grade point average in all ECE courses taken.
- Students with a major in Electrical Engineering wishing to add a minor in Computer Engineering must take 6 Computer Engineering course credit hours in addition to those needed to satisfy their degree requirements.

Curriculum Requirements

Students wishing to minor in Computer Engineering must satisfy 18 credits hours specified as follows:

<table>

Select a minimum of 6 credit hours of computer engineering electives from the following:
Engineering Science

Introduction

The curricula in the engineering sciences have been designed to prepare a student to fill the gap between the pure and applied sciences. The programs have been planned to enable the graduate to meet, work, and communicate with scientists and engineers at all levels of research and development, design and production, sales and distribution and to participate in the rapid and efficient translation of the latest scientific discoveries into technological achievements.

The general curriculum outlined below has been developed to give the student a firm foundation in the engineering sciences supported by a thorough grounding and facility in mathematics, physics and chemistry. In addition, each student will choose an area of specialization in at least one of the Engineering fields of architectural, civil, biomedical, electrical, industrial, or mechanical, and mathematics, chemistry or physics. By being well grounded in both the basic and applied sciences, the student, upon graduation, will be well prepared to assume responsibilities in his/her field of specialization or continue his/her professional development through graduate studies.

The engineering science program is intended primarily for students who expect to pursue graduate studies, and it will not satisfy the licensure requirements for professional engineering registration.

Premedical Studies: When BIL 150 and BIL 160 are added to the course sequence for engineering science, basic premedical requirements are satisfied. Additional specific courses, such as genetics or biochemistry, may be required for admission to certain medical schools. For optimum timing and course selection students who combine premedical studies and engineering science should consult the faculty advisor for engineering science and the Coordinator, Committee on Premedical Studies.

Because of the nature of the curriculum and its goals, the student must maintain a B average. The degree of Bachelor of Science Engineering Science is awarded upon successful completion of the program.

The required curriculum for the degree of Bachelor of Science in Engineering Science (General Concentration) is shown below as is a typical premed curriculum. A Professional Chemistry Concentration in the Engineering Science Program is available (the Professional Chemistry Program, approved by the American Chemical Society, is also available in the College of Arts and Sciences).

Mission Statement

The mission of the Engineering Science program is to provide excellent undergraduate and graduate education in engineering that will prepare graduates to meet Societies changing needs and aspirations.

Educational Objectives

The objectives of the Engineering Science program are to educate engineers who:

- have a sound background in the fundamentals of engineering science grounded in mathematics, physics and chemistry
- have abilities and knowledge expected by graduate programs
- are prepared to enter graduate programs with a strong background in pure science

- PHY 351 or CHM 202 Intermediate Electricity and Magnetism II or Organic Chemistry II (Lecture) 3
- ECE 305 Electronics I 3
- CHM 205 Chemical Dynamics Laboratory 1
- Applied Elective 2 3
- Technical Elective 3 3
The Department also offers:

Programs Section.

Specific courses required in each concentration are described in Degree

Technology, but with people, making industrial engineers a prime source

activities. It is the major branch of engineering concerned not only with

reduce health care costs, conserve energy, develop public transportation

systems, and improve industrial safety conditions. Industrial engineering

distinguishes itself from other engineering professions because it has

applications in manufacturing, service, commercial, and governmental

activities. It is the major branch of engineering concerned not only with

technology, but with people, making industrial engineers a prime source

of management talent.

Through consultation with his/her academic advisor, a student is

assisted in choosing electives which will prepare him/her for a degree

of specialization compatible with his/her future goals. The available

concentrations are Engineering Management and Manufacturing.

Specific courses required in each concentration are described in Degree

Programs Section.

The Department of Industrial Engineering offers graduate programs

leading to the:

• Master of Science in Industrial Engineering
• Master of Science in Environmental Health and Safety
• MSIE/MBA Weekend Executive Program (in conjunction with the
  School of Business)
• Master of Science in Management of Technology (in conjunction with
  the School of Business)

The Department also offers:

• a Ph.D. program in Ergonomics and Human Factors
• a Ph.D. in Industrial Engineering.

For further information, see the Bulletin of the Graduate School

(p. 831).

Bachelor of Science in Industrial Engineering

The curriculum includes required courses in mathematics and the

physical sciences that ensure a firm scientific background while

advanced departmental courses provide specialization. Required courses

in the people and society - humanities and arts give students the social,

ethical and ecological awareness needed in their profession. The courses

are designed with the prerequisite structure in mind so that students

have to draw from previously acquired knowledge to successfully

complete upper level course requirements.

The engineering design experience is interwoven in the curriculum

throughout the students’ four years of study.

• Starting with IEN 111 Introduction to Engineering I and IEN 112
  Introduction to Engineering II, an introduction to Engineering
  graphics, Auto CAD, MATLAB, C++, advanced Excel and Access are
  given.
• The students then move on to take IEN 201 Methods Analysis
  and Work Measurement where they perform work measurement
  projects in industry, write reports, and make oral presentations to
  management. In the Spring of their Junior year, the students take
  IEN 363 Project Management for Engineers and they are exposed to
  techniques and tools in project management such as use of network
  flow and MS Project.
• Students take IEN 361 Industrial Cost Analysis and IEN 380
  Engineering Economy where they become aware of the impact
  of productivity on the economic and social well-being of industry
  and countries. The students are also introduced to basic models
  of decision making such as the formulation and evaluation of an
  economic strategy.
• IEN 406 Computer-Aided Manufacturing introduces the students to
  product design in manufacturing and modern concepts of CAD/CAM/
  Automation.
• IEN 441 Deterministic Models in Operations Research focuses on
  the formulation of linear programming problems and solutions by
  the simplex method. Related topics include sensitivity analysis,
  duality theory and network programming. Engineering applications
  are emphasized.
• IEN 442 Stochastic Models in Operations Research focuses on basic
  concepts and techniques of random processes that are used to
  develop models for a variety of engineering and managerial problems.
  Topics include the Poisson Process, Markov chains, renewal theory,
  queuing models, and reliability.
• IEN 465 Production and Inventory Control provides a thorough
  treatment of modern production and inventory management policies,
  and their ramifications on supply chain management.
• Theory and applications of decision support systems in industrial
  engineering are covered in IEN 524 Decision Support Systems in IE.
  The topics include the study of model-based data-based, knowledge-
  based, and communication-based decision support systems.
• In IEN 557 Ergonomics and Human Factors Engineering both
  laboratory projects and real-world projects are designed, discussed,
  and conducted.
• Industry based projects are embedded into several other courses
  such as IEN 512 Statistical Quality Control and Quality Management,
  IEN 547 Computer Simulation Systems, and IEN 568 Materials
  Handling and Facilities Planning.
- IEN 494 Senior Project is a capstone project course where the students pool all of their knowledge and previous design experience into one major project integrating all components of the curriculum together. These projects are usually industry-based. Students prepare written and oral presentations. These presentations are made before top management or engineers of the organization where the projects were conducted in the presence of the faculty representatives from the department.

Real world projects are an integral part of most junior and senior level courses. In these courses, communication is emphasized through requirements for oral presentation and written technical reports. This experience provides the graduates with valuable industrial experience and communications skills while studying at the University of Miami.

The teaching laboratories meet current program needs and are constantly being improved. Equipment and experiments are geared to provide instruction in the areas of production system design, work methods and measurement, human factors engineering, manufacturing processes, computer applications in industrial engineering and operations research.

Advanced Writing and Communication Skills: Industrial Engineering students satisfy the University’s Advanced Writing and Communication Skill requirement by completing a set of classroom courses, laboratory courses and design courses where they learn effective oral, graphical and technical writing skills. Industrial Engineering students acquire Advanced Writing and Communication skills in the following core courses:

- IEN 111 Introduction to Engineering I
- IEN 201 Methods Analysis and Work Measurement
- IEN 351 Industrial Safety Engineering
- IEN 363 Project Management for Engineers
- IEN 380 Engineering Economy
- IEN 494 Senior Project
- IEN 512 Statistical Quality Control and Quality Management
- IEN 547 Computer Simulation Systems
- IEN 557 Ergonomics and Human Factors Engineering
- IEN 568 Materials Handling and Facilities Planning

Industrial Engineering Concentrations

- Engineering Management Concentration
- Manufacturing Engineering Concentration
- Pre-Medical Concentration

Five-Year Bachelor of Science in Industrial Engineering and Master of Science in Industrial Engineering (Five-Year BSIE/MSIE Program)

This program is specifically designed for those students who want to pursue their graduate study as soon as they complete their undergraduate study in Industrial Engineering. The special conditions for this Five-Year BSIE/MSIE Program are as follows:

1. The student must declare his/her intent to participate before the end of the Junior year by submitting an official application to the department graduate committee for admission into the MSIE portion of the program. Exceptions to this rule must be approved by the department faculty.

2. A student wishing to withdraw from the Five-Year Program without the MSIE degree must complete all the requirements for the BSIE program, including the IEN 494 Senior Project in order to get his/her BSIE degree.

3. To qualify for the MSIE degree, the student must meet all the pertinent Graduate School requirements, including an acceptable score on the GRE (Graduate Record Examination) and a minimum of 3.0 GPA.

4. The student is awarded both the BSIE and MSIE degrees at the end of the fifth year when all undergraduate and graduate requirements are satisfied.

Majors in Industrial Engineering

- B.S.I.E. in Industrial Engineering (p. 484)
- Industrial Engineering - Engineering Management Concentration (p. 486)
- Industrial Engineering - Manufacturing Concentration (p. 487)
- Industrial Engineering - Pre-Med Concentration (p. 489)

Dual B.S./M.S. Degrees in Industrial Engineering

- B.S./M.S. in Industrial Engineering - Five Year Dual Degree (p. 490)
- Industrial Engineering - (p. 492)Engineering Management Concentration - Five Year Program (p. 492)

Minor in Industrial Engineering

- Industrial Engineering (p. 494)

1 To be selected from lists of approved People and Society (PS)/Humanities and Arts (HA) (or applicable cognates). Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours).
The Technical Elective is selected from courses at the 300 level or above, offered by one of the following departments: MTH, BTE (except BTE 417), BME (except BME 320), CAE, ECO, EEN, IEN, MEN, ACC, FIN, MGT (Except MGT 303), MAS, MKT.

IEN Electives are selected from courses at the 300 level or above, offered by the Department of Industrial Engineering.

Mission
The Department of Industrial Engineering's mission is to provide contemporary and relevant industrial and systems engineering education and research; impart knowledge and skills necessary to design and to improve a variety of manufacturing and service processes; promote lifelong learning; and contribute to emerging societal needs.

Goals
The major goal of the Industrial Engineering program at the University of Miami is to prepare graduates to contribute to the economy by virtue of employment in a variety of industries: manufacturing (heavy and light, traditional and high technology) and service (health care, retail, transportation, logistics, government, consulting, banking, and insurance). In striving to achieve this goal, the objective of the faculty is to provide all graduates with the mathematical, scientific, and design tools required to formulate problems accurately, generate alternative solutions, evaluate those alternatives, and present the best solutions to clients or decision makers in a fashion that facilitates decision-making processes. In addition, superior students are prepared for graduate studies and research. Within the first several years following graduation from the Industrial Engineering program, graduates are expected to be:

1. Working as professionals by adding value in any one of the following sectors:
   - Service
   - Government
   - Consulting
   - Retail
   - Manufacturing

2. Pursuing or holding a graduate degree and/or developing professionally through continuing education, licensure, certification and seminars in a new area or their chosen areas of expertise.

Student Learning Outcomes
1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.

3. An ability to communicate effectively with a range of audiences.

4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

## Plan of Study

### Freshman Year

**Fall**
- IEN 111: Introduction to Engineering I (3)
- ENG 105: English Composition I (3)
- MTH 151: Calculus I for Engineers (5)
- PHY 221: University Physics I (3)
- **Credit Hours**: 14

**Spring**
- IEN 112: Introduction to Engineering II (2)
- ENG 107: English Composition II: Science and Technology (3)
- MTH 162: Calculus II (4)
- ECO 211 or 212: Principles of Microeconomics or Principles of Macroeconomics (3)
- PHY 222: University Physics II (3)
- PHY 224: University Physics II Lab (1)
- **Credit Hours**: 16

### Sophomore Year

**Fall**
- BSL 212 or BUS 202: Introduction to Business Law or Introduction to the Legal Environment of Business (3)
- HA Cognate (HA Elective): 3
- IEN 201: Methods Analysis and Work Measurement (3)
- MTH 210: Introduction to Linear Algebra (3)
- PHY 223: University Physics III (3)
- PHY 225: University Physics III Lab (1)
- **Credit Hours**: 16

**Spring**
- HA Cognate (HA Elective): 3
- CHM 151: Chemistry for Engineers (3)
- CHM 153: Chemistry Laboratory for Engineers (1)
- CAE 210, ECE 205, or MAE 303: Mechanics of Solids I or Principles of Electrical Engineering–I or Thermodynamics I (3)
- PS Cognate (PS Elective): 3
- MTH 311: Introduction to Ordinary Differential Equations (3)
- **Credit Hours**: 16

### Junior Year

**Fall**
- HA Cognate (Advanced HA Elective): 3
- IEN 310: Introduction to Engineering Probability (3)
- IEN 351: Industrial Safety Engineering (3)
- IEN 380: Engineering Economy (3)
- IEN 441: Deterministic Models in Operations Research (3)
- **Credit Hours**: 16

**Spring**
- PS Cognate (PS Elective): 3
- IEN 312: Applied Statistical Methods (3)
- IEN 361: Industrial Cost Analysis (3)
- IEN 363: Project Management for Engineers (3)
- IEN 406: Computer-Aided Manufacturing (3)
- IEN 442: Stochastic Models in Operations Research (3)
- **Credit Hours**: 18

### Senior Year

**Fall**
- IEN 465: Production and Inventory Control (3)
- IEN 512: Statistical Quality Control and Quality Management (3)
- IEN 547: Computer Simulation Systems (3)
- IEN 557: Ergonomics and Human Factors Engineering (3)
- IEN 571: Engineering Entrepreneurship (3)
- **Credit Hours**: 18

**Spring**
- IEN 494: Senior Project (3)
- IEN 524: Decision Support Systems in Industrial Engineering (3)
- IEN 568: Materials Handling and Facilities Planning (3)
- IEN 570: Engineering Management (3)
- IEN 572: Management of Technological Innovation (3)
- **Credit Hours**: 15

**Total Credit Hours**: 128

---

1. To be selected from lists of approved People and Society (PS)/Humanities and Arts (HA) (or applicable cognates). Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours).

1. To be selected from lists of approved People and Society (PS)/Humanities and Arts (HA) (or applicable cognates). Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours).

2. Advanced Bioscience Elective is to be chosen from BIL 250, BIL 255, BIL 268, MIC 301, CHM 202, or BMB 402. Students should verify admission requirements of their medical school of interest to verify Adv. Bioscience requirements, e.g. organic chemistry II, biochemistry, or both.

3. Technical or Science Elective Lab is selected from a science lab complementing the Adv Bioscience Elective (e.g., CHM or BIL lab).

1 To be selected from lists of approved People and Society (PS)/ Humanities and Arts (HA) or applicable cognates. Students take a minimum of 3 courses (9 credit hours) in HA cognate and 3 courses in PS Cognate (9 credit hours).
Minor in Industrial Engineering

A student majoring in another discipline who chooses to take a minor in Industrial Engineering must complete 15 credit hours of coursework consisting of the courses listed below. A minimum of 12 credits must be taken at the University of Miami and IEN 201 must be taken at the University of Miami. In addition, you must achieve a minimum GPA of 2.5 for the courses in the minor.

Mechanical and Aerospace Engineering

http://www.mae.miami.edu

Dept. Code: MAE

Introduction

Engineering is the art of applying the knowledge of science for the benefit of humanity. Mechanical Engineering is the most broadly based area of engineering. It is concerned with the analysis, design, development and application of equipment for such diverse fields as energy conversion, transportation, production machinery, consumer goods, and environmental control. Today’s advanced technology is largely a result of the skill of mechanical engineers who are heavily represented in most fields of modern industry.

Because of the varied careers and opportunities which are available to the Mechanical Engineering graduates, the curriculum emphasizes education in the fundamentals of the physical, mathematical, and engineering sciences, including materials science, solid mechanics, fluid mechanics and thermodynamics. These basic subjects are followed by courses in their application to the design and analysis of engineering devices and systems. Computers are utilized for analysis and design throughout the curriculum.

Aerospace Engineering is concerned with the analysis, design and development of a wide variety of aircraft and space vehicles and systems. The undergraduate aerospace engineering program is designed to provide a broad based foundation in aeronautics and astronautics, including topics such as aerodynamics, propulsion, aerospace structures and materials, flight dynamics, control and performance.

In the junior and senior years, the student is assisted in choosing technical electives in preparation for a degree of professional specialization or for further study in engineering, law, business or medicine. With the aid of an advisor and the concurrence of the department chairman, the student may select courses compatible with a variety of career goals.

The department offers two undergraduate degrees:

- Bachelor of Science in Mechanical Engineering
- Bachelor of Science in Aerospace Engineering

Within the Bachelor of Science in Mechanical Engineering program, sequences of courses are available to provide advanced knowledge in such traditional areas as electromechanical design, heat transfer, solid mechanics, fluid mechanics, and materials science. There are concentrations in:

- Aerospace Engineering
- Internal Combustion Engines

Advanced Writing and Communication Skills

Mechanical & Aerospace Engineering students satisfy the University’s Advanced Writing and Communication Skills requirement by completing a set of classroom courses, laboratory courses and design courses where they learn effective oral, graphical and technical writing skills.

Mechanical & Aerospace Engineering students acquire Advanced Writing and Communication skills in the following core courses:

<table>

Graduate Studies

Graduate programs leading to the degrees of Master of Science and Doctor of Philosophy are offered by the Department with options in
various engineering and interdisciplinary fields. Detailed information is available in the Bulletin of the Graduate School (p. 836).

**Majors in Mechanical and Aerospace Engineering**

- B.S. in Mechanical Engineering (p. 495)
- Mechanical Engineering - Aerospace Engineering Concentration (p. 497)
- Mechanical Engineering - Internal Combustion Engines Concentration (p. 498)
- B.S. in Aerospace Engineering (p. 500)

**Dual B.S./M.S. Degrees in Mechanical and Aerospace Engineering**

- B.S. in Aerospace Engineering and B.S. in Mechanical Engineering Dual Degree (p. 503)

### Mission

The mission of the Department of Mechanical and Aerospace Engineering is to provide excellent undergraduate education in aerospace engineering and undergraduate and graduate education in mechanical engineering that will prepare graduates to meet Society’s changing needs and aspirations.

The mission of the Mechanical Engineering program is to provide excellent undergraduate education in Mechanical Engineering that will prepare graduates to meet society’s changing needs and aspirations.

### Goals

The educational objectives of the undergraduate Mechanical Engineering (B.S.M.E.) Program are to prepare graduates, within a few years after graduation, to be:

- working as a professional or as an entrepreneur in an area related to mechanical engineering, and/or
- exhibiting lifelong learning by pursuing or having completed a graduate or professional degree and/or demonstrated professional development.

### Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.
Mechanical Engineering - Aerospace Engineering Concentration

http://www.coe.miami.edu/dept-mac/

The mission of the aerospace engineer is to design and manufacture payload carrying vehicles to travel distances at the lowest cost in the shortest period of time. The training of the aerospace engineer is by demand multidisciplinary and by spirit pioneering. It includes aerodynamics, propulsion, advanced materials, structures, controls, robotics, electronics and computer usage.

An option has been developed to allow students at the University of Miami to have a concentration of courses in Aerospace Engineering. This concentration in aerospace is built on the existing accredited degree program in Mechanical Engineering.

1  You must complete a minimum of 1 PS cognate and 1 HA cognate to be selected from the list of available cognates. Each cognate should be a minimum of three courses (9 credit hours).

2  Technical Electives are advanced courses in mathematics, science or engineering, approved by the Faculty Advisor, as appropriate for individual objectives.

Mission

The mission of the Department of Mechanical and Aerospace Engineering is to provide excellent undergraduate education in aerospace engineering and undergraduate and graduate education in mechanical engineering that will prepare graduates to meet Society’s changing needs and aspirations.

The mission of the Aerospace Engineering program is to provide excellent undergraduate education in Aerospace Engineering that will prepare graduates to meet Society’s changing needs and aspirations.

Goals

The educational objectives of the undergraduate Aerospace Engineering (B.S.A.S.E.) Program are to prepare graduates, within a few years after graduation, to be:

• working as a professional or as an entrepreneur in an area related to aerospace engineering, and/or
• exhibiting lifelong learning by pursuing or having completed a graduate or professional degree and/or demonstrated professional development.

Student Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

B.S./M.S.- Mechanical Engineering

The five-year BS/MS program leads to both the B.S. degree and the M.S. degree in Mechanical Engineering in five years. The program is intended for exceptional students who are admitted to the graduate program in their junior year. Students applying for this program must have a grade point average of at least 3.0 and must attain a score of 300 or more on the Graduate Record Examination (taken before the fifth year).

* At least 9 credit hours of Mechanical Engineering courses must be taken at the University of Miami; subject to approval of an academic advisor.

** A minimum 2.0 grade point average in all MAE courses taken is required.
Introduction
The Rosenstiel School of Marine and Atmospheric Science was established in 1943 as the Marine Laboratory of the University of Miami. It has grown from its modest beginnings in a boathouse to be one of the nation’s leading institutions for oceanographic and atmospheric research and education.

Originally a tropical marine biological facility, the Marine Laboratory initiated a program of studies leading to the Master of Science degree in 1949. In 1953, laboratory and classroom buildings were constructed on the School’s present campus on Virginia Key, and in the late fifties, the Marine Laboratory expanded its staff and developed its oceanographic capabilities in response to the increased interest in scientific research in the United States. It became the Institute of Marine Science in 1961. Ocean-going research vessels were acquired, and additional buildings were constructed to accommodate new wide-ranging projects. In 1969, the Institute, now a School, was named for Dorothy H. and Lewis Rosenstiel in recognition of a major contribution, made through the Rosenstiel Foundation, to encourage progress in the marine and atmospheric sciences at the University of Miami. In 1977, the Rosenstiel School and College of Arts and Sciences joined together to establish an undergraduate Marine and Atmospheric Science program based on the Coral Gables campus. The degree granting authority for this program was formally transferred to the Rosenstiel School in 2008.

Today the Rosenstiel School has a faculty of over 80 who conduct sponsored research while offering studies leading to the Bachelor of Science, Bachelor of Arts, Master of Science, Master of Professional Science and Doctor of Philosophy degrees.

Government agencies and private organizations support basic and applied research at the Rosenstiel School. Graduate and undergraduate students are an integral part of the research effort, and research programs, many multidisciplinary in nature, provide the environment within which professors and students interact.

The Rosenstiel School has modern laboratory facilities and a state-of-the-art catamaran, named the F. G. WALTON SMITH, in honor of the founder of the Rosenstiel School.

Mission
The Rosenstiel School strives to be in the forefront of basic and applied research as it applies to the ocean, atmosphere, and global environment, with particular emphasis on subjects of societal significance. Our goal is to provide excellence in graduate and undergraduate education and research training and to be a strong force towards improved environmental understanding and management.

Academic Policies
Admission
Applications for incoming freshmen are processed and reviewed by the Office of Admission. Enrollment in the RSMAS Undergraduate Program is selective and highly competitive. Admission decisions are based on the secondary school record, SAT/ACT score, counselor’s evaluation and the applicant’s essay.

Student Responsibilities
Students of the Rosenstiel School are responsible for planning their own programs and for meeting degree requirements. It is the student’s responsibility to understand and fully comply with all the provisions set forth in this Bulletin and written changes to their program of study.

Academic Progress
The Rosenstiel School will review each student’s record at the end of each semester. All students in the RSMAS Undergraduate Program must maintain a cumulative grade point average of 2.5 or better in order to remain in the program. Only those courses passed with a grade of C- or better may be applied to the major or minor.

Honors
Honors may be earned by students who have an overall 3.5 GPA, have successfully completed MSC/GSC/ATM 412 with a written senior thesis, and have presented a poster or oral presentation of their research at a public forum such as the RSMAS Undergraduate Research Forum. MSC/GSC/ATM 412 requires completion of a minimum of 3 credits in MSC/GSC/ATM 411 or equivalent research experience approved by the program director.

Degree Programs
The Rosenstiel School of Marine and Atmospheric Science offers degree programs at both the undergraduate and graduate levels for students interested in marine and/or atmospheric and/or geological sciences as a career.

Undergraduate Degree Programs
The Rosenstiel School of Marine and Atmospheric Science offers both Bachelor of Science /Bachelor of Science in Marine and Atmospheric Science and Bachelor of Arts/ Bachelor of Arts in Marine Affairs undergraduate degree options. Bachelor of Science options include Marine Science, Oceanography, Marine Biology and Ecology, Geological Sciences, and Meteorology. Bachelor of Arts options include Marine Affairs and Geological Sciences.

The Bachelor of Science degree programs are meant for students planning to continue with graduate and professional studies or for those who will pursue a technical career in government, research, or private industry. The Bachelor of Arts degree programs are designed for students planning either non-technical careers with government agencies or private industries or graduate studies in such areas as business, law, economics, political science, education, or communication.

In cooperation with the graduate program, courses of study culminating in a Master of Science or Master of Professional Science are also available.

Graduate Degree Programs
Graduate courses in the marine and atmospheric sciences are offered through the Graduate School and the Rosenstiel School of Marine and Atmospheric Science and are listed under the Rosenstiel School graduate program entries in the Bulletin.

Courses at the 500-level may be taken for undergraduate credit with junior standing and departmental consent. These courses are listed in the course section of the undergraduate bulletin.
Requirements for Graduation

In addition to satisfying the course requirements for the different undergraduate majors, students are expected to satisfy the School’s General Education Requirements. General Education Requirements stress breadth of knowledge and the cultivation of intellectual abilities essential for the acquisition of knowledge. Courses taken for the major and minor may also be used to satisfy the General Education Requirements.

Areas of Proficiency

A) English Composition

Students must complete ENG 105 and either ENG 106 or ENG 107, or their approved equivalents, typically in the first year of residence. Students with an appropriate score on the Advanced Placement [AP] language or literature examinations, or with an appropriate score on the International Baccalaureate [IB] higher level English examination, may earn 6 credits in English 105 and English 106. Those with an appropriate score on the SAT/V or ACT/E exams may be exempted from English 105.

B) Communication across the Curriculum

Students in the Rosenstiel School will, as part of their major curriculum, take courses designed to provide students with the skills required for effective communication, both written and oral, within the discipline.

C) Mathematics

**Bachelor of Arts:**

² Students must earn a letter grade of C- or higher in Calculus I for all B.S. and B.S.M.A.S majors excluding RSMI, RSMP and RSMX +MATH which require a letter grade of C- or higher in Calculus I and II. Meteorology majors must earn a letter grade of C or higher in both Calculus I and Calculus II.

² For specific Statistics and Computer Science requirements review each major.

Areas of Knowledge

As described under the section General Education Requirements under General University Information, students must complete one cognate in each of three the Areas of Knowledge:

1. Arts and Humanities,
2. People and Society (Social Sciences) and

All undergraduate students in the Rosenstiel School will fulfill their STEM cognate requirement through their major requirements. Students in Marine Affairs will fulfill their People and Society cognate requirement through their minor. Students in Marine Science may elect to fulfill the People and Society cognate requirement with a Marine Policy cognate. Students in Meteorology may elect to fulfill the People and Society cognate requirement with a Broadcast Meteorology cognate. Cognates integrating Study Abroad courses are also available. See program advisors for details.

Minors Offered by Marine and Atmospheric Science

- Climate Science and Policy (p. 513)
- Geological Sciences (p. 520)
- Marine Policy (p. 522)
- Marine Science (p. 542)
- Meteorology (p. 513)

Foote Fellow Requirements

Cognates

Foote Fellows are exempt from cognate requirements.

English

Foote Fellows with (ACT English score 18-31; or SAT Evidence-Based Reading and Writing or Critical Reading score 430-690; or TOEFL iBT Writing score 18 or above) will be required to take English Composition I and II. Foote Fellows with (ACT English score 32 or above; or SAT
Evidence-Based Reading and Writing or Critical Reading score 700 or above) will be required to take English Composition II (ENG 107). Only those Foote Fellows with sufficient scores on AP/IB examinations are exempt from the English composition requirement.

**Mathematics**
All Foote Fellows must complete math requirements as specified by their program.

**Exempt courses must be replaced by courses at the 200-level or higher.**

**Atmospheric Science - Meteorology**
Dept. Code: ATM

**Meteorology**
Meteorology is the study of the atmosphere, including climate and climate variability, weather forecasting, cloud and precipitation physics, tropical dynamics, severe weather and hurricanes. Atmospheric scientists use computer models and sophisticated observing systems to describe and understand the atmosphere. The curriculum emphasizes math and physics basics, providing a strong foundation for an intensive study of meteorology. The curriculum, conforming to the recommendations of the American Meteorological Society, prepares students for graduate school and for jobs in industry and government.

The Rosenstiel School offers a Bachelor of Science in Marine and Atmospheric Science with a major in Meteorology. The major includes a minor in Mathematics with an adequate MTH GPA.

Although Meteorology is a single major program, students often combine Meteorology with a second major in such diverse fields as Mathematics, Marine Science, or Broadcast Journalism. Interested students should read the information below and contact the Rosenstiel Undergraduate office (Ungar 210A or 305-284-2180) for details.

**Double Major Options**

**Mathematics**
The double major in Meteorology and Mathematics is intended for students who anticipate graduate study in Atmospheric Science and require a strong background in Mathematics. Interested students may find more information on the B.S.M.A.S. in Meteorology and Mathematics here (p. 511).

**Marine Science**
The double major in Meteorology and Marine Science is intended for those students who wish to have a truly interdisciplinary career in atmospheric and marine science. Interested students may find more information on the B.S.M.A.S. in Meteorology and Marine Science here (p. 533).

**Broadcast Journalism**
The double major in Meteorology and Broadcast Journalism is designed for Meteorology majors interested in Broadcast Meteorology. Students interested in adding Broadcast Journalism as a second major should review the School of Communication (p. 376) page for additional requirements.

**Majors in Atmospheric Science - Meteorology**
- B.S.M.A.S. in Meteorology (p. 508)
- B.S.M.A.S. (p. 508) Double Major in Meteorology and Mathematics (p. 511)
- B.S.M.A.S. (p. 508) Double Major in Meteorology and Marine Science (p. 510)

**Minors Offered by Meteorology**
- Climate Science and Policy (p. 513)
- Meteorology (p. 513)

**B.S.M.A.S. in Meteorology**

**Electives**
- Atmospheric Science, Mathematics, or Science Course 3
- Arts and Humanities Cognate Courses 9
- People and Society Cognate Courses 9
- Additional Electives 24

Recommended courses include:
- ATM 244  Tropical Weather and Forecasting
- ATM 306  Advanced Principles in Broadcasting Meteorology
- ATM 321  Scientific Programming in the Atmospheric Sciences
- MSC 301  Introduction to Physical Oceanography

Total Credit Hours 120

---

1  Calculus I and II must be passed with a grade of "C" or higher.

* 500-level courses are open to undergraduates but typically offered on the RSMAS campus. For Broadcast Meteorology double-majors and minors, the electives may be taken from the School of Communications.

Mission

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BS degree in Meteorology at the University of Miami is to graduate students with the ability and desire to integrate knowledge of meteorology into their future careers.

Goals

This program strives to provide the rigor, flexibility, depth and integration to enable students to:

• Pursue a course of study that provides both depth and breadth in Meteorology and related science courses.
• Prepare themselves for public and private sector employment, graduate school, and successful careers.

Student Learning Outcomes

• Meteorology students will be able to apply concepts from physics to the atmosphere of a rotating planet, to solve basic problems.
• Students will be able to apply the basic concepts of thermodynamics to the atmosphere.
• Students will learn the structure and chemistry of the troposphere and stratosphere and apply this to air quality and environmental science applications.

<td>Atmospheric Thermodynamics</td>
<td></td>
</tr>
</tbody>
</table>

* Students with a Meteorology major should replace ATM 102/ATM 103 from List A with an additional course from list B and cannot use ATM 307 towards the minor.
** Students from a program without a statistics requirement must also take an approved course in statistics increasing this to an 18 credit hour minor.
*** Only those courses passed with a grade of “C-” or higher may be applied to the minor. Courses used towards a minor must be above and beyond those used for the major. The Climate Science and Policy minor fulfills the requirements of the People and Society or STEM cognate.

### Approved Statistics Courses

</table>

*Students from a program without a statistics requirement must also take an approved course in statistics increasing this to an 18 credit hour minor.*
5 Year B.S/M.S. Program in Geological Sciences and Marine Geosciences

A 5-year B.S./M.S. in Geological Sciences and Marine Geosciences allows qualified students to complete a master's degree in one year of study beyond the B.S. By the beginning of their junior year students should have obtained a graduate faculty advisor, selected an approved topic for research, and begun work on their senior thesis as preparation for the M.S. In the senior year, students will increase their focus on graduate courses and work closely with their graduate faculty advisor.

Applicants must be high school seniors in the top 10% of their class and must have a minimum SAT I score of 1360 or (ACT 31). In addition to the regular Application for Admission to the University, the applicant must complete a separate application form. The application form and supporting materials must be submitted no later than November 1st of the applicant's senior year. A review of completed applications will begin by the end of November.

For further information and application forms please visit this website (https://nam01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.miami.edu%2Fdualdegree#/38;data=02%7C01%7Cwnolton%40rsmasmiamiedu%7C7cb81aa8441a024cb748b708d6bdc1d4917c2a144b72f23942d48c0e6f0f17c48e).

• B.A. in Geological Sciences (p. 514)
• B.S. in Geological Sciences (p. 516)
• B.S.M.A.S. in Marine Science / Geological Sciences (p. 518)

Minors Offered by Geological Sciences
• Geological Sciences (p. 520)

- Elective #14 3
- Elective #15 3
- Elective #16 3

Credit Hours: 15

Total Credit Hours: 122

---

1. Recommended elective to take for the Geological Science B.A. major.

**Mission**

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The undergraduate educational mission of the Geological Sciences program is to instill an understanding of Earth history, processes and dynamics so as to prepare our students to be meaningful contributors to and leaders of society in research, education and business.
Goals
In a time of increasing stress on Earth’s resources, land, oceans and environment, we strive to train our students in both the fundamentals of the Geological Sciences and natural systems and also the global environmental stresses facing Earth and society. In addition to the basic classroom and hands-on education in the various aspects of the Geological Sciences, we focus on preparing our undergraduate students in three critical areas: extensive field training and research to give students competence in dealing with the complexities of the real world; training in written and oral communication to give them competence in sharing their accumulating knowledge with their peers and also with the public; and an understanding of how increased human population and resource use is affecting Earth’s climate, environment and future character.

Student Learning Outcomes
• Students will demonstrate a strong knowledge base in the basics of geological sciences materials, history and processes (as provided in our GSC 110, 111, and 260 courses).
• Students will demonstrate a competent knowledge base in the following advanced sub-disciplines of geological sciences: sedimentology, stratigraphy, structural geology, paleontology/paleoecology, geochemistry, geophysics, and petrology.
• Students will demonstrate research competence in supervised research projects through course, employment, and/or a Senior Thesis.
• Students will demonstrate a competence in application of their geological sciences knowledge to field research applications, including mapping, sequence analysis, paleo-environmental reconstruction, structural/tectonic history, and process reconstruction.
• Students will demonstrate the ability to communicate their scientific knowledge and findings orally and in writing both at the professional scientific level and in lay terms.

1 Recommended elective to take for the Geological Sciences B.S. major.

**Mission**

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The undergraduate educational mission of the Geological Sciences program is to instill an understanding of Earth history, processes and dynamics so as to prepare our students to be meaningful contributors to and leaders of society in research, education and business.

**Goals**

In a time of increasing stress on Earth’s resources, land, oceans and environment, we strive to train our students in both the fundamentals of the Geological Sciences and natural systems and also the global environmental stresses facing Earth and society. In addition to the basic classroom and hands-on education in the various aspects of the Geological Sciences, we focus on preparing our undergraduate students in three critical areas: extensive field training and research to give students competence in dealing with the complexities of the real world; training in written and oral communication to give them competence in sharing their accumulating knowledge with their peers and also with the public; and an understanding of how increased human population and resource use is affecting Earth’s climate, environment and future character.

**Student Learning Outcomes**

- Students will demonstrate a strong knowledge base in the basics of geological sciences materials, history and processes (as provided in our GSC 110, 111, and 260 courses).
- Students will demonstrate a competent knowledge base in the following advanced sub-disciplines of geological sciences: sedimentology, stratigraphy, structural geology, paleontology/paleoecology, geochemistry, geophysics, and petrology.
Students will demonstrate research competence in supervised research projects through course, employment, and/or a Senior Thesis.

Students will demonstrate a competence in application of their geological sciences knowledge to field research applications, including mapping, sequence analysis, paleo-environmental reconstruction, structural/tectonic history, and process reconstruction.

Students will demonstrate the ability to communicate their scientific knowledge and findings orally and in writing both at the professional scientific level and in lay terms.

Electives

Arts and Humanities Cognate Courses 9

People and Society Cognate Courses 9

Total Credit Hours 124-125

1 At least 6 of which must be at the 300-level or higher. MSC 204 does not satisfy the MSC elective requirement but does satisfy the Statistics requirement.

2 One course in Geological Sciences may fulfill requirements in both Marine Science and Geological Sciences.

3 Chemistry for the Biosciences must be passed with a grade of “C-” or higher.

4 Calculus I must be passed with a grade of “C-” or higher.

5 Option 1 is recommended for Physics.

* 6 elective courses must include:
  • 3 Arts and Humanities Cognate courses
  • 3 People and Society Cognate courses

1 Students must take one laboratory from MSC 232 or MSC 302.

Mission

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BS degree in Marine Science at the University of Miami is to graduate students with the ability and desire to integrate knowledge of marine science into their future careers.

Goals

Students completing this double major will be able to master a broad set of fundamental scientific knowledge in Marine Science and Geology, acquire valuable technical skills and learn how to apply this knowledge to real-world problems, in a time of increasing stress on Earth’s resources and environment. The program will provide the rigor, flexibility, depth and integration to enable students to:

- Design and pursue their course of study that meets requirements of a double major in Marine Science and Geology.
- Learn from the diverse and outstanding group of professors and researchers who are experts in their fields and have active research programs.
- Undertake active research experiences, which will allow them to gain a strong understanding of the scientific process and provide them with a set of valuable experimental and computational skills.
• Prepare themselves for graduate school and for successful careers in public and private industries.

**Student Learning Outcomes**

- Students will demonstrate an ability to communicate effectively.
- Students will develop analytical and quantitative skills to allow critical data analysis.
- Students will be able to do carry out supervised research in the field of marine science.

### Minor in Geological Sciences

</tbody>
</table>

* The minor in Geological Sciences consists of 17 credit hours in courses numbered 110 or higher.
** A minimum grade of "C-" must be earned in each course with an overall GPA of 2.0.

### Marine Affairs

**Dept. Code:** MSC

**Marine Affairs**

The ocean is acquiring an ever-increasing significance as an avenue of worldwide commerce and communication and as a source of food, energy, minerals and fuels. As nations and private concerns become more involved in the ocean, the need increases for qualified professionals to deal with the social, cultural, economic, and legal complexities of marine affairs. In order to meet this need, the Rosenstiel School offers a Bachelor of Arts degree with a major in Marine Affairs combined with a required minor or additional major in Anthropology, Economics, Ecosystem Science and Policy, Geography, International Studies, Latin American Studies, Political Science, or an approved field within the Miami Business School. Students in the School of Communication may include Marine Affairs as a second major. This program is designed for students who wish to prepare themselves for graduate studies and careers in ocean related areas of business, policy, management, law, and communication.

**5 Year BA/MPS Program in Marine Ecosystems and Society**

The Rosenstiel School offers a 5 year BA/Master of Professional Science (MPS) Program in Marine Ecosystems and Society. This program enables qualified Marine Affairs students to earn a Bachelor of Arts in Marine Affairs in four years with the opportunity to earn a Master of Professional Science in Marine Ecosystems and Society in one additional year. Conditional acceptance to the graduate Marine Ecosystems and Society program is based on the student’s GPA at the end of the sophomore year. Students must then apply for acceptance to the graduate program at the Rosenstiel School during their junior year.

**Majors in Marine Affairs**

- B.A.M.A. in Marine Affairs (p. 520)

**Minors Offered by Marine Affairs**

- Marine Policy (p. 522)

**B.A. in Marine Affairs**

### Mission
The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BA degree in Marine Affairs at the University of Miami is to graduate students with the ability and desire to integrate knowledge of marine affairs into their future careers.

### Goals
This program strives to provide the rigor, flexibility, depth and integration to enable students to:

- Pursue a course of study that provides both depth and breadth in marine affairs and related science and policy courses.
• Prepare themselves for public and private sector employment, graduate school, and successful careers.

Student Learning Outcomes
• Students will demonstrate an ability to communicate effectively.
• Students will demonstrate an overall knowledge and understanding of the core concepts in Marine Affairs.
• Students will be able to successfully integrate important concepts in marine affairs to address a real-world issue in marine policy and marine resource management.

* Students majoring in the RSMAS Undergraduate Program should replace MSC 111 and MSC 112 with one additional elective, and all electives must be above and beyond those used for the major.
** Only those courses passed with a grade of “C-” or higher may be applied to the minor. The Marine Policy minor fulfills the requirements of the People and Society or STEM cognate.

Marine Biology and Ecology
Dept. Code: MBE

Marine Biology and Ecology
The Bachelor of Science in Marine Biology and Ecology teaches fundamental concepts and precepts in ecology, physiology and organismal-environmental interactions. The educational goals are to understand the range of significant biological concepts from the molecular biology of DNA to how species interactions are affected by environmental change. These educational goals are enhanced by active research experiences that catalyze a student’s understanding of the scientific process. This program is designed for students with a strong interest in academic research, graduate school, and professional careers that require critical thinking skills. For these high performing students, this program will develop competencies with which to successfully advance their careers.

While it is not required, there is enough flexibility in the Bachelor of Science in Marine Biology and Ecology program to allow students to do a minor or even a second major in the College of Arts and Sciences or other Schools. Students wishing to do a second major should review these disciplines for additional requirements.

Select one of the following options: 4 8-12

**Option #1**

| MTH 161 | Calculus I | |
| or MTH 171 | Calculus I | |
| MTH 162 | Calculus II | |
| or MTH 172 | Calculus II | |

**Option #2**

| MTH 140 | Calculus Concepts with Foundations A | |
| MTH 141 | Calculus Concepts with Foundations B | |
| MTH 162 | Calculus II | |

Select one of the following: 3

| MSC 204 | Environmental Statistics | |
| MTH 224 | Introduction to Probability and Statistics | |

Select one of the following options: 5 10

**Option 1:**

| PHY 201 | University Physics I for the Sciences | |
| PHY 106 | College Physics Laboratory I | |
| PHY 202 | University Physics II for the Sciences | |
| PHY 108 | College Physics Laboratory II | |

**Option 2:**

| PHY 221 | University Physics I | |
| PHY 222 | University Physics II | |
| PHY 223 | University Physics III | |
| PHY 224 | University Physics II Lab | |
| or PHY 225 | University Physics III Lab | |

**Option 3:**

| PHY 101 | College Physics I | |
| PHY 106 | College Physics Laboratory I | |
| PHY 102 | College Physics II | |
| PHY 108 | College Physics Laboratory II | |

**Electives**

| Arts and Humanities Cognate Courses | 9 |
| People and Society Cognate Courses | 9 |
| 300+ Level Elective | 3 |
| Additional Electives | 6 |

**Total Credit Hours** 121-127

---

1. Must be at the 300-level or higher. MSC 204 (http://bulletin.miami.edu/search/?P=MSC%20204/) does not satisfy the MSC elective requirement but does satisfy the Statistics requirement.
2. Biological Science electives include but are not limited to BIL, BMB, MBE, MIC, MSC, and NEU. For the Biology dual major, at least one BIL elective must be a CAPSTONE course.
3. Chemistry for the Biosciences must be passed with a grade of 'C-' or higher.
4. Calculus I must be passed with a grade of 'C-' or higher.
5. Option 1 is recommended for Physics.

* 9 elective courses must include:
  - 3 Arts and Humanities Cognate courses
  - 3 People and Society Cognate courses
  - 1 Course (3 credits) at the 300+ level

1 Recommended electives to take for the Marine Biology and Ecology major.

**Mission**

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

**Goals**

The MBE departmental major curriculum will provide the rigor, flexibility, depth and integration to enable students to:

- Design their course of study that provides both depth and breadth in marine biology and ecology and science related courses.
- Undertake active research experiences, which will allow them to gain a strong understanding of the scientific process.
- Learn from the diverse and outstanding group of professors, researchers, and classmates.
- Prepare themselves for the public and private sector employment, graduate school, and successful careers.

**Student Learning Outcomes**

Students completing the MBE departmental major will be able to:

- Master a broad set of fundamental biological knowledge including how to search for, understand, and synthesize primary scientific literature, and understand how fundamental biological principles relate to the marine environment.
- Solve problems competently by identifying the relevant features of the problem and developing a strategy to solve the problem.
- Use computers and computational approaches to acquire and process data as well as use software to analyze data.
- Understand and synthesize the objectives of research experiments, properly conduct experiments, and appropriately record, analyze, and communicate the results.
- Effectively communicate the concepts, results, and implications of their laboratory experiments and independent research both orally and in the written form to experts in the field, scientists in other disciplines, and the general public.
Marine Science

Dept. Code: MSC

Marine Science

Marine Science is an interdisciplinary program dealing with the study of the world's oceans, their physical and biological constituents, the influence of oceanic resources on human society, and the conservation and future development of these resources.

The Bachelor of Science double major in Marine Science prepares students for admission to graduate programs and for careers in teaching and research as well as for technical careers in government and private industries concerned with the oceans. The Bachelor of Science in Marine Science is a full double major program that requires a major in Marine Science through the Rosenstiel School and a second major in one of the sciences through the College of Arts and Sciences, RSMAS, or the College of Engineering. Common second majors are Biology, Chemistry, Geological Sciences, Physics, Computer Science, Meteorology and Microbiology & Immunology. Required courses for these combinations are listed within the major tab.

Second majors in Applied Physics, Biochemistry, Engineering (all disciplines), and Mathematics may be taken. Students interested in adding a second major in one of these disciplines should review the Applied Physics (p. 213), Biochemistry (p. 103), Engineering (all disciplines) (p. 424), or Mathematics (p. 179) pages for additional requirements. Each of the areas of concentration constitutes a rigorous program requiring 120-130 credit hours for graduation.

Majors in Marine Science

• B.S.M.A.S. in Marine Science / Biology (p. 525)
• B.S.M.A.S. in Marine Science / Chemistry (p. 529)
• B.S.M.A.S. in Marine Science / Computer Science (p. 527)
• B.S.M.A.S. in Marine Science / Geological Sciences (p. 531)
• B.S.M.A.S. in Marine Science / Meteorology (p. 533)
• B.S.M.A.S. in Marine Science / Microbiology and Immunology (p. 535)
• B.S.M.A.S. in Marine Science / Physics (p. 537)
• B.S.M.A.S. in Marine Science with a Second Major in One of: Applied Physics, Biochemistry, Engineering (All Disciplines), and Mathematics (p. 539)

Minors Offered by Marine Science

• Climate Science and Policy (p. 513)
• Marine Policy (p. 522)
• Marine Science (p. 542)

</table>
* 7 elective courses must include:
  - 3 Arts and Humanities Cognate courses
  - 3 People and Society Cognate courses

1 Students must take one laboratory from MSC 216, MSC 302.
2 Recommended elective to take for the Marine Science/Biology major.

**Mission**

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BS degree in Marine Science at the University of Miami is to graduate students with the ability and desire to integrate knowledge of marine science into their future careers.

**Goals**

Students completing this double major will be able to master a broad set of fundamental scientific knowledge in Marine Science and Biology, acquire valuable technical skills and learn how to apply this knowledge to real-world problems, in a time of increasing stress on marine environment. The program will provide the rigor, flexibility, depth and integration to enable students to:

- Design and pursue their course of study that meets requirements of a double major in Marine Science and Biology.
- Learn from the diverse and outstanding group of professors and researchers who are experts in their fields and have active research programs.
- Undertake active research experiences, which will allow them to gain a strong understanding of the scientific process and provide them with a set of valuable experimental and computational skills.
- Prepare themselves for graduate school and for successful careers in public and private industries.

**Student Learning Outcomes**

- Students will demonstrate an ability to communicate effectively.
- Students will develop analytical and quantitative skills to allow critical data analysis.
- Students will be able to do carry out supervised research in the field of marine science.

### Freshman Year

1. At least 6 of which must be at the 300-level or higher. MSC 204 does not satisfy the MSC elective requirement but does satisfy the Statistics requirement.
2. One course in Geological Sciences may fulfill requirements in both Marine Science and Geological Sciences.
3. Chemistry for the Biosciences must be passed with a grade of "C-" or higher.
4. Calculus I must be passed with a grade of "C-" or higher.
5. Option 1 is recommended for Physics.
6 elective courses must include:
- 3 Arts and Humanities Cognate courses
- 3 People and Society Cognate courses

1 Students must take one laboratory from MSC 232 or MSC 302.

Mission

The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BS degree in Marine Science at the University of Miami is to graduate students with the ability and desire to integrate knowledge of marine science into their future careers.

Goals

Students completing this double major will be able to master a broad set of fundamental scientific knowledge in Marine Science and Geology, acquire valuable technical skills and learn how to apply this knowledge to real-world problems, in a time of increasing stress on Earth's resources and environment. The program will provide the rigor, flexibility, depth and integration to enable students to:

- Design and pursue their course of study that meets requirements of a double major in Marine Science and Geology.
- Learn from the diverse and outstanding group of professors and researchers who are experts in their fields and have active research programs.
- Undertake active research experiences, which will allow them to gain a strong understanding of the scientific process and provide them with a set of valuable experimental and computational skills.
- Prepare themselves for graduate school and for successful careers in public and private industries.

Student Learning Outcomes

- Students will demonstrate an ability to communicate effectively.
- Students will develop analytical and quantitative skills to allow critical data analysis.
- Students will be able to do carry out supervised research in the field of marine science.

Elective #6 3

Credit Hours 12
Total Credit Hours 122

* 6 elective courses must include:
  • 3 Arts and Humanities Cognate courses
  • 3 People and Society Cognate courses

1 Students must take one laboratory from MSC 232 or MSC 302.

Mission
The mission of the Rosenstiel School of Marine and Atmospheric Science is to deepen our collective knowledge of our planet through cutting-edge scientific research on the oceans, atmosphere, geology, biota, and the human dimension, while training the next generation of scientists. We transfer the knowledge gained to our students, the national and international scientific community, and to policymakers and the public.

The educational mission of the BS degree in Marine Science at the University of Miami is to graduate students with the ability and desire to integrate knowledge of marine science into their future careers.

Goals
Students completing this double major will be able to master a broad set of fundamental scientific knowledge in Marine Science and Physics, acquire valuable technical skills and learn how to apply this knowledge to real-world problems, in a time of increasing stress on Earth’s resources and environment. The program will provide the rigor, flexibility, depth and integration to enable students to:

• Design and pursue their course of study that meets requirements of a double major in Marine Science and Physics.
• Learn from the diverse and outstanding group of professors and researchers who are experts in their fields and have active research programs.
• Undertake active research experiences, which will allow them to gain a strong understanding of the scientific process and provide them with a set of valuable experimental and computational skills.
• Prepare themselves for graduate school and for successful careers in public and private industries.

Student Learning Outcomes
• Students will demonstrate an ability to communicate effectively.
• Students will develop analytical and quantitative skills to allow critical data analysis.
• Students will be able to do carry out supervised research in the field of marine science.

1. Required for Biochemistry double majors.  
3. At least 6 of which must be at the 300-level or higher. MSC 204 does not satisfy the MSC elective requirement but does satisfy the Statistics requirement. Three credits may double count for both MSC and the second major if approved by advisor.  
4. Chemistry for the Biosciences I must be passed with a grade of "C" or higher.  
5. Calculus I must be passed with a grade of "C" or higher.  
6. Option 1 or 2 is recommended for Physics. Option 2 (University Physics) is required for Engineering and Applied Physics.  
7. MSC 203 or RSM 521 is required for Applied Physics, Engineering, and Mathematics.  
8. Students should review the Applied Physics (p. 213), Biochemistry (p. 103), Engineering (all disciplines) (p. 424), or Mathematics (p. 179) page for the second major requirements and credits needed.

Approved MSC 372 and 500-level classes offered by the Rosenstiel School

Total Credit Hours 16

1 At least 6 of which must be at the 300-level or higher.

* Students majoring in the RSMAS Undergraduate Program should replace MSC 111 and MSC 112 with an additional elective, and all electives must be above and beyond those used for the major.

** Only those courses passed with a grade of "C-" or higher may be applied to the major or minor. The Marine Science minor fulfills the requirements of the STEM cognate.
Oceanography

Dept. Code: OCE

Oceanography

The BSMAS in Oceanography is designed to give students a broad overview of the ocean sciences (physical, chemical, biological and geological oceanography, and ocean-atmosphere interactions as they relate to weather and climate) and specialized knowledge in one or more subdisciplines. Students are encouraged, but not required, to complete a second major in Chemistry, Physics, Biology, Geological Sciences, Meteorology, Mathematics, Computer Science or Engineering.

Total Credit Hours  120

1  Recommended for supplemental science courses and additional electives as needed.
2  MSC 220 can be used towards People and Society cognates while also fulfilling three credits of MSC electives.
3  Recommended for MSC elective.
Phillip and Patricia Frost School of Music

Introduction
The University of Miami Frost School of Music awards three types of undergraduate degrees within fourteen major programs.

- Bachelor of Music
  - Instrumental Performance (MIP) (p. 556)
  - Keyboard Performance (MKP) (p. 560)
  - Vocal Performance (MVP) (p. 606)
  - Studio Jazz Instrumental (MSJI) (p. 599)
  - Studio Jazz Vocal (MSJV) (p. 599)
  - Music Education (MED) (p. 563)
  - Music Therapy (MTY) (p. 563)
  - Theory and Composition (MTC) (p. 596)
- Bachelor of Science
  - Media Writing and Production (MWP) (p. 572)
  - Music Business and Entertainment Industries (MBEI) (p. 577)
  - Musicianship, Artistry Development, and Entrepreneurship (MADE) (p. 581)
  - B.M. in Professional Studies (MPRO) (p. 585)
- Bachelor of Arts
  - Music (MUS) (p. 553)

Mission
The Frost School of Music seeks to transform lives through the study and performance of music, and to enhance music’s future as the result of the most innovative and relevant curricula in higher education. The Frost School of Music is devoted to excellence and a culture of collegiality, in which a diversity of people, musical styles, and careers are valued. The Frost School of Music is a community of musicians committed to advanced musicianship for all Frost students across a broad array of majors and programs. The Frost School of Music seeks to elevate the community through intensive, sustained outreach to under-served populations. The Frost School of music strives to enhance the cultural richness of the University of Miami, South Florida and throughout the world as the result of world class performance, scholarship and research.

Accreditation
The Frost School of Music has been a member of the National Association of Schools of Music since 1939. The requirements for entrance and for graduation as set forth in this bulletin are in accordance with the principles of this association.

Goals
The primary goals are:

1. to provide music majors with a high quality education,
2. to provide opportunities for other university students to increase their musical skill, understanding, and appreciation,
3. to provide the music faculty with opportunities for creative activity and scholarly inquiry, and
4. to serve as an educational and cultural resource for the university, South Florida, and global communities.

Admissions

Admission to the Frost School of Music
Students admitted to the Frost School of Music must successfully complete a dual admission process. In addition to the general requirements for admission to the University, the undergraduate student must meet the following requirements of the Frost School of Music:

1. Submit a Frost School of Music Application to the Frost School of Music Admission Office.
2. Submit an Application for Undergraduate Study to the University Office of Undergraduate Admission.
3. Demonstrate performance proficiency by auditioning on campus, at designated regional audition centers, or by recording. Appropriate faculty committees will evaluate the audition.
4. After being admitted to the university each student will be required to participate in placement auditions and exams in theory and music performance. These examinations will be given immediately prior to the fall semester.
5. Transfer students who are admitted to the university will receive a tentative evaluation of their previous work from the office of Admission. Validation of credit hours in music will be based on the results of auditions and placement examinations discussed above. The Associate Dean for Undergraduate Studies of the Frost School of Music determines which transferred courses will meet specific requirements for graduation.
6. Admission is granted in Fall semesters only.

Students who are admitted to the Frost School of Music must begin a program of specialized requirements in music during their first semester.

Admission to the University (Undergraduate Students)
Application forms and bulletins for undergraduate students may be secured from the University of Miami web site (http://www.miami.edu). The University Office of Admission receives and processes all undergraduate applications, evaluates credentials, and mails letters of acceptance to applicants who qualify for entrance. Because of the university’s selective admissions policy and limited enrollment only those applicants are accepted who present evidence of intellectual promise, unusual talent and potential, and strong personal qualifications. Admission as a transfer student requires a 3.0 grade point average from the previous institution. The University Office of Admission and the Frost School of Music determine admission to the university. Prospective students should make formal application for admission in the fall of the senior year in high school.

New Student Placement
New students will participate in an ensemble placement audition and music theory placement assessment during Frost Orientation. These auditions and assessments will determine the student’s appropriate ensemble and music theory placement. Further information on placement materials and procedures will be communicated before Frost Orientation.

Attendance
Regular and punctual class attendance is vital for all students. Each instructor will announce during the first meeting of a class the penalties for non-attendance and for missed quizzes and examinations, since these
vary. Any student may be dropped from a course or receive a lowered grade for unauthorized absences which are exceed those permitted without penalty by the instructor. It is the student’s responsibility to know the instructor’s policies regarding examinations, penalties for absences, or late or missed work. See the UM Academic Bulletin for detailed policy.

A student who is ill should sign a release at the UM Health Service Clinic authorizing the doctor to discuss with the faculty that the student was indeed ill and visited the clinic. The student must request that the faculty contact the Health Center. No notes are given to students. If a student needs to miss more than two consecutive class days due to illness or other emergency, the Dean’s Office should be notified and faculty will be sent a memo.

Preparation and Class Participation
The School of Music values the presence and participation in class of the student as essential elements of the learning experience. Courses are experiential and participatory. The value of the course lies in preparing for, listening to, and participating in all class experiences. It is impossible for a student to make up a missed class with outside resources. Therefore, it is expected that students attend every class, arriving on time. Please see the grading policy for attendance.

80% Attendance Rule
The School of Music maintains a firm 80% policy regarding attendance. That is, a student who fails to attend at least 80% of class sessions does not qualify as having completed the course and will not receive a passing grade. Instructors determine the attendance and grading policy for their course as stated in the syllabus. The individual course attendance requirements may exceed the minimum 80% attendance rule.

Academic Probation and Failed Course Policies
Students Who Fail to Successfully Complete a Music Course
Students who fail to successfully complete any music course, including zero credit forums, after the second enrollment will be dismissed from the Frost School of Music. Courses required for the degree must be taken at the next available opportunity and may not be dropped during the second enrollment.

Grading Criteria:
1. Experiential Music Curriculum Core Courses (48 credits) must be passed with a grade of a "C" or higher, including program forums ('C-' = failing);
2. MED courses must be passed with a grade of "C" or higher for Music Education and Music Therapy majors;
3. Primary lessons must be passed with a grade of 'B-' or higher; and
4. All other music courses will be failing with a grade of "F".

Academic Probation
In addition to the University of Miami academic probation guidelines, a Frost School of Music student is subject to Academic Probation if she/he:
1. Fails to make satisfactory progress towards completion of degree; or
2. Earns an overall Term GPA below a 2.7.

A student who remains on probationary status after two consecutive semesters shall be subject to dismissal:

• Semester One = Probation One;
• Semester Two = Probation Two; and
• Semester Three = Dismissal

The decision to dismiss shall be made by the Academic Standards Committee (ASC) of FSOM. If the decision is made not to dismiss, the student shall remain on Academic Probation. Dismissal Procedures are outlined in the Frost School of Music Undergraduate Student Handbook.

Lessons
Primary Lessons
Primary lessons are for two (2) credit hours and must be taken on the student’s primary instrument, unless otherwise approved. Students enrolled in primary lessons are required to perform a jury at the end of each semester. If a student wishes to take lessons on a secondary instrument, they must follow the procedures in the 'secondary lesson' section below.

There are two levels of undergraduate private lessons:

• Level 1 (VO1) - Undergraduate freshman and sophomores, typically four semesters.
• Level 3 (VO3) - Undergraduate juniors and seniors, typically four semesters.

The number of lessons required for graduation is outlined in the curriculum of each degree program found in the UM Academic Bulletin. Transfer students enrolled in Level 1 for their first semester will be placed at the appropriate level of study after their first jury.

Students earning a grade of 'C+' or lower in lessons will be placed on probation for one semester. Following probation, an additional grade of 'C+' or lower in lessons will result in dismissal from the Frost School of Music.

Secondary Lessons
Secondary lessons are available to FSOM and non-music students, pending studio approval, for one (1) credit hour. Students who wish to enroll in a secondary lesson must first receive approval from the applicable department and submit the Private Lessons Form, located on the FSOM Undergraduate Forms (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) webpage, as outlined in the Frost School of Music Undergraduate Student Handbook.

There is a non-refundable $300 secondary lesson fee required for each semester in which a secondary lesson is taken. This fee must be paid in full before enrollment. For further instructions please contact the Office of Undergraduate Studies.

Summer Lessons
Should a summer lesson be available, it will not fulfill degree requirements for FSOM academic programs.

Juries
A jury is designed to evaluate a student’s musicianship and technical progress in their principal lesson. Juries are typically evaluated by a panel of performance faculty at the end of each semester. Repertoire and technical requirements are assigned by the student’s private instructor. A portion of the final grade may be determined by studio class participation, recital attendance, or other requirements specific to the student’s program of study.
Ensembles

Performing Ensembles

Ensembles provide music learning and performing experience for all students on the University of Miami campus through rehearsals and public concerts. Membership in each of these performing ensembles is based on auditions. Not all ensembles meet degree requirements. Please refer to the FSOM Undergraduate Student Handbook for detailed information regarding ensembles. Please see the course catalog for a complete list of all ensembles.

Instrumental Ensembles

- Accompanying
- American Music Ensemble (Songwriters)
- Avant Garde Ensemble
- “Band of the Hour” Marching Band
- Bluegrass Ensemble
- Blues Ensemble
- Brass Chamber Music
- Brass Choir
- Clarinet Choir
- Classical Guitar Ensemble
- Concert Jazz Band
- Contemporary Music Ensemble
- E.C.M. Ensemble
- Electronic Music Ensemble
- Flute Choir
- Funk/Fusion Ensemble
- Horace Silver Ensemble
- Ibis Ensemble
- Jazz Band III
- Jazz Bass Ensemble
- Jazz Guitar Ensemble
- Jazz Keyboard Ensemble
- Jazz Saxophone Ensemble
- Laptop Ensemble
- Mallet Ensemble
- Monk/Mingus Ensemble
- Percussion Chamber Music
- Salsa Ensemble
- Saxophone Ensemble
- Small Contemporary Ensemble
- Small Jazz Ensembles
- String-Keyboard Chamber Music
- Studio Jazz Band
- Studio Rhythm Section
- Symphonic Winds
- Symphony Orchestra
- Trombone Choir
- Tuba Ensemble
- University Band
- Wind Ensemble
- Woodwind Chamber Music

Vocal Ensembles

- Frost Chorale
- Jazz Vocal I-III
- Musical Theatre Workshop
- Opera Theater
- Symphonic Choir
- Women’s Choir

Enrollment

Forums

Students must successfully complete a program forum each semester in residence. Program forums must be passed with a "C" or higher in order to be approved for graduation. The grade of a "C-" is considered failing. Please refer to the FSOM Undergraduate Student Handbook for detailed information regarding forums and studio classes.

Auditing

Students are not permitted to audit music courses.

Graduation Requirements

The general requirements for graduation from the University of Miami are described in the General Information (http://bulletin.miami.edu/general-university-information/) section of the Academic Bulletin. These general requirements are included in the list of requirements for majors in the Frost School of Music. Students must satisfy all degree requirements in order to graduate. The student should consult his/her advisor regularly and review the Degree Progress Report available in CaneLink under Academic Requirements to ensure that these requirements are met. The Dean must approve changes or deviations from the printed requirements in writing. Degree requirements may be satisfied by successfully completing a course, an approved substitution for the course, an approved transfer course, or waiver from the course as a result of demonstrating the required competency through testing.

Candidates for degrees must complete all requirements of the University and the Frost School of Music with a minimum 'C' average (2.0) or better and at least 120 credits. Students may not graduate with an 'I' or 'NG' in any course.

Transfer Credits

Transfer Student Credit Evaluation

FSOM music course transfer equivalencies will be determined prior to Frost Orientation. Transfer Students will receive a pre-registration advising via email before enrolling in courses. If official transcripts are not received by the University, or if transfer credits are not correctly labeled, this process may be delayed. Please contact Eva Alonso at eva.alonso@miami.edu for further information.

Other Music Transfer Credits

If you have previously earned music credit at another institution and wish to receive transfer equivalencies, please complete the Transfer Credit Equivalency Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) and return it to Eva Alonso in PLF 108 N.
Non-UM Programs (Summer, Study Abroad, and Term)

Students currently enrolled in the Frost School of Music who wish to Study Abroad must complete the Non-UM Program Request Form (https://registrar.miami.edu/_assets/pdf/new-site/Forms-1/Non-UM%20Program%20Application.0.1.pdf) through the Registrar’s Office. If you wish to take summer courses away and earn college credit, please bring a completed Transfer Credit Equivalency Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/), along with the course description from the Non-UM Program, to the Undergraduate Studies Office. If you wish to transfer in a non-music course you must get the equivalency approved by the department in which the course lives (i.e. ENG 105 equivalency will need to be approved by the English Department). After the form is complete, please bring the form to the Office of Undergraduate Studies for final approval and processing.

If you have earned 56 credits or more, courses must be taken at a NASM or regionally accredited institution (four-year college or university). The last 45 credits prior to graduation must be in residence at the University of Miami.

Dual Degrees

Dual degrees have more stringent requirements than “double majors.” The only courses that may count for both degrees are the general education requirements (ENG 105 (http://bulletin.miami.edu/search/?P=ENG%20105/) and ENG 106 (http://bulletin.miami.edu/search/?P=ENG%20106/), Math, People and Society cognate, and STEM cognate). For each degree a student must have a different major and minor, if a minor is required. The major for one degree may not be a minor for the other degree.

Music Opportunities for Non-Music Majors

Select music courses are available to students not enrolled in a music degree program. A list of courses is available on the music website (forms), https://admissions.frost.miami.edu/undergraduate/current-students/

Minors for Non-Music Students

- General Music Minor (p. 553) (Satisfies the Arts and Humanities Area of Knowledge) - Audition Required
- Dance Minor (p. 609)(Satisfies the Arts and Humanities Area of Knowledge) - Audition Required
- Music Business and Entertainment Industries Minor (p. 596) (Satisfies the People and Society Area of Knowledge) - No Audition Required

Students interested in the Minor in General Music must successfully pass an ensemble placement (if participating in an ensemble) or primary instrument audition (if enrolling in private lessons). Please contact the appropriate faculty member listed on the Ensemble Contact List or the Secondary Lesson Audition Contact List (located on the Undergraduate Forms Webpage (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/)) to inquire about audition materials and to schedule your audition.

Once you have received confirmation that you have passed the audition, request that the designated faculty member sign the bottom of the Declaration of Music Minor Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) or the Declaration of Dance Minor Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/). For students declaring the General Music Minor, submit your completed Declaration of Music Minor Form to the Undergraduate Studies Office and declare your chosen music minor through your primary school. For students declaring the Minor in Dance, submit your completed Declaration of Dance Minor Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) to Prof. Carol Kaminsky, c.kaminsky@miami.edu and declare your chosen music and/or dance minor through your primary college or school.

Cognates

All cognates that include courses offered by FSOM satisfy the Arts & Humanities Area of Knowledge. Please see a list of all applicable cognates below:

- World of Music (https://cognates.miami.edu/AT_0001/) (AT_0001)
- Creative Arts in Therapy: Integrating Music and Dance into Counseling and Healthcare (https://cognates.miami.edu/AT_0009/) (AT_0099)
- The Arts in Education: Contextual Connections (https://cognates.miami.edu/AT_0010/) (AT_0010)
- Western Civilization: Historical Approaches (https://cognates.miami.edu/AT_0011/) (AT_0011)
- Music Performance and Understanding (https://cognates.miami.edu/AT_0102/) (AT_0102)
- Music and Movement (https://cognates.miami.edu/AT_0101/) (AT_0101)

Secondary Lessons

Secondary lessons are available to FSOM and non-music students, pending studio approval, for one (1) credit hour per semester. Students who wish to enroll in a secondary lesson must first receive approval from the applicable department and submit the Private Lessons Form, located on the FSOM Undergraduate Forms (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) webpage, to the Office of Undergraduate Studies.

There is a $300 secondary lesson fee required for each semester in which a secondary lesson is taken. This fee must be paid in full (cash or check payable to the University of Miami) before enrollment. For further instructions, please visit the Office of Undergraduate Studies. The Secondary Lesson Contact List is located on the Undergraduate Forms Webpage (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/).

Ensembles

Non-music students may request to audition for any ensemble in the Frost School of Music. Students may enroll in ensembles upon approval of applicable faculty and ensemble instructor. If course is restricted to majors only in CaneLink, please send proof of faculty approval to the Office of Undergraduate Studies and a registration permission code will be created.
General Education

General Education Requirements
Music students are expected to meet the university general education requirements, detailed in the academic bulletin, in order to ensure that they have acquired essential intellectual skills. Music students are encouraged to engage in a range of academic disciplines.

English and Mathematics Requirements
Students requiring ENG 105, ENG 106, or MTH 101 must enroll in these classes during the first year in residence and are not permitted to drop the courses.

Advanced Writing and Communication Skills

All students are required to successfully complete 3 Advanced Communications and Writing courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All music students will successfully complete:

1. A required musicology course, which will include substantial evaluated and revised writing components.
2. A Senior recital or culminating project, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. One required course in their major which will include discipline specific communication skills.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

- General Music Minor (p. 553)
- Music Business and Entertainment Industries Minor (p. 596)
- Creative American Music Minor (p. 595)
- Music Composition Minor (p. 599)
- Studio Music and Jazz Instrumental Minor (p. 606)
- Dance Minor (p. 609)
- Performer’s Certificate in Instrumental Performance (p. 559)
- Performer’s Certificate in Keyboard Performance (p. 562)
- Performer’s Certificate in Jazz (p. 605)
- Performer’s Certificate in Vocal Performance (p. 608)

Areas of Knowledge

To discover cognates offered by UM, please visit the Cognate Search Engine (https://cognates.miami.edu/). To declare a cognate and/or minor, students must submit a Minor and/or Cognate Declaration Form (http://www.miami.edu/frost/index.php/frost/programs/undergraduate_studies/undergraduate_forms/) to the Office of Undergraduate Studies.

Arts and Humanities
All Frost School of Music students satisfy the Arts and Humanities Area of Knowledge, upon successful completion of the BM, BS, or BA music degree requirements.

People and Society
Students enrolled in the following degree programs must satisfy their People and Society Area of Knowledge with a cognate, minor, or major. MIP, MKP, MVP, MSJI, MSJV, MTC, MWP, MBEI, MADE, and MPRO.

The following degree programs satisfy the People and Society Area of Knowledge upon successful completion of the required minor:

- MED Music Education with required minor in Education;
- MTY Music Therapy with required minor in Psychology;
- MBEI Music Business and Entertainment Industries with required minor in Business, Communication or Entertainment, if the minor is designated as People and Society; and

- MUS Bachelor of Arts in Music required minor outside of music may fulfill this requirement if the minor is in the People and Society Area of Knowledge.

Please note that a minor in Music Business and Entertainment Industries satisfies the People and Society Area of Knowledge.

Science, Technology, Engineering, and Math (STEM)

Students enrolled in the following degree programs must satisfy their STEM Area of Knowledge through a cognate, minor, or major: MIP, MKP, MVP, MSJI, MSJV, MED, MTC, MWP, MBEI, MADE, and MPRO.

The following degree programs satisfy the STEM cognate upon successful completion of the required minor:

- MUE Music Engineering with required minor in Electrical Engineering or Computer Engineering;
- MBEI Music Business and Entertainment Industries with required minor in Business, Communication or Entertainment, if the minor is designated as STEM;
- MUS Bachelor of Arts in Music required minor outside of music may fulfill this requirement if the minor is in the STEM area of knowledge.
Experiential Music Core Requirement (EMC)

The EMC Core courses are common to all Frost School of Music students regardless of degree program. The EMC core courses empower students to become internal musicians as they develop deep knowledge in music and a high level of musical skills. As a community of musicians, all students interact with their peers whose diverse interests strengthen their music making abilities.

Additional courses for Principal Instrument Lesson & Studio Class and Ensembles may be required for the major.

All EMC core courses must be successfully completed with a grade of "C" or higher. A grade of a "C-" is considered failing.

Foote Fellow General Education Requirements

The Foote Fellows Honors Program recognizes the most educationally accomplished incoming students at the University of Miami. Foote Fellows have distinguished themselves both in and out of the classroom, are self-motivated, and think independently. Admission to the Foote Fellows Honors Program is by invitation.

Within the curricular framework of their school or college, Foote Fellows enjoy maximum freedom to explore a multitude of educational resources. Many Foote Fellows leverage this opportunity to take additional majors and/or minors and to study abroad.

At each of the nine undergraduate schools at the University of Miami, a dedicated advisor helps Foote Fellows chart their academic path and attain access to distinctive learning opportunities and educational guidance, such as special school-based seminars, faculty-mentored research, networking opportunities, and off-campus internships.

In addition, Foote Fellows have access to opportunities outside their school. Special Foote Fellow lectures are held throughout the academic year. "Books That Matter," a rigorous, multidisciplinary seminar in reading and analyzing significant works of nonfiction, is offered to Foote Fellows. In their junior and senior years, Foote Fellows are invited to join advanced, interdisciplinary, and integrative seminars taught by leading faculty members from across the University. Foote Fellows also benefit from focused advising regarding post-baccalaureate distinguished fellowships and awards, support and information about co-curricular opportunities from a dedicated program manager, and networking events with other Foote Fellows from all disciplines.

To graduate with the Foote Fellows Honors Program distinction, Foote Fellow students must achieve a minimum GPA of 3.5 by the completion of the final semester.

Eligibility for the Foote Fellows Honors Program transcript distinction for each student is determined by the lower of two GPAs:

1. UM cumulative graduation GPA
2. Combination GPA (UM cumulative graduation GPA + Transfer GPA)

The Foote Fellows Honors Program reflects the educational vision of former University of Miami President Edward T. Foote, who retired in 2000 after serving the University for twenty years.

Foote Fellows in the Frost School of Music have freedom within the General Education requirements as described below. However, Foote
Fellow students are still required to accumulate twenty-seven (27) total credit hours in non-music coursework to meet graduation requirements.

Bachelor of Arts in Music (MUS)

Dept. Code: MCY

Undergraduate students who are interested in musicology, music history or ethnomusicology are encouraged to enroll in the Bachelor of Arts in Music degree, through which they can pursue these and related subjects within a liberal arts music curriculum. There is no undergraduate degree in musicology.

Bachelor of Arts in Music

- B.A.M. Bachelor of Arts in Music (p. 553)

Minors

- Minor in General Music (p. 556)

B.A.M. Bachelor of Arts in Music

Introduction

The Bachelor of Arts in Music degree is a non-professional degree designed for talented musicians who wish to pursue a broad liberal arts education. Curriculum flexibility affords students the opportunity for a variety of pre-professional studies, including premedical and pre-legal. A minor outside the Frost School of Music is required. Students in the BA in Music program must earn a minimum 2.5 GPA each semester to remain in the program.

The mission of the Bachelor of Arts in Music is to provide students with the highest quality education possible in music, a broad education in the liberal arts, and in-depth study in an academic area outside of the Frost School of Music.

Educational Objectives

- Students will acquire a thorough knowledge of music theory and music history, and develop advanced competence in musical performance.
- They will develop the ability to think, speak, and write clearly with the capacity to explain and defend their views effectively and rationally based on substantive knowledge of the liberal arts.

- The student will acquire competency in a selected non-music academic area that includes a broad understanding of the area and contemporary thought within the area.

Advanced Writing and Communication Skills

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All BA in Music students will successfully complete:

1. MCY 341, which will include substantial evaluated and revised writing components.
2. MCY or MTC 300+, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MCY or MTC 300+, which will include discipline specific communication skills.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

Mission

The mission of the Bachelor of Music Degree (BAM) in Music at the Frost School of Music is to 1) provide students the highest quality of education available in their principal academic program as instrumentalists and Vocalists within the areas of Instrumental and Vocal Performance, Commercial Music, Studio Music and Jazz, Composition, Music Education, Music Therapy though the diversity of programs offered at the Frost School of Music; 2) The objective of BAM is to enhance the development of musicianship that could serve as the foundation for graduate degree auditions, national/international competitions, and entry-level careers as musicians; 3) The Bachelor of Arts in Music program also aims to stimulate student awareness and artistic creativity within the fields of music composition as well as music ensemble performance, while providing students public performance opportunities in a supportive and encouraging environment. In addition, the requirement that students acquire a Minor Degree or a second Major within the University of Miami system enables them to present as a musician who excels in another academic area as well. The discipline and academic rigor endemic to achieving excellence in diverse fields equips FROST BAM students to better confront the challenges when entering the competitive professional world of employment as well.

Goals

- Students will acquire a thorough knowledge of music theory and music history, and develop advanced competence in musical performance.
- They will develop the ability to think, speak, and write clearly with the capacity to explain and defend their views effectively and rationally based on substantive knowledge of the liberal arts.
- The student will acquire competency in a selected non-music academic area that includes a broad understanding of the area and contemporary thought within the area.

Student Learning Outcomes

- Students will demonstrate intellectual/scholarly aptitude and oral skills in interdisciplinary discussions.
- Students will demonstrate mastery of their secondary area of study (minor, double major, or dual degree) outside of music and connectivity to their music studies. This includes writing proficiency through PowerPoint and musical aptitude through performance on their primary or secondary instrument.
- Students will be able to improvise and sight-read music in styles outside their normal performance practice. For example, a classical violist improvising over jazz chord charts, or a guitarist in the contemporary program sight reading orchestrated parts to support a
A music minor requires 15 credit hours, 12 of which must be earned at the University of Miami.

**Mission**

The mission of the Bachelor of Music in Performance Degree is to

1. Provide the highest quality of education possible in the areas of musicianship that will lead toward a professional performance career or graduate study as a classical artist.
2. To provide performance opportunities that integrate the skills learned in music and other classes and to foster creativity and research.
3. To provide audition skills and repertoire as well as the skills for building and managing the non-performance aspects of a professional career.

**Goals**

- Students will develop musicianship skills and technique that will lead toward a professional career as a solo classical performer or graduate study.
- Students will be able to sight-read and prepare musical performances without assistance.
- Students will develop musicianship skills and technique for working within an ensemble leading towards a professional career or graduate study as a classical performer. Ensemble requirements will vary by applied area.
- Students will develop skills for fostering a professional career or graduate study as a classical performer.
- Students will have a broad knowledge of music literature in their applied area as well as an understanding of stylistic and theoretical principles of the various musical and historical periods.

**Student Learning Outcomes**

- Students will develop instrumental Technique necessary for acceptance into elite level graduate study institutions and for fostering a professional career as classical instrumentalists.
- Students will develop instrumental Expression necessary for acceptance into elite level graduate study institutions and for fostering a professional career as classical instrumentalists.
- Students will develop effective Communication skills related to performance and pedagogy through effective writing or presentation. These skills are necessary for acceptance into elite level graduate study institutions and for fostering a professional career as classical instrumentalists.

**Certificate in Instrumental Performance**

Audition Required—Music Majors Only

Performance Certificates may be awarded to music majors, in non-performance degrees: MED, MTY, MTC, MWP, MBEI, MUE, and MUS, who meet the achievement level and standards of a music performance major on a single instrument as offered by the following degree programs: MIP, MVP, MKP, MSJI, and MSJV.

Any student wishing to declare a Performance Certificate must audition on an instrument or voice and be approved by the appropriate department. In addition to the Experiential Music Curriculum Core Courses, the following requirements must be met in one of the following tracks: MIP, MVP, MKP, or MSJ. The Music Performance Certificate requires approval by designated departmental faculty.

The appropriate performance level must be achieved as determined by the designated departmental faculty or the certificate will not have been earned, even if all courses have been successfully completed. The Music Performance Certificate will be awarded upon successful completion of all coursework and final approval of the designated departmental faculty.

* Students who will enroll in a required internship (i.e. student teaching) in their 8th semester may petition the department to perform the senior recital and satisfy the Principal Instrument Lesson & Studio Class degree requirements in their 7th semester.

Keyboard Performance (MKP)

Dept. Code: MKP

The Department of Keyboard Performance offers a bachelor of music performance degree and a performer's certificate in piano. It is a dynamic center for music scholarship. Regardless if a student is more versed in classical or contemporary repertoire, the performance and academic opportunities are exceptional and for all areas of keyboard study.

Bachelor of Music: Keyboard Performance (MKP)

The purpose of the Bachelor of Music in Keyboard Performance Degree: A degree from the Frost School of Music in Keyboard Performance will ensure a broad comprehensive training for a student in a performance-intensive environment. Degree programs incorporate performance, music research, pedagogy, and professional skills to cultivate students for a professional life in music. Graduates may seek careers as concert performers, collaborative pianists/accompanists, and/or as artist teachers.

Educational Objectives

Private lessons are taught with individual student goals in mind, and direction in academics and career pursuits are a priority for the entire faculty. We take pride in the reputation of our keyboard faculty for not only their distinguished concert careers, but also their dedication as inspiring teachers and mentors.

Major in Keyboard Performance

• B.M. in Keyboard Performance (p. 560)

Certificates

• Keyboard Performance (p. 562)

B.M. in Keyboard Performance

Advanced Writing and Communication Skills

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All keyboard performance students will successfully complete:

1. MCY 341 Music of the Medieval, Renaissance, and Baroque Periods, which will include substantial evaluated and revised writing components.
2. MKP XXX Private Lesson Level 3 Senior Recital, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MKP 547 Keyboard Pedagogy, which will include discipline specific communication skills.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

### Certificate in Keyboard Performance

#### Mission

The mission of the Bachelor of Music degree in Keyboard Performance is to:

- Provide students the highest quality of education available in the areas of piano performance and musicianship that will provide the foundation for a successful teaching career at an institution or private studio, and which could also lead toward a professional performance career as a classical pianist.
- Stimulate the student's awareness and artistic creativity in the field of piano performance.
- Provide students public performance opportunities in a supportive and encouraging environment.
- Provide students performance skills necessary for careers in teaching, success at national/international piano competitions, and to further their skills in performance.
- Provide students a learning environment for developing as performing musicians.
- Instruct students in developing their playing technique, musical knowledge, and performing personalities in order for them to share these insights with their future students.
- Introduce and educate students in the vast amount of literature available for the classical piano.

#### Goals

**Student Learning Outcomes**

- Students will develop solid memorization skills necessary to achieve a higher success rate at graduate auditions and other important performance settings. By acquiring such skills, students will develop greater freedom in performance and interpretive expression as well as a deeper understanding of the pianistic repertoire.
- Students will develop technical pianistic skills necessary for acceptance into a variety of graduate study institutions offering a MM in performance and for fostering a professional career as solo pianists.
- Students will develop musicianship skills and knowledge of a large selection of the piano repertory necessary for acceptance into a variety of graduate study institutions offering a MM in performance and for fostering a professional career as solo pianists.

### Certificate in Keyboard Performance Audition Required—Music Majors Only

Performance Certificates may be awarded to music majors, in non-performance degrees: MED, MTY, MTC, MVP, MBEI, MUE, and MUS, who meet the achievement level and standards of a music performance major on a single instrument as offered by the following degree programs: MIP, MVP, MKP, MSJI, and MSJV.

Any student wishing to declare a Performance Certificate must audition on an instrument or voice and be approved by the appropriate department. In addition to the Experiential Music Curriculum Core Courses, the following requirements must be met in one of the following tracks: MIP, MVP, MKP, MSJ, and MSJV. The Music Performance Certificate requires approval by designated departmental faculty.

The appropriate performance level must be achieved as determined by the designated departmental faculty or the certificate will not have been achieved.
This page discusses the Music Education and Music Therapy programs offered by the University of Miami, including admission requirements, courses, and educational objectives. It emphasizes the importance of having strong foundations in pedagogy and practical skills. The curriculum requirements are detailed, including courses such as Music of the Mediaeval, Renaissance, and Baroque Periods for Music Education majors (MCY 341). The program aims to prepare students to teach music in a wide array of contexts, including K-12 public & private schools. The Department of Music Education and Music Therapy offers two degree programs: Music Education (MED) and Music Therapy (MTY).

### Music Education and Music Therapy (MED) & (MTY)

**Dept. Code: MED**

The Department of Music Education and Music Therapy offers two degree programs,

- Music Education (MED)
- Music Therapy (MTY).

### Majors in Music Education and Music Therapy

- B.M. in Music Education with Minor in Education (p. 563)
- B.M. in Music Therapy with Minor in Psychology (p. 567)

### B.M. in Music Education with Minor in Education

**Introduction**

The Bachelor of Music in Music Education with Minor in Education degree program prepares undergraduate music students to become outstanding music educators who are certified by the Florida Department of Education (FL-DOE) to teach music in the schools of Florida and, through reciprocity agreements with other state DOEs, throughout the United States. A basic premise of the Bachelor of Music Education degree program is that music teachers must be both strong musicians and skilled educators; thus, competency as a performing and creating musician is as important as having strong foundations in pedagogy (both theory and practice).

We believe our series of music education techniques and methods courses provide students with a broad foundation in teaching music through the lifespan (childhood through adulthood), as well as across a wide array of educational settings and musical contexts. This sequence incorporates ideas drawn from theory, research, and the practical experiences of the faculty and other successful practitioners. We also believe that students must be able to build themselves to meet their professional goals by developing a specialization in an area of music teaching through music education emphasis area electives.

### Program Goals

- Help students develop the musical and teaching competencies necessary to enable them to demonstrate the generic and subject area competencies and the Florida Educational Accomplished Practices (FEAP) for becoming successful music teachers.
- Enable students to apply the musical and instructional skills developed in the program (and reinforced during field experience and student teaching) to teach music in a wide array of contexts.
- Help students to develop the skills and desire to continue music-making as a lifetime endeavor both personally and professionally.
- Help students develop skills in integrating information from the diverse professional literature into their teaching.

### Educational Objectives

- Students must demonstrate generic competencies required by the university in general education courses.
- Students must demonstrate competencies related to the core Professional Education courses required by the State of Florida in Teaching and Learning (TAL) courses.
- Students must demonstrate musical competencies related to the requirements of the Bachelor of Music degree.
- Students must demonstrate teaching competencies related to the core courses in the music education.

The Music Education curriculum is designed to prepare students to teach music in a wide array of contexts, including (K-12) public & private schools. All Music Education majors must perform at a high level either vocally or on an instrument. Students must successfully complete the Florida General Knowledge Examination (FGKE) to be admitted to teacher candidacy and to graduate.

All students must develop knowledge of and performance ability on wind, string, and percussion instruments as well as, vocal skills to assure effective use of the voice in teaching.

Admission to Teacher Candidacy and to graduate.

Admission to and/or retention in the music education curriculum leading to Florida Teacher Certification requires that students be formally screened with respect to specific criteria. Following are the Requirements for Admission to Teacher Candidacy and for Admission to Associate Teaching:

### Admission to Teacher Candidacy

1. Acceptance as a major in the music education program.
3. Completion of 45 credit hours. (Transfer students must have at least 12 credit hours earned at the University of Miami.)
4. Successful completion of TAL 305 or TAL 404 (C or higher).
5. No grade less than a C in TAL & MED courses.
6. 2.5 minimum GPA in music courses.
7. Required Background Check completed through Miami-Dade Public Schools Office.
8. Completion of a successful Field Experience Requirement.

**Admission to Student Teaching**

1. Approval of MED faculty members.
2. Completion of 90 credit hours.
3. Completion of at least three-fourths of the courses in the teaching major, verified by advisor.
4. Admission to Teacher Candidacy through the Undergraduate Associate Dean's Office in the School of Education & Human Development.
5. Completion of a C or better in all MED & TAL courses
6. 2.5 minimum GPA in music courses.
7. Completion of pre-internship field experiences with above-average evaluations.

Total Credit Hours  127-128

1 MED, TAL and EMC courses require a grade of "C" or higher. Lessons require a grade of 'B-' or higher.
2 MED 475 Internship in Music Education (12 credits) can be substituted for MED 471 & MED 473

**Advanced Writing and Communication Skills**

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All Music Education students will successfully complete:

1. MCY 341 Music of the Medieval, Renaissance, and Baroque Periods, which will include substantial evaluated and revised writing components.
2. MED 471 & MED 473 Internship in Music Education (Elementary & Secondary) or MED 475 Internship in Music Education, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MED 542 Teaching General Music, one required course in their major which will include discipline specific communication skills.

**Assessment**

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

**Suggested Plan of Study**

### Mission

The mission of the Bachelor of Music degree program in Music Education at the Frost School of Music is to:

- Help students develop the musical and teaching competencies necessary to enable them to demonstrate the generic and subject area competencies and the Florida Educational Accomplished Practices (FEAP) for becoming successful music teachers.
- Enable students to apply the musical and instructional skills developed in the program (and reinforced during field experience and student teaching) to teach music in a wide array of contexts.
- Help students to develop the skills and desire to continue music-making as a lifetime endeavor both personally and professionally.

¹ Two semesters of Marching Band (MIP 170) required for all brass, percussion, & woodwind principals.
• Help students develop skills in integrating information from the diverse professional literature into their teaching.

**Goals**

- Students must demonstrate generic competencies required by the university in general education courses.
- Students must demonstrate competencies related to the core Professional Education courses required by the State of Florida in Teaching and Learning (TAL) courses.
- Students must demonstrate musical competencies related to the requirements of the Bachelor of Music degree.
- Students must demonstrate teaching competencies related to the core courses in the music education.

**Student Learning Outcomes**

- Students in the Bachelor of Music Education program will demonstrate the ability to plan effective instruction.
- Students in the Bachelor of Music Education program will demonstrate the ability to deliver effective instruction.
- Students in the Bachelor of Music Education program will demonstrate effective communication and writing skills.

**B.M. in Music Therapy with Minor in Psychology**

**Introduction**

The music therapy program provides students with the opportunity to develop comprehensive musicianship as well as clinical knowledge and skills within a rich musical, scholarly and communicative environment. Music therapy majors must demonstrate musical proficiency, either vocally or instrumentally, and must acquire musical competency on guitar, piano, voice and percussion.

Graduates of this program are prepared for careers as professional music therapists in a variety of health care and educational settings. Furthermore, graduates are eligible to take the Board Certification Exam in music therapy, leading to the credential, Music Therapist Board Certified (MT-BC). The music therapy curriculum is approved by the American Music Therapy Association, and is based on the clinical and research paradigm known as Neurologic Music Therapy.

To remain in the Music Therapy program, students must earn a minimum 2.5 GPA each semester. Additionally, music therapy core courses must be completed with a grade of C or higher. All internship applications must include a written letter of recommendation from a music therapy faculty member.

**Educational Objectives**

The music therapy program is designed to address three primary objectives:

- **Comprehensive musicianship:** through intensive music study and performance experiences, students will articulate knowledge of music structure and style, produce aesthetically pleasing musical performances, and modify music for specific contexts.
- **Knowledge of human behavior:** by studying both theory and scientific evidence, students will develop an in-depth understanding of the systems of the human body, the intricacies of human behavior, as well as developmental norms and deviations in each domain of functioning.
- **Knowledge of Music Therapy:** students will engage in rigorous exploration of the theories and scientific evidence that support the use of music in a therapeutic context. Following the neurologic music therapy approach, all techniques learned in this program are based on scientific evidence regarding music perception and behavior. Furthermore, students have ample opportunity to establish and refine their therapeutic skills through five semesters of clinical practice in addition to a six-month, full-time clinical internship. Internship applications must include a written letter of recommendation from music therapy faculty member.

**The Music Therapy Equivalency Program**

The equivalency program is designed for the individual who has already completed a bachelor’s degree in a related discipline, including the following courses:

- Music Theory I, II, III and IV; Music History I and II; Conducting, Arranging, Applied Lessons (6 semesters), Performing Ensembles (8 semesters), Piano Competency (4 semesters of either lessons or group piano) and Introduction to Psychology.

Beyond these courses, the program consists of 50 credit hours that can be completed in two years, followed by a six-month clinical internship. All internship applications must include a written letter of recommendation from a music therapy faculty member. Please contact the Music Therapy Program Director for a listing of the 50 credit hours.

If any of the prerequisite courses have not yet been completed, they can be taken at the University of Miami. Taking these additional courses, however, may lengthen the amount of time required to complete the equivalency program. In certain situations, alternate courses from other universities can substitute for the required courses. Depending on the nature of the course, this decision will be made by the undergraduate dean, in consultation with the Music Therapy Program Director.

In order to determine exactly how many credits are required to complete the equivalency program, the student should obtain official transcripts for their previous degree and meet with the music therapy program director. Following completion of the course and internship, students are then eligible to sit for the music therapy board certification exam and can become professional members of the American Music Therapy Association (AMTA). For students wishing to pursue graduate studies in music therapy, the equivalency program can be combined with the master’s degree in music therapy.

Total credits for courses in the major = 58

Total Credit Hours: 124-125

1. EMC and MED courses require a grade of "C" or higher. Lessons require a grade of "B-" or higher.
2. Students enrolling in MED 560 Music Therapy Internship II are considered full-time. Health insurance is mandatory but can be waived depending on visa status. International students must apply for CPT (Curricula Practical Training). This course confers full-time status for undergraduate students and fulfills a degree requirement for the Bachelor of Music Therapy degree program.
Advanced Writing and Communication Skills

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All Music Therapy students will successfully complete:

1. MCY 141 Musical Trends and Traditions, which will include substantial evaluated and revised writing components.
2. MED 363 Senior Practicum, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MED 551 Music Therapy Research Methods, which will include discipline specific communication skills.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

1. Students enrolling in MED 560 Music Therapy Internship II are considered full-time. Health insurance is mandatory but can be waived depending on visa status. International students must apply for CPT (Curricula Practical Training). This course confers full-time status for undergraduate students and fulfills a degree requirement for the Bachelor of Music Therapy degree program.
### Mission

The mission of the Bachelor of Music degree program in Music Therapy at the Frost School of Music is to prepare students to develop: a) advanced and functional musicianship, b) music therapy clinical knowledge, and c) music therapy clinical skill. The preparation of students’ academic, professional, and interpersonal therapeutic abilities will satisfy the required standards of practice of an entry level practitioner as required by the American Music Therapy Association. The Frost program seeks to recruit and retain highly qualified students to study and gain entry-level clinical skill for music therapy practice and employment and to prepare them for graduate study.

### Goals

The music therapy program is designed to address three primary objectives:

- Comprehensive musicianship: through intensive music study and performance experiences, students will articulate knowledge of music structure and style, produce aesthetically pleasing musical performances, and modify music for specific contexts.

- Knowledge of human behavior: by studying both theory and scientific evidence, students will develop an in-depth understanding of the systems of the human body, the intricacies of human behavior, as well as developmental norms and deviations in each domain of functioning.

- Knowledge of Music Therapy: students will engage in rigorous exploration of the theories and scientific evidence that support the use of music in a therapeutic context. Following the neurologic music therapy approach, all techniques learned in this program are based on scientific evidence regarding music perception and behavior. Furthermore, students have ample opportunity to establish and refine their therapeutic skills through five semesters of clinical practica in addition to a six-month, full-time clinical internship. Internship applications must include a written letter of recommendation from music therapy faculty member.

### Student Learning Outcomes

- Students will demonstrate functional music skills for clinical practice.

- Students will demonstrate effective treatment planning to include assessment of various diagnoses, setting of goals and objectives, designing therapeutic music experiences, accurate data collection of behavior, and ability to articulate client progress through both verbal and written means.

- Students will demonstrate effective clinical practice skills including the ability to facilitate client response through appropriate music interventions.
Music Media and Industry (MMI)

Department code: MMI.

The Department of Music Media and Industry offers degree programs in the following areas:

- B.M. in Music Business Entertainment Industries with a Business, Communications, or Entertainment-Related Minor.
- B.M. in Musicianship, Artistry Development, and Entrepreneurship with a Minor in Music Business and Entertainment Industries.
- B.M. in Professional Studies
- B.S. in Music Engineering Technology with a Minor in Computer or Electrical Engineering
- B.M. in Media Writing and Production

Majors

- B.M. in Music Business Entertainment Industries with a Business, Communications, or Entertainment-Related Minor (p. 577)
- B.M. in Musicianship, Artistry Development, and Entrepreneurship with a Minor in Music Business and Entertainment Industries (p. 581)
- B.M. in Professional Studies (p. 585)
- B.S. in Music Engineering Technology with a Minor in Computer or Electrical Engineering (p. 587)
- B.M. in Media Writing and Production (p. 572)

Minors

- Creative American Music Minor (p. 595)
- Music Business and Entertainment Industries Minor (p. 596)

B.M. in Media Writing and Production

The Bachelor of Music in Media Writing and Production (MWP) is a program designed to provide the highest level of preparation for qualified composers and producers for media. Successful students will complete diverse writing (composing, scoring, producing) assignments, as well as develop technical and practical skills in the recording studio. In addition, students will increase their knowledge of current trends in the music industry.

Prospective students should furnish evidence of outstanding writing and production creativity, as well as basic digital audio workstation (DAW) and music notation skills.

Students must maintain a minimum GPA of 2.70 to remain in the MWP Program.

Advanced Writing and Communication Skills

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All music students will successfully complete:

1. MCY 141 Musical Trends and Traditions, which will include substantial evaluated and revised writing components (MWP Majors will take this or another equivalent course depending on their area of emphasis)

2. MCY XXX (200 level or higher), which will include discipline specific communication skills.

3. MMI 445 Senior Project/Portfolio/Business Plan, This course is the capstone for both the MWP programs. Students will develop and compile a portfolio of creative works that showcase their individual artistry, including but not limited to recordings, videos, songs, scores, and/or other applicable media elements.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

MCY 141  Musical Traditions (AWC) 3
MMI 310  Music Business and Entrepreneurship for Musicians 3
MMI 259  Digital Audio and MIDI Production 3
Ensembles (semesters 1-6, 1 credit hour) 6
Total credits for EMC Core courses = 48

Required Courses in the MWP Major
MKP 140  Media Writing and Production Forum 1
MKP 220, MSJ 220, or MMI 220  Media Writing I: Computer Composition 3
MMI 259  Production I: Recording and Production Techniques 3
MMI 445  Senior Project/Portfolio (AWC) 1
MWP Electives (Must complete 4 courses from the primary area of emphasis and 1 course from the secondary area of emphasis) 15
Media Writing Emphasis 3
MKP 260  Virtual Orchestration 3
MKP 262  Media Writing II: Video Game Scoring 3
MMI 363  Media Writing III: Film Scoring Foundations 3
MMI 364  Media Writing IV: Film Scoring Extensions 3
Production Emphasis
MKP 220  Synthestration 3
MKP 222  Production II: Audio Processing and Critical Listening 3
MKP 333  Production III: Audio Editing 3
MKP 334  Production IV: Mixing and Mastering 3
Additional Electives
MCY XXX  Elective at the 200 level or above (AWC) 3
MTC/MMI/MSJ  Orchestration or Arranging Elective 3
MTC/MMI/MSJ  Approved Elective at the 300 level or above 3
MTC/MMI/MSJ  Approved Music Electives or MTC Minor 3
Total credits for courses in the major = 48
Total Credit Hours 121

1 EMC core courses require a grade of "C" or higher. Lessons require a grade of 'B' or higher.
2 Students in conjunction with an advisor, can construct a MWP major with a Media Writing emphasis or Production emphasis. These areas of emphasis are notated on the UM transcript as a Media Writing and Production major.
3 MWP majors with a Media Writing emphasis are strongly encouraged to add a minor in Music Composition with the approval of the MTC Department Chair: http://bulletin.miami.edu/undergraduate-academic-programs/music/music-theory-composition/music-composition-minor/.

Mission
The Commercial Music & Production (MWP) degree program is designed to prepare undergraduate students for the many issues facing today’s commercial music writers and producers. In this specialized program, successful students complete diverse compositional assignments, develop technical and practical skills in the recording studio, and acquire an understanding of the music industry.

Goals
Student Learning Outcomes
• Students will demonstrate the ability to plan, prepare, produce, and execute a live performance of original contemporary commercial music and arrangements.
• Students will demonstrate the ability to compose, record, edit, and prepare for distribution original contemporary/commercial music and arrangements.
• Students will demonstrate the ability to compose, score, orchestrate, record, and edit, original music for visual media such as film, video, and games.

B.M. in Music Business Entertainment Industries
Introduction
The Bachelor of Music in Music Business and Entertainment Industries is a professional degree program designed to prepare qualified musicians for careers in the business management, financial, legal, and artistic areas of the music industry. Music, business, and music business courses are combined in an interdisciplinary curriculum, which includes a minor in Marketing, Business Law, Management, Finance, Business Technology, Public Relations, or other approved business-related area. For curriculum requirements see Minors for Non-Business Students. (p. 261)

Students must maintain a minimum GPA of 2.70 to remain in the MBEI Program.

Please see below for additional goals and degree requirements.

Educational Objectives
• Students will have a conceptual understanding of the structures and inter-relationships of the music and entertainment industries.
• Students will acquire knowledge and understanding of the vocabulary and terminology associated with the music and entertainment industries.

• Students will be able to comprehend and apply basic music publishing procedures including copyright administration, mechanical licensing and royalties distribution.
• Students will know how to promote and sell a music industry product.
• Students will have an understanding of the performing artist as a major economic factor in the marketplace.
• Students will develop a set of skills applicable to the music industry including: financial and project management, create and enact marketing and promotional plans, the ability to write basic agreements and licenses, and copyright management and administration.

Advanced Writing and Communication Skills

Courses
All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All music students will successfully complete:

1. MCY 141 Musical Trends and Traditions, which will include substantial evaluated and revised writing components.
2. MMI 537 Recorded Music Operations, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. ENG 230 Advanced Business Communications, COS 333 Business Communication, or ENG 331 Legal Writing which will include discipline specific communication skills.

Assessment
There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

**Mission**

The mission of the Music Business and Entertainment Industries Program is to prepare students for careers in the music business profession, specifically in the areas involving music publishing, and the record business. This is accomplished through courses in music...
business, music, and business, as well as the general education areas of English and STEM

Goals

• Students will have a conceptual understanding of the structures and inter-relationships of the music and entertainment industries.
• Students will acquire knowledge and understanding of the vocabulary and terminology associated with the music and entertainment industries.
• Students will be able to comprehend and apply basic music publishing procedures including copyright administration, mechanical licensing and royalties distribution.
• Students will know how to promote and sell a music industry product.
• Students will have an understanding of the performing artist as a major economic factor in the marketplace.
• Students will develop a set of skills applicable to the music industry including: financial and project management, create and enact marketing and promotional plans, the ability to write basic agreements and licenses, and copyright management and administration.

Student Learning Outcomes

• Students will demonstrate knowledge of the fundamentals of the music publishing industry, including licensing, royalties, publishing agreements, and how a song catalog is commercially exploited.
• Students will demonstrate knowledge of the fundamentals of the recorded music industry, including how content is created, distributed, and marketed, and how recording agreements are structured.
• Students will demonstrate knowledge of the fundamentals of music copyright, including how it applies to musical works and sound recordings, copyright infringement, the length of copyright protection, and international treatment of music copyrights.

B.M. in Musicianship, Artistry Development, and Entrepreneurship

The MADE major allows the freedom and flexibility for students to focus on their preferred areas of emphasis, with outcomes that lead toward a viable career of their own choosing.

Educational Objectives

Upon graduation, students will have:

• a highly competitive skill set in musicianship, artistry, and entrepreneurship, including performing, writing, arranging/orchestration, recording, musical direction, marketing and promotion, copyright management and administration, as well as the ability to write basic agreements and licenses;
• a diverse and applied understanding of the music industry;
• the ability to create and execute a sound business plan, as well as a portfolio/EPK that best showcases their brand identity.
• a minor in Music Business and Entertainment Industry.

1. EMC core courses require a grade of "C" or higher. Lessons require a grade of 'B-' or higher

**Advanced Writing and Communication Skills Courses**

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All music students will successfully complete:

- MCY 141 Musicals and Traditions, which will include substantial evaluated and revised writing components.
- MMI 445 Senior Project/Portfolio, which is the capstone for both the CAM and MADE programs. Students will develop and compile a portfolio of creative works that showcase their individual artistry, including but not limited to recordings, videos, songs, scores, and/or other applicable media elements. Students will also be required to organize a public performance/showcase their works. Requisite: MADE Major or CAM Minor
- COS 333 Business Communication or ENG 200+ course (recommended courses ENG 230 or ENG 331)

**Assessment**

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

16

### Total Credit Hours
129

---

1. MMI 320 substitutes for MMI 315.
2. MMI 307/MMI 308 will count towards ensemble requirements.

## Mission
The Bachelor of Music in Musicianship, Artistry Development & Entrepreneurship is a professional degree program designed to provide the highest level of preparation for qualified performers and creatives to thrive in all aspects of the contemporary music industry.
Goals

Upon graduation, students will have:

- A highly competitive skill set in musicianship, artistry, and entrepreneurship, including performing, writing, arranging/orchestration, recording, musical direction, marketing and promotion, copyright management and administration, as well as the ability to write basic agreements and licenses;
- A diverse and applied understanding of the music industry;
- The ability to create and execute a sound business plan, as well as a portfolio/EPK that best showcases their brand identity.
- A minor in Music Business and Entertainment Industry.

Student Learning Outcomes

B.M. in Professional Studies

The Bachelor of Music in Professional Studies will allow students to work closely with an advisor to develop individual goals and design a personalized program of study. While most music degree programs are highly prescriptive, the MPRO will allow students to tailor the curriculum to match their diverse personal and professional goals, as well as adjust to the rapidly changing music industry.

Students will select approved electives with the assistance of a guidance committee consisting of their assigned Faculty Advisor(s), Senior Academic Advisor, and the Associate Dean for Undergraduate Studies.

Experiential Music Curriculum Core Courses MPRO 1

- Program forum as assigned (8 semesters)
- Principal Instrument Lesson & Studio Class (semesters 1-4, 2 credit hours)
- Principal Instrument Lesson & Studio Class (semesters 5-6, 2 credit hours)
- Experiential Musicianship I
- Experiential Musicianship II
- Experiential Musicianship III
- Experiential Musicianship IV
- Skills Lab I (co-requisite MTC 140/MSJ 140/MMI 140)
- Skills Lab II (co-requisite MTC 141/MSJ 141/MMI 141)
- Skills Lab III (co-requisite MTC 240/MSJ 240/MMI 240)
- Skills Lab IV (co-requisite MTC 241/MSJ 241/MMI 241)
- Keyboard Studies I (MSJ 103 if enrolled in MSJ theory)
- Keyboard Studies II (MSJ 104 if enrolled in MSJ theory)
- Experiencing Music

Mission

Goals

Student Learning Outcomes
• Students will demonstrate and develop advanced competence in Music Performance on their instrument.
• Students will develop proficiency in ensemble performance skills necessary for participation and functionality as a professional.
• Students will develop the technological proficiency necessary for an entry-level career in the music profession.

B.S. in Music Engineering Technology

Introduction
The mission of the Music Engineering Technology program is to:
1. Provide the highest quality education in the field of music engineering.
2. Promote advancements in the fidelity and creativity of music recording, production and reproduction.
3. Promote advancements in the invention, design and implementation of audio hardware and software.

The goals of the Music Engineering Technology program are to:
1. Further enhance the program’s national and international stature.
2. Obtain teaching infrastructure and resources needed to provide contemporary education in the field of music engineering technology.
3. Ensure that curricular offerings are current and able to educate students in new and future theory and practice.
4. To help graduates find professional career positions.

Educational Objectives
• Understanding the theoretical basis of sound recording, processing and reproduction.
• Understanding the practice techniques used in sound recording, processing and reproduction.
• Designing and implementing original audio hardware and/or software.
• Understanding the principles of computer science (Bachelor of Music) or electrical engineering (Bachelor of Science).

The Music Engineering Technology curriculum is designed for musicians interested in pursuing a career in music recording, audio hardware and software design, and related professions in the audio, audio-video, multimedia, and internet industries. The program is interdisciplinary in nature; it includes courses in music, music engineering, computer science, electrical engineering, and mathematics. This program includes a minor in Electrical Engineering or a double major in Computer Science. Freshman students are expected to enroll in calculus, which carries a prerequisite of Trigonometry and Analytical Geometry. Prospective students are expected to have a strong background in music performance and in mathematics.

1. EMC core courses require a grade of "C" or higher. Lessons require a grade of 'B-' or higher.
2. MMI 460 Recital Recording and Sound Reinforcement must be taken a minimum of 3 times to satisfy the Advanced MUE elective requirement.
3. Must complete calculus by end of sophomore year.
4. A minimum 2.7 GPA is required to remain in the Music Engineering Technology program.
5. A minimum 2.0 GPA is required in all Engineering courses taken.

Select two of the following Advanced Music Engineering Electives:

- MMI 460 Recital Recording and Sound Reinforcement (Recording Services) 2
- MMI 465 Internship in Music Engineering
- MMI 504 Audio Signal Processing III
- MMI 505 Current Trends in Music Engineering I
- MMI 506 Current Trends in Music Engineering II
- MMI 508 Current Trends in Music Engineering III
- MMI 510 Computational Psychoacoustics
- MMI 521 Timbral Ear Training
- CIM 353 Post Production Sound Editing and Design

Advanced Writing and Communication Skills

**Courses**

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All music students will successfully complete:

1. MCV 141 Musical Trends and Traditions, which will include substantial evaluated and revised writing components.
2. MMI 410 Music Engineering Capstone Project, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MMI 401 Audio Electronics, which will include discipline specific communication skills.

**Assessment**

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

Total credits for courses in the major = 60

Total Credit Hours = 127

1. EMC core courses require a grade of “C” or higher. Lessons require a grade of ‘B-’ or higher.
2. MMI 460 Recital Recording and Sound Reinforcement must be taken a minimum of 3 times to satisfy the Advanced MUE elective requirement.
3. Must complete calculus by end of sophomore year.

* A minimum 2.7 GPA is required to remain in the Music Engineering Technology program.
** A minimum 2.0 GPA is required in all Engineering courses taken.

### Mission

The mission of the Music Engineering Technology program is to:

- Provide the highest quality education in the field of music engineering.
- Promote advancements in the fidelity and creativity of music recording, production, and reproduction.
- Promote advancements in the invention, design, and implementation of audio hardware and software.

### Goals

- Understanding the theoretical basis of sound recording, processing, and reproduction.
- Understanding the practice techniques used in sound recording, processing, and reproduction.
- Designing and implementing original audio hardware and/or software.
- Understanding the principles of computer science (Bachelor of Music) or electrical engineering (Bachelor of Science).

### Student Learning Outcomes

- Students will use problem solving skills to find a solution to a music engineering problem.
- Students will demonstrate theoretical understanding and practical techniques utilized in sound recording, processing, and reproduction.
- Students will demonstrate understanding of electrical and computer engineering concepts and applications.

### Minor in Creative American Music (Audition required, music majors only)

The Bruce Hornsby Creative American Music Program

The Bruce Hornsby Creative American Music Program is designed to develop the creative skills of talented performing songwriters by immersing them in the diverse traditions that form the foundation of modern American songwriting. This rigorous approach will require students to become intimate, both in understanding and practice, with the vast and varied legacy that is American music. The CAM Program is open to all Frost School of Music students by audition. Those who successfully complete the program will earn a minor in Creative American Music. A minor in Creative American Music requires 17 credit hours.

### Contemporary Performance as Primary Instrument or Voice

Contemporary Performance accommodates talented songwriters, singers, and instrumentalists who are not classical or jazz musicians. Contemporary instruments include Guitar (Electric and Acoustic), Voice, Electric Bass, Keyboard, Media (Alternate Controllers/Electronic
Producers), Strings (Fiddle, Electric Violin, etc.) and Percussion (incl. Drums). Songwriters may apply to the Creative American Music Program. Contemporary Performance is available to students in the following majors: Musicianship, Artistry Development, and Entrepreneurship; Music Business and Entertainment Industries; Music Engineering Technology; Media Writing and Production; Music Education; Music Composition; Music Therapy; Professional Studies; and the Bachelor of Arts in Music. Pre-screening and audition are required.

Music Theory and Composition (MTC)

Dept. Code: MTC

The Department of Music Theory-Composition

• Music Theory-Composition (MTC)

B.M. in Music Theory-Composition

• B.M. in Music Theory and Composition (p. 596)

Minor in Music Theory-Composition

• Music Composition (p. 599)

B.M. in Music Theory and Composition

Introduction

The Bachelor of Music in Composition is designed to:

1. Provide students with a learning environment conducive to the pursuit, fostering, development, and exchange of ideas and information, particularly as it pertains to music composition and performance.
2. To provide student access to varied composition communities.
3. To continue to build upon the Frost School of Music’s reputation as an innovative, forward-thinking, and first-rate center for advanced study.
4. To maintain the highest educational, professional, and ethical standards.

Goals of the program are:

1. To provide students with training to be fluent in basic compositional skills.
2. To help students understand various directions that are available to composers in the 21st century.
3. To help students perform and realize their music.
The curriculum in Composition is designed for those students intending to pursue a career as a composer and/or to pursue graduate degrees in Composition. Prospective students are expected to furnish evidence of compositional ability.

**Educational Objectives**

- Students develop basic compositional skills of varying lengths and genres.
- Students compose works utilizing various compositional techniques and styles.
- Students compose works for varied instrumentation and/or media.

**Advanced Writing and Communication Skills**

**Courses**

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All Music Theory and Composition students will successfully complete:

1. MCY 341 Music of the Medieval, Renaissance, and Baroque Periods, which will include substantial evaluated and revised writing components.
2. MTC 402 Composition VIII, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MTC 311 Analysis and Experience which will include discipline specific communication skills.

**Assessment**

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

### Mission

The mission of the Bachelor of Music in Composition program is to:

- Provide students with a learning environment conducive to the pursuit, fostering, development, and exchange of ideas and information, particularly as it pertains to music composition and performance.
- To provide student access to varied composition communities.
- To continue to build upon the Frost School of Music’s reputation as an innovative, forward-thinking, and first-rate center for advanced study.
- To maintain the highest educational, professional, and ethical standards.

### Goals

- To provide students with training to be fluent in basic compositional skills.
- To help students understand various directions that are available to composers in the 21st century.
- To help students perform and realize their music.

### Student Learning Outcomes

- Students will develop basic compositional skills of varying lengths and genres.
- Students will have works performed in concerts, recitals, and reading sessions.
- Students will demonstrate the ability to compose for a variety of instruments.

### Minor in Music Composition

A minor in music composition is primarily intended for students in the Frost School of Music who are pursuing majors in other fields within the Frost School. Students interested in this minor are required to submit a portfolio to the chair of the department for approval before declaring the minor. The minor consists of 15 credit hours.

### Studio Music and Jazz (MSJI) & (MSJV)

#### Dept. Code: MSJ

The Department of Studio Music and Jazz includes two programs, instrumental and vocal.

#### Introduction

The mission of the Studio Music and Jazz Performance Program is to:

- Prepare jazz instrumentalists to enter the music profession or graduate school.
- Identify, recruit, and retain high quality students who seek to pursue studio/jazz performance as a career.
- Foster faculty creativity and performance which serves as a role model for students.
- Develop, and revise courses in jazz improvisation, jazz arranging/composition and provide on and off campus performance opportunities.
- Produce in our on campus facility, recordings for the Down Beat Student Music Awards, compact disks, radio and Internet broadcast.
- Provide a platform of learning that includes performance, composition/arranging, technology, conducting, scholarship and production.

#### Educational Objectives

- Students will develop musical performance skills necessary to make them competitive in the jazz world.
- Students will develop performance skills in a variety of large and small ensembles that allow a student to participate in the professional jazz world.
- Students will develop the skills necessary to play in a chamber setting emphasizing spontaneous interaction and improvisation.
- Students will develop the skills necessary to play in large jazz ensembles emphasizing the development of ensemble skills necessary in a reading situation.
- Students will perform a senior recital of sixty-minute duration that demonstrates their capabilities in the jazz idiom.
- Students will develop the skills necessary to arrange and compose in a variety of styles appropriate to the jazz and contemporary music field.

### Majors in Studio Music and Jazz

- B.M. in Studio Music and Jazz Instrumental (p. 600)
- B.M. in Studio Music and Jazz Voice (p. 603)
Minor in Studio Music and Jazz
• Studio Music and Jazz Instrumental (Music Majors Only) (p. 606)

Certificates
• Jazz Performance (p. 605)

B.M. in Studio Music and Jazz Instrumental
Dept. Code: MSJ

The instrumental curriculum in Studio Music and Jazz is designed for interested and qualified students who desire to continue to develop to the highest degree their background and skills in the performance of studio music and jazz. Admission to this major pre-supposes musical training in jazz on the principal instrument.

Advanced Writing and Communication Skills

Courses
All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All Studio Jazz Instrumental students will successfully complete:
1. MCY 141 Musical Trends and Traditions, which will include substantial evaluated and revised writing components.
2. MSJ XXX Private Lesson Level 3 Senior Recital, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MSJ 213 Analysis & Evolution of Jazz Styles II, which will include discipline specific communication skills.

Assessment
There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

</table>
The mission of the Studio Music and Jazz Performance Program is to:

• Prepare jazz instrumentalists to enter the music profession or graduate school.
• Identify, recruit, and retain high quality students who seek to pursue studio/jazz performance as a career.
• Foster faculty creativity and performance which serves as a role model for students.
• Develop, and revise courses in jazz improvisation, jazz arranging/composition and provide on and off campus performance opportunities.
• Produce in our on campus facility, recordings for the Down Beat Student Music Awards, compact disks, radio and Internet broadcast.
• Provide a platform of learning that includes performance, composition/arranging, technology, conducting, scholarship and production.

Goals

• Students will develop musical performance skills necessary to make them competitive in the jazz world.
• Students will develop performance skills in a variety of large and small ensembles that allow a student to participate in the professional jazz world.
• Students will develop the skills necessary to play in a chamber setting emphasizing spontaneous interaction and improvisation.
• Students will develop the skills necessary to play in large jazz ensembles emphasizing the development of ensemble skills necessary in a reading situation.
• Students will perform a senior recital of sixty-minute duration that demonstrates their capabilities in the jazz idiom.
• Students will develop the skills necessary to arrange and compose in a variety of styles appropriate to the jazz and contemporary music field.

Student Learning Outcomes

• Students will develop proficiency in instrumental performance skills necessary to be competitive in the jazz and contemporary music professions.
• Students will develop proficiency in ensemble performance skills necessary for participation and functionality in the jazz and contemporary music professions.
• Students will develop proficiency in improvisation, composition, arranging, and interaction skills necessary for successful performance within the jazz idiom and a variety of styles appropriate to the jazz and contemporary music profession.
• Students will develop the technological proficiency necessary for a career in the jazz and contemporary music profession.

1. EMC core courses require a grade of “C” or higher. Lessons require a grade of “B-” or higher.
Mission
The mission of the Studio Music and Jazz Performance Program is to:

- Prepare jazz instrumentalists to enter the music profession or graduate school.
- Identify, recruit, and retain high quality students who seek to pursue studio/jazz performance as a career.
- Foster faculty creativity and performance which serves as a role model for students.
- Develop, and revise courses in jazz improvisation, jazz arranging/composition and provide on and off campus performance opportunities.
- Produce in our on campus facility, recordings for the Down Beat Student Music Awards, compact disks, radio and Internet broadcast.
- Provide a platform of learning that includes performance, composition/arranging, technology, conducting, scholarship and production.

Goals
- Students will develop musical performance skills necessary to make them competitive in the jazz world.

Student Learning Outcomes
- Jazz Vocal students will demonstrate an exceptional level of fluidity, fluency and facility in their vocal technique by the time they graduate.
- Jazz Vocal students will demonstrate an exceptional level in their improvisational structure by indicating the harmonic scheme, phrasing of melodic musical statement and creative use of compositional and stylistic components.
- Jazz Vocal students will demonstrate an exceptional level in their interpretation of jazz literature. Interpretation will be appropriate, relevant, and complimentary beyond the expectations of the musical task.

Certificate in Jazz Performance
Audition Required—Music Majors Only
Performance Certificates may be awarded to music majors, in non-performance degrees: MED, MTY, MTC, MWP, MBEI, MUE, and MUS, who meet the achievement level and standards of a music performance major on a single instrument as offered by the following degree programs: MIP, MVP, MKP, MSJI, and MSJV. Any student wishing to declare a Performance Certificate must audition on an instrument or voice and be approved by the appropriate department. In addition to the Experiential Music Curriculum Core Courses, the following requirements must be met in one of the following tracks: MIP, MVP, MKP, MSJI, and MSJV. The Music Performance Certificate requires approval by designated departmental faculty. The appropriate performance level must be achieved as determined by the designated departmental faculty or the certificate will not have been earned, even if all courses have been successfully completed. The Music Performance Certificate will be awarded upon successful completion of all coursework and final approval of the designated departmental faculty.

* Students who will enroll in a required internship (i.e. student teaching) in their 8th semester may petition the department to perform the senior recital and satisfy the Principal Instrument Lesson & Studio Class degree requirements in their 7th semester.

Students may enroll in the MSJ or Performer’s Certificate in Jazz Studies. Students may not earn both credentials.

Total required credits = 12

The Department of Vocal Performance offers a bachelor of music degree in vocal performance.

Advanced Writing and Communication Skills

Courses

All students are required to successfully complete 3 Advanced Writing and Communication Skills (AWC) courses. Student degree requirements will include courses that meet the desired communication outcomes in evaluated and revised writing, speaking, stage presence, and audience engagement.

All Vocal Performance students will successfully complete:

1. MCY 341 Music of the Medieval, Renaissance, and Baroque Periods which will include substantial evaluated and revised writing components.
2. MVP VO3 Private Lesson (Level 3) Senior Recital, which will include evaluated communication skills in attracting an audience, engaging an audience during performance, and preparing program notes or similar media as appropriate to the medium/venue.
3. MVP 538 Vocal Pedagogy, which will include discipline specific communication skills.

Assessment

There will be at least 2 specific assessments in each Advanced Communications Skills course for communications or writing equivalent to 4000 words, evaluated and revised.

Mission

The mission of the Bachelor of Music Degree in Vocal Performance is:

- To provide students the highest quality of education available in the areas of vocal performance and musicianship that will provide the foundation for continued academic work and which could also lead toward a professional performance career as a classical singer
- To stimulate the student's awareness and artistic creativity in the field of vocal performance
- To provide students public performance opportunities in a supportive and encouraging environment
- To provide students performance skills necessary for graduate degree auditions, vocal competitions and chamber music careers.

Goals

Student Learning Outcomes

- Students will be able to sing solo, classical, vocal repertoire in at least four languages in their senior solo recital.
- Student will demonstrate breath management and tension release skills in singing for one jury performance at the end of each semester.
- Students will demonstrate proper alignment for singing classical repertoire.

Certificate in Vocal Performance

Audition Required—Music Majors Only

Performance Certificates may be awarded to music majors, in non-performance degrees: MED, MTY, MTC, MWP, MBEI, MUE, and MUS, who meet the achievement level and standards of a music performance major on a single instrument as offered by the following degree programs: MIP, MVP, MKP, MSJI, and MSJV. Any student wishing to declare a Performance Certificate must audition on an instrument or voice and be approved by the appropriate department. In addition to the Experiential Music Curriculum Core Courses, the following requirements must be met in one of the following tracks: MIP, MVP, MKP, or MSJ. The Music Performance Certificate requires approval by designated departmental faculty. The appropriate performance level must be achieved as determined by the designated departmental faculty or the certificate will not have been earned, even if all courses have been successfully completed. The Music Performance Certificate will be awarded upon successful completion of all coursework and final approval of the designated departmental faculty.

* Students who will enroll in a required internship (i.e. student teaching) in their 8th semester may petition the department to perform the senior recital and satisfy the Principal Instrument Lesson & Studio Class degree requirements in their 7th semester.

Minor in Dance

https://dance.frost.miami.edu/

Students intending to minor in dance are required to write a statement (150-300 words) explaining their motivation to minor in dance or submit a resume of their dance experience or a video of themselves in dance performance or class for consideration. Send your statement, video or resume to Carol Kaminsky at c.kaminsky@miami.edu and approval from your advisor. All dance minors must maintain a grade point average of 3.0 in dance courses. There is no undergraduate major in dance.

Nursing and Health Studies
http://www.miami.edu/sonhs

The School of Nursing and Health Studies (SONHS) is committed to academic excellence, the advancement of healthcare, and service to society. Opportunities are available for students to study and earn course credit in a variety of local and international settings.

Mission
The mission of the SONHS is to educate students and support faculty committed to excellence in nursing and health science. Through research, education and practice, the school will create and disseminate health knowledge and prepare culturally competent leaders to provide safe service to our community, the nation and the world.

Baccalaureate Degrees
The SONHS offers three baccalaureate degrees:

1. Bachelor of Science in Health Science (BSHS)
2. Bachelor of Science in Nursing (BSN)
3. Bachelor of Science in Public Health (BSPH)

Student Responsibilities
Students in the SONHS are responsible for fulfilling their degree requirements. Students are also responsible for complying with all provisions outlined in the Academic Bulletin and the Student Handbook.

Academic Bulletin and Student Handbook
In addition to the material listed in the Academic Bulletin, all SONHS students are held to the policies, procedures, and requirements listed in the most current Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for their respective degree program. Please note the material included in the Student Handbook is subject to change throughout the academic year and may not be reflected in the Academic Bulletin. The Student Handbook contains the most current information. Consult an academic advisor in the Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) for questions related to academic requirements and opportunities.

Facilities

Simulation Hospital
In Fall 2017, the SONHS opened the new, state-of-the-art, 41,000 square foot, 5 story Simulation Hospital (http://www.miami.edu/sonhs/index.php/simulation_hospital/). The Simulation Hospital is a one-of-a-kind facility, as it is one of the first education-dedicated simulation facilities located on a college campus. This new facility uses the latest simulation technology to provide SONHS students with the highest-quality healthcare education through a variety of simulated clinical environments. It also provides opportunities for public health-related simulation experiences and creates ample opportunities for interprofessional education (IPE).

Library resources for SONHS students are available at the Otto G. Richter Library (http://library.miami.edu/) on the Coral Gables Campus and the Louis Calder Memorial Library (http://calder.med.miami.edu/) on the Medical Campus.

Clinical experiences are offered in a variety of hospitals and health-related agencies in the community, including the University of Miami Hospital, Jackson Health System, Sylvester Comprehensive Cancer Center, Nicklaus Children’s Hospital, and approximately 170 other community partners.

The Foote Fellows Honors Program (https://admissions.miami.edu/undergraduate/academics/honors-and-scholars-programs/foote-fellows/) at the University of Miami (UM) recognizes the most educationally accomplished incoming students. Throughout high school, Foote Fellows distinguished themselves both in and out of the classroom as self-motivated, independent-thinking individuals dedicated to the pursuit of knowledge. This program was built to reflect these ideals and to embody the educational vision of former University of Miami President, Edward T. Foote, who retired in 2000 after serving the University for twenty years.

Program Benefits and Opportunities
Foote Fellows in the School of Nursing and Health Studies (SONHS) are exempt from the Areas of Proficiency (e.g., English and mathematics), Areas of Knowledge (i.e., cognates), and Advanced Writing and Communication requirements. These exemptions provide Foote Fellows with unmatched freedom and flexibility to explore a multitude of educational endeavors within the curricular framework of the SONHS.

Financial Assistance
Students interested in obtaining financial assistance in the form of student loans, grants, etc. should contact the Office of Financial Assistance (http://www.miami.edu/admission/index.php/ofas/).

The SONHS also offers limited merit-based and need-based scholarships to continuing students. The types of scholarships available and the qualifications for them vary by semester. Continuing students who wish to be considered for the SONHS scholarships must apply for such scholarships through the SONHS General Scholarship Application. Calls for applications are e-mailed to continuing students once each semester to prompt students to apply who wish to be considered for a scholarship for the next term. Additional information on the SONHS scholarships as well as health science-, nursing-, and public health-related outside scholarships can be found on the SONHS Scholarships website (http://www.sonhs.miami.edu/admissions-and-financial-aid/financial-aid-and-community-scholarships/).
Many Foote Fellows leverage this opportunity to complete additional majors, minors, and/or cognates, study abroad, participate in research, etc.

SONHS Foote Fellows may be eligible to participate in various global initiatives (https://www.sonhs.miami.edu/academics/hemispheric-and-global-initiatives/), research experiences, civically-engaged or clinically-based courses, and academic lectures. They will be invited to join advanced, interdisciplinary Foote Fellow seminars taught by leading faculty members from across the University (e.g., 'Books That Matter'). Furthermore, Foote Fellows receive focused advising by the Foote Fellow program coordinator on post-baccalaureate prestigious awards and fellowships. SONHS Foote Fellows should speak with the academic advisors located in the Office of Student Services (OSS) (https://www.sonhs.miami.edu/admissions-and-student-services/office-of-student-services/contact-oss/) to learn more about their academic and extracurricular opportunities.

Admission Criteria
Admission to the SONHS Foote Fellows program is by invitation only. To be considered for this program, health science, nursing, and public health students must have a weighted high school GPA of 4.5 or higher and a SAT score of 1300 or higher (verbal and math) or an ACT score of 30 or higher. Students must also submit a portfolio consisting of (a) an essay on their desire to contribute to decreasing health disparities, including a description of at least one health disparity and a plan for addressing it, (b) a historical account of their community service, volunteer, and leadership experience, and (c) a discussion of their short-term and long-term goals.

Outcome Criteria
Foote Fellows in the SONHS will maintain an undergraduate GPA of 3.5 or higher. The GPA used to make this determination is the UM-specific GPA or the Combined GPA (i.e., UM-specific and Transfer GPA combined), whichever is lower. Foote Fellows must also create a capstone portfolio that includes examples of (a) how they have addressed a health disparity throughout their program of study and of (b) the community service, volunteer, and leadership experiences they have participated in throughout their time at the University of Miami.
Health Science

Academic Programs

The University of Miami (UM) School of Nursing and Health Studies (SONHS) offers courses leading to the degree of Bachelor of Science in Health Science (BSHS). Baccalaureate education provides the foundation for further education in specialized health professional fields. All students who pursue the BSHS degree graduate with a health science major and one of the following pre-professional tracks:

1. General Track
2. Health Management and Policy Track
3. Pre-Medical Track
4. Pre-Occupational Therapy Track
5. Pre-Pharmacy Track
6. Pre-Physical Therapy Track

Students are encouraged to contact graduate programs directly to ascertain if there are specific course requirements they must complete above and beyond those included in their chosen pre-professional track.

Admission

Admission as a new freshman or transfer student to the BSHS program is handled through the Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers&utm_medium=Print) and is open to applicants who meet the general requirements for admission to the UM.

In accepting students into the BSHS program, the UM does not in any way ensure admittance into professional graduate programs. Admission to professional graduate programs is dependent upon strong undergraduate academic performance and appropriate, well-rounded extracurricular experiences. Admission to these programs is determined independently by the school or program to which the student applies.

Applicants interested in any of the SONHS’ baccalaureate programs are encouraged to speak with a representative from the SONHS’ Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) and/or the UM’s Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers&utm_medium=Print&). Students are encouraged to contact graduate programs directly to discuss any questions related to course requirements for admission to professional graduate programs.

Academic Policies

Grades

Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to grades, progression, and dismissal.

Undergraduate BSHS students must earn a C- or higher in each course for the major to progress.

When a course must be repeated, progression in the BSHS program may be altered in order for prerequisites to be met. Such alteration may lengthen the time required to complete the BSHS program.

Grade Point Averages (GPAs)

Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to GPAs, progression, and dismissal.

Requirements to Declare

Current UM students who wish to switch into the BSHS program must possess a minimum 2.8 UM GPA to be considered for admission. Please note that the SONHS may have a waitlist to get into the BSHS program so meeting the minimum admission criteria for the BSHS program does not guarantee admission. Seats in the program are allocated from the waitlist to students based on a holistic review of all students on the waitlist but the following factors are strongly considered in each admission decision: (1) the availability of seats in a student’s intended year of graduation, (2) the date in which a student added himself/herself to the waitlist, (3) the student’s UM GPA, and (4) the feasibility of the student completing the desired degree on time. Questions about the BSHS waitlist should be directed to the academic advisors in the OSS.

Incoming transfer students who plan to enter the BSHS program must possess a minimum 2.8 transfer GPA to be considered for admission.

Requirements to Continue

BSHS are strongly encouraged not to continue with the BSHS degree if they have less than a 2.5 UM GPA after 15 credits completed in the major.

Requirements to Graduate

Students enrolled in the BSHS program must complete their coursework with a minimum 2.0 UM GPA and a minimum 2.0 major GPA to graduate.

Prerequisites and Corequisites

Students must successfully complete all specified prerequisites with a C or higher before entering a nursing course or with a C- or higher before entering a health science or public health course. Students must also register for all required corequisites at the time of enrollment. If students enroll in a health science, nursing, or public health course without the proper prerequisite or corequisite, they may be dropped from the course at the discretion of the course instructor, OSS, Associate Dean, or Dean. Students should consult an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to course enrollment.

Note: All Health Science majors must take the anatomy and physiology lectures and labs offered through the SONHS (i.e., HCS 212/213 and HCS 215/216) as stated in their plan of study. No exceptions will be made to take other UM anatomy or physiology lectures or labs outside of the SONHS.

Residency Requirements

Undergraduate BSHS students must adhere to the general UM residency rules. At least half of the health science major must be taken in residence at the UM. Exceptions to the residency requirements may only be obtained through an appeal to the Undergraduate Academic Standing and Admissions Committee (UGASAC). Students should speak with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) for more information on the residency requirements and on the UGASAC appeals process.

Transfer Credit

Students may transfer health science, nursing, or public health courses from other institutions to the UM with approval by the OSS (http://oss.sonhs.miami.edu/). Detailed course descriptions or syllabi must...
be presented to the OSS (http://oss.sonhs.miami.edu/) for transfer equivalency reviews.

**Degree Requirements**

Listed in this section are the degree requirements for the BSHS program.

The University of Miami’s General Education Requirements (GERs) consist of the Areas of Proficiency, Areas of Knowledge, and Advanced Writing and Communication Skills requirements. Through the completion of the GERs, graduates acquire essential intellectual skills and engage a range of academic disciplines. The GERs provide students with the opportunity to study methodologies and achievements in all areas of human inquiry and creative endeavor, and to cultivate abilities essential for the acquisition of knowledge. The GERs also allow students to create an integrative map for their academic careers, providing a context for more focused studies.

There are numerous ways students can create plans of study for the BSHS program. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study. Students should meet with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to degree requirements and plans of study.

**Areas of Proficiency**

The Areas of Proficiency requirements ensure students either possess or develop the ability to express themselves effectively, to use mathematics with facility, and to reason cogently.

**English Composition**

Good writing facilitates clear thinking, and clear thinking is the foundation of effective communication. The expectation is that students become adept at using the English language as an effective communication tool. Effective writing skills are representative of an educated person because they are instruments to advance ideas efficiently and persuasively.

**Requirements**

Students complete this requirement by completing ENG 105 and ENG 106 (Note: SAT or ACT verbal scores can be used to waive the ENG 105 requirement; credit will not be awarded for the waiver. Students who enter UM with credits for ENG 105 or ENG 106 may take ENG 208 to finish this requirement).

**Outcomes**

By completing the English Composition requirement, students will be able to:

1. gather information, synthesize data, compare various points of view, and present results in writing
2. develop the ability to read texts critically and to use textual evidence to support a sophisticated written argument
3. consider audience, tone, organization, and standard conventions in relationship to specific rhetorical tasks

**Mathematics & Computer Science**

In a world increasingly influenced by science and technology, it is important for students to acquire the capacity to use and understand essential mathematical applications. The mathematics requirement helps students learn to use quantitative methods to solve problems by emphasizing the manipulation, interpretation, and application of quantitative data.

**Requirements**

Students complete this requirement by completing a course in each of the following areas:

1. **Calculus:** MTH 141, MTH 161, or MTH 171
2. **Computer Science:** 1 CSC or BTE course
3. **Statistics:**
   a. Health Management and Policy Track: MAS 201 or other approved statistics course
   b. All other tracks: HCS 202 or other approved statistics course

Math placement criteria is established affected by the Department of Mathematics (http://www.math.miami.edu/undergraduate/aleks-math-placement/). The following items may affect students' math placement at the UM: SAT and ACT scores, ALEKS math placement scores, and AP IB, dual enrollment, and transfer credits. Students should review the information listed on the Department of Mathematics website and consult with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) if they have any questions.

**Outcomes**

By completing the Mathematics requirement, students will be able to:

1. select quantitative tools appropriate for solving problems
2. use quantitative tools appropriate for solving problems
3. interpret quantitative data in an appropriate manner for solving problems

**Areas of Knowledge (Cognates)**

The Areas of Knowledge requirement is designed to help students understand and appreciate intellectual achievements in major areas of human inquiry and creative endeavor. The courses offered in the Areas of Knowledge provide a broad array of intellectual and cultural exploration. In satisfying these requirements, students examine creative expression in the arts, literature, and philosophy; study human development and behavior; and explore the mathematical, scientific, and technological world.

Students fulfill the Areas of Knowledge requirement by completing a specific 'cognate' in three distinct areas: Arts & Humanities, People & Society, and Science, Technology, Engineering, and Mathematics (STEM). Cognates are groups of ‘at least three related courses for at least 9 credits’ focused on a specific topic. Majors and minors can be used to fulfill a cognate in its respective Area of Knowledge. Each cognate used to fulfill one of the Areas of Knowledge must have a different Responsible Academic Unit (RAU). Several cognates may include the same courses; however, one course cannot be used to complete multiple cognates. For more information on cognates, go to the ‘General Education Requirements’ section of the Academic Bulletin or visit http://www.miami.edu/cognates/.

**Arts & Humanities**

Arts & Humanities cognates engage students in the study of the most enduring and influential works of art, imagination, and culture. Through study, creation, and performance, courses in this area enable students to understand the works of artists, musicians, novelists, philosophers, playwrights, poets, historians, and theologians. These courses cultivate
the ability to interpret, critically evaluate, and experience the creative products of human culture and expression.

**Requirements**
Complete one Arts & Humanities cognate.

**Outcomes**
By completing the Arts & Humanities requirement, students will be able to:
1. critically evaluate and interpret the creative products of humanistic and artistic expression, applying appropriate vocabulary and concepts for their description and analysis
2. understand the creation and performance of art

**People & Society**
People & Society cognates help students understand and analyze the organization of society and the patterns of social change, in the past and in the contemporary world.

**Requirements**
Complete one People & Society cognate.

**Outcomes**
By completing the People & Society requirement, students will be able to:
1. analyze the organization of society
2. analyze patterns of social change

**Science, Technology, Engineering, and Mathematics (STEM)**
STEM cognates develop students’ abilities to think critically about mathematical, scientific, and technological issues by understanding the processes and methods of scientific inquiry involved in experimentation, observation, and quantitative analysis. The STEM cognates nurture literacies that enable students to make informed decisions in an increasingly complex world.

**Requirements**
Complete one STEM cognate. The health science major may be used to fulfill this cognate area.

**Outcomes**
By completing the STEM requirement, students will be able to:
1. understand the use of quantitative tools, experimentation, and observation to analyze and solve mathematical, scientific, environmental, and technological problems
2. interpret quantitative data and draw useful conclusions

**Major**
Refer to the ‘Major Requirements’ section below for information on the courses required for the BSHS program.

**Minor**
All students must complete a minor from the SONHS’ approved minors list. An approved second major from this list waives the minor requirement. See the OSS (http://oss.sonhs.miami.edu/) for details.

**Advanced Writing and Communication Skills**
The Advanced Writing and Communication Skills requirement empowers health science students to develop their communication skills, both written and verbal, enabling them to better articulate information relating to health science, nursing, and public health.

**Requirements**
To fulfill this requirement, students must complete five designated writing-intensive courses. Several health science requirements and/or electives may qualify as writing-intensive.

**Health Science Courses that Require Formal Student Writing or Presentation**
The following SONHS courses carry writing and presentation components and may count for the BSHS program:

<table>
<thead>
<tr>
<th>Course</th>
<th>Writing Assignment</th>
<th>Student Presentations</th>
</tr>
</thead>
<tbody>
<tr>
<td>BPH 301</td>
<td>Various papers</td>
<td>Various presentations</td>
</tr>
<tr>
<td>BPH 305</td>
<td>Three reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 309</td>
<td>Three reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 310</td>
<td>Four reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 321</td>
<td>Five reflective papers</td>
<td>Student presentations throughout class</td>
</tr>
<tr>
<td>BPH 490</td>
<td>Five journal entries, final paper</td>
<td>Final student presentation</td>
</tr>
</tbody>
</table>

**Outcomes**
By completing the Advanced Writing and Communication Skills requirement, students will be able to:
1. effectively communicate information related to health science in both speech and in writing, using appropriate information sources, presentation formats, and technologies
2. demonstrate the necessary written and verbal communication skills to effectively carry out a career in healthcare

**Plan for Assessment**

**Student Performance on Written Assignments and Presentations**
In order to graduate from the BSHS program students must successfully pass two courses in English Composition (i.e., ENG 105 and ENG 106) as well as five writing-intensive courses with a grade greater than or equal to 70%. Grading of student written assignments and oral presentations are based on defined rubrics. These courses may be applied to the BSHS program as outlined in the major requirements. A number of elective courses in the BSHS curriculum also require students to submit significant written assignments and give oral presentations throughout the semester. Throughout the BSHS curriculum, students must demonstrate their ability to write and communicate accurately and with clarity in order to successful complete their courses.

**Graduating Senior Survey (GSS) Responses for Questions Related to Written and Verbal Communication**
Based on the results from the GSS, students believe their undergraduate coursework in the BSHS program significantly enhanced their written, oral, and formal presentation skills, which, in turn, allowed them to more effectively interact with various individuals and groups.

**Electives**
Students must earn a minimum of 120 credits to complete the BSHS degree. Students may need to take varying numbers of elective credits beyond the degree requirements listed above to reach the 120 credit threshold.
Major Requirements

Health science must be a student's first major. There is no additional major offered in health science.

Visit the 'TRACKS IN BSHS PROGRAMS' link to learn more about the major requirements for the SONHS' BSHS programs, which are listed under the 'OVERVIEW' section for each BSHS program.

Minor Requirements

There is no minor available in health science.

Classes Not Applicable Toward SONHS Degrees

The following courses do not count toward the 120 credits required of the BSHS degree: DAN 101-104, ENG 103, and MTH 099. Based on their ENG or MTH placement scores, students may need to complete ENG 103 or MTH 099 before enrolling in higher-level requirements. Even though the courses listed above cannot count toward graduation, they can count toward the 12 credits required to be considered a full-time student.

Senior Assessments

In line with the SONHS' ongoing accreditation efforts, seniors with a major in the health science, nursing, and public health may be required to participate in general or major-specific senior assessments lasting up to several hours each. Scores on senior assessments will not affect students’ GPAs or ability to graduate, but failure to complete required assessments may delay or prevent students’ ability to graduate.

Research Experience

Students may participate in research experiences through the SONHS (http://www.miami.edu/sonhs/index.php/sonhs/research/) or the Office of Undergraduate Research and Community Outreach (http://www.miami.edu/index.php/undergraduate_research_and_community_outreach/) during their time at the UM. Students should speak with the academic advisors located in the OSS (http://oss.sonhs.miami.edu/) to learn more about the research opportunities available to them at the UM.

Required Coursework and Sample Plans of Study

Visit the 'TRACKS IN BSHS PROGRAMS' link to learn more about the academic requirements for the SONHS’ BSHS programs and to view sample graduation plans, which are listed under the 'OVERVIEW' and 'PLAN OF STUDY' sections, respectively, for each BSHS program.

Major in Health Science

- BSHS, Health Science Major, General Track (p. 615)
- BSHS, Health Science Major, Health Management and Policy Track (p. 617)
- BSHS, Health Science Major, Pre-Medical Track (p. 620)
- BSHS, Health Science Major, Pre-Occupational Therapy Track (p. 622)
- BSHS, Health Science Major, Pre-Pharmacy Track (p. 624)
- BSHS, Health Science Major, Pre-Physical Therapy Track (p. 626)

BSHS - General Track

Students enrolled in the General Track must complete the coursework listed on the Curriculum tab to earn the BSHS degree through the School of Nursing and Health Studies (SONHS). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to their degree requirements.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSHS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement**: ENG 105
- **MTH placement**: MTH 107
- **Major(s)**: Health Science, General Track
- **Minor(s)**: Chemistry
- **Cognates**
  - **Art & Humanities**: American Literature (RAU = English)
  - **People & Society**: Abnormal Psychology (RAU = Psychology)
  - **Science, Technology, Engineering, and Mathematics (STEM)**: Health Science major (RAU = Nursing & Health Studies)

* The health science major may be used to fulfill this cognate area.

** Students may fulfill this requirement by taking BMB 401 or any BIL, BPH, or HCS course for at least 3 credits at the 200 level or above (except for BPH 202, HCS 202, and NUR 202).

*** CHM 222 and CHM 206 and are recommended but not required for this track.

**** Students who complete the Chemisty for the Biosciences sequence automatically fulfill the requirements for a minor in chemistry; no additional coursework would be required to complete this requirement.

***** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.

****** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the General Track. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSHS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement**: ENG 105
- **MTH placement**: MTH 107
- **Major(s)**: Health Science, General Track
- **Minor(s)**: Chemistry
- **Cognates**
  - **Art & Humanities**: American Literature (RAU = English)
  - **People & Society**: Abnormal Psychology (RAU = Psychology)
  - **Science, Technology, Engineering, and Mathematics (STEM)**: Health Science major (RAU = Nursing & Health Studies)

### Mission
The Mission of the School of Nursing and Health Studies is to educate students and support faculty committed to excellence in the art and science of nursing and health studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation and the world. The University of Miami School of Nursing and Health Studies offers courses leading to the degree of Bachelor of Science in Health Science. Baccalaureate education provides the foundation for further education in specialized health professional fields. Pre-professional tracks include Pre-physical therapy, Pre-pharmacy, Pre-medicine, Pre-occupational therapy, Health Science/Health Management and Policy, and Health Science General.

### Goals
**Student Learning Outcomes**
- Students will be able to demonstrate advanced knowledge in human anatomy.
- Students will be able to demonstrate knowledge of statistical analyses.
- Students will demonstrate knowledge related to the importance of nutrition in human health and well-being.

### BSHS - Health Management and Policy Track
Students enrolled in the Health Management and Policy Track must complete the coursework listed on the Curriculum tab to earn the BSHS degree through the School of Nursing and Health Studies (SONHS). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to their degree requirements.

**Total Credit Hours:** 120

* The health science major may be used to fulfill this cognate area.

** Students may fulfill this requirement by taking HMP 310, HMP 388, HMP 498, HMP 499, INS 570, INS 571, INS 572, INS 573, or SOC 321

*** Students may fulfill this requirement by taking BIL, BPH, or HCS course for at least 3 credits at the 200 level or above (except for BPH 202, HCS 202, and NUR 202).

**** CHM 222 and CHM 206 are recommended but not required for this track.

***** Students who complete the Health Management and Policy Track automatically complete a minor in Health Sector Management and Policy; no additional coursework is required to complete this requirement.

****** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.

****** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the Health Management and Policy Track. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement**: ENG 105
- **MTH placement**: MTH 107
• Major(s): Health Science, Health Management and Policy Track
• Minor(s): Health Sector Management and Policy
• Cognates
  • Art & Humanities: American Literature (RAU = English)
  • People & Society: Abnormal Psychology (RAU = Psychology)
  • Science, Technology, Engineering, and Mathematics (STEM): Health Science major (RAU = Nursing & Health Studies)

* The health science major may be used to fulfill this cognate area.
** Six graded credits of ENG courses (6 credits). Creative writing courses cannot count. ENG 105 and ENG 106 may count if a grade was received.
*** Students who complete the Chemistry for the Biosciences sequence automatically fulfill the requirements for a minor in chemistry; no additional coursework would be required to complete this requirement.
**** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.
***** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the Pre-Medical Track. Students should feel empowered to use the information listed in the Academic Bulletin and
the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) **recommends students create their own plan of study** that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement**: ENG 105
- **MTH placement**: MTH 107
- **Major(s)**: Health Science, Pre-Medical Track
- **Minor(s)**: Chemistry
- **Cognates**
  - **Art & Humanities**: American Literature (RAU = English)
  - **People & Society**: Abnormal Psychology (RAU = Psychology)
  - **Science, Technology, Engineering, and Mathematics (STEM)**: Health Science major (RAU = Nursing & Health Studies)

BSHS - Pre-Occupational Therapy Track

The Mission of the School of Nursing and Health Studies is to educate students and support faculty committed to excellence in the art and science of nursing and health studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation and the world. The University of Miami School of Nursing and Health Studies offers courses leading to the degree of Bachelor of Science in Health Science. Baccalaureate education provides the foundation for further education in specialized health professional fields. Pre-professional tracks include Pre-physical therapy, Pre-pharmacy, Pre-medicine, Pre-occupational therapy, Health Science/Health Management and Policy, and Health Science General.

Goals

Student Learning Outcomes

- Students will be able to demonstrate advanced knowledge in human anatomy.
- Students will be able to demonstrate knowledge of statistical analyses.
- Students will demonstrate knowledge related to the importance of nutrition in human health and well-being.

BSHS - Pre-Occupational Therapy Track

Students enrolled in the Pre-Occupational Therapy Track must complete the coursework listed under curriculum requirements to earn the BSHS degree through the School of Nursing and Health Studies (SONHS). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to their degree requirements.

The health science major may be used to fulfill this cognate area.

** CHM 222 and CHM 206 are recommended but not required for this track.

*** Students who complete the Chemistry for the Biosciences sequence automatically fulfill the requirements for a minor in chemistry; no additional coursework would be required to complete this requirement.

**** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.

***** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the Pre-Occupational Therapy Track. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement:** ENG 105
- **MTH placement:** MTH 107
- **Major(s):** Health Science, Pre-Occupational Therapy Track
- **Minor(s):** Chemistry
- **Cognates**

### Sample Plan of Study

| Course       | Title                                                                 | Credit Hours |

BSHS - Pre-Pharmacy Track

Students enrolled in the Pre-Pharmacy Track must complete the coursework listed under curriculum requirements to earn the BSHS degree through the School of Nursing and Health Studies (SONHS). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to their degree requirements.

### Mission

The Mission of the School of Nursing and Health Studies is to educate students and support faculty committed to excellence in the art and science of nursing and health studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation and the world. The University of Miami School of Nursing and Health Studies offers courses leading to the degree of Bachelor of Science in Health Science. Baccalaureate education provides the foundation for further education in specialized health professional fields. Pre-professional tracks include Pre-physical therapy, Pre-pharmacy, Pre-medicine, Pre-occupational therapy, Health Science/Health Management and Policy, and Health Science General.

### Goals

**Student Learning Outcomes**

- Students will be able to demonstrate advanced knowledge in human anatomy.
- Students will be able to demonstrate knowledge of statistical analyses.
- Students will demonstrate knowledge related to the importance of nutrition in human health and well-being.

---

* The health science major may be used to fulfill this cognate area.

** Students may fulfill this requirement by taking any BIL, BPH, or HCS course for at least 3 credits at the 200 level or above (except for BPH 202, HCS 202, and NUR 202).

*** Students who complete the Chemistry for the Biosciences sequence automatically fulfill the requirements for a minor in chemistry; no additional coursework would be required to complete this requirement.

**** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.

***** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the Pre-Pharmacy Track. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement:** ENG 105
- **MTH placement:** MTH 107
- **Major(s):** Health Science, Pre-Pharmacy Track
- **Minor(s):** Chemistry
- **Cognates**
  - **Art & Humanities:** American Literature (RAU = English)
  - **People & Society:** Abnormal Psychology (RAU = Psychology)
  - **Science, Technology, Engineering, and Mathematics (STEM):** Health Science major (RAU = Nursing & Health Studies)

W Course is designated as writing-intensive

* Students may fulfill this requirement by taking BMB 401 or any BIL, BPH, or HCS course for at least 3 credits at the 200 level or above (except for BPH 202, HCS 202, and NUR 202).

** HCS 216 is not required but it is highly recommended.
Mission
The Mission of the School of Nursing and Health Studies is to educate students and support faculty committed to excellence in the art and science of nursing and health studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation and the world. The University of Miami School of Nursing and Health Studies offers courses leading to the degree of Bachelor of Science in Health Science. Baccalaureate education provides the foundation for further education in specialized health professional fields. Pre-professional tracks include Pre-physical therapy, Pre-pharmacy, Pre-medicine, Pre-occupational therapy, Health Science/Health Management and Policy, and Health Science General.

Goals
Student Learning Outcomes
- Students will be able to demonstrate advanced knowledge in human anatomy.
- Students will be able to demonstrate knowledge of statistical analyses.
- Students will demonstrate knowledge related to the importance of nutrition in human health and well-being.

Nursing
www.miami.edu/sonhs

Nursing Accreditation
The baccalaureate nursing program in the University of Miami’s (UM’s) School of Nursing and Health Studies (SONHS) is approved by the Florida Board of Nursing and accredited by the following:
Commission of Collegiate Nursing Education (CCNE)
One DuPont Circle NW, Suite 530
Washington, DC 20036
(202) 887-6791

Academic Programs
Baccalaureate education is the primary foundation for professional nursing and is necessary for graduate study. The SONHS offers three baccalaureate options leading to the Bachelor of Science in Nursing (BSN) degree:
1. Accelerated BSN: For students who hold a baccalaureate degree in a field other than nursing and who seek a one year nursing degree
2. RN-to-BSN: For students who possess a diploma or Associate’s degree in nursing, who have successfully completed the Registered Nurse (RN) licensure exam, and who wish to finish their baccalaureate education within three to five semesters
3. Traditional BSN: For students who may not have any previous higher education experience and who seek a traditional four-year nursing degree

Admission
Students who possess a baccalaureate degree from a regionally-accredited institution in a field other than nursing and who wish to pursue a career in nursing may apply to the Accelerated BSN program. Applicants must meet specific admission criteria and complete specific clinical prerequisites (http://acceleratedbsn.sonhs.miami.edu/admissions/) before they may enter the Accelerated BSN program. Applications for the Accelerated BSN program are submitted through NursingCAS (http://www.nursingcas.org/) and are reviewed by the SONHS.

The RN-to-BSN program is designed to provide licensed RNs who have an Associate's degree or a nursing diploma with an opportunity to complete the remaining coursework needed to earn a BSN degree. Students interested in the RN-to-BSN program must meet specific admission criteria (http://rnobsn.sonhs.miami.edu/admissions/) and must apply through the Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers/#38;utm_medium=Print&). All applications are reviewed by the SONHS.

Admission as a new freshman to the Traditional BSN program is handled through the Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers/#38;utm_medium=Print&) and is open to applicants who meet the general requirements for admission to the UM. Students who wish to transfer into the Traditional BSN program must also meet general UM admission requirements. Additionally, students who wish to transfer directly into the clinical components of the Traditional BSN curriculum (i.e., the third year) must complete specific clinical prerequisites (http://bsn.sonhs.miami.edu/admissions/) as outlined by the SONHS. These transfer applications will be considered for direct entry into clinical coursework as space allows. All transfer applications are handled through the Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers/#38;utm_medium=Print&) and are reviewed by the SONHS. Only credits taken at regionally-accredited institutions are considered for transfer to the UM.

Applicants interested in any of the SONHS’ baccalaureate programs are encouraged to speak with a representative from the SONHS’ Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) and/or the UM’s Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers/#38;utm_medium=Print&).

Academic Policies
Technical Standards
Nursing education requires that the accumulation of scientific knowledge be accompanied by the simultaneous acquisition of skills and professional attitudes and behaviors. The nursing degrees awarded by the UM SONHS at the completion of the educational process certifies that the individual has acquired a base of knowledge and skills required for the practice of nursing at the respective undergraduate or graduate level. To this end, all courses in the curriculum must be completed successfully. In order to acquire the knowledge and skills to function in a variety of clinical situations and to render a wide spectrum of patient care, candidates for the undergraduate and graduate degrees in nursing must have abilities and skills in five areas:

1. Observation
2. Communication
3. Motor
4. Conceptual-Integrative
5. Behavioral-Social

Technological compensation can be made for some disabilities in certain of these areas, but a candidate should be able to perform in a
reasonably independent manner and exercise independent judgment. Reasonable accommodations will be considered on a case by case basis for individuals who meet eligibility under applicable statutes. Any person expecting to need accommodations should request them prior to beginning the program, as some accommodations may not be considered reasonable and may impact an applicant's ability to complete all components of the program.

**Observation**

The candidate must be able to observe demonstrations and participate in didactic courses and simulated learning opportunities. A candidate must be able to observe a patient accurately at a distance and close at hand. Observation requires the use of common sense, as well as the functional use of the senses of vision, audition, olfaction, and palpation.

**Communication**

Candidates must communicate effectively using English in clinical and classroom settings. A candidate must be able to elicit information from patients, describe changes in mood, activity and posture, and perceive nonverbal communications. A candidate must be able to communicate effectively and sensitively with patients. Communication includes not only speech, but reading and writing. The candidate must be able to communicate effectively and efficiently with all members of the health care team in both immediate and recorded modes.

**Motor**

Candidates should have sufficient motor function to elicit information from patients by palpation, auscultation, percussion and other assessment techniques. A candidate should be able to perform nursing skills requiring the use of gross and fine motor skills (e.g. IV insertion, venous blood draw, urinary catheter insertion). A candidate should be able to execute motor movements reasonably required to provide nursing care and emergency response to patients. Examples of emergency responses reasonably required of nurses are cardiopulmonary resuscitation, medication administration, and application of pressure to stop bleeding. Candidates must perform actions which require the use of both gross and fine muscular movements, equilibrium, and functional use of the senses of touch and vision. Candidates should also be able to assist and/or participate in various lifting activities.

**Conceptual-Integrative**

These abilities include measurement, calculation, reasoning, analysis, synthesis, and retention of complex information. Critical thinking requires all of these intellectual abilities in order to provide optimal nursing care. In addition, the candidate should be able to comprehend three-dimensional relationships and to understand the spatial relationships of structures.

**Behavioral-Social**

Candidates must possess the emotional health required for the full use of their intellectual abilities, the exercise of good judgment, the prompt completion of all responsibilities attendant to the care of patients, and the development of mature, sensitive and effective relationships with patients. Candidates must be able to tolerate physically taxing workloads and to function effectively under stress in the classroom and clinical area. They must be able to adapt to changing environments, display flexibility and learn to function in the face of uncertainties inherent in the clinical environment. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that are assessed during the admissions and educational process.

**Clinical Clearance**

Before students can enter the clinical components of the undergraduate nursing curriculum, they must successfully complete a drug test and a background check. Students must have a background report without any infractions, regardless of how they were resolved or adjudicated. Accordingly, if a student's background report contains any infractions, regardless of how they were resolved or adjudicated, he/she may not be able to successfully complete the background check and he/she will be withdrawn from the nursing program.

Students must also provide current immunizations as outlined by the SONHS and obtain a Basic Life Support (BLS) for Healthcare Providers certification from the American Heart Association prior to entry into clinical coursework. The BLS certification must include content on Automated External Defibrillators (AEDs).

Refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) or speak with a representative in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) for more information.

**Grades**

Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to grades, progression, and dismissal.

Undergraduate nursing students must earn a C or higher in each clinical prerequisite and each nursing course to progress.

A C- or below is considered a failure in a clinical prerequisite or a nursing course. Students are allowed to repeat only one failed clinical prerequisite and one failed nursing course. A student who fails only one clinical prerequisite and/or one nursing course, retakes the failed clinical prerequisite and/or failed nursing course, and receives a passing grade on the second attempt at a failed clinical prerequisite and/or a failed nursing course may progress through the program but the original failure is still counted as a failed course. Failure of two clinical prerequisites or two nursing courses with a grade of C- or below, or failure of the same clinical prerequisite or the same nursing course twice with a grade of C- or below, constitutes failure of two clinical prerequisites or two nursing courses, respectively, and the student will be dismissed from the nursing program.

When a nursing course must be repeated, progression in the nursing program will be altered in order for prerequisites to be met. Such alteration will lengthen the time required to complete the BSN program.

Students who repeat a clinical nursing course must repeat both the theoretical and clinical components of the course. Students are required to fulfill the course requirements in effect at the time of enrollment. No special courses will be created for students who repeat a course.

**Withdraw Policy**

All BSN students may not withdraw from more than two nursing courses during the length of the nursing program and cannot withdraw from the same nursing course twice. Students must adhere to the withdraw dates set by the University in the Academic Calendar.

**Grade Point Averages (GPAs)**

Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more
detailed information on the SONHS’ policies related to GPAs, progression, and dismissal.

Requirements to Declare
Current UM students who wish to switch into the Traditional BSN program must possess a minimum 3.0 UM GPA and a minimum 2.75 clinical prerequisite GPA to be considered. Please note that the SONHS may have a waitlist to get into the Traditional BSN program so meeting the minimum admission criteria for the Traditional BSN program does not guarantee admission. Seats in the program are allocated from the waitlist to students based on a holistic review of all students on the waitlist but the following factors are strongly considered in each admission decision: (1) the availability of seats in a student’s intended year of graduation, (2) the date in which a student added himself/herself to the waitlist, (3) the student’s UM GPA, and (4) the feasibility of the student completing the desired degree on time. Questions about the Traditional BSN waitlist should be directed to the academic advisors in the OSS.

Incoming transfer students who plan to enter the Traditional BSN degree must possess a minimum 3.5 transfer GPA and a minimum 3.3 clinical prerequisite GPA to be considered for admission.

Requirements to Continue
Students who are enrolled in the Traditional BSN program and who are not yet enrolled in their clinical coursework (i.e., third or fourth year) are strongly encouraged not to continue with the nursing major if they have less than a 2.5 UM GPA and/or less than a 2.5 clinical prerequisite GPA after 15 credits in the clinical prerequisites and/or second year nursing courses.

Requirements to Progress into Clinical Coursework
Students who enter the Accelerated BSN program enter directly into clinical coursework. These students must possess a minimum 3.0 transfer GPA and a minimum 3.0 clinical prerequisite GPA to be considered for admission.

Current UM students enrolled in the Traditional BSN program must possess a minimum 3.0 UM GPA and a minimum 2.75 clinical prerequisite GPA to progress into their clinical coursework (i.e., third year). Students must also have completed a minimum of 60-63 total credits to be eligible to progress (Note: Only 57 credits are slated in the prescribed Plan of Study for students’ clinical years. If students only have 60-62 completed credits at the time of progression, they will be required to complete additional elective credits during their last two years to reach the 120 credit requirement for the degree.).

Incoming transfer students who apply to transfer directly into the clinical components of the Traditional BSN degree (i.e., the third year) must possess a minimum 3.5 transfer GPA and a minimum 3.3 clinical prerequisite GPA to be considered for admission.

Requirements to Graduate
Students enrolled in the Accelerated BSN, RN-to-BSN, and Traditional BSN programs must complete their coursework with a minimum 2.0 UM GPA and a minimum 2.0 major GPA to graduate.

Prerequisites and Corequisites
Students must successfully complete all specified prerequisites with a C or higher before entering a nursing course or with a C- or higher before entering a health science or public health course. Students must also register for all required corequisites at the time of enrollment. If students enroll in a health science, nursing, or public health course without the proper prerequisite or corequisite, they may be dropped from the course at the discretion of the course instructor, OSS, Associate Dean, or Dean. Students should consult an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to course enrollment.

Note: All Traditional BSN majors must take the anatomy and physiology lectures and labs offered through the SONHS (i.e., HCS 212/213 and HCS 215/216) as stated in their plan of study. No exceptions will be made to take other UM anatomy or physiology lectures or labs outside of the SONHS.

Residency Requirements
Undergraduate nursing students must adhere to the general UM residency rules. Once a student enrolls at the UM, all remaining clinical prerequisites must be completed at the UM unless special permission is obtained through an appeal to the Undergraduate Academic Standing and Admissions Committee (UGASAC). Additionally, all courses in the nursing major must be completed at the UM. Students should speak with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) for more information on the residency requirements and on the UGASAC appeals process.

Transfer Credit
Students may transfer health science, nursing, or public health courses from other institutions to the UM with approval by the OSS (http://oss.sonhs.miami.edu/). Detailed course descriptions or syllabi must be be presented to the OSS (http://oss.sonhs.miami.edu/) for transfer equivalency reviews.

Degree Requirements
Listed in this section are the degree requirements for the Traditional BSN program. The Accelerated BSN and RN-to-BSN requirements are listed under the ‘OVERVIEW’ section of the ‘TRACKS IN BSN PROGRAMS’ link for each of the respective programs.

The University of Miami’s General Education Requirements (GERs) consist of the Areas of Proficiency, Areas of Knowledge, and Advanced Writing and Communication Skills requirements. Through the completion of the GERs, graduates acquire essential intellectual skills and engage a range of academic disciplines. The GERs provide students with the opportunity to study methodologies and achievements in all areas of human inquiry and creative endeavor, and to cultivate abilities essential for the acquisition of knowledge. The GERs also allow students to create an integrative map for their academic careers, providing a context for more focused studies.

All Areas of Proficiency, Areas of Knowledge, clinical prerequisites, and electives, except for the nursing major elective, must be completed prior to the clinical components of the Traditional BSN program (i.e., the third year). Students should meet with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to degree, clinical prerequisite, or major requirements.

Areas of Proficiency
The Areas of Proficiency requirements ensure students either possess or develop the ability to express themselves effectively, to use mathematics with facility, and to reason cogently.

English Composition
Good writing facilitates clear thinking, and clear thinking is the foundation of effective communication. The expectation is that students become adept at using the English language as an effective communication tool.
Effective writing skills are representative of an educated person because they are instruments to advance ideas efficiently and persuasively.

**Requirements**
Students complete this requirement by completing ENG 105 and ENG 106 (Note: SAT or ACT verbal scores can be used to waive the ENG 105 requirement; credit will not be awarded for the waiver. Students who enter UM with credits for ENG 105 or ENG 106 may take ENG 208 to finish this requirement).

**Outcomes**
By completing the English Composition requirement, students will be able to:
1. gather information, synthesize data, compare various points of view, and present results in writing
2. develop the ability to read texts critically and to use textual evidence to support a sophisticated written argument
3. consider audience, tone, organization, and standard conventions in relationship to specific rhetorical tasks

**Mathematics**
In a world increasingly influenced by science and technology, it is important for students to acquire the capacity to use and understand essential mathematical applications. The mathematics requirement helps students learn to use quantitative methods to solve problems by emphasizing the manipulation, interpretation, and application of quantitative data.

**Requirements**
Students complete this requirement by completing NUR 202.

Math placement criteria is established affected by the Department of Mathematics (http://www.math.miami.edu/undergraduate/aleks-math-placement/). The following items may affect students’ math placement at the UM: SAT and ACT scores, ALEKS math placement scores, and AP, IB, dual enrollment, and transfer credits. Students should review the information listed on the Department of Mathematics (http://www.math.miami.edu/undergraduate/aleks-math-placement/) website and consult with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) if they have any questions.

**Outcomes**
By completing the Mathematics requirement, students will be able to:
1. select quantitative tools appropriate for solving problems
2. use quantitative tools appropriate for solving problems
3. interpret quantitative data in an appropriate manner for solving problems

**Areas of Knowledge (Cognates)**
The Areas of Knowledge requirement is designed to help students understand and appreciate intellectual achievements in major areas of human inquiry and creative endeavor. The courses offered in the Areas of Knowledge provide a broad array of intellectual and cultural exploration. In satisfying these requirements, students examine creative expression in the arts, literature, and philosophy; study human development and behavior; and explore the mathematical, scientific, and technological world.

Students fulfill the Areas of Knowledge requirement by completing a specific ‘cognate’ in three distinct areas: Arts & Humanities, People & Society, and Science, Technology, Engineering, and Mathematics (STEM). Cognates are groups of at least three related courses for at least 9 credits’ focused on a specific topic. Majors and minors can be used to fulfill a cognate in its respective Area of Knowledge. Each cognate used to fulfill one of the Areas of Knowledge must have a different Responsible Academic Unit (RAU). Several cognates may include the same courses; however, one course cannot be used to complete multiple cognates. For more information on cognates, go to the ‘General Education Requirements’ section of the Academic Bulletin or visit http://www.miami.edu/cognates/.

**Arts & Humanities**
Arts & Humanities cognates engage students in the study of the most enduring and influential works of art, imagination, and culture. Through study, creation, and performance, courses in this area enable students to understand the works of artists, musicians, novelists, philosophers, playwrights, poets, historians, and theologians. These courses cultivate the ability to interpret, critically evaluate, and experience the creative products of human culture and expression.

**Requirements**
Complete one Arts & Humanities cognate.

**Outcomes**
By completing the Arts & Humanities requirement, students will be able to:
1. critically evaluate and interpret the creative products of humanistic and artistic expression, applying appropriate vocabulary and concepts for their description and analysis
2. understand the creation and performance of art

**People & Society**
People & Society cognates help students understand and analyze the organization of society and the patterns of social change, in the past and in the contemporary world.

**Requirements**
Complete one People & Society cognate.

**Outcomes**
By completing the People & Society requirement, students will be able to:
1. analyze the organization of society
2. analyze patterns of social change

**Science, Technology, Engineering, and Mathematics (STEM)**
STEM cognates develop students’ abilities to think critically about mathematical, scientific, and technological issues by understanding the processes and methods of scientific inquiry involved in experimentation, observation, and quantitative analysis. The STEM cognates nurture literacies that enable students to make informed decisions in an increasingly complex world.

**Requirements**
Complete one STEM cognate. The nursing major may be used to fulfill this cognate area.

**Outcomes**
By completing the STEM requirement, students will be able to:
1. understand the use of quantitative tools, experimentation, and observation to analyze and solve mathematical, scientific, environmental, and technological problems
2. interpret quantitative data and draw useful conclusions
Clinical Prerequisites
Refer to the ‘Clinical Prerequisite Requirements’ section below for information on the clinical prerequisites required for the Traditional BSN program.

Major
Refer to the ‘Major Requirements’ section below for information on the courses required for the Traditional BSN nursing major.

Advanced Writing and Communication Skills
The Advanced Writing and Communication Skills requirement empowers nursing students to develop their communication skills, both written and verbal, enabling them to better articulate information relating to health science, nursing, and public health. Several designated writing-intensive courses are built into the nursing major to satisfy this requirement.

Required Communication domains
Students must communicate effectively using English in clinical and classroom settings. A student must be able to elicit information from patients, describe changes in mood, activity, and posture, and perceive nonverbal communications. A student must be able to communicate effectively and sensitively with patients. Communication includes not only speech, but reading and writing. Students must be able to communicate effectively and efficiently with all members of the healthcare team in both immediate and recorded modes. Throughout the curriculum students are expected to achieve skills in the following communication domains:

Therapeutic Communication
Therapeutic communication between the nurse and patient is a cornerstone of effective nursing care. This communication style is goal-oriented and focused on learning and promoting growth.

Example content: principles of therapeutic use of self; therapeutic communication techniques; health education/teaching; reflective journals

Technical Communication
Technical communication encompasses the specific methods used by the nursing profession to communicate information necessary for nursing practice.

Example content: use of clinical information systems (e.g., electronic health record, physician order entry); application of standardized health care terminology; use of data and data systems

Inter- and Intra-Professional Communication
Effective communication among all members of the healthcare team is essential for delivering high quality, safe patient care.

Example content: teamwork/cooperative learning; scopes of practice; conflict resolution; group dynamics and evaluation

Scholarly Written Communication
Scholarly writing is a formal means of communication in which the writer communicates synthesized knowledge about a topic while also demonstrating original thought and unique perspectives.

Example content: scholarly papers; research critiques; application of APA publication style

Scholarly Verbal Communication
Scholarly verbal communication is a formal way of speaking with the intended audience to provide and/or elicit information in a systematic manner. Primary methods of scholarly verbal communication involve verbal presentations/lectures and formal data gathering processes such as interviews.

Example content: scholarly presentations; key informant interviews

Minimal writing proficiency standards
Writing proficiency is evaluated throughout the BSN plan of study. Three primary categories of writing are required:

1. scholarly papers (NUR 400/NUR 401, NUR 440, and NUR 453)
2. patient care documentation (NUR 304, NUR 308, NUR 318, NUR 320, NUR 411, NUR 448, and NUR 453)
3. reflective journals (NUR 306 and NUR 453)

Each writing component is evaluated as part of the grading rubric for the associated course. Feedback and revisions are required.

Plan for assessment
Content to meet the required communication domains and minimal writing proficiency standards is provided across the curriculum. The table below outlines the specific communication domains covered in each course as well as the assessment/outcome criteria used to measure them. In addition to demonstrating skills across the five required communication domains, students must complete ENG 105 and ENG 106 or their equivalents to provide the foundation for the development of more advanced writing and communication skills.

**Electives**

Students must earn a minimum of 120 credits to complete the Traditional BSN degree. Students may need to take varying numbers of elective credits beyond the degree requirements listed above to reach the 120 credit threshold.
Clinical Prerequisite Requirements

Accelerated BSN
All clinical prerequisites must be completed prior to matriculation into the Accelerated BSN program and within the last 10 years. The clinical prerequisites include:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHM 103 &amp; CHM 105</td>
<td>Chemistry for the Health Sciences I and Chemistry for the Health Sciences I (Laboratory)</td>
<td>4</td>
</tr>
<tr>
<td>HCS 212 &amp; HCS 213</td>
<td>Human Anatomy and Human Anatomy Laboratory</td>
<td>4</td>
</tr>
<tr>
<td>HCS 215</td>
<td>Principles of Systemic Physiology</td>
<td>3</td>
</tr>
<tr>
<td>MIC 320</td>
<td>Introduction to Microbes and the Immune System for Nurses</td>
<td>3</td>
</tr>
<tr>
<td>NUR 202</td>
<td>Introductory Statistics in Health Care</td>
<td>3</td>
</tr>
<tr>
<td>NUR 306</td>
<td>Principles of Nutrition</td>
<td>3</td>
</tr>
<tr>
<td>NUR 317</td>
<td>Theories in Growth and Development</td>
<td>3</td>
</tr>
<tr>
<td>PSY 110</td>
<td>Introduction to Psychology</td>
<td>3</td>
</tr>
</tbody>
</table>

RN-to-BSN
Students must meet specific admission criteria (http://rntobsn.sonhs.miami.edu/admissions/) to be considered for the RN-to-BSN program. If admitted, any required coursework must be completed prior to matriculation.

Traditional BSN
All clinical prerequisites must be completed prior to the clinical components of the Traditional BSN program (i.e., the third year) and within the last 10 years. The clinical requirements include:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIL 150 &amp; BIL 151</td>
<td>General Biology and General Biology Laboratory</td>
<td>5</td>
</tr>
<tr>
<td>CHM**</td>
<td></td>
<td>4-5</td>
</tr>
<tr>
<td>HCS 212 &amp; HCS 213</td>
<td>Human Anatomy and Human Anatomy Laboratory</td>
<td>4</td>
</tr>
<tr>
<td>HCS 215</td>
<td>Principles of Systemic Physiology</td>
<td>3</td>
</tr>
<tr>

<tr>
<td>NUR 306</td>
<td>Principles of Nutrition</td>
<td>3</td>
</tr>
<tr>
<td>NUR 317</td>
<td>Theories in Growth and Development</td>
<td>3</td>
</tr>
<tr>
<td>PSY 110</td>
<td>Introduction to Psychology</td>
<td>3</td>
</tr>
</tbody>
</table>

(*) = Chemistry is satisfied by CHM 103/CHM 105 or CHM 121/CHM 113.

(**) = MTH 101, MTH 107, or mathematics placement higher than MTH 107. Note: MTH 107 is a pre- or co-requisite for BIL 150.

Students can transfer equivalent clinical prerequisites to the UM as long as they comply with the general UM and the SONHS residency rules (see ‘Residency Requirements’ section above). Students must provide the documentation listed in the “Transfer Credit” section above to the OSS (http://oss.sonhs.miami.edu/) for any health science, nursing, or public health transfer equivalency requests. For transfer equivalency reviews of any other clinical prerequisites, students must present any necessary documentation to the respective academic unit for their consideration.

Major Requirements
Nursing must be a student’s first major. There is no additional major offered in nursing.

Visit the ‘TRACKS IN BSN PROGRAMS’ link to learn more about the major requirements for the SONHS’ BSN programs, which are listed under the ‘OVERVIEW’ section for each BSN program.

Minor Requirements
BSN students are not required to complete a minor.

There is no minor available in nursing.

Classes Not Applicable Toward SONHS Degrees
The following courses do not count toward the 120 credits required of the BSN degree: DAN 101-104, ENG 103, and MTH 099. Based on their ENG or MTH placement scores, students may need to complete ENG 103 or MTH 099 before enrolling in higher-level requirements. Even though the courses listed above cannot count toward graduation, they can count toward the 12 credits required to be considered a full-time student.

Pre-immersion Course
Prior to enrollment in clinical nursing courses, students must complete a mandatory online pre-immersion course. The pre-immersion course is listed in students’ first term of clinical enrollment but it does not affect students’ GPAs. Failure to complete the pre-immersion course may delay entry into the clinical nursing courses. Information about the pre-immersion course will be provided to eligible students by the OSS.

Senior Assessments
In line with the SONHS’ ongoing accreditation efforts, seniors with a major in the health science, nursing, and public health may be required to participate in general or major-specific senior assessments lasting up to several hours each. Scores on senior assessments will not affect students’ GPAs or ability to graduate, but failure to complete required assessments may delay or prevent students’ ability to graduate.

HESI Exams
Mandatory HESI exams are required throughout the undergraduate nursing programs. For further details, refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/).

RN Licensure Exam (NCLEX-RN)
Students who successfully complete the Accelerated BSN or Traditional BSN program at the SONHS are eligible to sit for the RN licensure exam.
referred to as the NCLEX-RN. For additional eligibility requirements, refer to the appropriate state board of nursing website.

**Research Experience**

Students may participate in research experiences through the SONHS (http://www.miami.edu/sonhs/index.php/sonhs/research/) or the Office of Undergraduate Research and Community Outreach (http://www.miami.edu/index.php/undergraduate_research_and_community_outreach/) during their time at the UM. Students should speak with the academic advisors located in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to learn more about the research opportunities available to them at the UM.

**Required Coursework and Sample Plans of Study**

Visit the 'TRACKS IN BSN PROGRAMS' link to learn more about the academic requirements for the SONHS’ BSN programs and to view sample graduation plans, which are listed under the 'OVERVIEW' and 'PLAN OF STUDY' sections, respectively, for each BSN program.

**Major in Nursing**

- Accelerated BSN (p. 636)
- RN-to-BSN (p. 639)
- Traditional BSN (p. 637)

**Accelerated BSN**

Students enrolled in the Accelerated BSN program must complete the following coursework as specified in the Plan of Study to earn the BSN degree through the School of Nursing and Health Studies (SONHS):

Total Credit Hours 55

(C) = Course includes a clinical component and meets the UM civic engagement criteria
(L) = Course includes a lab component
(*) = Course must be completed online via Blackboard after the point of admission and prior to full matriculation into the Accelerated BSN program; students officially register for the course in their first semester but the course does not affect the students’ GPA

Mission
The mission of the School of Nursing and Health Studies (SONHS) is to educate students and support faculty committed to the art and science of nursing and health care studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation, and the world.

Goals
Student Learning Outcomes
• Students will demonstrate advanced knowledge of natural and behavioral sciences, arts, humanities and nursing science as a basis for cultural competence in nursing practice.
• Students will demonstrate the use of evidence-based research and scholarship findings in practice.
• Students will demonstrate effective inter-professional communication with others to improve patient outcomes in culturally diverse settings.

Traditional BSN
Students enrolled in the Traditional BSN program must complete the coursework listed under curriculum to earn the BSN degree through the School of Nursing and Health Studies (SONHS). All Areas of Proficiency, Areas of Knowledge, clinical prerequisites, and electives, except for the nursing major elective, must be completed prior to the clinical components of the Traditional BSN program (i.e., the third year). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to degree, clinical prerequisite, or major requirements.

Curriculum Requirements

| Code   | Title                                           | Credit Hours |
|--------|                                                |              |
|        | **Areas of Proficiency**                       |              |

|        | **Total Credit Hours**                          | 121-122      |

C Course includes a clinical component and meets the UM civic engagement criteria.
L Course includes a lab component.
* The nursing major may be used to fulfill this cognate area.
** Chemistry is satisfied by CHM 103/CHM 105 or CHM 121/CHM 113.
*** MTH 101, MTH 107, or mathematics placement higher than MTH 107.
**** MTH 107 is a pre- or co-requisite for BIL 150.
***** These NUR courses follow a lock-step sequence; these NUR courses must be taken in the semesters specified in the Plan of Study.
Course must be completed online via Blackboard prior to full matriculation into the clinical components of the Traditional BSN program (i.e., the third year); students officially register for the course in their first semester of their third year but the course does not affect the students’ GPA.

This elective must be completed by taking at least 3 credits in a BIL, BPH, HCS, HST, or NUR course at or above the 200 level (except for BPH 202, HCS 202, and NUR 202).

These courses are factored into the Traditional BSN nursing coursework; students do not need to take extra courses to complete this requirement.

The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the Traditional BSN program. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG and MTH placement scores and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG and MTH placement information and major, minor, and cognate selections:

- **ENG placement:** ENG 105
- **MTH placement:** MTH 101
- **Major(s):** Nursing
- **Minor(s):** None
- **Cognates**
  - **Art & Humanities:** World of Music (RAU = Music)
  - **People & Society:** The Science of Human Development (RAU = Psychology)
  - **Science, Technology, Engineering, and Mathematics (STEM):** Nursing major (RAU = Nursing & Health Studies)

All Areas of Proficiency, Areas of Knowledge, clinical prerequisites, and electives, except for the nursing major elective, must be completed prior to the clinical components of the Traditional BSN program (i.e., the third year).

- Course includes a clinical component and meets the UM civic engagement criteria.
- Course includes a lab component.
- Upon successful completion of the 30 junior year credits listed above, 30 additional credits are automatically awarded to RN-to-BSN students simply for possessing an RN license, bringing their overall credit total up to the 120 credits required for the BSN degree. These credits are added in the form of Advanced Placement courses at no additional tuition cost.

## Mission

The mission of the School of Nursing and Health Studies (SONHS) is to educate students and support faculty committed to the art and science of nursing and health care studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation, and the world.
Goals
Student Learning Outcomes
• Students will demonstrate advanced knowledge of natural and behavioral sciences, arts, humanities and nursing science as a basis for cultural competence in nursing practice.
• Students will demonstrate the use of evidence-based research and scholarship findings in practice.
• Students will demonstrate effective interdisciplinary communication with others to improve patient outcomes in culturally diverse settings.

Public Health
Academic Programs
The University of Miami (UM) School of Nursing and Health Studies (SONHS) offers courses leading to the degree of Bachelor of Science in Public Health (BSPH). Baccalaureate education provides the foundation for further education in public health and specialized health professional fields. The program is currently undergoing the accreditation process with the Council on Education for Public Health.

Admission
Admission as a new freshman or transfer student to the BSPH program is handled through the Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers&utm_medium=Print&u#38;utm_medium=Print& and is open to applicants who meet the general requirements for admission to the UM.

Applicants interested in any of the SONHS’ baccalaureate programs are encouraged to speak with a representative from the SONHS’ Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) and/or the UM’s Office of Undergraduate Admission (http://admissions.miami.edu/undergraduate/index.html?utm_source=Mailers&utm_medium=Print&u#38;utm_medium=Print&).

Academic Policies
Grades
Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to grades, progression, and dismissal.

Undergraduate BSPH students must earn a C- or higher in each course for the major to progress.

When a course must be repeated, progression in the BSPH program may be altered in order for prerequisites to be met. Such alteration may lengthen the time required to complete the BSPH program.

Grade Point Averages (GPAs)
Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to GPAs, progression, and dismissal.

Requirements to Declare
Current UM students who wish to switch into the BSPH program or add an additional major in public health must possess a minimum 2.8 UM GPA to be considered. Please note that the SONHS may have a waitlist to get into this program so meeting the minimum admission criteria for the program does not guarantee admission. Seats in the program are allocated from the waitlist to students based on a holistic review of all students on the waitlist but the following factors are strongly considered in each admission decision: (1) the availability of seats in a student’s intended year of graduation, (2) the date in which a student added himself/herself to the waitlist, (3) the student’s UM GPA, and (4) the feasibility of the student completing the desired degree on time. Questions about the waitlist should be directed to the academic advisors in the OSS.

Incoming transfer students who plan to enter the BSPH program must possess a minimum 2.8 transfer GPA to be considered for admission.

Requirements to Continue
BSPH are strongly encouraged not to continue with the BSPH degree if they have less than a 2.5 UM GPA after 15 credits completed in the major.

Requirements to Graduate
Students enrolled in the BSPH program must complete their coursework with a minimum 2.0 UM GPA and a minimum 2.0 major GPA to graduate.

Prerequisites and Corequisites
Students must successfully complete all specified prerequisites with a C or higher before entering a nursing course or with a C- or higher before entering a health science or public health course. Students must also register for all required corequisites at the time of enrollment. If students enroll in a health science, nursing, or public health course without the proper prerequisite or corequisite, they may be dropped from the course at the discretion of the course instructor, OSS, Associate Dean, or Dean. Students should consult an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to course enrollment.

Residency Requirements
Undergraduate BSPH students must adhere to the general UM residency rules. At least half of the public health major and at least half of the public health minor must be taken in residence at the UM. Exceptions to the residency requirements may only be obtained through an appeal to the Undergraduate Academic Standing and Admissions Committee (UGASAC). Students should speak with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) for more information on the residency requirements and on the UGASAC appeals process.

Public health majors must complete at least 18 of the 33 credits required for the public health major in residence at the University of Miami School of Nursing and Health Studies. Public health majors can apply a maximum of 6 credits from study abroad programs toward their public health major. These study abroad credits will count as part of the remaining 15 of the 33 credits required of the major that are allowed to be taken outside of the University of Miami School of Nursing and Health Studies.

Transfer Credit
Students may transfer health science, nursing, or public health courses from other institutions to the UM with approval by the OSS (http://oss.sonhs.miami.edu/). Detailed course descriptions or syllabi must be be presented to the OSS (http://oss.sonhs.miami.edu/) for transfer equivalency reviews.
Degree Requirements

Listed in this section are the degree requirements for the BSPH program.

The University of Miami’s General Education Requirements (GERs) consist of the Areas of Proficiency, Areas of Knowledge, and Advanced Writing and Communication Skills requirements. Through the completion of the GERs, graduates acquire essential intellectual skills and engage a range of academic disciplines. The GERs provide students with the opportunity to study methodologies and achievements in all areas of human inquiry and creative endeavor, and to cultivate abilities essential for the acquisition of knowledge. The GERs also allow students to create an integrative map for their academic careers, providing a context for more focused studies.

There are numerous ways students can create plans of study for the BSPH program. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study. Students should meet with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to degree requirements and plans of study.

Areas of Proficiency

The Areas of Proficiency requirements ensure students either possess or develop the ability to express themselves effectively, to use mathematics with facility, and to reason cogently.

English Composition

Good writing facilitates clear thinking, and clear thinking is the foundation of effective communication. The expectation is that students become adept at using the English language as an effective communication tool. Effective writing skills are representative of an educated person because they are instruments to advance ideas efficiently and persuasively.

Requirements

Students complete this requirement by completing ENG 105 and ENG 106 (Note: SAT or ACT verbal scores can be used to waive the ENG 105 requirement; credit will not be awarded for the waiver. Students who enter UM with credits for ENG 105 or ENG 106 may take ENG 208 to finish this requirement).

Outcomes

By completing the English Composition requirement, students will be able to:

1. gather information, synthesize data, compare various points of view, and present results in writing
2. develop the ability to read texts critically and to use textual evidence to support a sophisticated written argument
3. consider audience, tone, organization, and standard conventions in relationship to specific rhetorical tasks

Mathematics

In a world increasingly influenced by science and technology, it is important for students to acquire the capacity to use and understand essential mathematical applications. The mathematics requirement helps students learn to use quantitative methods to solve problems by emphasizing the manipulation, interpretation, and application of quantitative data.

Requirements

Students complete this requirement by completing a course in each of the following areas:

1. Mathematics: MTH 107 or higher
2. Statistics: BPH 202 or other approved statistics course

Math placement criteria is established affected by the Department of Mathematics (http://www.math.miami.edu/undergraduate/aleks-math-placement/). The following items may affect students’ math placement at the UM: SAT and ACT scores, ALEKS math placement scores, and AP, IB, dual enrollment, and transfer credits. Students should review the information listed on the Department of Mathematics (http://www.math.miami.edu/undergraduate/aleks-math-placement/) website and consult with an academic advisor in the OSS (http://oss.sonhs.miami.edu/) if they have any questions.

Outcomes

By completing the Mathematics requirement, students will be able to:

1. select quantitative tools appropriate for solving problems
2. use quantitative tools appropriate for solving problems
3. interpret quantitative data in an appropriate manner for solving problems

Social Science

Requirements

Students complete this requirement by completing PSY 110 and an additional approved social science course for a total of 6 credits.

Modern Language

Requirements

Students complete this requirement by completing one 3 credit Modern Language course at or above the 200 level.

Natural Science

Requirements

Students complete this requirement by completing BIL 150 and BIL 151, as well as CHM 103 and CHM 105 or CHM 121 and CHM 113 for a total of 9-10 credits.

Areas of Knowledge (Cognates)

The Areas of Knowledge requirement is designed to help students understand and appreciate intellectual achievements in major areas of human inquiry and creative endeavor. The courses offered in the Areas of Knowledge provide a broad array of intellectual and cultural exploration. In satisfying these requirements, students examine creative expression in the arts, literature, and philosophy; study human development and behavior; and explore the mathematical, scientific, and technological world.

Students fulfill the Areas of Knowledge requirement by completing a specific ‘cognate’ in three distinct areas: Arts & Humanities, People & Society, and Science, Technology, Engineering, and Mathematics (STEM). Cognates are groups of at least three related courses for at least 9 credits’ focused on a specific topic. Majors and minors can be used to fulfill a cognate in its respective Area of Knowledge. Each cognate used to fulfill one of the Areas of Knowledge must have a different Responsible Academic Unit (RAU). Several cognates may include the same courses; however, one course cannot be used to complete multiple cognates. For more information on cognates, go to the ‘General Education Requirements’ section of the Academic Bulletin or visit http://www.miami.edu/cognates/.
**Arts & Humanities**
Arts & Humanities cognates engage students in the study of the most enduring and influential works of art, imagination, and culture. Through study, creation, and performance, courses in this area enable students to understand the works of artists, musicians, novelists, philosophers, playwrights, poets, historians, and theologians. These courses cultivate the ability to interpret, critically evaluate, and experience the creative products of human culture and expression.

**Requirements**
Complete one Arts & Humanities cognate.

**Outcomes**
By completing the Arts & Humanities requirement, students will be able to:
1. critically evaluate and interpret the creative products of humanistic and artistic expression, applying appropriate vocabulary and concepts for their description and analysis
2. understand the creation and performance of art

**People & Society**
People & Society cognates help students understand and analyze the organization of society and the patterns of social change, in the past and in the contemporary world.

**Requirements**
Complete one People & Society cognate. The public health major may be used to fulfill this cognate area.

**Outcomes**
By completing the People & Society requirement, students will be able to:
1. analyze the organization of society
2. analyze patterns of social change

**Science, Technology, Engineering, and Mathematics (STEM)**
STEM cognates develop students’ abilities to think critically about mathematical, scientific, and technological issues by understanding the processes and methods of scientific inquiry involved in experimentation, observation, and quantitative analysis. The STEM cognates nurture literacies that enable students to make informed decisions in an increasingly complex world.

**Requirements**
Complete one STEM cognate.

**Outcomes**
By completing the STEM requirement, students will be able to:
1. understand the use of quantitative tools, experimentation, and observation to analyze and solve mathematical, scientific, environmental, and technological problems
2. interpret quantitative data and draw useful conclusions

**Major**
Refer to the ‘Major Requirements’ section below for information on the courses required for the BSPH program.

**Minor**
BSPH students are not required to complete a minor.

**Advanced Writing and Communication Skills**
The Advanced Writing and Communication Skills requirement empowers public health students to develop their communication skills, both written and verbal, enabling them to better articulate information relating to health science, nursing, and public health.

**Requirements**
To fulfill this requirement, students must complete five designated writing-intensive courses. Several public health requirements and/or electives may qualify as writing-intensive.

**Public health Courses that Require Formal Student Writing or Presentation**
The following courses carry writing and presentation components and may count for the BSPH program:

<table>
<thead>
<tr>
<th>Course</th>
<th>Writing Assignment</th>
<th>Student Presentations</th>
</tr>
</thead>
<tbody>
<tr>
<td>BPH 301</td>
<td>Various papers</td>
<td>Various presentations</td>
</tr>
<tr>
<td>BPH 305</td>
<td>Three reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 309</td>
<td>Three reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 310</td>
<td>Four reflective papers</td>
<td>Final student presentation</td>
</tr>
<tr>
<td>BPH 321</td>
<td>Five reflective papers</td>
<td>Student presentations throughout class</td>
</tr>
<tr>
<td>BPH 490</td>
<td>Five journal entries, final paper</td>
<td>Final student presentation</td>
</tr>
</tbody>
</table>

**Outcomes**
By completing the Advanced Writing and Communication Skills requirement, students will be able to:
1. effectively communicate information related to public health in both speech and in writing, using appropriate information sources, presentation formats, and technologies
2. demonstrate the necessary written and verbal communication skills to effectively carry out a career in healthcare

**Plan for assessment**

**Student Performance on Written Assignments and Presentations**
In order to graduate from the BSPH program students must successfully pass two courses in English Composition (i.e., ENG 105 and ENG 106) as well as five writing-intensive courses with a grade greater than or equal to 70%. The majority of public health courses include written assignments and student presentations as part of the course grade. Grading of student written assignments and oral presentations are based on defined rubrics. These courses may be applied to the BSPH program as outlined in the major requirements.

**Graduating Senior Survey (GSS) Responses for Questions Related to Written and Verbal Communication**
Based on the results from the GSS, students believe their undergraduate coursework in the BSPH program significantly enhanced their written, oral, and formal presentation skills, which, in turn, allowed them to more effectively interact with various individuals and groups.

**Electives**
Students must earn a minimum of 120 credits to complete the BSPH degree. Students may need to take varying numbers of elective credits.
beyond the degree requirements listed above to reach the 120 credit threshold.

**Major Requirements**
Public health can be a primary major or an additional major.

Coursework in the BSPH program is based on recommendations made by the Association for Prevention Teaching and Research (2008) for undergraduate course work in public health. Students are required to complete 33 credit hours of public health coursework, which includes 27 credit hours of core required courses and 6 credit hours of approved public health electives.

Visit the 'MAJORS' link to learn more about the major requirements for the SONHS’ BSPH program, which are listed under the 'OVERVIEW' section for the public health major.

**Second Major Requirements**
A second major in public health is available to all UM students. Students who pursue a second major in public health must complete the the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>BPH 206</td>
<td>Introduction to Public Health</td>
<td>3</td>
</tr>
<tr>
<td>BPH 208</td>
<td>Introductory Epidemiology</td>
<td>3</td>
</tr>
<tr>
<td>BPH 305</td>
<td>Issues in Health Disparities</td>
<td>3</td>
</tr>
<tr>
<td>BPH 309</td>
<td>Health and Environment</td>
<td>3</td>
</tr>
<tr>
<td>BPH 310</td>
<td>Global Health</td>
<td>3</td>
</tr>
<tr>
<td>BPH 321</td>
<td>Health Promotion and Disease Prevention</td>
<td>3</td>
</tr>
<tr>
<td>BPH 322</td>
<td>Introduction to Health Policy</td>
<td>3</td>
</tr>
<tr>
<td>BPH 352</td>
<td>Biological Principles of Public Health</td>
<td>3</td>
</tr>
<tr>
<td>BPH 465</td>
<td>Public Health Statistics and Data Management</td>
<td>3</td>
</tr>
<tr>
<td>BPH 490</td>
<td>Field Practicum in Community Health</td>
<td>3</td>
</tr>
</tbody>
</table>

Elective (*)

Total Credit Hours 33

(*) = Students may choose an elective from the following courses: APY 205, BPH 301, BPH 303, BPH 306, BPH 317, BPH 319, BPH 355, BPH 402, BPH 419, BPH 461, BPH 487, BTE 450, BSL 460, COS 324, COS 325, COS 426, COS 427, COS 472, GEG 231, GEG 241, GEG 334, GEG 336, GEG 341, GEG 343, GEG 345, GEG 346, GEG 348, GEG 366, GEG 412, INS 570, INS 571, INS 572, INS 573, INS 599, KIN 155, MGT 270, MKT 388, and SOC 480

**Minor Requirements**
The SONHS offers a minor in public health. The School also collaborated with the School of Communication to offer a minor health communication.

Visit the 'MINORS' link to learn more about the minor requirements for the public health and health communication minors.

**Classes Not Applicable Toward SONHS Degrees**
The following courses do not count toward the 120 credits required of the BSPH degree: DAN 101-104, ENG 103, and MTH 099. Based on their ENG or MTH placement scores, students may need to complete ENG 103 or MTH 099 before enrolling in higher-level requirements. Even though the courses listed above cannot count toward graduation, they can count toward the 12 credits required to be considered a full-time student.

**Senior Assessments**
In line with the SONHS’ ongoing accreditation efforts, seniors with a major in the health science, nursing, and public health may be required to participate in general or major-specific senior assessments lasting up to several hours each. Scores on senior assessments will not affect students’ GPAs or ability to graduate, but failure to complete required assessments may delay or prevent students’ ability to graduate.

**Bachelor of Science in Public Health (BSPH) and Master of Public Health (MPH)/Master of Science in Public Health (MSPH) 4+1 Program**
The SONHS and the Graduate Programs in Public Health at the UM Miller School of Medicine have developed a Bachelor of Science in Public Health (BSPH) to a Master in Public Health (MPH) or Master of Science in Public Health (MSPH) 4 + 1 program.

**Program Highlights**
1. Undergraduate students enrolled in the BSPH program in the SONHS who qualify academically may apply to the MPH or MSPH program in the fall of their junior year
2. Accepted students are able to take 12 credit hours of Master’s-level public health courses in their senior year
   a. BSPH students taking Master’s-level public health courses in their senior year must obtain a grade of B or better in these courses in order for them to count toward the graduate degree
   b. All Master’s-level credit hours count toward their MPH or MSPH degree
   c. By completing 3-6 credit hours of Master’s-level MPH or MSPH coursework in the summer following completion of their BSPH degree, students can complete the MPH or MSPH degree in only one additional academic year
3. Students accepted to the 4 + 1 program continue to pay undergraduate tuition for the senior year
   a. Upon graduation with the BSPH, students matriculate into the MPH or MSPH program and complete the remaining credit hours of MPH or MSPH coursework at UM graduate school tuition rates

**Admission Criteria**
1. BSPH students must have an overall undergraduate GPA of 3.0 or higher at the time of application to be considered; accepted students who do not maintain a 3.0 GPA for the remainder of their undergraduate coursework are subject to re-evaluation
2. GRE scores are not required for UM undergraduates who apply to the 4+1 program
3. Admissions decisions are made solely by the admissions committee for the Graduate Programs in Public Health at the UM Miller School of Medicine

**Research Experience**
Students may participate in research experiences through the SONHS (http://www.miami.edu/sonhs/index.php/sonhs/)
Required Coursework and Sample Plans of Study

Visit the 'MAJORS' link to learn more about the academic requirements for the SONHS' BSPH program and to view a sample graduation plan, which are listed under the 'OVERVIEW' and 'PLAN OF STUDY' sections, respectively, for the BSPH program.

Major in Public Health

- BSPH, Public Health Major (p. 645)

Minors in Public Health

- Public Health Minor (p. 647)
- Health Communication Minor (p. 647)

BSPH - Public Health

Students enrolled in the public health major must complete the coursework listed under curriculum requirements to earn the BSPH degree through the School of Nursing and Health Studies (SONHS). Students should meet with an academic advisor in the Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) to learn more about the research opportunities available to them at the UM.

* The public health major may be used to fulfill this cognate area.

** Students may choose an elective from the following courses: APY 205, BPH 301, BPH 303, BPH 306, BPH 317, BPH 319, BPH 355, BPH 402, BPH 419, BPH 461, BPH 487, BTE 450, BSL 460, COS 324, COS 325, COS 426, COS 427, COS 472, GEG 231, GEG 241, GEG 334, GEG 336, GEG 341, GEG 343, GEG 345, GEG 346, GEG 366, GEG 412, INS 570, INS 571, INS 572, INS 573, INS 599, KIN 155, MGT 270, MGT 388, and SOC 480

*** Students must take at least five designated writing-intensive courses to complete this requirement; unless students choose to take additional credits to complete this requirement, it is highly recommended students select courses that are designated as writing-intensive and will double count toward this area and their other requirements.

**** The number of electives students take may vary due to differences in placement scores, transfer credits, course and cognate selections, etc.

This is only a sample. There are numerous ways students can create plans of study for the public health major. Students should feel empowered to use the information listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) to take charge of their education, pursue their own academic interests, and create their own, unique plans of study.

The School of Nursing and Health Studies (SONHS) recommends students create their own plan of study that accounts for their ENG, MTH, and modern language placements and incorporates their major, minor, and cognate interests. Once students draft their initial plan of study, they are encouraged to meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to review their plan, address any questions or concerns, discuss areas for improvement, and brainstorm...
ways to integrate research experiences, study abroad opportunities, global initiatives, graduate school requirements, and career preparation experiences.

The sample plan of study listed below is based on the following ENG, MTH, and modern language placement information and major, minor, and cognate selections:

- ENG placement: ENG 105
- MTH placement: MTH 101
- Modern Language placement: SPA 101
- Major(s): Public Health
- Minor(s): None
- Cognates
  - Art & Humanities: Popular Culture (RAU = English)
  - People & Society: Public Health major (RAU = Nursing & Health Studies)
  - Science, Technology, Engineering, and Mathematics (STEM): Biology and Chemistry for Pre-Health Sciences (RAU = Chemistry)

(W) = Course is designated as writing-intensive

(*) = Students may choose an elective from the following courses:
- APY 205, BPH 301, BPH 303, BPH 306, BPH 317, BPH 319, BPH 355, BPH 402, BPH 419, BPH 461, BPH 487, BTE 450, BSL 460, COS 324, COS 325, COS 426, COS 427, COS 472, GEG 231, GEG 241, GEG 334, GEG 336, GEG 341, GEG 343, GEG 345, GEG 346, GEG 348, GEG 366, GEG 412, INS 570, INS 571, INS 572, INS 573, INS 599, KIN 155, MGT 270, MKT 388, and SOC 480

**Mission**

The Mission of the School of Nursing and Health Studies is to educate students and support faculty committed to excellence in the art and...
science of nursing and health studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation and the world. The University of Miami School of Nursing and Health Studies offers courses leading to the degree of Bachelor of Science in Public Health. Baccalaureate education provides the foundation for further education in Public Health and/or other specialized health professional fields.

**Goals**

**Student Learning Outcomes**

- Students will be able to interpret quantitative and qualitative research findings in the medical, nursing, public health and social science literature.
- Students will demonstrate awareness of local health problems, determinants, and interventions in South Florida.
- Students will effectively communicate information related to public health.

**Health Communication Minor**

The School of Communication (SoC) in collaboration with the School of Nursing and Health Studies (SONHS) offers a minor in health communication, which is available to all students. Students must have a minimum of a 2.0 UM GPA to declare the minor and they must earn a C or higher in each course for the minor to count; a grade of C- or lower is not acceptable for the health communication minor. Students should meet with an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/) to discuss any questions related to their degree requirements.

**Public Health Minor**

The School of Nursing and Health Studies (SONHS) offers a minor in public health, which is available to all students. The public health minor consists of two required courses and two electives as outlined below. Students must earn a grade of C- or higher in each course and an overall GPA of 2.0 to complete the public health minor. Any questions related to the public health minor requirements should be directed to an academic advisor in the Office of Student Services (OSS) (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

GRADUATE ACADEMIC PROGRAMS

Mission
The mission of the Graduate School is to promote graduate education, scholarship, and research; to support individuals, departments, and programs in the pursuit of excellence; to foster innovative, multidisciplinary, and interdisciplinary activities; and to maintain high ethical and academic standards in graduate studies.

The standards of study and conduct in the Graduate School are high. They are not set and maintained by the Graduate School but rather by the faculty who determine the standards for their individual program. The Graduate School through its Council sets no course requirements for a degree. It does set certain general residence, grade and examination standards. Fundamentally the Graduate School delegates responsibility to the student and his/her program. Within this broad responsibility the recommendation for the degree rests with the Committee.

Architecture
http://www.arc.miami.edu

Introduction
The School of Architecture at the University of Miami offers:

- Master of Architecture (3 year and 2 year advanced track)
- Master of Science in Architecture (Design and Research track)
- Master of Construction Management/Executive Master of Construction Management
- Master of Real Estate Development + Urbanism
- Master of Urban Design
- Dual degrees
- Certificates

The School of Architecture's location in Coral Gables within the Miami metropolitan area provides an outstanding laboratory for research and advanced study; the challenges of conservation and development are intense in one of the nation’s fastest growing urban areas. These challenges result in an increasing demand for skilled professionals.

Students have the opportunity to work with the faculty in the exploration of theoretical issues as well as in the resolution of practical problems. The School of Architecture values and sustains a creative, open and supportive environment, emphasizing personalized instruction in small classes and studio courses.

Accreditation
In the United States, most registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture offered by institutions with U.S. regional accreditation, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted an eight-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Master of Architecture degree programs may require a pre-professional undergraduate degree in architecture for admission. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

The University of Miami School of Architecture offers the following NAAB-accredited degree programs:

Bachelor of Architecture (171 undergraduate credits)
Master of Architecture I (105 graduate credits)
Master of Architecture II (60 graduate credits)

Admission Requirements
To ensure an orderly design studio sequence we accept applications for Fall semester only. Entry in other semesters may result in a delay of design studio attendance which effects the timely completion of the program. Applications completed by February 1st will be given the highest priority, the Graduate program is accepting applications until June 1st. Admission to the graduate program is subject to the rules, regulations and procedures of the Graduate School as stipulated in the University Graduate Bulletin. It is the responsibility of each student to understand these requirements and to ensure that they are met.

The minimum requirements for application (https://grad.miami.edu/apply/) to the Master’s Degree program are:

- GPA 3.0 cumulative grade point average
- GRE 300 (https://www.ets.org/gre) or GMAT 550 (www.mba.com/us) - not required for Executive Master of Construction Management
- Official transcripts (need to be addressed to: School of Architecture, Graduate Program, 1223 Dickinson Drive, Coral Gables, FL 33146)
- Once admitted international transcripts and diplomas need to be translated and evaluated (see link here) (https://www.arc.miami.edu/admissions/admissions-and-portfolio-requirements/grad-requirements/international-admissions/) by an accredited Evaluation Agency.
- Resume
- Portfolio (not required for Master of Real Estate Development + Urbanism and Master of Construction Management/Executive of Construction Management

Please visit the website of the School of Architecture at www.arc.miami.edu for more information.

Dual Degrees

• Bachelor of Science in Architectural Engineering (B.S.A.E)/Master of Architecture I (M.ARCH)
• Master of Architecture (M.ARCH I and II) and Master of Real Estate Development + Urbanism: 105 credits + 21 credits
• Master of Architecture (M.ARCH I and II) and Master of Urban Design: 60 credits + 21 credits
• Master of Urban Design (M.U.D)/Master of Real Estate Development + Urbanism (MRED+U): 36 cr + 24 cr (min. 60 credits)

Certificates

• Historic Preservation Certificate
• Classical Architecture Certificate
• Sustainable and Resilient Design Certificate
• Construction Management Certificate
• Urban Design Certificate
• Real Estate Development and Urbanism Certificate
• Hospitality Design Certificate
• Healthcare Design Certificate

Certificates require 15 credits of one certificate related studio (6 cr) and related architecture electives (9 cr).

Master of Architecture

The Master of Architecture program promotes a creative, open and supportive environment emphasizing advanced and personalized instruction through small class and studio courses. The School's resources are enhanced by the interdisciplinary opportunities offered by the other schools and colleges at the University of Miami. Located in the southeastern U.S. in close proximity to the Caribbean and Latin America, the School also participates in an international network to enable students and faculty to develop an understanding of architecture and culture in an increasingly globalized world. In addition, the School of architecture Rome Program offers graduate students an intensive experience in design, theory, and history of architecture with U-SoA faculty at the School’s private Rome studios. U-SoA faculty are joined each year by internationally recognized visiting scholars and fellows. The diversity of faculty interests and experience offers opportunities for students in the selection of studios and in the exploration of diverse areas of professional concentration. Students immerse in contemporary challenges to address a variety of social, cultural, technological and programmatic contexts. Students are encouraged to get involved in various research projects located within the School’s various labs, and to pursue a certificate in an area of professional concentration.

The Master of Architecture (M.ARCH) program consists of the following two tracks:

Master of Architecture I
A 2 year program for students with non-architecture degrees (completion of 105 credits is required).

Master of Architecture II
A 2 year program for students with non-professional degrees in architecture or closely related field (completion of 90 credits is required).

Master of Construction Management/Executive Master of Construction Management

Gain the technical knowledge and managerial skills you need to set yourself apart in the construction industry. The Master of Construction Management (M.C.M.) is an one year (three semesters), 36 credit program. It is designed to broaden your educational and career options to solve challenges in the industry and become future leaders of design and construction related organizations worldwide. The Executive Master of Construction Management (E.M.C.M.) is a 30 credit program designed for accomplished professionals in the design and construction industry who are ready to take their career to the next level.

Master of Science in Architecture

The Master of Science in Architecture (M.Sc.Arch.) is a one year, three semester program (completion of 36 credits is required). The program offers a critical and professional environment to investigate design strategies and design challenges in relation to the most pressing issues of the 21st century: resilient design, tropical and subtropical architectures, identity in a globalized world, health care design, housing design, conservation of the built environment and the effect of embedded technologies on design. The Master of Science in Architecture program is designed to provide a skills and knowledge base for professional application as well as future advanced doctoral study.

The School of Architecture offers two tracks:

• Architectural Design
• Architectural Studies

Master of Urban Design

The Master in Urban Design, is a three (optional four) semester program that provides students with a design experience investigating the guiding principles for building regions, cities and communities. Guided by the imperatives of sustainability and resilience, the program conceptualizes cities as an extension of the ecological transect across the natural to
human habitat, providing students with a range of experiences from rural to urban.

**Master in Real Estate Development and Urbanism**

The Master of Real Estate Development + Urbanism (MRED+U) is an intensive one-year (Fall, Spring, Summer), 36 credit graduate program for students with degrees and experience in business, architecture and related fields blending the fundamentals of real estate development (finance, law, market analysis, development process) with the School's strengths in livable community design.

**Awards and Scholarships**

All students admitted full time may be eligible for partial tuition based scholarship support. The School of Architecture provides merit-based tuition scholarships to graduate students. Applicants to the Graduate Programs will be considered each semester for a limited number of merit-based assistantships within the School. Assistantships are an honors award available to a limited number of students.

American Institute of Architects Henry Adams Medal is awarded by the American Institute of Architects to the highest ranking graduating student for scholarship and excellence in architecture.

American Institute of Architects Henry Adams Certificate awarded to the second highest ranking graduating student for scholarship and excellence in architecture.

Other honors, distinctions, and awards are presented annually for excellent student performance.

**Master Degrees in Architecture**

- Master of Architecture I (3 years) (p. 655)
- Master of Architecture II (2 years, advanced standing) (p. 655)
- Master of Science in Architecture - Architectural Design or Architectural Studies (M.Sc.Arch.) (p. 659)
- Master of Construction Management (M.C.M.) (p. 657)
- Executive Master of Construction Management (E.M.C.M.) (p. 654)
- Master of Real Estate Development + Urbanism (M.R.E.D.+U) (p. 658)
- Master of Urban Design (M.U.D.) (p. 660)

**Dual Masters Degrees in Architecture**

- Bachelor of Science in Architectural Engineering (B.S.A.E)/Master of Architecture I (M.ARCH) (http://bulletin.miami.edu/undergraduate-academic-programs/engineering/civil-architectural-environmental-engineering/architectural-engineering-bs-master-architecture-dual-degree/#curriculumtext)
- Master of Architecture (M.ARCH I and II) and Master of Real Estate Development + Urbanism: 105 credits + 21 credits
- Master of Architecture (M.ARCH I and II) and Master of Urban Design: 60 credits + 21 credits
- Master of Urban Design (M.U.D)/Master of Real Estate Development + Urbanism (MRED+U): 36 cr + 24 cr (min. 60 credits)

**Master of Architecture I and Master of Real Estate Development + Urbanism**

(105 cr + 21 cr)

### Executive Master of Construction Management

The Executive Master of Construction Management (E.M.C.M.) (https://mcm.arc.miami.edu/) is an interdisciplinary 30-credit program and designed for accomplished professionals in the design and construction industry who are ready to take their career to the next level. Courses are offered in the late afternoons, evenings and on weekends, to meet the needs of working professionals. The program will focus on current issues and events in construction Management and address the needs of the industry by developing candidates for middle and upper management positions.

### Mission

The mission of Executive Master of Construction Management is to provide experienced construction professionals, a highly specialized practical curriculum embodied with real-world experience and taught by industry leaders to augment their practical knowledge of the industry and assist in advancing their careers into leadership positions at their organizations.

### Goals

- To provide an integrative, flexible, and state of the art curriculum that prepares students with the knowledge, discipline and marketable skills, to become future leaders in design and construction-related organizations;
- To provide future construction professionals with the knowledge and quantitative skills required to understand, organize and control construction projects from conception to closeout;
- To expose participants to technical skills and knowledge in architecture, engineering, construction, and cutting-edge technology in support of planning, analyzing, and solving construction problems;
- To encourage our students, as future industry leaders, through the school's culture and resources to address the critical social, economic, and environmental challenges facing the construction industry; and
• To encourage participants to make meaningful contributions to the shaping of the built environment.

Student Learning Outcomes
• Students will apply various management techniques and methods to efficiently and effectively plan and control construction projects.
• Students will adopt and integrate emerging technologies and innovations in Construction Management practices.
• Students will understand the value of and apply sustainable building practices to optimize the use of available resources.
• Students will apply skills to manage creative teams and project processes effectively and efficiently.
• Students will possess an understanding of the contributions made by design professionals to the construction processes, and can communicate and interact with design professionals within the multidisciplinary construction team.

Master of Architecture

Master of Architecture I
The Master of Architecture I (M.Arch I) is a NAAB-accredited, 3 year (7 semesters) program intended for students holding undergraduate degrees in non-design fields. This STEM-designated professional degree program provides a well-grounded understanding of architecture as students immerse in contemporary challenges to address a variety of social, cultural, technological and programmatic contexts.

At the heart of the M.Arch I curriculum are Core Studios that introduce students to critical topics, imbue necessary skills, inspire critical thinking, examine the production of meaning in architecture, and foster an understanding of architecture as an integrative discipline. The Core Studios are carefully synchronized with core courses in drawing and visualization, history and theory, technology and systems, and practice.

The first year begins with an examination of the relationship between nature, landscape, and the built environment, and how architectural form is informed by a careful reading of place. A summer in the School's Rome studio is configured to provide an intensive, on-site experience balancing design, history, theory, and analysis through drawing. In order to make travel to Rome more accessible, the School covers the cost of travel and lodging for this trip.

During the second year, students engage design-based critical inquiry into more complex issues including technology, structural systems, environmental stewardship, building envelope systems, and social human-centered aspects of architecture. In the Integrative Studio, which systematically incorporates professionals into the studio environment, students emulate modes of practice by organizing a complex architectural project combining design considerations with complex building systems, while also demonstrating proficiency in technical documentation.

In their final year, graduate M.Arch students are expected to pursue a final degree project. Final degree projects comprise one of two tracks:

1) Design Thesis, an opportunity for each student, working with a faculty advisor, to conduct independent scholarly research and define an individual position with regard to the discipline of architecture

2) Graduate Design Research Studio, led by a faculty member, which investigates relevant or thematic issues of architecture.

Beyond the Core Studios, students are able to develop individual focus areas, for instance in advanced technology, design-build, and building construction, sustainability and resilience, urban design, historic preservation, and adaptive-use, healthcare, or hospitality. Students direct their trajectory following their interests, develop areas of professional concentration through certificates, and engage in critical research.

U-SoA faculty are joined each year by internationally-recognized visiting scholars and fellows. The diversity of faculty interests and experience offers opportunities for students in the selection of Advanced Elective Design Studios. The School is home to innovative research units, including RAD-UM, a lab dedicated to emergent embedded technology, the Laboratory of Littoral Urbanism, an acclaimed design/build program, and the Center for Urban and Community Design.

The M.Arch degree can also be combined efficiently with on-site post-professional degree programs, such as the Master of Science in Architecture, Master of Urban Design, Master of Real Estate Development and Urbanism, and Master of Construction Management.

Master of Architecture II
The Master of Architecture II (M.Arch II) is a 2-year (4-semester program) for students holding a pre-professional degree in architecture or a closely-related field. This STEM-designated professional degree program provides an advanced platform for students to engage contemporary challenges and address a variety of social, cultural, technological and programmatic contexts.

This M.Arch II program allows students to advance their undergraduate education by engaging more complex challenges, honing their skills in essential areas, and by developing individual focus areas, for instance in advanced technology, design-build, and building construction, sustainability and resilience, urban design, historic preservation and adaptive-use, healthcare, or hospitality. Students direct their trajectory following their interests, develop areas of professional concentration through certificates, and engage in critical research.

In their final year, graduate M.Arch students are expected to pursue a final degree project. Final degree projects comprise one of two tracks:

1) Design Thesis, an opportunity for each student, working with a faculty advisor, to conduct independent scholarly research and define an individual position with regard to the discipline of architecture

2) Graduate Design Research Studio, led by a faculty member, which investigates relevant or thematic issues of architecture.

U-SoA faculty are joined each year by internationally-recognized visiting scholars and fellows. The diversity of faculty interests and experience offers opportunities for students in the selection of Advanced Elective Design Studios. The School is home to innovative research units, including RAD-UM, a lab dedicated to emergent embedded technology, the Laboratory of Littoral Urbanism, an acclaimed design/build program, and the Center for Urban and Community Design.

The M.Arch degree can also be combined efficiently with on-site post-professional degree programs, such as the Master of Science in Architecture, Master of Urban Design, Master of Real Estate Development and Urbanism, and Master of Construction Management.

Master of Architecture I (3 years)
For students with non-architecture degrees (completion of 105 credits is required)
### Master of Architecture II (2 year advanced standing)

**For students with non-professional degrees in architecture or closely related field (completion of 60 credits is required)**

1 Architecture and professional courses completed in a non-professional bachelor’s degree program will be evaluated to identify courses that may be waived in the Master of Architecture Professional Degree Program.
2 Requirements/Recommendations for additional coursework will be contingent on the evaluation of the student’s prior work at the time of admission.
3 An additional summer semester may be added for students with less than 8 Design Studios from a Bachelor of Architecture degree (6 credits).

Mission

Goals
- To prepare students for professional leadership and lifelong learning in architecture, urbanism, and related fields.
- To preserve and develop knowledge for the profession through research and practice.
- To share knowledge locally and internationally through community service.

Student Learning Outcomes
- Students will demonstrate the ability to effectively use basic architectural and environmental principles in design.
- Students will demonstrate the ability to raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards.
- Students will demonstrate the ability to read, write, speak and listen effectively.
- Students will demonstrate the ability to use appropriate representational media, such as traditional graphic and digital technology skills, to convey essential formal elements at each stage of the programming and design process.

Master of Construction Management
The Master of Construction Management (M.C.M.) (https://mcm.arc.miami.edu/) is an interdisciplinary 36-credit program and open to graduates from Architecture, Engineering and Construction related programs. The curriculum will broaden educational and career options for students. Formal knowledge and experience in project and construction management are highly sought after by architectural and engineering firms, construction companies and real estate developers. Combined with other educational opportunities currently offered or planned, at the U-SoA or other academic units, students can create their own future expanding their horizon in the job market.

Note: Master of Construction Management students are required to participate in a minimum of one internship approved by Toppel Internship Program (TIP).

*Electives must be approved by the Program Director.

### Mission

The mission of the Construction Management programs is to broaden educational and career options for our graduates and to provide an integrative, flexible, and state of the art curriculum that prepares students with the knowledge, discipline and marketable skills, to become future leaders in design and construction-related organizations;

- To provide future construction professionals with the knowledge and quantitative skills required to understand, organize and control construction projects from conception to closeout;
- To expose participants to technical skills and knowledge in architecture, engineering, construction, and cutting-edge technology in support of planning, analyzing, and solving construction problems;
- To encourage our students, as future industry leaders, through the school's culture and resources to address the critical social, economic, and environmental challenges facing the construction industry; and
- To encourage participants to make meaningful contributions to the shaping of the built environment.

### Student Learning Outcomes

- Students will apply various management techniques and methods to efficiently and effectively plan and control construction projects.
- Students will adopt and integrate emerging technologies and innovations in Construction Management practices.
- Students will understand the value of and apply sustainable building practices to optimize the use of available resources.
- Students will apply skills to manage creative teams and project processes effectively and efficiently.
- Students will possess an understanding of the contributions made by design professionals to the construction processes, and can communicate and interact with design professionals within the multidisciplinary construction team.

### Master of Real Estate Development + Urbanism

The Master of Real Estate Development and Urbanism (MRED+U) program is an intensive one year, three semester program for students with degrees and experience in business, architecture and related fields blending the fundamentals of Real Estate Development (finance, law, market analysis, development process) with the School's strengths in livable community design.

The mission of the MRED+U program is to educate future real estate professionals on the fundamentals of real estate development grounded in livable community planning and design.

Goals

- Prepare real estate industry professionals capable of tapping the power of the market to deliver financially successful development that offers a high quality of life for diverse populations to live, work, and pursue daily activities in walkable, sustainable neighborhoods and communities.
- Prepare students for professional leadership and lifelong learning in urban real estate development with an emphasis on livable community planning and design.
- Preserve and develop knowledge for the profession through research and practice.
- Share knowledge locally, nationally and internationally through the program website, programs and community outreach projects.
- Promote community design and real estate development goals of environmental responsibility, social equity and economic sustainability.

Student Learning Outcomes

- Students will demonstrate the ability to assess the viability of individual properties, neighborhoods and districts for appropriate types and scales of urban real estate development including the physical, environmental, regulatory (land use, zoning, building codes, etc.), political, transportation, social and community context for development.
- Students will demonstrate the ability to identify and research regional and local (on the ground) real estate market conditions, comparable and competitive properties, demographic and psychographic characteristics of populations and prospective customers and tenants for real estate.
- Students will demonstrate the ability to prepare a real estate development program with appropriate land uses, tenant mixtures, parking and non-revenue generating elements (civic uses and public space) consistent with local regulations (land use, zoning).
- Students will demonstrate: literacy in real estate finance terminology and concepts for real estate development; the ability to analyze the financial feasibility of real estate development proposals, and; the ability to prepare and present a financial pro forma for a real estate development proposal.
- Students will demonstrate the ability to work in various roles and collaborate as part of an interdisciplinary team carrying out an urban real estate development project.
- Students will demonstrate knowledge of exemplary urban projects and places including historic, new and redeveloped urban places. Students will demonstrate knowledge of design principles used to create and maintain livable communities, build real estate value and advance sustainability.

Master of Science in Architecture

The Master of Science in Architecture (M.Sc.Arch.) is a one-year, three-semester program (completion of 36 credits is required). The program offers a critical and professional environment to investigate design strategies and design challenges in relation to the most pressing issues of the 21st century resilient design, tropical and subtropical architectures, identity in a globalized world, health care design, housing design, conservation of the built environment and the effect of embedded technologies on design. The Master of Science in Architecture program is designed to provide a skills and knowledge base for professional application as well as future advanced doctoral study.

1. Elective credits can be fulfilled from one, two and three credit course offerings over the three semesters including study abroad courses involving MRED+U faculty (or approved by the Director).
2. With professor approval, students may test out of RED 610 and complete RED 612 and RED 614 or approved FIN courses.
3. Master of Real Estate Development and Urbanism students are required to participate in a minimum of one internship approved by Toppel Internship Program (TIP).
Master of Urban Design

The Master in Urban Design, is a three- (optional four-) semester program that provides students with a design experience investigating the guiding principles for building regions, cities and communities. Guided by imperatives of sustainability and resilience, the program conceptualizes cities as an extension of the ecological transect across the natural to human habitat, providing students with a range of experiences from rural to urban.

Program Director Elizabeth Plater-Zyberk, recognized for her foundational role in the development of the movement called the New Urbanism, leads the program that invites students to explore design, policy and management tools for place-making as a vehicle for health, retrofitting the suburban landscape, real estate development as community building, adaptation to climate change, and urban growth and revitalization, are topics prominent in course offerings and faculty research.

The three-semester curriculum begins in the fall each year with foundation courses in urban design and real estate development, in an Interdisciplinary approach structured by environmental, social and economic goals. The spring semester intensifies students' engagement with contemporary urban challenges such as climate resilience, healthy community design, and repair of suburban sprawl. The summer semester provides a concluding experience that aggregates prior topics in an international setting that challenges goals of sustainability and resource conservation.

As part of the curriculum, students participate in the National Charette Institute certification course, a training in public outreach and participatory planning, and collaborate with real estate development students in two...
special projects: a national design and development competition, and a local community revitalization plan. These experiences and the coursework shared with the Master of Real Estate Development and Urbanism program focus on implementation.

The optional fourth semester of the Master of Urban Design program is a semester-long independent study design project or thesis. In recent years, these have focused on topics such as greening a Brazilian City, socially integrated public housing in China, and an analysis of principles and metrics of Smart Cities and New Urbanism.

Other resources that enrich the urban design student’s experience in the School include the Center for Community and Urban Design (CUCD), engaging students in community outreach projects in South Florida and The Caribbean, and access to the Archive of the New Urbanism, housed in the School of Architecture Library. The Archive is a growing resource of documents, with both texts and images that support research related to urban design housed in the School of Architecture. Also, Research Affiliates from around the world join the faculty annually to study the state-of-the-art in urban design and architecture.

Guiding the ever-evolving program are faculty members Charles Bohl, Jaime Correa, Eric Firley, Jean Francois Lejeune, and Joanna Lombard, internationally recognized in research, publication, and design.

While the Master of Urban Design is a post-professional program, structured for students with a professional degree in architecture, those holding a degree in engineering, planning or landscape architecture may apply for admission. A preparatory summer course may be required for non-architects, to be determined by the admission process.

History of Program

Urban Design offerings at the School of Architecture emerged in the 1980’s when a group of faculty members sought to have an impact on the urban growth of South Florida. The impetus was their study of Coral Gables, a Progressive Era new town, one of a series of Anglo-American Suburbs that can be found across the United States. George Merrick founded Coral Gables in 1923. He believed that for his city to be great it needed a university, and he set aside land for the University of Miami. The architects Merrick engaged in the building of Coral Gables founded the architecture program at the outset. Today, building on his legacy, the School of Architecture is renowned for its dedication to preparing future professionals with an understanding of the larger context for their work in the environment and society.

In 1988, mentored by their city and their studies of its design, and by leading thinkers of the time such as Leon and Rob Krier, the faculty established a post-professional degree in urban design. The young faculty’s design of Seaside, now an icon of new community design, challenged the planning and development conventions of its day. The new masters program established the precepts of Traditional Neighborhood Development (TND) and of the Charter for the New Urbanism. The School’s faculty and alumni are among the founders of the Congress for the New Urbanism, and have been prominent contributors to the evolution of the movement, now a globally renowned approach to sustainable urban growth and revitalization.

Mission Goals

• To prepare students for professional leadership and lifelong learning in architecture, urbanism, and related fields.
• To preserve and develop knowledge for the profession through research and practice.
To share knowledge locally and internationally through community service.

To promote building and community design goals of environmental responsibility, social equity, and economic sustainability.

**Student Learning Outcomes**

- Students will demonstrate the Ability to effectively use basic architectural and environmental principles in design.
- Students will demonstrate the ability to raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards.
- Students will demonstrate the ability to read, write, speak and listen effectively.

- Doctor of Philosophy

**Degree Requirements**

Please consult the specific department section for information related to degree requirements in addition to general degree requirements for the various degrees as listed by the Graduate School.

**Other**

The Max and Peggy Kriloff Fund is a fund that provides travel support for students earning degrees from the College of Arts and Sciences. The fund provides support for students to present papers, or posters at professional conferences worldwide. Students will need to fill out an application form available here [https://www.as.miami.edu/_assets/pdf/krilof-graduate-student-travel-scholarship-form-2019.pdf](https://www.as.miami.edu/_assets/pdf/krilof-graduate-student-travel-scholarship-form-2019.pdf) and submit it, along with the necessary supporting documentation to the Office of Graduate and Administrative Services.

**Anthropology**

anthropology.as.miami.edu

The University of Miami offers a Professional Practice in Anthropology. The program will provide an academic foundation of best practices, current theory, grantsmanship, government regulations, and ethical standards of working with living peoples, dynamic cultural systems, and cultural heritage materials within the U.S. and abroad. It is designed to prepare graduates for careers in the private sector, government and nongovernmental organizations, nonprofit organizations, and education, including medical and research settings.

Students in these programs are expected to design their mandatory field/research experience in concert with a faculty advisor and external site supervisor as a means of acquiring practical experience in workplace setting. These students will present a professional paper, submit a grant proposal, and/or produce a manuscript for publication as part of the requirements for graduation. They may elect to pursue a degree with or without a written thesis. A total of 36 semester credit hours of graduate coursework (600-level or above) is required to complete the degree.

**Master's Program in Anthropology**

- Master of Arts in Anthropology (p. 662)

**M.A. in Anthropology**

http://www.as.miami.edu/anthropology/

**Overview**

The Department of Anthropology offers a Master of Arts degree in the Professional Practice of Anthropology. The program offers students the opportunity to specialize in one of three areas:

**Applied archaeology**

Cultural heritage management (cultural resource management), including museum management for archaeological collections, graduates will be in compliance with regulations and requirements from the U.S. Secretary of the Interior.
Applied biological anthropology
Analysis and identification of human remains; museum management of human skeletal/dental remains; applied primatology.

Applied cultural anthropology
Medical anthropology, anthropology in public health and allied fields, and applied ethnography for industrial/ private/government sectors.

Degree Requirements
The aim of the curriculum is to give graduates the skill sets needed to design, conduct, and analyze anthropological fieldwork for their employers or as a component of independent research-driven careers. Graduate students have two degree options. Both thesis and non-thesis options require a minimum of 36 credits beyond the baccalaureate degree and 18 months in residency.

Basic Coursework, Common to Both Options
1. Two of the four core graduate seminars in professional practice and theoretical foundations (total of 6 credits);
2. At least one course in anthropological research methods (3-9 credits);
3. At least one course in anthropological field studies, potentially fulfilled via internship (3-9 credits).

Option 1 - Thesis
Requires a written thesis with an open defense guided by an advisor and committee chosen in consultation with the anthropology faculty. The committee for the thesis must include at least three faculty members, including one from outside anthropology. A minimum of 18 months in residency is also required for this option. Thesis requirements will conform to the University of Miami’s standards and format.

Option 2 - Non-Thesis
Requires 9 credits of elective coursework within anthropology and a paper for presentation at a conference and/or for publication in a professional venue.

GIS Certification, available for both options
In cooperation with the Department of Geography and Regional Studies, students may obtain a GIS certificate by completing a specific 12-credit sequence in the Department of Geography and Regional Studies. (This will entail 3 credits beyond the normal required non-anthropology coursework.)

Academic Standing
Graduate students are expected to maintain an overall GPA of 3.0.

For more information, please consult the Department of Anthropology web site: http://www.as.miami.edu/anthropology/

For inquiries regarding graduate school policies, please consult: https://www.grad.miami.edu/

Admission Requirements
All applicants will be selected for admission based on:

GRE Score
1. A combined score of 297 on the General Test.
2. Applicants with lower scores may be considered for admission with supporting documentation from referees of active and successful involvement in research and/or transcripts showing an established record of scholarly achievement as an undergraduate.

Transcripts
1. Official copy of undergraduate transcripts showing the date the bachelor’s degree was awarded.
2. Transcripts must show a 3.0 GPA in anthropology and no less than 3.0 for the overall GPA.
3. Students with lower averages may be admitted provisionally with higher than minimum GRE scores and supporting materials from referees on a case-by-case basis.

Personal Statement
1. A personal statement in which the applicant details reasons for pursuing an MA in our program specifically.
2. A cogent written statement will be used in evaluating the applicants’ ability for written expression, as well as their fit with our strengths and offerings.

Part Time Admission
Returning students or practicing professional anthropologists who seek continuing education to better their skill set while enhancing their opportunities for advancement in the field may apply. Nondegree-seeking students and/or part time students will be considered by the Admissions Committee on a case-by-case basis.

¹ Students in the Thesis Option must take a combination of APY 611, APY 702, and APY 810 for a total of 21 credits with no fewer than 3 and no more than 9 credits in any one of the courses.

² Students in the Non-Thesis Option must take APY 611 and APY 702 for a total of 12 credits with no fewer than 3 and no more than 9 credits in either of the courses.

³ Nine graduate-level credits outside of Anthropology (mandatory) – These may be from a suggested list of electives and/or may be designed as a graduate cognate by the student with guidance from the advisor.

³ Language (mandatory) – demonstrated competency in the language of the country in which the applicant will work.

³ A written thesis with an open defense is required. Students may choose their thesis committee which must include at least three faculty members, including one from outside anthropology. Thesis requirements will conform to the University of Miami’s standards and format.

Mission

Goals

It is the goal of this program and our department to produce professional Anthropologists with the highest caliber skill set and tools for critical thinking, problem solving, and written and oral communication skills for persons in the discipline and with nonspecialists in other settings.

Student Learning Outcomes

- The student will demonstrate advanced knowledge and theoretical foundation in any of the four subfields of anthropology.
- The students will demonstrate professional communication skills (written and oral) in their subfield or discipline.
- The student will develop a set of teaching materials in anthropology (optional).

Art and Art History

art.as.miami.edu

Degree Programs

The Department of Art and Art History currently offers a Master of Fine Arts degree in the professional practice of studio art.

- The Master of Fine Arts can be completed in the following studio areas:
  - Ceramics
  - Digital Imaging-Illustration/Photography
  - Painting
  - Printmaking
  - Sculpture

Master of Fine Arts

M.F.A. in Studio Art:

The M.F.A. in Studio Art is designed for personal development and career success in both traditional and conceptual-based practice. The Master of Fine Arts degree in the professional practice of studio art is a three-year program that offers students the opportunity to specialize in five concentrations: 1) Ceramics; 2) Digital Imaging-Illustration/Photography; 3) Painting; 4) Printmaking; and 5) Sculpture.

Admission Requirements:

Applicants for the program will be selected for admission based on submission of the following materials and standards by the application deadline:

1. Official copy of undergraduate transcripts showing the date the B.A. / B.S. /B.F.A. degree was awarded. [Transcripts must show no less than 3.0 for the overall G.P.A.] Transcripts need to be mailed directly to the department.
2. A personal statement of interest in the M.F.A in Studio Art program at the University of Miami.
3. A portfolio of digital images of personal artwork, not to exceed 20 images. [Portfolios are currently uploaded via the Acceptd site; please visit the department’s website for details.]
4. Three letters of recommendation.
5. A minimum TOEFL score of 80 (for international students only).
6. It is highly recommended that applicants have advanced coursework in the area they wish to study, as well as related professional and/or exhibition experience.

Academic Standing:

Graduate students are expected to maintain an overall G.P.A. of 3.0 in all coursework. Should the average fall below that mark in a semester, the student will be notified, and will work with his/her faculty adviser to rectify the performance problems. If the student has a second consecutive semester with an average G.P.A. below the 3.0 standard, he/she will be placed on academic probation. Three semesters of below average performance may result in suspension from the program at the discretion of the Chair and in discussion with the student and his/her adviser in accordance with guidelines for the University’s Graduate School.

Mission

The Art Department is dedicated to the promotion of excellence in the visual arts by encouraging originality, discovery, creativity, and critical inquiry. The department provides an educationally diverse environment where students can acquire the critical perspectives, historical knowledge, and technical skills that will prepare them for a variety of professional careers in the arts.

Goals

Students will acquire the skills needed for careers as practicing artists who can successfully interact with galleries and museums, write grants, attend residencies, sell works of art, and manage expenses and income.

Student Learning Outcomes

- Students will be able to produce creative, original and quality artwork suited for exhibition.
- Students will develop an in-depth understanding of the history of art and both traditional and contemporary aesthetic positions.
- Students will develop their written communication skills.

Biology

biology.as.miami.edu
Dept. Code: BIL
Degree Programs

Application for Admission

Applications are due December 1.

In applying for admission, applicants must select either the Master's or the Ph.D. track.

Students with an appropriate B.S. degree may seek direct entry to either the M.S. track or the Ph.D. track.

Applicants who were admitted on the Master's track and wish to complete the M.S. degree, should follow the same procedures as all other applicants, but they must include letters of support from three UM Biology faculty, including a major advisor, should be added to the applicant’s file. The file must be current. Such applicants will be judged by the same criteria that are applied to other Ph.D. applicants.

Applicants to the Ph.D. track who were admitted on the Master's track and wish to complete the M.S. degree, should follow the same procedures as all other applicants, but they must include letters of support from three UM Biology faculty. Such applicants will be judged by the same criteria that are applied to other Ph.D. applicants.

Applicants must:

2. Send hardcopies of the following to the Coordinator of Graduate Studies in Biology, Department of Biology, 1301 Memorial Drive, Coral Gables, FL 33146 USA.
   a. Originals of all undergraduate and graduate official transcripts (photocopies are not accepted)
   b. Official scores from recent Graduate Record Examinations (within five years), including the aptitude portion; (photocopies of scores are not accepted)
   c. International applicants whose native language is not English must additionally submit the TOEFL (Test of English as a Foreign Language) official scores (photocopies of scores are not accepted)
3. Send digital copies of the following to the Coordinator of Graduate Studies in Biology (bio.gradcoord@miami.edu)
   a. A cover letter that identifies interests, suggests possible research projects, states career goals and identifies a UM Biology faculty sponsor
   b. Copies of any research papers (e.g., publications, manuscripts, senior reports, etc.)
4. Letters of recommendation from three science instructors/supervisors that address: nature and duration of relationship to applicant; motivation; ability to conceptualize and deal quantitatively with biological problems, and research potential should be sent by email to the Coordinator of Graduate Studies in Biology at bio.gradcoord@miami.edu
5. Request UM Biology faculty sponsor submit a memo of support by email to the Coordinator of Graduate Studies in Biology (bio.gradcoord@miami.edu). Applicants MUST secure the sponsorship of a faculty member as a condition for admission; the research interests of the applicant and the faculty sponsor should be well-matched; the sponsor will be the major advisor

A limited number of applicants to the Ph.D. program may be invited to interview at departmental expense in early January of the year of admission.

Materials submitted in support of an application cannot be released for other purposes or returned to the applicant.

Degree Requirements

All students are required to satisfy the general requirements for the appropriate degree that are listed in the Graduate Studies Bulletin, whether or not they are listed among the Biology requirements.

Implementation

All Graduate students will be reviewed each spring semester by GAAC.

1. The advisor will review the student's progress to date.
2. The student will provide updates for a student progress database every February.
3. The student will provide written evidence that the advisor and committee have reviewed her/his progress and plans.
4. Each student will receive a letter summarizing the results of the discussion concerning his/her progress.
5. All graduate students shall have the right to respond to GAAC, and, if necessary, the graduate faculty in matters pertaining to the review.
6. Possible outcomes of the review:
   a. Student making satisfactory progress
   b. Student not making satisfactory progress; recommendations for improvement
   c. Student not making satisfactory progress; his/her tenure terminated.

Financial Support

1. The Department intends to support all doctoral students in good standing for up to 10 semesters. Support beyond 10 semesters is contingent upon GAAC approval.
2. Master's degree students usually are not eligible for departmental stipends or tuition remission.
3. Students who do not provide annual updates for the student progress database will not be eligible for continued funding. Students who will be off-campus are still responsible for making sure that GAAC receives the data. Students who choose not to present at the annual departmental graduate student symposium may be considered as not in good standing.
4. Students holding full fellowships or research assistantships will not normally be given teaching assignments, nor will students be permitted to hold fellowships and research assistantships simultaneously. Exceptions require GAAC approval.

Masters Programs in Biology

- M.S. in Biology with Thesis (Three Year Program) (p. 667)
- M.S. in Biology without Thesis (Two Year Program) (p. 668)

Doctoral Program in Biology

- Ph.D. in Biology (p. 668)
M.S. in Biology with Thesis (Three Year Program)

Curriculum Requirements

1. Credit hours: a total of 30 credit hours are required:
   - 24 course credit hours, including the two semester departmental core courses for graduate students and at least one graduate course in statistics. Students are encouraged to take courses from more than one conceptual area; they are encouraged to select courses and independent studies that will prepare them for research, as listed under the Ph.D. requirements. No more than 9 credit hours from the independent study series may be used to fulfill the 24 course credit hours.

<tr>
<td>BIL 678</td>
<td>Current Topics in Biological Research - DVP</td>
<td>1</td>
</tr>
</tbody>
</table>

At times these course numbers are used by professors to teach a new course or a special topics course, in which case the corresponding credit hours can be counted as a non-independent study credit hour. Course selection requires committee approval.

   • 6 research credit hours (BIL 810); no more than 6 M.S. research credit hours are allowed.
   • The minimum acceptable grade average in all coursework towards the degree is a ‘B (3.0)’ and no grade may be below a ‘C.’

2. Research Proposal: public presentation and successful defense to the committee of a written research proposal. The public presentation must be given during regular sessions of the Fall or Spring semesters, not during summer sessions, intersessions, reading days or finals weeks.

3. Thesis: A well-written and successfully defended thesis of publishable quality; a defense is successful if all members of the committee sign the grad school form and the signature page of the dissertation.

4. Other requirements described under 'The Master's Degree,' including but not limited to:
   • a total of at least 30 credit hours (course credit hours plus research credit hours). The Graduate School and the Department concur in requiring at least 24 course credit hours and exactly 6 research credit hours (BIL 810) for a thesis M.S.
   • once a student has completed all required credit hours, she/he must enroll in 'Research in Residence' (BIL 820) status until the degree is granted. This course carries 1 credit hour, but is considered full-time enrollment. Even though no credit is earned, a tuition charge equivalent to 1 course credit hour normally applies to this course.
   • The thesis committee is formed officially when the student is admitted to candidacy. It may comprise the same individuals as the supervisory committee, or it may be formed anew. The student in consultation with the advisor suggests the membership of the committee to the graduate school. The committee will consist of a minimum of three faculty, one of whom must be from outside the department, and one of whom must be a member of the graduate faculty. There is no sub-disciplinary representation requirement.
   • The thesis committee is nominated by the department, but it must be approved and appointed by the Dean of the Graduate School. There is a special form that must be filed with the graduate school.
   • Committee meetings are required at least once a year (recommended at least once a semester); the student is responsible for arranging meetings; the student should consult with the committee about major changes in research goals and about problems. Memos summarizing each meeting should be in the student’s file and emailed to the Coordinator of Graduate Studies in Biology (bio.gradcoord@miami.edu).

5. About the committee:
   • A single committee will combine the responsibilities of the supervisory and thesis committees.
   • The supervisory committee will be determined by the student in consultation with his or her advisor. The committee will consist of a minimum of three faculty, one of whom must be from outside the department, and one of whom must be a member of the graduate faculty. There is no sub-disciplinary representation requirement.

6. About the time table:
   • A written thesis proposal is due no later than the middle of the second semester. Please take note of this deadline. The scope of the M.S. thesis should be in line with the timetable.
   • Analysis of data and a polished draft of the thesis should be completed and in the hands of the committee by the middle of the sixth semester. Please take note of this deadline. The scope of the M.S. thesis should be in line with the timetable.
   • Defense of the thesis and its submission to the Graduate School must meet or precede the deadline for graduation immediately following the sixth semester unless an extension has been approved by the Graduate Admissions and Advisement Committee (GAAC) upon recommendation of the thesis committee. Notice of the defense must be submitted on a special form to the graduate school in advance of the defense and must be posted publicly in the department.
   • The oral defense of the thesis must be given during regular sessions of the Fall or Spring semesters, not during summer sessions, intersessions, reading days or finals weeks.
   • No student may receive the degree in the same semester in which she/he is admitted to candidacy.
   • The indicated dates form firm deadlines. A student’s committee, however, may submit a written petition to GAAC for an extension of time detailing reasons for the request. An extension will be granted only under extraordinary circumstances and will be effective upon written approval by GAAC.
   • Proposals to change the schedule for any reason should be preceded by a study of the graduate bulletin sections on leaves of absence, full time student status and recency of credit hour and explicitly address how the proposed change of schedule relates to these matters. The memo requesting the change also should address the proposed financial support.

7. Completed SACS evaluation forms are required at two points during the course of study. One following the research proposal defense and the final following defense of the thesis. The student is responsible for providing blank forms to the committee at each milestone. The graduate advisor is responsible for forwarding completed forms to the Graduate Director. The student is responsible for ensuring the Graduate Director receives these forms.
Mission
The purpose of the Biology M.S. program is to engender the knowledge of biological concepts as well as the critical thinking and presentation skills that are central to professional careers in teaching, laboratory employment and non-governmental organizations.

Goals

Student Learning Outcomes

1. Students will demonstrate a deep knowledge of a biological area.
2. Students will demonstrate the ability to critically evaluate peer-reviewed publications in Biology.
3. Students will demonstrate the presentation skills necessary for presenting their work at professional meetings.

M.S. in Biology without Thesis (Two Year Program)

Curriculum Requirements

1. Credit hours:
   • A total of 30 course credit hours are required by the Biology Department, including the two semester departmental core courses for graduate students and at least one graduate course in statistics. Students are encouraged to take courses from more than one conceptual area, listed under the Ph.D. requirements. No more than 9 credit hours from the independent study series may be used to fulfill the 30 course credit hours:

</tbody>
</table>

   At times these course numbers are used by professors to teach a new course or a special topics course, in which case the corresponding credit hours can be counted as a non-independent study credit hour. Course selection requires committee approval.

   • The minimum acceptable grade average in all coursework towards the degree is a ‘B (3.0)’ and no grade may be below a ‘C.’

2. Passing a written comprehensive exam given by the committee.

3. About the committee:
   • A single committee will combine the responsibilities of the initial supervisory and the comprehensive examination committees. The committee will be determined by the student in consultation with her/his advisor. The committee will consist of a minimum of three faculty, one of whom must be from outside the department, and one of whom must be a member of the graduate faculty. There is no sub-disciplinary representation requirement.

   • The examination committee is nominated by the department, but it must be approved and appointed by the Dean of the Graduate School. There is a special form that must be filled with the graduate school.

   • Committee meetings are required at least once a year (recommended at least once a semester); the student is responsible for arranging meetings; the student should keep the committee advised of major changes in the graduate program plan; memos summarizing each meeting should be in the student’s file.

4. About the time table:
   • The comprehensive exam must be passed by the end of the fourth semester.
   • No student may receive the degree in the same semester in which she/he is admitted to candidacy.
   • The indicated dates form firm deadlines. A student’s committee, however, may submit a written petition to GAAC for an extension of time detailing reasons for the request. An extension will be granted only under extraordinary circumstances and will be effective upon written approval by GAAC.

   • Proposals to change the schedule for any reason should be preceded by a study of the graduate bulletin sections on leaves of absence, full time student status and recency of credit hour and explicitly address how the proposed change of schedule relates to these matters. The memo requesting the change also should address the proposed financial support.

5. Completed SACS evaluation forms are required following the comprehensive exam. The student is responsible for providing blank forms to the committee. The graduate advisor is responsible for forwarding completed forms to the Graduate Director. The student is responsible for ensuring the Graduate Director receives these forms.

Mission
The purpose of the Biology M.S. program is to engender the knowledge of biological concepts as well as the critical thinking and presentation skills that are central to professional careers in teaching, laboratory employment and non-governmental organizations.

Goals

Student Learning Outcomes

1. Students will demonstrate a deep knowledge of a biological area.
2. Students will demonstrate the ability to critically evaluate peer-reviewed publications in Biology.
3. Students will demonstrate the presentation skills necessary for presenting their work at professional meetings.

Ph.D. in Biology

Curriculum Requirements

1. Credit hours: a total of 60 credit hours (including both course and research credit hours) beyond the Bachelor’s degree are required:

   • At least 18 course credit hours that are not from the independent study series, including the two semester departmental core courses for graduate students and at least one graduate course in statistics (BIL 618). The independent study series is:
The qualifying examination has two components:

1. Comprehensive Component

   - The comprehensive component of the qualifying exam will be passed by the end of the third semester. The qualifying exam has two classes of <3 will fail the comprehensive component of the qualifying exam. A student who earns less than a B in a class will replace a student's original grade for that part of the Graduate Core class in which they failed to achieve the minimum grade of a B. It is only necessary to retake a class if a student earned less than a B in that class (i.e. if students earn less than a B in only one of the two classes, it is not necessary for them to retake both classes in the sequence). All students retaking classes must have completed their retakes by the end of their fourth semester. Each retake grade will replace a student's original grade for that part of the Graduate Core. Following the retakes, students who earn As (4.0) in both Graduate Core I and Graduate Core II will pass with distinction, students whose grade average across the two classes is <4 but ≥3 will earn a passing grade, while students with a grade average across the two classes of <3 will fail the comprehensive component of the qualifying exam. A student who earns less than a B in a retake, will fail the comprehensive component of the qualifying exam for a second time and be terminated from the program.

   - Students who already have a Master's Degree in the same field may not need as many course credit hours (consult Graduate School rules on transfer credit hours), but at least 24 credit hours must be taken in residence at UM.

   - The committee may decide that students with previous graduate level courses may be exempt from some of the course requirements.

   - The minimum acceptable grade average in all coursework towards the degree is a 'B (3.0)' and no grade may be below a 'C.'

   • CONCEPTUAL AREAS: Students are encouraged to take courses and independent studies from at least 3 main conceptual areas, and are urged to take courses and independent studies that will prepare them for research and for the comprehensive qualifying exam. Students also are encouraged to participate in seminars and study groups and to take special courses in other departments of UM, at our Coalition for Excellence in Tropical Biology partner institutions, from the Organization for Tropical Studies, or other special interdisciplinary courses. Such courses should be appropriate to their course of study and research area as determined by their committee. Conceptual areas offered in our department include: EVOLUTION (graduate level evolution courses are in the 620's series); ECOLOGY (graduate level ecology courses are in the 630's series); BEHAVIOR (graduate level behavior courses are in the 640's series); GENETICS AND MOLECULAR BIOLOGY (graduate level genetics and molecular biology courses are in the 650's series); and PHYSIOLOGY AND CELL BIOLOGY (graduate level physiology courses are in the 660's series). Special concentrations in our department and/or in collaboration with other departments include: Tropical Biology, Mathematical Ecology, Neuroscience, and Behavior.

   - At times these course numbers are used by professors to teach a new course or a special topics course, however, in which case the corresponding credit hours can be counted as a non-independent study credit hour. Course selection requires committee approval.

   • At least 12 research credit hours (BIL 830 and/or BIL 840). Once the overall number of required credit hours (see below #6) has been reached, there is no need to take additional research credit hours.

   • An additional 30 credit hours from any combination of graduate courses (600 level regular courses and independent study courses) and research credit hours (800 level) to bring the total number of credit hours beyond the Bachelor's Degree to 60 credit hours. (One example: 18 required course credit hours + 12 required research credit hours + 15 additional course credit hours + 15 additional research credit hours = 60 total; another example would be 18 additional course credit hours and only 12 additional dissertation credit hours, etc.)

   • Students who already have a Master's Degree in the same field may not need as many course credit hours (consult Graduate School rules on transfer credit hours), but at least 24 credit hours must be taken in residence at UM.

   • The committee may decide that students with previous graduate level courses may be exempt from some of the course requirements.

   • The minimum acceptable grade average in all coursework towards the degree is a 'B (3.0)' and no grade may be below a 'C.'

   2. Comprehensive qualifying exam should be passed by the end of the third semester.

   The qualifying examination has two components:

   (I) Comprehensive Component

   (II) Specialty Component

The Specialty component of the qualifying exam will be administered by the initial committee (see § "The committee") who will test the student in subject areas related to the student's field of study. As early as the middle of the first semester and before the end of the second semester the student should meet with their committee to administer the specialty component of the qualifying exam. The Specialty component of the qualifying exam will be passed by the end of the second semester. The Specialty component of the qualifying exam will be administered by the initial committee (see § "The committee") who will test the student in subject areas related to the student's field of study. As early as the middle of the first semester and before the end of the second semester the student should meet with their committee to administer the specialty component of the qualifying exam.
The specific requirements for the alternative specialty component are:

1. The research must have been conducted since matriculation at UM, under the guidance of the Ph.D. advisor. Research conducted prior to matriculation at UM cannot be the basis for the article. However, a student's supervisory committee may at its discretion approve work that considerably extends previous research (e.g., a M.S. project) and that contains substantial new data generated since matriculation.

2. The student must be the first author of the article, and must play the principal role in data analysis, writing, submission, and seeing the manuscript through to publication.

3. The target journal should have an impact factor above the median that contains substantial new data generated since matriculation.

4. The publication must be a full article: No form of short note (e.g., primer, technical or natural history note), short communication or brief commentary is acceptable. Substance rather than paper length will be the major consideration: e.g., articles in Science and Nature would be short but perfectly acceptable! The exam committee will assess the paper’s acceptability.

5. Prior to submission for publication, all members of the supervisory committee must have agreed upon journal selection, served as collegial reviewers of the manuscript, and agreed that the manuscript is suitable for submission. The student is also expected to orally present and defend the research described in the manuscript.

6. Satisfactory completion of this alternate qualifying exam will require submission of the manuscript before the end of the third semester of graduate study. As is the case for a standard written qualifying exam, satisfactory completion will also require a vote of the supervisory/examination committee.

7. A memorandum to GAAC by the supervisory/examination committee chair reporting passing the alternate qualifying exam should be accompanied by a copy of the journal's acknowledgment of submission.

8. If the approved manuscript has not been submitted before the end of the third semester, the graduate student must prepare to sit the regular specialty component of the qualifying exam before the end of the fourth semester. Students have up to the Monday of the second last week of classes in the fourth semester to submit their manuscript. If the manuscript is not submitted by the end of the second last week of classes in the fourth semester, the student must sit the regular specialty component of the qualifying exam before the end of the fourth semester.

9. The student is encouraged to present the work on which the manuscript is based at the department's annual graduate student symposium.

10. Each committee member will decide on a pass/fail grade based on the total performance (written plus oral). Conditional passes may not be awarded. For the student to pass the examination, 3 of the 4 examiners must vote a grade of pass. An oral and written summary of the committee's evaluation must be prepared by the chair of the examination committee and given to the student and to GAAC. If the student does not pass the examination, there will be a chance to retake it the following semester. In the case of failure a second time, the student will be terminated from the program.

11. At time of completion of the oral examination the examination committee must provide the Graduate Director with a completed SACS evaluation form, the student is responsible for ensuring the Graduate Director receives this form.

3. Research proposal: public presentation of a research proposal and defense of a written research proposal to the complete research committee (see below) should be completed by the middle of the fourth semester. Students are encouraged to follow the format of a grant proposal to a major funding agency. At the proposal defense, the student will receive either a pass or a fail. A grade of pass will be recorded if no more than one member of the complete research committee (see below) votes to fail the student. If the student fails the proposal defense, she/he will be given a second chance to defend no later than the sixth week of the fifth semester. If the defense is failed a second time, the student will be terminated from the program. At time of completion of the proposal defense the complete research committee must provide the Graduate Director with a completed SACS evaluation form, the student is responsible for ensuring the Graduate Director receives this form.
4. Admission to candidacy: (application is made on a form available in the grad school and in the department). This normally will occur at the end of the fourth semester. Requirements are to pass the comprehensive examination and to successfully defend a written research proposal and to have complete SACS evaluation forms from both the qualifying exam and the proposal defense on file. No student may receive the degree in the same semester in which the defense of the dissertation is conducted.

5. Teaching: All students on the Ph.D. track in Biology are required to serve satisfactorily at least one semester as a teaching assistant in one of the courses offered as part of the Department’s training program.

6. Grants: Submission of a grant proposal to a major funding agency (e.g., NSF, NIH, National Geographic, World Wildlife Fund, etc.) is required. All students are required to seek outside funding for their research. This must be a research project proposal. Application for an NSF pre-doctoral fellowship does not meet this requirement, but application for an NSF dissertation improvement grant does qualify.

7. Ph.D. Dissertation: A well-written and successfully defended dissertation containing an original contribution to the field and of quality appropriate for publication in a scientific journal; a defense is successful if all members of the committee sign the graduate school form and the signature page of the dissertation. A final, acceptable typescript of the dissertation must be in the hands of the committee a minimum of two weeks prior to the defense. If this deadline is not met, the defense must be rescheduled. A public dissertation seminar also is presented at the time of the defense. Following the defense the committee is required to provide the Graduate Director with a completed SACS evaluation form.

8. Other requirements described under 'Doctor of Philosophy,' including but not limited to:
   - a total of at least 60 credit hours (course credit hours plus research credit hours).
   - once a student has completed all required credit hours, she/he must enroll in 'Research in Residence' (BIL 850) status until the degree is granted. This course carries 1 credit hour, but is considered full-time enrollment. Even though no credit is earned, a tuition charge equivalent to 1 course credit hours normally applies to this course.

9. Committee: A single committee will advise the student on both comprehensive and research training. The committee will be responsible for ensuring breadth, significant background and depth in at least 3 conceptual areas (examples include but are not limited to the areas listed above). The research function of the committee is to advise the student on research, including preparation, training, project choice, project design, implementation and evaluation of the research. The committee will go through several phases and its membership will be determined by the advisor and student together, contingent upon approval of GAAC and/or the Graduate School, as appropriate at each phase:
   - The initial committee will consist of at least 4 faculty. 2 appointed to ensure breadth of training (from two areas outside the research area) and 2 from the research area. It will be formed to help the student choose courses during the first few weeks of the first semester. This committee will decide whether students having a M.S. in biology (botany, zoology, etc.) from another institution can substitute a graduate level course taken elsewhere for a departmental course requirement; it also will decide which additional courses should be taken for both research and breadth. The choice of areas briefly will be outlined in a memo to GAAC.
   - The initial committee of at least 4 faculty will be responsible for preparing and administering the comprehensive examination.
   - The complete committee of at least 4 faculty including one from outside the department, should be formed by the end of the third semester; all four members should participate in the proposal evaluation which will take place in the fourth semester. The committee will consist of a minimum of four faculty, which includes the committee chair, who must be a member of the Graduate Faculty. Of the remaining members, it is also required that two shall be from the Graduate Faculty.
   - The dissertation committee (of four) is formed officially when the student is admitted to candidacy. It usually will comprise the same individuals as the complete research committee, or it may be formed anew. The student and advisor consult on the membership of the committee, and the department nominates the committee to the graduate school. The committee will consist of a minimum of four faculty, which includes the committee chair who is the advisor, who must be a member of the Graduate Faculty. Of the remaining members, it also is required that two shall be from the Graduate Faculty and one from outside the department of concentration. The dissertation committee is nominated by the department, but it must be approved and appointed by the Dean of the Graduate School. There is a special form that must be filed with the graduate school.
   - Committee meetings are required at least once a year (recommended at least once a semester in the early phases). The student is responsible for arranging meetings; the student should consult with the committee about any major changes in research goals and any problems; memos summarizing each meeting should be in the student’s file.

10. About the time table:
   - The written comprehensive qualifying examination must be passed by the end of the third semester.
   - A polished, written dissertation proposal must be defended to the committee in the fourth semester together with a public presentation of the proposal. This must take place by mid-April of the spring semester or mid-November of the fall semester.
   - Admission to candidacy normally occurs after the comprehensive qualifying exam and proposal defense are passed upon the recommendation of the committee and the approval of the Graduate School. Application for admission to candidacy is made to the graduate school on a special form.
   - Analysis of data and a polished draft of the dissertation should be completed and in the hands of the dissertation committee no later than the middle of the tenth semester.
   - Defense of the dissertation and its submission to the Graduate School must meet or precede the deadline for graduation immediately following the tenth semester unless an extension has been approved by GAAC upon recommendation of the dissertation committee. Notice of the defense and of the public seminar must be submitted on a special form to the graduate school in advance of the defense and must be posted publicly in the department.
   - The oral defense of the dissertation must be given during regular sessions of the Fall or Spring semesters, not during summer sessions, intersessions, reading days or finals weeks.
   - No student may receive the degree in the same semester in which she/he is admitted to candidacy.
• The indicated dates form firm deadlines. A student’s committee, however, may submit a written petition to GAAC for an extension of time detailing reasons for the request. An extension will be granted only under extraordinary circumstances and will be effective upon written approval by GAAC.

• Proposals to change the schedule for any reason should be preceded by a study of the graduate bulletin sections on leaves of absence, full time student status and recency of credit hour, and explicitly should address how the proposed change of schedule relates to these matters. The memo requesting the change also should address the proposed financial support of the student beyond the 10 semesters of normal departmental support.

11. Public presentations must be during regular semesters. The public presentation associated with the defense of the proposal and the public seminar associated with the defense of the dissertation must be given during regular sessions of Fall or Spring semesters, not during summer sessions, inter-sessions, reading days, or finals weeks.

12. Completed SACS evaluation forms are required at three points during the course of study. One following the qualifying exam, one following the proposal defense and the final following defense of the dissertation. The student is responsible for providing blank forms to the committee at each milestone. The graduate advisor is responsible for forwarding completed forms to the Graduate Director. The student is responsible for ensuring the Graduate Director receives these forms.

Mission
The purpose of the Biology Doctoral Program is to engender the research, teaching and presentation skills that are central to professional biological careers in academia, government and private organizations.

Goals
Student Learning Outcomes

• Students will demonstrate a deep knowledge of a Biological area, and the research skills required to make an original scientific contribution.

• Students will demonstrate the ability to teach Biology to University of Miami undergraduates.

• Students will demonstrate appropriate level of writing skills for communicating their research in professional settings.

Chemistry
chemistry.as.miami.edu

Dept. Code: CHM

Degree Programs
Prospective graduate students are expected to have completed, during their undergraduate training:

The candidate must hold a B.S./B.A. degree from an accredited institution. Consideration is given to applicants who have successfully completed general chemistry (two semesters), organic chemistry (two semesters), physical chemistry (two semesters), and the related laboratories. A course in advanced inorganic chemistry is strongly recommended, and remedial work in this area may be required of students who have not taken such a course. The mathematics and physics courses that are normally included in a B.S. program in chemistry are also required.

Undergraduate deficiencies are treated as such and must be overcome during the first year of graduate study.

Masters Program in Chemistry
• M.S. in Chemistry (p. 672)

Doctoral Program in Chemistry
• Ph.D. in Chemistry (p. 672)

M.S. in Chemistry

Students must take 18 credits of formal lecture courses by the end of the spring semester of their first year. Of the 18 credit hours, 4 core courses totaling 12 credit hours should be taken by all graduate students.

Ph.D. in Chemistry
Curriculum Requirements

The general requirements for the doctorate in Chemistry are set forth in this Bulletin under the heading Doctor of Philosophy. The Department of Chemistry has the following specific requirements:

The PhD degree requires a minimum of 60 credit hours. The department will cover tuition costs up to 60 credit hours for students on assistantships and fellowships.

Students must take 18 credits of formal lecture courses by the end of the spring semester of their first year. Of the 18 credit hours, 4 core courses totaling 12 credit hours should be taken by all graduate students.

### Mission

As one of the core sciences, Chemistry has always been of the utmost importance in inventing new technology and ensuring that our nation remains at the forefront of scientific advances in energy, medicine, agriculture, environmental issues, and nanotechnology. The Ph.D. program at the University of Miami is committed to interdisciplinary interactions with research partners in all scientific and technological areas, thereby enriching the educational opportunities of the graduate students in the Department of Chemistry. We strive to deliver a high quality classroom-based instructional experience to provide our students with a broad knowledge base in the field, and, at the same time, allow for specialization in select topics to advance student understanding. By combining this instructional effort with a cutting-edge research program, our mission is to provide chemistry graduate students with a modern educational experience for future careers in all areas of the field, including academic, governmental, and industrial positions.

### Goals

#### Student Learning Outcomes

- Graduates will be able to demonstrate a broad understanding of chemical principles in all areas of the science.
- Graduates will be able to demonstrate a significant understanding of chemical instrumentation analysis methods, and laboratory techniques.
- Graduates will exhibit advanced critical thinking skills and problem solving strategies as applied to chemical research.
- Graduates will exhibit advanced creative thinking skills and ability to design their own projects as applied to chemical research.
- Graduates will be able to clearly and effectively communicate scientific results.
- Graduates will be able to clearly and effectively communicate scientific results, and demonstrate mastery in the area they are specializing in.

### Computer Science

csc.as.miami.edu

Dept. Code: CSC
Introduction
The Department of Computer Science offers undergraduate and graduate education in Computer Science, and performs research in various areas of Computer Science. The Department has faculty with strong accomplishments in the fields of algorithm engineering, automated reasoning, bioinformatics, computational complexity, computational geometry & computer graphics, cryptography & network security, data mining, data science, molecular computation, multimedia systems, music information retrieval, robotics, scientific computing, scientific visualization, semantic web, and wireless & mobile computing.

Degree Programs
The Department of Computer Science offers
- a Master of Science (MS) in Computer Science
- a Doctor of Philosophy (PhD) in Computer Science

Note
All Computer Science graduate TAs and RAs must complete RCR training during their first semester in the department. All other Computer Science graduate students must complete Responsible Conduct of Research (RCR) training before starting research work. Information about RCR training can be found from UM ethics programs: http://www.miami.edu/index.php/ethics/projects/rcr/ (https://ethics.miami.edu/disciplines/research-ethics/responsible-conduct-of-research/).

Masters Programs in Computer Science
- M.S. in Computer Science (p. 674)
- Five-Year B.S. and M.S. in Computer Science (p. 674)

Doctoral Program in Computer Science
- Ph.D. in Computer Science (p. 675)

B.S./M.S. in Computer Science Five-Year
The 5-year Bachelor of Science + Master of Science program in Computer Science provides research training for students who wish to work in a computing research lab, or possibly continue to PhD studies. This program is open only to currently enrolled Computer Science undergraduates. Students must complete the requirements for a Bachelor of Science in Computer Science (p. 128), and the requirements for a 30 credit hour Master of Science in Computer Science with thesis (p. 674). No credits may be counted towards both requirements.

Students enter the ‘MS-phase’ of the program when they have met the following requirements:
- They have achieved senior status, i.e., earned 89 credit hours towards their Bachelor of Science in Computer Science.
- Within the requirements for a Bachelor of Science in Computer Science, they have completed the prerequisites for entry into the regular Master of Science program, i.e.:

<table>

</tbody>
</table>

- They have completed 3 credit hours of CSC 410 and/or CSC 411 in a research-oriented project.
- They have an overall GPA of at least 3.0.
- They have a GPA of at least 3.3 in the CSC courses taken towards their BS in Computer Science.
- They have advised the Director of Graduate Studies of their eligibility for the MS-phase.
- Students in the MS-phase must complete 3 further credit hours of CSC 410 and/or CSC 411 in a research-oriented project, as part of their Bachelor of Science in Computer Science (this project will normally be the starting point for the Master of Science research). Students in the MS-phase may take up to 12 credits of courses that count towards completing the requirements for the Master of Science in Computer Science. When students have completed the requirements for a Bachelor of Science in Computer Science they will be awarded that degree, and when they have completed the requirements for the Master of Science in Computer Science they will be awarded that degree.
- Incoming students can be admitted to the program if their mathematics placement is MTH 108 or higher. Existing Bachelor of Science in Computer Science students can switch into the program when they have met the requirements for entering the MS-phase of the program. Students can be removed from the program if they have not met the prerequisites for admission to the MS-phase by the time they have achieved senior status. If a student is removed or decides to withdraw from the program, any CSC6XX level courses taken may be used to fulfill the requirements for a Bachelor of Science in Computer Science.

M.S. in Computer Science
The Master of Science program in Computer Science is overseen by the Computer Science Graduate Committee (CSCG). The basic guidelines for approval of a student’s program are recommendations appearing in the Communications of the Association for Computing Machinery (ACM), the professional society in Computer Science.

Prerequisites for Admission
Completion of the following courses, or their equivalents, is prerequisite to entry into the program:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSC 120</td>

</tr>
</tbody>
</table>

¹ For both options, at least 18 credit hours must be from CSC 6XX and CSC 7XX courses, and may not include more than 6 credit hours from CSC 670.

Each program must include both theoretical and experimental topics. By graduation students will have knowledge in the areas of Programming Languages, Algorithm Design and Analysis, Theory of Computing, Operating Systems, Computer Networks, and Software Engineering. Each program is approved by the CSGC and the Department Chairman or designate. Programs may be individually tailored to meet varied backgrounds and objectives. It is recognized that there are individuals with undergraduate degrees in other fields wishing to pursue graduate work in Computer Science, and individuals with work experience in the field wishing to advance their formal training in Computer Science.

All Computer Science graduate TAs and RAs must complete Responsible Conduct of Research (RCR) training during their first semester in the department. All other Computer Science graduate students must complete RCR training before starting research work. Information about RCR training can be found from UM ethics programs: http://www.miami.edu/index.php/ethics/projects/rcr/ (https://ethics.miami.edu/disciplines/research-ethics/responsible-conduct-of-research/).

Mission
The Department’s mission is to educate and perform scholarly activities in Computer Science.

Goals

Student Learning Outcomes
- Student has adequate knowledge of 1) hardware and software systems and 2) design and implementation procedures for software systems.
- Student has foundation of theoretical computer science including discrete mathematics, automata and language theory, design and analysis of algorithms, computational complexity, and correctness of programs.
- Student has understanding and knowledge of the state-of-the-art hardware and software applications in one or more research area and has identified one or more open and interesting problems that computer scientists are currently addressing.
- Student has applied knowledge of computer science theories and software development methodologies to solve an original research topic. The student has written a Ph.D. dissertation and presented to his dissertation committee.

Ph.D. in Computer Science
The Doctor of Philosophy program in Computer Science is overseen by the Computer Science Graduate Committee (CSGC). The basic guidelines for approval of a student’s program are recommendations appearing in the Communications of the Association for Computing Machinery (ACM), the professional society in Computer Science.

Prerequisites for Admission
Completion of the following courses, or their equivalents, is prerequisite to entry into the program:

</tr>
<tr>
<td>Total Credit Hours</td>
<td>27</td>
<td></td>
</tr>
</tbody>
</table>

Students may be admitted with deficiencies, normally a maximum of 6 credits. These must be completed in addition to the degree requirements.

Requirements for Graduation
Students must complete the Graduate School requirements (p. 57), and the Departmental requirements described here.

Credits
For graduation students must complete at least 60 credits (as required by the Graduate School), including at least 24 classroom course credits (see below), at least 9 pre-candidacy credits (CSC830), and at least 9 post-candidacy credits (CSC840).
Written Qualifying Exam

The student must pass a three-hour written exam of general knowledge of Computer Science at the end of the first year. Upon failure, the student may petition the CSGC to allow a second attempt at the end of the second year. The exam will be administered once a year in the early weeks of the summer session. It will cover expected knowledge of all first-year graduate students. Included in this material are a fundamental understanding of algorithm analysis and design, advanced skills in programming, basic knowledge of computer architecture, and a general understanding of computer systems.

Classroom Courses

By the end of the first two years, the student must have completed at least eight classroom courses, for a total of at least 24 credits. At least four of these courses (12 credit hours) must be CSC7XX courses. The student must work with the Director of Graduate Studies to select approved courses. Maximally 12 credits from prior study may be pre-approved by the Director of Graduate Studies for transfer after completion of an equivalent number of credits at the University of Miami.

Selecting an Advisor

By the end of the second semester, the student must find a research supervisor. By the end of the third semester, the student must have made significant progress on a research project under the supervision of a faculty member. The student must write a detailed progress report that will become a public document and shall be kept on file by the Department. The student must present the report to a quorum of the CSGC at a time to be approved by the chairman of the Department. The supervisor and CSGC must approve the project as applicable toward candidacy for a Ph.D.

Annual Presentations

After passing the written qualifying exam, the student must make a public oral presentation to the Department at least once per year. These presentations include the thesis proposal and the thesis defense. The goals are to develop the student's oral and presentation skills, to provide a means for the Department to check the research and progress of the student, and to present the opportunity for feedback to improve the student's research.

Teaching Experience

Each student must teach a lab-based course for a minimum of one semester. Lab-based courses typically require the student to present material in a relaxed lecture format, re-emphasizing material learned in the general lecture as well as introducing new material to the students.

Responsible Conduct of Research Training

All Computer Science graduate TAs and RAs must complete Responsible Conduct of Research (RCR) training during their first semester in the department. All other Computer Science graduate students must complete RCR training before starting research work. Information about RCR training can be found from UM ethics programs: http://www.miami.edu/index.php/ethics/projects/rcr/

Mission

The Department’s mission is to educate and perform scholarly activities in Computer Science.

Goals

Student Learning Outcomes

- Student has adequate knowledge of 1) hardware and software systems and 2) design and implementation procedures for software systems.
- Student has foundation of theoretical computer science including discrete mathematics, automata and language theory, design and analysis of algorithms, computational complexity, and correctness of programs.
- Student has understanding and knowledge of the state-of-the-art hardware and software applications in one or more research area and has identified one or more open and interesting problems that computer scientists are currently addressing.
- Student has applied knowledge of computer science theories and software development methodologies to solve an original research topic. The student has written a Ph.D. dissertation and presented to his dissertation committee.
- Student has received national and international recognition for presentation and publication of original research results.

Criminology

sociology.as.miami.edu

The Department of Sociology offers a Master's of Science degree in Criminology and Criminal Justice. The program provides training in fundamentals of the criminal justice system and criminological theory, as well as foundational training in research methods and statistics. Students may tailor their programs to best fit their goals through their selected electives, curricula tracks, and choice of one of three completion options. At present, curricula tracks (comprised of six credit hours) include such areas as leaderships and management, criminal law, research methods and statistics, and geographic information systems (GIS). Students have the program completion options of preparing for and taking a comprehensive examination, completing an internship and accompanying paper, or completing a Master's thesis.

For more information, please see our website: http://www.as.miami.edu/sociology/graduate-programs/mscriminology/.

Admission Requirements

Students are evaluated for admission based on a holistic assessment of the following requirements. Students must submit:

1. A statement of purpose.
   a. In this personal statement applicants detail their reasons for pursuing the degree, both in general and in our program specifically. The statement will help evaluate applicants’ writing abilities as well as fit with our program.
2. Transcripts from all academic institutions attended.
   a. Official transcripts from all academic institutions attended must be submitted. Transcripts should show that students attained a minimum of 3.0 in the last 60 credits of upper division undergraduate coursework and/or 3.0 in graduate coursework. Applicants with lower averages may be admitted to the Certificate program.
3. Letters of recommendation.
   a. At least three letters of recommendation must be submitted. These should be positive and strongly indicate that the applicant
has the aptitude and stamina necessary to successfully complete a graduate degree.

4. GRE scores.
   a. A minimum GRE score of 950 (or a combined 294 on the revised Test) is necessary for admission to the M.S. program. Applicants with lower scores may be admitted to the Certificate program. The GRE requirement may be waived for applicants based on a) Five or more years of relevant professional experience or b) Prior degree in related field/area

**Academic Standing**

Graduate students are expected to maintain a minimum of a 3.0 overall GPA in all coursework. Should the average fall below that minimum in a semester, the student will be notified and will work with his/her advisor to rectify the performance issues. If the student has a second consecutive semester with an average overall GPA below 3.0, he/she will be placed on academic probation. Three semesters of below average performance may result in suspension from the program in accordance with guidelines for the University's Graduate School.

**Masters Program in Criminology and Criminal Justice**

M.S. in Criminology and Criminal Justice (p. 678)

**Certificate in Criminology and Criminal Justice**

Certificate in Criminology and Criminal Justice (p. 677)

**Certificate in Criminology and Criminal Justice**

The Department of Sociology offers a Graduate Certificate in Criminology and Criminal Justice. The program provides training in fundamentals of the criminal justice system and criminological theory, as well as foundational training in research methods and statistics. The Certificate is designed for students who wish to augment their training in criminology and criminal justice as well as for those students seeking to enter the M.S. program in Criminology and Criminal Justice but who may not meet all program requirements. Students earn the Certificate by successfully completing the five required courses.

Please see our website for more information: [http://www.as.miami.edu/sociology/graduate-programs/mscriminology/](http://www.as.miami.edu/sociology/graduate-programs/mscriminology/).

**Admission Requirements**

Students are evaluated for admission based on a holistic assessment of the following requirements. Students must submit:

1. A statement of purpose
   a. In this personal statement, applicants detail their reasons for pursuing the degree, both in general and in our program specifically. The statement will help evaluate applicants' writing abilities as well as fit with our program.

2. Transcripts from all academic institutions attended
   a. Official transcripts from all academic institutions attended must be submitted. Transcripts should show that students attained a minimum of 3.0 in the last 60 credits of upper division undergraduate coursework and/or 3.0 in graduate coursework. Applicants with lower averages may be admitted.

3. Letters of recommendation from at least three references familiar with the individual’s scholastic and/or work performance
   a. At least three letters of recommendation must be submitted. These should be positive and strongly indicate that the applicant has the aptitude and stamina necessary to successfully complete a graduate degree.

4. GRE scores
   a. A minimum GRE score of 950 (or a combined 294 on the revised Test) is necessary for admission to the M.S. program. Applicants with lower scores may be admitted to the Certificate program. The GRE requirement may be waived for applicants based on a) Five or more years of relevant professional experience or b) Prior degree in related field/area.

**Mission**

The Graduate Certificate in Criminology and Criminal Justice program aims to address issues related to crime and its control in the United States. For those working in or seeking to work in criminal-justice related positions, higher levels of education are increasingly required for employment and/or advancement in many professions and jobs. The 15 credit hour program is designed to provide students with a foundation in criminal justice and criminological theory, connections between theory and policy, and in research methods and statistics.

**Goals**

The program objectives of the Graduate Certificate program in Criminology and Criminal Justice are to:

- Provide a Graduate Certificate for those currently or intending to work in research or applied settings in criminal justice agencies or community college teaching. It also provides an opportunity for interested students to explore potential further education in a Master's program.
- Provide training in criminology and criminal justice, enabling a strong and integrated knowledge of research and practice. This will enable

Student Learning Outcomes

• Students will demonstrate advanced knowledge of classic and contemporary criminological theory.
• Certificate earners will demonstrate proficiency in written and oral communication.
• Certificate earners will have a thorough knowledge of the fundamentals of research in the social sciences and be able to synthesize and apply them in written form.

Academic Standing

Graduate students are expected to maintain a minimum of a 3.0 overall GPA in all coursework. Should the average fall below that minimum in a semester, the student will be notified and will work with his/her advisor to rectify the performance issues. Completion Track

Choose one of the following tracks:
**Mission**

The Master of Science in Criminology and Criminal Justice program aims to address issues related to crime and its control in the United States. For those working in or seeking to work in criminal-justice related positions, higher levels of education are increasingly required for employment and/or advancement in many professions and jobs. The program is designed to provide students with a foundation in criminal justice and criminological theory, research methods and statistics, and substantive areas.

**Goals**

The program objectives of the proposed new Master’s program in Criminology and Criminal Justice are to:

- Provide a terminal Master’s degree for those currently or intending to work in research or applied settings in criminal justice agencies or community college teaching. It also provides an opportunity for interested students to explore potential further education in a doctoral program.
- Provide interdisciplinary training in criminology and criminal justice, enabling a strong and integrated knowledge of research and practice. This will enable greater understanding of both the etiology and prevention of crime as well as to better inform criminal justice policy.
- Provide a comprehensive understanding of the complexities of criminal behavior, its control, and of the criminal justice system.
- Provide the research and conceptual skills required to conduct advanced analyses and assessments of the criminal justice system.

**Student Learning Outcomes**

- Students will demonstrate advanced knowledge of classic and contemporary criminological theory.
- Graduates will have a thorough knowledge of the discipline and the theoretical foundations of the literature and be able to synthesize and apply them in well-written form.
- Graduates will have a thorough knowledge of the fundamentals of research in the social sciences and be able to synthesize and apply them in written form.

**English**

english.as.miami.edu

Dept. Code: ENG

**Degree Programs**

The Ph.D. program in English (p. 680) is an innovative scholarly course of study offering substantial work in literatures in English, including British, American, Caribbean, Irish, and other Anglophone literature, with some opportunities for advanced work in comparative literature.

The M.F.A. program in Creative Writing (p. 679) located in the English Department offers an intensive two year study with a third year option in the reading, writing and teaching of creative writing.

**Master of Fine Arts**

- M.F.A. in Creative Writing (p. 679)

**Doctoral Program in English**

- Ph.D. in English (p. 680)

**M.F.A. in Creative Writing**

http://www.as.miami.edu/english/creativewriting/

**Master of Fine Arts in Fiction and Poetry**

The University of Miami’s MFA Program in Creative Writing offers a fully funded, two-year course of study in the writing of poetry, fiction, or cross-genre literature while providing substantial training in the teaching of creative writing and composition. Students may apply to receive a third year of funding, during which graduate students focus on professional development and publication as they continue to teach undergraduate writing courses. The program features a broad multilingual focus in a vibrant, multicultural city unlike any other. Enrollment is kept deliberately small to maximize student-teacher interaction, and faculty at UM are supportive of the linguistic and cultural differences that writers bring to their art.

**Full Funding**

The James Michener Fellowships and Teaching Assistantships support all our graduate students. Awards include a full tuition waiver and an annual stipend. MFA candidates teach one section of Introduction to Creative Writing per semester during their second year in the program or one section each of Creative Writing and Composition.

**The Third Year**

Students who proceed into a third year will teach Creative Writing and Composition, with additional professional development options in literary magazine editing and communications/public outreach. They will receive faculty mentorship towards professional development. Graduates of the MFA in Creative Writing have gone on to publish award-winning novels, books of poetry, and creative nonfiction; have been awarded Stegner Fellowships and other residencies; and have gone on to find employment in teaching and publishing.

**Mission**

The MFA in Creative Writing Program provides its students with a thorough understanding of how to write publishable novels, collections of stories, and books of poetry in order to contribute to the global literary canon; a range of critical and craft-based strategies in order to attain their creative and artistic vision; the skills needed to establish their own expertise, voice and style within the literary genre of their choice; the necessary preparation for careers in the production of contemporary literatures and arts administration within and outside of the academy; and training to teaching in two- and four-year colleges and in research universities. In addition to guiding our students in the writing and revision of their creative theses, we work to assist them in publishing their books, developing a forum for the reading of these works, and obtaining appropriate employment.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate a thorough understanding of how to write publishable novels, collections of short stories and books of poetry in order to contribute to the global literary cannon.
- Students will master a range of critical and craft-based strategies in order to attain their creative and artistic vision and demonstrating the skills needed to establish their own expertise, voice and style within the literary genre of their choice by submitting a final portfolio and by participating in the Closing Conversation.
- Students will cultivate the necessary skills for careers in the production of contemporary literatures and arts administration.

**Ph.D. in English**

http://www.as.miami.edu/english

**Curriculum Requirements**

1. **Courses**

   Ph.D. students must complete 54 credit hours (if entering with a B.A.) or 36 credit hours (if entering with an M.A.) of 600-level courses in literature and literary theory.

2. **Language Requirements**

   A basic reading knowledge of two foreign languages or an advanced reading knowledge of one foreign language is required.

3. **Qualifying Examination**

   All Ph.D. students are required to pass a qualifying examination. Students may not take the qualifying examination until they have:
   - completed the required Ph.D. coursework,
   - satisfied the foreign language requirement
   - enrolled for ENG 697.

4. **Dissertation**

   Students may proceed with the dissertation after the dissertation committee has been appointed and the dissertation proposal has been accepted by the committee and approved by the department. The dissertation itself must be an investigation of a substantial critical or scholarly topic. A final oral defense of the dissertation is required.

   Further information on the department’s graduate programs is contained in the Guide to Graduate Study available from the Department of English and posted on the department Web site in the Graduate section.

   Students must complete their work within one year of the schedule set out in the Guide to Graduate Study.

**Doctoral Concentration in Early Modern Studies**
PhD students in English pursuing the doctoral concentration in Early Modern Studies must take as part of their required course credit hours a minimum of four Early Modern-focused courses (12 credit hours). A minimum of two Early Modern-focused courses (6 credits) must be in English and a minimum of two Early Modern-focused courses (6 credits) must be in History and/or Modern Languages and Literatures.

**Doctoral Concentration in Caribbean Studies (pending approval of the Board of Trustees)**

PhD students in English pursuing the doctoral concentration in Caribbean Studies must take as part of their required course credit hours a minimum of four Caribbean-focused courses (12 credit hours) as shown below:

A minimum of two courses (6 credits) selected from the following:

- ENG 658: Studies in Transatlantic Literature
- ENG 665: Studies in African American Literature
- ENG 666: Caribbean Literature
- ENG 667: Caribbean Popular Culture
- ENG 668: Studies in Race and Diasporic Literatures
- ENG 686: Theories of Gender and Sexuality
- ENG 687: Studies in Literature and Culture since 1950
- ENG 688: Studies in Latino/a Literatures and Cultures
- ENG 689: Comparative Americas Studies

A minimum of two courses (6 credits) selected from the following:

- FRE 775: Topics in Francophone Studies
- HIS 602: Africa and the African Diaspora
- HIS 602: Africa in Cuba / Cuba in Africa
- HIS 652: Race in Latin America
- HIS 652: Travels through Latin America
- HIS 654: Afro-Caribbean Religion: Healing and Power
- HIS 654: Haiti in History
- HIS 654: Caribbean Intellectual History and Social Movements
- HIS 662: Slavery and Capitalism
- HIS 669: Black Protest Thought
- HIS 669: Rethinking African-American Culture
- HIS 669: History of Global Slavery
- HIS 708: Slavery in the Atlantic World
- HIS 708: Atlantic Histories
- HIS 716: Caribbean Field Prep
- MLL 702: Bilingualism
- MLL 703: Topics in Critical Studies of Language
- MLL 721: Atlantic Crossings: Literature and Immigration in the Age of Globalization
- MLL 727: Topics in Caribbean Studies
- SPA 733: Topics in Colonial Literature
- SPA 735: Topics in 19th Century Latin American and Caribbean Literature
- SPA 736: Topics in 20th Century Latin American and Caribbean Literature

Or other courses with advisor or DGS approval.

**Mission**

The Department of English works to provide its students with a thorough understanding of literatures written in English; to introduce them to a range of critical and theoretical methodologies; to provide them with the skills needed to establish their own scholarly expertise within an area of specialization; to prepare them for careers in scholarship and research within the academy; to train them for teaching in two- and four-year colleges and in research universities; where appropriate, to transfer and develop those research, communication, and presentation skills to non-academic settings; and to assist them in obtaining appropriate employment inside or outside higher education.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate knowledge of literatures written in English and master methods of literary and cultural analysis.
- Students will develop a capacity for professional development, enabling the graduate to contribute to a profession or field of study.
- Students will demonstrate excellence in teaching undergraduate writing and literature courses.

**Mission**

The Department of Geography works to provide its students with a thorough understanding of literatures written in English; to introduce them to a range of critical and theoretical methodologies; to provide them with the skills needed to establish their own scholarly expertise within an area of specialization; to prepare them for careers in scholarship and research within the academy; to train them for teaching in two- and four-year colleges and in research universities; where appropriate, to transfer and develop those research, communication, and presentation skills to non-academic settings; and to assist them in obtaining appropriate employment inside or outside higher education.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate knowledge of literatures written in English and master methods of literary and cultural analysis.
- Students will develop a capacity for professional development, enabling the graduate to contribute to a profession or field of study.
- Students will demonstrate excellence in teaching undergraduate writing and literature courses.

**Mission**

The Department of Geography and Regional Studies, has a long and distinguished history of excellent scholarship, is proud to continue its mission of education, research, and service to the community and the world about the importance of geographic knowledge. Our vibrant and diverse department is organized around three major core areas of specialization: Urbanization, Cities and Sustainability; Space, Conservation and Environment; and Public Health, Illness, and Disease. The program builds upon our strengths in urban geography, environmental studies, and medical geography along with gaining skills in methodology, including GIS, remote sensing, and statistics. For the past five years, the Department of Geography’s urban studies program has consistently ranked as one of the nation’s top 5% urban programs for its quality of research and instruction, based on data from Academic Analytics.
Degree Programs
The Department of Geography and Regional Studies at UM is home to one Geography graduate program: Master’s (MA), and a Graduate Certificate in Geospatial Technology. Each graduate student selects one of the department’s core program areas as a concentration for research and fieldwork, and works closely with a particular faculty adviser.

Areas of Specialization
Urbanization, Cities and Sustainability
This program examines the dramatic growth in the size, number, and population of global cities. Areas of emphasis include: Smart Cities; Global Urbanization and Infrastructure; Sustainable Development; African Urbanism; Urban Spatial Restructuring, Development Geography, Urban Health and Well-Being; Social Justice, and Ethnicity.

Conservation and Environment
This program builds upon the foundations of human geography as an integrated social science to examine the interplay of socio-spatial processes involved in shaping the complex interrelationships between societies and nature and the built environment. Areas of emphasis include: Climate Change, Biogeography, and Systematic Conservation Planning.

Public Health, Illness, and Disease
This program examines and responds to both challenges and opportunities to improve population health within and across populations and cities and metropolitan areas. Areas of emphasis include Health Disparities, Spatial Epidemiology, Community and Culturally Responsive Research and Mathematical Modeling for Disease Transmission.

Application Procedure & Financial Assistance
Applicants must submit a completed application form, at least two letters of reference, official transcripts from each undergraduate and/or graduate school attended, and an official GRE (Verbal/Quantitative/Analytical) record. The Graduate Admissions Committee evaluates the student’s academic accomplishments and promise as well as the match between the applicant’s professional goals and core faculty expertise. For information about the department in general, as well as the professional activities of individual faculty members, see the Department website. The application procedure may be found on the Applications page.

Transfer of Credit
The university has specific and stringent requirements concerning the transfer of credit. Please see the Graduate College website for Transfer of Credit requirements.

Financial Assistance
Please visit the Financial Support page for details.

Admission requirements and deadlines can be found on the Geography Department’s web page at http://www.as.miami.edu/geography/graduate/ and for the Certificate Program at the Certificate Program webpage at http://www.as.miami.edu/gisc/.

Major
• MA in Geography (p. 683)

Certificate in Geospatial Technology
• Graduate Certificate in Geospatial Technology (p. 682)

Certificate in Geospatial Technology
The Certificate Program in Geospatial Technology (GT) is designed to benefit students who seek to enhance their skills in geospatial technology, especially Geographic Information Systems (GIS) and satellite remote sensing. The Certificate requires a minimum of 15 credit hours, including three core courses and two or more electives. Students may receive credit toward the Certificate for past coursework completed at UM or other accredited schools. All fifteen credits may be double counted toward the M.A. degree, making it possible for a student to complete both the M.A. and the Certificate in two years.

Other approved electives
Total Credit Hours 15

* Note that all courses from the Certificate Program can be double counted toward the MA in Geography Degree.

** Students are encouraged to find a suitable internship experience with the Career Planning and Placement Center or with the GIS Program Director. Upon approval by the GIS Program Director, 3 credit hours may be earned with an internship (GEG 635)

*** For more information e-mail terghazar@miami.edu to make an appointment.

Mission
This graduate certificate program is designed for students who seek to enhance their skills in geospatial technology, especially Geographic Information Systems (GIS) and satellite remote sensing. Students will learn to work with geospatial datasets using industry-standard software including ArcGIS, ERDAS IMAGINE, TerrSet, and SPSS.

Goals
Graduates of the program will improve their employment prospects and/or advance their careers in geospatial technology, particularly in job settings that stress the use of satellite remote sensing and vector-based GIS.

Student Learning Outcomes
* Students will demonstrate skills in the interpretation of geospatial datasets, statistical datasets and remotely sensed imagery, and in the preparation of those datasets for analysis and creation of maps and other products. Students will also demonstrate an understanding of the concepts and applications of geospatial technology, and apply them appropriately to the practice of mapping and digital cartography.

** Students completing the Graduate Geospatial Certificate Program concurrently with the MA degree must complete GEG 692 and use one of the electives for a course that satisfies the Certificate Program requirements.

** Students completing the two-paper option take GEG 625 and GEG 645; Students completing the Thesis Option take GEG 810 and GEG 820.

Mission
The Department of Geography and Regional Studies (GEG) seeks to encourage the rigorous investigation of human-environment interactions and the analysis of spatial patterns and trends related to societal processes. It reaches across disciplines to draw on a range of methods, theories, and perspectives that help us to understand how ideas and structures result from the interaction of space, time, and place. The department's core objective is to foster the examination, open discussion, and lively debate of geographic issues and urban studies among faculty
and students from all fields of study, enriching the undergraduate curriculum and the university’s academic mission through greater communication across disciplines and colleges. Its aim is to broaden, deepen, and transform the learning community at UM and beyond.

**Goals**

Our graduate program (MA) aims to prepare students for positions in teaching, government, non-governmental organizations, private business, urban and regional planning, Geographic Information Systems (GIS), remote sensing (RS), resource management, and environmental analysis. The program focuses on three thematic areas: development studies, environmental analysis, and globalization and urban change. In addition, students can take courses in geospatial technology and learn marketable skills for today’s job market: GIS, digital cartography, satellite remote sensing, land use and land cover analysis, survey research, and spatial statistics. During their studies, our students develop global citizenship, being able to see the global problems by using different lens, and develop skills to work effectively in multi-cultural environments and collaborative settings.

**Student Learning Outcomes**

- Students will have advanced understanding of the concepts and theories in both human and physical geographies and will be able to select and use advanced tools and methods to measure and assess spatial-temporal patterns and processes, the interrelationships between people and places, and the interactions between people and nature.
- Students will integrate and apply advanced concepts and theories in human and physical geographies and apply critical thinking to conduct an original research project.
- Students will demonstrate effective, advanced and original written, cartographic, and oral communication.

**Global Health and Society**

https://global-health.as.miami.edu/

The Master of Arts in Global Health and Society (GHS) provides a comprehensive framework of global health that underscores the sociopolitical, economic, and geographic factors that, in addition to biomedical factors, impact health conditions of various countries and populations throughout the world. The GHS program is 36 credits, and offers a range of interdisciplinary courses that examine the emerging challenges to human health and security, the differential access and adoption of evidence-based health policies and practices, and how these interventions translate from international to community scales. Our students gain the social science knowledge and methodologies to integrate stakeholders and researchers in the design, implementation, interpretation of community-based participatory studies. Additionally, graduates of our program acquire skills in leadership and advocacy, and combined with a deep understanding of policy and governance, are prepared to assist private, government, non-profit, and for-profit organizations formulate new global and community health strategies.

There are three tracks in the GHS program:

- Global Health General
- Policy, Governance and Advocacy
- Community-Based Participatory Research, Monitoring and Evaluation (CBPR)

---

**Master of Arts in Global Health and Society**

**M.A. in Global Health and Society**

**Curriculum Requirements**

There are three tracks in the GHS program. Each track requires 36 graduate credits:

- Global Health General
- Policy, Governance and Advocacy
- Community-Based Participatory Research, Monitoring and Evaluation (CBPR)

**Global Health General Track** – The Global Health General track provides training in both qualitative and quantitative research methods. It also allows students the ability to design their own program of elective courses according their needs. This track is designed for professionals who are already in the health field, who those who desire to enter the health professions, but require substantial social science and epidemiological knowledge and methodologies to complete their education. These students may have strong interest in (or are already working in) developing countries or underserved areas. Substitute courses may be permitted for some coursework that includes tailored research and independent study courses with faculty approval.

**Total Credit Hours** 36

1 EPH 612 is only offered as a winter intersession course, requiring students to attend class from 9am-5pm for one full week.
2 Depending on the student’s choice of Capstone (5 credits) or Thesis (6 credits), the student may be advised to take either 11 or 12 credits of electives, so that their plan of study totals 36 credits.
Students may choose either a Capstone or a Thesis to complete their degree. The 5-credit Capstone is offered through the Department of Public Health Sciences at the Miller School of Medicine and requires 150 hours of fieldwork and a final project. The 6-credit Thesis is offered through the Department of Anthropology at the College of Arts & Sciences and includes an internship, usually completed over the summer, as well as a successfully defended thesis.

**Policy, Governance and Advocacy Track** – This track provides graduate students a comprehensive framework of global health that underscores the sociopolitical, economic, and geographic factors that, in addition to biomedical factors, impact health conditions of various countries and populations throughout the world. It focuses on the global health policies and governance models that are aimed at addressing these challenges. This concentration prepares interested graduate students to understand and critically evaluate global policy frameworks. Students in this track will analyze key issues and controversies in global health policy and delivery (e.g. priority setting, design of health systems, primary health care, equity considerations). Substitute courses may be permitted for some coursework that includes tailored research and independent study courses with faculty approval.

Total Credit Hours: 36

1 EPH 612 is only offered as a winter intersession course, requiring students to attend class from 9am-5pm for one full week.

---

**Community-Based Participatory Research, Monitoring and Evaluation (CBPR) Track** - This track will provide graduate students skills to build partnership and active participation to address critical health issues in communities throughout the world. It provides unique social science skills to integrate community members, local stakeholders, elected officials, and researchers in the design, implementation, interpretation of community-based participatory studies as well as uses of research and evaluation results to develop integrated policies to improve the wellbeing of community members. Community-Based Participatory Research is a methodology that has been widely endorsed by major global health players, including the NIH’s Office of Behavioral and Social Sciences Research. Substitute courses may be permitted for some coursework that includes tailored research and independent study courses with faculty approval.

Total Credit Hours: 36

1 EPH 612 is only offered as a winter intersession course, requiring students to attend class from 9am-5pm for one full week.

---

**History**

history.as.miami.edu

Dept. Code: HIS

Our Department is committed to pursuing excellence in historical and interdisciplinary scholarship, teaching, and service to the profession, the University, and the wider community.

Our fine faculty of some twenty-four professors does research and teaches in many historical areas, often crossing chronological, geographic, and disciplinary boundaries.

Our courses combine innovative subjects and methods with more traditional subjects and presentations. In their classes, students have the opportunity to experience the latest and best historical research and writing, to explore special topics in depth, and to receive rigorous training in researching, analyzing, and writing history from nationally and internationally recognized scholars.

**Master of Arts Program in History**

- M.A. in History (p. 686)

**Doctoral Program in History**

- Ph.D. in History (p. 686)
M.A. in History

We are looking for applicants with a record of outstanding achievement and evidence of potential success in graduate studies, attributes which can be measured in various ways such as grades, recommendations, written work, and test scores. Students with a master's degree from an accredited institution may apply for admission to the doctoral program. Students with a bachelor's degree only and with very strong credentials may be admitted into the doctoral program. Applicants must meet the admissions requirements set by both the graduate school, which are listed in its materials, and the department of history.

Because one of the strengths of our program is a close working relationship between faculty members and students, we cannot always accept qualified applicants when no one in the department can provide the guidance they need in their area of interest. Applicants should explore the listing of faculty on our website and contact the DGS or relevant faculty members if they have any questions.

Application Requirements

1. A completed application form.
2. A completed financial aid application, if seeking aid.
3. Three letters of recommendation, preferably from applicant's former professors.
4. Recent Graduate Record Examination scores on the General Test.
5. TOEFL scores (for international students).
7. A detailed statement from the student indicating:
   a. the student's background and education;
   b. the student's interests (field, topic, etc.);
   c. why the student wants to pursue a graduate degree in history at the University of Miami;
   d. what the student plans to do with the degree upon completion.
   This statement constitutes a very important part of the application review process and should indicate the student's understanding of the professional nature of the training that the student is about to begin.
8. A representative writing sample.

Deadlines

January 5: Applications for admission and aid for Fall semester.

</tbody>
</table>

1. This course is normally given in the fall semester. All students are required to take the Historiography course in their first year. This course counts for 3 of the 30 credits.
2. Typically, students take HIS 701 and HIS 702 in their 2nd and 3rd semesters in the program. The credit hours from these courses are included in the total required.
3. The comprehensive examination for the M.A. degree in history is an oral examination in two fields that will normally not exceed two hours. Although the exam is in two fields, all members of the advisory committee will participate. Students selecting the thesis examination should expect questioning on the thesis as well as their fields during the examination. For such students the comprehensive exam also will act as a thesis defense. For a list of fields, see below.
4. Students may, if they wish, write an M.A. thesis. Students who elect this option should consult with their advisor. Any student writing a thesis should register for 6 credit hours of HIS 810, which count toward the 30 required credit hours.
5. Students must apply for graduation in their penultimate semester (i.e. fall semester for spring semester graduation).

Committee

Upon admission to the master's program in history, the student is assigned a provisional major advisor. An advisory committee of three, including the major advisor and a faculty member representing the student's secondary field, must be formed no later than the student's second semester in the program. There are then two options for completing the masters. One requires 30 credit hours of coursework and an exam. The other requires 24 credit hours of coursework, a master's thesis (6 thesis credit hours), and an exam. In the case of both options, one member of the committee may be from a cognate discipline, but this is not required. It is the responsibility of the student and the advisor to form the committee and to notify the DGS of its composition. The major advisor chairs the advisory committee and oversees the student's course of study and progress in the program. The advisory committee also administers the oral comprehensive exam that is given in the case of either option. In the case of the second (thesis) option, the advisory committee and the thesis committee are usually, but not necessarily, composed of the same faculty members.

Ph.D. in History

With a program and faculty that are recognized regionally, nationally, and internationally, the history department at the University of Miami is dedicated to producing Ph.D.s of the highest quality. Our selective program offers close, individualized training for the next generation of teachers and researchers who will shape and lead the historical profession.

While we have particular strengths in the histories of Latin America and the Caribbean, Europe, and the United States, our faculty shares interests that cut across geographies: gender and sexuality; religion; race and ethnicity; law; and economy, among others. Additionally, we have a strong commitment to interdisciplinarity, as we actively maintain bridges to other departments, programs, and centers at the University of Miami. Our graduate students are encouraged to take advantage of these dynamic scholarly connections as they cultivate their own intellectual pursuits.

Admissions

We are looking for applicants with a record of outstanding academic achievement and evidence of potential success in graduate studies, attributes which can be measured in various ways such as grades, recommendations, written work, and test scores. Students with a master's degree from an accredited institution may apply for admission to the doctoral program. Students with a bachelor's degree only and with very strong credentials may be admitted into the doctoral program. Applicants must
meet the admissions requirements set by both the graduate school, which are listed in its materials, and the department of history.

Because one of the strengths of our program is a close working relationship between faculty members and students, we cannot always accept qualified applicants when no one in the department can provide the guidance they need in their area of interest. Applicants should explore the listing of faculty on our website and contact the DGS or relevant faculty members if they have any questions.

The complete application contains:

1. A completed application form.
2. A completed financial aid application, if seeking aid.
3. Three letters of recommendation, preferably from the applicant’s former professors.
4. Recent Graduate Record Examination scores.
5. For international students, TOEFL scores.
7. A detailed statement from the student indicating:
   a. the student’s background and education;
   b. the student’s interests (field, topic, etc.);
   c. why the student wants to pursue a graduate degree in history at the University of Miami; and
   d. what the student plans to do with the degree upon completion. This statement constitutes a very important part of the application review process and should indicate the student’s understanding of the professional nature of the training that the student is about to begin.
8. A representative writing sample.

Admission from M.A. to Ph.D. Status

Students admitted at the master’s level who are performing well in their studies are encouraged to proceed to Ph.D. status. Advisors who believe that a student should be admitted to the Ph.D. program, and have the consent of the student, inform the DGS of this desire early in the spring semester and at least before the annual departmental meeting reviewing graduate students’ progress. The request is then reviewed by the department at its annual meeting for recommendation to the graduate committee. Students who move from the M.A. to the Ph.D. program are eligible for the same number of years’ aid as students entering the Ph.D. program directly from the B.A., minus the years of aid they have already received. For course requirements, see below.

The required credit hours of coursework are only the formal minimum. Although course work is necessary preparation for the comprehensive examination, students are examined on the mastery of fields of knowledge rather than courses. The number of courses taken depends on the student’s background, choice of fields, nature of related work, language skills, etc. Courses should be selected only after consultation with the Major Advisor.

This course is normally given in the fall semester. All students are required to take the Historiography course in their first year. The credit hours from this course are included in the total required.

Typically, students take HIS 701 and HIS 702 in their 2nd and 3rd semesters in the program. The credit hours from these courses are included in the total required.

Typically, students take HIS 762 in their forth semester in the program. The credit hours from this course are included in the total required.

Typically, students take HIS 772 in their 5th semester in the program. The credit hours from this course are included in the total required.

Students must demonstrate a reading knowledge in at least one foreign language. Reading knowledge in additional languages may be required by the major advisor.

The comprehensive examination for Ph.D. candidates consists of written and oral examinations in three fields. All doctoral students are expected to take their comprehensive exams no later than their 6th semester in the program.

Following the completion of course credit hours, students will need to take sufficient dissertation research credit hours (HIS 830 if before the comprehensive examination has been passed; HIS 840 after passage of the comprehensive examination) to reach a total of 60 credit hours beyond the B.A. in order to receive the doctorate. Graduate School rules require that students take a minimum of 12 dissertation credit hours. Students who enter the Ph.D. program with an M.A. from another university or from another program at the University of Miami receive 30 credit hours towards the 60 credit hour requirement.

For requirements relating to the dissertation, see below.
As indicated, the number of required course credit hours varies depending on the student’s previous graduate work, but all students must reach a total of 60 credit hours beyond the B.A.

Committee
Upon admission to the program, the student is assigned a provisional major advisor. As noted above, students should then concur or select a different advisor by the beginning of the second semester in the program. An advisory committee of four or five, including the major advisor and faculty members representing the second and third fields, must be formed no later than the student’s third semester in the program. It is the responsibility of the student and the advisor to form this committee and notify the DGS of its composition. The major advisor chairs the advisory committee and oversees the student’s course of study and progress in the program. The advisory committee will also administer the oral and written comprehensive examinations. Students may change advisor and other committee members throughout the program provided that the faculty member(s) selected agree(s).

Incompletes
All incompletes from the fall semester must be made up by the official end of the following spring semester. All incompletes from the spring semester must be made up before the official start of the subsequent fall semester. No student will be allowed to proceed to exams until all incompletes have been made up.

Languages Requirement
Reading knowledge of at least one foreign language is required. More than one foreign language may be required if the major advisor deems it necessary.

Comprehensive Examinations
It is the responsibility of the student and major advisor to organize the comprehensive examinations. Students may take them at any time of the year that classes are in session. Arrangements for the exams, including selection of their dates and a final list of committee members, should be made by the end of the first month of the semester in question, with notification to the Department Chair and DGS.

The student takes the written part of the examinations in three history fields, which are normally administered over a period of two successive weeks. The portion for each field is four hours in duration. Only after the advisory committee deems that the student has successfully passed the written portions for each field is the student permitted to take the oral part of the examination.

The oral section covers the three history fields and is approximately two hours in duration. The prospectus may form part of the discussion, but the examination will focus on coverage of the fields. The committee consists of at least three faculty members.

The student advances to candidate status after passing the comprehensive examinations and submitting an acceptable dissertation prospectus.

Students who have not already received a master’s degree from the University of Miami will be awarded an M.A. upon successful completion of their doctoral comprehensive exams.

Dissertation
After passing the examinations, students form a dissertation committee. This may be the original advisory committee, but it may also be revised to meet the needs of the dissertation work. The students, in consultation with the Major Advisor, put forward the names of individuals suggested to serve on the dissertation committee. The committee must be comprised of at least three members within the department and one outside the department. The committee is then approved and appointed by the dean of the graduate school.

The dissertation must make a significant contribution to the candidate’s field of specialization. It must meet the highest standards of research, substance, and form, and demonstrate an ability to conduct and report independent and original scholarly investigation.

The student must apply for graduation in his or her penultimate semester (i.e. fall for spring semester).

Upon completion of the dissertation and its tentative approval by the dissertation committee, the student takes a final oral examination that is a “defense” of the dissertation and that lasts for approximately two hours. It is open to the university community. Following the defense of the dissertation, the dissertation committee will render its decision to accept or reject the dissertation. Approval of the dissertation must be indicated by the signature of all members of the dissertation committee.

Fields
Chronological/Geographical fields:

- Medieval Europe
- Early Modern Europe
- Modern Europe
- Early American History
- Modern U.S. History
- Colonial Latin America
- Modern Latin America
- East Asia
- Russia
- Africa
- Caribbean

Topical Fields. These must cover either two of the geographic or two of the temporal fields listed above:

- African Diaspora
- Race and Ethnicity
- Gender and Sexuality
- History of Religion
- History of Science and Medicine
- History of Crime and Law
- Political History
- Diplomatic History
- Urban and Environmental History
- Economic History
- Business History
- Labor History
- History of Sport
- Military History
Customized Fields:
Students may create their own fields in consultation with their advisory committee. The student opting for this approach must file a plan of study listing relevant courses, the faculty member(s) involved, and the rationale. To pursue the individualized concentration, the student must obtain written approval of the plan by the major advisor, DGS, and the Department Chair.

The plan and signed approvals are placed in the student's file. With rare exceptions, a customized field may not be the major field of study.

Concentrations

**Ph.D. in History with a concentration in Caribbean Studies**

International Administration

maia.miami.edu

The University of Miami's Master of Arts in International Administration Program is a thirty (30) credit interdisciplinary graduate degree designed to prepare students for careers in the administration of public and private organizations. MAIA students learn how to identify, analyze, and manage the complex global problems that confront modern institutions, particularly in areas of security, human rights, and geopolitics. The program combines academic considerations of politics and culture with those of economics and management to provide participants with the skills necessary to pursue a range of career objectives in both domestic and international careers. MAIA students are change-agents, entrepreneurs, and leaders in both government and non-governmental sectors. Our graduates have pursued careers in the realm of non-profits and non-governmental organizations, in the fields of communication, health, emergency management and national security, as well as in the financial and business sectors. The degree is awarded by the College of Arts and Sciences.

A concentration in Security Management is available for students who see additional credentialing in security administration and emergency management strategies.

For additional program information and a complete list of MAIA faculty and staff, please visit us at maia.miami.edu (http://bulletin.miami.edu/graduate-academic-programs/arts-sciences/international-administration/maia.as.miami.edu)

Dual Degree Program: MAIA/MPH

The Master of Arts in International Administration/Master of Public Health (MAIA/MPH) degree is offered jointly by the College of Arts and Sciences and Miller School of Medicine's Department of Public Health Sciences. The MAIA degree, with a second master’s degree in public health, is designed for students who seek knowledge of public health with a broader emphasis in globalization and health, international health policy and international development. Students enrolled in this joint program can expect to complete both degree requirements within two and a half (2.5) years. The dual degree requires sixty (60) credits.

Dual Degree Program: MAIA/MPA

The Master of Arts in International Administration/Master of Public Administration (MAIA/MPA) degree is designed for students who seek an in-depth knowledge of both domestic and international aspects of policy, administration, and leadership. In addition to the professional advantage of studying public administration as part of UM’s highly regarded MPA program, student will benefit from the global pedagogical perspectives of the MAIA program, including coursework on diplomacy, security, sustainability, and culture. Students enrolled in this joint program can expect to complete both degree requirements within two and a half (2.5) years. The dual degree requires sixty (60) credits.

MAIA Graduate Certificate in Security Management

The Certificate in Security Management is designed to prepare administrators of public and private organizations to meet multidimensional security challenges in the post-9/11 world. From threats posed by violent human actions to natural disasters and data security, management in times of acute crisis demands a unique array

11 Students must demonstrate a reading knowledge in at least one foreign language. Reading knowledge in additional languages may be required by the major advisor. For more information on fulfilling language requirements, see below.

12 The comprehensive examination for Ph.D. candidates consists of written and oral examinations in three fields. All doctoral students are expected to take their comprehensive exams no later than their 6th semester in the program.

13 Following the completion of course credit hours, students will need to take sufficient dissertation research credit hours (HIS 830 if before the comprehensive examination has been passed; HIS 840 after passage of the comprehensive examination) to reach a total of 60 credit hours beyond the B.A. in order to receive the doctorate. Graduate School rules require that students take a minimum of 12 dissertation credit hours. Students who enter the Ph.D. program with an M.A. from another university or from another program at the University of Miami receive 30 credit hours towards the 60 credit hour requirement.

15 As indicated, the number of required course credit hours varies depending on the student's previous graduate work, but all students must reach a total of 60 credit hours beyond the B.A.

Early Modern Studies

Graduate Concentration in Early Modern Studies

The Early Modern Studies Concentration is an interdisciplinary concentration to be earned in conjunction with the individual Ph.D. requirements for the departments of English, History, and Modern Languages and Literatures (Romance Studies, Spanish and French). Graduate students will continue to be housed in any one of the three departments and must fulfill the requirements of their discipline for the Ph.D. To qualify for the Concentration, students must successfully complete a minimum of two courses (6 credit hours) in one or both of the other two departments, substituting for courses within their department; and a minimum of two courses (6 credit hours) in early modern studies within their department.

Mission

Goals

The major goals of the Ph.D. in History are 1) to ground students in historical knowledge and scholarship at the most sophisticated level; 2) to provide each with the skills necessary to cultivate an area of specialization and an original research agenda; 3) to train students for teaching at the college/university level; and 4) to prepare graduates to obtain appropriate employment.

Student Learning Outcomes

- Students will grasp historical knowledge and scholarship at the most sophisticated level.
- Students will cultivate an area of specialization and carry out an original research agenda.
- Students will demonstrate the ability to teach at the college/university level.
of insights and skills. The program is be grounded in an academic, theoretical, understanding of security problems and emergency management strategies. It also emphasizes the development of the practitioner's arts within the strategic, tactical and operational realms of security administration. The certificate requires fifteen (15) credits.

### Master of Arts in International Administration

- M.A. in International Administration (p. 691)

### Dual Degree - M.A. in International Administration / Master of Public Health

- MAIA/MPH Dual Degree (p. 693)

### Dual Degree - M.A. in International Administration / Master of Public Administration

- MAIA/MPA Dual Degree (p. 692)

### MAIA Graduate Certificate in Security Management

The Certificate in Security Management is designed to prepare administrators of public and private organizations to meet multidimensional security challenges in the post-9/11 world. From threats posed by violent human actions to natural disasters and data security, management in times of acute crisis demands a unique array of insights and skills. The program is be grounded in an academic, theoretical, understanding of security problems and emergency management strategies. It also emphasizes the development of the practitioner's arts within the strategic, tactical and operational realms of security administration.

This certificate aims to address issues related to the management of security for public and private organizations. It concentrates attention on the intellectual and operational challenges associated with the task of protecting people and property within a changing landscape of threat from human and natural sources. At the epistemic center of the program of study will be a complex understanding of security, requiring mastery of vocabularies across academic disciplines and conjoining insights of a technical and theoretical nature in a fashion that allows security managers to be effective and sensitive to the varied contexts shaping their decisions. Interdisciplinary academic study in the complex field of security administration is essential as a point of both entry and advancement in this growing profession.

Students may complete a stand-alone Certificate in Security Management for 15 graduate credits, or they may complete a Concentration in Security Management as part of the MAIA program.

To be admitted to the Certificate in Security Management, students must complete the same admission requirements for the MAIA program.

Capstone/Thesis (Choose one)
Mission
The Master of Arts in International Administration program (MAIA) seeks to prepare students for careers in the administration of public and private organizations. Students are introduced to academic traditions of scholarship and the insights of professional practice in the identification, analysis and management of the complex problems that confront modern institutions. They engage considerations of politics and culture as well as those of business, finance and management in order to develop the skills necessary to work with people in multiple contexts and environments. These include:

- Local, state and federal governmental agencies
- Regional and international organizations
- National and international public health-care management organizations
- Non-profit public service organizations
- Global relief and charitable groups
- Civil society movements
- Corporate and financial concerns
- Emergency management organizations

Goals
Student Learning Outcomes

- Students will demonstrate knowledge of the subject-matter, the topic, at the center of their Practicum Report. This involves an understanding of the functional and organizational setting in which they served during their internship, the broader political, cultural and economic context within which the internship site exists and the ability to abstract from their experience a specific topic for analysis to which students apply skills in critical analysis, problem-solving and written communications developed during their course of study.

- Students will demonstrate critical thinking skills, a habit of mind characterized by the comprehensive exploration of issues, ideas, artifacts, and events before accepting or formulating an opinion or conclusion.

- Students will demonstrate their skills in written communication, learning to work in many genres and styles. It can involve working with many different writing technologies, and mixing text, data and images.

M.A./M.P.A Dual Degree in International Administration and Public Administration

The Dual MPA/MAIA degree requires a total of 60 credits - 39 credits in Public Administration (MPA) and 21 credits in International Administration (MAIA).

*This program is pending UM Board of Trustees Approval

International Studies

international-studies.as.miami.edu

Dept. Code: INS

Degree Programs
The Department of International Studies offers interdisciplinary social science programs leading to the Ph.D. and MA degrees. Ph.D. and MA programs offer advanced students the opportunity to study issues such as globalization, democratic governance, comparative and international political economy, post-Cold War conflicts and security threats, and new forms of civil society mobilization in world politics. To organize the study of these debates in the social sciences, the Department offers three fields of specialization:

- **International Relations**: international relations theory; globalization; social movements beyond the nation-state; security studies; peace and conflict studies; international law and organization; international political economy; foreign policy analysis, global public health, and related fields.

- **Comparative Politics**: theory and methods of comparative analysis; authoritarian and democratic political regimes; democratic governance and citizenship, comparative political economy; contentious politics and social movements; civil-military relations; and appropriate courses on selected regions, such as the European Union, Latin America, or the Post-Soviet countries.

- **International and Comparative Political Economy**: the politics and institutions regulating the global trade, investment, and financial regimes; comparative international development; the politics and economics of international environmental regimes; democracy, partisan politics, and global governance, the domestic and international distributive impacts of globalization; and international economic theory.

Masters Program in International Studies

- M.A. in International Studies (p. 694)

Doctoral Program in International Studies

- Ph.D. in International Studies (p. 695)

M.A. in International Studies

The Master of Arts Degree in International Studies is a 30-credit degree program that is designed for students who seek practical training in social science perspectives and methods that address emerging problems of globalization, international conflicts and humanitarian crises, global environmental change, and international development. The program emphasizes professional preparation through the acquisition of qualitative and quantitative research skills that will enhance students’ career opportunities and/or prepare them for advanced study in doctoral programs. The program faculty consists of experts in international relations, comparative politics and political economy, geographical sciences, ethnographic inquiry, public health, and social inquiry and change. The program can typically be completed within two years, although students may receive credit toward the degree if they have completed equivalent courses elsewhere. Students seeking the degree on a part-time basis are welcome.

Students must complete three core courses and are free to design their program of study on any topic within the broad sphere of international studies under the guidance of a faculty mentor. Major themes covered in International Studies elective courses range from international conflicts, refugee movements and migration, international trade and investment, climate change mitigation and adaptation, poverty alleviation, humanitarian crises, and emerging public health threats.

Curriculum Requirements

1. Core courses:

1.1 Thematic core courses (one required):

- **INS 601 International Relations** (fall) Introduction to the theory of international relations; globalization; social movements beyond the nation-state; security studies; peace and conflict studies; international law and organization; international political economy; foreign policy analysis, global public health, and related fields.

Or

- **INS 630 Comparative Politics** (fall): Introduction to theory and methods of comparative analysis; authoritarian and democratic political regimes; democratic governance and citizenship, comparative political economy; contentious politics and social movements; civil-military relations; and appropriate courses on selected regions, such as the European Union, Latin America, or the Post-Soviet countries.

Or

- **INS 637 International and Comparative Political Economy** (fall): Introduction to the politics and institutions regulating the global trade, investment, and financial regimes; comparative international development; the politics and economics of international environmental regimes; democracy, partisan politics, and global governance, the domestic and international distributive impacts of globalization; and international economic theory.

1.2 Methodological core courses (two required):

- **POL 695A Introductory Statistical Methods in Political Science** (fall) Introduction to the core concepts of descriptive and inferential statistics; probability theory; graphical presentation of data; descriptive measures of central tendency and dispersion; hypothesis testing, contingency tables and linear regression.

- **POL 695T Advanced Statistical Methods in Political Science** (spring) Introduction to general linear models within a likelihood framework, including models for discrete data—binary, multinomial, ordered and count outcomes. In addition, the course provides an introduction to the R programming environment, a powerful and versatile open-source statistics suite.

Or

Students may substitute any graduate-level mixed-methods course such as **INS 611 (International Relations Methodology II)**, any qualitative methods courses (e.g., survey methods, ethnographic methods) such as **INS 612 (Qualitative Methods)**, or information technology course such as **GEG 691 (Introduction to Geographic Information Systems for Graduate Students)** and **APY 611** for POL 695T. In addition, a variety of other statistics courses are available in other social science departments that may be used as substitutes for POL 695T.
2. **Foreign Language Requirement**: All students must demonstrate competency (reading and basic comprehension) in at least one foreign language. Students are expected to pass a foreign language examination by the end of their first year to determine if they meet this essential requirement or may require additional foreign language training. A variety of options is available for practical language training including courses offered by the Department of Modern Languages and Literatures (insert link) and the Directed Independent Language Study (DILS, insert link).

3. **Comprehensive Exam, Thesis and Non-thesis Options**: As a final requirement to graduate, students must select one of the following 3 options:

   - Pass a written qualifying (comprehensive) examination in one of the three fields of specialization. The MA qualifying examination probes student knowledge of one of the Department's three fields of study and the ability to think and express ideas clearly. Masters level students are required to answer three questions within four hours
   - Thesis and Non-Thesis options: Both thesis and non-thesis options are available and students are expected to identify a specific topical interest and research focus by the end of their first semester in residence. The non-thesis option consists of two short papers and an oral examination; the thesis option involves production of a MA thesis that will be examined by a committee of three faculty members, one of whom is the faculty mentor. Students opting for an MA Thesis must have a GPA of 3.5 or higher.

**Mission**

The Department of International Studies provides a comprehensive curriculum that allows students at both the undergraduate and graduate levels to study contemporary international issues. INS courses include globalization, democratization, transnationalism, international political economy, global trade, conflicts and national security threats, human rights, new forms of civil society mobilization, cultural diversity in world politics, global environmental challenges, global public health, and world poverty. The curriculum revolves around the study of the accelerating processes of globalization and their far-reaching impacts on individual states, societies, economies and cultures. The INS Program promotes, through its interdisciplinary reach, the exploration of various theoretical and analytical approaches and methodological techniques intended to offer students a broad program of study focused on the interaction between the local and the global, from the historical to the contemporary, while tracking possible alternative future scenarios and developments in the international system.

**Goals**

**Student Learning Outcomes**

- Students will select and use theories and methods to measure and assess, the interrelationships between foreign relations and governments, social movements and/or organizations.
- Students will demonstrate the capacity to integrate and apply concepts and theories to ask coherent and original questions about international studies.
- Students will demonstrate effective written, presentation and to integrate data with sound analysis and meaningful interpretation.

**Ph.D. in International Studies**

The Department's Ph.D. program's primary objective is to prepare a select group of highly qualified doctoral students for careers in academic teaching and research.

**Curriculum Requirements**

The requirements include:

- Complete a total of 66 degree credit hours (12 semester courses) to obtain the Ph.D. degree (i.e., 36 credit hours at the doctoral level beyond the MA degree).
- Complete one seminar on quantitative methods and one seminar on qualitative methods in the social sciences.
- Complete a sequence of two core seminars in two of the Program's three major fields of study:
  - International Relations;
  - Comparative Politics; and
  - International and Comparative Political Economy.
- Pass
  a. written MA exam in one of the Program's three fields of study and
  b. written and oral examinations in two of the Program's three fields of study.
- Complete at least one of the basic core seminars in the third (non-examination) field.
- Complete the Doctoral Workshop.
- Successfully defend a dissertation proposal/prospectus.
- Pass a foreign language examination.
- Complete 12 dissertation credit hours.
- Research, write and orally defend a dissertation that makes an original contribution to knowledge.

See the *INS Graduate Student Handbook* for a complete description of the requirements for the Ph.D. degree.

**Mission**

The Department of International Studies provides a comprehensive curriculum that allows students at both the undergraduate and graduate levels to study contemporary international issues. INS courses include globalization, democratization, transnationalism, international political economy, global trade, conflicts and national security threats, human rights, new forms of civil society mobilization, cultural diversity in world politics, global environmental challenges, global public health, and world poverty. The curriculum revolves around the study of the accelerating processes of globalization and their far-reaching impacts on individual states, societies, economies and cultures.

**Goals**

The INS Program promotes, through its interdisciplinary reach, the exploration of various theoretical and analytical approaches and methodological techniques intended to offer students a broad program of study focused on the interaction between the local and the global, from the historical to the contemporary, while tracking possible alternative future scenarios and developments in the international system.
Student Learning Outcomes

- Students will select and use theories and methods to measure and assess, the interrelationships between foreign relations and governments, social movements and/or organizations.
- Students will demonstrate the capacity to integrate and apply concepts and theories to ask coherent and original questions about international studies.
- Students will demonstrate effective written, presentation and to integrate data with sound analysis and meaningful interpretation.

Latin American Studies

las.miami.edu

Dept. Code: LAS

The Latin American Studies Program at the University of Miami takes an interdisciplinary approach to the study of the politics, economics, cultures, and societies of Latin America and the Caribbean. Courses in the program are offered in departments from every school and college at the University of Miami, and the program’s faculty research topics ranging from development economics to immigrant health care, from indigenous music to Caribbean colonial literature, from the archaeology of the region’s earliest people to present-day questions of resource conservation and management. Our students become true experts who can speak to a wide range of issues confronting Latin America; experts who can contribute proactively to development and cooperation as well as to business and political analysis in ways that their peers with a more traditional disciplinary focus simply cannot.

Requests for Information

Dr. William J. Pestle
Academic Director, Latin American Studies Program
Merrick Hall 102-E
University of Miami
Coral Gables, FL 33124-2005
las@miami.edu (lasgrad@miami.edu)

The interdisciplinary graduate programs in LAS offer excellent preparation for careers in international business, law, banking, work in philanthropy, economic development, the environment, government service, education, health care, or journalism.

Master of Arts in Latin American Studies

- M.A. in Latin American Studies (p. 699)

The interdisciplinary graduate programs in LAS offer excellent preparation for careers in international business, law, banking, work in philanthropy, economic development, the environment, government service, education, health care, or journalism.

Joint Programs in Latin American Studies

- M.A. in Latin American Studies with GIS Certificate (p. 700)
- M.A./M.P.H Dual Degree in Latin American Studies and Public Health (p. 698)
- JD/M.A. in Latin American Studies (p. 697)
- B.A./M.A. in Latin American Studies (p. 696) (Fellows in Latin American Studies - FILAS)

B.A./M.A. in Latin American Studies

FILAS (Fellows in Latin American Studies)

In this highly selective Honors Program, students follow a rigorous, accelerated curriculum to complete two degrees (B.A./M.A.) in Latin American and Caribbean Studies in five years, less time than would be required to obtain the degrees separately. The program provides exciting collaborative research, travel, and work opportunities. While students typically apply to the FILAS program upon their initial application to UM, we also welcome applicants in their first year of study at the University.

FILAS Admission Requirements

- SAT1 composite score of 1360 or ACT 31.
- Top 10% of high school graduating class.
- Regular Application for Admission to the University of Miami. We recommend students submit their applications by November 15.
- Recommendations from three high school teachers.
- Statement of interest in FILAS, emphasizing prior language or area study
- To continue through the graduate level (MA Phase), students must maintain at least a 3.4 GPA and take the GRE Exam.

Curriculum Requirements

Working with UM’s world-class faculty in various academic disciplines, FILAS participants design individualized curricula. In addition to the regular general education course requirements of the College of Arts and Sciences, FILAS students choose one focus track for their most advanced courses: Social Sciences, Law and Policy, Literature & Culture, Communication, Environmental Studies, Public Health, or History. For broad-based, multi-disciplinary preparation, students choose courses that focus on Latin America and the Caribbean. At least ten of these courses must be taken at the graduate level.

FILAS Specific Requirements

Select one gateway seminar in Latin American Studies 3
Select five courses above the 300-level (third-year) in a range of disciplines 15
Select seven courses in Study Abroad 21
Select five courses above the 300-level (third-year) in a range of disciplines 15
Select ten courses in one focus track 30

MA Phase Requirements

LAS 601 Interdisciplinary in Latin American and Caribbean 3
LAS 602 Research Design in Latin American Studies 3
Select two Regional Fundamentals courses 6
Select four electives from approved LAS or combined courses 12
LAS 810 Pre-candidacy thesis credits (students must enroll in two semesters of this 3-credit course to fulfill this requirement.) 3
LAS 810 Pre-candidacy thesis credits 3

Total Credit Hours 150

1 Certain AP/IB scores may be used to fulfill the Composition requirement as credit. If Transfer students transfer one of the two above, but not both, they may take ENG 208 to complete the requirement. ENG 105 must be taken unless exempted by SAT/V or ACT/V scores (does not include credits).

2 MTH 108 or higher. Unless exempted by AP/IB, or UM placement test. UM placement test does not include credits. Prerequisites must be met before enrolling in MTH courses.

3 Students must take at least three credits in a language other than English at the 200-level or higher. Prerequisites may be required. Courses taken in order to meet this requirement, including necessary prerequisite courses to the 200 level courses, cannot be used in cognates seen below. FILAS students already fulfill this requirement when completing the language requirements cited below.

4 Degree candidates must complete at least four writing courses, and at least one such course must be in the student’s major discipline.

5 Typically, students must complete a minimum of three cognates, one from each of the three areas of the University curriculum: Arts & Humanities; People & Society; and Science, Technology, Engineering & Mathematics. A cognate is a minimum of 9 credit hours, however it can be more. Each major/minor fulfills the cognate requirement in one Area of Knowledge. However, FILAS students must complete only the STEM Cognate as the FILAS program fulfills the Arts & Humanities and People & Society cognates. To avoid additional course credits, please select a STEM Cognate that includes a Natural Science course to concurrently fulfill this CAS general education requirement. According to the Collage of Arts & Sciences, ‘three credits must be earned from one of the following departments: Biology, Chemistry, Ecosystem Science & Policy (only ECS 111, 112, or 202), Geological Sciences, Marine Science (except MSC 313 and 314), Physical Science, or Physics. APY 203 and GEG 120 may also count. These credits may double count with any other requirement, e.g., courses in the STEM cognate.’

FILAS students also write a Master’s Thesis based on an original research project. In addition, they must defend the thesis and present their findings at the LAS Annual Student Symposium.

J.D./M.A. in Latin American Studies

Overview

The University of Miami School of Law in partnership with the Latin American Studies (LAS) Program, College of Arts and Sciences, offers a joint J.D./M.A. in Latin American Studies. This curriculum prepares Law School students for business, government, political, and nonprofit legal positions in organizations or institutions with a Latin American/Caribbean focus or presence. The program provides a solid theoretical framework and grounding in policy analysis, administration, and management.

This joint program allows students to obtain both J.D. and M.A. degrees in 3 or 3 1/2 years, less time than obtaining the degrees separately. The first year is spent in the Law School and years two, three and four (if needed) are spent taking both Law and M. A. courses.

Admissions

To be admitted to this program, students must apply separately to both programs. Students may apply to the MA in Latin American Studies program prior to beginning Law School or anytime during the first or second year of Law School. Students may begin the MA program in the fall or spring semesters.

For admission to the M. A. program students must complete an MA application. If they apply before the end of their first year in Law School, they will not need to take the GRE exam. Their LSAT score will be used instead of the GRE. For more details on the M. A. program, visit the M.A. in Latin American Studies website.

Acceptance by one program does not in any way indicate or guarantee acceptance by the other degree program.

Tuition and Fees

Tuition for J.D. courses will be paid to the Law School. Tuition for the M.A courses will be paid to the College of Arts and Sciences. Law School scholarships may only be used towards tuition for Law School courses.
Courses and Credits

Students must complete 82 credits in the Law School and 6 credits will be double-counted from the M.A. courses to complete the total of 88 JD credits. In the College of Arts and Sciences, students must complete 21 credits in Latin American Studies courses, and 9 credits will be double-counted from the J.D. coursework to complete the total of 30 credits. Students will be required to complete a total of 103 credits for both degrees.

Juris Doctor (J.D.) Course Requirements

• During their first year of the joint program, students will be required to attend the J.D. program full-time.
• Students who begin in the JD program will be able to take courses in the Latin American Studies Master’s program beginning the fall of their 2L year.
• Students must complete all J.D. requirements and all M.A. requirements as defined by their programs.
• Students may take summer law courses which may reduce the length of the joint degree program by up to a semester.
• Students may not take more than 16 credits/semester. Seventeen credits/semester may be taken with permission from the Associate Dean, Academic Affairs, School of Law.

Master of Latin American Studies Requirements

• Required courses in LAS are: LAS601, LAS602, and a discipline-appropriate research methods course (to be approved by the degree director.)
• Two regional fundamentals courses in Latin American/Caribbean studies are also required.
• Students will be required to write a master’s thesis, create an equivalent capstone project, or pass a comprehensive exam (each of which requires 6 credits of thesis/readings courses). These options all require a committee consisting of at least three faculty members.
• Language Requirement: Students must demonstrate advanced language competency in Spanish, French, Portuguese, or Haitian Creole. Students may establish proficiency by passing one course taught in the target language at the 600-level or above, or by passing a language competency exam. A major indigenous language of Latin America may be substituted for either Spanish or Portuguese. Students may petition for a waiver of examination if they have gained language competency in another manner (i.e. native speaker, upper division coursework in target language, Peace Corps service, IB credits, or Defense Language Proficiency Test).

M.A. Dual Degree in Latin American Studies and Public Health

http://www.as.miami.edu/las/graduate/joint-master-of-arts-programs/medicine-and-public-health/

Miami is the gateway to Latin America. As such we recognize an urgent need for public health professionals with the training and expertise needed to meet the growing public health challenges both in Latin America and the Caribbean. This program is designed to train students for a career in public health with a focus on social policy, health management and health care in Latin America and the Caribbean, as well as expatriate communities in the United States.

Average Program Duration: 2 years, 5 semesters

Number of required credits: 54 (+6 for non-native speakers)

¹ Students must demonstrate advanced language competency in Spanish, French, Portuguese, or Haitian Creole. Students may establish proficiency by passing one course taught in the target language at the 600-level or above, or by passing a language competency exam. A major indigenous language of Latin America may be substituted for either Spanish or Portuguese. Students may petition for a waiver of examination if they have gained language competency in another manner (i.e. native speaker, upper division coursework in target language, Peace Corps service, IB credits, or Defense Language Proficiency Test).

² Six credits worth of Regional Fundamentals in Latin America must be taken. These electives may be chosen from appropriate offerings in LAS, INS, POL, HIS, APY, or GEG, among others. Regional Fundamentals are those courses that have a clear regional or sub-regional focus (e.g. Andean Region; the Caribbean; South America; Central America; Southern Cone; Brazil; South Florida), or a cross-cutting thematic focus (e.g. Caribbean religions, Latin American Social Movements) rather than a specific country focus. The LAS Academic Director may approve courses from other departments.

Language Proficiency

Total Credit Hours 30

1 Students must demonstrate advanced language competency in Spanish, French, Portuguese, or Haitian Creole. Students may establish proficiency by passing one course taught in the target language at the 600-level or above, or by passing a language competency exam. A major indigenous language of Latin America may be substituted for either Spanish or Portuguese. Students may petition for a waiver of examination if they have gained language competency in another manner (i.e. native speaker, upper division coursework in target language, Peace Corps service, IB credits, or Defense Language Proficiency Test).

2 Six credits worth of Regional Fundamentals in Latin America must be taken. These electives may be chosen from appropriate offerings in LAS, INS, POL, HIS, APY, or GEG, among others. Regional Fundamentals are those courses that have a clear regional or sub-regional focus (e.g. Andean Region; the Caribbean; South America) rather than a specific country focus.

3 Students are required to write a master’s thesis, create an equivalent capstone project, or pass a comprehensive exam. For each of these options, a committee consisting of at least three members is required. Students who opt for the comprehensive exam will take one more elective in the place of the Research Methods course and enroll in 6 credit hours of LAS 697, rather than LAS 810.

4 Students must demonstrate advanced language competence in Spanish, Portuguese, Haitian Creole, or French by passing a course taught in the target language at the 600-level or above, or by passing a language competency exam.

M.A. in Latin American Studies

The Master of Arts in Latin American Studies is a 30 credit hour interdisciplinary degree characterized by a high degree of flexibility in allowing students to create a course of study focused on Latin American and the Caribbean that serves their interests. Combining core courses offered by the program with a large variety of courses combined with departments, programs, and units throughout the University of Miami, the program offers tremendous diversity in courses available for credit hour towards this degree. This encourages students to combine course offerings from around the university into a cohesive course of study that enables specialization in an area, topic, country, theme, or issue of their choosing and thus to tap into the many resources available at the University of Miami for students with a passion for Latin America and the Caribbean.
** Students who are simultaneously enrolled in a certificate program (other than GIS) at the University of Miami may double-count courses between the certificate program and the Master of Arts in Latin American Studies, with approval of the academic director. In select cases (such as methods courses), seminars and courses at the 600-level that do not specifically target Latin America or the Caribbean, but for which the final project or paper produced by the student is focused on Latin America may be counted towards the Master of Arts in Latin American Studies, subject to the approval of the academic director.

**Mission**

The mission of the Master of Arts in Latin American and Caribbean Studies is to offer students the tools and resources that enable them to advance and disseminate knowledge of the history, literature, culture, politics, and economics of the region using various theoretical and analytical approaches.

**Goals**

This graduate program furthers the skills and knowledge gained in undergraduate study and expects graduates to conduct scholarly research, formulate an academically rigorous and unique Master’s thesis, and eloquently defend a thesis reflective of the student’s enhanced expertise in the region. Graduates are prepared to either pursue further graduate study or find employment as experts with mastery of a particular region or peoples in Latin America or the Caribbean.

**Student Learning Outcomes**

- Students will demonstrate a deep understanding of the region, its peoples and societies, and its history and cultures.
- Students will demonstrate an ability to conduct independent and original research.
- Students will demonstrate their skills in written communication.
- Students will demonstrate critical thinking skills.

**M.A. in Latin American Studies with GIS Certificate**

http://www.as.miami.edu/las/graduate/joint-master-of-arts-programs/gis/

The Master of Arts in Latin American Studies with GIS certificate is a 30 credit hours interdisciplinary degree characterized by a high degree of flexibility in allowing students to create course of study focused on Latin American and the Caribbean, while allowing students to focus on obtaining specific skills in geographic Information Systems (GIS). The GIS option allows students to work towards a graduate certificate in GIS through the department of Geographic and Regional Studies while working towards their Master of Arts in Latin American Studies.

1 The 6 credit hours in LAS 810 will consist of a GIS capstone project with a focus on Latin America, the Caribbean, or South Florida. Students will require a three-member committee to oversee the capstone project. A group project may be allowed with approval of the academic director.

**Liberal Studies**

mals.miami.edu

**Dept. Code:** MLS

**Degree Programs**

The Liberal Studies program is founded on an interdisciplinary approach to issues and questions central to the history and development of human culture. It is designed to provide a broad understanding of these issues and questions through a focused and systematic program of study drawing upon faculty from various disciplines in the humanities, the social sciences, and the basic sciences.

For further information regarding this program, please contact:

Master of Arts in Liberal Studies Program
1300 Campo Sano Avenue, 215
Coral Gables, FL 33146-2025
Call 305-284-8783 or email mals@miami.edu

**Masters Program in Liberal Studies**

- M.A. in Liberal Studies (p. 701)

The Master of Arts in Liberal Studies program is designed for the student who seeks to develop the critical thinking that marks a truly educated person—for the student who brings a heightened awareness of the unanswerd questions that confront an inquiring mind—for the self-motivated person who never stops asking the first question: why?

MALS students come from varied backgrounds. They are artists, business professionals, entrepreneurs, engineers, homemakers, lawyers, recent graduates, journalists and teachers. The program gives them the opportunity for intellectual and personal growth and for sharing their experiences with others in a community of learning.
Post-Graduate Certificate in Liberal Studies

• Certificate in Liberal Studies

http://www.as.miami.edu/mals/

The Post-Graduate Certificate Program in Liberal Studies requires 15 credit hours of coursework. The curriculum can be designed to fit each student's academic goals. Students may select from MALS courses or other graduate level courses with the approval of the director.

M.A. in Liberal Studies

http://www.as.miami.edu/mals/

The Master of Arts in Liberal Studies degree requires 24 credit hours, plus a 6 credit hour thesis OR an additional 6 credit hours of coursework and a representative portfolio. The curriculum is drawn from three core courses as well as additional courses designed for MALS students. Students may select from other graduate level courses with the approval of the director. In addition, all students are required to participate in the MALS Writing Seminar.

**Choose One of the Following Options:**

**Thesis or Project Option:**

- Approved Graduate Credit Hours (15 credits)
- Thesis or Project Requirement (6 credits)

**Non-Thesis Option:**

- Approved Graduate Credit Hours (21 credits)
- A portfolio representative of works completed

**Total Credit Hours:** 30

1 Students learn to analyze and read texts critically and demonstrate their ability to express that knowledge in their oral and written work with accuracy and insight. This 3 hour, non-credit workshop is required and should be taken during the first regular semester of study.

2 Students may select from other graduate level courses with the approval of the director.

Mission

The Master of Arts in Liberal Studies Program opens the door to new ways of thinking. Increasingly, one of the central problems in the business and professional world is how to handle new information, what to do with it, how to use it, how to understand its rhythms and patterns, how to make it make sense.

Goals

Our program is dedicated to providing students with an interdisciplinary education at the graduate level that prepares them through a rigorous course of inquiry and thought, to winnow information, evaluate it, array it in meaningful ways, discern its patterns and symmetries, and apply it in whatever field they chose.

Student Learning Outcomes

• Students will have the ability to analyze and read texts critically.
• Students will demonstrate the ability to express critical thinking skills in their written work with accuracy and insight.
• The student demonstrates new ways of thinking through the study of various disciplines.

Mathematics

http://www.math.miami.edu

Dept. Code: MTH

Degree Programs

The Mathematics Department offers graduate degree programs leading to:

• Five-Year BS Math/MS Math Finance (p. 701)
• Master of Arts (p. 702)
• Master of Science (p. 701)
• Master of Science in Mathematical Finance (p. 701)
• Doctor of Philosophy (p. 701)

Prerequisites and requirements for these degrees are described on the program pages:

Masters Programs in Mathematics

• M.A. in Mathematics (p. 702)
• M.S. in Mathematics (p. 705)
• M.S. in Mathematical Finance (p. 703)

Doctoral Program in Mathematics

• Ph.D. in Mathematics (p. 706)

Dual BS/MS Degree

• Five-Year BS Math/MS Math Finance (p. 181)

Five-Year BS Math/MS Math Finance

http://www.math.miami.edu/

The BS/MSMF program is a five-year program combining the Probability/Statistics track of the Mathematics undergraduate major with the graduate coursework required for the MS in Mathematical Finance degree. For undergraduates seeking careers in the fields of economics, finance and data science, the BS/MSMF degree offers the appropriate training sought by companies worldwide. Students can achieve the required academic credentials in five years due to the integrated and focused nature of the BS/MSMF degree.

Mission Goals

The primary objective of the Master of Arts degree in mathematics is to prepare students for careers in teaching. This program also provides the necessary foundation for entry into careers in science, business, government, or other fields which make use of mathematics.

Student Learning Outcomes

- Students will achieve a solid understanding of the material in at least one of the following six advanced mathematics content areas: partial differential equations, ordinary differential equations, probability and statistics, topology, real analysis, and abstract algebra.
- Students will exhibit a broad synthesis of the theory and application of one of the subjects listed in the above outcome.

M.S. in Mathematical Finance

1 Students may be required to take CSC 220 Computer Programming II or ECE 218 Data Structures during their first semester in the program. Students who are not proficient in C, C# or C++ may be required to take CSC 322 System Programming during their first or second semester in the program.

Mission

The Master of Science in Mathematical Finance program is dedicated to producing technically trained professionals with an understanding of how to analyze and value complex investments, and assess the associated risks. Over the course of three semesters of study, the students receive a rigorous training in mathematics, especially in the area of probability and stochastic calculus, in statistical analysis, and in computation, together with an overview of the common financial instruments and the institutional operation of markets and exchanges.

The financial landscape is constantly changing, and we design the MSMF curriculum to equip students with skills and knowledge that will provide the foundation for their future success. Our program seeks the proper balance between the mathematical and statistical theory, programming practice and financial applications.

Goals

• Provide future finance professionals with the advanced quantitative skills required to understand, evaluate and price modern financial instruments. Such skills include both analytic techniques of mathematical finance, and computer-based simulation techniques.

• Expose participants to the key statistical methods, and specifics of applying these methods to working with financial data.

• Impart the necessary hands-on software and programming skills to solve various optimization and simulation problems arising in financial setting.

Student Learning Outcomes

• Students will demonstrate advanced knowledge of risk-neutral approach to pricing financial instruments, discrete and continuous-time frameworks of modern mathematical finance, and common financial derivatives.

• Students will master the tools of statistical analysis and statistical software packages and be able to apply them to various financial datasets.

• Students will demonstrate working knowledge of software and programming tools to use optimization and simulation techniques in financial setting master the common models of portfolio analysis, as well as the quantitative approach to risk models.

M.S. in Mathematics

http://www.math.miami.edu/

Admission Requirement

A minimum of 15 credit hours in mathematics courses numbered 200 and above is required. For more information about admission, please visit our website (http://www.math.miami.edu/graduate/application-procedure/).

Mission

The primary objective of the Master of Science degree in mathematics is to prepare students for careers in teaching. This program also provides the necessary foundation for entry into careers in science, business, government, or other fields which make use of mathematics.

Goals

Student Learning Outcomes

- Students will achieve a solid understanding of the material in at least one of the following six advanced mathematics content areas: partial differential equations, ordinary differential equations, probability and statistics, topology, real analysis, and abstract algebra.
- Students will exhibit a broad synthesis of the theory and application of one of the subjects listed in outcome above.
- Upon completion of the degree, students will be interviewed and asked to rate how successful the program was in enabling them to pursue their career goals. The department will document the students' initial employment.

Ph.D. in Mathematics

http://www.math.miami.edu/

Curriculum Requirements

The following requirements are in addition to the general requirements for the Doctor of Philosophy Degree as described by the Graduate School.

Preliminary and three written qualifying exams must be passed. Of these written exams, two must be from the above basic sequences; the other may be another from the basic sequences or in the candidate's area of specialty.

A proficiency in one of the languages French, German, or Russian must be demonstrated.

Additional Courses 24

Total Credit Hours 60

Mission

The Doctor of Philosophy degree is the highest degree attainable in mathematics. The objective of this degree program is to prepare students for careers in mathematical research. Each student in the program must successfully complete a substantial number of advanced mathematics courses and attain expertise in a specific area of specialization. Under the guidance of a faculty advisor, the student must produce significant original research and must present it in the form of a dissertation that is approved by a supervisory committee.

Goals

Student Learning Outcomes

- Students will demonstrate proficiency in the fundamentals of at least two of the following broad subdivisions of mathematics: algebra, topology and analysis.
- Students will demonstrate a deep understanding of the following four core areas of mathematics: abstract algebra, algebraic topology, real analysis, and complex analysis.
- Students will demonstrate readiness for conducting original research.
- Students will produce and defend a dissertation based on his/her research, and the student will have the skills to effectively communicate mathematical ideas pertaining to that research both orally and in writing.

Modern Languages and Literatures

mll.as.miami.edu

Dept. Codes: ARB, CHI, FRE, GER, HAI, HEB, ITA, JPN, MLL, POR, SPA

Degree Programs

The Ph.D. in Literary, Cultural, and Linguistic Studies offers major concentrations in Literary and Cultural Studies and Critical Studies of Language/Linguistics. The program is designed primarily to prepare students for careers as university professors and research scholars. Students develop advanced language, teaching, and research skills that lend themselves to other professions, as well. A variety of geographic, temporal, and theoretical concentrations allow students to carry out innovative and interdisciplinary research projects, often with a transnational focus.

Students develop superior language skills and professional competency in their major research field(s) through an intensive study of canonical works while engaging in comparative, interdisciplinary fields such as Africana Studies, Arabic Studies, Caribbean Studies, French and Francophone Studies, Iberian Studies, Italian Studies, Latin American Studies, Luso-Brazilian Studies, and combinations thereof.

The program's strong theoretical component grounds student research in a range of areas, including: aesthetics, bilingualism, digital humanities, early modern studies, film studies, gender and sexuality studies, (im)migration studies, indigenous studies, performance studies, postcolonial studies, queer studies, subaltern studies, sociolinguistics, theatre studies, and women's studies.

Students are required to develop competency in a cognate field related to their intellectual pursuits, leading to the dissertation topic. Recent examples of cognate specialization include anthropology, communication studies, film studies, history, law, philosophy, musicology, classics, and sociology.

The department offers these graduate certificates and concentrations to prepare students beyond their specialization, which may be fulfilled with course electives:

- Graduate Certificate in Second Language Acquisition and Teaching (http://www.as.miami.edu/mll/graduate/slat-certificate/)
• Early Modern Studies Concentration (http://humanities.miami.edu/humanities/academic/early-modern-studies-concentration/), an interdisciplinary certificate offered in conjunction with English and History

• Caribbean Studies Concentration (http://www.as.miami.edu/mll/), interdisciplinary doctoral concentration in Caribbean Studies in conjunction with English and History

Admission Requirements
The Department of Modern Languages and Literatures accepts applications to the Ph.D. program for Fall admission only from students holding (or completing during the time of application) B.A. or M.A. degrees in a related discipline (e.g. Spanish, French, Luso-Brazilian Studies, History, Anthropology, Communication Studies, Comparative Literature, Philosophy, Journalism). The Department does not admit students who seek terminal M.A. degrees.

The deadline to apply for the 2020-21 academic year is December 30, 2019. The Graduate Committee will begin reviewing complete applications January 15, 2020. All applicants will automatically be considered for Departmental TAships and University-wide fellowships.

Applications must include the following materials:

1. A completed application form, including a detailed statement of purpose. (Applications are only accepted through this link (https://www.applyweb.com/miamigrd/)).
2. A Graduate Assistantship application.
3. Three letters of recommendation (typically, 1-2 pages). Applicants should use the CollegeNet interface to have recommenders submit their letters online.
4. GRE scores mailed directly from ETS testing agency to the Department of Modern Languages and Literatures. Domestic and international students can send GRE and TOEFL scores to our Department with the University of Miami code (5815).
5. International students without BA or MA degrees from a U.S. institution should have TOEFL scores mailed directly from the testing agency to the Department of Modern Languages and Literatures.
6. Graduate applicants who have attended college or university outside the United States must submit official translations of transcripts and diplomas directly to the Department of Modern Languages and Literatures.
7. A research paper of 15-20 pages in English.
8. Research paper(s) of 15-20 pages in the primary language(s) of proposed study.

Application fee of $85.00

Printed materials should be sent to:

Graduate Program Admissions
Department of Modern Languages & Literatures
University of Miami
P. O. Box 248093
Coral Gables, Florida 33124-4650

Ph.D. in Literary, Cultural, and Linguistic Studies

The Ph.D. in Literary, Cultural, and Linguistic Studies offers two major concentrations: 1) Literary and Cultural Studies and 2) Critical Studies of Language/Linguistics. Students in each concentration may opt to develop a secondary field of expertise in the other.

The program is designed primarily to prepare students for careers as university professors and research scholars. Students develop advanced language, teaching, and research skills that lend themselves to other professions, as well. A variety of geographic, temporal, and theoretical concentrations allow students to carry out innovative and interdisciplinary research projects, often with a transnational focus.

Basic Curriculum Requirements
The requirements set out below for the Ph.D. in Literary, Cultural, and Linguistic Studies are minimum requirements. The Graduate Studies Committee, Director of Graduate Studies, and individual advisors may set additional requirements.

1. The requirements:
   a. for students entering on the “five-year plan” (with a B.A. or M.A., see below), passing satisfactorily a minimum of 60 graded credit hours in approved courses, 30 of which must be open to graduate students only;
   b. for students entering on the “four-year plan” (with an M.A. in a closely related field, see below), passing satisfactorily a minimum of 48 graded credit hours in approved courses, 24 of which must be open to graduate students only;
2. Passing MLL 701, MLL 711, MLL 714, MLL 799, and a minimum of 15 graded credit hours in the area(s) of research emphasis to be determined on an individualized basis in collaboration with the graduate advisors.
3. For students in the Literary and Cultural Studies concentration, three credits of Critical Studies of Language/Linguistics and three credits in any Arts and Sciences discipline focusing on Colonial or Early Modern Studies (18th century or earlier).
4. At least six credits in an approved cognate discipline to be determined in consultation with graduate advisors.
5. Nine credits in Literary/Cultural Studies or Critical Studies of Language/Linguistics, for students pursuing an optional minor concentration.

6. In addition to proficiency in English and the major language of study, demonstrating the following:
   a. reading knowledge of two other languages; or
   b. holistic knowledge of one other language (for example, by passing the equivalent of a course at the 300-level). **Note:** Appropriate languages of study will be determined in collaboration with the student’s advisors (e.g. students of Latin America may be encouraged to study Portuguese or an indigenous language; students focusing on early modern Spanish or French studies may be encouraged to study Italian; students working in the French-speaking Caribbean may need to take Haitian Kreyòl; etc.);
   c. if areas of specialization include Medieval, Early Modern, or Colonial Latin American Studies, students must demonstrate reading knowledge of Latin.

7. Passing a Breadth Exam. Depending on the student’s interests, the exam shall consist of three parts, according to one of the following configurations:
   a. one geographic region over three time periods;
   b. two geographic regions over two or three time periods;
   c. two geographic regions over one or two time periods and one area of critical sociolinguistics;
   d. two areas of critical sociolinguistics and one geographic region over one-time period. **Note:** Students entering the doctoral program with an MA in a relevant field may petition to waive the Breadth Exam (normally taken in the spring semester of the second year) after the first semester of study. The Graduate Studies Committee will consider petitions on an individualized basis.

8. Passing a Qualifying Exam on an approved topic. The exam typically includes three general approaches focusing on:
   a. literature, cultural studies, or sociolinguistics;
   b. critical theory;
   c. a cognate discipline (e.g. history, sociology, philosophy, law, art, film, etc.).

11. Satisfying the requirements of the Graduate School as stated in the **Graduate Bulletin**.

### Mission

The Ph.D. in LCLS moves beyond the traditional Spanish/French binary of Romance Studies to bridge those two critical areas of emphasis with one another, as well as with additional areas of expertise offered by our tenured and tenure-track faculty in Arabic, Chinese, Italian, and Luso-Brazilian Studies. Graduate training in MLL prepares students to work as teachers and researchers of literary, linguistic, and cultural studies at universities and four-year colleges, as well as to serve in administrative, advocacy, and leadership positions in a range of educational and cultural institutions.

### Goals

The Department seeks: 1) to train innovative and productive intellectuals whose work can contribute to the creation of more knowledgeable and just societies; 2) to help students prepare for fruitful and fulfilling careers in scholarship, research, teaching, community service, and related professions; and 3) to guide and support graduating students in the successful pursuit of academic or non-academic employment.

### Student Learning Outcomes

- Graduate students should demonstrate a broad, critical understanding of literary and cultural forms, traditions, products, and processes from the geographies and time periods specific to their fields of study.
- Students working as Teaching Assistants will demonstrate the ability to teach innovative, well-crafted, well-received courses in language, literature, and cultural studies at various levels.
- MLL will equip its students as innovative and productive intellectuals, preparing them for fruitful careers in scholarship and research within and/or beyond the academy.

### Philosophy

philosophy.as.miami.edu

We offer an M.A. and a Ph.D. in philosophy.

The M.A. program is designed for those who want to pursue philosophy at a deeper level than in their B.A. degree, or who wish to transition into philosophy from other academic disciplines. Students may choose this program to improve their chances of acceptance into a highly-ranked Ph.D. program, or for other reasons. There are no distribution requirements: students may tailor their coursework to their own interests. Students must also write and defend a thesis, which can be used as a writing sample for Ph.D. program applications. **Note** that acceptance into the M.A. program does not guarantee acceptance into our own Ph.D. program later on; the application procedures are separate.

The Ph.D. program is specifically designed to prepare students for careers as professional teachers and researchers in philosophy, not only by way of coursework and research supervision, but also through professional mentoring and opportunities for philosophical development both inside and outside the classroom. Students normally enter with either a B.A. or an M.A. degree in philosophy. Students who enter without an M.A. and who fulfill the relevant requirements are awarded the M.A. degree as they work towards the Ph.D.

Each entering student is assigned a mentor from among the faculty, and faculty members lead professional development seminars on such topics as teaching, preparing work for publication, and preparing for the job market. A dedicated placement director works with each student to maximize their success at securing good post-graduation employment.

The Department prides itself on providing an inclusive, friendly and congenial atmosphere for doing philosophy, with many opportunities for informal interaction among students and faculty including workshops, conferences, colloquia and post-colloquium dinners.

### Masters Degree in Philosophy

- M.A. in Philosophy (p. 709)

### Doctoral Program in Philosophy

- Ph.D. in Philosophy (p. 709)
M.A. in Philosophy

Policies & Important Details

1. The M.A. in Philosophy is intended to deepen a student’s background in philosophy, and to improve a student’s preparation for Ph.D. programs in philosophy. It is possible to use the M.A. as a bridge program from another discipline into philosophy.

2. To maintain status as a graduate student, registration in each fall and spring semester is required. Otherwise, admission lapses and permission to re-enter must be granted.

3. Time restrictions on obtaining degrees will be strictly enforced and can be waived only by the Dean of the Graduate School.

4. Upon completing the course requirements and presenting and defending a satisfactory thesis, the student has completed the requirements for an M.A. in Philosophy.

5. The student in consultation with his/her selected M.A. thesis committee chair will decide on the thesis committee members. The thesis committee will consist of not less than three members, two from the Department’s graduate faculty, and one from either inside or outside the Department. The chair has to be a member of the graduate faculty. The duties of the thesis committee are:

   a. To consult with and to advise students on their research.
   b. To meet, at intervals, to review progress and expected results.
   c. To read and comment upon the draft thesis.
   d. To meet, when the thesis is completed, to conduct the final oral examination and to satisfy itself that the thesis is a contribution to knowledge and that it is written in lucid and correct English and submitted in approved form.

The candidate is well advised to have a final acceptable typescript of the thesis in the hands of each member of his/her committee at a time reasonably in advance of the final defense of the work.

¹ Presentation and oral defense of an acceptable thesis.
* Students must accumulate 30 credits in philosophy with satisfactory grades, 24 credits of coursework and 6 credits of thesis research. At least 18 of these credits must be earned while in residence.

Mission
Goals

Our students will be well prepared to attend Ph.D. programs in philosophy. They will have broad knowledge of the most important areas of philosophy and its history, and mastery of philosophical methods of argumentation. They will also have detailed knowledge in a particular sub-discipline of philosophy and (where relevant) its relations to other areas of inquiry, preparing them to conduct original research in this area. They will also be prepared to become contributors to philosophical knowledge by presenting their work at workshops and conferences.

Student Learning Outcomes

- Students will demonstrate a deep and broad knowledge of the main areas of philosophy and their history, and mastery of philosophical methods.
- Students will demonstrate the ability to contribute to philosophical knowledge by writing and presenting original philosophical research.

Ph.D. in Philosophy

Policies and Important Details

1. The Ph.D. in Philosophy is for students with a background in philosophy. Normally at least a B.A. in Philosophy is required.

2. To maintain status as a graduate student, registration in each fall and spring semester is required. Otherwise, admission lapses and permission to re-enter must be granted.

3. Once a student has completed all course and required research credit hours, he or she must enroll in “Research in Residence” status until the degree has been granted. “Research in Residence” status is considered full time enrollment. Time restrictions on obtaining degrees will be strictly enforced and can be waived only by the Dean of the Graduate School.

4. Upon completing the course requirements and passing the qualifying exams with a grade of 1 or 2, the student has completed the requirements for an M.A. in Philosophy.

5. Upon completing the course requirements, passing the qualifying exams with a grade of 2, and successfully defending the Ph.D. proposal, the student is eligible for admission to Ph.D. candidacy.

6. Upon passing the qualifying exams, the student in consultation with his/her selected Ph.D. dissertation committee chair will decide on the dissertation committee members. The dissertation committee will consist of not less than four members, three from the department’s graduate faculty, and one from outside the Department. The chair has to be a member of the graduate faculty. The duties of the dissertation committee are:

   a. To consult with and to advise students on their research.
   b. To meet, at intervals, to review progress and expected results.
   c. To read and comment upon the draft dissertation.
   d. To meet, when the dissertation is completed, to conduct the final oral examination and to satisfy itself that the dissertation is a contribution to knowledge and that it is written in lucid and correct English and submitted in approved form.

The candidate is well advised to have a final acceptable typescript of the dissertation in the hands of each member of his/her committee at a time reasonably in advance of the final defense of the work.

Curriculum Requirements

Students must accumulate a 60 credits in philosophy with satisfactory grades, 45 credits of coursework and 15 credits of dissertation research. At least 21 of the 45 credits must be for courses at the 700 level. At least 27 of these credits must be earned while in residence.

### Qualifying Exam

1. A comprehensive qualifying exam must be taken. Exams are given the grade of 0, 1 or 2. A student must receive a grade of 2 in order to proceed to the dissertation stage. The student is provided with a reading list in their intended area of specialization. The student studies the material on the reading list, writes a paper of around 8,000 words on a topic central to this material, writes a dissertation proposal of around 2,000 words, and participates in an oral defense of the paper and proposal as they relate to the reading list.

### Language Requirement

2. A student must possess the linguistic proficiency required by the proposed dissertation topic. This is determined by the dissertation proposal committee on the basis of examinations or coursework.

### PHD Dissertation

3. Presentation and oral defense of an acceptable dissertation.

### Mission

Our students will be well prepared to work as professional academic philosophers. They will have broad knowledge of the most important areas of philosophy and its history, and mastery of philosophical methods of argumentation. They will also have detailed knowledge in a particular sub-discipline of philosophy and (where relevant) its relations to other areas of inquiry, preparing them to conduct original research in this area. They will be able to disseminate philosophical knowledge by teaching a wide range of courses at the undergraduate level and specialist courses at the graduate level. They will also be prepared to become contributors to philosophical knowledge by presenting their work at conferences and publishing original research in the form of articles, monographs, and/or books.

### Goals

#### Student Learning Outcomes

- Students will demonstrate a deep and broad knowledge of the main areas of philosophy and their history, and mastery of philosophical methods.
- Students will demonstrate the ability to teach a wide range of philosophy courses at the undergraduate level, and courses in the area of specialization at the graduate level.
- Students will demonstrate the ability to contribute to philosophical knowledge by writing original philosophical research.

### Physics

http://www.physics.miami.edu

#### Degree Programs

All graduate students in physics must plan their entire program with the advice and approval of a departmental advisor.

The program of graduate studies in physics emphasizes research work, but also includes teaching experience as an essential element. Research and thesis opportunities are at present available in the fields of astrophysics and cosmology, atmospheric, ocean and quantum optics, biological physics, complexity, condensed matter/energy materials physics, elementary particle theory.

### Masters Program in Physics

- M.S. in Physics (p. 710)

### Doctoral Program in Physics

- Ph.D. in Physics (p. 711)

### M.S. in Physics

#### Curriculum Requirements

In addition to the general requirements for graduate degrees, the Physics Department makes the following specific requirements.

1. Submission of scores on the general Graduate Record Examination (GRE).
2. A minimum of 30 physics course credit hours at the 600-700 level are required for the Master Degree.
3. The following specific courses, or their equivalent, are required for the M.S. degree:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHY 640</td>
<td>Classical Mechanics II</td>
<td>3</td>
</tr>
<tr>
<td>PHY 660</td>
<td>Quantum Mechanics and Modern Physics I</td>
<td>3</td>
</tr>
<tr>
<td>PHY 661</td>
<td>Quantum Mechanics and Modern Physics II</td>
<td>3</td>

<tr>
<td>PHY 771</td>
<td>Quantum Theory II</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Select six additional physics course credits at the 600 or 700 level</td>
<td>6</td>
</tr>
</tbody>
</table>

Total Credit Hours 30

4. For the M.S. degree no more than 3 credit hours for reading courses may be counted, and no more than 2 credit hours of seminars. Up to 6 credit hours may be earned in thesis work for this degree.

5. The physics department offers a comprehensive graduate examination each year. All students are required to take the exam when it is offered.

6. Courses taken outside the department should be relevant to the students’ program and approved by the graduate advisor.

### Ph.D. in Physics

#### Curriculum Requirements

In addition to the general requirements for graduate degrees, the Physics Department makes the following specific requirements.

1. Submission of scores on the general Graduate Record Examination (GRE).
2. A minimum of 24 physics course credit hours at the 600-700 level are required for the Ph.D.
3. The following specific courses, or their equivalent, are required for the Ph.D degree:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHY 640</td>
<td>Classical Mechanics II</td>
<td>3</td>

<td>Quantum Theory II</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>Select six additional physics course credits at the 600 or 700 level</td>
<td>6</td>
</tr>
</tbody>
</table>

Total Credit Hours 30

4. The physics department offers a comprehensive graduate examination each year. A passing grade at an appropriate level is required for the Ph.D. A student is required to take the exam each year and is allowed two attempts toward a passing grade.

5. Courses taken outside the department should be relevant to the students’ program and approved by the graduate advisor.

6. Students are required to participate in research at the earliest opportunity. Specifically, upon passing the written graduate examination and before the end of the following semester, the student is required to select a faculty member who consents to serve as the student’s Ph.D. thesis advisor. Student and thesis advisor are to form, in a timely fashion, a dissertation committee to review an oral presentation of the student’s initial research activities and future plans. Should a student need to select a new thesis advisor, this selection must be made without delay, and the review process must be repeated.

7. Renewal of financial support from the department is contingent, each semester, upon satisfactory performance of teaching duties and research activities, and upon timely progress towards completion of all requirements for the Ph.D. degree.

### Mission

The mission of the Physics Ph.D program is to develop productive and creative research scientists and educators by providing students with a rigorous grounding in classical and modern theory, practice in advanced experimental techniques, training in a specialized field of research, and teaching experience.

### Goals

It is expected that graduates will be capable of conducting independent research, solving complex problems, communicating scientific results in both written and spoken form, and critically assessing the scientific literature.

### Student Learning Outcomes

- Students will demonstrate a rigorous grounding in classical and modern physics theory, the associated mathematical methods and their applications.
- Students will demonstrate their ability to conduct independent research, incorporating the ability to critically analyze and address a fundamental problem in their chosen field.
- Students will demonstrate the ability to communicate research findings effectively.

### Political Science

politicalscience.as.miami.edu

The MPA program is designed to prepare students for a career of public service. Students will be exposed to the essential components of public service professionalism—excellence in technique, ethics and leadership—to help meet the challenges in the years ahead. Our award-winning, student-oriented faculty is dedicated to helping you achieve this “professional edge” in small, stimulating seminars, convenient evening courses, super-modern facilities and we have an excellent record in placing graduates.

### Masters Program in Political Science

- M.P.A. Masters in Public Administration (p. 714)
Joint Program in Political Science
- J.D./M.P.A. Joint Degree Program (p. 712)
- M.A.I.A./M.P.A. Joint Degree Program (p. 713)
- MPH/MPA Joint Program (p. 959)

Certificate in Public Administration

The Certificate in Public Administration is available in both the traditional and online platform. The program is available to a student wishing to earn just a certificate or to a student who wants to earn a spot in the master’s of Public Administration program but does not meet the admission criteria. The Certificate requires the completion of any six of the core MPA courses with a grade of B or higher in all six courses (see MPA course listing (p. 714)). Students who successfully earn a B or higher in all six core courses are then eligible to enroll in the Masters in Public Administration program.

J.D./M.P.A. Joint Degree Program

The joint program allows students to obtain both JD and MPA degrees in four years. The program is designed to prepare law school students for government, political and nonprofit legal positions. The first year is spent in the Law School and years two through four are spent taking both Law and MPA courses.

To be admitted to this program, students must apply separately to both programs. Students may apply to the MPA program prior to beginning law school or anytime during the first or second year of law school. Students may begin the MPA program in the fall, spring or summer semesters. For further information contact the Department of Political Science at 305-284-2401 or the Law School at 305-284-5535.

The Masters of Public Administration program seeks to provide the highest quality graduate education for current and prospective public service officials in government and nonprofit organizations. The program strives to achieve local, state and national prominence through a contemporary curriculum, innovative instruction, scholarly and applied research, and service to key stakeholders. Program activities are designed to develop and enhance management skills essential to public and nonprofit organizations oriented towards a diverse metropolitan environment.

**Mission**

The Masters of Public Administration program seeks to provide the highest quality graduate education for current and prospective public service officials in government and nonprofit organizations. The program strives to achieve local, state and national prominence through a contemporary curriculum, innovative instruction, scholarly and applied research, and service to key stakeholders. Program activities are designed to develop and enhance management skills essential to public and nonprofit organizations oriented towards a diverse metropolitan environment.

**Goals**

**Student Learning Outcomes**

- Students should be able to demonstrate critical analytical and writing skills related to public policy and administration by the time they graduate.
- Students will demonstrate oral communication skills.
- Students will demonstrate analytical competencies acquired through internships.

**M.P.A. Online**

The MPA program is designed to provide students with a comprehensive and holistic understanding of what you will need to be an effective public service leader. Students will explore the most critical areas of public administration, planning and financial budgeting, political analysis and personnel administration as well as contemporary issues in Ethics, Digital Governance, NGOs and Global Governance. Assignment examples include practice in management consulting, policy making and democratic input.

Influence the future of your community. A Master’s degree in Public Administration from the University Miami gives you access to a rewarding career in Public Service. According to the Bureau of Labor Statistics, this is a growing field with the number of new government jobs predicted to increase by 1.4 million over the next ten years. Visit our website for more information. (http://miami.edu/online/programs/masters-in-public-administration/)

• Students will demonstrate oral communication skills.
• Students will demonstrate analytical competencies acquired through internships.

M.P.A./M.P.H. Second Master's Degree in Public Health
Master of Public Administration Joint Degree (MPA/MPH)
The Master of Public Administration/Master in Public Health (MPA/MPH) degree is offered jointly by the University of Miami College of Arts and Sciences and the Miller School of Medicine's Department of Public Health Sciences. The joint degree is designed for students who seek an in-depth knowledge of public health with training in management and public policy administration. Students may complete the requirements for the MPA and MPH degrees consecutively or in succession.

Applicants must be admitted into the MPH and MPA programs on a separate basis, based on the admissions requirements and procedure of each individual program. Acceptance by one program does not in any way indicate or guarantee acceptance by the other degree program. Both the MPA and the MPH degree programs require the Graduate Record Exam (GRE) as part of the admissions requirement.

Average Program Duration: 2.5 years
Number of required credits: 66

Doctoral Program in Psychology
• Ph.D. in Psychology (p. 717)

MS in Psychology- Applied Behavior Analysis
http://www.psy.miami.edu/aba/

The Master’s program specializing in Applied Behavior Analysis is a full-time graduate program for students who have earned a bachelor’s degree in Psychology or a related field and are seeking further training and/or professional certification in Applied Behavior Analysis. The 42-credit program begins each Fall and is designed to be completed in five consecutive semesters [Fall/Spring/Summer/Fall/Spring]. Students who complete the program will meet at the University instructional coursework and experiential [practicum] requirements necessary to take the exam to become a Board Certified Behavior Analyst [BCBA].

Total Credit Hours 42

1 Classroom-based courses are offered in a face-to-face didactic format.
2 Practicum course experiences are provided within University of Miami-based ABA training clinics. Each practicum course requires students complete 15 hours per/week of supervised clinical work.

Mission

Goals

Students completing the master’s degree ABA program will meet the instructional/practicum requirements necessary to obtain certification as a Board Certified Behavior Analyst (BCBA), a master’s level certification offered by the Behavior Analyst Certification Board (BACB).

Student Learning Outcomes

- Students will acquire knowledge of foundational principles and concepts in applied behavior analysis.
- Students will acquire clinical competency in the implementation of applied behavior analytic treatments and procedures.
- Students will demonstrate ethical and responsible behavior analytic practices, in a manner that is consistent with the BACB Professional and Ethical Compliance Code for Behavior Analysts.

Ph.D. in Psychology

Curriculum Requirements

1. The principal goal of the graduate program in Psychology is to prepare the student for a career contributing to the growth of scientific knowledge in psychology.
2. Applicants for admission to graduate status in psychology shall have a. a minimum average of B.
   b. at least 18 credit hours of psychology that must include courses in Introductory Psychology, Statistics, and Experimental Psychology or Research Methods.
   c. Students lacking the necessary preparation must ordinarily make up deficiencies prior to admission to the Graduate School.
3. All applicants must present the Graduate Record Examination (Aptitude Tests; Advanced Test in Psychology preferred). In all cases admission to graduate degree programs in Psychology is competitive, since available resources do not permit admission of all qualified applicants.
4. The Ph.D. program in Psychology has four clinical tracks [Adult Clinical, Child Clinical, Health Clinical, and Pediatric Health] and four non-clinical tracks [Behavioral Medicine, Cognitive-Behavioral Neuroscience, Developmental, and Evolution and Behavior]. All Ph.D. programs in Psychology require a minimum of 72 credit hours, including 6 thesis credits (PSY 810) and 12 dissertation credits (PSY 830). Non-clinical programs require a minimum of 60 credit hours including 6 thesis credits (PSY 810) and 12 dissertation credits (PSY 830).
5. PSY 680 and PSY 681 will not be counted toward the 72 credit hour minimum.
6. A Master of Science in Psychology based upon 24 credit hours of course work and 6 credit hours of Master’s thesis research is a component of all programs.
7. In cases in which a student has a prior graduate degree, the number of credit hours required for the Ph.D. may be reduced at the discretion of the Department.
8. All programs in Clinical Psychology require an internship.

Mission

The mission of the graduate program in the Department of Psychology is to train students to acquire, advance, and disseminate knowledge within the Psychological and Biobehavioral Sciences.

Goals

In order to achieve these goals the graduate program: 1. Develops advanced understanding of behavioral, psychological, and biological processes; 2. provides rigorous training in research design and analysis, develops advanced research skills; 3. provides detailed scientific knowledge about psychology as well as clinical psychology training and practical experience for those students seeking applied training in a career as a clinician scientist, in accordance with the American Psychological Association guidelines for accreditation in Clinical Psychology; and 4. fosters independent learning, enabling the graduate to contribute to the scientific field of Psychology, including Clinical Psychology.

Student Learning Outcomes

• Students will demonstrate an understanding of behavioral, psychological, and biological processes and knowledge of the core curriculum, clinical curriculum, and specialty area.
• Students will demonstrate knowledge and skills in research methods and analysis.
• Students will demonstrate appropriate professional conduct, excellent clinical assessment and/or clinical intervention skills.

Sociology

sociology.as.miami.edu

Dept. Code: SOC

Graduate Program Overview

The Graduate Program in Sociology at the University of Miami is intended to equip students with the theoretical, methodological, and analytical tools required for research and teaching. The Graduate Program in Sociology is designed for students seeking the Doctor of Philosophy (Ph.D.) in Sociology. The Master of Arts (M.A.) degree is earned during the first portion of the program. At the doctoral level, graduate students are encouraged to choose two concentrations from three substantive areas:

1. Criminology.
2. Race & Ethnic Relations, and Immigration
3. Medical Sociology.

Although the strengths of the department lie within these major programmatic fields, students may also develop a course of study that meets unique research interests and career objectives. Assistantship and fellowships are awarded each academic year to cover tuition and living expenses.

For more details, consult the Guide to Graduate Study in Sociology available through the Sociology Department (http://www.as.miami.edu/sociology/).

1 An M.A. or and M.S. degree is required for admission to this program. The courses taken for the Ph.D. must be different from the courses taken for the M.A. degree.

2 A maximum of 6 Pre-Candidacy Doctoral Dissertation credit hours may be taken.

3 With reference of the 45 total credit hours, it is anticipated that three credit hours will have been taken as electives at the M.A. level.

4 The satisfactory completion of the requirements of the Graduate School as stated in this Bulletin

Mission

The Graduate Program in Sociology at the University of Miami is designed to equip students with the theoretical, methodological, and analytical tools required for teaching and conducting research in academic and non-academic (e.g., government and private industry) settings. This goal is accomplished through a combination of classroom learning, comprehensive exams, independent research (particularly the thesis and dissertation), and teaching undergraduate students.

Goals

Student Learning Outcomes

- Students will develop a knowledge of, and the ability to use, classic and contemporary sociological theory.
Objectives
Science in general, and Lean Six Sigma Management specifically. The areas of science, technology, and management as related to Quality through the acquisition, dissemination, and application of knowledge in practice of Quality Science. Its mission is to promote the improvement Manufacturing and Service (UMISQ) exists to advance the theory and digital innovation are at a premium across all sectors and geographies.

Impact
From developing business and analytics knowledge and skills, to inspiring the analytics-driven digital innovation, to delivering pro-bono business and analytics consulting, the Institute focuses on developing university graduates and knowledge for a world in which analytics and digital innovation are at a premium across all sectors and geographies.

Role
The Institute serves as a focal point and home for students and faculty from the University of Miami and select partner institutions throughout the globe, facilitating curricular, co-curricular, and industry-oriented activities related to business education, business analytics, and digital innovation.

Graduate Business Student Association
The Graduate Business Student Association (GBSA) is a professional and social student-run organization. All graduate business students become members once enrolled in a business master’s or doctoral program and are encouraged to attend meetings and events. The GBSA organizes activities and events aimed at strengthening networking within the graduate business student body and the business community while enriching the academic and social experiences of its members. The GBSA is governed by a committee that consists of a president, vice president, treasurer, secretary, marketing director, community service director, networking director, wellness and athletics director, and a Graduate School Association senator. In addition, cohort representatives are elected per program to serve as a liaison between their respective cohort and the committee.

Financial Assistance
Graduate Business Scholarships and Fellowships
There are a limited number of merit-based graduate business scholarships which are awarded at the time of admission to qualified full-time MBA and specialized Master’s students. A graduate business scholarship covers a portion of tuition for the MBA and specialized Master’s degree. Graduate business scholarships are not automatically renewed.

In addition to graduate business scholarships, there are a limited number of Emery Means Findley, Jr. Fellowships and scholarships which are awarded by Graduate Business Programs to applicants with outstanding academic credentials. Any applicant who wishes to be considered for a graduate business scholarship or a fellowship, must indicate this in the space provided on the application. Awards are available to both domestic and international students.

There may be a limited number of merit/need-based scholarships which are awarded following admission to Professional and Executive programs. Details on how to apply for these scholarships are provided at the time of admission.
Donor Scholarships

Several endowed scholarships are made available to incoming graduate business students through the generosity of alumni and friends of the University of Miami Business School. These donor scholarships are for the purpose of recruiting students of high academic merit. The total number and amount of scholarship awards vary from year to year.

Scholarships will be awarded based on the recommendations of the Faculty Admissions Committee on a first come, first served basis. Since the number of scholarships is limited, students who meet the minimum criteria are not guaranteed a donor scholarship award.

We regret that a student may be ineligible for financial awards if he/she receives tuition benefits from the University of Miami or accepts any assistantship, scholarship, grant or fellowship from the University of Miami, in addition to our offer. This includes employees, their spouses, and dependents.

BANK OF AMERICA - ENDOWED BUSINESS SCHOLARSHIPS^1
Criteria: A graduate business school student based on a combination of scholarship and financial need, who will preferably specialize in Finance, Accounting, or Management.

JACK R. BORSTING - GRADUATE SCHOLARSHIP ENDOWMENT
Criteria: Outstanding candidate for a master’s level business degree.

RYDER/PATRICK J. CESARANO – ENDOWED SCHOLARSHIP^1
Criteria: MBA student with a concentration in finance or management science/operations research. Based on academic excellence and financial need.

PAT & LON WORTH CROW - SCHOLARSHIP ENDOWMENT^1
Criteria: Graduate business student specializing in Finance, who possesses several years of work experience, preferably with an expressed interest in a career in banking or a banking-related field. U.S. citizen, preferably resident in South Florida community.

EMERY MEANS FINDLEY, JR. – ENDOWED GRADUATE FELLOWSHIPS IN BUSINESS
Criteria: Outstanding candidates for Graduate Business Programs.

DEAN M. FOGEL BUSINESS ENDOWED SCHOLARSHIP
Criteria: Graduate business student with financial need and priority is for a United States veteran.

ALBERT AND ESTHER GREEN ENDOWED SCHOLARSHIP
Criteria: Graduate business student with a health challenge, or student studying or working in Health Administration.

ALLAN M. HERBERT & PATRICIA M. HERBERT – ENDOWED GRADUATE BUSINESS SCHOLARSHIP^1
Criteria: Outstanding graduate business student, well-rounded, willing to finance his/her own education, and who appreciates the value of work and strives to combine study, work and extra-curricular activities.

JAMES W. McLAUGHLIN – GRADUATE BUSINESS FELLOWSHIPS
Criteria: To recruit and retain outstanding graduate business students.

E. BRUCE MCLAUGHLIN & CYNTHIA M. SWOL - ENDOWED SCHOLARSHIP IN MARKETING^1
Criteria: Graduate business student with concentration in Marketing, who has significant work experience prior to entering the MBA program. U.S. citizen, with preference given to female students with unmet financial need.

MERRILL LYNCH & CO. FOUNDATION, INC. – FELLOWSHIPS IN INTERNATIONAL FINANCE
Criteria: Graduate business student preparing for a career in International Finance.

CHARLES & ROSE NATIELLO AND THOMAS A. NATIELLO, JR. BUSINESS SCHOLARSHIP
Criteria: Full-time Graduate Business student who has completed one year and is enrolled in a two-year program with a 3.5 GPA or higher.

PIECHOSKI FAMILY GRADUATE BUSINESS FELLOWSHIP
Criteria: Outstanding graduate business student.

SOUTHEAST BANKING CORPORATION FOUNDATION – ENDOWED SCHOLARSHIPS^1
Criteria: Graduate student in the MBA program who is a Florida resident. Based on academic excellence and financial need.

SOUVIRON FAMILY SCHOLARSHIPS - Annual MBA Scholarship
Criteria: The annual scholarship is for a MBA student with financial need with a preference for an Eagle Scout, if someone meets that criteria. If not, a qualified MBA student with need.

1 Essay Required: In 300 words or less, please explain why you need financial assistance to complete your MBA degree. The essay must be included with your application.

Various other donor scholarships are available based upon need, merit, or other specified criteria.

Ziff Graduate Career Development Center

The Ziff Graduate Career Development Center’s mission is to help all Miami Business School graduate students launch and develop successful, rewarding careers. Through career exploration, recruiting preparation, and career readiness training students can excel in any career path they choose. The Center provides students with a full menu of resources and services including career assessments, personal branding, resume review, job search coaching, mock interviews, salary negotiation, and all types of professional development.

The Ziff Graduate Career Development Center’s staff is comprised of career coaches and employer relations professionals who are dedicated to positioning students for the best career opportunities possible. Through individual coaching sessions, career development programming, and a variety of employer events the staff ensures students are set up for success. Examples of employer events are guest speakers, panels, information sessions, and career fairs. The Center also develops relationships with companies from local to global scale to offer internship and full-time employment options. Even after accepting a job offer, students can partner with the staff on a professional development plan to close any remaining skill gaps for their new role.

A graduate business career search can be challenging in the dynamic and complex job market of today’s global economy. The Ziff Graduate Career Development Center exists to help students navigate and stand out in this challenging yet exciting environment. Students who leverage the full array of resources and services offered by the Center will undoubtedly reap the rewards in their career search and development.

The Mentor Program

1. The Miami Business School Mentor Program is designed to enhance the classroom experience by matching students with professionals.
who have experience and expertise in the students’ area of career interest, or are versed in areas of professional development.

2. Through personal interaction with experienced business professionals, students gain an understanding of corporate culture, career directions, and networking. Students also have the opportunity to interact with other mentors by attending regularly scheduled round tables, hosted by the School.

3. Graduate business students are encouraged to participate.

4. Applications are available on our website. (https://miamimentoring.chronus.com/about/)

**Doctoral Programs in Business**

- Doctorate of Philosophy in Business (p. 723)
- Doctorate of Philosophy in Economics (p. 724)

**Certificate Programs**

- Certificate in Accounting Practice (online) (p. 751)
- Certificate in Corporate Finance (online) (p. 752)
- Certificate in Financial Decision Making (online) (p. 752)
- Certificate in Leadership (p. 753)
- Graduate Business Certificate (p. 751)

**Doctoral**

**Doctoral**

The doctoral program at the University of Miami Business School links world-class faculty with accomplished PhD candidates to prepare them for careers in academic research and teaching. The PhD in Business and PhD in Economics programs combine interdisciplinary study and research with one-on-one mentoring from faculty experts in your area of interest.

- Doctorate of Philosophy in Business (p. 723)
- Doctorate of Philosophy in Economics (p. 724)

**Doctorate of Philosophy in Business**

**Doctor of Philosophy in Business**

The PhD in Business program combines interdisciplinary study and research. It is designed to prepare students for careers in academic research and teaching. Students follow specialized programs of study under the guidance of faculty experts. In addition, they have the opportunity to participate in cross-disciplinary training. The curriculum will also equip students with the skills and experience necessary for academic placement in the world's top research universities.

A minimum of 60 credit hours are required to earn the PhD in Business degree. The program requires year-round, full-time study in order to maximize interaction between faculty and students. Students are expected to interact and begin research projects with the faculty upon entering the program.

The requirements for the PhD in Business degree are the same as those listed in the general section.

Students may choose to concentrate their study in:

- Accounting
- Finance
- Management Science
- Marketing
- Operations Management
- Organizational Behavior
- Strategy/International Business

**Required “Core” Courses**

*These courses can be waived by consent of the appropriate department; waiver is granted by issuing transfer credit hours for similar courses taken at the advanced graduate level at accredited institutions.*

There are two streams of “core” courses for students, each comprising of five courses.

**Stream I**

(Accounting, Finance, Management Science, Marketing-Quantitative, and Operations Management)
**Doctorate of Philosophy in Economics**

**Stream II**

(Marketing-Consumer Behavior, Organizational Behavior, Strategy/International Business)

</tbody>
</table>

**Area of Concentration Courses**

*These are to be decided by the student and faculty.

*Students in the Management Science concentration are required to complete at least 30 graduate credits in STEM courses.

In total, a minimum of 33 credit hours in concentration courses are to be taken, up to 15 of which may be satisfied by transfer-credit hours. Some Departments may require students to complete a minor field. If so, their major field must consist of a minimum of 24 credit hours (with at least 15 credit hours completed in doctoral program residence at the University of Miami). The minor field would then consist of 9-12 credit hours in an area outside of the major concentration (with a minimum of 9 credit hours taken in doctoral program residency at the University of Miami).

**Dissertation Research**

12 credit hours are to be taken at a minimum—two semesters of 6-9 credit hours each. No transfer credit is given for dissertation or prior research.

**Total Credit Hour Requirements**

In total, a minimum of 60 credit hours are required for receiving the Ph.D. degree in Business:

<table>

</tr>
</tbody>
</table>

To this total must be added any prerequisite courses (as outlined above), with transfer-credit hours being subtracted.

**Mission**

The mission of the PhD in Business program is to attract the best and brightest students and train them to become serious research scholars who are capable of being placed in faculty positions in leading business schools after they graduate.

**Goals**

- Understand the latest theories in their chosen field of study to create new knowledge.
- Demonstrate research methodology skills to conduct rigorous academic research.
- Demonstrate effective written and oral communication skills to disseminate the knowledge.

**Student Learning Outcomes**

- Students will demonstrate their understanding of the extant literature, theories, and concepts in their chosen field of study.
- Students will demonstrate their understanding of appropriate research methods to conduct appropriate empirical and/or theoretical research.
- Students will develop good communication skills to be able to present their research effectively to academic audiences, and write research articles that can be published in refereed academic journals.

**Doctorate of Philosophy in Economics**

The Ph.D. program in Economics prepares the recipient for a variety of research-oriented career opportunities, including university research/teaching, government employment, and a host of employment opportunities in the private sector.

**Mission**

The mission of the Ph.D. Program in Economics is to give students the skills, knowledge, and research training necessary to produce high-quality research needed for successful careers in the academic, government, and private sectors and enabling them to be leaders in their respective institutions.

**Goals**

**Student Learning Outcomes**

- Students will be knowledgeable in the core economic fields of microeconomic and macroeconomic theory.
- Students will be able to generate original research questions, complete original empirical and/or theoretical research, and write original research papers.
- Students will be able to present and explain their research findings to a general and an academic audience. They should also be able to effectively present economic principles to undergraduate students as well as in their research in academic conferences.

**MBA Programs**

**MBA Programs**

The MBA (Master of Business Administration) at the University of Miami Business School prepare students for leadership in today’s rapidly changing global economy. In order to compete and succeed in the 21st century, business leaders must not only be able to adapt to change, they must drive change. At the Miami Business School, we not only prepare students for careers in management and leadership positions, we produce creative thinkers, strong communicators, and the best negotiators.

MBA programs are offered in different formats to serve the diverse academic and business needs of our constitutes including full time, part time, hybrid, and online.

**Executive and Professional MBA Programs**

**Executive MBA and Professional MBA Programs**

The University of Miami Business School offers Executive and Professional MBA programs that are designed for accomplished professionals who are ready to take their career to the next level without interrupting their career. Participants gain insight and understanding into the business environment by gaining a more global outlook and are better equipped to meet the challenges of today’s business world. They become better negotiators, strategic thinkers, and more effective team players in a variety of business related situations. Programs include:

- Professional MBA
- Global Executive MBA
- Global OneMBA®
- Executive MBA in Health Sector Management and Policy

**Global Executive MBA**

The Global Executive MBA program is aimed at senior executives who want to further their business acumen and enhance their understanding of conducting business globally. The format flexibility and length of the program will permit students to earn their MBA. The 17-month program blends face-to-face on-campus modules, which include executive presentations, case studies and group projects, with distance learning. It covers four focus areas (Global Strategy and Execution; Managing Global Operations and Decision Making; Global Multi-Cultural Leadership; and Entrepreneurship, Innovation and Technology) through eleven courses or modules, as well as an Integrated Project carried out in nine on-campus residencies and eight Inter-Residencies (distance-learning). The Global EMBA is lock-step in nature. Students will progress together through a sequential pattern of courses. The students will obtain their MBA after the successful completion of 45 credit hours over an 17 month period.

To obtain detailed program admission and curricula information please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our
website (http://www.bus.miami.edu/graduate-programs/executive-mba/emba-americas/).

¹. Runs throughout the program.

**Mission**

- To develop innovative ideas and principled leaders that transform global business and society.

**Goals**

**Student Learning Outcomes**

- The MBA students will demonstrate the ability to integrate business information and knowledge within the strategies and perspectives of an organization.
- The MBA students will demonstrate the ability to understand and utilize the process of critical and analytical thinking in diverse business settings to solve problems and make decisions.
- The MBA students will demonstrate sensitivity to issues in business decision-making from an ethical and social perspective (principled leaders).
- The MBA students will demonstrate an understanding of business operations and decision-making in a global environment.

**Global OneMBA**

The University of Miami Business School’s Global OneMBA® program empowers students with the knowledge, insight, leadership skills, global understanding, and the support network to drive their career forward. The program delivers a truly global curriculum built and simultaneously delivered by all five partner schools. Students also benefit from global residencies on four continents. The five partner schools that make up the OneMBA® consortium are:

- USA: Miami Business School, University of Miami
- Brazil: FGV São Paulo School of Business Administration (FGV)
- China: School of Management, Xiamen University (SMXMU)
- Mexico: EGADE Business School of Tecnológico de Monterrey
- The Netherlands: Rotterdam School of Management, Erasmus University (RSM)

**Health Sector Management and Policy**

The University of Miami Herbert Business School Executive MBA in Health Sector Management and Policy Program prepares graduates for positions of leadership in health care and health-related organizations. The program focuses on the post-graduate educational needs of professionals already fully employed in the health care industry, as well as those aspiring to careers in the field. Combining its strengths in graduate business education and its close relationships with the South Florida health care community, the program teaches practical administrative skills as well as broad strategic and theoretical perspectives to students who wish to expand their knowledge of management and administration as applied to the health care industry.

Mission

- To develop innovative ideas and principled leaders that transform global business and society.

Goals

Student Learning Outcomes

- The MBA students will demonstrate the ability to integrate business information and knowledge within the strategies and perspectives of an organization.
- The MBA students will demonstrate the ability to understand and utilize the process of critical and analytical thinking in diverse business settings to solve problems and make decisions.
- The MBA students will demonstrate the ability to gain an awareness of and a sensitivity to issues in business decision-making from an ethical and social perspective (principled leaders).
- The MBA students will demonstrate an understanding of business operations and decision-making in a global environment.

Professional MBA

Professional MBA

The University of Miami Herbert Business School's Professional MBA Program is designed to help busy professionals gain that competitive edge to meet the new demands of today's organizations. Created specifically with the hard-working professional in mind, the Professional MBA prepared students to join the ranks of those leading the business world of tomorrow without having to compromise their existing work schedule. Classes meet twice a week, on Monday evenings and Saturday mornings.

To obtain detailed program admission and curricula information please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (https://www.bus.miami.edu/academic-programs/mba-masters/professional-mba/).

Full Time MBA Programs

Full-Time MBA Programs

The University of Miami delivers full-time MBA programs that are innovative, flexible and career focused. They are designed for those who either have an undergraduate background in business, or are from other industry areas interested in a career in business. The curriculum not only prepares students for leadership in business, it adds a valuable dimension to other professions. Students become better negotiators, strategic thinkers, and more effective team players in a variety of business related situations. Programs include:

- Two-Year MBA
- Accelerated MBA
- Accelerated MBA in Real Estate
- JD/MBA (Joint Degree)
- MD/MBA (Joint Degree)
- JD/LLM/MBA
- BArch/MBA (Joint Degree)

Accelerated MBA

Accelerated MBA Program

The Accelerated MBA program at the University of Miami Herbert Business School allows students to fast-track their career through hands-on opportunities in the city that is shaping the future of business. The Accelerated MBA gives eligible students the unique opportunity to earn an MBA in less than a year. Candidates with an undergraduate degree in business or a graduate degree in business or related discipline are encouraged to apply. The program begins in May and runs through December, for a duration of 7 months.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (https://www.bus.miami.edu/academic-programs/mba-masters/accelerated-mba/).

Accelerated MBA in Real Estate

Accelerated MBA in Real Estate

The Miami Herbert Business School offers an accelerated MBA program with a concentration in real estate highlighted by two internship opportunities. Bringing together the School’s strengths in management
education with the strengths of the UM School of Architecture in new urbanism, the program prepares students to succeed in commercial real estate market careers. This program is designed to meet the needs of the student with an undergraduate degree in business. Applicants must demonstrate successful completion of the core business courses: Financial and Managerial Accounting, Microeconomics, Macroeconomics, Statistics, Calculus, Organizational Behavior, Operations Management, Marketing, and Finance.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/full-time-mba/real-estate/index.html?utm_source=undefined&/utnm_medium=undefined&).

**BArch/MBA**

The Bachelor of Architecture/Master of Business Administration is an exciting joint venture with the Miami Business School and School of Architecture, which will allow students to earn a Bachelor of Architecture as well as a Master of Business Administration. The joint degree offers students the unique opportunity to complete the two degrees in six years, saving an entire year by combining the programs.

Students will begin taking Saturday graduate level business courses during the fourth year of their architecture program. Both degrees are fully accredited by their respective accrediting bodies — the NCARB and AACSB International.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://www.arc.miami.edu/academics/undergraduate/bachelor-of-architecture-mba/).

Triple Degree Program: A Specialized Option for Business Majors

The University of Miami School of Law and the Miami Business School have created a triple degree program - a JD, an LLM in Tax or Real Property Development, and an MBA - which can be completed in just four years and two summers.

This program offers a combination of legal and business degrees to students who were undergraduate business majors. These credentials are ideal for anyone with a long-term goal of servicing top corporate clients or becoming a senior executive at a bank, real estate company,
or financial institution. They also serve as significant assets in today's competitive marketplace to any attorney starting out in tax or real estate law.

To obtain detailed program admission, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/full-time-mba/jd-llm-mba/).

**JD/MBA**

**Juris Doctor /Master of Business Administration**

The University of Miami School of Law and the Miami Herbert Business School offer a joint degree program in law and business. Upon completion of this program, a student earns the Juris Doctor degree from the School of Law and a Master of Business Administration degree from the Miami Herbert Business School.

Students who apply for the joint J.D./M.B.A. program must apply to both the School of Law and the Miami Herbert Business School. The applicant must achieve a qualifying score on the Law School Admissions Test (LSAT) and the Graduate Management Admissions Test (GMAT) for admission to the respective schools. The applicant must notify both schools that he or she is applying for the joint J.D./M.B.A. program, and in order to remain in the joint program, the student must meet minimum standards of both the School of Law and the Miami Herbert Business School.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/full-time-mba/jd-llm-mba/).

In addition to all requirements for the J.D degree, students in the joint J.D./M.B.A. program must complete the following courses:

- LAW 406 - Professional Responsibility
- LAW 100 - Business Associations
- LAW 101 - Commercial Law
- LAW 105 - Federal Income Tax

**MD/MBA**

The University of Miami Herbert Business School offers a joint MD/MBA degree program in partnership with the University’s Miller School of Medicine (http://www.med.miami.edu/). The business curriculum prepares future physicians for the business complexities related to running a private medical practice or heading a group practice, and...
prepares medical students for careers in health sector management, leadership, and policy.

The MD/MBA program adds an additional year to the four-year medical school curriculum. The MBA coursework ranges from financial reporting and corporate strategy to the legal aspects of health administration.

MD students are eligible to apply to the MD/MBA program during their 3rd year of Medical School and will be required to submit a Full-Time MBA online application and the GMAT (http://www.mba.com) to be considered for the program.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/full-time-mba/md-mba/).

### Two Year MBA (The Miami MBA)

#### Two Year MBA Program (The Miami MBA)

The full-time two-year MBA Program (The Miami MBA) is innovative, flexible, and career-focused. Candidates with an undergraduate degree in any field with work experience who seek advanced business expertise as a springboard to their career are encouraged to apply. The curriculum not only prepares students for leadership in business, but it adds a valuable dimension to other professions.

The Miami Business School’s full-time MBA program is 56 credit hours and is completed in less than two calendar years. The curriculum provides a framework that accelerates growth. Students gain new perspectives and have the opportunity to prove and polish their leadership skills. They learn to think critically across subjects, linking their knowledge of management, economics, and marketing with finance, business law, and technology.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (https://www.bus.miami.edu/academic-programs/mba-masters/two-year-mba/).

**Specialized Master Degrees**

**Mission**
- To develop innovative ideas and principled leaders that transform global business and society.

**Goals**

**Student Learning Outcomes**
- The MBA students will demonstrate the ability to integrate business information and knowledge within the strategies and perspectives of an organization.
- The MBA students will demonstrate the ability to understand and utilize the process of critical and analytical thinking in diverse business settings to solve problems and make decisions.
- The MBA students will demonstrate the ability to gain an awareness of and a sensitivity to issues in business decision-making from an ethical and social perspective (principled leaders).
- The MBA students will demonstrate an understanding of business operations and decision-making in a global environment.

**Specialized Master Degrees**

**M.H.A. in Health Management and Policy**

*Pending approval by the UM Board of Trustees*

**Overview**
The MHA program helps students understand business principles and their application to the health care sector. Students enrolled in the Master in Health Administration (MHA) program hone skills in business fundamentals such as finance, accounting, human resources, and process improvement, and gain knowledge in health care specific areas including the structure, organization, policy, and delivery of health care; health economics; and information technology; among others. Students also gain a comprehensive lens through which they can approach solutions in their careers through first-hand experience of daily operations and opportunities to improve processes. Students have access to C-suite leaders in the classroom and other venues. Each student will also have the opportunity to participate in an off-site internship experience. Graduates of the program are prepared to be leaders in the management and administration of health care systems, physician groups, insurance companies, medical device companies and health care facilities.

Mission
The Master in Health Administration (MHA) is designed to prepare future leaders to develop knowledge and mastery of skills to meet the critical challenges facing the health care industry.

Goals
The program objectives are to:

- Understand basic principles and their application to the health care sector.
- Expose participants to key health care industry concepts associated with the dynamic, continuously changing, and complex management and policy aspects of the health care sector.
- Prepare future leaders to develop knowledge and mastery of skills to meet the critical challenges facing the health care industry.

Student Learning Outcomes
- Students will be able to predict impacts and unintended consequences of health care policies, differentiating between associated and causal factors, using aggregate data to inform their predictions. This maps directly from the course objectives and analytic competency in the syllabus: using the most valid and reliable sources of information to assess the dimensions of health system issues and their solutions, and present such solutions in an organized, convincing framework.
- Students will demonstrate the ability to integrate key economics concepts of supply, demand, scarcity, and opportunity cost in the health care setting.
- Students will demonstrate the ability to integrate key MHA competencies with business principles and health care fundamentals to complete a capstone project working directly with a health care organization.

M.S. in Sustainable Business

Master of Science in Sustainable Business

The University of Miami Business School’s Master of Science in Sustainable Business provides students the opportunity to be a force for good inside a company by making positive impacts on the environment and society in a way that increases the long-term value of the firm and is consistent with the firm’s strategy and vision. The unique disciplinary team of the program unites business, science, theory, and practice to provide forward-thinking expertise for those focused on where the world is headed. Beyond the business core courses, students receive training in scientific basics through interdisciplinary electives from the University of Miami’s Rosenstiel School of Marine and Atmospheric Science and the Department of Civil Architecture and Environmental Engineering.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (https://www.bus.miami.edu/academic-programs/mba-masters/masters/sustainable-business/).

Credit Hours
16

Total Credit Hours
32
Mission
The M.S. in Sustainable Business aims to address the growing need for a master's level program to prepare students for careers in corporate sustainability.

Goals
• To provide rigorous, business focused graduate education to those pursuing a degree in sustainable business.
• To educate students in the scientific basis of sustainability programs.
• To provide students with experiential training in the development of a business sustainability project.

Student Learning Outcomes
• Students will be able to apply rigorous, data driven methods to measure, report, and analyze sustainability programs.
• Students will be able to evaluate the economic value of sustainability programs.
• Students will demonstrate written and oral communication skills needed to succeed in sustainability-related professions.

Master in International Business

Mission
To help students develop the competencies, expertise, and mindset with which to advance their goal of becoming principled leaders of global businesses and societies.

Goals
Students completing the MIBS program will be able to understand and integrate basic international business concepts and to apply analytic models and techniques for international business decision making, planning and execution. They'll acquire international functional skills to formulate and implement international business strategies, as well as gain an understanding of a particular region of the world and successfully apply the acquired international business frameworks and expertise to profit from international business opportunities and/or to cope with international business challenges.

Student Learning Outcomes
• To develop the Business Core Foundations.
• To integrate all acquired knowledge/expertise through an internationally-focused practical project.
• To acquire a global perspective and gain the basic International Business expertise.

Master of Accounting
The Master of Accounting (MAcc) and Master of Science in Taxation (MST) programs are similar in that they offer an opportunity to concentrate in accounting, but they differ in degree of specialization and career path orientation. The MAcc offers two separate tracks in assurance and corporate accounting while the MST is designed for students interested in careers in taxation. In addition to the traditional one year of full-time study beyond the Bachelor’s level, the MAcc and the MST programs are offered as accelerated programs for University of Miami undergraduates.

Scholarships
University of Miami School of Business - Alumni Association Endowed Accounting Scholarships are available for students pursuing Graduate Studies in Accounting. Various other scholarships and assistantships may be available.

Accounting Summer Intensive Program
The Accounting Summer Intensive Program is designed for students who hold at least an undergraduate business degree in a field other than accounting from an accredited college or university and for foreign students.

Non-Accounting Majors
Students that have a non-accounting degree, preferably in business, can apply for admission to our Master of Accounting (MAcc) or Master of Science in Taxation (MST) and Summer Intensive Program. Applicants to the MAcc or MST program will automatically be considered applicants to the Accounting Summer Intensive Program if their undergraduate degree is not in accounting. Summer Intensive students entering the MAcc or MST program must also take an advanced taxation course (ACC 639) which is offered following the Summer Intensive Program in an intersession format in August before the start of the fall semester. Although MST students must complete advanced taxation in the summer, MAcc students may complete the course in the summer or in term one of the spring semester.

Foreign Students
The Accounting Summer Intensive Program is also designed to meet the needs of foreign students. Foreign students must have successfully completed two semesters of intermediate accounting, one semester of cost accounting, one semester of auditing, one semester of accounting information systems and one semester of tax at a U.S. university accredited by the AACSB or alternatively, must attend the Summer Intensive Program before enrolling in graduate accounting courses. Foreign students entering the MAcc or MST program must also take an advanced taxation course (ACC 639) which is offered following the Summer Intensive Program in an intersession format and in term one of the spring semester. Foreign applicants to the MAcc program will automatically also be considered applicants to the Accounting Summer Intensive Program.

Program Schedule
The Accounting Summer Intensive Program is fast-paced and requires full-time attention. As its name implies, the program is intensive and not designed for students that are working even part-time. The 7-week program begins each year about July 1 and continues through mid-

August and consists of two 3½ -week modules. Three 2-credit courses are included in each module. Students who want to take any additional graduate tax classes should also plan to take the advanced taxation course (ACC 639) which is offered following the Summer Intensive Program in a 9-day intersession format in August before the start of the fall semester.

Program Prerequisite Accounting Courses
Students entering the program are required to have previously completed introduction to financial accounting and management accounting at a US or foreign university.

Summer Intensive Program Course Offerings
The Summer Intensive Program includes the following six 2-credit upper division accounting courses that are prerequisites for graduate study.

<table>
<thead>
<tr>

<td>2</td>
</tr>
</tbody>
</table>

Note that the Summer Intensive Program does not include an advanced taxation course (the equivalent of ACC 404) which is a required prerequisite for most tax courses in the MST program. Accordingly, in addition to the six summer intensive courses, students entering the MST program must complete ACC 639 which is offered following the Summer Intensive Program in an intersession format in August before the start of the fall semester.

Entering the MAcc or MST Program
Upon successful completion of the intensive program, students immediately enter the MAcc or MST program in the fall semester. To graduate with their MAcc or MST degree, students must complete 30 credits beyond the 12-credit intensive program and may graduate in as little as two semesters, assuming they are full-time students.

CPA Licensure Requirements
Most of our students intend to become qualified as Certified Public Accountants (CPA). While the CPA exam is a national exam administered by the American Institute of Certified Public Accountants, its execution and CPA licensing practices are governed by state law. For example, some states require a certain number of credit hours in particular subjects and have overall accounting and business credit hour requirements. As such, you should check with the state in which you intend to practice to determine what the specific course requirements are for that state. Our department is unable to make a determination of your eligibility to sit for the CPA exam. This can only be done by the appropriate state board. Please find the licensure requirements for the State of Florida, here (http://www.myfloridalicense.com/DBPR/certified-public-accounting/licensure/).

For your convenience, the Florida rules that apply to most individuals are summarized here. Please check the State of Florida Web site noted above for updates and rules which may apply in particular circumstances.
As of July 1, 2008 the Florida State Board of Accountancy (BOA) separated the requirements to become a Certified Public Accountant (CPA) into two parts: (1) the requirements to be eligible to take the CPA exam and (2) the requirements for licensure to practice as a CPA in Florida.

Requirements to Sit for the CPA Exam: To be eligible to take the CPA exam, applicants must have completed 120 semester hours including 24 semester hours of upper division (300-level or above) accounting to include auditing, cost and managerial accounting, financial accounting, accounting information systems, and taxation. Applicants must also complete 24 semester hours of upper division general business courses with some exceptions in that one microeconomics, one macroeconomics, one statistics, one business law, and one introduction to computers course may be lower division (freshman or sophomore level). As part of the general business hours, applicants are required to have a total of six semester hours of business law courses, which must cover contracts, torts, and the Uniform Commercial Code. Note that excess upper division accounting courses may be used to meet the general business requirement; however, elementary accounting courses are never acceptable for credit nor are courses for non-accounting majors and any MBA courses that are equivalent to elementary accounting.

The exam is offered in the following time periods; January – February, April – May, July – August and October – November. Note that applicants are not required to have a bachelor’s degree in order to sit for the CPA exam.

Requirements for Licensure: In addition to passing all four parts of the CPA exam with at least a 75% within 18 month rolling period, the Florida State Board of Accountancy requires that applicants have completed a bachelor’s degree plus an additional 30 hours for a total of 150 semester hours before you can become licensed as a CPA. One year of work experience under the supervision of a licensed CPA is now also required to become licensed. In addition to experience obtained in public accounting and government, Florida’s 2008 legislative change also allows experience obtained in industry and academia. This experience may be obtained before or after sitting for the exam, however, all requirements to sit for the exam must be met before the work experience commences. If you fail to apply for licensure within three years of receiving the licensure package, (sent after you pass all four parts) the CPA grades expire and you must retake the examination.

The 150 semester hours must include a minimum of 36 semester hours of upper division accounting courses and at least 39 semester hours of upper division (with some exception) general business courses. Excess upper division accounting courses may be used to meet the general business requirement. Courses for non-accounting majors and any MBA courses that are equivalent to elementary accounting are not accepted for this requirement.

Licensed in Another State: If you are licensed in a state other than Florida you can obtain a license in Florida by a process called endorsement. You must provide evidence of meeting all of the requirements in effect at the time of your application. In addition if you passed the exam more than two years before applying you must provide evidence of meeting continuing professional education requirements.

CPA Accreditation Requirements
The Florida State Board of Accountancy accepts degrees from schools accredited by the following associations: Middle States Association, New England Association, North Central Association, Northwest Association, Southern Association of Colleges and Schools, Western Association of Schools and Colleges, Association of Independent Schools and Colleges who have been approved by the Florida State Board of Independent Colleges and Universities, and Canadian Schools who have been approved by their provincial educational bodies. If you have graduated from a school or college which is not accredited by the above mentioned means, then you must use the provisions of F.A.C. 61H1-27.001 (5) (see below).

Applicants Who Have Graduated from Non-Accredited Schools (61H1-27.001) (5)
Applicants who have graduated from a non-accredited school may still qualify to sit for the CPA examination. The candidate must take 15 semester hours of graduate classes. Those must consist of at least nine hours of graduate level accounting courses including a minimum of three semester hours of graduate tax. THESE HOURS MUST BE TAKEN AFTER ADMISSION TO GRADUATE SCHOOL. If the courses are taken before admission to a graduate program, the classes will not be accepted, even if the school includes them as part of the graduate program. These courses cannot duplicate other courses which the applicant has taken and they cannot be used to accredit the non-accredited degree and satisfy the educational requirements. The applicant must complete the graduate school courses to validate the non-accredited degree. The applicant must also meet all other requirements for endorsement or transfer of credit. An evaluation of foreign transcripts must be completed by an evaluation service which has been approved by the Board (see Board Approval Evaluation Services).

Duplicate Courses
No credit will be given for courses which duplicate another course for which the applicant has received credit. CPA review courses are considered as duplicates.

Admission Requirements
For admission to MAcc, based on an undergraduate degree from an accredited U.S. institution, we consider the applicant's:

- Undergraduate grade point average
- GMAT score
- Grades in specific accounting courses
- Rigor of the undergraduate program
- Other factors such as work experience.

Admission decisions are made on a competitive basis from the applicant pool. Undergraduate students from the University of Miami that have a grade point average of 3.4 or higher do not have to take the GMAT exam. In addition individuals who have demonstrated their ability to do graduate work in accounting by becoming a CPA or who have earned a graduate degree from a business school accredited by the AACSB are also waved from the requirement to take the GMAT exam.

Students without an undergraduate degree in accounting will be required to take certain prerequisite courses to secure admission. These prerequisites will depend upon the undergraduate major and previous accounting courses taken. Necessary prerequisite accounting courses can be taken in the University of Miami's Accounting Summer Intensive Program, which is a seven-week program beginning in early July.

Foreign students must provide evidence of proficiency in English by supplying a TOEFL score. Additionally, foreign students must have successfully completed two semesters of intermediate accounting, one semester of cost accounting, one semester of auditing, one semester
of accounting systems and one semester of tax at a U.S. university accredited by the AACSB before enrolling in graduate accounting courses. Alternatively, foreign students may attend the University of Miami’s Accounting Summer Intensive Program to fulfill this requirement.

**Master of Accounting (MACC)**

The MACC program offers two tracks: Assurance (MACC-Assurance) for students planning to go into public accounting and Corporate Accounting (MACC-Corporate) for students planning careers as controllers, CFOs or financial analysts. The MACC is designed for the student who has taken the accounting and related courses required for an undergraduate major in accounting or other undergraduate business majors who have successfully completed the Accounting Summer Intensive Program. These students should be able to complete the MACC in a year or less provided they enroll as full time students.

**Undergraduate Course Requirements**

The courses listed below are undergraduate prerequisites that, unless already completed, must be fulfilled in order to be admitted for graduate study. For most graduate tax classes including ACC 648 Financial Reporting Implications of Income Taxes., the equivalent of ACC 404 Advanced Taxation(Corporate and Partnership Income Taxation) is also required. Students can satisfy this prerequisite by taking ACC 639 Income Taxation and Business Entities which is offered in a 9-day intersession format in August before the start of the fall semester. If a candidate does not have an undergraduate business degree, additional business prerequisites (economics, marketing, management, finance and others) will also be required.

**Master of Accounting—Assurance Track (MACC-Assurance)**

The program requires 30 semester hours consisting of nine required courses and the balance of approved elective courses provided the student has an undergraduate degree in Accounting, or its equivalent, from an accredited institution. In addition to the nine required courses, students must select four courses from the designated course list. Other courses can be selected from the list of approved electives or in consultation with the program director. Courses with a 600-level designation are designed for graduate students. Courses with a 500-level designation are open to upper-level undergraduate students and do not count toward the MACC degree. Unless otherwise noted, courses in the program are two semester hours (two credits).

### Total Credit Hours

30

Any other electives must be selected in consultation with the Program Director.

###Accelerated Masters Programs

In addition to offering the Master of Accounting (MAcc) and Master of Science in Taxation (MST) on the usual time frame involving one year of full-time study beyond the Bachelor’s level, the MAcc and MST are offered as accelerated programs. These programs permit high achieving accounting students who have accelerated their education by taking advanced courses in high school, testing out of classes, taking increased class loads, or going to summer school, to start their graduate work while seniors.

The accelerated programs are available only to students who are undergraduate students at the University of Miami. The programs are designed in such a way that students can expect to complete both their Bachelor’s and Master’s degrees and make significant progress on the CPA exam (if not complete it entirely) within 4½ years. In addition, these programs are extremely price competitive.

</tbody>
</table>

All UG degree requirements except those taken in the senior year.

Students that select the MAcc-Corporate Track must take FIN 303 before or during their senior year.
### Admission to the Accelerated Programs

**Incoming Freshmen**

- Prospective students apply to the accelerated program when they apply for admission to the University of Miami.
- SAT scores should meet or exceed 1400; high school unweighted GPA should meet or exceed 3.75.
- Students are required to have an overall and accounting GPA of 3.3 or higher by their junior year in college. Students must then maintain an overall GPA of 3.3 or higher and an accounting GPA of 3.3 or higher to remain in the program. Students who do not maintain the expected GPA may be placed on probation or transferred out of the program.
- Students will need to have completed 102 credit hours by the start of their senior year.

**Remaining 16 graduate credits**

- Pass CPA exam
- Approved CPA Review Course
- 1 ACC graduate course

### Summer after Junior Year

**Internship**

**Senior Year Curriculum 1**

**Summer after Senior Year 2**

1 ACC graduate course

### Final Fall Semester

- Remaining 16 graduate credits 4

### Current University of Miami Undergraduate Accounting Majors

- Students should apply to the accelerated program by September 15 of their junior year.
- Admission to the program will be based on GPA, letters of recommendation, and performance in upper division (300-level or above) accounting courses in progress or completed. It is expected that the students admitted to the program will have GPAs exceeding 3.3, but students with these scores are not guaranteed admission. The decision will depend on the quality and size of the applicant pool and will be made by senior school administrators and faculty.
- After admission, to remain in the program, students must maintain an overall GPA of 3.3 or higher and an accounting GPA of 3.3 or higher. Students who do not maintain the expected GPA may be placed on probation or transferred out of the program.
- Students will need to have completed 102 credit hours by the start of their senior year including ACC 311, ACC 312, ACC 402, ACC 403, BSL 401 and ACC 404.

### Five-Year Accounting Program with Senior-Year Internship

The Five-Year Accounting Program with Senior-Year Internship is intended to allow exceptional students to acquire both undergraduate and graduate accounting degrees in five years while gaining valuable experience working at a full-time internship in the spring semester of their senior year. Students will also take a CPA review course and sit for the CPA exam so they can pass some (if not all) parts of the exam before they graduate with their Master of Accounting or Master of Science in Taxation degree.

### Program Timeline

1. Fall semester of Junior Year: Complete an application to the program by September 15 and apply for an internship position to take place in the spring of senior year.
2. Fall semester of Senior Year: Submit the internship agreement and apply to graduate school.
3. Spring semester of Senior Year: Complete Internship followed by 9 credit hours of coursework to complete the undergraduate accounting degree in specially-designed short-duration courses that include ACC 301, ACC 406 and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).
4. Summer following Senior Year: Take CPA review and exam.
5. Fall semester following Senior Year: Begin the Master of Accounting (MAcc) or Master of Science in Taxation (MST) Program.

### Pre-requisites

The program is designed for University of Miami Herbert Business School undergraduate students who are pursuing the accounting major and who have a cumulative GPA of at least 3.2 at the time of application. Admission to the program is based on several criteria, so a 3.2 GPA does not guarantee admission. Students should discuss the program and their academic plan for entering the program with an academic advisor in the Office of Undergraduate Business Education or with the Program Director in the Department of Accounting. Prior to the spring semester of their senior year, students will need to have completed all undergraduate degree requirements, except for two accounting major courses (ACC 301
and ACC 406 (http://bulletin.miami.edu/search/?P=ACC%20406/) and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).

Senior Year Spring Semester Curriculum
In the first half of the spring semester of the senior year, students will work full-time in an accounting internship for which they can receive 3 credit hours toward their undergraduate degree (ACC 550 (http://bulletin.miami.edu/search/?P=ACC%20550/)). Additionally, in the spring semester of their senior year, students will take 9 credit hours in three specially-designed short-duration courses that include ACC 301, ACC 406 and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).

Summer, Fall, and Spring after Senior Year
In the summer after their senior year, students will have the opportunity to take a CPA review course and sit for the CPA exam. Students will complete their Master of Accounting or Master of Science in Taxation in the fall and spring semesters after senior year and begin working that following summer or fall.

Admission to the Five-Year Accounting Program with Senior-Year Internship
- Students must apply to the program in their junior year and obtain an “approved” internship through the Toppel Career Center.
- The internship must be scheduled to take place during the spring semester of their senior year.
- In the fall semester of their senior year, before registering for their senior-year spring classes, students must submit a copy of their internship agreement to the Program Director or Program Manager in the Department of Accounting.
- By the fall semester of their senior year, students must have applied for admission to the graduate program and submitted their verification deposit to pursue a Master of Accounting or Master of Science in Taxation degree in the fall semester immediately following their senior year.
- The GMAT will be waived for students admitted into the program.

Mission
The mission of the Accounting Department is to provide an environment recognized for educational excellence through our academic programs, intellectual contributions, and service to the academic and professional communities.

Goals
Student Learning Outcomes
- Students should demonstrate an understanding of International Financial Reporting Standards (IFRS) including its basic history, its standard setting structure, and significant accounting concepts and principles and how they compare to U.S. Generally Accepted Accounting Principles (U.S. GAAP).
- Students should understand the financial reporting related to the income tax provision in accordance with the requirements under ASC 740 (accounting for income taxes).
- Students should demonstrate good understanding of the importance of the footnotes to financial statements while evaluating reported financial numbers and be able to recast financial statements for comparability across years.

Master of Professional Accounting (online)
Master of Professional Accounting (online)
The Master of Professional Accounting provides focused, accounting education meant to prepare students for a career in public accounting, private industry, as well as government/non-profit sector. The program consists of 32 credits that will be taken over a 16-month period with start dates in September, January, and May. The coursework will consist of 16 credits in basic accounting, taxation and information systems, followed by 16 credits in advanced topics including auditing and financial statement analysis and firm valuation. The courses offered in the MPRA are taught at both the undergraduate and graduate level in accounting at the Miami Herbert Business School. All of these courses have been taught as two-credit or three-credit courses, but have been modified, combined and packaged into four credit modules. Most students in the program will earn a Certificate in Accounting Practice along the way to earning their degree.

To obtain detailed program admission and curricula information please visit the website (http://www.miami.edu/online/online-degrees/masters-professional-accounting/)

Total Credit Hours 40
Should your state of residence require additional coursework in order to sit for the CPA certification exam, you may enroll in two additional (optional) advanced courses which will enable you to earn additional Accounting credits that may be required.

Mission
The MPrA program strives to conform to strategic priorities of the Miami Business School in the following ways:

• Integrate knowledge from the latest field-based research into classroom discussion so that students better understand financial and managerial decision making in practice and can take a professional leadership role in assessing the standard quantitative tools used in accounting.

• Recognize the context and implications of the conflicts of interest inherent in the accounting industry in both classroom discussion and extracurricular interaction with local leaders, in order to create principled leaders in the field of accounting.

• Expose students to the global aspect of the field of accounting through both coursework and interaction with masters-level students in one of the most culturally diverse graduate business schools in the United States.

Goals

Student Learning Outcomes

• Understand and apply appropriate accounting techniques to a variety of transactions in business.

• Understand fundamental principles in taxation and basic rules of taxation as set out in Internal Revenue Service Code.

• Understand the basic principles guiding the design and implementation of accounting information systems with an emphasis on internal controls.

Master of Science in Business Analytics

Master of Science in Business Analytics
The Master of Science in Business Analytics program is an intensive experience that develops well-trained business analysts armed with the skills necessary to understand, manage and make use of big data in a business context. Over the course of 10 months, students learn how to turn abstract data into meaningful information with which to predict consumer behavior and forecast revenue and expenses for virtually any business model and any industry sector.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/specialized-masters/analytics/).

Total Required Credits: 32

1 Students may take BUS 641 Capstone Project as a replacement of MAS 650 Management Science Internship if an internship cannot be obtained.

2 8 credits of electives (approximately 4 courses) are required. Elective offerings are based on class demand.

Mission
• To develop individuals that are prepared to use the methods and technology of analytics and data science to impact global business and society.

Goals

Student Learning Outcomes

• Students will develop skills in acquiring, preparing and visualizing data.

• Students will develop and use data mining methods and software tools.

• Students will learn to use decision models.

• Student will develop and use predictive models.

B.B.A./M.S. in Business Analytics Dual Degree

Bachelor of Business Administration in Business Analytics and Master of Science in Business Analytics
The dual BBA and Master of Science in Analytics program is designed in such a way that students can expect to complete both their Bachelor’s and Master’s degree within four and a half years. This accelerated program is designed to assist highly-motivated undergraduate students seeking an efficient path and an expedient start to their professional careers without sacrificing quality of education.
Students enroll in up to twelve credits of graduate work in their senior year*. Then, at least twenty credits of graduate work is completed in the fall semester after the senior year.

* Students in this program will only be permitted to take graduate classes if they are within 30 credits of completing the baccalaureate degree and have a minimum 3.0 GPA.

## Curriculum Requirements

Additional Required Courses

Electives 2  

Total Credit Hours  32

The curriculum defines a common core of required courses (14 credits) and allows the selection of elective courses (20 credits). A minimum of 12 elective credits out of the 20 total elective credits must be Finance (FIN) courses. A minimum of 24 STEM credits (12 required and 12 elective) out of the 34 total program credits is required for graduation.

One semester of part-time (10-20 hours per week) practical training and concurrent enrollment in FIN 695 is mandatory for the Master of Science in Finance degree. Practical training is defined as ‘alternative work/study, internship, cooperative education, or any other type of required internship or practicum that is offered by sponsoring employers through cooperative agreements with the school’. The practical training and concurrent enrollment in FIN 695 must be approved in advance by the faculty director. International students in F-1 status are required to obtain authorization for Curricular Practical Training (CPT) from the Department of International Student and Scholar Services (ISSS) prior to engaging in off-campus employment.

Curriculum Requirements

The Master of Science in Finance develops quantitative and analytical skills demanded in today’s competitive marketplace. The STEM-oriented curriculum integrates modeling, analytics, information technology, and quantitative methods into all of the finance courses. Students are able to personalize the curriculum by choosing course ‘clusters’ that match their learning needs and areas of interest. Sample course clusters include:

- Corporate Finance
- Fintech
- Investment & Portfolio Management
- Wealth Management
- International Finance
- Financial Analytics
- Psychology of Financial Markets
- Sustainable Finance
- Real Estate Investments

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (https://www.bus.miami.edu/academic-programs/mba-masters/masters/finance-program/).

Master of Science in Finance

Master of Science in Finance

The Master of Science in Finance develops quantitative and analytical skills demanded in today’s competitive marketplace. The STEM-oriented curriculum integrates modeling, analytics, information technology, and quantitative methods into all of the finance courses. Students are able to personalize the curriculum by choosing course ‘clusters’ that match their learning needs and areas of interest. Sample course clusters include:

- Corporate Finance
- Fintech
- Investment & Portfolio Management
- Wealth Management
- International Finance
- Financial Analytics
- Psychology of Financial Markets
- Sustainable Finance
- Real Estate Investments

1 Students may take BUS 641 (https://nam01.safeLinks.protection.outlook.com/?url=http%3A%2F%2Fbulletin.miami.edu%2Fsearch%2F%3Fsearch%3Dbus%2B641%26%3Bdata%3D02%7C01%7Cemas%40busmiamiedu%7C%7Ce316175b02eb46bb904d08d6a177daf6%7C2a144b72f23942d48c0ede9e7cf%7C0%7C0%7C636873933481449075) Capstone Project as a replacement of MAS 650 Management Science Internship if an internship cannot be obtained.

2 Electives are based on class demand.
FIN 646  Real Estate Market Analysis
FIN 647  Introduction to ARGUS
FIN 648  Advanced ARGUS
FIN 651  Advanced Topics in Investments
FIN 652  Fixed Income Securities
FIN 653  Alternative Investments
FIN 654  Impact Investing
FIN 655  Smif Fund Analyst I
FIN 656  Smif Fund Analyst II
FIN 657  Smif Fund Portfolio Manager I
FIN 658  Smif Fund Manager II
FIN 660  International Finance
FIN 661  Advanced Topics in International Finance
FIN 668  Wealth Management and Financial Planning
FIN 671  Advanced Topics in Corporate Finance
FIN 672  Sustainable Finance
FIN 674  Financial Analysis of Mergers and Acquisitions
FIN 679  Private Equity and Venture Capital
FIN 680  FinTech
FIN 681  Financial Institutions
FIN 685  Mathematics of Financial Derivatives
FIN 686  Financial Decision Making
FIN 698  Selected Topics in Finance

Other STEM Electives
ECO 685  Managerial Decisions in a Global Economy
ECO 695  Global Economics
MAS 627  Programming for Data Analytics
MAS 637  Applied Regression Analysis I
MAS 640  Applied Time Series Analysis and Forecasting
MTH 647  Introduction to Mathematical Finance
MTH 648  Stochastic Calculus with Application to Finance
MTH 649  Computational Methods of Finance

Other Electives
ACC 628  Introduction to Accounting Analytics
ACC 670  Financial Reporting and Analysis
ACC 672  Advanced Financial Analysis
BSL 691  The Public Corporation: Legal Perspectives
BSL 694  Real Estate Law
MGT 621  High Performance Leadership

RED 660  Urban Infill, Preservation, and Mixed Use Development

Total Credit Hours 34

1 Students may take FIN 696 as a replacement for FIN 695 only if an internship cannot be obtained.

Mission
Goals
Student Learning Outcomes
• Students will acquire the ability to apply appropriate analytical and quantitative models to a wide assortment of decisions encountered by finance professionals.
• Students will acquire the ability to write effectively in order to excel as a professional in the field of finance.
• Students will apply the financial concepts and quantitative and analytical techniques important to their chosen field of specialty, as defined by their Finance Internship (FIN 695) or Finance Capstone Project (FIN 696), in the solution of real-world problems.

Total Credit Hours 32
Certificate in Financial Decision Making

For students who want to advance in corporate finance functions without committing to a full degree program. This certificate is 16 credits taken over an eight-month period beginning in August, January or May. Students would typically be working in such functions as the controller’s office, treasury management, capital budgeting, or investor relations. After completion, it is possible to apply for admission to the online Master of Science in Finance which would then take another 16 credits and 8 months to complete.

Mission

The Master of Science in Finance online program is designed to prepare students for finance-focused careers, such as a personal financial adviser, financial manager, financial analyst, financial services sales agent, or insurance underwriter.

Goals

The 16-month program gives students the necessary knowledge in corporate finance and investments as well as the basic communication, teamwork, and organizational skills necessary to forge a successful career in corporate finance or financial decision making. Additionally, each student is expected to develop an analytical problem solving ability and to be able to apply current problem solving technologies in their financial decision making.

Student Learning Outcomes

- Use teamwork, business communication, and organizational skills to effectively analyze information and present results in group projects.
- Apply analytical and theoretical approaches to financial topics.
- Use technology for financial problem solving.

Master of Science in Leadership

Master of Science in Leadership

The Master of Science in Leadership shapes students into competent, versatile and dynamic leaders ready to navigate the complex workplace of the 21st century. The program helps participants develop the interpersonal skills they need to influence others and lead effectively in today’s challenging work environment. Not only does the program include coursework to provide students with a foundation of basic management skills, it includes a set of courses that focus on the skills needed to achieve performance at the highest levels possible.

To obtain detailed program admission information, please reference the program brochure which can be requested by contacting the Office of Recruiting and Admissions at 305-284-2510 or visit our website (http://bus.miami.edu/graduate-programs/specialized-masters/leadership/).

Work Experience Admissions Requirement: Very few students are admitted to the MS, Leadership program without work experience. Those few students admitted directly from an undergraduate program without such experience must meet with the Academic Director to find an appropriate internship or field training to take part in during at least the second half of the program. Students entering the program with the requisite work experience will be exempt from this requirement.

Mission
To develop professionals who successfully demonstrate the principled leadership skills necessary to effect positive change in their various communities and ultimately, in the global economy.

Goals
Student Learning Outcomes
• The ability to assess their respective leadership strengths and weaknesses, and develop action plans to improve existing skills sets.
• The ability to apply leadership theories and concepts to actual leadership situations.
• The ability to identify the leadership ethical issues in various situations.

Master of Science in Taxation
The Master of Accounting (MAcc) and Master of Science in Taxation (MST) programs are similar in that they offer an opportunity to concentrate in accounting, but they differ in degree of specialization and career path orientation. The MAcc offers two separate tracks in assurance and corporate accounting while the MST is designed for students interested in careers in taxation. In addition to the traditional one year of full-time study beyond the Bachelor's level, the MAcc and the MST programs are offered as accelerated programs for University of Miami undergraduates.

Scholarships
University of Miami Herbert Business School - Alumni Association Endowed Accounting Scholarships are available for students pursuing Graduate Studies in Accounting. Various other scholarships and assistantships may be available.

Accounting Summer Intensive Program
The Accounting Summer Intensive Program is designed for students who hold at least an undergraduate business degree in a field other than accounting from an accredited college or university and for foreign students.

Non-Accounting Majors
Students that have a non-accounting degree, preferably in business, can apply for admission to our Master of Accounting (MAcc) or Master of Science in Taxation (MST) and Summer Intensive Program. Applicants to the MAcc or MST program will automatically also be considered applicants to the Accounting Summer Intensive Program. Foreign students entering the MAcc or MST program must also take an advanced taxation course (ACC 639) which is offered following the Summer Intensive Program in an intersession format and in term one of the spring semester. Foreign students entering the MAcc or MST program must also take an advanced taxation course (ACC 639) which is offered following the Summer Intensive Program in an intersession format and in term one of the spring semester. Foreign applicants to the MAcc program will automatically also be considered applicants to the Accounting Summer Intensive Program.

Program Prerequisite Accounting Courses
Students entering the program are required to have previously completed introduction to financial accounting and management accounting at a US or foreign university.

Summer Intensive Program Course Offerings
The Summer Intensive Program includes the following six 2-credit upper division accounting courses that are prerequisites for graduate study.

<table>

</tr>
</tbody>
</table>

Note that the Summer Intensive Program does not include an advanced taxation course (the equivalent of ACC 404) which is a required prerequisite for most tax courses in the MST program. Accordingly, in addition to the six summer intensive courses, students entering the MST program must complete ACC 639 which is offered following the Summer Intensive Program in an intersession format in August before the start of the fall semester.

Entering the MAcc or MST Program
Upon successful completion of the intensive program, students immediately enter the MAcc or MST program in the fall semester. To
graduate with their MAcc or MST degree, students must complete 30 credits beyond the 12-credit intensive program and may graduate in as little as two semesters, assuming they are full-time students.

**CPA Licensure Requirements**

Most of our students intend to become qualified as Certified Public Accountants (CPA). While the CPA exam is a national exam administered by the American Institute of Certified Public Accountants, its execution and CPA licensing practices are governed by state law. For example, some states require a certain number of credit hours in particular subjects and have overall accounting and business credit hour requirements. As such, you should check with the state in which you intend to practice to determine what the specific course requirements are for that state. Our department is unable to make a determination of your eligibility to sit for the CPA exam. This can only be done by the appropriate state board. The licensure requirements for the State of Florida can be viewed here (http://www.myfloridalicense.com/DBPR/certified-public-accounting/licensure/).

For your convenience, the Florida rules that apply to most individuals are summarized here. Please check the State of Florida Web site noted above for updates and rules which may apply in particular circumstances.

As of July 1, 2008 the Florida State Board of Accountancy (BOA) separated the requirements to become a Certified Public Accountant (CPA) into two parts: (1) the requirements to be eligible to take the CPA exam and (2) the requirements for licensure to practice as a CPA in Florida.

**Requirements to Sit for the CPA Exam**

To be eligible to take the CPA exam, applicants must have completed 120 semester hours including 24 semester hours of upper division (300-level or above) accounting to include auditing, cost and managerial accounting, financial accounting, accounting information systems, and taxation. Applicants must also complete 24 semester hours of upper division general business courses with some exceptions in that one microeconomics, one macroeconomics, one statistics, one business law, and one introduction to computers course may be lower division (freshman or sophomore level). As part of the general business hours, applicants are required to have a total of six semester hours of business law courses, which must cover contracts, torts, and the Uniform Commercial Code. Note that excess upper division accounting courses may be used to meet the general business requirement; however, elementary accounting classes are never acceptable for credit nor are courses for non-accounting majors and any MBA courses that are equivalent to elementary accounting.

The exam is offered in the following time periods: January – February, April – May, July – August and October – November. Note that applicants are not required to have a bachelor’s degree in order to sit for the CPA exam.

**Requirements for Licensure**

In addition to passing all four parts of the CPA exam with at least a 75% within 18 month rolling period, the Florida State Board of Accountancy requires that applicants have completed a bachelor’s degree plus an additional 30 hours for a total of 150 semester hours before you can become licensed as a CPA. One year of work experience under the supervision of a licensed CPA is now also required to become licensed. In addition to experience obtained in public accounting and government, Florida’s 2008 legislative change also allows experience obtained in industry and academia. This experience may be obtained before or after sitting for the exam, however, all requirements to sit for the exam must be met before the work experience commences. If you fail to apply for licensure within three years of receiving the licensure package, (sent after you pass all four parts) the CPA grades expire and you have to retake the examination.

The 150 semester hours must include a minimum of 36 semester hours of upper division accounting courses and at least 39 semester hours of upper division (with some exception) general business courses. Excess upper division accounting courses may be used to meet the general business requirement. Courses for non-accounting majors and any MBA courses that are equivalent to elementary accounting are not accepted for this requirement.

**Licensed in Another State**

If you are licensed in a state other than Florida you can obtain a license in Florida by a process called endorsement. You must provide evidence of meeting all of the requirements in effect at the time of your application. In addition if you passed the exam more than two years before applying you must provide evidence of meeting continuing professional education requirements.

**CPA Accreditation Requirements**

The Florida State Board of Accountancy accepts degrees from schools accredited by the following associations: Middle States Association, New England Association, North Central Association, Northwest Association, Southern Association of Colleges and Schools, Western Association of Schools and Colleges, Association of Independent Schools and Colleges who have been approved by the Florida State Board of Independent Colleges and Universities, and Canadian Schools who have been approved by their provincial educational bodies. If you have graduated from a school or college which is not accredited by the above mentioned means, then you must use the provisions of F.A.C. 61H1-27.001 (5) (see below).

**Applicants Who Have Graduated from Non-Accredited Schools (61H1-27.001) (5)**

Applicants who have graduated from a non-accredited school may still qualify to sit for the CPA examination. The candidate must take 15 semester hours of graduate classes. Those must consist of at least nine hours of graduate level accounting courses including a minimum of three semester hours of graduate tax. THESE HOURS MUST BE TAKEN AFTER ADMISSION TO GRADUATE SCHOOL. If the courses are taken before admission to a graduate program, the classes will not be accepted, even if the school includes them as part of the graduate program. These courses cannot duplicate other courses which the applicant has taken and they cannot be used to accredit the non-accredited degree and satisfy the educational requirements. The applicant must complete the graduate school courses to validate the non-accredited degree. The applicant must also meet all other requirements for endorsement or transfer of credit. An evaluation of foreign transcripts must be completed by an evaluation service which has been approved by the Board (see Board Approval Evaluation Services).

**Duplicate Courses**

No credit will be given for courses which duplicate another course for which the applicant has received credit. CPA review courses are considered as duplicates.

For the CPA requirements in other states, you should consult the State Board of Accountancy for your state.
Admission Requirements

For admission to either the MAcc or MST, based on an undergraduate degree from an accredited U.S. institution, we consider the applicant's:

- Undergraduate grade point average
- GMAT score
- Grades in specific accounting courses,
- Rigor of the undergraduate program
- Other factors such as work experience

Admission decisions are made on a competitive basis from the applicant pool. Undergraduate students from the University of Miami that have a grade point average of 3.4 or higher do not have to take the GMAT exam. In addition individuals who have demonstrated their ability to do graduate work in accounting by becoming a CPA or who have earned a graduate degree from a business school accredited by the AACSB are also waved from the requirement to take the GMAT exam.

Students without an undergraduate degree in accounting will be required to take certain prerequisite courses to secure admission. These prerequisites will depend upon the undergraduate major and previous accounting courses taken. Necessary prerequisite accounting courses can be taken in the University of Miami's Accounting Summer Intensive Program, which is a seven-week program beginning in early July.

Foreign students must provide evidence of proficiency in English by supplying a TOEFL score. Additionally, foreign students must have successfully completed two semesters of intermediate accounting, one semester of cost accounting, one semester of auditing, one semester of accounting systems and one semester of tax at a U.S. university accredited by the AACSB before enrolling in graduate accounting courses. Alternatively, foreign students may attend the University of Miami's Accounting Summer Intensive Program to fulfill this requirement.

Master of Science in Taxation (MST)

This program affords the accounting major or equivalent the opportunity to specialize in the area of taxation. Through electives, students are able to expand their areas of expertise, so that they may adequately prepare themselves for careers requiring a high degree of specialized tax knowledge in public accounting, private industry, and government. The program requires 30 semester hours consisting of six required courses and the balance of approved elective courses provided the student has an undergraduate degree in Accounting, or its equivalent, from an accredited institution and has completed ACC 403 Fundamentals of Taxation and ACC 404 Advanced Taxation, or their equivalents. Students who have taken only one tax course should plan to take an advanced taxation course (such as ACC 639 Income Taxation and Business Entities which is offered following the Summer Intensive Program in an intersession format in August before the start of the fall semester). In addition to the nine required courses, students must select four courses from the designated course list. Other courses can be selected from the list of approved electives or in consultation with the program director. Courses with a 600-level designation are designed for graduate students. Courses with a 500-level designation are open to upper-level undergraduate students and do not count toward the MST degree. Unless otherwise noted, courses in the program are two semester hours (two credits).

Accelerated Program Timeline

Programs are extremely price competitive. CPA exam (if not complete it entirely) within 4½ years. In addition, these Bachelor’s and Master’s degrees and make significant progress on the designed in such a way that students can expect to complete both their undergraduate students at the University of Miami. The programs are designed in such a way that students can expect to complete both their Bachelor’s and Master’s degrees and make significant progress on the CPA exam (if not complete it entirely) within 4½ years. In addition, these programs are extremely price competitive.

Accelerated Masters Programs

In addition to offering the Master of Accounting (MAcc) and Master of Science in Taxation (MST) on the usual time frame involving one year of full-time study beyond the Bachelor’s level, the MAcc-Assurance Track, MAcc-Corporate Track, and MST are offered as accelerated programs. These programs permit high achieving accounting students who have accelerated their education by taking advanced courses in high school, testing out of classes, taking increased class loads, or going to summer school, to start their graduate work while seniors.

The accelerated programs are available only to students who are undergraduate students at the University of Miami. The programs are designed in such a way that students can expect to complete both their Bachelor’s and Master’s degrees and make significant progress on the CPA exam (if not complete it entirely) within 4½ years. In addition, these programs are extremely price competitive.

1 Any other electives must be selected in consultation with the Program Director.

### Admission to the Accelerated Programs

#### Incoming Freshmen

- Prospective students apply to the accelerated program when they apply for admission to the University of Miami.
- SAT scores should meet or exceed 1400; high school unweighted GPA should meet or exceed 3.75.
- Students are required to have an overall and accounting GPA of 3.3 or higher and an accounting GPA of 3.3 or higher to remain in the program. Students who do not maintain the expected GPA may be placed on probation or transferred out of the program.
- Students will need to have completed 102 credit hours by the start of their senior year.

#### Current University of Miami Undergraduate Accounting Majors

- Students should apply to the accelerated program by September 15 of their junior year.
- Admission to the program will be based on GPA, letters of recommendation, and performance in upper division (300-level or above) accounting courses in progress or completed. It is expected that the students admitted to the program will have GPAs exceeding 3.3, but students with these scores are not guaranteed admission. The decision will depend on the quality and size of the applicant pool and will be made by senior school administrators and faculty.
- After admission, to remain in the program, students must maintain an overall GPA of 3.3 or higher and an accounting GPA of 3.3 or higher. Students who do not maintain the expected GPA may be placed on probation or transferred out of the program.

</tbody>
</table>

1 Twelve credits of work in senior year will count towards the MAcc or MST degree (only students in the accelerated program are eligible to take these classes during their senior year).
2 Students must take one accounting graduate course in the summer following their senior year. Accounting courses are offered based on demand and could include ACC 620 Accounting Controls in Information Technology (offered every summer) or ACC 649 Issues in Tax Policy.
3 Students are also REQUIRED to take an approved CPA review course during the summer following their senior year. Students who do not take a CPA review course must complete an additional six graduate credits which will likely delay graduation to May instead of graduating in December. Students are also expected to pass part, if not all, of the CPA exam during this summer.
4 In the final fall semester students will complete the remaining 16 graduate credits including the requirements for their track and electives selected in consultation with the Program Director.
• Students will need to have completed 102 credit hours by the start of their senior year including ACC 311, ACC 312, ACC 402, ACC 403, BSL 401 and ACC 404.

Five-Year Accounting Program with Senior-Year Internship

The Five-Year Accounting Program with Senior-Year Internship is intended to allow exceptional students to acquire both undergraduate and graduate accounting degrees in five years while gaining valuable experience working at a full-time internship in the spring semester of their senior year. Students will also take a CPA review course and sit for the CPA exam so they can pass some (if not all) parts of the exam before they graduate with their Master of Accounting or Master of Science in Taxation degree.

Program Timeline
1. Fall semester of Junior Year: Complete an application to the program by September 15 and apply for an internship position to take place in the spring of senior year.
2. Fall semester of Senior Year: Submit the internship agreement and apply to graduate school.
3. Spring semester of Senior Year: Complete Internship followed by 9 credit hours of coursework to complete the undergraduate accounting degree in specially-designed short-duration courses that include ACC 301, ACC 406 and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).
4. Summer following Senior Year: Take CPA review and exam.
5. Fall semester following Senior Year: Begin the Master of Accounting (MAcc) or Master of Science in Taxation (MST) Program.

Pre-requisites
The program is designed for University of Miami Business School undergraduate students who are pursuing the accounting major and who have a cumulative GPA of at least 3.2 at the time of application. Admission to the program is based on several criteria, so a 3.2 GPA does not guarantee admission. Students should discuss the program and their academic plan for entering the program with an academic advisor in the Office of Undergraduate Business Education or with the Program Director in the Department of Accounting. Prior to the spring semester of their senior year, students will need to have completed all undergraduate degree requirements, except for two accounting major courses (ACC 301 and ACC 406) and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).

Senior Year Spring Semester Curriculum
In the first half of the spring semester of the senior year, students will work full-time in an accounting internship for which they can receive 3 credit hours toward their undergraduate degree (ACC 550 (http://bulletin.miami.edu/search/?P=ACC%20550/)). Additionally, in the spring semester of their senior year, students will take 9 credit hours in three specially-designed short-duration courses that include ACC 301, ACC 406 and MGT 401 (http://bulletin.miami.edu/search/?P=MGT%20401/).

Summer, Fall, and Spring after Senior Year
In the summer after their senior year, students will have the opportunity to take a CPA review course and sit for the CPA exam. Students will complete their Master of Accounting or Master of Science in Taxation degree in the fall and spring semesters after senior year and begin working that following summer or fall.

Admission to the Five-Year Accounting Program with Senior-Year Internship
• Students must apply to the program in their junior year and obtain an “approved” internship through the Toppel Career Center.
• The internship must be scheduled to take place during the spring semester of their senior year.
• In the fall semester of their senior year, before registering for their senior-year spring classes, students must submit a copy of their internship agreement to the Program Director or Program Manager in the Department of Accounting.
• By the fall semester of their senior year, students must have applied for admission to the graduate program and submitted their verification deposit to pursue a Master of Accounting or Master of Science in Taxation degree in the fall semester immediately following their senior year.
• The GMAT will be waived for students admitted into the program.

Mission
The mission of the Accounting Department is to provide an environment recognized for educational excellence through our academic programs, intellectual contributions, and service to the academic and professional communities.

Goals
Student Learning Outcomes
• Students will demonstrate the ability to analyze complex tax problems and to use technology to locate solutions.
• Students will demonstrate an understanding of the tax professional’s obligations when dealing with clients.
• Students will understand the financial reporting related to the income tax provision in accordance with the requirements under ASC 740 (accounting for income taxes).

Non-Degree Programs
Graduate Non Degree Programs
The School offers open enrollment certificate programs in general business as well as accounting and finance (online) which enable professionals to add basic business courses to their portfolios.

To obtain specific program information please visit:
• Certificate in Accounting Practice (online) (p. 751)
• Certificate in Business (p. 751)
• Certificate in Corporate Finance (online) (p. 752)
• Certificate in Financial Decision Making (online) (p. 752)
• Certificate in Leadership (p. 753)
Certificate in Accounting Practice (online)

Certificate in Accounting Practice

Intended for candidates with no prior accounting credits, the Certificate of Professional Accounting program will provide the fundamental knowledge of financial and managerial accounting, as well as taxation and accounting information systems sufficient to equip students for entry-level jobs in public or corporate accounting.

The Certificate of Professional Accounting program strives to conform to the strategic priorities of the Miami Herbert Business School in the following ways:

1. Integrate knowledge from the latest field-based research into classroom discussion so that students better understand financial and managerial decision making in practice and can take a professional leadership role in assessing the pros and cons of standard quantitative tools used in accounting.

2. Recognize the context and implications of the conflicts of interest inherent in the accounting industry in both classroom discussion and extracurricular interaction with local leaders, in order to create principled leaders in the field of accounting.

3. Expose students to the global aspect of the field of accounting through both coursework and interaction with masters-level students in one of the most culturally diverse graduate business schools in the United States.

The specific CPrA program objectives are to address the growing demand for a masters-level business certificate focused in accounting by accomplishing the following goals:

• Provide focused, graduate level education to those wishing to pursue a professional career in accounting
• Develop communication skills critical to long-term success in the accounting profession
• Provide participants with an understanding of the day-to-day work environment accounting professionals face, and career guidance, through periodic interaction with other professionals

To obtain detailed program admission information, please contact the Office of Recruiting and Admissions at 305-284-2510 or visit our website. To obtain detailed program admission information, please visit website.

### Mission

**Goals**

**Student Learning Outcomes**

- The CBA students will demonstrate the ability to integrate and communicate business information.
- The CBA students will demonstrate the ability to understand and utilize the process of critical and analytical thinking in diverse business settings to solve problems and make decisions.

### Certificate in Corporate Finance (online)

This certificate is designed for students who are seeking a career change to corporate finance, or students wishing to advance in the corporate Treasurer’s office or similar structure. The certificate begins with a common core of financial tools. The core classes include an integrated foundation of finance, economics and accounting, as well as an integrated course on domestic and international corporate valuation, covering both financial and accounting problems. The certificate finishes with a course in applied corporate finance, which focuses on financial decision making from a corporation’s perspective. Issues addressed include management of corporate liabilities, leasing and other asset-based financing techniques, short-term and long-term financing, capital budgeting decisions (CAPEX), corporate valuation, hedging with options and futures, dividend policy and share repurchases, corporate financial strategy, and other current issues in corporate finance.

Students completing the online Master of Science in Finance have the option of earning a certificate in either Corporate Finance or Financial Decision Making to supplement their degree. Additionally, an individual certificate in each track can be earned online for those students who do not wish to complete the full degree at this time. The combined Certificate in Finance Decisions and Corporate Finance requires 20 credits, while the Certificate in Corporate Finance requires 16 credits.

To obtain more information please visit the website (http://welcome.miami.edu/online/programs/masters-in-finance/certificate/).

### Mission

The Certificate in Corporate Finance allows students to advance in corporate finance functions such as the controller’s office, treasury management, capital budgeting, or investor relations.

### Goals

**Student Learning Outcomes**

- Use teamwork, business communication, and organizational skills to effectively analyze information and present results in group projects.

### Certificate in Financial Decision Making (online)

This certificate is designed for students who wish to either become financial managers or who wish to advance their financial careers. The certificate begins with a common core of financial tools and finishes with a course in financial decision-making. The core classes include an integrated foundation of finance, economics and accounting, as well as an integrated course on domestic and international corporate valuation, covering both finance and accounting problems. The financial decision making course, and the certificate will help managers use decision-making theory to better understand why investors, money managers, and corporate managers often make sub optimal economic and financial decisions. The course includes basic techniques and models that a manager or an investor should know. The certificate will provide students with a template for thinking through a variety of financial issues.

Students completing the master’s in finance have the option of earning a certificate in either Corporate Finance or Financial Decision Making to supplement their degree. Additionally, an individual certificate in each track can be earned online for those students who do not wish to complete the full degree at this time. The combined Certificate in Finance Decisions and Corporate Finance requires 20 credits, while the Certificate in Financial Decision Making requires 16 credits.

To obtain detailed program admission and curricula information please visit the website (http://welcome.miami.edu/online/programs/masters-in-finance/certificate/).

Communication

http://www.com.miami.edu

Departments

The School of Communication offers:

- the Master of Arts in the Department of Communication Studies (M.A. in Communication Studies), and
- the Master of Arts in the Department of Journalism and Media Management (M.A. in Journalism), and
- the Master of Arts in the Department of Strategic Communication (M.A. in Public Relations), and
- the Master of Science in the Department of Journalism and Media Management (M.S. in Media Management), and
- the Master of Fine Arts in the Department of Cinema and Interactive Media (M.F.A. in Motion Pictures and M.F.A. in Interactive Media).

The School also offers a Ph.D. in Communication.

Admission Requirements

Admission to Graduate Studies at the Master’s Level

The following is a list of the required conditions as well as the required documents/fees for your application for admission to the Master of Arts, Master of Science, or Master of Fine Arts degree in the School of Communication:

- A baccalaureate degree from an accredited institution
- The School’s official application
- An $85.00 non-refundable application fee
- Three letters of recommendation
- 500-word typed statement of academic and professional goals
  - Note: for the Interactive Media M.F.A., please visit this web site (http://com.miami.edu/interactive-media-mfa/) for specific instructions about the statement.
- Official transcripts of all college work, both undergraduate and graduate
  - Note: In addition, international applicants must send an official copy of their diploma for all degrees earned, and all documentation that confers their degree, with English translation for all degrees earned.
  - Note: All transcripts must be the original document, forwarded directly from the university; Xerox copies, true copies, notarized copies and other types of copies are not acceptable.
- Official TOEFL or IELTS scores
  - Note: Only for international applicants.
- Copy of current passport
  - Note: Only for international applicants. The name entered on the graduate application must exactly match your name as it appears on your passport.
- Official Graduate Record Examination (GRE) scores
  - Note: Required for M.A. applicants in Communication Studies and Public Relations.
  - Note: Journalism M.A. and Interactive Media M.F.A. applicants may send GRE scores or a portfolio.
  - Note: Media Management M.S. applicants may send the official Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) scores. Those applicants with at least three years of relevant professional media or business work experience (by the time they apply) may be eligible for a waiver. Eligibility for a waiver depends on the quality and type of professional experience and remains at the discretion of the Department of Journalism and Media Management Chairperson.
- Portfolio
  - Note: Required for Motion Pictures M.F.A. applicants.

Contact the Office of Graduate Studies, call 305-284-5236 or email (socgrad@miami.edu), for information.

Admission to Graduate Studies for the Juris Doctor/Master of Arts in Communication Joint Degree

Requirements for admission to graduate studies for the Juris Doctor/Master of Arts in Communication joint degree are:

- Students must be admitted to the Law School first, prior to enrollment in the School of Communication, checking a box on their application indicating their interest in the joint degree program. Once accepted to the Law School, the student’s law school application including LSAT score, undergraduate transcript, and letters of recommendation (two of them required for the J.D. program) will be sent to the School of Communication for review. The student will then receive notification from the School of Communication regarding his/her admission to the joint degree program.
- The LSAT score may be submitted in lieu of the GRE score.

General notes

- Students will be admitted to the Law School J.D. program and the School of Communication (SoC) master’s program separately.
- Students in this joint degree program must commence law study first.
- Students who have already commenced work on the SoC M.A. are not eligible for the joint program.

Admission to Graduate Studies at the Doctoral Level

The following is a list of the required conditions as well as the required documents/fees for your application for admission to the Doctor of Philosophy in Communication program:

- A master’s degree in communication or another appropriate field. The degree must be in addition to a bachelor’s degree. All degrees must be from accredited institutions.
- The School’s official application
- An $85.00 non-refundable application fee
- Three letters of recommendation
- Official transcripts of all college work, both undergraduate and graduate
  - Note: In addition, international applicants must send an official copy of their diploma for all degrees earned, and all documentation that confers their degree, with English translation for all degrees earned.
  - Note: All transcripts must be the original document, forwarded directly from the university; Xerox copies, true copies, notarized copies and other types of copies are not acceptable.
- Official TOEFL or IELTS scores
  - Note: Only for international applicants.
- Copy of current passport
  - Note: Only for international applicants. The name entered on the graduate application must exactly match your name as it appears on your passport.
Students take courses in the Department of Journalism and or strengthen their knowledge about business fundamentals, including analytics. Students complete courses in the Business School to learn content distribution, news and entertainment programming, research, and Media Management (M.S.)

The thesis track program builds from a foundation of public relations and methodologies. A second 36 credit hour, coursework-only non-thesis track program provides an opportunity to supplement a thesis track program. The 36 credit hour non-thesis track program focuses on a theoretical foundation with emphasis on applied communication. Students have the option to concentrate in Communication Studies, Health Communication, Intercultural Communication, or Organizational Communication.

Journalism (M.A.)

JOURNALISM (M.A.) is an intensive program of academic study and hands-on practice designed to develop competitive, high-level, cross-platform digital media skills appropriate for today’s media landscape. Students take a common core of courses designed to provide a foundation in all aspects of contemporary journalism (e.g., writing, reporting, multimedia, data visualization, broadcasting, media law and ethics). In addition, students have the opportunity to focus their work in various areas of study, including broadcast journalism, news and feature writing and various aspects of multimedia journalism. Through a combination of journalism courses and related courses offered by other programs, students may also concentrate some of their work in particular areas of interest (e.g., sports reporting, travel and features). The program begins in the fall semester and lasts for 18 months. No prior training or experience in journalism is required.

Public Relations (M.A.)

PUBLIC RELATIONS (M.A.) offers two tracks. The 30 credit hour thesis track program provides an opportunity to supplement a working foundation and knowledge with pertinent theory and research methodologies. A second 36 credit hour, coursework-only non-thesis track program builds from a foundation of public relations and communication courses.

Media Management (M.S.)

MEDIA MANAGEMENT (M.S.) is a 32-credit interdisciplinary graduate program designed for students who seek new or advanced opportunities in the various and expanding areas of the media industry, such as content distribution, news and entertainment programming, research, and analytics. Students complete courses in the Business School to learn or strengthen their knowledge about business fundamentals, including managerial strategy, economics, accounting, and marketing. At the same time, students take courses in the Department of Journalism and Media Management to apply business principles to media situations and evaluate critically how technological and regulatory trends, changing business models, emergent content applications, and new audience measurement techniques influence decision-making in media operations. Students can also customize their coursework by selecting electives in the School of Communication that best match their personal or career interests.

Required classes are held on Saturdays and weekday evenings to provide flexibility for working professionals. Students can study full-time or part-time. The program begins every fall and lasts one year for full-time students or two years for part-time students. No prior business or media management experience or education is required.

Joint Degree Juris Doctor (J.D.)/M.A. in Communication

JOINT DEGREE JURIS DOCTOR (J.D.)/M.A. IN COMMUNICATION. A powerful background in law and in communication can be a launching pad for a career in law, business, entertainment or government. For this reason, the University of Miami School of Law and School of Communication have brought together these two dynamic fields to offer a joint degree program. Through this joint program, students can acquire a law degree and a master’s degree in communication in less time (3 to 3 1/2 years). The joint degree program is intended for students with a variety of goals including students who plan to practice professionally in a communication field such as journalism or strategic communication with a law-related emphasis. Graduates of these programs may also work in-house counsel for new communication technology companies, or serve with government agencies concerned with communication law or with law firms practicing in that field. This program also provides a solid foundation for future journalists who wish to report on legal affairs, and offers ideal preparation for the rapidly growing field of public affairs management, in which practitioners work in business, government and non-profits to communicate with key audiences.

The School of Communication M.A. degree programs participating in the joint J.D. program are:

- Communication Studies (Communication Studies, Health Communication, Intercultural Communication, Organizational Communication)
- Public Relations
- Journalism

Motion Pictures (M.F.A.)

MOTION PICTURES (M.F.A.) The Motion Picture graduate program provides a student-centered learning experience within a globally diverse moving image context. The M.F.A. curriculum emphasizes the relationship between theory and practice and encourages both creative collaboration and independent thinking as it prepares motion picture professionals and artists. M.F.A. candidates are expected to follow a set sequence of courses during the first two semesters of their studies. During the second year of studies, candidates are strongly encouraged to explore not only a primary but also a secondary area of specialization in the program and develop a minimum of two creative projects consistent with their areas of primary interest and secondary specialization. A minimum of 6 credit hours in each area of specialization is required. Under faculty committee supervision, students will develop one or two creative projects in the third year of their studies. This three-year program culminates with a thesis portfolio that demonstrates, not only skilful execution of craft, but strong conceptual development rooted in collaborative work and innovative uses of technology.
Graduate students are encouraged to pursue independent and critical thinking, research and creative work as appropriate to the fulfillment of the requirements of their degree. In addition, the graduate program seeks to support innovative approaches and ideas and to aid in the pursuit of relevant scholarly and creative endeavors.

**Interactive Media (M.F.A)**

**INTERACTIVE MEDIA (M.F.A.)** The Interactive Media graduate program aims to prepare a new generation of innovators and leaders in the field of interaction design. The M.F.A. curriculum emphasizes exploration of the use of technology, design, and human behavior, to impact, augment, and influence how people communicate. The multidisciplinary curriculum brings together students from different backgrounds to learn about interaction design, gaming, mobile, data visualization, human computer interaction, and other emerging technologies. The program trains students to research, prototype, design, and build projects in business, social, academic, and cultural contexts.

**Communication**

**COMMUNICATION (Ph.D.)** provides students with the theory and research skills required to use communication to make positive change in society, community, and individuals. Possible areas of specialization, within this overarching framework of social and behavioral change, include health communication (broadly defined), intercultural communication, organizational communication, international communication, advocacy, and journalism studies and accompanying new/digital media foundations and skills.

**Cinema and Interactive Media**

The Cinema and Interactive Media Department offers a complete curricular experience in critical understanding and effective creation of contemporary moving image media and interactive design. With two programs, the M.F.A. in Motion Pictures and the M.F.A. in Interactive Media, our mission is to explore the creative uses of narrative, documentary, technology, design and human behavior in order to entertain, impact, augment, and influence how people communicate. We prepare a new generation of innovators, storytellers and leaders in the fields of cinema, transmedia and interaction design.

The M.F.A. in Motion Pictures program requires that students complete a minimum of 66 credit hours. At least 24 of these credit hours must be at or above the 700-level. At least 12 credit hours must be earned at the 800-level for thesis work. Motion Picture students must maintain an overall minimum GPA of 3.0 or above for all courses. By the end of the second year, students are required to achieve a minimum 3.0 score on the program’s film and television literacy test.

Students in the Motion Picture program are strongly encouraged to explore not only a primary but also a secondary area of specialization and develop a minimum of 2 creative projects in consultation with their faculty advisory committee. The 3 year program culminates in a thesis portfolio. Students need to work closely with their primary advisor and committee to ensure they are fulfilling their degree expectations, which typically include a short motion picture project abroad and a summer internship.

The M.F.A. in Interactive Media program requires that students complete a minimum of 45 credit hours at the graduate level with an average of ‘B’ and no grade lower than a ‘C-’. Prior written approval is required from both the chair of the CIM department and the director of graduate studies for transfer of credit hours, for course substitutions, as well as for taking a course at another university.

Interactive Media students are required to register for a capstone project seminar. To register for this course, students must complete all courses with a standing of 3.0 GPA. The capstone course is designed to help students define and execute their final projects. To graduate, students must complete and present a fully articulated capstone project and related documentation. Students must complete all degree requirements within 6 years.

M.F.A. candidates are expected to follow a set sequence of courses during the first two semesters of their studies. Several courses are required during the second year of studies. Candidates are strongly encouraged to explore not only a primary but also a secondary area of specialization in the program and develop a minimum of two creative projects consistent with their areas of primary interest and secondary specialization. A minimum of 6 credit hours in each area of specialization is required. Under faculty committee supervision, students will develop one or two creative projects in the third year of their studies.

All M.F.A. students must demonstrate deeper, critical understanding of motion picture practice in diverse social and cultural contexts. To this end, students are encouraged to take advantage of available study abroad programs. Students are also encouraged to participate in an internship during the summer of the first year or second year of studies.

By the end of the second year, students must complete a film and television literacy test, based on a list of 150 culturally and historically significant titles compiled by the faculty. The list is circulated to each student upon entrance into the program. The test is administered annually in the spring semester. Students are required to earn 85/100% on the test in order to complete the degree.

This three-year program culminates with a thesis portfolio that demonstrates, not only skillful execution of craft, but strong conceptual development rooted in collaborative work and innovative uses of technology.

Mission

The MFA in Interactive Media’s mission is to provide high quality graduate education for current and prospective professionals in the fields of interaction design, data visualization, and game design. Program activities are designed to explore the strategic role that interactive technologies play in communication and how they are shaping today’s business, culture, and society.

Goals

The program strives to achieve local, state, and national prominence through a contemporary hands-on curriculum, practical experience with outside organizations, and applied research designed to develop and enhance creative competence and design thinking skills.

Student Learning Outcomes

- Students will demonstrate the ability to design a system, component, or process to meet desired needs within system constraints.
- Students will be able to develop a product following a human-centered design that incorporates user research, innovation, design, and implementation.

M.F.A. in Motion Pictures

Students must complete a minimum of 66 credit hours with the approval of the faculty advisor. At least 24 must be at or above the 700-level and at least 12 must be earned for thesis. Motion Picture students must maintain an overall minimum GPA of 3.0 for all courses.

1. Students must complete a minimum of 45 credit hours at the graduate level with an average of B and no grade lower than a C-. Prior written approval is required from both the chair of the interactive media program and the director of graduate studies for transfer credit hours, for course substitutions as well as for taking a course at another university.

2. Students are required to register for a capstone project seminar. To register for this course, students must complete all courses with a standing 3.0 GPA. The capstone course is designed to help students define and execute their final projects. To graduate, students must complete and present a fully articulated capstone project and related documentation.

3. Students must complete all master’s degree requirements within 6 years.

4. Specializations are recommended, but students have the flexibility to design their own specialization.

Total Credit Hours 66

No more than 9 credit hours will be allowed for graduate internships and advanced projects and directed research. Courses may be taken, with program director approval, from other programs or departments within the University of Miami.

### Mission

The M.F.A. in Motion Pictures focuses on media creation with an emphasis on combining advanced technical proficiency and innovative narrative skills. Students gain practical and theoretical mastery of their particular professional concentration in screenwriting, production, and producing. Additionally, all students engage in critical studies of film history and theory in order to develop the analytical skills necessary for creative, cutting edge experimentation.

### Goals

The Program's objective is to nurture individual creative voices and encourage independent thinking, as well as to support the unique creative collaborative process of media creation. Graduates are prepared to
pursue careers as professional moving image artists, enter the teaching profession, provide service to the community and beyond, and enter moving image related professional fields.

**Student Learning Outcomes**

- Students will demonstrate advanced production skills in their area of concentration (producing, directing, cinematography or editing) in both analog and digital technologies. Students are also expected to learn and practice the primary activities of both creative and physical production: to follow the producing process from idea through script to preparation and execution of a production plan, as well as finish and exhibit the resultant production.
- Students will demonstrate film literacy with a clear fluency regarding important classic and contemporary international cinema and its cultural and social contexts.
- Screenwriting students will demonstrate advanced skills in screenwriting and television writing, with attention to professional screenwriting standards.

**Communication Studies**

Two programs are offered in Communication Studies.

- The thesis program emphasizes the student’s development of research skills under faculty supervision (30 credit hours).
- The non-thesis program focuses on a theoretical foundation with emphasis on applied communication (36 credit hours).

Students will be prepared for leadership positions in public or private organizations at the national or international level, or pursue advanced degrees.

Thesis students must complete a minimum of 30 credit hours at the graduate level with the approval of a faculty advisor or department chair. Non-thesis students must complete a minimum of 36 credit hours at the graduate level with the approval of a faculty advisor or department chair. Communication Studies students must maintain an overall minimum GPA of 3.0 for all courses. Core courses must be completed during the first year of study, or by completion of 18 credit hours. No more than 6 credit hours will be allowed for advanced projects and directed research. Only one intersession course (3 credit hours) can be counted towards the degree. Electives credits must be chosen with prior approval of a Communication Studies advisor.

**M.A. in Communication Studies - Communication Studies Track**

The goals of the Master of Arts program in Communication Studies are to provide students with a rigorous educational experience, to develop an advanced understanding of the human communication process, to increase awareness of the interdisciplinary nature of the communication field, and to develop oral, written, critical thinking, and research skills. Students may complete coursework in persuasion, and interpersonal, intercultural, organizational, and health communication together with research methods applicable to these areas. Two programs are offered. The thesis track emphasizes student development of research skills under faculty supervision (30 credit hours). The non-thesis track emphasizes a theoretical foundation based on application of communication courses (36 credit hours).

A maximum of 9 credit hours non-thesis track may come from outside the Department of Communication Studies (COS or COM courses). Elective credits must be chosen with prior approval from a Communication Studies advisor.

**Mission Goals**

The goals of the Master of Arts Program in Communication Studies are to provide students with a rigorous graduate level academic experience, comprehensive understanding of theoretical communication concepts, and development of advanced oral, written, critical thinking, and research skills.

**Student Learning Outcomes**

- Graduate students will demonstrate application of appropriate communication and professional skills.
- Graduate students will demonstrate a comprehensive understanding of communication concepts and critical analysis of research.
- Graduate students will demonstrate appropriate writing and presentational skills.

**M.A. in Communication Studies - Health Communication Track**

Health Communication is an emerging specialty in the field of communication. This graduate program is designed to provide a broad introduction to human communication in a health-care context. Career opportunities in this area include public health leaders, practitioners, and researchers who design, evaluate, and disseminate health communication messages for private and governmental organizations, advertising, public relations and marketing agencies, and journalists. Students will explore the roles of patients and caregivers, social and cultural issues, communication in health organizations, and the role of mass media. Two programs are offered. The thesis track emphasizes student development of research skills under faculty supervision (30 credit hours). The non-thesis track emphasizes a theoretical foundation based on application of communication courses (36 credit hours).

- Graduate students will demonstrate a comprehensive understanding of communication concepts and critical analysis of research.
- Graduate students will demonstrate appropriate writing and presentational skills.

**M.A. in Communication Studies - Intercultural Communication Track**

The Intercultural Communication Track is designed to provide students with an understanding of the way communication functions in intercultural settings, how culture affects the communication process, and the reciprocal effects of intercultural perceptions on policy in the history of Eastern-Western relations. Career opportunities in this field include corporate diversity trainer, communication director, human resource manager, international service representative, negotiator, and foreign correspondent with government and business organizations. Two programs are offered. The thesis track emphasizes student development of research skills under faculty supervision (30 credit hours). The non-thesis track emphasizes a theoretical foundation based on application of communication courses (36 credit hours).

### Mission Goals

The goals of the Master of Arts Program in Communication Studies are to provide students with a rigorous graduate level academic experience, comprehensive understanding of theoretical communication concepts, and development of advanced oral, written, critical thinking, and research skills.

### Student Learning Outcomes

- Graduate students will demonstrate application of appropriate communication and professional skills.
- Graduate students will demonstrate a comprehensive understanding of communication concepts and critical analysis of research.
- Graduate students will demonstrate appropriate writing and presentational skills.
M.A. in Communication Studies - Organizational Communication Track

Organizational Communication is designed to provide students with a comprehensive and advanced understanding of communication in the organizational environment. Courses are designed to extend oral, written, and critical thinking skills through application of concepts using practical challenges in organizations. Students have the opportunity to explore essential areas of organizational communication, presentational skills, leadership styles, interpersonal and small group interaction, decision making, persuasion, conflict management, and diversity training. Two programs are offered. The thesis track emphasizes student development of research skills under faculty supervision (30 credits). The non-thesis track emphasizes a theoretical foundation based on application of communication courses (36 credits).

1 A maximum of 6 credit hours thesis track may come from outside the Department of Communication Studies (COS or COM courses). Elective credits must be chosen with prior approval from a Communication Studies advisor.

Total Credit Hours

- Thesis Program: 30 credit hours
- Non-Thesis Program: 36 credit hours
Mission

Goals

The goals of the Master of Arts Program in Communication Studies are to provide students with a rigorous graduate level academic experience, comprehensive understanding of theoretical communication concepts, and development of advanced oral, written, critical thinking, and research skills.

Student Learning Outcomes

- Graduate students will demonstrate application of appropriate communication and professional skills.
- Graduate students will demonstrate a comprehensive understanding of communication concepts and critical analysis of research.
- Graduate students will demonstrate appropriate writing and presentational skills.

Doctor of Philosophy in Communication

The doctoral program is designed to provide students with the requisite foundation in theory as well as research skills for using communication to make positive change at the societal, community, and individual levels. The program allows learning across content and creative areas, methodological orientations, and platforms of expression for engaged scholarship and immersive experience, globally and locally. You will engage with communication theory, research, and practice using advocacy and storytelling, with particular attention to new and social media for social and behavioral change. This will be your niche: conducting research, engaging in immersive experience, and translating these into evaluation-based practice for the well being of community, society and the world.

The program includes field research experience and the teaching, writing, and media skills necessary for a career in higher education, research institutions, non-profits, government organizations, media, business, and industry. You may choose from health, environmental, international, intercultural and organizational communication as well as from journalism studies and media development to create an appropriate combination for your career goals.

Curriculum Requirements

For the doctoral program, students must complete 57 credit hours of course work beyond the master’s degree; 12 of the 57 credit hours must be dissertation credit hours. Doctoral students cannot take intersession courses.

1. A maximum of 9 credit hours non-thesis track may come from outside the Department of Communication Studies (COS or COM courses). Elective credits must be chosen with prior approval from a Communication Studies advisor.

2. Students must take a minimum of 9 credit hours in COM 609 and/or COM 695/COM 698 or any combination of the three. Students are allowed to take up to 6 credit hours of Directed Readings/Independent Research in total.

3. The dissertation committee may be the same as the student's qualifying exams committee. The guidelines for the composition of the dissertation committee are the same as those for the qualifying exams committee. Students must complete 12 dissertation credit hours. These credit hours begin after students have successfully completed their qualifying exams. Students are required to defend a dissertation proposal to the dissertation committee. Students may proceed with the dissertation once the proposal has been approved by the committee and accepted by the director of graduate studies. The dissertation must be an investigation of a substantial scholarly topic and must be defended orally in the presence of the dissertation committee. Students should note that they cannot conduct human subjects research without approval from the University of Miami’s Institutional Review Board.

All School of Communication Ph.D. students will take written and oral qualifying examinations following the conclusion of all course work prior to being admitted to candidacy for the Ph.D. degree. A student who fails the exam is given one opportunity to retake it with the permission of the exam committee and must pass it within one calendar year of failing the first exam. Any student who fails to be admitted to candidacy for the degree within this one-year period will be dismissed from the program. To be admitted to candidacy, students must have successfully completed qualifying exams and received approval from the department chair, have a minimum GPA of 3.0, and have submitted all original transcripts and standardized test results. A qualifying exams committee consists of a minimum of four members including the chair.

Mission

The mission of the Doctor of Philosophy program in Communication is to provide students with a rigorous advanced education and field experience in communication theory, concepts and practice as well as in qualitative and quantitative research methods.

Goals

The expected outcome from this education and experience is that students and graduates will be able to conduct original research, translate it into practice, and teach effectively.
Student Learning Outcomes

- Students will demonstrate comprehensive knowledge of communication theory, research methods, and their areas of specialization.
- Students will demonstrate the ability to propose and implement original research and present and defend the research in academic and professional contexts. They will demonstrate effective written communication, oral communication, and critical thinking skills.
- Students will demonstrate the ability to teach undergraduate communication courses independently.

J.D./M.A. in School of Communication

This program allows students to earn a J.D. and an M.A. in Communication in 3 to 3½ years. The three School of Communication programs participating in the joint J.D./M.A. program are Communication Studies, Journalism, and Public Relations. This joint degree program will allow 9 J.D. credit hours to be applied to the M.A. degree and 6 M.A. credit hours to be applied to the J.D. degree, saving the student 15 credit hours between the two programs.

In the J.D. program, students will complete 82 credit hours in the School of Law. Additionally, 6 credit hours from the School of Communication program will be applied to their Law School transcript, for a total of 88 required J.D. credit hours. In the M.A. program, students will complete 27 credit hours in the School of Communication. Additionally, 9 law school credit hours will be applied toward their master’s degree, for a total of 36 required M.A. credit hours. As defined above, 15 credit hours will be counted toward both degrees: 6 credit hours from the School of Law and 9 credit hours from the School of Communication. During the first year of the joint program, students will be required to attend the J.D. program full-time. Students will be able to take courses in the School of Communication beginning in the fall of their 2L year. Students must complete all J.D. requirements and all M.A. requirements as defined by their programs. Participants in the joint J.D./M.A. program are not required to complete the M.A. capstone project. The thesis-track is not open to students in the J.D./M.A. joint program without specific approval of the School of Communication. Students may take summer law courses, which may reduce the length of the joint degree program by up to one semester. Students may not take more than 16 credit hours each semester, excluding summer sessions. 17 credit hours per semester may be taken with permission from the Associate Dean, Academic Affairs, School of Law.

Law School Requirements

9 Law School credit hours should come from the following courses:

- Administrative Law
- Communications law
- Constitutional Law II
- Copyright Law
- First amendment Law
- Intellectual Property Law
- Internet Law
- Mass Media Law

The Law School will accept 6 credit hours from School of Communication courses: (the courses selected will depend on the specific program, e.g., Communication Studies, Journalism, or Public Relations, though following consultation with, and approval by, a faculty advisor, substitutions may be allowed). Examples include:

J.D./M.A. in Communication Studies

Communication Studies (M.A.)

The program has four tracks, each with 9 credits of required courses and 27 credits of elective courses but students in the joint program take 18 credits of electives and transfer 9 credit from the School of Law to make 27 credits. Communication Studies students must receive a ‘B’ or higher in core courses (COM 601, COM 602, and COM 603), as well as maintain an overall minimum GPA of 3.0 for all courses. Core courses must be completed during the first year of study, or by completion of 18 credits.

Curriculum Requirements

Communication Studies Track - Non-Thesis

This program focuses on developing a theoretical foundation with emphasis on applied communication.

J.D./M.A. in Journalism

Journalism (M.A.)
The program in journalism has 15 credits of required courses and 12 credits of elective courses (plus 9 credits that will be transferred from the School of Law). Law students with particular areas of interest may consult with a faculty advisor in Journalism to request course substitutions. As journalism evolves, the core and list of electives will evolve as well.

**Journalism and Media Management**

**Journalism (M.A.)**

Journalism is an intensive program of academic study and hands-on practice designed to develop competitive, high-level, cross-platform digital media skills appropriate for today's media landscape. Students take a common core of courses designed to provide a foundation in all aspects of contemporary journalism (e.g., writing, reporting, multimedia, data visualization, broadcasting, media law and ethics). In addition, students have the opportunity to focus their work in various areas of study, including broadcast journalism, news and feature writing and various aspects of multimedia journalism. Through a combination of journalism courses and related courses offered by other programs, students may also concentrate some of their work in particular areas of interest (e.g., sports reporting and, travel and features). The program begins in the fall semester and lasts 18 months. No prior training or experience in journalism is required.

**Media Management (M.S.)**

This 32-credit interdisciplinary graduate program is designed for students who seek new or advanced opportunities in the various and expanding areas of the media industry, such as content distribution, news and entertainment programming, research, and analytics. Students complete courses in the Business School to learn or strengthen their knowledge about business fundamentals, including managerial strategy, economics, accounting, and marketing. At the same time, students take courses in the Department of Journalism and Media Management to apply business principles to media situations and evaluate critically how technological and regulatory trends, changing business models, emergent content applications, and new audience measurement techniques influence decision-making in media operations. Students can also customize their coursework by selecting electives in the School of Communication that best match their personal and career interests.

Students can study full time or part time. The program begins every fall and lasts one year for full-time students or two years for part-time students. No prior business or media management experience or education is required.

**Masters Program in Journalism and Media Management**

- M.A. in Journalism (p. 768)
- M.S. in Media Management (p. 769)

**M.A. in Journalism**

The Journalism M.A. program is designed to prepare students for professional participation in a number of digital and multimedia news environments, including television, online, mobile, magazine, and newspaper. Coursework stresses journalistic values, critical thinking, and storytelling, combined with the digital and technical skills to create content in the context of today's dynamic and evolving media landscape. In consultation with faculty advisors, students are strongly encouraged to develop areas of special interest, and are required to complete an individually produced, in-depth Qualifying Project.

Journalism M.A. students must complete a minimum of 36 credit hours at the graduate level with the approval of the Chair of the Department of Journalism and Media Management or Director of the Graduate Program in Journalism. Of the 36 credit hours, all must be at or above the 600 level. Students with strong prior experience in a particular area may request a written waiver of a required course from the department chair, upon the demonstration of sufficient expertise in that subject. The program begins in the fall semester with a mandatory bootcamp one week before classes begin and the program typically lasts 18 months, unless the student is attending on a part-time basis. Prior training or experience in journalism is preferred, but not required or necessary. As journalism evolves, the core and list of electives will evolve as well.

**Electives**

Electives are chosen with the approval of a faculty advisor. These courses may come from either within or outside the School of Communication. It is highly recommended that students consider pursuing a professional internship for one of these electives. Select six of the following:

- JMM 610: Comparative Media Systems
- JMM 617: Television News Reporting
- JMM 619: Interactive Storytelling
- JMM 620: Reporting and the Internet
- JMM 622: Introduction to Infographics and Data Visualization
- JMM 623: Sports Reporting
- JMM 627: Television News Producing
- JMM 630: Programming for Interactivity
- JMM 631: Data Journalism
- JMM 633: Social Media
- JMM 637: The Business of Modern Journalism
- JMM 640: Web Design
- JMM 641: Advanced Audio Video Narratives
- JMM 644: Feature Writing
- JMM 646: Travel Writing
- JMM 647: Magazine Planning
- JMM 648: Sports and the Media
- JMM 650: 3D Design and Graphics
- JMM 695: Special Topics in Journalism
- JMM 699: Advanced Projects and Directed Research
- CIM 636: Collaborative Innovation Laboratory
- CIM 640: Intro to Creative Coding
- CIM 645: Managing Interactive Media Projects
- CIM 651: Motion Graphics and Compositing
- CIM 661: 360° Immersive Filmmaking and Storytelling

**Final Qualifying Project**

Students, in consultation with a faculty committee of their choosing, will complete a final reporting project that reflects in-depth knowledge and analysis of a subject and professional competence in reporting and presenting it for the appropriate medium.

- JMM 815: Multimedia Project 3

**Total Credit Hours**: 36

### Mission

The MA program in Journalism program at the University of Miami strives to prepare its students to conduct journalistic research and to turn that information into dynamic content—written, audio, video, digital—for presentation to global media audiences.

### Goals

Upon graduation, students are prepared to work in a variety of news and information settings and are equipped to gather and analyze information, critically evaluate it, and write and produce material for various media formats, all within the guiding ethical and legal principles for journalism.

### Student Learning Outcomes

- Students will demonstrate the ability to acquire, critically analyze, and present journalistic messages in an appropriate format using sound reasoning and journalistic principles.
- Students will demonstrate proficiency in the use of contemporary equipment, technologies, and workflows, as well as key theoretical concepts of audio/visual/interactive storytelling.
- Students will demonstrate the ability to articulate and practice the values, ethics, laws, social responsibilities, and theoretical and methodological foundations of the profession.

### M.S. in Media Management

Created in partnership with the Miami Business School, the Master of Science in Media Management is designed to prepare students for careers on the business side of the industry, such as content distribution and audience research. Students will acquire a solid background to understand and operate in the different segments of the rapidly changing media industry by being exposed to both business principles and key aspects of media management, technology, economics, programming, distribution, measurement, and law. The program allows students to cultivate their own topical interests in required media management courses and electives.

**Total Credit Hours** 32
Mission
The M.S. program in Media Management will prepare students for careers on the business side of the media industry, such as operations, marketing, sales, and research. The program will cover both business principles and key aspects of media management, technology, economics, programming, distribution, research, and law as they pertain to the changing media environment. Students will gain strategic and analytical skills through media case studies and applications.

Goals
Our graduates should be able to:

• Master business fundamentals;
• Understand the dynamics of the media ecosystem from technological, economic, and regulatory perspectives;
• Learn the role of content in the media ecosystem and its relationship to audience measurement;
• Develop problem-solving skills to address media industry issues and challenges through case studies and applications; and
• Acquire expertise in one or more areas that are consistent with their personal interests.

Student Learning Outcomes
• Students will demonstrate knowledge of how technological change has influenced the economic transformation of the media ecosystem and the content delivery process across various platforms.
• Students will demonstrate the ability to analyze business plans and audiences using a variety of media industry metrics and research techniques.
• Students will demonstrate the ability to address technological, economic, financial, and legal challenges facing media companies and present cogent and effective solutions.

Strategic Communication
Public Relations (M.A.)
The program offers two tracks. The 30-credit thesis track program provides an opportunity to supplement a working foundation and knowledge with pertinent theory and research methodologies. A second 36-credit, coursework-only non-thesis track program builds from a foundation of public relations and communication courses.

Masters Programs in Strategic Communication
• M.A. in Public Relations (p. 771)

Goals

Student Learning Outcomes

• Students will demonstrate in-depth knowledge of the public relations discipline.
• Students will demonstrate that they can write effectively for public relations.
• Students will demonstrate the ability to communicate orally and present public relations strategies and plans clearly and effectively.

Mission

The Public Relations Program mission is to prepare professional communicators who understand and can demonstrate the use of theory, research, planning and evaluation in effective public relations practice. We are committed to building students’ ability to apply ethical principles to decision-making and to perceive each communication and its intended audience holistically, based on an understanding of and appreciation for cultural and other differences. We also seek to nurture students’ analytic and creative skills with the goal of graduating insightful, resourceful citizens of a global society.
Education and Human Development

http://www.education.miami.edu

Departments

• Educational and Psychological Studies (EPS)
• Kinesiology and Sport Sciences (KIN)
• Teaching and Learning (TAL)

Degree Programs

Doctor of Philosophy (Ph.D.)
The Doctor of Philosophy degree is designed to develop personnel competent to conduct research in a particular field of education or behavioral sciences. Concentrations are offered in:

• Community Well-Being (EPS)
• Counseling Psychology (EPS)
• Exercise Physiology (KIN)
• Research, Measurement, and Evaluation (EPS)
• Teaching and Learning (TAL)

Doctor of Education (Ed.D.)
The Doctor of Education degree is designed to develop personnel in education competent to utilize the results of research in practical situations. Concentrations are offered in:

• Applied Learning Sciences (TAL)
• Higher Education Leadership (EPS)

Specialist in Education (Ed.S.)
The Specialist in Education degree is an advanced terminal, practice-oriented degree that is designed to prepare recipients to assume positions of leadership within educational and affiliated settings. Concentrations are offered in:

• Early Childhood Special Education (TAL)

Master of Science in Athletic Training (M.S.A.T.)
The Master of Science in Athletic Training degree is a graduate professional program accredited by the Commission on Accreditation of Athletic Training Education (CAATE). The program is designed to provide a structured classroom and clinical experience to prepare students to become eligible to sit for the Board of Certification exam.

• Athletic Training (KIN)

Master of Science in Education (M.S.Ed.)
The Master of Science in Education degree is a practice-oriented degree that is designed to prepare its recipients to assume professional positions that require advanced course work and post-graduate degrees. Concentrations are offered in:

• Applied Learning Sciences (TAL)
• Community and Social Changes (EPS)
• Counseling: Marriage and Family Therapy (EPS)
• Counseling: Mental Health (EPS)
• Early Childhood Special Education (TAL)
• Education and Social Change (TAL)
• Exercise Physiology: Clinical and Applied Exercise Physiology (KIN)
• Exercise Physiology: Nutrition for Health and Human Performance (KIN)
• Exercise Physiology: Strength and Conditioning/Fitness Entrepreneurship (KIN)
• Higher Education: Enrollment Management (EPS)
• Higher Education: Institutional Research and Policy Analysis (EPS)
• Higher Education: Student Life and Development (EPS)
• Research, Measurement and Evaluation (EPS)
• Special Education (TAL)
• Sport Administration (KIN)
• STEM Education (TAL)
• TESOL (TAL)

NOTE: The School of Education and Human Development’s graduate programs are governed by the rules, regulations and policies of the larger University and Graduate School. In places where what appears in the following is judged to be in conflict with these other policies, the University and/or Graduate School’s policies will take precedence.

Application Requirements

Admission to all graduate-degree concentrations in the School of Education and Human Development is based on the recommendation of the faculty. Admissions decisions are based on faculty review of the following general requirements that apply to all Graduate Programs in the School as well as specific documents listed under each concentration. Applicants must:

• achieve acceptable scores on the Graduate Record Exam (GRE) taken within the past five years. International applicants whose native language is not English or applicants whose degrees are from a non-U.S. University must pass the Test of English as a Foreign Language (TOEFL) and the GRE;
• provide official transcripts showing completion of a bachelor’s degree from an accredited institution and an acceptable undergraduate grade point average. A minimum of 3.0 undergraduate GPA is required. Official transcripts from every institution attended by an applicant, whether or not the applicant completed a degree program at the institution, are required;
• provide three letters of recommendation that address the issues and purpose of the program being applied to;
• resume;
• take part in an admissions interview (required by some programs); and
• exhibit personal and professional experiences and characteristics that are relevant to the profession and/or field and/or degree program for which the application is being submitted.

Doctor of Philosophy (Ph.D.)

In addition to the factors listed as general requirements for all applications to the SEHD’s graduate programs, consideration for admission to the Ph.D. program will include the following:

• letters of recommendation should address the applicant’s academic potential;
• available student space in the program;
• For TAL: availability of faculty advisor willing to mentor the student.
• For EPS: Counseling: receipt of completed applications by the predetermined cut-off date. Please reference the SEHD web site, as doctoral applications are reviewed once each year.

Doctor of Education (Ed.D.)

*In addition* to the factors listed as general requirements for all applications to the SEHD’s graduate programs, consideration for admission to the Ed.D. program will include the following:

• letters of recommendation should address the applicant’s academic potential;
• available student space in the program; and
• admissions interview.

Specialist in Education (Ed.S.)

*In addition* to the factors listed as general requirements for all applications to the SEHD’s graduate programs, consideration for admission to the Ed.D. program will include the following:

• completion of a master’s degree with an outstanding record from an accredited institution;
• adequacy of previous study in the field for which the Ed.S. is being requested;
• an appropriate period of successful teaching experience (TAL only);
• acceptable scores on the Graduate Record Examination (GRE); or in the case of TAL only, approval of a GRE waiver. Applicants who seek a GRE waiver must have taught for a minimum of three years in a full-time capacity, fill out and submit a GRE waiver form, and submit a 3-page essay on an important educational.

Master of Science in Education (M.S.Ed.)

*In addition* to the factors listed as general requirements for all applications to the SEHD’s graduate programs, consideration for admission to the M.S.Ed. program will include the following:

• For some M.S.Ed. programs in TAL: Teachers with at least three years full-time teaching experience may apply for a GRE waiver for programs in the Department of Teaching and Learning. An application for waiver of the GRE requirement may be found on the SEHD web site. Teachers who apply for a GRE waiver must submit a 3-page essay on an important topic in education.
• For Community and Social Change (EPS): Professionals who have worked full-time for at least three years in a not-for-profit setting may apply for a waiver of the GRE requirement. Please contact the program directly for conditions governing this waiver.
• For Sport Administration (KIN): Applicants with 3-years of professional work experience may apply for a GRE waiver. Please contact the program directly for specific waiver criteria.

International Applications

All international applications must provide additional information and meet additional requirements as required by the UM Graduate School and the UM Office of International Admissions. For an appropriate link to these requirements, please visit the Graduate School website.

Admission Decision

Once an applicant has been admitted to graduate study, that individual should meet with the faculty advisor who was appointed to serve in that capacity and whose name appears in the admissions letter. This advisor will help the student enroll in courses that are appropriate to the program; to develop and to refine a Program of Study or Course Sequence Plan that must be on file in the Senior Associate Dean’s Office by the end of the first semester of study.

Honor Code/Handbook of Policies and Procedures

The School of Education and Human Development follows the Graduate School’s Honor Code. All students are required to submit a signed Acknowledgement of Receipt and the Graduate Student Honor Code by the end of their first semester of enrollment.

Continuous Enrollment

The School of Education and Human Development adheres to the Graduate School’s continuous enrollment requirement.

Financial Assistance

In addition to University-wide fellowships and the availability of student loans, the School of Education and Human Development provides many forms of financial assistance for students enrolled in its graduate programs. These include tuition-based scholarships (including federally funded scholarships), teacher-tuition scholarships, training fellowships, graduate student assistantships, and other forms of help.

Notwithstanding a student’s time to completion, the SEHD limits a student’s eligibility for scholarships and other financial assistance that is under its control to five years from the time of initial enrollment.

Scholarship-based financial assistance is to be used only for courses that define each student’s program of study. Students who enroll in courses outside of their programs of study will be charged full tuition for those courses.

Teacher Tuition Scholarships do not apply to doctoral (Ph.D. and Ed.D.) programs.

Tuition scholarship assistance may not be applied to the retaking of courses for any reason whatsoever.

Financial assistance whose sources of funding are outside of the School of Education and Human Development, for example, Federal loans provided by the University of Miami, shall be governed by all applicable rules, regulations, and policies. Specifically, many federal loans and grants have conditions limiting the programs and/or courses to which they may be applied. Some federal loans are restricted to graduate courses only; some fellowships, grants or traineeships may entail post-graduation employment commitments. Alternatively, private scholarships or fellowships may have their own conditions. Before accepting any form of financial assistance, please be sure to ask about and to fully understand the conditions that govern whatever type of financial assistance you are offered.

Degree Requirements

In addition to the formal academic requirements (as outlined below), the School of Education and Human Development requires its students to demonstrate personal qualities that, in the judgment of the faculty, would permit them to function effectively in their professional roles. The School of Education and Human Development reserves the right to dismiss any students who are academically or personally unwilling or unable to carry out the professional responsibilities of the respective profession for which they are being trained. Conduct which may be considered unprofessional may include, but is not limited to, research or professional misconduct; dishonesty, cheating, plagiarism; exercise of professionally
Doctor of Philosophy (Ph.D.)

Upon admission to graduate study, a supervisory committee, consisting of at least four members (composed as per UM Graduate School regulations), will be appointed by the School of Education and Human Development.

The student will meet with the chairperson of this committee to design a Program of Study/Residency Plan.

The Program of Study/Residency Plan must be approved by the supervisory committee, the department chairperson, and the Senior Associate Dean of Graduate Studies in the School of Education and Human Development.

The Program of Study/Residency Plan must be filed with both the Graduate School and the School of Education and Human Development by the end of the second semester of enrollment or future registration will not be permitted.

All students are required to submit a signed Student Responsibility Checklist and the Graduate Student Honor Code by the end of their first semester of enrollment.

The residence requirement is two full-time consecutive semesters of coursework at the University of Miami.

The minimum total credit hours required beyond the Bachelor’s are 60, plus a minimum of 12 dissertation research credit hours.

15 credit hours of statistics and research methods are required as prescribed by the supervisory committee.

A student must pass a Qualifying exam before being admitted to candidacy for a doctorate. The content and conditions for administering the Qualifying examination are defined by the program area in which a student is enrolled.

A student’s score on the Qualifying Examination is the professional judgment of the committee that was appointed to score that examination. As such, no academic appeals of scores on qualifying examination are possible.

If a student fails an initial attempt at passing a program’s Qualifying examination, the student’s advisory committee may allow a student a second opportunity to pass a new qualifying examination that is administered within a year of the original, at its sole discretion.

A student who fails a program’s qualifying examination may not proceed any farther in the program and is, instead, dismissed at the end of the then-current term. Beyond the then-current term in which a student’s qualifying examination is scored, no additional financial assistance will be provided to a student who is scheduled to be dismissed from the program for failure in the qualifying examination.

Students are required to complete all Ph.D. requirements within eight years of initial enrollment.

Doctor of Education (Ed.D.)

Upon admission to graduate study, a supervisory committee, consisting of at least four members (composed as per UM Graduate School regulations), will be appointed by the School of Education and Human Development.

The student will meet with the chairperson of this committee to design a Program of Study/Residency Plan.

The Program of Study/Residency Plan must be approved by the supervisory committee, the department chairperson, and the Senior Associate Dean of Academic Studies in the School of Education and Human Development.

The Program of Study/Residency Plan must be filed with both the Graduate School and the School of Education and Human Development by the end of the second semester of enrollment or future registration will not be permitted.

All students are required to submit a signed Student Responsibility Checklist and the Graduate Student Honor Code by the end of their first semester of enrollment.

The minimum total credit hours required beyond the bachelors are 60, including a minimum of 12 dissertation credit hours.

A supporting area consisting of at least 12 credit hours is required, the student must be qualified for admission to graduate status in this area, and receive approval for enrollment from the appropriate department and from the School of Education and Human Development.

A minimum of 12 credit hours of statistics and research methods are required as prescribed by the supervisory committee.

Students are required to complete all Ed.D. requirements within eight years of initial enrollment.

Specialist in Education (Ed.S.)

The Specialist in Education is a terminal degree that is independent of both doctoral degrees (Ph.D. and Ed.D.) that are offered by the SEHD. Although there is normally some overlap in coursework, admission to a specialist program does not imply that the student has been or will be admitted to a doctoral program.

A supervisory committee consisting of three faculty members in the student’s area of study will be appointed by the School of Education and Human Development.

Upon admission to the specialist program, a formal program of study is approved by the Supervisory Committee.

A minimum of 60 graduate credit hours, (or 30 credit hours after completion of the Master’s program) is required. The program must include at least 30 graduate credit hours earned at the University of Miami and at least 18 graduate credit hours earned following admission to the specialist program. The specialist program of study is developed in consultation with the Supervisory Committee that consists of 3 faculty members (a chairperson and 2 other members).

Students must pass a comprehensive written examination, portfolio (with an oral examination as a possible additional requirement), capstone course, project, thesis, or requirement specified by the program. When a thesis is chosen, a maximum of 6 credit hours may be counted toward the total degree requirements, and an oral examination in defense of the thesis will be required. The written comprehensive examination will cover
the student's program of study. The examination must be taken during or after the final semester in which the student is enrolled for coursework in the program. The project will be directed by the Chairperson of the Specialist Supervisory Committee.

All specialist students must engage in teaching and/or research appropriate to their degree program.

All work for the degree of Specialist in Education must be completed within six years of initial enrollment.

**Master of Science in Athletic Training (M.S.A.T.)**
A minimum of 60 graduate credit hours is required.

All work towards the Master's degree must be completed within six years of initial enrollment.

**Master of Science in Education (M.S.Ed.)**
A minimum of 30 graduate credit hours is required.

TAL: Students enrolled in any certification program that has been approved by Florida Department of Education (e.g., the Professional Training Option) must fulfill any and all additional requirements (e.g., passing state teacher tests) that are specified by the program approval.

EPS: Students enrolled in any counseling program must complete the required “Personal Growth Experience” form.

Students must pass a comprehensive written examination, portfolio (with an oral examination as a possible additional requirement), capstone course, project, thesis, or requirement specified by the program. When a thesis is chosen (in the KIN Dept. or EPS Dept.), a maximum of 6 credit hours may be counted toward the total degree requirements, and an oral examination in defense of the thesis will be required. The written comprehensive examination will cover the student's program of study. The examination must be taken during or after the final semester in which the student is enrolled for coursework in the program. The project will be directed by the student's advisor.

All work towards the Master's degree must be completed within six years of initial enrollment.

**Certificates in Educational and Psychological Studies**
- Higher Education Administration/Enrollment Management (p. 788)
- Higher Education Administration/Student Life and Development (p. 787)
- Latino Mental Health Counseling (p. 787)

**M.S.Ed. in Community and Social Change**
http://sites.education.miami.edu/community-and-social-change-m-s-ed/

The Community and Social Change Master's program is a 30-36 credit program designed to prepare a new generation of creative leaders for the not-for-profit sector who are knowledgeable in the research, theories, and practice of individual and social well-being. The vision of the program is to be a hub for innovative and applied leadership in community well-being and social change. The mission of the program is to prepare globally aware leaders, researchers, and agents of change who create, inspire,
and engage community organizations to foster well-being in diverse community settings. The program is designed to develop community leaders who can help understand and address the real challenges faced by local communities in a multi-cultural and global context. The program is designed to accommodate a variety of students by offering courses in a unique format that incorporates the following domains:

1. Core theory and skill-building coursework,
2. Core research coursework,
3. Experiential field experience (practicum), and
4. Capstone requirement (Independent project).

\(^1\) See Academic Advisor for a full list of eligible electives.

\(^2\) If electives are not specified (to be determined) when Course Sequence Plan (CSP) is submitted to the Senior Associate Dean’s Office, then you should complete a Course Substitution form before you register for the approved elective(s).

### Mission

The mission of the program in Community & Social Change (C&SC) is to prepare globally aware leaders, researchers, and agents of change who create, inspire, and engage community organizations to foster well-being in diverse community settings.

### Goals

Program objectives include:

- Produce students who understand the constructs of well-being and how to apply them in community-based work settings;
- Produce students with an awareness of their values and how these impact their work in communities, as well as students who can critically think about and evaluate community based organizations, community and human services and programs; and
- Produce students with skills that translate across diverse settings and a basic understanding of emerging technology as it relates to community and social change efforts.

### Student Learning Outcomes

- Students will demonstrate an awareness of their values and assumptions and be able to think analytically, logically and critically about social problems and solutions.
- Students will demonstrate in-depth knowledge of the theories and practices of community and social change by the time they graduate.
- Students will demonstrate an understanding of multicultural settings and the components necessary to work with competence in diverse settings.
- Students will demonstrate an ability to organize and communicate information effectively and incorporate technology and digital media.

### M.S.Ed. in Counseling - Marriage and Family Therapy

http://sites.education.miami.edu/marriage-family-therapy-m-s-ed/
Programs offered in counseling are characterized by intensive clinical supervision by faculty members in an on-campus clinic, by strengths in the areas of family systems and couples’ therapy, and by the rich multi-ethnic composition of the community, students and clients.

Curriculum Requirements
This variable 60 credit hour program provides the academic and pre-degree supervision requirements for licensing as a Marriage and Family Therapist in the State of Florida.

Goals
The Master’s program prepares students to function as culturally competent counselors to address the mental health needs of a diverse client population.

Student Learning Outcomes
• Our counseling students will demonstrate knowledge of DSM-5 (Diagnostic and Statistical Manual of Mental Disorders· 5th Edition) symptom criteria for mental disorders. They will accurately identify clinical symptoms and provide the corresponding diagnosis based on DSM-5 criteria.
• Students are expected to demonstrate competence in developing case conceptualizations. Specifically, students should be able to incorporate theories in developing comprehensive case conceptualizations of practicum patients (patients treated at our on-campus training clinic).
• Students will demonstrate knowledge in the application of ethical guidelines governing the practice of mental health counseling.

Curriculum Requirements
This variable 60 credit hour program provides the academic and pre-degree supervision requirements for licensing as a Mental Health Counselor in the State of Florida.

Mission
To prepare students for professional practice at the Master’s level in Mental Health Counseling (MHC), and Marriage and Family Therapy (MFT) through the integration of theory, research and skills derived from science-based education.

Mission

To prepare students for professional practice at the Master’s level in Mental Health Counseling (MHC), and Marriage and Family Therapy (MFT) through the integration of theory, research and skills derived from science-based education.

Goals

The Master’s program prepares students to function as culturally competent counselors to address the mental health needs of a diverse client population.

Student Learning Outcomes

- Our counseling students will demonstrate knowledge of DSM-5 (Diagnostic and Statistical Manual of Mental Disorders· 5th Edition) symptom criteria for mental disorders. They will accurately identify clinical symptoms and provide the corresponding diagnosis based on DSM-5 criteria.
- Students are expected to demonstrate competence in developing case conceptualizations. Specifically, students should be able to incorporate theories in developing comprehensive case conceptualizations of practicum patients (patients treated at our on-campus training clinic).
- Students will demonstrate knowledge in the application of ethical guidelines governing the practice of mental health counseling.

M.S.Ed. in Higher Education Administration - Enrollment Management

http://sites.education.miami.edu/higher-education-administration-enrollment-management-m-s-ed/

The Higher Education Administration Program, which offers a Master of Science in Education with concentrations in Enrollment Management, Student Life and Development, and Institutional Research and Policy Analysis, is designed to produce skilled and versatile higher education administrators who understand all aspects of their professional environment. Our graduates enter a variety of roles in college and university administration with the ability to consider today’s challenges from a broad-based, highly informed perspective.

Also offered is a Certificate Program for working professionals who already have master’s degrees and seek career-furthering credentials and skills.

Curriculum Requirement

The Enrollment Management concentration (33 credit hours), the product of a unique collaboration between the School of Education and Human Development and the Division of Enrollment Management, integrates theory, research, teamwork, and effective communication. It is an interdisciplinary program, with courses also required in the Miami Business School. Opportunities abound for integrating research and theory in daily practice.

Total Credit Hours 33

Mission
The Higher Education Administration Program leading to a Master of Science in Education prepares students to begin careers at colleges and universities, and professionals to acquire career-advancing knowledge and skills. The program’s three tracks are based in enrollment management, which uses theory, research, collaboration across office lines and strategic decision-making to effect student success. In emphasizing hands-on experiences, the tracks – Enrollment Management, Student Life and Development, and Institutional Research & Policy Analysis – instill comprehensive understanding of today’s higher education.

Goals
Our program works to impart the ability to apply theory and research to practice in complex, multicultural environments; to make sound decisions; and to obtain, at minimum, middle management positions in the field.

Student Learning Outcomes
- Students will demonstrate a solid understanding of the foundations of higher education, including contemporary applications of enrollment management, and the ability to apply that understanding to real-world problems.
- Through hands-on experience, students will effectively apply theory and research findings to strategic planning in higher education administration.

M.S.Ed. in Higher Education Administration - Institutional Research and Policy Analysis

http://sites.education.miami.edu/higher-education-administration-institutional-research-and-policy-analysis-m-s-ed/

The Higher Education Administration Program, which offers a Master of Science in Education with concentrations in Enrollment Management, Student Life and Development, and Institutional Research and Policy Analysis, is designed to produce skilled and versatile higher education administrators who understand all aspects of their professional environment.

Our graduates enter a variety of roles in college and university administration with the ability to consider today’s challenges from a broad-based, highly informed perspective.

Curriculum Requirements
The Institutional Research and Policy Analysis concentration (33 credits) focuses on the skills necessary to conduct applied research that supports the effective functioning of post-secondary institutions. Areas of study extend beyond integrating research into effective administrative and policy initiatives to include understanding state and federal policies, higher education foundations, statistics, and data analytics.

**Mission**

The Higher Education Administration Program leading to a Master of Science in Education prepares students to begin careers at colleges and universities, and professionals to acquire career-advancing knowledge and skills. The program's three tracks are based in enrollment management, which uses theory, research, collaboration across office lines and strategic decision-making to effect student success. In emphasizing hands-on experiences, the tracks — Enrollment Management, Student Life & Development, and Institutional Research & Policy Analysis — instill comprehensive understanding of today's higher education.

**Goals**

Our program works to impart the ability to apply theory and research to practice in complex, multicultural environments; to make sound decisions; and to obtain, at minimum, middle management positions in the field.

**Student Learning Outcomes**

- Students will demonstrate a solid understanding of the foundations of higher education, including contemporary applications of enrollment management, and the ability to apply that understanding to real-world problems.
- Through practicums, students will demonstrate ability to apply theory and research to meeting daily challenges affecting undergraduate students' transition and adjustment to college, academic success and personal growth.

**M.S.Ed. in Research, Measurement and Evaluation**

http://sites.education.miami.edu/research-measurement-evaluation-m-s-ed/

The curriculum of the M.S. Ed. in RME is structured around three components: (A) a core set of 24 credits (8 courses of 3 credits each) of required coursework covering the fundamentals of research design, measurement, and statistical analysis; (B) 6 credits of elective coursework; and (C) a comprehensive exam occurring upon the completion of the 24 credits of required coursework. The specific details of the curriculum are given below.

</tbody>
</table>
Each student must successfully pass a comprehensive exam that covers the content of the core 24 credits. This exam assesses the student's competency in these core areas of research methodology and use of statistical software, and is based on content that is aligned with the material covered in the core 24 credits.

Total Credit Hours 30

1 Students work with faculty member(s) to select from a large number of graduate courses relevant to the students' interests and professional goals. Appropriate courses may be related to advanced statistical modeling or other content areas.

2 Upon the approval of your academic advisor, you can take the classes from other departments.

Mission
The mission of the RME Master's program is to provide students with the requisite training in the application of statistical and measurement methodologies to be a data analyst, research coordinator, or measurement advisor in a variety of professional (e.g., educational assessment) and/or academic (e.g., doctoral student in a related program) settings.

Goals
Student Learning Outcomes
• Students will demonstrate adequate mastery in the advanced statistical and measurement methodology.
• Students will demonstrate adequate mastery for conducting statistical analyses and database management using the R program.

Executive Ed.D. in Higher Education Leadership
http://sites.education.miami.edu/higher-education-leadership-et-ed-d/

The Higher Education Leadership program, which offers a Doctor of Education degree (Ed.D.), is committed to preparing students for senior leadership positions in colleges and universities, state and federal agencies, and other educational organizations. The Executive Ed.D. program is guided by a practitioner-scholar model that combines theoretical offerings with application to practical higher education problems. Students focus on areas of special interest and choose dissertation projects that address issues confronting the contemporary higher education workplace.

The Executive Ed.D. is designed to meet the needs of working professionals. Courses are offered on weekends, and a cohort design allows students to develop meaningful relationships, support one another, and learn from the diverse experiences of fellow educators.

The curriculum emphasizes the impact of theory and empirical evidence on administrative, organizational, and policy contexts in post-secondary education. Unique to the University of Miami Executive Ed.D. in Higher Education Leadership is its component in enrollment management, a comprehensive strategy that promotes the seamless integration of administrative responsibilities to efficiently and effectively meet institutional needs and promotes student success.

Mission

The Executive Ed.D. Program in Higher Education Leadership prepares students for senior-level administrative, academic, policymaking, and other leadership roles in both public and private spheres of higher education. To nurture effective leaders, our emphasis is on data-driven decision-making. Grounded in research, theory, applications to daily practice, and enrollment management, our intensive weekend cohort format allows working professionals with master's degrees to retain full-time careers while earning a Doctor of Education.

Goals

Students emerge with the knowledge, skills, versatility, and creativity for solving problems, taking advantage of opportunities, and leading change in a range of educational settings.

Student Learning Outcomes

- Students will grasp the basics of social science research on issues in higher education and demonstrate skills in asking effective research questions, developing sound methodology and conducting appropriate analyses.
- Students will effectively apply knowledge of leadership theory, research and best practices to problems of practice in higher education.
- Students will master all doctoral dissertation components as demonstrated through communication effectiveness – written and oral deliveries – at quality academic and professional levels.

Ph.D. in Community Well-Being

http://sites.education.miami.edu/community-well-being-ph-d/

The program in Community Well-Being trains community-engaged action-researchers committed to promoting social justice through rigorous theoretical analysis and community-based research. The program is grounded in the discipline of community psychology and focuses on community-engaged scholarship that involves the researcher in a mutually beneficial partnership with the community. The program prepares scholars for careers in academia, research, and public policy.
Mission
The mission of the program is to produce community-engaged scholars who promote individual, relational, and collective well-being through community-based research and action.

Goals
Student Learning Outcomes
• Students will demonstrate a breadth of knowledge and understanding of the main perspectives, theoretical approaches, and meta-competences in community psychology.
• Students will demonstrate knowledge and skills with research designs and methods used in community research.
• Students will demonstrate a deep understanding and mastery of ONE SPECIFIC AREA OF FOCUS that contributes to scholarship and generates new knowledge relevant to community psychology and community well-being.

Ph.D. in Counseling Psychology
http://sites.education.miami.edu/counseling-psychology/

The Counseling Psychology Program has been fully accredited by The American Psychological Association since 1989 and has a proud tradition of preparing students as scholars, clinicians. The program is firmly committed to the foundational values of the discipline of counseling psychology, including its emphasis on prevention, optimal human development, and the promotion of individual, family, and community well-being. The program strives to prepare students who will make a difference in the world through research, scholarship, and reflective practice. The mission of the program is to nurture the development of counseling psychology graduate students and faculty as reflective researchers and scientist-practitioners committed to promoting psychological well-being in a multicultural complex world.

Mission
To nurture the development of counseling psychology graduate students and faculty as reflective researchers and scientist-practitioners committed to promoting psychological well-being in a multicultural complex world.

Goals
Student Learning Outcomes
• Students will demonstrate an understanding of scientific knowledge in psychology and will be able to critically evaluate and conduct research relevant to the practice of counseling psychology.
• Students will demonstrate the ability to engage in competent clinical practice as scientist-practitioners.
• Students will demonstrate the ability to engage in ethical behavior and will be responsive to issues of diversity in multiple contexts.
The curriculum of the Ph.D. in RME is structured around six components: (A) a core set of 36 credits (12 courses of 3 credits each) of required coursework covering the fundamentals of research design, measurement, and statistical analysis; (B) 6 credits of a research apprenticeship, in which students conduct mentored research under the supervision of RME faculty members; (C) 6 credits of field experience in educational research, in which students play active roles in the design and analysis of an applied research or evaluation projects; (D) the doctoral qualifying exam; (E) 12 credits of the doctoral dissertation and (F) 6 credits of electives (12 credits of electives for students who do not hold a master degree).

</tr>
</tbody>
</table>

For a minimum of 6 research apprenticeship credits, students work under the mentorship of RME faculty members (or approved faculty members outside of RME) on original studies pertinent to research, measurement, and evaluation. It is expected that the work completed during the apprenticeship culminates in a manuscript that is suitable for publication in an academic journal. The 6 credits of apprenticeship are documented as two 3-credit blocks of EPS799 (Advanced Individual Study). Form for registering for EPS799 can be found on the SEHD website under the resource tab; and the research apprenticeship must be completed prior to the commencement of dissertation hours (EPS830).

Students must complete a minimum of 6 credits in field experience related to educational research. The field experience involves providing methodological assistance to a research or evaluation project at the University of Miami or other approved organization (e.g., the evaluation division of Miami-Date County Public Schools). The nature of the field experience must be approved by the student’s advisor prior to commencing the credit hours. The field experience credits are currently documented as EPS712.

</tr>
</tbody>
</table>

Total Credit Hours 66-72

1. EPS 799 (Advanced Individual Study) and EPS 712 (Field Experience in Educational Research) can be repeated over and above the credits fulfilling a student’s apprenticeship (6 credits) and field experience (6 credits) requirements.

2. 6 credits for students with a Master degree; 12 credits for students without a Master degree

3. Upon the approval of your academic advisor, you can take the classes from other departments.

4. Additional courses may be substituted upon approval from a student’s academic advisor. These options include a variety of graduate courses in the fields of computer science, psychology, education, and other areas of interest.

**Mission**

The mission of the RME doctoral program is to provide students with the requisite training in the application of statistical and measurement methodologies to conduct original research in the fields of educational research and measurement methodology, and to serve as experts in the areas of research design, data analysis, and measurement.
Goals

Student Learning Outcomes

- Students will demonstrate mastery of the computer programing skills that is required for conducting research project using computer simulation in R.
- Students will conduct original research in the field of statistical and measurement methodology.
- Students will demonstrate the ability to provide methodological consultation.

Certificate in Higher Education Administration/Student Life and Development

http://sites.education.miami.edu/higher-education-administrationstudent-life-development-cert/

The Certificate in Student Life and Development is a 12-credit minimum program designed for working professionals who already have master’s degrees and seek career-enhancing insights, skills, and credentials. The program is focused on students transition and adjustment to college and on elements of the college environment that enhance their academic achievement and personal development and well-being.

The certificate can be integrated into the Master of Science in Higher Education Administration Program (for a total of 39 credits). It can be completed in addition to or after completion of a master’s program in higher education administration or related field.

Mission

The Higher Education Administration Program Certificate offers a choice between concentrations in Enrollment Management and Student Life & Development. The Student Life focus is on students’ transition and adjustment to college and on elements that enhance their academic achievement and personal well-being.

Goals

Designed for working professionals who already have a master’s degree, the program aims to provide career-enhancing skills and credentials today’s higher education administrators need to help their institutions and students succeed.

Student Learning Outcomes

- Students will demonstrate holistic understanding of how college affects diverse undergraduate students, including student development theories on psychosocial, cognitive, moral, identity, authorship, self-efficacy and other related indices.

Certificate in Latino Mental Health Counseling

http://sites.education.miami.edu/latino-mental-health-counseling-cert/
This Certificate requires previous graduate training. It can be acquired after graduation from the Master's Program in Counseling or can be integrated into the Doctoral Program in Counseling Psychology. It can be completed in addition to or after completion of a degree program in counseling, psychology or a related field.

M.S. in Athletic Training

The Athletic Training program at the University of Miami is a graduate professional program accredited by the Commission on Accreditation of Athletic Training Education (CAATE). The program is designed to provide a structured classroom and clinical experience to prepare students to become eligible to sit for the Board of Certification exam.

Athletic Trainers (ATs) are health care professionals who render service or treatment, under the direction of or in collaboration with a physician. As a part of the health care team, services provided by ATs include injury and illness prevention, wellness promotion and education, emergent care, examination, and clinical diagnosis, therapeutic intervention, and rehabilitation of injuries and medical conditions.

Please see the Athletic Training website or the Athletic Training Guidelines Manual for the course sequence requirements and other important information regarding the requirements for completion of the Athletic Training degree.

2  Those students taking the comprehensive exam must enroll in another KIN elective course to complete their master's degree requirements in exercise physiology.

Mission
The mission of the M.S.Ed. program in Exercise Physiology is to provide students with advanced-level knowledge, skills and competencies in the applied sciences concomitant with practical and clinical/applied experiences. Students will also learn the fundamentals of providing physical and health related assessments and training consistent with improved knowledge of well-being.

Goals

Student Learning Outcomes

• Students will demonstrate advanced level knowledge, skills, and competencies in the field of Exercise Physiology.
• Students will be proficient in hands-on laboratory skills in Exercise Physiology.
• Students will demonstrate practical knowledge and application skills required in the field of Exercise Physiology.

M.S.Ed. in Exercise Physiology - Strength and Conditioning/Fitness Entrepreneurship Track

http://sites.education.miami.edu/exercise-physiology-strength-conditioningfitness-entrepreneurship-m-s-ed/

This program is for persons interested in advanced skill in exercise programming and instruction, the fitness entrepreneur, and those looking for administrative positions in the fitness industry.

Total Credit Hours: 36

Mission
The mission of the M.S.Ed. program in Exercise Physiology is to provide students with advanced-level knowledge, skills and competencies in the applied sciences concomitant with practical and clinical/applied experiences. Students will also learn the fundamentals of providing physical and health related assessments and training consistent with improved knowledge of well-being.

Goals
Student Learning Outcomes
• Students will demonstrate advanced level knowledge, skills, and competencies in the field of Exercise Physiology.
• Students will become proficient in hands-on laboratory skills in Exercise Physiology.
• Students will demonstrate practical knowledge and application skills required in the field of Exercise Physiology.

M.S.Ed. in Nutrition for Health and Human Performance
http://sites.education.miami.edu/nutrition-for-health-human-performance-m-s-ed/

This program is designed for students seeking a master’s degree in Exercise Physiology with a focus on Nutrition for Health and Human Performance. Graduates will possess a robust knowledge in the latest, evidence-based science with regard to exercise physiology and nutrition applied towards optimized health, wellbeing, and sports performance. Students should be well-equipped to pass accredited personal training certifications, such as ACSM’s Certified Clinical Exercise Physiologist (ACSM-CEP) and the American College of Nutrition’s Certified Nutrition Specialist (ACN-CNS). Both of these accreditations require a master’s degree in this discipline and individually obtained practicum experience (600 hours for ACSM-CEP and 1000 hours of supervised practice for the ACN-CNS). Students who obtain the CNS can achieve a Licensed Dietitian/Nutritionist (LDN) credential to practice in the state of Florida as well as many other states.

Total Credit Hours: 36

1. Required for Florida Licensed Dietitian/Nutritionist eligibility. Additionally, the State requires 900 hours of practicum experience, which can be taken outside the program.

2. KIN 800: Supervised Practicum 1-3 Credit Hours. Students will engage in supervised experiential learning designed especially for entry into their field. The student will be supervised by an approved preceptor (industry professional, clinician, or researcher) for the practical application of the academic discipline’s theory. Practicum hours will vary based on the nature of the experience.

Students can transfer up to 9 graduate credits into the 36-credit hour program.

Mission

The mission of the M.S.Ed. program in Exercise Physiology is to provide students with advanced-level knowledge, skills, and competencies in the applied sciences concomitant with practical and clinical/applied experiences. Students will also learn the fundamentals of providing physical and health related assessments and training consistent with improved knowledge of well-being.

Goals

Student Learning Outcomes

- Students will demonstrate advanced level knowledge, skills, and competencies in the field of Exercise Physiology.
- Students will become proficient in hands-on laboratory skills in Exercise Physiology.
- Students will demonstrate practical knowledge and application skills required in the field of Exercise Physiology.

M.S.Ed. in Sport Administration

Mission
The Sport Administration’s mission is to educate and nurture students; to create knowledge; and to provide service to our community and beyond. Committed to excellence and proud of the diversity of our University family, we strive to develop future leaders within the sport industry for our nation and the world. The program will prepare the next generation of leaders, researchers, and agents of change and well-being in the sport community; to promote knowledge with in the widespread realm of the sport sciences and prepare graduates for careers in the sport industry and academia, reflective of our multicultural community. The sport industry has been expanding rapidly, both in spectators and participants. As the industry grows, the need for administrators with specialized training becomes more complex and important. Sport Administration is an attractive field for young professionals. A degree in Sport Administration is widely recognized by industry professionals and gives graduates an important advantage when seeking employment.

Goals
The University of Miami program in Sport Administration prepares individuals for a career in this field according to their personal and professional goals.

Student Learning Outcomes
• Students will demonstrate an overall knowledge and understanding of the core concepts in Sport Administration.
• Students will demonstrate strong oral and written communication skills by demonstrating the ability to engage their peers, and clearly demonstrate both context and purpose of written and oral communications.

Total Credit Hours 30

1 For further information, please contact the Graduate Program Director.
2 For guidance, please contact the Graduate Program Director.
* Coursework specialization is available in this program for persons interested in clinical and research orientation in the area of exercise physiology.
** 2/3 of all coursework must be at or above the 700 level. Students entering with a Master’s degree in Exercise Physiology or a related degree must take a minimum of 30-credit hours of graduate coursework at the University of Miami in addition to 12-credit hours of dissertation.

Mission
The mission of the Ph.D. program in Exercise Physiology is to provide students with advanced knowledge, skills and competencies in the applied sciences concomitant with the ability to conduct advanced level research using laboratory proficiencies required of the field. Students will also learn to provide services related to health and wellness to our diverse Miami community.

Goals
Student Learning Outcomes
• Students will demonstrate advanced level knowledge, skills, and competencies in the field of Exercise Physiology.
• Students will be able to demonstrate advanced level clinical laboratory proficiencies required of the field of Exercise Physiology.
• Students will demonstrate proficiency in their ability to write intelligently about concepts and theory in Exercise Physiology and conduct scientific research in the field.
• Students will demonstrate proficiencies in their written and oral communication skills.

Teaching and Learning

http://sites.education.miami.edu/tal/

Dept. Code: TAL

Programs

Doctor of Philosophy (Ph.D.)
• Teaching and Learning

This individually-tailored program is designed to help students achieve their professional research-based career goals. A central component of the doctoral program in Teaching and Learning includes work on research projects that support collaboration with faculty and the application of course work as students develop their own research ideas. TAL’s Ph.D. program emphasizes an understanding of theory in scholarly inquiry; the intellectual framing and conduct of empirical research; the placement of research within cultural contexts and policy settings; designing, implementing and testing of transformative learning-environments that promote deep learning; and critical analysis of policy, research and practice.

Specializations are offered in:
• Language & Literacy Learning in Multilingual Settings (LLLMS)
• Science, Technology, Engineering, and Mathematics (STEM)
• Special Education (SPED)

Doctor of Education (Ed.D.)
• Applied Learning Sciences

Master of Science in Education (M.S.Ed.)
• Applied Learning Sciences
• Education and Social Change
• Early Childhood Special Education
• Special Education
• TESOL

Specialist in Education (Ed.S.)
• Early Childhood Special Education

The Ed.S. degree is a terminal degree, for educators who already have a relevant Master’s degree and who wish to increase their proficiency in their chosen field. The program requires 30 additional credit hours beyond the Master’s Degree (minimum) and is individually designed after admission. Some programs for cohorts of teachers feature lock-step curricula. These programs typically combine students pursuing M.S.Ed. degrees with those pursuing Ed.S. degrees. While all students in these programs follow the same curriculum, students pursuing Ed.S. degrees receive additional or different assignments. Please contact the Department of Teaching and Learning for a program sheet and course listings for the above programs.

Certificate in Applied Learning Sciences
• Applied Learning Sciences (p. 794)

Certificate in Applied Learning Sciences

The Certificate in Applied Learning Sciences is a 15-credit hour graduate program and is focused on human learning, whether alone or social settings. The program’s three specific foci, which students are expected to integrate in a culminating applied project, are:
• Learning: how people, as individuals, groups, or parts of an organization, learn;
• Design: the design, implementation, and revision of learning environments that enhance human learning; and
• Assessment: the assessment of learning and the evaluation of individual, social, technological, and design factors that advance or impede learning.

**Mission**

The Certificate program in the Applied Learning Sciences will provide people across a broad array of fields with the intellectual tools to (re)think about how they interact with subordinates, trainees, mentees, and students as learners and to (re)think their own roles as being that of a teacher where teachers design, implement, and evaluate the impacts of learning environments for their students.

**Goals**

As a result of the Certificate program, graduates will:

- Be able to assess learners’ initial knowledge as regards to what said learners are supposed to understand;
- Be able to design and implement learning environments that will help learners to learn and to understand their intended outcomes; and,
- Be able to evaluate and modify learning environments against how well learners achieved their own learning outcomes.

**Student Learning Outcomes**

**Ed.D. in Applied Learning Sciences**

The 45-credit post-Master’s EDD in Applied Learning Sciences prepares students for careers that require expertise in multiple facets of human learning. The program’s three specific foci, which students are expected to integrate in a culminating applied project, are:

- **Learning**: how people, as individuals, groups, or parts of an organization, learn;
- **Design**: the design, implementation, and revision of learning environments that enhance human learning; and
- **Assessment**: the assessment of learning and the evaluation of individual, social, technological, and design factors that advance or impede learning.

**Mission**

The EDD program in the Applied Learning Sciences will provide people across a broad array of fields with the intellectual tools to (re)think about how they interact with subordinates, trainees, mentees, and students as learners and to (re)think their own roles as being that of a teacher where teachers design, implement, and evaluate the impacts of learning environments for their students.

**Goals**

As a result of the EDD program, graduates will:

- Be able to assess learners’ initial knowledge as regards to what said learners are supposed to understand;
- Be able to design and implement learning environments that will help learners to learn and to understand their intended outcomes; and,
- Be able to evaluate and modify learning environments against how well learners achieved their own learning outcomes.
Student Learning Outcomes
Ed.S. Early Childhood Special Education

http://sites.education.miami.edu/early-childhood-special-education-ed-s/

The Specialist in Education (Ed. S.) degree program with a concentration in Early Childhood Special Education includes coursework and practicum experiences that could lead to endorsement in Pre-Kindergarten Disabilities. Please contact the Florida Department of Education's Bureau of Educator Certificate for any questions regarding endorsement.

In addition to the required 30 credits listed below, students in this program (a) may be assigned advanced level assignments within courses; (b) may be required to complete additional graduate level coursework; (c) will be required to increase the level of implementation of the capstone project; and (d) will be required to write a publishable paper based on the advocacy project and submit it a practitioner special education journal.

Mission

The MSED program in the Applied Learning Sciences will provide people across a broad array of fields with the intellectual tools to (re)think about how they interact with subordinates, trainees, mentees, and students as learners and to (re)think their own roles as being that of a teacher...
where teachers design, implement, and evaluate the impacts of learning environments for their students.

Goals
As a result of the MSEd program, graduates will:

• Be able to assess learners’ initial knowledge as regards to what said learners are supposed to understand;
• Be able to design and implement learning environments that will help learners to learn and to understand their intended outcomes; and,
• Be able to evaluate and modify learning environments against how well learners achieved their own learning outcomes.

Student Learning Outcomes
M.S.Ed. in Early Childhood Special Education

http://sites.education.miami.edu/early-childhood-special-education-m-s-ed/

Early Childhood Special Education prepares students to work with young children with disabilities and their families in inclusive, collaborative, and natural environments. As part of the 30 credits of coursework, students complete 6 credits of practicum experiences in high-need urban settings involving collaborative partners within the UM as well as community agencies. The program culminates in the presentation of an Advocacy Capstone project. Coursework, practicum experiences and Capstone projects start scholars on a pathway to advocacy for high-need children and their families.

The program includes coursework and practicum experiences that could lead to endorsement in Pre-Kindergarten Disabilities. Please contact the Florida Department of Education’s Bureau of Educator Certificate for any questions regarding endorsement.

M.S.Ed. in Education and Social Change

http://sites.education.miami.edu/education-social-change-m-s-ed/

The Education and Social Change program’s conceptual framework focuses on the world of education beyond classroom walls, the classroom context of teaching, and the students in classrooms, comprising a holistic, developmental approach across the three areas. Overall, the goals of the program track are to improve instruction for diverse populations, to prepare teachers for leadership roles within their schools, and to develop capacity to lead future change efforts in support of public education.

There are two tracks: 1) Teaching Track and 2) Social Change Track. The Teaching Track includes a teaching methods course in the area of certification, the core classes, and two electives for those with or wishing to pursue a Florida Temporary or Full Teaching Certificate. There is also the Professional Training Option leading to a Florida Temporary Teaching Certificate (see below for required courses) upon completion of program requirements. The Social Change Track is made up of an additional Social Change course, the Core Classes, and two electives.

Total Credit Hours 30
The mission of the School of Education and Human Development (SEHD) is to produce knowledge and prepare the next generation of leaders, researchers, and agents of change and well-being in education and the community. The Education and Social Change Master's degree's goals and objectives mirror the SEHD's mission statement by focusing on educational policy systems at the federal, state, and local levels, as well as providing instructional opportunities to learn in order to promote equity and social justice in public schools and classrooms. While other new or continuing Master's in Education programs in the Teaching and Learning (TAL) department focus on specific instructional areas or student populations and are geared for teaching professionals with a background in education (Teaching English to Speakers of Other Languages [TESOL]; Bilingual/Biliteracy Education; Early Childhood Special Education), the Education and Social Change (ESoC) program track is the only TAL master's program offering the graduate coursework required by the Florida Department of Education (FDOE) to fulfill Full Certification requirements when the teacher candidate has secured a FDOE Temporary Certification through the FDOE, and may not have studied education. Thus, the ESoC program is a route to state teacher certification for those who have a bachelor's degree in an area other than education, and who also wish to pursue a Master's degree while improving teaching methods and understandings of education systems.

The program track's conceptual framework focuses on the world of education beyond classroom walls, the classroom context of teaching, and the students in classrooms, comprising a holistic, developmental approach across the three areas. Originally created for a partnership effort with the Teach for America Miami corps in 2009, the program's main goals of improving classroom teaching for diverse populations in urban schools and building leadership and advocacy skills for public education are integrated throughout program courses. While these initial goals remain, more specifically it is hoped graduates will remain teaching in urban classrooms or pursue additional experiences to build a future career in the field of education (i.e., work for non-profit agencies advocating for public education, further enrollment in graduate studies for education-related majors/emphases, or seek education policy/legislative fellowships/opportunities nationally or abroad). These goals parallel the mission of the department and seek social justice and equity for all students regardless of background. In sum, this program serves to promote educational equity in urban classrooms for novice teachers who may or may not have experience teaching, which is an important goal in light of the diverse classroom contexts within Miami-Dade County.

**Goals**

The ESoC program coursework will build the leadership and advocacy skills of graduates to become more effective teachers of diverse students, and lead efforts that support public education and equitable opportunities for all public school students. Upon completion of the program, students will have the knowledge and capacity needed to create and lead social change efforts in education.

**Student Learning Outcomes**

- Students will demonstrate knowledge of diversity from ecological, multicultural, and global perspectives.
- Students will be able to communicate well in oral, written, and electronic media formats.
- Students will demonstrate knowledge of Systems Change and Organization in Education.

**M.S.Ed. in Special Education**

http://sites.education.miami.edu/special-education-m-s-ed/

This degree prepares individuals to work with students with disabilities in collaborative school environments. The course of study consists of 30-36 credits over six terms (one year that includes two summers). The program accommodates both working teachers and individuals seeking initial teacher certification in special education.

The initial certification option includes 6-credit hours of student teaching including related Florida Educator Accomplished Practices support. The State approved program provides competencies for initial certification in K-12 special education with reading and ESOL endorsement.

There is 70% scholarship opportunity sponsored by the School of Education and Human Development. The School makes these awards at the same time as final admissions decisions are made.

Mission
Over the last five years, special education has been a critical shortage area in teaching at the national, state, and district levels. The US Department of Education reported on the designated teacher shortage areas by State for 2015-2016 and noted that special education is a critical shortage area in the state of Florida, the site of this program (See http://www2.ed.gov/about/offices/list/ope/pol/tsa.doc). Further, the Miami-Dade County Public School district has issued a recruitment call for certified special educators to meet the critical shortage area demand. Almost 50% of the current MDCPS open teaching positions require a special education teaching certification. This goal of this program is to address the critical shortage by producing certified special education teachers who possess the requisite knowledge and skills to pursue careers in special education.

Goals
The specific learning objectives for this program are to increase:

• Knowledge of foundations of special education including knowledge of the IEP and the transition process;
• Knowledge of assessment and evaluation including reading, language/communication, and behavioral assessments and supports; and
• Knowledge of effective instructional practices in special education.

Student Learning Outcomes
• Students will demonstrate knowledge of foundations of special education.
• Students will demonstrate knowledge of assessment and evaluation for special education.
• Students will demonstrate knowledge of instructional practices in special education.

M.S.Ed. in TESOL
http://sites.education.miami.edu/teaching-english-to-speakers-of-other-languages-tesol-m-s-ed/

This program is for teachers in Pre-K-16 contexts—English as a Second Language (ESL) specialists or mainstream content area teachers who work with emergent bilinguals or English language learners (ELLs) in the U.S. The Florida Department of Education ESOL Endorsement requirements are embedded within the program's courses. This is a hybrid program with face-to-face meetings for locals; those not able to join the local meetings would be able to join virtually.

Concentration in Bilingual Education
http://sites.education.miami.edu/bilingual-bilingualism-development-in-spanish-m-s-ed/

This program is for teachers in Pre-K-12 settings who wish to boost their proficiency in Spanish and/or teach in dual language learning (DLL) or ESOL contexts. Typically DLL had ended in 5th or 6th grade; however, there is a recent and progressive push for biliteracy and bilingualism, which requires biliteracy in middle and high school grades, across content areas. Some Spanish language courses may be required, depending on proficiency. This is an hybrid program with face-to-face meetings for locals; those not able to join the local meetings would be able to join virtually.

Total Credit Hours  30
Mission
The mission of this program is to address the critical need for English language professionals who possess the requisite knowledge and skills to pursue careers in TESOL.

Goals
- Students will acquire foundational knowledge of language acquisition and development, research, partnership, and research in TESOL and Bilingual education.
- Students will acquire knowledge of planning, implementing, and managing ESL/bilingual education and content instruction.
- Students will acquire knowledge of assessment for English language learners, including language proficiency assessment and classroom-based assessment for ESL/bilingual education.

Student Learning Outcomes
- Students will demonstrate knowledge of foundations of TESOL and bilingual education, including language and culture, language acquisition and development, and ESL/bilingual education research, partnerships and advocacy.
- Students will acquire knowledge of planning, implementing, and managing ESL/bilingual education and content instruction.
- Students will demonstrate knowledge of assessment for English language learners, including language proficiency assessment and classroom-based assessment for ESL/bilingual education.

Ph.D. in Teaching and Learning
The Ph.D. Program in the Department of Teaching and Learning prepares highly qualified individuals to serve as educational leaders, researchers, designers and teacher educators whose work will contribute to improving teaching and learning both in and out of schools. The program has a strong focus on diversity and equity and supports faculty and student research in areas such as early development, instructional interventions, innovative use of technology, multilingualism, teacher preparation, family engagement, disability, education policy, and science, technology and mathematics learning. Incoming students are assigned a Supervisory Committee to advise them in developing their Program of Study. With the approval of their Supervisory Committee, doctoral students may apply up to 30 credits from an earned Master's degree towards the 60 required credits of coursework. Students must also enroll in 12 dissertation credits.

2 Required.

3 See Academic Advisor for course options.

Mission

The mission of the School of Education and Human Development is to produce knowledge and prepare the next generation of leaders, researchers, and agents of change and well-being in education and the community.

Goals

The goal of the doctoral program in Teaching and Learning (TAL) is to provide professional preparation for careers in research and teacher education in one of the following three specialty areas: Language, Literacy, and Learning in Multilingual Settings (LLLMS); Science, Technology, Engineering and Mathematics (STEM) Education; and Special Education (SPED).

All students are expected to develop and demonstrate a high level of competency in their area of specialization, in their knowledge of research methods, and in their knowledge of diversity as it applies to their area of research and practice. We expect that our graduates will go on to work as faculty in Institutions of Higher Education or as educational leaders in school systems, educational foundations, research organizations, and other settings.

Student Learning Outcomes

• Students will demonstrate knowledge of the literature on diversity in education, with particular attention to racial, ethnic, linguistic, and cultural diversity.

• Students will demonstrate in-depth knowledge of their area of specialization, i.e., LLLMS, STEM, or Special Education.

• Students will demonstrate their knowledge of research methods appropriate to their area of specialization.
Engineering
http://www.miami.edu/engineering

Degree Programs
The College of Engineering offers courses of graduate study leading to the degrees of:

- Master of Science (Environmental Health and Safety)
- Master of Science (Occupational Ergonomics and Safety)
- Master of Science (Construction Management)
- Master of Science in Architectural Engineering
- Master of Science in Biomedical Engineering
- Master of Science in Biomedical Engineering (Medical Physics)
- Master of Science in Civil Engineering
- Master of Science in Electrical and Computer Engineering
- Master of Science in Industrial Engineering
- Master of Science in Mechanical Engineering
- Master of Science in Mechanical Engineering (Additive Manufacturing)
- Master of Science in Ocean Engineering

Ph.D. degrees are offered in the areas of:

- Biomedical Engineering
- Biomedical Engineering (Medical Physics)
- Civil Engineering
- Civil Engineering (Architectural or Environmental Emphasis)
- Electrical and Computer Engineering
- Industrial Engineering
- Mechanical Engineering

Admission Requirements
Students with an appropriate B.S. degree may seek direct entry to either the M.S. track or Ph.D. track. Admission guidelines for the various tracks are as follows. Please refer to program specific sections of the bulletin for more information with respect to admission and degree requirements or visit coe.miami.edu/apply

B.S. to M.S.
In engineering, the master’s – not the bachelor’s – degree is the first professional degree, so all engineers should seek to obtain an M.S. degree. In order to facilitate the obtaining of an M.S. degree, the University of Miami (UM) College of Engineering (CoE) offers the M.S. degree through a number of possible venues or entry points, as summarized below. Every one of our M.S. degree programs requires 10 courses or 30 credit hours to complete; this can be typically undertaken in one, 9-month academic year (i.e., by enrolling in 15 credit hours per semester).

General Admission Requirements
1. A B.S. degree from an accredited program.
2. Typically a cumulative grade point average of 3.0 on a 4.0 scale.
3. Typically a GRE score of 300 or higher (verbal + quantitative).

4. Most international students must provide a TOEFL iBT score of 80 or higher, or an IELTS score of 6.5 or higher to demonstrate English proficiency.

B.S. to Ph.D.
Direct admission to the Ph.D. track by students holding B.S. degrees is limited to students with exceptional credentials. These credentials typically include a minimum GPA of 3.5 on a 4.0 scale and a minimum GRE of 308 (verbal plus quantitative). After completion of the Departmental M.S. requirements, students enrolled in the direct B.S. to Ph.D. track may apply for an M.S. degree.

M.S. to Ph.D.
Criteria for admission into the Ph.D. program for students with an appropriate M.S. degree include a minimum GPA of 3.5 on a 4.0 scale within their M.S. degree program and a minimum GRE of 302 (verbal plus quantitative).

The College offers graduate programs leading to degrees in both traditional and interdisciplinary areas of study. The primary focus of the College lies in those areas and problems that cross traditional lines. Given the interdisciplinary nature of programs, flexibility is provided in course selection which allows each student to pursue a program especially tailored to the goals of the individual. Given the strengths of the University, graduate programs are offered in conjunction with other schools or units. These programs include:

- Biomedical Engineering in conjunction with the School of Medicine
- Engineering Management
- Dual M.S. in Industrial Engineering and M.B.A. in conjunction with the Miami Herbert Business School
- M.S. program in Management of Technology in conjunction with the Miami Herbert Business School
- M.S. in Environmental Health and Safety in conjunction with the School of Medicine.

The M.S. and Ph.D. programs in Interdepartmental Graduate Studies permit, with approval of the Graduate Council, highly qualified students to pursue a privileged individualized program which cuts across disciplinary lines.

Further details on the various College of Engineering areas of specialization are given under the Departmental and Program headings that follow this section.

Students applying for graduate admission to the College must submit three letters of recommendation from individuals familiar with the applicant’s abilities and background.

Students who hold a bachelor’s degree in a field other than their proposed major may be admitted to the graduate program and to candidacy upon completion of appropriate undergraduate deficiency courses, in addition to the regular requirements for the graduate degree.

A student’s overall program is planned by the student and the student’s advisory committee. Requirements for the M.S. thesis and non-thesis options (not available in all areas of specialization) are shown below.

Accepted M.S. applicants can apply and be considered on a competitive basis for partial tuition scholarships. Need based aid also can be awarded, as determined through the financial aid process. A minimum
graduate GPA of 3.0 must be maintained in order to maintain satisfactory progress.

Accepted Ph.D. applicants financial assistance is available in the form of fellowships, partial tuition scholarships, teaching and research assistantships, and graduate cooperative assistantships combining study and work assignments with private engineering and architectural firms and government agencies. A minimum graduate GPA of 3.3 must be maintained in order to maintain satisfactory progress.

Financial support is provided predominantly to students pursuing Ph.D. degrees.

For further information, contact Office of Admission, College of Engineering at gradadm.eng@miami.edu (dtpoole@miami.edu) or 305-284-2404, option 2.

**Degree Requirements**

**Requirements for the Master of Science Degree (Thesis Option)**

- An approved integrated program with a minimum of 30 credit hours with an average grade of B or better and no grade below C.
- At least 6 course credit hours must be at the 700-level.
- 6 credit hours of the required 30 must be earned in thesis work.
- An oral examination in defense of the thesis.

**Requirements for the Master of Science Degree (Non-Thesis Option)**

- An approved integrated program with a minimum of 30 credit hours with an average grade of B or better and no grade below C.
- At least 12 of the course credit hours must be at the 700 level.
- In most departments a 3 credit hour graduating project is required.

**Requirements for the Doctor of Philosophy Degree**

- The programs leading to the degree of Doctor of Philosophy comply in full with the regulations of the Graduate School concerning admission, residence requirements, qualifying and final examinations and dissertation.
- Applicants for admission to the Ph.D. program will be expected to have superior records in their M.S. and B.S. degree programs, well above average scores on the Graduate Record Examination, and strong letters of recommendation.
- At least 18 credit hours in courses must be taken beyond the requirements for the M.S. degree of which 6 credit hours must be at the 700 level.
- All candidates for the doctorate are expected to complete an appropriate integrated program of studies in preparation for the comprehensive Qualifying Examination.
- Students are expected to take their qualifying exams during the first year of enrollment. Admission to candidacy across College of Engineering Departments includes passing the qualifying exam and successful defense of a proposal for research.
- Minimum of one year beyond admission to candidacy is usually necessary for the completion of an acceptable dissertation (12 credit hours or more), whereupon the student is then expected to defend their Ph.D. thesis during the Final Oral Examination.
- Departments may have requirements in addition to the above general requirements for their own graduate programs.

For further information, contact Office of Admission, College of Engineering at gradadm.eng@miami.edu (dtpoole@miami.edu) or 305-284-2404, option 2.

**Postgraduate Certificate Program**

- A Postgraduate Certificate Program is available requiring the completion of a minimum of 15 credit hours of individually planned advanced course work in an area of engineering specialization, or interdisciplinary study.
- Course sequences culminate at an advanced level, but may begin at a basic level if a new area of specialization is to be undertaken.
- The Program must be completed with a grade average of at least C, within a period of five calendar years from the date of enrollment.
- No transfer credit hours will be accepted. International students requiring a student visa must be in a degree program, and cannot obtain a student visa for the Certificate Program; but international students with certain other types of visas may enroll in the Program.
- Basic admission requirement for the Program is a bachelor’s degree in a recognized field of engineering or registration as a Professional Engineer by examination.
- Students demonstrating marked ability in the Program may be encouraged to apply for admission to study for the Master’s Degree, and may apply up to 6 credit hours toward the M.S. degree.

**Ph.D. Course Exchange with Florida International University**

University of Miami Ph.D. students are eligible to enroll in courses at Florida International University for a maximum of 6 credit hours. Enrollment in FIU courses requires approval through the student’s program of study committee. See FIU/UM Ph.D. exchange section of the Graduate School section of the bulletin for more details.

**Biomedical Engineering**

Dept. Code: BME

**Degree Programs**

The Department of Biomedical Engineering offers three different programs of graduate study leading to the degrees of Master of Science (MS) and Doctor of Philosophy (PhD) in Biomedical Engineering:

- BS/MS in Biomedical Engineering
- MS in Biomedical Engineering
- PhD in Biomedical Engineering (including MD/PhD).

The Bachelor of Science / Master of Science (BS/MS) program is available only to qualified undergraduate students enrolled within the Department of Biomedical Engineering. This program gives qualified internal undergraduate students the opportunity to receive a BS and MS degree in five years.

The graduate program in biomedical engineering includes a medical physics program accredited by the Commission on Accreditation of Medical Physics Educational Programs (CAMPEP). This program is coordinated by the Department of Biomedical Engineering and the Department of Radiation Oncology at the School of Medicine.

The graduate programs in Biomedical Engineering at the University of Miami provide a diverse interdisciplinary training experience through...
collaboration with clinical programs at the University of Miami School of Medicine.

Areas of Research

The broad areas of research in Biomedical Engineering include:

- Imaging, optics and lasers, diagnostic and surgical instrumentation
- Biomechanics, microfluidics, biomaterials and tissue engineering
- Neural engineering, brain-computer-interfaces
- Medical physics

Graduate students receive training and conduct research at the Department of Biomedical Engineering and at clinical departments and research centers at the School of Medicine, including the Bascom Palmer Eye Institute, the Miami Project to Cure Paralysis, the Diabetes Research Institute, the University of Miami Ear Institute, Biomedical Nanotechnology Institute, the Departments of Pathology, Radiology, Radiation Oncology, Otolaryngology, and Surgery, and the Miami Veterans Administration Research Service. Most of our graduate students work closely with physicians to develop and investigate new therapies, devices, and technologies that address real-world clinical problems.

Masters Programs in Biomedical Engineering

- B.S./M.S. Five-Year Program in Biomedical Engineering (p. 804)
- M.S. in Biomedical Engineering (p. 805)

Doctoral Program in Biomedical Engineering

- Ph.D. in Biomedical Engineering (p. 810)

Certificate Program

- Medical Physics (p. 815)

B.S./M.S. Five-Year Program in Biomedical Engineering

The Department of Biomedical Engineering offers a dual-degree program that culminates with students receiving both Bachelor of Science and Master of Science (BS/MS) in Biomedical Engineering concurrently. This program is available only to qualified students enrolled in the undergraduate program in Biomedical Engineering at the University of Miami. This program is intended to give qualified Biomedical Engineering students the opportunity to acquire both a baccalaureate degree (BSBE) and a Master of Science (MSBE) degree in five years rather than the 4 plus 2 years (approximately) that is traditionally expected. The two degrees are awarded simultaneously when the combined requirements have been met for both degrees.

Admission Requirements

The dual BS/MS program is available only to qualified undergraduate students enrolled in the Department of Biomedical Engineering, in any of the four Concentrations (Electrical, Mechanical, Biomaterials and Tissue, PreMed). Typically, students must have undergraduate student status and a cumulative G.P.A. of at least 3.0 at the time of application.

Undergraduate students must take the Graduate Record Examination (GRE) before the end of their classification as a senior and attain a combined score of more than 300 on the verbal and quantitative portions. Students must meet all other pertinent graduate school and College of Engineering requirements.

Qualified students must apply prior to the beginning of final exams in the second semester of their junior year. Students are strongly advised to apply to the BS/MS program as early as possible in their junior year to facilitate academic advising and course selection in the second semester of their junior year. Before submitting an application, interested students should discuss the program and the possibility of entering the program with an academic advisor.

The College of Engineering Office of Admission will carefully review academic credentials for admission into the program and will notify students of their acceptance into the program. All admitted students will have a special advising appointment with Dr. Narasimhan, Assistant Dean for Undergraduate Studies, to discuss academic issues specific to the BS/MS program.

Curriculum Guidelines

In the dual-degree BS/MS program in the Department of Biomedical Engineering, the first four years of the curriculum are altered as follows:

- The 3 credits of Senior Design Project (BME 402/BME 403) are eliminated.
- In Semester I of the senior year, one 3-credit Undergraduate Technical Elective is replaced with BME 705 (MS Design Project I).
- In Semester II of the senior year, one 3-credit Undergraduate Technical Elective is replaced with one 3-credit Graduate Technical Elective.

Graduate Technical Electives taken in the senior year must be chosen from the BME graduate course offerings, with the approval of their academic advisor. The credits of Graduate Technical Electives completed in the fourth year are counted toward the 30 credits required for the MS degree.

Students admitted in the dual degree BS/MS program can take a maximum of six (6) graduate credits per semester in their senior year, for a maximum of twelve (12) graduate credits per year, without incurring additional costs if they are full-time undergraduate students during this period. Students should register for courses towards their graduate degree as ‘G’ credits and not as ‘U’ credits. These registrations must be completed prior to taking courses. Retroactive add/drops will not be processed.

To register for graduate credits during their senior year, students must be in senior status and must complete and submit the Graduate School’s ‘Application for Undergraduates to Take Graduate Coursework (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/five-year-program-biomedical-engineering-bs-ms/undergrad_take_grad_course.pdf)’ form. This form must accompany the Add/Drop and/or Course Request form to ensure that students are registered with the correct registration status.

In the Senior year, students must be registered for a minimum of 12 undergraduate credits each semester to maintain full-time status as an undergraduate student. After completing the senior year, students must register as graduate students.
BS/MS Design Project (BME 705/706)

In lieu of the 3-credit design project (BME 402/BME 403) students enrolled in the dual-degree BS/MS program register for 6 credits of Master Design Project (BME 705/BME 706). The 3 credits of BME 705 satisfy the undergraduate senior design requirements, in which students complete a year-long capstone design project that follows the same guidelines and format as BME 402/BME 403. Students enroll in BME 705 during the first semester of their senior year and receive their final project grade at the end of their senior year. The 3 credits of BME 706 satisfy the non-thesis Master’s project requirement. Students enroll in BME 706 during the first semester of their fifth year. The BME 706 project can be a continuation of the student’s BME 705 project, or an entirely new project. The format and guidelines for BME 706 are described in the MS section of the bulletin.

Graduation Requirements

Students accepted into the dual degree program must maintain at least a 3.0 Cumulative GPA, and meet all other pertinent Graduate School requirements, including a minimum of 3.0 GPA in the credits applied toward the MS degree.

Curriculum Requirements

- B.S./M.S.: Biomaterials and Tissue Concentration (p. 438)
- B.S./M.S.: Electrical Concentration (p. 440)
- B.S./M.S.: Mechanical Concentration (p. 442)
- B.S./M.S.: Premed Concentration (p. 444)
- B.S./M.S.: Medical Physics

M.S. in Biomedical Engineering

Masters Program Objectives

The goal of the MS program in Biomedical Engineering at the University of Miami is to prepare students for successful careers in the biomedical industry, academia, or government (FDA, US Patent Office), or for further study in doctoral or health-related programs.

The educational objective of the program is to provide students with the technical and intellectual skills required to solve complex technical or scientific problems at the interface of engineering and medicine or biology.

Admission requirements

The qualifications and documentation required for admission to the MS program in Biomedical Engineering are the same as for the College of Engineering.

The Department of Biomedical Engineering generally admits four types of students to its MS program:

- Students with undergraduate degrees in biomedical engineering and other engineering disciplines who seek advanced professional training or specialization in a particular area of biomedical engineering
- Professional engineers with degrees in other engineering disciplines who plan to enter the field of biomedical engineering
- Students with an undergraduate degree in Physics, Mathematics, Computer Science, Chemistry, Biology or other fields of natural or health science who seek to diversify their career opportunities by acquiring an engineering degree
- Students who are preparing for admission to advanced health-related or other professional programs such as medical school

Students in the last two groups are generally given conditional admission and required to take additional undergraduate courses in engineering, physics, and/or mathematics depending on their previous course work, as specified in the admission letter. The requisite courses will be prescribed by the Department Chair or Graduate Program Director during the first advising session.

Curriculum

The curriculum combines advanced coursework which provides depth in a specific area of concentration and advanced problem-solving skills, with supervised research or design in one of the laboratories of the faculty from the Department of Biomedical Engineering or the School of Medicine, or in the local biomedical industry.

Except for the Medical Physics program there are no formalized graduate curricular tracks in the MS program. Master’s students select a course of study together with the graduate advisor and/or with their mentor and the thesis committee (for the thesis option) based on their own needs or interests. Students can choose from any of the graduate course offerings, as long as they satisfy the general course requirements and the course prerequisites.

Required Core Courses

All students enrolled in the MS program in Biomedical Engineering are required to complete the following core graduate courses:

- Unified Medical Sciences I/II/III (BME 601/BME 602/BME 603, 3 credits each). Students enrolled in the BS/MS program must take exactly two of these three courses, no more and no less. Other students can choose to complete all three courses.
- Regulatory Control of Biomedical Devices (BME 612, 3 credits)

The three courses of the Unified Medical Sciences sequence are designed to provide a basic understanding of human physiology and anatomy and cellular and molecular biology. Students with an MD from a medical school accredited by the World Health Organization are exempted from taking these courses. Students holding advanced degrees in the life sciences, or equivalent experience in the field, may also be exempt. Each such exception requires the approval of the Department Chairperson and Faculty member responsible for the course of concern.

Students with a background in an engineering or scientific field with no prior exposure to biology/medicine are required to complete all three Unified Medical Sciences courses.

Non-Thesis MS Program

The MS non-thesis option is intended for students with an undergraduate degree in biomedical engineering or related disciplines who seek advanced training or specialization in a specific area of biomedical engineering; for professional engineers with undergraduate degrees in other disciplines who want to enter the field of biomedical engineering; and for students who want to prepare for admission to advanced health-related or other professional programs.
Graduation Requirements
Graduation requirements for the MS Non-Thesis Option include:

Non-Thesis MS Project
General description
All students enrolled in the MS non-thesis program must complete a 3 credit Master’s project (BME 706), under the supervision of a project mentor and departmental project coordinator. The project must demonstrate the candidate’s ability to solve complex scientific or technical problems at the interface of engineering and medicine or biology.

The MS project can be a research or design project. The project must include a significant research or design component contributed by the M.S. student, including, but not limited to, the design of an experiment or process; the development of a device, instrument, or system; the development of a computer program; the analysis of experimental data. Projects cannot be limited solely to the review of literature, the development of research or design proposals, or the collection of experimental data.

At the completion of their project, students must submit a written project report and complete a public oral defense of their project.

Project Mentor
Students who select the MS non-thesis track must identify a project mentor and select a project before they register for their second semester of full-time study. The project mentor is generally a primary faculty member of the Department of Biomedical Engineering. The role of the project mentor is to help the student identify a suitable project, to monitor the progress of the student, to provide guidance and training in the relevant topics, and to review the final report and presentation.

Students may complete their project under the supervision of a faculty member from another Department at the University of Miami, or from the local biomedical industry, under the following conditions:
- The student must receive the approval of the Department Chairman and Graduate Program Director.
- The student must identify a co-mentor who must be a primary faculty member of the Department of Biomedical Engineering. The co-mentor must be familiar with the topic of the proposed project. The role of the co-mentor will be to monitor the student progress and ensure that the Master’s project report and presentation satisfy all of the relevant requirements.

Project Coordinator
The project coordinator is a member of the primary faculty of the Department of Biomedical Engineering who is responsible for teaching the BME 706 course. The role of the project coordinator is to:
- Help students identify a project and mentor.
- Ensure that the projects satisfy the program objectives.
- Provide general guidance and graduate scholarship training.
- Ensure that the students are making suitable progress towards the project goals.

Project Abstract
Non-Thesis MS students must submit a one-page project abstract to the Department Chairman or Graduate Program Director and to the MS Project Coordinator at the time when they register for BME 706. The abstract must include the name of the project mentor (and co-mentor, if any), the title of the proposed project, and a brief description of the goals of the project and proposed methods. The abstract must be approved by the mentor, MS Project Coordinator, and Department Chairman or Graduate Program Director before the student can start work on the project. (Project Abstract Template (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-ms/Abstract_Template.pdf))

Project Report
Non-thesis MS students must submit a detailed report describing the work completed during the project. The report must describe the objectives and significance of the work, and summarize the activities completed by the student as part of the MS project. The report must demonstrate that the work performed by the student satisfies the general project criteria. The typical length of non-thesis M.S. project reports is 20 to 30 pages. If the project resulted in the submission of a full-length peer-
reviewed scientific article, the article can be submitted in lieu of a report, as long as the following conditions are satisfied:

- The student must be the first author of the article.
- The article must reflect the work performed by the student as part of the project.
- The article must be submitted for publication in a peer-reviewed journal or conference proceedings volume.
- A one to two page introduction must be submitted to summarize the project goals and main outcomes.

The report must be reviewed and approved by the project mentor (and co-mentor, if any). Once the report is approved by the mentor(s), one printed copy and one electronic version in PDF format must be submitted to the Project Coordinator by the specified deadline. The final report must be approved and signed by the Project Mentor(s), Project Coordinator and Graduate Program Director or Department Chairman. (Signature Page Template (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-ms/Signature_Page_Template.pdf))

Project presentation
Non-thesis MS students must give an oral presentation of their project. The oral presentation is generally scheduled during the scheduled final examination time of BME 706 in the semester of graduation.

Project grade
The final grade for the project is given by the Project Coordinator. The final grade is a combination of a grade submitted by the Project Coordinator and Graduate Program Director or Department Chairman. The duties of the thesis mentor are:

1. to consult with and to advise students on their research;
2. to meet, at intervals, to review progress and expected results;
3. to hold a primary or secondary faculty appointment in the Department of Biomedical Engineering.
4. to provide training and guidance in the relevant research topics, including design of experiments, experimental techniques, and scholarship activities.
5. to chair or co-chair the thesis committee.
6. to work closely with the student to ensure that there is satisfactory progress towards the thesis goals.

Graduation Requirements
Graduation requirements for the MS Thesis Option include:

Students who are not able to complete their thesis during the 3rd semester and have completed all 30 required credits of graduate work, must enroll in 0 credits of Research in Residence (BME 820) to maintain full-time student status.

MS Thesis
General Description
The Master’s thesis is a research monograph which describes the significance of the research and summarizes the research activities completed as part of the MS degree requirements. The objective of the thesis is to evaluate the candidate’s competence in the area of the MS research. The thesis must demonstrate that the research is original and that the candidate has the ability to solve complex scientific and/or technical problems at the interface of engineering and medicine or biology.

Thesis Mentor
Students who select the MS thesis track must identify a thesis mentor before they register for their second semester of full-time study. The thesis mentor must hold a primary or secondary faculty appointment in the Department of Biomedical Engineering. Exceptions can be made only with approval of the Graduate Program Director and Department Chairman.

The thesis mentor supervises the research work of the student and provides training and guidance in the relevant research topics, including design of experiments, experimental techniques, and scholarship activities. The mentor helps the student select a thesis topic and develop a plan, and chairs or co-chairs the thesis committee. The mentor works closely with the student to ensure that there is satisfactory progress towards the thesis goals.

Thesis Committee
The thesis must be approved by a thesis committee. The duties of the thesis committee are:

- to consult with and to advise students on their research;
- to meet, at intervals, to review progress and expected results;
• to read and comment upon the draft thesis;
• to meet, when the thesis is completed, to conduct the final oral examination and to satisfy itself that the thesis work is original; that it demonstrates the candidate's ability to solve complex scientific and/or technical problems at the interface of engineering and medicine or biology; that it is written in lucid and correct English; and that it is submitted in approved format.

The thesis committee will consist of not less than three members, with the following requirements:

• The committee chair shall be a Primary Faculty member of the Department of Biomedical Engineering, as well as a regular member of the Graduate Faculty. The Committee Chair is generally also the thesis mentor.
• A thesis mentor who is not a member of the Primary Faculty of the Department of Biomedical Engineering, can serve as Co-Chair of the Thesis Committee, together with a second Co-Chair who shall be a member of the primary faculty of the Department of Biomedical Engineering.
• It is an additional requirement of the Department of Biomedical Engineering that at least two committee members should be primary Faculty members from the Department.
• One committee member must be from outside the Department. Outside members of the thesis committee can include part-time faculty that teach within the Department.
• At least one committee member must be a regular member of the Graduate Faculty of the University of Miami.

The committee is nominated by the Graduate Program Director. Usually, the student consults with his/her research mentor and with the Chairperson or Graduate Program Director to select the Committee members.

Thesis Format and Deadlines
It is the duty of the student to ensure that the thesis defense is scheduled and that a final version of the thesis approved by the Dissertation Editor is submitted to the Dissertation Editor by the required deadlines set by the Graduate School. All information pertaining to the formatting and electronic guidelines for electronic thesis submission can be found on the Graduate School website (https://grad.miami.edu/).

Each thesis must be accompanied by a Certificate of Defense Approval for Master's Thesis (https://grad.miami.edu/policies-and-forms/forms/) signed by all members of the Committee. Forms can be downloaded from the Graduate School website.

Evaluation Forms
The student is responsible for distributing dissertation evaluation forms (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-ms/SACS_Graduate_Rating_Grid_Rubric_2016.pdf) to the members of the Thesis Committee for the final oral examination. The evaluation forms are used to assess the overall quality of the graduate program at the Department, College, and University level. The evaluation forms are available on the Graduate School and Department of Biomedical Engineering websites. The completed forms must be collected by the Thesis Mentor and forwarded to the Office Manager at the Department of Biomedical Engineering.

Transfer to MS Non-Thesis Program
Students enrolled in the MS thesis program who do not wish to complete their thesis can transfer to the MS non-thesis program and graduate from the MS program under the following conditions:

• The transfer must be approved by the Department Chair or Graduate Program Director.
• All requirements of the MS non-thesis option must be satisfied, including completion of a 3 credit MS project (BME 706), submission of a project report, and oral defense of project. Completed thesis credits may count towards the three credit MS project requirement.

MS in Biomedical Engineering: Medical Physics
The MS in Biomedical Engineering offers a special track in Medical Physics. The objective of the Medical Physics program is to provide advanced knowledge in the field of therapeutic medical physics, and to provide the training required for students to become licensed medical physicists. This program is coordinated by the Department of Biomedical Engineering and the Department of Radiation Oncology at the School of Medicine.

The program is open to students enrolled in the regular MS program, as well as the dual degree (BS/MS) program. Candidates are required to have completed a 3 credit course in Modern Physics (PHY 360 or equivalent) and a 3 credit course covering the physical foundations of medical imaging (BME 330 or equivalent) before they start their coursework in the Medical Physics program.

Students in the Medical Physics Program must complete Unified Medical Sciences II (BME 602) and one of the remaining two courses from the Unified Medical Sciences (BME 601 or BME 603) course series, and the following 22-credit core curriculum in the area of medical physics:

<table>
<thead>
<tr>

<td>Total Credit Hours</td>
<td>22</td>
</tr>
</tbody>
</table>

Any remaining credits required to complete the degree must satisfy the general requirements of the MS program. Students enrolled in the MS program in Medical Physics may require a total of 31 credits (non-thesis option) or 34 credits (BS/MS and thesis option) to complete the program requirements.

The topic of the BS/MS project (BME 705/BME 706), MS project (BME 706, non-thesis option), or MS thesis must be related to medical physics. In general, the project is co-supervised by Faculty from the Department of Biomedical Engineering and the Department of Radiation Oncology.
**Curriculum**

Typical curricula for each option of the MS program in Medical Physics are shown in the following tables. The curriculum for the BS/MS in Medical Physics can be found in the BS/MS section of the bulletin. The course sequence and timeline can be adjusted based on individual needs. The minimum residence requirement for the MS degree is two semesters in full-time study or the equivalent in part-time work.

In general, the Department admits three types of students to its PhD program in Biomedical Engineering are the same as for the College of Engineering. The qualifications and documentation required for admission to the PhD program under the following general requirements:

- Students with MS degrees in Biomedical Engineering or related science and engineering fields.
- Students with MD degrees with undergraduate degrees in sciences or engineering.
- Highly qualified students with BS degrees in engineering or sciences.

Students admitted with non-engineering degrees are generally given conditional admission and required to take additional undergraduate courses in engineering, physics, and/or mathematics depending on their previous course work, as specified in the admission letter. The requisite courses will be prescribed by the Department Chair or Graduate Program Director during the first advising session.

The PhD program in biomedical engineering is also a degree-granting program of the University of Miami's MD-PhD program.

Internal M.S. students (thesis or non-thesis) who wish to pursue a doctoral degree can transfer from the MS program to the doctoral degree program under the following general requirements:

- Submission of an application for admission to the PhD program. The application must be submitted on paper to the BME Department Chair.
- Submission of a letter of support by a faculty member who agrees to serve as the student's Ph.D. dissertation advisor.
- Approval of the application by the Department's Graduate Admissions Committee.

### Graduation Requirements

The general requirements for award of the Doctor of Philosophy include:

- Completion of a minimum of 60 course credits beyond the BS degree.
- Satisfactory completion of an oral qualifying examination.
- The submission, oral defense, and approval of a dissertation proposal.
- The submission, oral defense and approval of a dissertation.
- Completion of the publication requirements.

All work, including credit transferred from other institutions, must be completed within 8 years of the time of admission to graduate work, and/or within four years of approval of the dissertation proposal. An average of B (3.0) is required for a graduate degree, and no "D" credit may be counted toward the degree. A C- is the lowest passing grade for graduate students.

### Curriculum Requirements

The PhD curriculum was designed to provide the technical and intellectual skills required to identify and solve complex scientific or technical problems at the interface of engineering and medicine or biology. The curriculum combines advanced coursework which provides depth in a specific area of concentration, with independent original research in one of the laboratories of the faculty from the Department of Biomedical Engineering or the School of Medicine.

Except for the Medical Physics program there are no formalized graduate curricular tracks in the PhD program. The student's mentor and supervisory committee work with the student to develop a personalized course plan, based on the student's own needs and interests. The personalized course plan is designed to ensure that the student is prepared for advanced independent research and technical innovation in biomedical engineering. The course plan can include any of the graduate course offerings, as long as the student satisfies the course prerequisites.

### Mission

The mission of the Biomedical Engineering Program is to prepare students to become knowledgeable and skilled engineers with an understanding of the ethical and other professional aspects of biomedical engineering. Design skills and an ability to work both independently and as part of a team are emphasized.

### Goals

The educational objective of the program is to provide students with the technical and intellectual skills required to solve complex technical or scientific problems at the interface of engineering and medicine or biology.

### Student Learning Outcomes

- High level ability to apply knowledge of mathematics, science and engineering to formulate and solve relevant biomedical engineering problems.
- Ability to communicate the scientific and technical research effectively in writing and oral presentations.
- Ability to conduct supervised research and development.

### Ph.D. in Biomedical Engineering

#### Program Objectives

The goal of the PhD program in Biomedical Engineering at the University of Miami is to train students for independent research and innovation in biomedical engineering. The program is designed to prepare graduates for careers in academia, industrial research and development, or government (FDA, US Patent Office).

PhD students conduct research at the Department of Biomedical Engineering and at clinical departments and research centers at the School of Medicine, including the Bascom Palmer Eye Institute, the Miami Project to Cure Paralysis, the Diabetes Research Institute, the University of Miami Ear Institute, Biomedical Nanotechnology Institute, the Departments of Pathology, Radiology, Radiation Oncology, Otolaryngology, and Surgery, and the Miami Veterans Administration Research Service. Many of our doctoral students work closely with physicians to develop and investigate new therapies, devices, and technologies that address real-world clinical problems.

### Admission Requirements

The qualifications and documentation required for admission to the PhD program in Biomedical Engineering are the same as for the College of Engineering.

In general, the Department admits three types of students to its PhD program:

- Students with MS degrees in Biomedical Engineering or related science and engineering fields.
- Students with MD degrees with undergraduate degrees in sciences or engineering.
- Highly qualified students with BS degrees in engineering or sciences.

</tbody>
</table>

- Completion of the publication requirements.
The proposed individualized course curriculum must be submitted to the Graduate Program Director for final approval or to the Department Chairperson when the Graduate Program Director is the student's mentor.

**Required Core Courses**

There are four core graduate courses: Unified Medical Sciences I/II/III (BME 601/BME 602/BME 603, 3 credits each) and a Graduate Scholarship course (BME 780, 3 credits).

The three courses of the Unified Medical Sciences sequence are designed to provide a basic understanding of human physiology and anatomy and cellular and molecular biology. Students admitted to the PhD program with a BS degree are required to take all three courses. Students admitted to the PhD program with an MS degree only need to complete 2 of the 3 courses. Students enrolled in the MD-PhD program and students with an MD from a medical school accredited by the World Health Organization are exempted from taking these 3 courses. With the permission of the graduate advisor, students who have completed these courses or similar coursework in a previous graduate course of study may substitute technical electives for this requirement.

The Graduate Scholarship course provides training in grant proposal writing, manuscript preparation and other doctoral-level research and professional skills. The Graduate Seminars course is a seminar series on research and professional topics in Biomedical Engineering. To receive credit for the Biomedical Engineering Seminars course, students must attend a minimum of 4 seminars each semester during their first 4 semesters.

**MD-PhD program**

Students enrolled in the MD-PhD program start the PhD program after completion of the first two years of medical school.

MD-PhD students who choose BME as their degree-granting program can count up to 15 credits of work completed during the first two years of medical school towards their PhD degree requirements (See: Credit Requirements). To receive credit, students enroll in the following courses:

- **BME 711**: Accelerated Basic Science Medical Curriculum (9 credits). BME 711 satisfies the Unified Medical Sciences (9 credits) requirement.
- **PIB 731**: Laboratory Research (1-6 credits). Students receive up to 3 credits for each research rotation that they complete during their first two years of medical school, up to a maximum total of 6 credits. To receive credit, students must submit a report for each rotation, following the guidelines for BME Independent Study reports.

All MD PhD students must complete a 3-credit biostatistics course. Students who have successfully completed equivalent coursework in a previous course of study can be exempted from this requirement.

**Medical Physics Program**

The Department of Biomedical Engineering at the University of Miami offers a special PhD program in Medical Physics accredited by CAMPEP. The objective of the Medical Physics program is to provide advanced knowledge in the field of therapeutic medical physics, and to provide the training required for students to become licensed medical physicists. This program is coordinated by the Department of Biomedical Engineering and the Department of Radiation Oncology at the School of Medicine.
