Candidates are required to have completed a 3 credit course in Modern Physics (PHY 360 or equivalent) and a 3 credit course covering the physical foundations of medical imaging (BME 330 or equivalent) before they start their course work in the Medical Physics program.

Students enrolled in the Medical Physics Program must follow the general requirements of the PhD program and must complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>

</tbody>
</table>

Students enrolled in the Medical Physics program must complete their PhD dissertation project on a topic related to medical physics. In general, the project is co-supervised by Faculty from the Department of Biomedical Engineering and the Department of Radiation Oncology.

Students enrolled in the Medical Physics program must also complete an additional separate qualifying examination focused on the medical physics curriculum (see below section on qualifying examination).

**Credit Requirements**

The credit requirements are summarized below. Students admitted with non-engineering degrees are generally accepted conditionally, with the requirement to complete a set of undergraduate courses in engineering and/or mathematics before gaining full admission into the PhD program. The list of pre-requisite courses is defined before the start of the first semester of study by the Graduate Program Director and Department Chairperson, in consultation with the student mentor. Course pre-requisites are not counted towards the degree requirements.

Total Credits 60

1. If the student has completed equivalent coursework, this requirement can be waived. However, these courses must be substituted with another 6 credits of coursework.

2. Beyond the minimum requirement of 9 course credits, the supervisory committee shall decide which additional courses, if any, will be required to ensure that the student is prepared for advanced independent research and technical innovation in biomedical engineering. A three credit advanced biostatistics course is strongly recommended.

3. More information about these courses can be found on the CoE website (http://www.coe.miami.edu/) and the UM RCR website. (http://www.coe.miami.edu/research-2/responsible-conduct-of-research/)

4. A minimum of 12 credits of dissertation work must be completed. Students should enroll into BME 830 before admission to candidacy and BME 840 after admission to candidacy.

Total Credits 60

1. A minimum of 15 credits of additional courses to be selected by the student in consultation with his/her mentor and the supervisory committee. Of these credits, up to 6 credits can be satisfied by PIB 731. Beyond the minimum requirement of 24 course credits, the supervisory committee shall decide which additional courses, if any, will be required to ensure that the student is prepared for advanced independent research and technical innovation in biomedical engineering.

2. This course is not counted towards the minimum of 21 course credit requirement.

3. More information about these courses can be found on the CoE website (http://www.coe.miami.edu/) and the UM RCR website. (http://www.coe.miami.edu/research-2/responsible-conduct-of-research/)

4. A minimum of 12 credits of dissertation work must be completed. Students should enroll into BME 830 before admission to candidacy and BME 840 after admission to candidacy.
Medical Physics Program
Students enrolled in the Medical Physics Program must follow the general requirements of the PhD program and must complete the following classes as part of their course curriculum:

Research in Residence
Once a student has completed all required course and dissertation credits, he or she must enroll in Research in Residence status (BME 850, 0 credit) until the degree has been granted. Research in Residence status is considered full time enrollment. Credit is not granted for research in residence, but a fee is charged for each enrollment.

Qualifying Examination
Schedule
The examination will be administered at the beginning of the third semester that a student is enrolled in the PhD program.

Qualifying Examination Committee
The oral qualifying examination will be administered by a qualifying examination committee, to be nominated by the Graduate Program Director or Department Chair, with input from the research mentor. The committee will consist of 3 tenured or tenure-track primary faculty in the Department of Biomedical Engineering. The committee members will be selected based on the student's research area. The research mentor cannot be a member of the qualifying examination committee for his/her students. At least one additional tenured, primary BME faculty member who is not part of the committee will serve as neutral observer. The observer will ensure that the examination follows the required standards and will help resolve any conflicts that may arise.

Format
The committee will provide the student with a list of topics to study at least 3 months before the exam, including fundamental knowledge of physiological and engineering principles, data analysis, and experimental methods. During the exam, the committee will assess the student's grasp of the topics as well as critical thinking and problem-solving skills. The oral qualifying examination will be closed to the public. The examination should last approximately 1 hour, and will be followed by a deliberation period of the qualifying examination committee. The entire examination will be recorded and the recording will be stored in a secured database until the student graduates from the program.

Evaluation and Repeat Rule
After the oral examination, the student's qualifying examination committee will deliberate and determine if the student passed the examination. The findings of the qualifying examination committee will be summarized in a letter to the student from the Graduate Program Director. A student who fails will be given an opportunity to retake the examination. The letter will include a list of topics where the student needs improvement that will be included in the second examination. The second examination must be scheduled within 3 months and will be given by the same committee. A student who fails the examination at the second trial will be dismissed from the program.

Medical Physics Qualifying Examination
Students enrolled in the Medical Physics program must pass an additional written examination focused on topics covered in the Medical Physics curriculum. The examination is typically scheduled the semester following the regular BME screening examination, and consists of 6 separate written tests on the following topics, corresponding to courses in the curriculum: Anatomy/Radiobiology BME 602/BME 681); Medical Imaging (BME 620/BME 729); Radiation Therapy Physics (BME 682); Radiation Protection (BME 683); Radiation Dosimetry (BME 781); Medical Physics Clinical Rotation (BME 783). The entire examination is scheduled in a single day, with each test lasting 55 minutes. The minimum passing score for each test is 70%. Students who fail one or more of the tests must retake the test(s) before the end of the semester. Students who fail the same test twice are dropped from the Medical Physics program.

Supervisory Committee
In the Department of Biomedical Engineering, the PhD Supervisory Committee is appointed by the Chairperson during the first year of enrollment, in consultation with the student and his/her research mentor.

The role of the Supervisory Committee is to identify any additional courses required beyond the minimum course requirements, to oversee program milestones, and to administer any additional written or oral examination deemed necessary to complete the qualifying examination.

In the Department of Biomedical Engineering, the Supervisory Committee must be comprised of at least five members. The five members include the committee chair, who shall be a Primary Faculty member of the Department of Biomedical Engineering, as well as a regular member of the Graduate Faculty. Of the remaining members, it is also required that two shall be from Graduate Faculty and one from outside the department. It is an additional requirement of the Department of Biomedical Engineering that two of the remaining members shall be primary Faculty members from the Department. A research mentor who is not a Primary Faculty member of the Department of Biomedical Engineering, can serve as Co-Chair of the Supervisory Committee, together with a second Co-Chair who shall be a member of the primary faculty of the Department of Biomedical Engineering.

Dissertation Proposal
Format
Each student must submit an original written proposal describing the goals of the dissertation research project, the significance of the work, preliminary studies, and the research plan. The proposal must be submitted to the Supervisory Committee and orally defended before the end of the fourth semester for students admitted with an MS degree and before the end of the first semester of the third year for students admitted with a BS degree. The student's knowledge of the proposed research topic will be tested during the oral defense. If any deficiencies are discovered during the defense of the proposal, an additional written or oral examination may be required by the Ph.D. Supervisory Committee.

Evaluation Forms
The candidate is responsible for distributing dissertation proposal evaluation forms (http://bulletin.miami.edu/graduate-academic-
programs/engineering/biomedical-engineering/biomedical-engineering-phd/SACS_Graduate_Rating_Grid_Rubric_2016.pdf) to the members of the Supervisory Committee. The evaluation forms are used to assess the overall quality of the graduate program at the Department, College, and University level. The evaluation forms are available on the Graduate School and Department of Biomedical Engineering websites. The forms must be completed by the Committee members after the dissertation defense. The completed forms must be collected by the Dissertation mentor and forwarded to the Office Manager at the Department of Biomedical Engineering.

Admission to Candidacy
A student who has passed the written qualifying examination, and successfully defended the dissertation proposal must:

- submit a signed 'Approval of the Dissertation Proposal (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-phd/Department_Dissertation_Proposal_Approval.pdf) form to the Graduate Program Director of the Department of Biomedical Engineering.
- form a Dissertation Committee (see below)
- submit an Application for Admission to Candidacy (https://grad.miami.edu/policies-and-forms/forms/) for the Ph.D./Ed.D./D.M.A. to the Graduate School to be granted admission to candidacy.

Admission to candidacy recognizes the fact that a student enrolled in the PhD program has completed all doctoral degree requirements except completion of an acceptable dissertation project and defense of the dissertation. Completion of the required course credits and dissertation credits (BME 830 and/or BME 840) is not a requirement for admission to candidacy in the Department of Biomedical Engineering.

No student may receive the degree in the same semester or summer session in which he or she is admitted to candidacy. The student must be admitted to candidacy before the dissertation defense is scheduled.

Dissertation Committee
In the Department of Biomedical Engineering, the Dissertation Committee is generally the same as the Supervisory Committee, but it may also be a committee formed anew to undertake the duties of advising and passing upon the dissertation. The Dissertation Committee is nominated by the Department, and is approved and appointed by the Dean of the Graduate School.

As with the Supervisory Committee, the Dissertation Committee must be comprised of at least five members, including the committee chair. The committee chair shall be a Primary Faculty member of the Department of Biomedical Engineering, as well as a regular member of the Graduate Faculty. Of the remaining members, it is also required that two shall be from Graduate Faculty and one from outside the department. It is an additional requirement of the Department of Biomedical Engineering that of the remaining members, at least two should be primary Faculty members from the Department. A research mentor who is not a member of the Primary Faculty of the Department of Biomedical Engineering, can serve as Co-Chair of the Dissertation Committee, together with a second Co-Chair who shall be a member of the primary faculty of the Department of Biomedical Engineering. One additional requirement is that the Dissertation Committee of students enrolled in the MD-PhD program must include one member of the MD-PhD program committee.

The duties of the Dissertation Committee are:

- to consult with and to advise students on their research;
- to meet, at least once per year, to review progress and expected results (see below);
- to read and comment upon the draft dissertation;
- to meet, when the dissertation is completed, to conduct the final oral examination and to satisfy itself that the dissertation is a contribution to knowledge and that it is written in lucid and correct English and submitted in approved format.

Yearly Progress Review
The student must schedule a yearly meeting with the dissertation committee. The purpose of the meeting is to give the student an opportunity to present his/her doctoral research progress to the committee and to receive the committee’s feedback and recommendations. The student must submit a brief progress report to the dissertation committee at least seven days before the meeting. During the meeting, the student will present his/her doctoral research progress to the committee. The presentation will be followed by a discussion session. At the end of the discussion session, the committee will meet alone to discuss the student’s progress and provide recommendations to the mentor. The mentor will provide a written summary of the discussion and committee recommendations to the student and to the Graduate Program Director. Students who are not making adequate progress may be terminated from the program.

Doctoral Dissertation
General Description
The doctoral dissertation is a monograph which describes the significance of the research and summarizes the research activities completed as part of the doctoral degree requirements. The objective of the dissertation is to evaluate the candidate’s competence in the area of the Ph.D. research. The dissertation must demonstrate that the research is original and that it makes a significant contribution to the field of study.

A final public oral defense of the dissertation is required. However, none but the members of the dissertation committee may interrogate the candidate. The defense must be held before the deadline published on the Graduate School website (https://grad.miami.edu/), generally at least two weeks prior to the last day of class in the semester the student wishes to graduate. The student must submit the Defense Notice Form (https://grad.miami.edu/policies-and-forms/forms/) available on the Graduate School website (https://grad.miami.edu/) and provide a copy to the Department of Biomedical Engineering.

The candidate is well advised to have a final, acceptable typescript of the dissertation in the hands of each member of his/her committee at a time reasonably in advance of the final defense of the work a minimum of two weeks prior to the defense.

Dissertation Format and Deadlines
It is the duty of the student to ensure that the dissertation defense is scheduled and that a final version of the dissertation approved by the Dissertation Editor is submitted to the Dissertation Editor by the required deadlines set by the Graduate School. All information pertaining to the formatting and electronic guidelines for electronic thesis and dissertation submission can be found on the Graduate School website (https://grad.miami.edu/). The Graduate School also encourages students to contact the Dissertation Editor at the Graduate School when they start preparing their dissertation.

Students must inform the Department of Biomedical Engineering of their intent to defend at least 2 weeks in advance of the defense date, by email
to the Department staff. The email must include the dissertation title and the date, time and location of the defense. The information will be posted in the Department’s physical and online bulletin boards.

Evaluation Forms
The candidate is responsible for distributing dissertation evaluation forms (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-phd/SACS_Graduate_Rating_Grid_Rubric_2016.pdf) to the members of the Dissertation Committee. The evaluation forms are used to assess the overall quality of the graduate program at the Department, College, and University level. The evaluation forms are available on the Graduate School and Department of Biomedical Engineering websites. The forms must be completed by the Committee members after the dissertation defense. The completed forms must be collected by the Dissertation mentor and forwarded to the Office Manager at the Department of Biomedical Engineering.

Publication Requirements
As a requirement for graduation, all PhD Candidates at the University of Miami Department of Biomedical Engineering are expected to have published, or have in press (i.e., the manuscript must have received final acceptance), in high quality peer-reviewed journals, a minimum of 2 publications describing work related to the dissertation. The candidate must be the first author on at least one of these two publications. In addition, the candidate must have been the presenting author of at least 2 oral or poster presentations describing the dissertation work at major peer-reviewed international conferences.

Teaching Requirements
Students enrolled in the PhD program in Biomedical Engineering who passed their qualifying examination are required to participate in undergraduate teaching activities. The minimum requirement will be to teach one undergraduate classroom lecture per academic year, under the supervision of the primary or secondary mentor, and/or the faculty responsible for the course and to help supervise at least one undergraduate student research project per academic year. For each classroom lecture, the mentor will provide feedback to the student and complete and sign a teaching evaluation form (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-phd/Grad_Teaching_Eval.pdf) which must be returned to the Graduate Program Director.

Mission
The mission of the Biomedical Engineering Program is to prepare students to become knowledgeable and skilled engineers with an understanding of the ethical and other professional aspects of biomedical engineering. Design skills and an ability to work both independently and as part of a team are emphasized.

Goals
The goal of the PhD program in Biomedical Engineering at the University of Miami is to train students for independent research and innovation in biomedical engineering. The program is designed to prepare graduates for careers in academia, industrial research and development, or government (FDA, US Patent Office).

Student Learning Outcomes
- Advanced ability to apply knowledge in mathematics, science and engineering to formulate and solve relevant biomedical engineering problems and conduct research.
- An ability to communicate the scientific and technical research effectively in writing and oral presentations.
- Ability to conduct independent research and contribute to existing knowledge.

Certificate Program in Medical Physics
Associated with the Department of Biomedical Engineering’s graduate program in Medical Physics, the University of Miami offers a Certificate Program in Medical Physics. The Certificate Program is accredited by CAMPEP (Commission on Accreditation of Medical Physics Educational Programs) and is a non-degree granting program. The objective of this two-semester program is to allow qualified individuals who have obtained PhD degrees in Physics, Engineering or a related field with a physics-minor-equivalent background to transition into a career in medical physics.

Civil, Architectural and Environmental Engineering

http://cae.miami.edu

Dept. Code: CAE

Mission Statement
The mission of the Department of Civil, Architectural, and Environmental Engineering is to:
Disciplines

Civil engineers are leaders in the planning, design, construction, and operation of systems that are essential to modern life. These systems include: buildings, highways, airports, pipelines, bridges, dams, irrigation systems, drainage systems, water-supply and distribution systems, and wastewater collection and treatment works. Civil engineers are employed by government agencies, public utility companies, private consulting firms, construction companies, architectural firms, and universities.

Architectural engineers are leaders in the planning, design, construction, and operation of engineered systems for commercial, industrial, and institutional buildings and other facilities. These engineered systems include electrical, communications and control, lighting, heating, ventilating, air conditioning, fire protection, plumbing, acoustic, and structural components. Architectural engineers are employed by consulting firms, construction companies, facility management companies, HVAC equipment manufacturers, architectural firms, government agencies, and universities.

Environmental engineers are leaders in the application of engineering principles to improve and maintain the environment for the protection of human health, for the protection of nature’s beneficial ecosystems, and for environment-related enhancement of the quality of human life. Environmental engineers are employed by government agencies, consulting firms, and universities.

Degree Programs

The Department of Civil, Architectural, and Environmental Engineering offers graduate programs leading to the degrees of:

- Master of Science in Civil Engineering
- Master of Science in Civil Engineering - Environmental Engineering emphasis
- Doctor of Philosophy in Civil Engineering
- Doctor of Philosophy in Civil Engineering - Architectural Engineering emphasis
- Doctor of Philosophy in Civil Engineering - Environmental Engineering emphasis

The specialty areas of study in Civil Engineering include:

- Structural Engineering and Structural Materials
- Environmental Engineering
- Water-Resources Engineering

The specialty areas of study in Architectural Engineering include:

- Integrated Building Systems
- MEP Systems

Admission Requirements

All applicants to the graduate program are required to submit official academic transcripts, GRE scores (optional for some MS programs), and a minimum of three letters of recommendation. Specific admission criteria are described in this Bulletin under Engineering (p. 802) - General Admission Requirements.

Applicants who hold a bachelor’s degree in a field other than civil, architectural, or environmental engineering may be admitted to the graduate program (and to candidacy, if applicable) upon completion of (a) the regular graduate degree requirements, and (b) undergraduate deficiency courses, which include:

1. Calculus (10 credits)
2. Advanced Mathematics (6 credits)
3. General Chemistry (4 credits)
4. Calculus-based Physics (8 credits)
5. Statics (3 credits)
6. Engineering Science related to are of study (3 credits)
7. Engineering Design related to area of study (6 credits)

In general, items 1 through 7 apply to students without an undergraduate degree in engineering, and items 6 and 7 apply to students with an undergraduate degree in engineering. The student’s Program of Study committee will select courses for items 6 and 7 on an individual basis.

Research Opportunities

Civil Engineering: Current research activities include properties of concrete materials, composite structural systems, fiber-reinforced concrete, modeling and simulation of engineering materials, multi-scale modeling of materials, fracture mechanics, structural steel behavior, structural health monitoring, structural repair and rehabilitation.

Architectural Engineering: Current research activities include energy, indoor air quality, heating, ventilating and air conditioning (HVAC), environmentally compatible construction materials and systems, lifecycle building systems integration, and sustainable affordable housing.

Environmental Engineering: Current research activities include development of new physicochemical water and wastewater treatment processes, potable wastewater reuse, solid and hazardous waste management, health and environmental risks analysis, environmental/ economic planning for sustainable development, hazardous waste remediation, environmental health studies, water quality studies, groundwater, surface-water, and contaminant-transport processes, hydrologic processed, water resources planning and management, and water policy.

Graduate Academic Standing

A student enrolled in any CAE graduate program is required to make adequate progress towards graduation, maintain a minimum Grade Point Average (GPA), and achieve acceptable course grades.

Throughout their graduate study, a student’s graduate academic standing will either be Good Standing, or Probation.

Good Standing: A student’s status is considered Good Standing if he/she is:
1. maintaining an overall cumulative GPA greater than or equal to 3.00,
2. achieving a term GPA greater than or equal to 3.00 in every
   semester,
3. achieving grades of 'C' or better in all coursework,
4. complying with the University of Miami's Honor Code,
5. making adequate progress towards graduation (see below for
   criteria), and
6. making satisfactory progress towards the completion of a
   dissertation or thesis (for Ph.D. and thesis-based M.S. students)

To be eligible for graduation, a student must have a GPA greater than
or equal to 3.00, and no grade below 'C' in all courses in the student's
approved Program of Study. In accordance with university policy, all
course grades are included in the GPA, and the Graduate School's Repeat
Rule applies to courses with grades lower than 'C'.

**Progress:** Failure to make adequate progress towards graduation
includes, but is not limited to:

- failure to maintain the GPA requirements or grades specified for Good
  Standing
- having Incomplete grades in more than 30% of the total credit hours
  registered towards the degree
- withdrawing (with a W grade) from more than 30% of the total credit
  hours registered towards the degree
- Failure to progress in research needed to complete a dissertation or
  thesis

It is the student’s responsibility to provide regular updates (at least once
per semester) to his/her Advisor and Supervisory Committee members,
and inform them of any courses in which they withdrew (with a W grade),
received grades of C or below, or received an Incomplete. A student who
does not satisfy all of the above requirements (for Good Standing) may
be placed on Probation or dismissed from the program.

At the request of a student’s Advisor or Supervisory Committee member,
or at the discretion of the Graduate Program Director, the Graduate
Program Director can initiate a formal assessment of a student’s
progress. This assessment may include a joint meeting of the student’s
Supervisory Committee, the Graduate Program Director, and the student.
The student will be given an opportunity to present his/her case to explain
any shortcomings in his/her progress or performance. The
Supervisory Committee will place the student in Good Standing, on
Probation, or dismiss the student from the program.

**Probation:** A student who does not meet all of the requirements for
being in Good Standing must consult with his/her Advisor and/or
Supervisory Committee to review his/her progress and develop a plan to
rectify the performance problems. A student will be given one semester
(on Probation status) to improve his/her performance and satisfy the
requirements of Good Standing. Otherwise, the student will be dismissed
from the program.

A student on Probation may not be permitted to enroll in courses, or
may be limited to a certain number of credit hours specified by the
Supervisory Committee, and may have an electronic hold placed on future
enrollment until grades for work-in-progress are reviewed by the student’s
Supervisory Committee.

**Dismissal:** The decision to dismiss a student shall be made by the
student’s Supervisory Committee. If the decision is made not to dismiss,
the student may be placed on Probation. A student dismissed from

the graduate program can appeal the dismissal through the Graduate
Program Director, then the Department Chair, then by following the
guidance provided in the Graduate Student Handbook.

**Masters Programs in Civil, Architectural and Environmental Engineering**

- M.S. (p. 819) (p. 818) Civil Engineering (p. 819)
- M.S. (p. 818) (p. 819) Architectural Engineering (p. 818)
- B.S./M.S. Civil Engineering Program (p. 817)
- Dual M.S. in Civil Engineering with the University of Bologna (p. 822)

**Doctoral Program in Civil, Architectural and Environmental Engineering**

- Ph.D. in Civil Engineering Program (p. 826)

**B.S./M.S. in Civil Engineering**

**Admission Requirements**

Undergraduate students of the department having a GPA of 3.0 or better
are encouraged to apply to the 5-year BS/MS program during their
junior year. Applicants are required to submit official transcripts, official
GRE scores, and three letters of recommendation. Admission criteria
are described under Colleges of Engineering – Graduate Admission
Requirements.

**Graduation**

Requirements for graduation are:

- Minimum of 30 graduate-level credits with a GPA of at least 3.0, and
  no grade lower than C

Of the 30 graduate-level credits:

- At least 24 credits of lecture-based courses
- At least 15 credits in CAE
- At least 12 credits of courses at the 700 level
- At least 6 credits of lecture-based CAE courses at the 700 level (not
  Independent Study / Special Problems)
- Up to 6 credits can be Independent Study (Special Problems and/or
  Master's Design Project)

Thesis research (CAE 810) will not count towards the degree. CAE 665 -
669 and CAE 765 - 769 shall not count towards the degree.

**Transfer of credits from other institutions**

- A total of 6 credits of transfer and/or exchange coursework not
  counted towards the student’s BS may be taken at another institution
  and used to satisfy requirements for the M.S. The number of eligible
  credits for transfer is 9, when pre-approved coursework is taken as
  part of a semester abroad experience.

**Curriculum**

The program of study is tailored to the student’s background and goals
by their advisor, and must be approved as constituting an MS in Civil or
Architectural Engineering by the student’s Program of Study Committee. The committee comprises a minimum of 3 members, as follows:

- The CAE Committee Chair (Advisor) shall be a full-time faculty member from the CAE Department, one member must be from outside the Department and hold a Ph.D., and one member other than the CAE Committee Chair (Advisor) must be either a full-time or part-time member of the Department; and
- In addition to the Committee Chair, at least one of the members must be tenured/tenure-earning, or a member of the Graduate Faculty.

M.S. in Architectural Engineering

Overview

The Department of Civil, Architectural, and Environmental Engineering (CAE) offers a Master of Science degree in Architectural Engineering (MAE).

The educational objectives of the Master of Science program in Architectural Engineering are to produce graduates whom:

1. Have advanced technical knowledge in at least one specialty area of Architectural Engineering
2. Have advanced capability to apply knowledge to engineering problems

The degree program has the following options:

- Thesis option
- Non-Thesis option
- 5-Year B.S./M.S. option available for qualified undergraduate students enrolled within the CAE Department

For all options, a minimum of 30 graduate-level credits are required with an average of 'B' or better and no grade below 'C'. A total of 6 credits of transfer and/or exchange coursework (not counted towards the B.S. degree, and with grades of 'B' or above) may be taken at another institution (with pre-approval) to satisfy the requirements for the M.S. degree. The M.S. degree can be typically completed within one calendar year.

The Program of Study is the student’s specific set of coursework that defines the course requirements for graduation and must be approved by an advisory committee (known as the Supervisory Committee).

Curriculum Requirements - Thesis Option

A minimum of 30 graduate-level credits are required with an average of 'B' or better and no grade below 'C'. Of the 30 credits:

- At least 24 credits of lecture-based courses
- At least 15 credits in CAE courses
- At least 6 credits of lecture-based CAE courses at the 700 level (not Independent Study)
- 6 credits of Master's Thesis (CAE 810) and an oral examination in defense of the thesis

The table presents an overview of the course selection:

<table>
<thead>
<tr>
<th>Code</th>

</tr>
<tr>
<td>5 Elective Courses</td>
<td>15</td>
<td></td>
</tr>
<tr>
<td><strong>Total Credit Hours</strong></td>
<td><strong>30</strong></td>
<td></td>
</tr>
</tbody>
</table>

Notes: All courses are 3 credit hours unless otherwise indicated.

1. Independent Study/Special Problems (CAE 595, CAE 695, CAE 795) will not count towards the degree requirements.
2. Master’s Design Project (CAE 604) will not count towards the degree requirements.
3. The M.S. thesis must be defended to, approved by, and signed by the student’s Thesis Committee, which is typically the same as the student’s Supervisory Committee or, if not, has a composition that is equivalent to the Supervisory Committee.
4. Refer to the Additional Details section (below) for additional options and restrictions.

Curriculum Requirements - Non-Thesis Option

<table>

</tbody>
</table>

Notes: All courses are 3 credit hours unless otherwise indicated.

1. Up to 6 credits can be Independent Study/Special Problems (CAE 595, CAE 695 CAE 795)
2. Master’s Design Project (CAE 604) will not count towards the degree requirements.
3. Master’s Thesis (CAE 810) will not count towards the degree requirements.
4. Refer to the Additional Details section (below) for additional options and restrictions.

Additional Details

- There is also a 5-Year B.S./M.S. option available for qualified undergraduate students enrolled within the CAE Department. For this combined degree programs only, students are allowed to transfer up to 9 credit hours of graduate coursework from a semester spent abroad. The coursework resulting in the 9-credit hour transfer is to be approved by the student’s M.S. Supervisory Committee prior to initiating a study abroad program. With the exception of the dual M.S. program with UniBo (http://www.coe.miami.edu/departments/cae-engineering/graduate/dual-ms/), transferred credits cannot be used to satisfy the requirements of an external degree.
- Admissions requirements for the M.S. degree are listed in this Bulletin under Engineering (p. 802) and under Master’s Degree.
- A total of 6 credits of transfer and/or exchange coursework (not counted towards the B.S. degree, and with grades of 'B' or above) may be taken at another institution (with pre-approval) to satisfy the requirements for the M.S. degree.
• Internships, Practical Training, workshops, or other types of practicum are neither required nor optional credit-earning components in the established graduate curriculum (Program of Study). Credit earned through these experiences (such as UMI 605) will not count towards any CAE degree requirement. CAE 665 - 669 and CAE 765 - 769 shall not count towards the degree.
• The Supervisory Committee must have a minimum of 3 members, including:
  1. Committee Chair (Advisor) shall be full-time CAE faculty and a member of the Graduate Faculty.
  2. Full-Time or Part-Time CAE Faculty
  3. Non-CAE member with an earned Ph.D.

In addition to the Committee Chair, at least one member must be tenured/tenure-earning or a member of the Graduate Faculty.

Mission
The mission of the Department of Civil, Architectural, and Environmental Engineering is to:
- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering that will prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research that will advance the body of knowledge and improve the quality of human life; and
- Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

Goals
The educational objectives of the M.S. program in Architectural Engineering are to produce graduates whom:
- Have advanced technical knowledge in at least one specialty area of architectural engineering; and
- Have advanced capability to apply knowledge to engineering problems.

Student Learning Outcomes
- Students will demonstrate an advanced knowledge of the discipline (mathematics, science, and engineering), including methodology relevant to a specialty area.
- Students will demonstrate an advanced ability to identify, formulate, and solve engineering problems.
- Students will demonstrate an advanced ability to generate technical contributions and effectively communicate them to the scientific community.

M.S. in Civil Engineering
Overview
The Department of Civil, Architectural, and Environmental Engineering (CAE) offers a Master of Science degree in Civil Engineering (MSCE) with three areas of specialty:
- Structural Engineering and Structural Materials
- Environmental Engineering
- Water-Resources Engineering

The educational objectives of the Master of Science program in Civil Engineering are to produce graduates whom:
1. Have advanced technical knowledge in at least one specialty area of civil engineering
2. Have advanced capability to apply knowledge to engineering problems.

In each of the specialty areas, several options are available:
- Thesis option
- Non-Thesis option
- 5-Year B.S./M.S. option available for qualified undergraduate students enrolled within the CAE Department
- 5-Year B.S./Dual M.S. option available for qualified undergraduate students enrolled within the CAE Department; students earn a B.S. and two M.S. degrees (one at the University of Miami and one at the University of Bologna, Italy) by spending their 5th year studying abroad.

For all options, a minimum of 30 graduate-level credits are required with an average of 'B' or better and no grade below 'C'. A total of 6 credits of transfer and/or exchange coursework (not counted towards the B.S. degree, and with grades of 'B' or above) may be taken at another institution (with pre-approval) to satisfy the requirements of the M.S. degree. The M.S. degree can be typically completed within one calendar year.

The Program of Study is the student’s specific set of coursework that defines the course requirements for graduation and must be approved by an advisory committee (known as the Supervisory Committee).

Curriculum Requirements - Thesis Option
A minimum of 30 graduate-level credits are required with an average of 'B' or better and no grade below 'C'. Of the 30 credits:
- At least 24 credits of lecture-based courses
- At least 15 credits in CAE courses
- At least 6 credits of lecture-based CAE courses at the 700 level (not Independent Study)
- 6 credits of Master's Thesis (CAE 810) and an oral examination in defense of the thesis

The table presents an overview of the course selection:

<table>

<td>15</td>
<td></td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td>30</td>
<td></td>
</tr>
</tbody>
</table>
Curriculum Requirements - Non-Thesis Option

A minimum of 30 graduate-level credits are required with an average of 'B' or better and no grade below 'C'. Of the 30 credits:

- At least 24 credits of lecture-based courses
- At least 15 credits in CAE courses
- At least 12 credits of courses at the 700 level
- At least 6 credits of lecture-based CAE courses at the 700 level (not Independent Study)
- Up to 6 credits can be Independent Study (Special Problems)

The table presents an overview of the course selection:

</tbody>
</table>

* NOTES
1. All courses are 3 credit hours unless otherwise indicated.
2. Independent Study/Special Problems (CAE 595, CAE 695, CAE 795) will not count towards the degree requirements.
3. Master’s Design Project (CAE 604) will not count towards the degree requirements.
4. Master’s Thesis (CAE 810) will not count towards the degree requirements.

The Supervisory Committee must have a minimum of 3 members, including:
1. Committee Chair (Advisor) shall be full-time CAE faculty and a member of the Graduate Faculty
2. Full-time or part-time CAE faculty
3. Non-CAE member with an earned Ph.D.

In addition to the Committee Chair, at least one member must be tenured/tenure-earning or a member of the Graduate Faculty.

Mission

The mission of the Department of Civil, Architectural, and Environmental Engineering is to:

- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering that will prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research that will advance the body of knowledge and improve the quality of human life; and
- Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

Goals

The educational objectives of the M.S. program in Civil Engineering are to produce graduates whom:

- Have advanced technical knowledge in at least one specialty area of civil engineering; and
- Have advanced capability to apply knowledge to engineering problems.

Student Learning Outcomes

- Students will demonstrate an advanced knowledge of the discipline (mathematics, science, and engineering), including methodology relevant to a specialty area.
- Students will demonstrate an advanced ability to identify, formulate, and solve engineering problems.
- Students will demonstrate an advanced ability to generate technical contributions and effectively communicate them to the scientific community.

M.S. in Construction Management

Situational Background

The U.S. Census Bureau puts the total annual value of construction in the United States at approximately $900 billion (8% of the U.S. gross national product). The U.S. construction industry employs over 6 million people, and the demand for skilled workers continues to grow. Construction professionals are essential in ensuring the safe and efficient development of infrastructure, from highways and bridges to schools and hospitals. This program prepares students to meet the challenges of the construction industry, which is facing a shortage of trained professionals.
product), making the construction industry one of the most important sectors of the nation’s economy.

The University of Miami’s MS in Construction Management program is a practice-oriented advanced graduate degree that offers a blend of construction and business management courses. This degree program is designed to develop leaders and managers for complex building projects, with mastery in best practices related to resiliency, sustainability, building information modeling, project delivery and decision-making. The University is uniquely situated in a booming metropolis where commercial and residential construction is a large and important industry.

**The Construction Management Program**

- Offers an interdisciplinary approach with the participation of other graduate programs at the University of Miami.
- Prepares graduates for a variety of employment opportunities. Potential employers include general contractors, real estate developers, sub-contractors, construction management firms and architectural engineering firms.

**Objective**

The MS in Construction Management provides a foundation for those who want to effectively lead a construction project or business.

**Who Is the MS Program For?**

The program is open to both entry-level graduate students who want to pursue a career in construction management and professionals who have responsibilities in engineering, architecture, business and law fields, and want to further their knowledge and skills.

**Industry Advisory Board**

One of the differentiators of the MS program is that it is informed by an industrial advisory board with significant experience in construction management. The advisory board currently consists of:

- **Henry E. Adams**, Kiewit Corporation
- **Rodney Barreto**, Floridian Partners, LLC; Chairman - Fish & Wildlife Foundation of Florida
- **Scott Desharnais**, Moss Construction
- **Kobi Karp**, Kobi Karp Architecture and Interior Design
- **Thomas Koulouris**, AECOM / Jackson Health Systems
- **Ana Veiga Milton**, President of Jose Milton Foundation
- **John L. Murphy**, DLA Piper LLP (US)
- **Ari Pearl**, South Florida Developer
- **Jaime S. Saavedra**, Turner Construction
- **Victor Sanchez**, Goldman Properties

**Description**

Graduates of the program obtain the technical proficiency, financial knowledge, entrepreneurial skills, and business acumen needed for success in this continuously evolving industry.

Graduates of the program will learn how to integrate multiple professional requirements for bringing construction projects to successful completion, including estimating, cost control, risk, new technologies, project planning, scheduling, negotiation and labor relations. Coursework also examines how to manage the various types of contractual relationships governing the owner, the contractor, subcontractors, consultants and architects, as well as the essential skills of bidding, negotiating, handling disputes and claims, devising and implementing strategic business plans, and leadership.

Through consultations with industry leaders, advisory board members, faculty members, and colleagues in the construction industry, the curriculum for the University of Miami’s MS-CM is continually evaluated against current best practices and the highest standards. Participants have immediate access to knowledge and skills that address current issues and developments in the industry.

The current director of this program is Dr. Esber Andiroglu. ([http://www.coe.miami.edu/faculty-directory/name/esber-andiroglu/](http://www.coe.miami.edu/faculty-directory/name/esber-andiroglu/))

Mission

The vision of the MS CM program is to provide an interdisciplinary, flexible and state-of-the-art curriculum that provides students with knowledge and marketable skills to become future leaders of construction related organizations worldwide, by utilizing existing infrastructure resources at University of Miami, with program-generated additional resources as necessary.

Goals

Graduates of the program obtain the technical proficiency, financial knowledge, entrepreneurial skills, and business acumen needed for success in this continuously evolving industry.

Student Learning Outcomes

Dual M.S. in Civil Engineering with the University of Bologna

The Department of Civil, Architectural, and Environmental Engineering (CAE) at the University of Miami (UM) has partnered with the University of Bologna (UNIBO) in Italy to offer a dual Master of Science degree program in Civil Engineering (Dual MSCE). Each dual degree program is structured in four semesters and consists of courses and research with two semesters to be completed at UM and two semesters to be completed abroad at UNIBO. The degrees conferred by each institution are as follows:
Dual Degree Program Area of Emphasis

Civil Engineering

Environmental Engineering

Academic Degree Obtained at UNIBO

Laurea Magistrale in Civil Engineering (Classe LM) - Taught in English

Laurea Magistrale in Ingegneria per l'Ambiente ed il Territorio (Classe LM 35) - 'Earth Resources Engineering' International Curriculum taught in English

Academic Degree Obtained at UM

MS in Civil Engineering (Environmental Emphasis)

Upon Completion of the Dual Degree Program requirements, the students will be awarded two separate and distinct Master's of Science degrees.

This program is open to students who are admitted to the graduate program at the end of their junior year as part of the 4+1 (BS + MS) program. Students applying for this program must have a minimum grade point average of 3.0, and score more than 300 on the Graduate Record Examination (GRE).

Once enrolled in the 4+1 (BS+MS) program, students are eligible to apply to the dual MS degree program. The five-year program leading to a B.S. and dual M.S. degrees (BS/2MS) can be completed in 10 semesters as long as the student makes satisfactory progress.

Admission to the 4+1 (BS+MS) program and the BS + dual M.S. program is conducted through the College of Engineering Admissions Office. Any student interested in applying should contact the Director of Admissions in the College of Engineering and their academic advisor in the CAE Department. Both should conduct an overview and feasibility study based on the student’s current program of study, and discuss the application requirements and timeline.

The curriculum for the dual M.S. degree program consists of courses that are required for the MS-UM degree, courses for the MS-UNIBO degree, and common courses shared between the programs. In general, students will enroll in the following program of study during their 4th year (Senior Year), and 5th year (at UNIBO). The table is shown in UM credit equivalents:

Students shall submit an individual Program of Study to select courses as part of the program. The individual study program must be approved by both institution’s Academic Coordinators. A thesis is required as part of the program and will be completed at UNIBO while working with an advisor at UM. Students must defend their Master’s Thesis according to the rules and modalities of UNIBO to obtain the Laurea Magistrale degree.

Program credits are reported using two systems: the European Credit Transfer System (ECTS) and the United States College Credit System (US). The transfer rate between the systems is 2 ECTS credits = 1 US credit. The credit requirements for each MS program are based on the transfer credits between the institutions.

Any deviation from the designated course lists requires pre-approval by the student’s UM supervisory committee, the UM CAE Graduate Program Director, and the UNIBO Academic Advisor prior to course registration.

5 YEAR BS/DUAL MS

COURSE SCHEDULE FOR CIVIL ENGINEERING

4TH Year (Senior Year at UM): All courses in Table A (24 U.S., 48 ECTS) + 2 courses in Table B (6 U.S., 12 ECTS)
5th Year (at UNIBO): The remaining courses in Tables B and C (24 U.S., 48 ECTS) + Civil Engineering Research (6 U.S., 12 ECTS) + CAE 795: Special Problems (4 U.S., 8 ECTS). Courses in Table C consist of Curriculum courses and Elective courses which can be chosen by the student, depending on the study area they are interested. They are shown in Tables E, F, and G.

Additional Details
- Each Student is required to complete a Program of Study and have it approved by their Supervisory Committee and the Graduate Program Director prior to entering the program.
- Internships, Practical Training, Workshops, or other types of practicum are neither required nor optional credit-earning components in the established graduate curriculum (Program of Study). Credit earned through these experiences (such as UMI 605) will not count towards any CAE degree requirements. CAE 665 - 669 and CAE 765 - 769 shall not count towards the degree.
- The Supervisory Committee at the University of Miami must have a minimum of 3 members, including:
  1. Committee Chair (Advisor) shall be full-time CAE Faculty and a member of the Graduate Faculty
  2. Full-time or Part-time CAE Faculty
  3. Non-CAE member with an earned Ph.D.

In addition to the Committee Chair, at least one member must be tenured/tenure-earning or a member of the Graduate Faculty.

Ph.D. in Civil Engineering
Overview
The Department of Civil, Architectural, and Environmental Engineering (CAE) offers a Doctor of Philosophy (Ph.D.) degree in Civil Engineering with the following areas of emphasis:
- Civil Engineering
- Architectural Engineering
- Environmental Engineering

The educational objectives of the Doctor of Philosophy program in Civil Engineering are to produce graduates whom:

1. Have advanced technical knowledge in at least one specialty area of civil engineering
2. Have advanced capability to apply advanced knowledge to engineering problems
3. Have made significant contributions in at least one specialty area of civil engineering

The specialty areas of study for the Ph.D. include:
- Structural Engineering and Structural Materials
- Environmental Engineering
- Water Resources Engineering
- Integrated Building Systems
- Mechanical, Electrical, and Plumbing (MEP) Systems

For students who already have an earned Master of Science (in either civil, architectural, or environmental engineering), 30 graduate-level
credits are required beyond the M.S. degree. For students who do not have an M.S. (in civil, architectural, or environmental engineering), a minimum of 60 graduate-level credits are required beyond the B.S. degree. All students are required to engage in supervised research and defend a dissertation.

The Program of Study is the student’s specific set of coursework that defines the course requirements for graduation and must be approved by an advisory committee (known as the Supervisory Committee). Depending on whether the student already has an earned M.S. degree, the Ph.D. degree can typically be completed within two to five years.

Curriculum Requirements

For a Ph.D. following an M.S.

For students who already have an earned M.S. (in civil, architectural, or environmental engineering), a minimum of 30 graduate-level credits are required beyond the M.S. degree. For students who do not have an M.S. (in civil, architectural, or environmental engineering), a minimum of 60 graduate-level credits are required beyond the B.S. degree with an average of ‘B’ or better and no grade below a ‘C’. Of the credits:

- At least 18 credits in CAE
- At least 18 credits of lecture-based and/or Independent Study courses
- At least 6 credits of lecture-based CAE courses at the 700 level (not Independent Study)
- 12 credits of Doctoral Dissertation (CAE 830 and/or CAE 840)
- A total of 6 credits of transfer and/or exchange coursework (not counted towards the B.S. or M.S. degrees) may be taken at another institution and used to satisfy the requirements for the Ph.D. degree.

The table presents an overview of the courses selection:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAE 830 and/or CAE 840</td>
<td></td>
<td>18</td>
</tr>
<tr>
<td>2 CAE 700 Level Lecture-Based Courses</td>
<td></td>
<td>6</td>
</tr>
<tr>
<td>4 Elective Courses</td>
<td></td>
<td>12</td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td></td>
<td>30</td>
</tr>
</tbody>
</table>

Note: All courses, except Dissertation, are 3 credit hours unless otherwise indicated. Refer to the Additional Details section (below) for additional options and restrictions.

For a Ph.D. without prior M.S.

For students who do not have an M.S. (in civil, architectural, or environmental engineering), a minimum of 60 graduate-level credits are required beyond the B.S. degree with an average of ‘B’ or better and no grade below a ‘C’. Of the 60 credits:

- At least 42 credits of lecture-based and/or Independent Study courses
- At least 12 credits of lecture-based CAE courses at the 700 level (not Independent Study)
- At least 30 credits in CAE
- 18 credits of Doctoral Dissertation (CAE 830 and/or CAE 840)
- A total of 12 credits of transfer and/or exchange coursework (not counted towards the B.S. or M.S. degrees) may be taken at another institution and used to satisfy the requirements for the Ph.D. degree.

The Ph.D. thesis must be defended to, approved by, and signed by the student's Dissertation Committee, which is typically the same as the student’s Supervisory Committee or, if not, has makeup equivalent to the Supervisory Committee. All Committee members must approve the Proposal.

Qualifying Examination

A Ph.D. student must pass a Qualifying Examination, generally taken at the end of the first year of study, before being allowed to defend a dissertation proposal. The examination, administered by the student’s Supervisory Committee, must consist of a written component, and may also include an oral component if deemed appropriate by the Supervisory Committee. Three outcomes of the examination are possible: Pass, Fail, and Fail with option to re-take once. For students retaking the exam, the Committee will determine a suitable time frame, but not to exceed 6 months.

Dissertation Proposal Defense

Subsequent to passage of the Qualifying Examination, the student can defend his/her Dissertation Proposal to their Dissertation Committee, which is typically the same as the student’s Supervisory Committee or, if not, has makeup equivalent to the Supervisory Committee. All Committee members must approve the Proposal.

Admission to Candidacy

Admission of the student to Candidacy is subject to passage of the Qualifying Examination and passage of the oral Dissertation Proposal Defense.

Dissertation Defense

The Ph.D. thesis must be defended to, approved by, and signed by the student's Dissertation Committee, which is typically the same as the student’s Supervisory Committee or, if not, has a composition that is equivalent to the Supervisory Committee.

Additional Details

- Master’s Design Project (CAE 604) will not count towards the Ph.D. degree requirements.
- Internships, Practical Training, workshops, or other types of practicum are neither required nor optional credit-earning components in the established graduate curriculum (Program of Study). Credit earned through these experiences (such as UMI 605) will not count towards any CAE degree requirements. Courses CAE 665 - 669 and CAE 765 - 769 shall not count towards the degree.
- At a minimum, a qualifying exam and a final public oral examination in defense of the thesis are required.
- The Supervisory Committee (and Dissertation Committee) must have a minimum of 4 members, including:
  1. Committee Chair (Advisor) shall be full-time CAE faculty and a member of the Graduate Faculty.
  2. CAE faculty and a member of the Graduate Faculty
Current research interests of the faculty include:

- Statistical signal processing.
- Image and video processing, pattern recognition, computer vision, automation of visual tasks.
- Machine learning and big data analytics.
- Bioinformatics, computational biology, and genomics.
- Nano-photonics, plasmonics, micro/nano-electronic devices, nano-materials and structures.
- Fusion and learning in networks.

Mission

The mission of the Department of Civil, Architectural, and Environmental Engineering is to:

- Provide high-quality undergraduate and graduate education in civil, architectural, and environmental engineering that will prepare graduates for professional careers and a lifetime of learning;
- Conduct high-quality research that will advance the body of knowledge and improve the quality of human life; and
- Serve the engineering profession and society through active involvement in professional organizations and contribution of professional expertise.

Goals

The educational objectives of the Ph.D. program are to produce graduates whom:

- Have advanced technical knowledge in at least one specialty area of civil engineering;
- Have advanced capability to apply advanced knowledge to engineering problems; and
- Have made significant contributions in at least one specialty area of civil engineering.

Student Learning Outcomes

- Students will demonstrate an advanced knowledge of the discipline (mathematics, science, and engineering), including methodology relevant to a specialty area.
- Students will demonstrate an advanced ability to identify, formulate, and solve engineering problems to carry out supervised research.
- Students will demonstrate an advanced ability to generate technical contributions and effectively communicate them to the scientific community.

Electrical and Computer Engineering

http://www.coe.miami.edu/dept-eec/

The Department of Electrical and Computer Engineering offers graduate programs leading to the degrees of Master of Science (thesis or non-thesis option) and Doctor of Philosophy in Electrical and Computer Engineering. Five-year BS and MS dual degree programs are available for qualified undergraduate students enrolled within the Department.

Current research interests of the faculty include:

- Data mining, multimedia information systems, multimedia networking and security.
- Intelligent sensor microchips and MEMS, BioMEMS, implantable medical devices, VLSI, ASICS, system-on-a-chip, FPGAs.
- Integrated optics, holography, lithography, spectral imaging, optical coherence tomography.
- Game theory, multi-agent systems.

Master of Science in Electrical and Computer Engineering (MSECE)

Must complete either a thesis option (consisting 24 course credits + 06 thesis credits) or a non-thesis option (30 course credits). Thesis option requirements include the submission and oral defense of a thesis supervised by a Research Supervisor.

Doctor of Philosophy (PhD)

Must complete 30 credits (18 course credits + 12 dissertation credits). Requirements include successful completion of a Qualifying Examination, an oral defense of a research proposal, and submission and oral defense of a dissertation supervised by a Research Supervisor. An MS degree in Electrical and/or Computer Engineering, or related area, is required for students pursuing a PhD degree.

Masters Programs in Electrical and Computer Engineering

- M.S. in Electrical and Computer Engineering (p. 828)
- Five-Year B.S.E.E.-M.S.E.C.E. Dual Degree - Electrical Engineering Option (p. 467)
- Five-Year B.S.E.E.-M.S.E.C.E. Dual Degree - Audio Engineering Option (p. 468)
- Five-Year B.S.Cp.E.-M.S.E.C.E. Dual Degree - Computer Engineering Option (p. 477)
- Five-Year B.S.Cp.E.-M.S.E.C.E. Dual Degree - Software Engineering Option (p. 478)

Doctoral Program in Electrical and Computer Engineering

- Ph.D. in Electrical and Computer Engineering (p. 830)

M.S. in Electrical and Computer Engineering

The Electrical and Computer Engineering Department offers the Degree of Master of Science in Electrical and Computer Engineering (M.S.E.C.E.) with a thesis option (24 course credit hours and 6 thesis credit hours) or a non-thesis option (30 course credit hours and no thesis credit hours). The M.S.E.C.E. program offers five tracks: audio engineering, data analytics, Microdevices and Photonics, cybersecurity, and a general ECE track.

Admissions Requirements

Admission to MS degree programs in the College of Engineering (CoE) at the University of Miami is competitive. A qualified applicant needs a strong academic record, as evidenced by their grades in relevant coursework (traditionally a cumulative gpa of 3.0 or higher). Additionally, prospective students should have a 300 or higher on the GRE General
Test (verbal plus quantitative), acceptable scores on TOEFL or ILETS exams (English proficiency exams for international students only), as well as comprehensive letters of recommendation. Transfer of credits from other institutes complies with the rules of the graduate school. Many of our applicants have research experiences that have resulted in publication.

Traditionally a BS degree in engineering is required for admission into one of our MS programs. Students who do not have a degree in an Engineering field can still apply and will be considered by the admission committee, but if admitted pre-requisite coursework is traditionally required before being fully admitted into MS studies with us.

**Graduation Requirements**

**The M.S.E.C.E. program with the non-thesis option complies in full with the CoE degree requirements**

- An approved integrated program with a minimum of 30 credit hours with an average grade of B or better and no grade below C.
- At least 12 course credit hours must be at the 700-level.
- In addition, the cybersecurity track requires a 3-credit-hour graduating project.

**The M.S.E.C.E. program with the thesis option, complies with the following CoE degree requirements**

- An approved integrated program with a minimum of 30 credit hours with an average grade of B or better and no grade below C.
- At least 6 of the course credit hours must be at the 700 level
- 6 credit hours of the required 30 must be earned in thesis work.

In addition to the CoE degree requirements, the M.S.E.C.E. program with the thesis option requires the following:

- Appointment of a Thesis Defense Committee comprised of at least 3 members: the Chair of the committee is the Research Advisor who must have RF/GF status within ECE; at least one other member (excluding the Research Advisor) must have RF/GF status within ECE; at least one member must be from outside ECE.

**Curriculum Requirements**

**General ECE Option**

Any 600-level and 700-level ECE courses and courses in other departments with the approval of the academic advisor.

**Audio Engineering Option**

Mission
The MS program in the Department of Electrical and Computer Engineering is designed to prepare students for both of the following:

• Advanced academic degrees leading to successful careers in teaching and research; and
• Rewarding and productive careers in industrial and government research positions.

Goals
Student Learning Outcomes

• The graduate will be able to exhibit broad understanding and mastery of the basic corpus of knowledge representing the discipline. They should be able to apply in their work 1) advanced mathematical principle and 2) advanced knowledge of science and engineering.
• The student will leave the university with the ability to apply critical thinking to complex engineering problems. This means that they should be able to 1) identify advanced engineering problems and address then, and 2) demonstrate proficiency in critically analyzing and solving advanced engineering problems.
• The students will demonstrate proficiency in conveying the results of their work both in terms of written communication and convincing oral presentation.

Ph.D. in Electrical and Computer Engineering
The Ph.D. degree is designed so that it

• offers students the theoretical, practical, and professional knowledge that will enable them to pursue discovery of new knowledge;
• allows students to conduct visible high-quality research that will advance the state of knowledge; and
• serves to train, motivate, and inspire our graduates to become leaders in their fields.

Admission Requirements
The minimum GRE requirement is 310 (verbal plus quantitative) for the B.S. to Ph.D. track, and 305 for the M.S. to Ph.D. track. Other requirements are identical to the CoE requirements. The transfer policy complies with the rules of the graduate school.

Graduation Requirements
The average grade of course works should be B or better, and no grade can be below C. Other requirements are identical to the CoE requirements.

Qualifying Examination
The Ph.D. Qualifying Examination is held twice a year, one week prior to the beginning of the Fall and Spring semesters. The applicant must select four subject areas listed in the following:

Computer Engineering (CE) Program
CE1 Programming Languages and Algorithms
CE2 Computer Networks
CE3 Computer Architecture and Digital Systems
CE4 Database and Distributed Systems
CE5 Analytical Techniques

Electrical Engineering (EE) Program
EE1 Signals and Systems
EE2 Communications
EE3 Circuits and Electronics
EE4 Solid-State Physics and Devices
EE5 Analytical Techniques

The criteria for subject selection are as follows:

• Select the PROGRAM (CE or EE) (in consultation with Research Advisor).
• Select FOUR subjects as follows:
  • THREE from the selected PROGRAM
  • ONE from the other PROGRAM

Subject matter in CE5 and EE5 are identical, and both CE5 and EE5 cannot be selected in one sitting.

Requirements for satisfactory completion of the Ph.D. qualifying examination are:

• Taking the Ph.D. Qualifying Examination:
  • The first attempt must be within two semesters (summers excluded) of initial enrollment in the Ph.D. program.
  • Any student failing to pass the examination during the first attempt, can retake the examination a second time during its immediate next offering (see Passing the Ph.D. Qualifying Examination section below).
  • Any student failing to pass the examination a second time will have his/her Ph.D. status terminated.

• Passing the Ph.D. Qualifying Examination: To pass the examination, a student’s grades must satisfy the following criteria:
  • Criterion 1: Average grade of ‘B’ (3.000) or better for the entire 4-subject examination: a student failing to meet this criterion will be required to repeat the whole examination during its immediate next offering. The student may change the subject areas selected.
  • Criterion 2: Grade of ‘C’ (2.000) or better for each subject: each subject failing to meet this criterion will have to be repeated during the immediate next offering of the Ph.D. Qualifying Examination. No change in the subject area is allowed and the average grade computed with the re-taken subject together with
Dissertation Committee
The dissertation committee should comprise at least 5 members: the Chair of the committee is the Research Advisor who must have research faculty (RF) or graduate faculty (GF) status within ECE; at least two other members (excluding the Research Advisor) must have RF/GF status within ECE; at least one member must be from outside ECE.

Dissertation Proposal Defense
An oral defense of a dissertation proposal on an original research topic before the dissertation committee is required.

Admission to Candidacy
Requirements are identical to the CoE requirements.

Mission
Provide outstanding graduate educational programs to students in electrical engineering, and computer engineering. Conduct visible high-quality research programs that will advance the state of knowledge in the fields of electrical engineering and computer engineering and will serve to train, motivate and inspire our graduates to become leaders in their fields.

Goals
Graduates of the Ph.D. program will have the theoretical, practical, and professional knowledge that will enable them to independently pursue the discovery of new knowledge and methods that enhance the theory and practice of electrical engineering and computer engineering. Graduates will be qualified for entry-level academic positions, or research positions in industrial and government research institutions and laboratories.

Student Learning Outcomes
- Students will demonstrate advanced understanding of a broader range of subject areas and expertise in their research work that will allow them to be at a vanguard position when entering the workforce, in either academic or industrial/government careers.
- Students will demonstrate an established record of original and independent research contributions.
- Students will demonstrate ability to communicate the results of their technical both in writing and in oral presentations.

Industrial Engineering

Department Mission Statement
The Department of Industrial Engineering mission is to provide contemporary and relevant industrial and systems engineering education and research; impart knowledge and skills necessary to design and to improve a variety of manufacturing and service processes; promote lifelong learning; and contribute to emerging societal needs.

Degree Programs
The Department of Industrial Engineering offers graduate programs leading to the:
- Master of Science in Industrial Engineering
- Master of Science in Environmental Health and Safety

M.S. in Environmental Health and Safety
Master of Science in Environmental Health and Safety
An interdisciplinary M.S. degree program in Environmental Health and Safety is offered through the Department of Industrial Engineering in collaboration with the School of Medicine. These programs of study are individually structured to fit the student's interests and career objectives. The program will consist of a 36 credit hours in the areas of environmental health and safety.

M.S. in Industrial Engineering

Mission
The Department of Industrial Engineering’s mission is to provide contemporary and relevant industrial and systems engineering education and research; impart knowledge and skills necessary to design and to improve a variety of manufacturing and service processes; promote lifelong learning; and contribute to emerging societal needs.

Goals
Student Learning Outcomes
- Graduates will demonstrate an ability to apply knowledge and methodology to advanced problems in Environmental Health and Safety.
- Graduates will demonstrate an ability to write effectively about advanced Environmental Health and Safety topics.
- Graduates will have an ability to present their findings effectively about advanced Environmental Health and Safety topics.

M.S. in Industrial Engineering
1. The Master of Science degree in Industrial Engineering includes the following areas of concentration:
   a. Engineering Management
   b. Ergonomics and Human Factors
   c. Health Care Systems
   d. Management of Technology
   e. Manufacturing Engineering
   f. Occupational Health and Safety
   g. Operations Research
   h. Productivity Engineering
   i. Quality
2. Students (other than University of Miami graduates) applying for graduate admission to the College should submit three letters of recommendation from individuals familiar with the applicant’s abilities and background. Students who hold a bachelor’s degree in a field other than Industrial Engineering may be admitted to the graduate program and to candidacy upon completion of appropriate undergraduate deficiency courses, in addition to the regular requirements for the graduate degree. A student’s overall program is planned by the student and the Graduate Advisor.
3. The Department of Industrial Engineering offers a 5-Year Bachelor of Science in Industrial Engineering and Master of Science in Industrial Engineering Program (BSIE/MSIE Program).
   a. This program is specifically designed for those students who want to pursue their graduate study as soon as they complete their undergraduate study in Industrial Engineering.
   b. The special conditions for this 5-Year BSIE/MSIE Program are as follows:
      i. The student must declare his/her intent to participate before the end of their Junior year by submitting an official application to the department graduate committee for admission into the MSIE portion of the program. Exceptions to this rule must be approved by the department faculty.
      ii. A student wishing to withdraw from the 5-Year Program without the MSIE degree must complete all the requirements for the BSIE program, including the IEN 694 in order to get his/her BSIE degree.
   c. More details can be found in the Undergraduate bulletin (p. 483).

Curriculum Requirements
Requirements for the Master of Science Degree (both thesis and non-thesis option):
1. An approved integrated program with a minimum of 30 credit hours with a 3.0 average or better on all credit hours attempted and no single grade below “C” at the University of Miami while a graduate student.
2. At least 12 course credit hours must be at the 700 level.

1 Note: All courses are 3 credit hours unless otherwise indicated

Notes:
- In addition to the above required courses, the student will have to take other graduate level elective courses to fulfill the degree
requirements. A list of approved electives is maintained by the Graduate Advisor in the Department of Industrial Engineering. Substitution of courses is allowed, but must be approved by the Graduate Advisor and the Department Chairman.

b. 500-level courses are open to advanced undergraduates and to graduate students; 600-level courses are open only to graduate students.

c. 500-level and 600-level courses are also open to qualified graduate students majoring in other disciplines.

Mission
The Department of Industrial Engineering’s mission is to provide contemporary and relevant industrial and systems engineering education and research; impart knowledge and skills necessary to design and to improve a variety of manufacturing and service processes; promote lifelong learning; and contribute to emerging societal needs.

Goals
Student Learning Outcomes
• Graduates will demonstrate an ability to apply knowledge and methodology to advanced problems in Management of Technology.
• Graduates will demonstrate an ability to write effectively about advanced Management of Technology topics.
• Graduates will have an ability to present their findings effectively about advanced Management of Technology topics.

M.S. in Occupational and Ergonomics Safety
Master of Science in Occupational Ergonomics and Safety
An interdisciplinary Master of Science degree program in Occupational Ergonomics and Safety is offered through the Department of Industrial Engineering in collaboration with the School of Medicine. These programs of study are individually structured to fit the student’s interests and career objectives.

The program will consist of a 36 hour Master's degree program in Occupational Ergonomics and Safety in the Department of Industrial Engineering. The program will include 33 hours of course work in the areas of ergonomics and safety and 3 hours on internship in an industrial or health care related facility. Research areas will include musculoskeletal injuries, occupational stress, automation and design for older workers and special populations.

M.S.I.E./M.B.A. Executive Program
Dual MSIE/MBA Weekend Executive program makes it possible to earn two separate degrees at the same time, a Master of Business Administration Degree (MBA) and a Master of Science in Industrial Engineering (MSIE).

It is a 57 credit hour program that starts every January and is completed in two years and one semester. Classes are held on Saturdays and during intersessions.

A bachelor's degree in any engineering discipline, an acceptable GRE score, and at least 3 years of work experience is required.

Ph.D. in Ergonomics and Human Factors

Policies and Important Details
1. The Ph.D. in Ergonomics and Human Factors for students with a background in engineering and/or related sciences.
2. To maintain status as a graduate student, registration in each fall and spring semester is required. Otherwise, admission lapses and permission to re-enter must be granted.
3. Once a student has completed all course and required research credit hours, he or she must enroll in “Research in Residence” status until the degree has been granted. “Research in Residence” status is considered full time enrollment. Time restrictions on obtaining degrees will be strictly enforced and can be waived only by the Dean of the Graduate School.
4. Upon completing the course requirements, passing the qualifying exams, and successfully defending the Ph.D. proposal, the student is eligible for admission to the Ph.D. candidacy.
5. Upon passing the qualifying exams, the student in consultation with his/her selected Ph.D. Dissertation committee chair will decide on the dissertation committee members. The Dissertation committee will consist of not less than four members, three from the Department's graduate faculty, one from outside the Department. The chairman has to be a member of the graduate faculty. The duties of the Dissertation Committee are:
   a. To consult with and to advise students on their research.
   b. To meet, at intervals, to review progress and expected results.
   c. To read and comment upon the draft dissertation.
   d. To meet, when the dissertation is completed, to conduct the oral examination and to satisfy itself that the dissertation is a contribution to knowledge and that it is written in lucid and correct English and submitted in approved form.
   e. The candidate is well advised to have a final acceptable typescript of the dissertation in the hands of each member of his/her committee at a time reasonably in advance of the final defense of the work.
6. There are no foreign language requirements for the Ph.D. degree.

Course work requirements depend on the student's background, and are established by the Graduate Advisor and the Department Chairman. 60 credit hours beyond the baccalaureate degree are the minimum requirement for the Ph.D. Students with a Master's degree may take the
minimum hours listed below, while students without a master’s must take the maximum hours.

¹ A written qualifying examination is to be taken by each doctoral degree candidate during the first year of graduate work. The department may specify that the student must take an oral examination as well. In those cases, normally, the student shall pass the written examination before the oral examination is conducted. Upon completion of the examination process, the Graduate Advisor notifies the Department Chairman that the student has passed or failed the examination. A student who fails the examination may be permitted to retake it, with the permission of the Graduate Advisor and the Chairman. Qualifying examinations normally will not be given during the summer months. The applicant must hold a 3.0 average on all credit hours attempted with no single grade below 'C' at the University of Miami while a graduate student.

* At least 24 must have been taken in residence at the University of Miami. A minimum of 12 dissertation credit hours must be taken.

**Mission**

The Department of Industrial Engineering’s mission is to provide contemporary and relevant industrial and systems engineering education and research; impart knowledge and skills necessary to design and to improve a variety of manufacturing and service processes; promote lifelong learning; and contribute to emerging societal needs.

**Goals**

**Student Learning Outcomes**

- Graduates will identify advanced engineering problems, search all possible methods for solution and implement the most appropriate one.
- Graduates will demonstrate an ability to write effectively about advanced engineering topics.
- Graduates will have an ability to present their findings effectively about advanced engineering topics.

**Ph.D. in Industrial Engineering**

### Policies and Important Details

1. The Department offers a Ph.D. in Industrial Engineering for students with a background in engineering.
2. To maintain status as a graduate student, registration in each fall and spring semester is required. Otherwise, admission lapses and permission to re-enter must be granted.
3. Once a student has completed all course and required research credit hours, he or she must enroll in “Research in Residence” status until the degree has been granted. “Research in Residence” status is considered full time enrollment. Student Learning Outcomes
• Graduates will identify advanced engineering problems, search all possible methods for solution and implement the most appropriate one.
• Graduates will demonstrate an ability to write effectively about advanced engineering topics.
• Graduates will have an ability to present their findings effectively about advanced engineering topics.

Mechanical and Aerospace Engineering
http://www.coe.miami.edu/dept-mac/
Dept. Code: MAE

Degree Programs
The Department of Mechanical and Aerospace Engineering offers courses and provides facilities for two programs of graduate study and research in Mechanical Engineering, leading to the degrees of:

1. Master of Science (p. 837)
2. Doctor of Philosophy (http://bulletin.miami.edu/graduate-academic-programs/engineering/mechanical-aerospace-engineering/mechanical-engineering-phd/)

The program of study must reflect the importance of underlying principles of the physical sciences and mathematical analysis to all phases of modern mechanical engineering.

Areas of Research
• Fluid Mechanics
• Biomechanics
• Solid Mechanics
• Composite Materials
• Optimization and Reliability
• Nano Mechanics
• Heat Transfer
• Hydrogen Energy
• Materials Science
• Internal Combustion Engines
• Controls and Design
• Aerodynamics and CFD
• Nano-Bio-Systems
• Fuel Cells

It is expected that each graduate student will indicate early in his/her graduate work (within the first year), the particular area in which he/she intends to concentrate his/her efforts as well as the faculty advisor for dissertation.

500 level courses are open to advanced undergraduates and to graduate students; 600 level courses are open only to graduate students.

Clean Energy Research Institute
1. The Clean Energy Research Institute in the Department of Mechanical and Aerospace Engineering acts as the focal point of energy and environment related activities in the College of Engineering.
2. Its goals are:
   • to conduct research and to generate research proposals to investigate energy and environmental problems;
   • to organize seminars, workshops and conferences using researchers within and without the University;
   • to assemble, compile, publish and disseminate information on every aspect of energy and environmental problems; and
   • to cooperate with other organs of the University, other academic institutions, government and private organizations in connection with the above listed activities.
3. The current activities of the Institute include research into hydrogen as a clean, inexhaustible synthetic fuel, environmental damage caused by fossil fuels, global warming and its remediation, instabilities in boiling systems, solar cooling and heating, hybrid solar collectors, remote sensing applied to energy related problems and solar energy, system optimization and reliability of solar and wind energy systems, and organization of national and international conferences and symposia on energy and environmental problems.

Research Laboratories
• Advanced Nano Systems Laboratory
• Advanced Research for the Exploration of Space
• Aerospace Materials Simulation Laboratory
• Center for Advanced Multi-Scale Studies
• Computational Fluid Dynamics Laboratory
• Fuel Cells Laboratory
• Internal Combustion Laboratory
• Materials Laboratory
• Measurements Laboratory
• Multi-Functional Composite Materials Laboratory
• Optimization and Reliability Laboratory
• Robotics and Intelligent Systems Engineering Laboratory
• Thermo-Fluid Mechanics Laboratory
• Tissue Biomechanics Laboratory
• Wind Tunnel Laboratory

**Masters Programs in Mechanical and Aerospace Engineering**

1. M.S. in Mechanical Engineering (p. 837)
   - a. non-thesis option
   - b. thesis option
2. B.S./M.S. in Mechanical Engineering (http://bulletin.miami.edu/undergraduate-academic-programs/engineering/mechanical-aerospace-engineering/mechanical-engineering-bs-ms/)

   The five-year BS/MS program leads to both the B.S. degree and the M.S. degree in Mechanical Engineering in five years. The program is intended for exceptional students who are admitted to the graduate program in their junior year. Students applying for this program must have a grade point average of at least 3.0 and must attain a score of 300 or more on the Graduate Record Examination (taken before the fifth year).

**Doctoral Program in Mechanical and Aerospace Engineering**

• Ph.D. in Mechanical Engineering (p. 838)

**Admission Requirements**

Students applying for acceptance to degree status must comply with the general requirements of the Graduate School. General requirements for the M.S. degree are listed under the Engineering heading of this section and in the general information of this Bulletin.

**Graduation Requirements**

General requirements for the M.S. degree are listed under the Engineering heading of this section and in the general information of this Bulletin.

**Curriculum Requirements**

1. One academic year, or equivalent, spent in full time graduate study will be the minimum time necessary for a student to fulfill the requirements for the degree of Master of Science in Mechanical Engineering.
2. The student is required to complete only graduate-level courses, 600-level or 700-level, to fulfill the course requirement.
   - a. A minimum of two 700-level courses are to be completed as part of the total expected credits of coursework required in their chosen option.
   - b. If no 700-level courses are available in the chosen area of interest of the student during their stay in the M.S. program, the requirement of 700-level course(s) can be waived with the recommendation of their faculty advisor.
   - c. Any M.S. student can take a maximum of two 600-level or 700-level courses from other Engineering Department(s) or other Departments such as Mathematics and Computer Science with the approval of his/her faculty advisor. The student is expected to state his reasons for taking the outside departmental course and get his/her faculty advisor’s approval before registering for the course(s). The only exception is that a course from Industrial Engineering Department needs to be a course that involves lectures for the entire duration of the semester instead of those that are conducted over weekends for only 4-to-6 weeks of the semester.
   - d. A maximum of only one course is allowed among 600-level or 700-level courses of the MAE Department that are designated as “Special Topics” or “Special Problems” that do not have scheduled lecture classes for the entire duration of the semester.
3. Both a 30 credit hour thesis option and a 30 credit hour non-thesis option are available.
   - a. M.S. with Thesis Option: The student is required to complete 24 credits of course work and 6 credits of thesis in their chosen area of specialization. The thesis involves research-type work completed under the supervision or guidance of a faculty advisor. At the completion of the thesis, the student is required to write a thesis and make an acceptable oral presentation of the thesis before a committee of three faculty members that includes the faculty thesis advisor as the Chair of the committee. The faculty advisor is required to be from the Department of Mechanical and Aerospace Engineering.
   - b. M.S. with Non-Thesis Option: The student is required to complete 27 credits of course work and 3 credits of an independent project in an area of his/her interest under the supervision of a faculty advisor. The faculty advisor is required to be from the Department of Mechanical and Aerospace Engineering. After completing the project, the student is required to submit a project report to the faculty advisor and also make an oral presentation of the project before two faculty members, including the faculty advisor. The student will receive a grade for the project. The independent project credits do not count toward the required minimum of two 700-level courses to be completed as part of the total expected credits of coursework required in their chosen option.
   - c. M.S. with Management Option: This is a Non-Thesis Option in which a student completes 15 credits from Mechanical and Aerospace Engineering courses and 12 credits from the general area of Management, and 3 project-based credits. The independent project credits do not count toward the required minimum of two 700-level courses to be completed as part of the total expected credits of coursework required in their chosen option. The courses in Management area can be taken either from the School of Business, if available, or from the Department of Industrial Engineering. The student will select the courses in consultation with his/her faculty advisor. The faculty advisor is required to be from the Department of Mechanical and Aerospace Engineering. An undergraduate degree in engineering is required.
4. Students can also concentrate their studies in Additive Manufacturing, providing students hands-on training in methods to design, analyze, and fabricate complex structures using state-of-art additive manufacturing printing facilities. This area of study is designed for students who want to further their career by enhancing
their analytical and practical skills, critical thinking and problem solving strategies.

a. Special areas of study include: Advanced material science and mechanics of materials, Computer Aided Design (CAD) for novel structural design and Finite Element Methods (FEM) for structural optimization and stress analysis, and Algorithm design for the additive manufacturing process.

b. Students who choose to concentrate their studies in Additive Manufacturing take the following courses, as well as their required thesis or project credits:
   - Methods of Engineering Analysis
   - Scientific and Engineering Foundation of Additive Manufacturing
   - Additive Manufacturing of Engineering Materials
   - Additive Manufacturing Lab
   - Computer Aided Design (CAD) for novel structural design and Finite Element Methods (FEM) for structural optimization and stress analysis
   - Engineering Optimization
   - Electives [for the remainder of their required credit hours]: Advanced Mechanics of Materials, Introduction to Composite Materials and Analysis, Intermediate Heat Transfer, Mechanical Vibrations, Design for Manufacturability, or Special Topics (with multidisciplinary options).

**Mission**

The mission of the graduate program is to prepare students to become knowledgeable and skilled engineers and researchers with an understanding of the ethical and other professional aspects of mechanical engineering.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate competence in the theoretical and practical knowledge of mechanical engineering.
- Students will demonstrate the ability to effectively communicate the results of their scientific research in writing and in oral presentations.
- Students will demonstrate the ability to think critically in learning and/or research.

---

**Ph.D. in Mechanical Engineering**

http://www.umcoe.miami.edu/dept-mac/

**Admission Requirements**

The program leading to the degree of Doctor of Philosophy in the Department of Mechanical and Aerospace Engineering complies in full with the regulations of the Graduate School concerning admission, residence requirements, qualifying and final examinations and the dissertation.

**Curriculum**

1. All candidates for the Ph.D. degree are expected to complete an integrated program of studies in mechanical engineering, mathematics, physics and/or chemistry in preparation for the Qualifying Examination. For students entering with a Master’s degree, a maximum of only one course is allowed among 600-level or 700-level courses of the MAE Department that are designated as “Special Topics” or “Special Problems” that do not have scheduled lecture classes for the entire duration of the semester. For students entering with a Bachelor’s degree, a maximum of only two courses is allowed among 600-level or 700-level courses of the MAE Department that are designated as “Special Topics” or “Special Problems” that do not have scheduled lecture classes for the entire duration of the semester.

2. A qualifying examination, typically offered the last week of September, is to be taken by each doctoral degree student within the first three semesters of study. In the qualifying examination, the student is expected to demonstrate their competence in certain basic courses appropriate to modern mechanical engineering to the satisfaction of the department. A Ph.D. student will be admitted to candidacy after passing the qualifying examination as well as the defense of dissertation proposal.

3. There is no foreign language requirement.

4. One or two years beyond admittance to candidacy will usually be found necessary for the completion of an acceptable dissertation, whereupon the student will be required to pass the Final Oral Defense of the Dissertation.

5. The candidate may, if he/she so desires, pursue for their dissertation an investigation in connection with any of the research projects in progress in the Mechanical and Aerospace Engineering Department or, in the case of interdisciplinary programs, in other Colleges/Schools such as the School of Marine and Atmospheric Science or the Medical School.

---

**Curriculum Requirements**

For students who joined the program in Spring 2009 or after:

**For students with a M.S. degree in Engineering:**

- Minimum 18 credits of course work + 12 credits of dissertation.
- At least 6 credits must be at the 700 level.
- Expected duration of the program: 3 years.

**For students with only a B.S. degree in Engineering:**

- Minimum 36 credits of course work + 12 credits (or more) of dissertation.
- At least 12 credits must be at the 700 level.
- Expected duration of the program is 4 years.

**For Ph.D. students with a non-engineering degree:**

- Required credits and the expected duration of the program as specified in the assistantship offer letter.

In order to register for courses and/or dissertation in each semester, students are required to select the courses and/or dissertation credits by consulting their respective dissertation (research) advisors. They must also see the Graduate Advisor of the Department (Chair of the Department) for approval and signature.

Please note that the number of credits to be taken in various semesters is stated in each student’s Ph.D. assistantship offer letter.
For Dissertation Credits

- Register as MAE 830 before passing both parts of the Qualifying Exam
- Register as MAE 840 after becoming a PhD candidate (usually after PhD proposal is passed)
- Register as MAE 850 Research in residence (after completing the required 12 credits of dissertation through MAE 830 and MAE 840).

Qualifying Exam

Ph.D. students are required to pass a 2-part Qualifying Exam.

Part 1 of the Qualifying Exam:

It consists of a written examination (no oral exam). Each student is required to select three areas, including Methods of Analysis, out of the following six areas:

- Methods of Analysis (Level of MAE 601) – compulsory for all students
- Mechanics of Solids (Undergraduate level)
- Fluid Mechanics (Undergraduate level)
- Heat Transfer (Undergraduate level)
- Materials (Undergraduate level)
- Control and dynamics (Undergraduate level)

A list of topics in each course will be given to the student at least one month before the Exam. All three areas will be covered in one exam of 6-hour duration (2 hours for each of the three areas) with a 30-minute break. It is expected that each student passes Part 1 of Qualifying Exam within the first year. If a student fails in one or more areas, a second chance may be given (within 3 months of the first exam).

Part 2 of the Qualifying Exam:

It consists of an oral exam before the student’s Dissertation Committee.

- The student presents a research proposal (in the form of a written report) to the Dissertation Committee after completing some preliminary research work including the Literature Review.
- Part 2 of the Qualifying Exam is to be taken within 2 years if the student has a Master’s degree in Engineering and 2.5 years if the student has only a B.S. degree in Engineering.

Mission

The mission of the graduate program is to prepare students to become knowledgeable and skilled engineers and researchers with an understanding of the ethical and other professional aspects of mechanical engineering.

Goals

Student Learning Outcomes

- Students will demonstrate competence in the theoretical and practical knowledge of mechanical engineering.
- Students will demonstrate the ability to communicate effectively the scientific and technical research in writing and oral presentations.
- Graduates will demonstrate the ability to conduct independent research and contribute to existing knowledge.

M.S. in Ocean Engineering

The MS in Ocean Engineering provides participants with a combination of engineering skills and strong scientific knowledge in the marine sciences, preparing them to address a variety of ocean-related engineering concerns (e.g. prepare coastal communities for a changing climate; port and harbor security; coastal observation networks; coastal infrastructure; etc.) in a rational and responsible manner.

The program is open to students who want to pursue a career in engineering or marine science and professionals who have responsibilities in engineering, marine science, business and law fields and want to further their knowledge and skills. According to the U.S. Bureau of Labor Statistics, Ocean Engineering is projected to grow 9% from 2014-2024.

The program has two tracks:

Coastal engineering
Remote sensing and maritime security

Both tracks build upon the unique world-class resources available through the University of Miami’s Center for Southeastern Tropical Advanced Remote Sensing (https://www.cstars.miami.edu/) (CSTARS) satellite receiving facility and Surge Structure Atmosphere Interaction Facility (http://sustain.rsmas.miami.edu/) (SUSTAIN) wind-wave laboratory.

Curriculum Requirements

The curriculum is divided into three groups. The first group of four core courses (12 cr) provides an introduction to the field, as well as analytical tools and theoretical background in the fundamental areas of fluid dynamics and wave propagation.

Requirement for those students entering this program without an engineering background are three terms of Calculus, Ordinary Differential Equations, Physics II, Statics and Dynamics.

The initial semester of the program is designed to introduce students to the different subjects encompassed within modern Ocean Engineering and to provide the fundamental knowledge in oceanic applications of mathematics and fluid mechanics necessary to excel in the later courses.

The student then elects one course (3 cr) from a group focusing on computational (numerical) methods and one course (3cr) from a group focusing on experimental methods. These courses give the student the additional tools needed in the profession.

Electives 1: 12

Total Credit Hours: 30

1 Electives should be chosen based on the intended track of study:  
- Track A: Coastal Engineering  
- Track B: Remote Sensing and Maritime Security

**Mission**

The mission of the MS Ocean Engineering degree is to educate students with a combination of strong applied scientific knowledge in the marine sciences and engineering. These students will possess the skills needed to address a range of marine related concerns in a rational and responsible manner.

**Goals**

Within this context, the objective of the MSOE program is to educate and train students who, upon completion of their degree, are prepared to assume positions in industry, government, academic, and non-governmental institutions that require advanced scientific training and engineering skills in the fields of Applied Remote Sensing and coastal/ocean engineering.

**Student Learning Outcomes**

- Students will demonstrate competency in applying the applied scientific and engineering knowledge required for employment in the broad field of ocean engineering in the industrial or governmental sector.
- Students will demonstrate oral and written communication skills required for employment in the broad field of ocean engineering in the industrial or governmental sector.
Ocean Engineering

About the Program
The University of Miami has a long history in Ocean Engineering. The University of Miami’s College of Engineering together with the Rosenstiel School of Marine and Atmospheric Science offered a Master of Science degree in Ocean Engineering. The program and others of its kind in the nation, were popular in the 1970s and 1980s.

In the past decade, several major incidents – the 2010 Deep Water oil spill in the Gulf of Mexico, a series of devastating hurricanes in 2003-2005 and 2017, and the Japan Tsunami have turned our collective attention to the vulnerability of the nation's coastal infrastructure. Furthermore there have been significant demands for an increased emphasis on port and harbor security since September 11, 2001. These events have led to a renewed interest in the field of Ocean Engineering, albeit with a new focus and broader scope. Our program offers an MS degree for students not interested in a research based education but rather a practical skills-based training in real world applications of engineering theory.

Ocean Engineering
Ocean Engineering concentrates on problems associated with human interaction with the ocean.

• The ocean engineer combines competence as an engineer with both a practical experience in and theoretical understanding of the ocean.
• The Ocean Engineering program, offered jointly with the Rosenstiel School of Marine and Atmospheric Science, is intended to lay the foundation of this competence, experience and understanding.
• The areas of faculty specialization in this program include coastal engineering, off-shore engineering, structures, turbulence, computer modeling of fluids, acoustics, remote sensing and maritime security.
• Tracks offered in the program include Coastal Engineering and Remote Sensing

Additional Information
For additional information on this program, including curriculum requirements, please visit: https://graduate.rsmas.miami.edu/graduate-programs/ocean-engineering/

M.S. In Ocean Engineering (p. 839)
Interdisciplinary

Interdisciplinary Degrees
M.A. in Environment, Culture, & Media (p. 842)  
M.P.S. in Environment, Culture, & Media (p. 843)  
Ph.D. in Environmental Science Policy (p. 846)

M.A. in Environment, Culture, & Media

The Abess Center’s MA in Environment, Culture, & Media enables students to tap into synergistic research networks across a range of schools and colleges at the University of Miami, including the College of Arts and Sciences, the Rosenstiel School of Marine and Atmospheric Science, the Miller School of Medicine, the School of Law, School of Education, School of Communication, School of Architecture, and the College of Engineering. This graduate program draws upon existing interdisciplinary collaborations that have been created by the Abess Center. For more information: https://abess.miami.edu/academics/masters-degrees/index.html

The Master of Arts in Environment, Culture, and Media (ECM) integrates the study of the environment with emerging screen technologies, digital culture, cultural theory, and ethics. For new scientists, the defining creative and intellectual challenge of the 21st century exists in the use and design of digital content aimed at engaging an increasingly participatory media culture. Comparable in its cultural complexity and historical significance to the invention of the book, interactive digital content has become the dominant means of contemporary communication. In today’s leading 21st century career fields, theoretical proficiency with digital and visual culture has become a necessary skill. The proliferation of screen technologies has opened new opportunities and challenges for communicating environmental information. Governmental, non-profit and private sector organizations that deal with a range of scientific issues are scrambling to develop an effective digital presence. Responding to this demand, the ECM program has been designed to address the practical and theoretical aspects of this new environmental culture, preparing students for an expanded and innovative sector of employment opportunities.

This innovative program is the first and only graduate degree of its kind intersecting environmental studies, emerging screen technologies, digital culture, cultural theory, and ethics. Surveying public perspectives of the environment across cultures, the ECM program will investigate how societies have perceived natural phenomena in differing ways, and the implications this has had on popular thought and the comprehension of scientific issues. Students in the program will benefit from the Abess Center’s affiliated faculty across UM’s schools, in disciplines such as biology, geology, marine conservation, computer science, archaeology, ecology, and communication.

Students will examine the ways in which various forms of visual media such as Internet blogging, ethnographic film, television, social media, documentary video, user generated content [YouTube], reality TV and so forth affect the reception of scientific media messages in popular culture, international politics, education, and law. The goal of the program is to advance and innovate societal engagement through understanding visual forms of scientific communication, research strategies, public outreach, and education concerning ecosystem science and issues of sustainability.

Practical aspects will vary based on personal goals, but may include: negotiating problems in representation of cultures and environments through media, digital media curation, understanding the political economy shaping the production and distribution of environmental media worldwide, designing innovative forms of science communication, research into the social practice of screen use across cultures (from western iPhone addiction to viral videos in South Korea), and analyzing the practical consequences of the media’s representation of specific scientific issues.

This unique program is aimed at a diverse range of students, offering scientific insights to those with social science or humanities backgrounds, and anthropological perspectives to those with science backgrounds. This graduate program will provide students with a foundation in the science that underlies environmental issues, and the ability to integrate media theory with practical use. Students will evaluate the histories and limitations of both analog and digital visual culture as tools of research and communication. By investigating various media forms, students will explore emerging theoretical debates around digital culture and the role of visual artifacts in shaping societal values and perceptions of the environment. Students will be exposed to ethical issues through an anthropological lens that examines and contextualizes how knowledge and culture are created, transmitted, and maintained through visual culture.

Employment opportunities in this field require an advanced degree. Students in the MA track will be required to complete a research thesis, they are not required to complete an internship, but may also pursue an internship during their studies. The program is designed to prepare graduates of the MA for a range of careers, including for example: environmental media consultant (Google), digital content curator (U.S. National Parks), climate and energy campaigner (Greenpeace), and director of green initiatives campaigns (Toyota). Graduates of the MA program will be prepared to go on to doctoral studies and other research related employment.

One of the central challenges we face as a society is an array of complex, large scale environmental problems. The ECM program will train students with diverse backgrounds in the use and conceptual design of visual and digital content for engaging an increasingly participatory media culture to address these challenges.

Curriculum Requirements

For more info : http://abess.miami.edu/cesp/academics/ecm/degree-program-requirements/

Degree Requirements for the ECM MA

Completion of the MA will take 18 months (three semesters).

Prerequisite: students admitted into the program must have earned a Bachelor’s degree with a minimum 3.0 GPA.

Core Courses and Credit Requirements

Students must complete 18 credits worth of coursework in the following core courses:
ECS 609 Contemporary Media Representations of the Environment  
ECS 610 Technology and Human Behavior  
ECS 611 Nature, the Anthropocene, and Visual Anthropology  
ECS 612 Environmental Communication, New Media & Policy  
6 credits Research Thesis (MA) or Internship Report (MPS)

The 12 remaining credits are chosen electives that align with each student’s interest.

Mission
The media play a major role in influencing public perception of environmental problems and solutions. Effective understanding of the global and local drivers of consumption and risk perception require crosscultural understanding of the interpretation of print and visual media. Complementing an understanding of the media’s influence in environmental issues is a pressing need to create effective communication strategies, and products for education, entertainment, and warning. Successfully communicating probabilistic scientific information is a particularly critical and challenging endeavor. The mission of this program is to prepare a new generation of students for the hybrid role of science-communicator, a position for which the current generation of academics is under-equipped.

Goals
The MA degree will provide excellent preparation for employment on local, regional, and international levels in areas of interactive media curation, sustainability awareness, science education, government and non-profit work, and corporate marketing strategies.

Student Learning Outcomes
• Thorough understanding of the theories, processes, and interactions of media and environmental studies, policy, and justice.

M.P.S. in Environment, Culture, & Media

The Abess Center’s MPS in Environment, Culture, & Media enables students to tap into synergistic research networks across a range of schools and colleges at the University of Miami, including the College of Arts and Sciences, the Rosenstiel School of Marine and Atmospheric Science, the Miller School of Medicine, the School of Law, School of Education, School of Communication, School of Architecture, and the College of Engineering. This graduate programs draw upon existing interdisciplinary collaborations that have been created by the Abess Center. For more information: http://abess.miami.edu/cesp/academics/ecm/

The Master of Professional Science in Environment, Culture, and Media (ECM) integrates the study of the environment with emerging screen technologies, digital culture, cultural theory, and ethics. For new scientists, the defining creative and intellectual challenge of the 21st century exists in the use and design of digital content aimed at engaging an increasingly participatory media culture. Comparable in its cultural complexity and historical significance to the invention of the book, interactive digital content has become the dominant means of contemporary communication. In today’s leading 21st century career fields, theoretical proficiency with digital and visual culture has become a necessary skill. The proliferation of screen technologies has opened new opportunities and challenges for communicating environmental information. Governmental, non-profit and private sector organizations that deal with a range of scientific issues are scrambling to develop an effective digital presence. Responding to this demand, the ECM program has been designed to address the practical and theoretical aspects of this new environmental culture, preparing students for an expanded and innovative sector of employment opportunities.

This innovative program is the first and only graduate degree of its kind intersecting environmental studies, emerging screen technology, and cultural studies. Surveying public perspectives of the environment across cultures, the ECM program will investigate how societies have perceived natural phenomena in differing ways, and the implications this has had on popular thought and the comprehension of scientific issues. Students in the program will benefit from the Abess Center’s affiliated faculty across UM’s schools, in disciplines such as biology, geology, marine conservation, computer science, archaeology, ecology, and communication.

Students will examine the ways in which various forms of visual media such as Internet blogging, ethnographic film, television, social media, documentary video, user generated content [YouTube], reality TV and so forth affect the reception of scientific media messages in popular culture, international politics, education, and law. The goal of the program is to advance and innovate societal engagement through understanding visual forms of scientific communication, research strategies, public outreach, and education concerning ecosystem science and issues of sustainability.

Practical aspects will vary based on personal goals, but may include: negotiating problems in representation of cultures and environments through media, digital media curation, understanding the political economy shaping the production and distribution of environmental media worldwide, designing innovative forms of science communication, research into the social practice of screen use across cultures (from western iPhone addiction to viral videos in South Korea), and analyzing the practical consequences of the media’s representation of specific scientific issues.

Students will be exposed to ethical issues through an anthropological lens that examines and contextualizes how knowledge and culture are created, transmitted, and maintained through visual culture.

Employment opportunities in this field require an advanced degree, and most require participatory field experience in the form of an internship. Students in the MPS track will be required to complete an internship and submit an internship report. The program is designed to prepare graduates of the MPS for a range of careers, including for example: environmental media consultant (Google), digital content curator (U.S. National Parks), climate and energy campaigner (Greenpeace), and director of green initiatives campaigns (Toyota).

One of the central challenges we face as a society is an array of complex, large scale environmental problems. The ECM program will train students...
with diverse backgrounds in the use and conceptual design of visual and digital content for engaging an increasingly participatory media culture to address these challenges.

Curriculum

For more info: http://abess.miami.edu/cesp/academics/ecm/degree-program-requirements/

Degree Requirements for the ECM MPS

Completion of the MPS/MA will take 18 months (three semesters).

Core Courses and Credit Requirements

Students must complete 18 credits worth of coursework in the following core courses:

ECS 609 Contemporary Media Representations of the Environment
ECS 610 Technology and Human Behavior
ECS 611 Nature, the Anthropocene, and Visual Anthropology
ECS 612 Environmental Communication, New Media & Policy
6 credits Research Thesis (MA) or Internship Report (MPS)

The 12 remaining credits are chosen electives that align with each student's interest.

ECS 601. Interdisciplinary Environmental Theory. 3 Credit Hours. Theoretical approaches in environmental and social science fields, including conservation biology, ecology, geography, economics, sociology, anthropology, philosophy, and interdisciplinary approaches. Themes include human ecology, historical ecology, landscape ecology, environmental law and ethics, perception of risk and uncertainty, vulnerability and adaptation, and environmental valuation.

Requisite: Plan of Ecosystem Science and Policy.

Components: DIS.
Grading: GRD.
Typically Offered: Fall.

ECS 603. Interdisciplinary Environmental Methods. 3 Credit Hours. Environmental methods related to core programmatic themes of Urban Ecology, Global Public Health, Climate and Society, Environment and the Media, Integrated Marine and Terrestrial Management, and Regulatory Regimes. The course focuses on the application of Interdisciplinary approaches and methods for addressing complex environmental problems. Students will learn to design and employ interdisciplinary approaches, using qualitative and quantitative methods and analysis, through lectures, reading assignments, discussion sessions, and assignments.

Requisite: Plan of Ecosystem Science and Policy.

Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ECS 605. Interdisciplinary Environmental Law and Policy. 3 Credit Hours. Analysis of science-based environmental decision-making and policy implementation at the federal and state levels in the United States, with comparative international perspectives, and an introduction to international institutions that fashion and carry out environmental policy. Case studies will cover authorization, appropriations and over-sight functions of Congress and state legislatures; the role of the executive, federal and state, in initiating and implementing statutes by regulation and other means; and the role of negotiation, litigation, mediation and consensus-building in resolving disputes and advancing or thwarting environmental policy.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 607. Interdisciplinary Environmental Decision Analysis. 3 Credit Hours. Approaches to studying and interpreting human behavior related to a range of decision making at the level of individual, group, and firm. Multidisciplinary theories and methods informing work in the decision sciences will be covered from fields of psychology, business, economics, political science, and anthropology.

Requisite: Plan of Ecosystem Science and Policy.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 608. Interdisciplinary ECS Seminar. 1-3 Credit Hours. Seminar centering on research and case studies illustrating cutting edge human-environment research, and including both qualitative and quantitative methods. Intensive reading and writing related to relevant topics in the field.

Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ECS 609. Contemporary Representations of the Environment. 3 Credit Hours. This course will combine media studies, environmental studies, and critical theory to give students a broad introduction to ways in which screen media are used today to represent both the natural world and also environmental issues such as climate change, animal extinction, and natural resource use. From more conventional media such as feature fiction films (e.g. Wall-e, The Day After Tomorrow, Avatar), documentary films (e.g. An Inconvenient Truth, HBO's Gasland), and television news coverage, to more niche formats like Google Earth's global mapping and in-dash monitors that depict miles-per-gallon, screen technology has long been and is increasingly used to mediate our relationship with surrounding ecosystems. Students will look at mainstream television channels (e.g. Discover, National Geographic, and the Weather Channel) alongside the digital campaigns of agencies and institutions directly aimed at conservation efforts, including the ecotourism industry, non-profit environmental groups, and governmental bodies such as the National Parks Service. In addition, this course will investigate the increasing role of interactive media in museums and science centers, as well as the rising power of social media in disseminating news regarding environmental issues.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECS 610. Technology and Human Behavior. 3 Credit Hours.
This course will explore the social aspects of technology use and cultural adaptation through cross-cultural ethnographic research on science and traditional beliefs. From the adoption of chainsaws in Amazonian forestry to the use of smart watches in Japanese cities, technological choice will be examined through psychological theories of behavior, socio-cultural perspectives, and institutional and economic forces. Reflecting the rising social, cultural, scientific, and political importance of emerging digital culture (e.g. virtual reality, smart devices, artificial intelligence), a key focus of the second half of the course will focus on philosophical notions of post-human cyborgism. Students will be introduced to recent research on the cognitive issues of social media use and consumption, including social media addiction and other neurological impacts of chronic screen use. Coursework will connect historical understandings and larger social analysis of digital media use and encourage students to participate in an ongoing exploration of their own technological choices and media practices. Students will also be exposed to multidisciplinary theories and research on risk perception and the psychology and effectiveness of environmental messaging in order to address how various media technologies impact individual and collective thinking and action.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 611. Nature, the Anthropocene, and Visual Culture. 3 Credit Hours.
Different cultural and historical contexts have conceived of humanity’s relationship to the natural world in vastly different ways, from ‘sacred and part of’ to ‘separate from’ and ‘steward over.’ A culture’s techniques of representation, use of imagery, and ways of seeing are a key part of the shaping of its worldview and cognitive framework of shared ideas and beliefs. This course is an opportunity for students to use an anthropologist’s eye to actively engage with the human production of knowledge about the natural world through visual culture. Rather than approaching visual anthropology with its usual divide between ‘anthropological content’ and ‘aesthetic composition,’ this course will foster both approaches as it examines human perceptions of the environment from prehistoric cave paintings to modern day street art. Key elements of visual anthropology will be introduced, including symbols and symbolism, reflexivity, visual data of everyday life, art analysis, ethics, society-as-text paradigm, urban visual data, and ways of conceiving systems of visual representation. Representations of Other will be analyzed through theories of the exotic, gender, race, post-colonialism, nationalism, and heritage studies.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 612. Environmental Communication, New Media, and Policy. 3 Credit Hours.
Facebook and Twitter to the rhetorical film essay documentaries that have waged ideological wars over the past twenty years, screen and new media are an increasingly powerful force in the shaping of policy, political awareness, and popular ideological views of the environment. This course will draw on critical approaches of media theory, rhetoric, and political science to study and interpret the political use of visual media. Just as FDR’s WPA used film to propagandize the agricultural importance of public works, and Hollywood has been harnessed for ecological causes from natural conservation to climate change, today screen and digital media (e.g. television commercials, podcasts, social media blasts) are the driving force of PR campaigns for both governmental bodies and private companies that greatly impact environmental understanding and policy. From information to misinformation, viral content streams constantly onto screens across the world, whose apps are also used for activism and citizen science—students will look at what strategies of circulation and rhetoric are used to wage digital campaigns to communicate and shape ecological values and policy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 614. Environment, Culture, and Media Thesis. 3-6 Credit Hours.
This course is for research culminating in a Master’s thesis. Students will enroll in 3-6 credits while researching and writing their final project for the ECM Masters of Arts.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ECS 615. Environment, Culture, and Media Internship. 3-6 Credit Hours.
This course is for hands-on experience and research culminating in a final Master’s internship report. Students will enroll in 3-6 credits while completing their internship and researching their final project for the ECM Masters of Professional Science.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ECS 612. Special Topics in ECS. 0-3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 680. Field Studies. 1-4 Credit Hours.
This course will provide participants with the opportunity for intensive field research geared toward an interdisciplinary understanding of environmental issues and conservation concerns.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ECS 725. Problems in Environmental Science and Policy. 1-6 Credit Hours.
Content and prerequisites announced when offered. Course may be repeated for credit if content varies. Requisite: Plan of Ecosystem Science and Policy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
Mission
The media play a major role in influencing public perception of environmental problems and solutions. Effective understanding of the global and local drivers of consumption and risk perception require crosscultural understanding of the interpretation of print and visual media. Complementing an understanding of the media’s influence in environmental issues is a pressing need to create effective communication strategies, and products for education, entertainment, and warning. Successfully communicating probabilistic scientific information is a particularly critical and challenging endeavor. The mission of this program is to prepare a new generation of students for the hybrid role of science-communicator, a position for which the current generation of academics is under-equipped.

Goals
The MPA degree will provide excellent preparation for employment on local, regional, and international levels in areas of interactive media curation, sustainability awareness, science education, government and non-profit work, and corporate marketing strategies.

Student Learning Outcomes
- Thorough understanding of the theories, processes, and interactions of media and environmental studies, policy, and justice.

Ph.D. in Environmental Science Policy
Dept. Code: ECSD

Through the Graduate School, the Abess Center for Ecosystem Science and Policy offers an interdisciplinary course of study leading to a Ph.D. Details regarding areas of specialization can be found at the Abess Center website (http://www.cesp.miami.edu/). Doctoral students are supported by research assistantships, which include tuition remission and a monthly stipend. All students are also required to serve satisfactorily for two terms as teaching assistants in the Abess Center undergraduate program.

Prerequisite
Students admitted to the program must have earned a bachelor’s or master’s degree and should display a strong interest in the interdisciplinary study of ecosystem science and policy.

¹ By the end of their second semester, students must submit a proposed group of additional courses, totaling at least 18 hours, related to their research interest and intended dissertation research area. This group of courses requires approval of both the student’s advisor and the Director of Graduate Studies.
² All Ph.D. students will be given comprehensive examinations following the conclusion of the core series of courses. A majority of the examination committee must be members of the graduate faculty of the University. In the event of failing to pass an examination, students are required to retake and pass the examination within one calendar year. By the end of their second year, students must present and defend a research proposal. Following successful completion of the comprehensive examination and research proposal defense, the student may apply to candidacy for the degree. Any student who fails to be admitted to candidacy for the degree within this two-year period can be dismissed from the program.
By the beginning of the second year, students should form a four-member dissertation committee; by the end of the second, write and defend a research proposal. Students may proceed with the dissertation after the dissertation committee has been appointed and the Director of Graduate Studies and the Graduate School have accepted the dissertation proposal. The dissertation must be an investigation of a substantial scholarly topic and bridge both scientific and policy aspects of the topic area. A final oral defense of the dissertation is required.

* To attain the Ph.D., students must take a minimum of 60 credits, of which at least 24 must be for coursework taken while in residence at the University of Miami. (Students entering the program with a master’s degree in a related field may be given credit for up to 24 course credits.) Students must accrue at least 12 credits worth of dissertation research.

Mission

The Environmental Science and Policy (ECS) graduate program was formulated in response to increasing societal demand for academicians and practitioners at the Ph.D. level with interdisciplinary training aimed at addressing complex problems concerning the impact of human activity and global climate change on so-called linked social-ecological systems. Our graduate program targets top caliber students whose demonstrated skills and interests bridge science and social science, and who seek the theoretical and analytical skills to address human-environment problems from academic and applied perspectives.

Goals

Student Learning Outcomes

- Students will demonstrate command of interdisciplinary environmental policy literature.
- Students will demonstrate the ability to perform sound interdisciplinary analyses of environmental problems and formulate sound interdisciplinary research approaches.
- Students will exhibit an ability to communicate effectively in oral presentations and in writing.

Marine and Atmospheric Science

The Rosenstiel School of Marine and Atmospheric Science (RSMAS) was established in 1943 as the Marine Laboratory of the University of Miami. It has grown from its modest beginnings in a boathouse to be one of the nation’s leading institutions for oceanographic and atmospheric research and education.

Originally a tropical marine biological facility, the Marine Laboratory initiated a program of studies leading to the Master of Science degree in 1949. In 1953, laboratory and classroom buildings were constructed on the School’s present campus on Virginia Key, and in the late fifties, the Marine Laboratory expanded its staff and developed its oceanographic capabilities in response to the increased interest in scientific research in the United States. It became the Institute of Marine Science in 1961. Ocean-going research vessels were acquired, and additional buildings were constructed to accommodate new wide-ranging projects. In 1969 the Institute, now a School, was named for Dorothy H. and Lewis Rosenstiel in recognition of a major contribution made through the Rosenstiel Foundation to encourage progress in the marine and atmospheric sciences at the University of Miami.

Today, RSMAS has a faculty of 70 scientists who conduct sponsored research while offering graduate studies leading to the Master of Professional Science, Master of Science, and Doctor of Philosophy degrees. The School offers graduate programs in Atmospheric Sciences, Marine Ecosystems and Society, Marine Biology and Ecology, Marine Geosciences, Meteorology and Physical Oceanography, Ocean Engineering, and Ocean Sciences. Undergraduate programs leading to a Bachelor of Science in Marine and Atmospheric Science (with majors in Marine Science, and Meteorology), and a Bachelor of Arts in Marine Affairs are also offered.

RSMAS uses multiple laboratory and high-performance computing facilities and a state-of-the-art catamaran. The Marine Technology and Life Sciences Seawater Complex (MTLSSC), opened in 2014, houses studies that rely on seawater for observing air-sea interactions in a controlled environment and for holding, spawning and rearing marine organisms. This complex is the centerpiece of an updated RSMAS campus. The catamaran, named the F. G. Walton Smith, in honor of the founder of the Rosenstiel School has been in service since 2000. The 96-foot-long catamaran is able to explore the deep ocean as well as normally inaccessible shallow environments such as reefs, mangroves and grassbeds.

Academic Programs

The Rosenstiel School is made up of seven academic programs:

- Atmospheric Sciences (p. 853)
- Marine Biology and Ecology (p. 859)
- Marine Ecosystems and Society (p. 864)
- Marine Geosciences (p. 874)
- Meteorology and Physical Oceanography (p. 878)
- Ocean Engineering (p. 841)
  - The College of Engineering and the Rosenstiel School offer a joint program that leads to a non-thesis M.S. degree in Ocean Engineering.
  - Ocean Sciences (p. 881)

General Degree Requirements

Master of Professional Science (M.P.S.) Program

The Master of Professional Science (M.P.S.) degree offers many tracks within the departments of Atmospheric Sciences, Marine Biology and Ecology, Marine Ecosystems and Society, and Ocean Sciences. The curriculum is structured to allow students to complete their degree in as little as 12 months (for select tracks), with the training and real-world experience necessary to prepare them for careers in today’s professional science job market.

Checklist

All M.P.S. students should follow the M.P.S. Checklist (https://mps.rsmas.miami.edu/our-students/form/), which indicates all the milestones that must completed in order to graduate from the Rosenstiel School.

Credit Hour Requirements

M.P.S. students must complete 30 credits of graduate coursework, with a minimum, cumulative GPA of 3.0 to graduate with the M.P.S. degree. These credits are typically distributed as follows: 24 course credits and maximum 6 internship credits. All RSMAS
students are required to complete the Research Ethics course (RSM 700) and Graduate Student Training: Preventing Sexual Harassment and Sexual Violence (GRD 600).

Academic Advisor and Committee Chair
Students will be assigned an Academic Advisor during their first semester in residence. The advisor must hold an appointment in the department representing each student’s track. This individual will offer guidance regarding University expectations, coursework, registration, program details, and graduation requirements. At the beginning of the first semester, the student and the Academic Advisor will establish the curriculum to be followed, based on the student's personal and professional goals and M.P.S. track requirements. During a student’s second semester in residence (Fall or Spring), each student will begin forming their internship committee, starting with the committee chair. This person can be different from the student’s academic advisor. The Committee Chair acts as a resource to the student regarding career guidance and the selection of an appropriate internship, as well as providing guidance during the internship and report/presentation creation. Any RSMAS graduate faculty member may act as a committee chair, but it should be someone with relevant experience in the students chosen career/internship path. Students should identify their chair no later than the end of the second semester.

Committee
All M.P.S. students must have a graduate committee of at least 3 members. This committee will include a committee chair from the RSMAS faculty (described above), an additional faculty member from UM, and one outside committee member, who is usually the direct supervisor at the student’s internship. Each member should be an expert in the student’s chosen track, and more specifically, the topic of their final report. Though deviations from these guidelines are possible, they must be approved by the M.P.S. Associate Dean and Program Director. The Appointment to Student Committee (https://mps.rsmas.miami.edu/our-students/form/) form solidifies the committee and is due 1 week after starting an internship.

Comprehensive Examination
Students must respond to and successfully pass 4 comprehensive exams during his or her time in residence. The exams will be written and will be based on core course content. Your overall evaluation for all 4 comprehensive exams is cumulative. The Program Director will collect the exams from your course instructors and submit your comprehensive exam's final report (indicating your overall result) to you via email upon completion of your 4th comprehensive exam. The Comprehensive Exam form (https://mps.rsmas.miami.edu/our-students/form/) will be used to indicate your overall result. In the event of a failure, a student may be re-examined once, or choose a different course's exam. Successful completion of 4 comprehensive exams is a requirement for graduation.

Pre-Internship
Before commencing an internship, a student must:

- Submit the Internship Commitment Form (https://mps.rsmas.miami.edu/our-students/form/) including a 1-page summary of the proposed project, highlighting the timeline, goals, expectations, and objectives of your internship.
- Complete at least 12 graduate-level credits with a minimum GPA of 3.0.
- Removal all I (Incomplete), NG (No Grades), grades lower than C-, and deficiencies such as: failure to submit items listed on student's Certificate of Admission; failure to complete online courses (RSM 700 and GRD 600); failure to successfully pass 4 comprehensive exams.

Internship
Each student will be required to complete an internship with an organization engaged in some activity associated with marine and/or atmospheric science and identify an Internship Supervisor. Such organizations can be national or international agencies, private corporations, or foreign governments with clearly defined marine and/or atmospheric-oriented programs or activities. Internships can be either paid or unpaid by the organization, or interns can complete the internship by formal participation in a University-sponsored program in some area of marine or atmospheric science. The Internship Commitment Form (https://mps.rsmas.miami.edu/our-students/form/) is due no later than 2 weeks after the start of an internship, but should ideally be completed before the internship begins. Additionally, a detailed synopsis of a proposed contribution to the hosting organization is required as a formal proposal no later than 1 month after the start date. The internship proposal will include: an introduction to the topic (i.e., a literature review), a statement of the problem, the purpose of the study, methods and materials (i.e., the proposed activities and analyses), a timeline, and plans for disseminating the information. The internship proposal template and guidelines are available on the M.P.S. website (https://mps.rsmas.miami.edu/our-students/form/).

Institutions may release an intern before the end of the proposed time commitment, and an intern may also terminate the position with an institution at any time, provided there are significant reasons not to proceed. In either case, due process will include a conference with the intern, the supervisor, and the student's academic committee members. The resolution of any problems should occur during this meeting. However, should the problems continue, or are deemed to be irreparable/irrevocable, the internship may be terminated, and the plans for the involved student will be reevaluated by the student's committee.

Internship Report
The final grade (Pass/Fail) will be based on a written report and an oral presentation. The final assessment will be based on a written report and an oral presentation. The internship report is not a summary of involvement but rather a contributory assessment of the experience, including developmental insight and a summary of any research performed. Copies of the final, approved report should be distributed as follows:

- One electronic copy to each member of student’s committee
- One copy for the representative agency, institution, or business (electronic and/or hard copy, at their request)
- One electronic copy (as a Word document file), plus the fully-signed title page (PDF or hard copy is accepted) submitted via e-mail to the M.P.S. Office

Oral Presentation
A strict requirement for the completion of the M.P.S. degree is an oral presentation. Oral presentations should be no longer than 30 minutes in length (includes time for Q&A from the committee and other attendees), should include a visual component (e.g., PowerPoint, Prezi, etc.), and may not be scheduled until
all committee members have edited at least one draft of the internship report. Additionally, the PowerPoint (or equivalent) must be reviewed and edited by your Committee Chair, and all committee members must be invited to the presentation, to attend either in person or virtually (e.g. Skype, GoToMeeting, etc.). If presenting at RSMAS, please coordinate with your committee to identify a mutually agreeable time and date, and then follow the instructions and deadlines on the M.P.S. Graduation Checklist (https://mps.rsmas.miami.edu/our-students/form/). If presenting off-campus or at a different UM campus (e.g. Coral Gables, Medical, etc.), follow the instructions above as well as those listed on the checklist. Hosting an oral presentation and submitting its visual content (e.g. PowerPoint, Prezi, PDF) to the M.P.S. Office is a requirement for graduation.

Conference Attendance
Though not mandatory, M.P.S. students are strongly encouraged to attend a scientific conference during their academic residency at RSMAS.

Graduation
Students must be registered for at least 1 graduate-level credit during the semester in which they plan to graduate. Also, all students must have at least a 3.0 cumulative GPA, all passing grades, 30 graduate level credits total on his/her graduate record in order to graduate from the M.P.S. program. All M.P.S. students, including joint J.D./M.P.S. students, must apply to graduate via CaneLink during the semester in which they intend to graduate. Application deadlines for graduation are available on the Academic Calendar (https://registrar.miami.edu/dates-and-deadlines/academic-calendars/). If you applied to graduate, and then elected to defer graduation to a future term, you must apply for graduation again. Students who applied for Spring graduation but chose to defer to Summer graduation must notify the M.P.S. Office via email.

J.D./M.P.S. students can only apply to graduate from the UM School of Law via CaneLink. J.D./M.P.S. students must email the M.P.S. Office of his or her intent to graduate and indicate the semester for graduation.

All M.P.S. students, regardless of track, must follow the deadlines and instructions listed on the M.P.S. Graduation Checklist (https://mps.rsmas.miami.edu/our-students/form/) for successful clearance by the M.P.S. Office. Students who fail to complete the requirements listed on the M.P.S. Graduation Checklist (https://mps.rsmas.miami.edu/our-students/form/) will not be cleared for graduation. Clearance delays will delay the release of a student’s degree/diploma.

Master of Science (M.S.) Program
The Master of Science (M.S.) degree is offered in Atmospheric Sciences, Marine Biology and Ecology, Marine Ecosystems and Society, Marine Geosciences, Meteorology and Physical Oceanography, and Ocean Sciences. The expected time to completion for the M.S. degree is two years of full-time study.

Checklist and Academic Plan
Each student should follow the RSMAS Checklist for Defense and Graduation, which will guide the student through all the milestones required in order to graduate from the Rosenstiel School. This begins with an Academic Plan that identifies the number of courses a student must complete to be eligible for graduation, according to program requirements. Part I should be reviewed and completed by the student and Program Director during the first semester; Part II must be completed at least one semester before expected graduation.

Credit Hour Requirements
M.S. students are required to take a minimum of 30 credit hours, which consists of 24 graduate course credits (of which 18 must be taken at UM) and 6 research credits, PGM 810 (“PGM” is the program abbreviation). All RSMAS students are required to complete the Research Ethics course (RSM 700) and Graduate Student Training: Preventing Sexual Harassment and Sexual Violence (GRD 600).

M.S. students with prior graduate coursework may transfer up to 6 course credits (with grades of “B” or above) from another accredited institution with approval from the Program Director. Students must have an approved Academic Plan on file prior to completing the Petition for Transfer of Credit (https://grad.miami.edu/policies-and-forms/forms/) form from the Graduate School. Transfer credit will only be processed once the equivalent number of credit hours have been completed at UM.

Any student whose cumulative Grade Point Average (GPA) falls below 3.0 will receive written notice from their Program with copies to the Graduate Studies Office (GSO) stating that they are on academic probation. Any graduate student who receives this warning letter must meet the full standards of academic progress set forth by the University by the end of the subsequent semester. Students who fail to meet the cumulative GPA requirement have failed to meet the satisfactory academic progress standards established by the university and are no longer eligible to receive any graduate assistantship, fellowship or tuition scholarship and are subject to dismissal from the school.

Committee
The “Thesis Committee” described in the UM Graduate Student Handbook (https://www.grad.miami.edu/policies-and-forms/) is commonly known as the student’s “Committee” at RSMAS. Specific requirements for committee formation are provided in the UM Graduate School Handbook (https://www.grad.miami.edu/policies-and-forms/); individual programs may have additional requirements.

Per the UM Graduate School Handbook:
“The thesis committee will consist of not less than three members. The committee chair must be Regular Faculty from the student’s program of concentration (this includes secondary appointments). In addition to the chair, one member must be Regular Faculty or have Graduate Faculty (http://grad.miami.edu/graduate-education/graduate-faculty/rsmas/) status in the student’s program of concentration. The third member must be an outside member. “Regular Faculty” are faculty having tenured or tenure-earning appointments of a program or department.”

Once the Committee is formed (typically by the end of the first year), the Appointment to Student’s Committee form should be completed, approved by all members and the Program Director, then submitted to GSO. The Committee should meet regularly to review the student’s progress, and prepare a short report on progress and research directions with the student. Proposed changes to the membership of a committee must be approved by the Committee Chair and must carry the endorsement of the Program Director.
Approved changes to the Committee must be submitted to GSO using the Change to Student’s Committee form.

Comprehensive Examination
A comprehensive examination may be required by the end of the first year. Whether or not to host the exam, as well as the required content and format, is at the discretion of each program. The Comprehensive Exam form must notify GSO of the outcome must be submitted by the Committee Chair and approved by the Program Director.

Thesis Proposal and Proposal Defense
The thesis proposal, containing the items listed below, must be defended and approved by the student’s Committee. The purpose of the proposal defense is to certify the readiness of the student to conduct thesis research, as well as facilitate an open discussion regarding the objectives of the thesis and the relevant experimental approach.

1. Tentative title
2. Statement of the problem and objectives
3. Methodology, including equipment and facilities required
4. Timetable

The Thesis Proposal form must be approved by the members of the student’s Committee and Program Director. The completed form must be submitted to GSO with the approved copy of the proposal.

Thesis Defense
The defense must occur by the Deadline to Defend during the semester a student intends to graduate. Students must be registered for research credits during the semester of defense.

Before scheduling the defense, a student must fulfill the following requirements:

- Have an approved Committee on file
- Pass the comprehensive exam (if applicable)
- Submit and successfully defend the thesis proposal
- Have a 3.0 GPA in all credits earned
- Remove all incomplete grades or deficiencies

The Announcement of Defense form must be submitted to GSO at least 14 days prior to the defense date. The student is responsible for reserving the room and obtaining approvals from all Committee members and Program Director. Each member must be given no less than 14 days to review material prior to approving the Announcement of Defense. Thus, the student must provide the Committee with a complete version of the thesis at least 1 month prior to the desired defense date. If a student is receiving a stipend, the Student Payroll End Date form should accompany the Announcement of Defense. The Committee Chair should notify GSO of the outcome of the defense via the form and SACS Assessment Rubric.

Thesis Submission
All graduating students must adhere to the ETD guidelines provided by the Graduate School. In addition to submitting an electronic copy of their manuscript to the UM Scholarly Repository, students must complete the following forms by the deadlines specified in the Academic Calendar:

1. Certificate of Defense Approval: This form is the student’s proof of successful defense. Students must prepare this form at least one before the defense date for committee members to electronically sign after the successful defense.
2. ETD Final Content Approval Form: This form replaces the signed hard copy of the signature page to formally document the Committee’s approval of the content in the final manuscript. Students must complete this form prior to uploading the final manuscript to the Scholarly Repository.
3. ETD Availability Agreement Form: This form informs the Graduate School of the availability option for the final manuscript in the UM Scholarly Repository.

Defense and Submission Deadlines
The defense and submission deadlines are set by the Graduate School. If any requirements are not met by the Deadline for Completion, the student is not guaranteed to graduate in that semester and graduation may be deferred to the following semester.

Graduation Clearance
It is the student’s responsibility to complete the graduation application through CaneLink before deadline specified on the Academic Calendar. Students who previously applied for graduation but did not meet the requirements outlined above must reapply to graduate in the following semester.

In order to be cleared for graduation, the student must satisfy the minimum degree requirements set by the program, and the Graduate School; fulfill all milestones noted on the RSMAS Checklist for Defense and Graduation; and complete the ETD Process by the identified deadlines. The Clearance Form must be completed by the student then returned to GSO prior to the last day of the semester.

Doctor of Philosophy (Ph.D.) Program
The Doctor of Philosophy (Ph.D.) degree is offered in Atmospheric Sciences, Marine Biology and Ecology, Marine Ecosystems and Society, Marine Geosciences, Meteorology and Physical Oceanography, and Ocean Sciences. The expected time to completion for a Ph.D. degree is five years. A student in residence in the program beyond 8 years requires approval by the Program Director and Associate Dean.
Checklist and Academic Plan
Each student should follow the RSMAS Checklist for Defense and Graduation, which will guide the student through all the milestones required in order to graduate from the Rosenstiel School. This begins with an Academic Plan that identifies the number of courses a student must complete to be eligible for graduation, according to program requirements. Part I should be reviewed and completed by the student and Program Director during the first semester; Part II must be completed at least one semester before expected graduation.

Credit Hour Requirements
Each program sets their own requirements with regard to course and research credits, PGM 830 (where “PGM” is the program abbreviation), as stated in the Program Handbook, as long as a minimum of 60 total credits are taken. It is up to each program to determine, upon admission, whether a transfer student requires more course credits to fulfill the Ph.D. requirements. Ph.D. students entering with a Master’s Degree from another university may apply up to 24 course credits from their Master’s Degree. Individual programs may require more course credits to remove deficiencies. Of the 36 remaining credits needed for the Ph.D., a minimum of 12 must be taken as research credits (PGM 830). All RSMAS students are required to complete the Research Ethics course (RSM 700) and Graduate Student Training: Preventing Sexual Harassment and Sexual Violence (GRD 600).

Ph.D. students with prior graduate coursework may transfer up to 9 course credits (with grades of ‘B’ or above) from another accredited institution with approval from the Program Director. Students must have an approved Academic Plan on file prior to completing the Petition for Transfer of Credit (https://grad.miami.edu/policies-and-forms/forms/). Transfer credit will only be processed once the equivalent number of credit hours have been completed at UM.

Any student whose cumulative Grade Point Average (GPA) falls below 3.0 will receive written notice from his/her program with copies to GSO stating that he/she is on academic probation. Any graduate student who receives this warning letter must meet the full standards of academic progress set forth by the University by the end of the subsequent semester. Students who fail to meet the cumulative GPA requirement have failed to meet the satisfactory academic progress standards established by the university and are no longer eligible to receive any graduate assistantship, fellowship or tuition scholarship and are subject to dismissal from the school.

Committee
The “Supervisory Committee” and “Dissertation Committee” described in the UM Graduate Student Handbook (https://www.grad.miami.edu/policies-and-forms/) are commonly known as the student’s “Committee” at RSMAS, and are normally the same committee. Specific requirements for committee formation are provided in the UM Graduate School Handbook (https://www.grad.miami.edu/policies-and-forms/); individual programs may have additional requirements.

Per the UM Graduate School Handbook:

“For the dissertation committee a student needs no less than four members. The committee chair must be Regular Faculty from the student’s program of concentration (this includes secondary appointments). In addition to the chair, two members must be Regular Faculty or have Graduate Faculty (http://grad.miami.edu/graduate-education/graduate-faculty/rsmas/) status in the student’s program of concentration. The fourth member must be an outside member. “Regular Faculty” are faculty having tenured or tenure-earning appointments of a program or department”.

Once the Committee is formed (typically in the second year), the Appointment to Student’s Committee form should be completed, approved by all members and the Program Director, then submitted to GSO. The Committee should meet regularly to review the student’s progress, and prepare a short report on progress and research directions with the student. Proposed changes to the membership of a committee must be approved by the Committee Chair and must carry the endorsement of the Program Director. Approved changes to the Committee must be submitted to GSO using the Change to Student’s Committee form.

Comprehensive Examination
A comprehensive examination may be required by the end of the first year. Whether or not to host the exam, as well as the required content and format, is at the discretion of each program. The Comprehensive Exam form notifying GSO of the outcome must be submitted by the Committee Chair and approved by the Program Director. In the event of a failure, a student may be re-examined once, upon the advice of the student’s advisor and/or Committee, and at the discretion of the Program Academic Committee with advice from the Comprehensive Exam Committee. If granted, the re-examination must be given before the end of the following semester.

Dissertation Proposal and Proposal Defense
The dissertation proposal, containing the items listed below, must be defended and approved by the student’s Committee. The purpose of the proposal defense is to certify the readiness of the student to conduct dissertation research, as well as facilitate an open discussion regarding the objectives of the dissertation and the relevant experimental approach.

1. Tentative title
2. Statement of the problem and objectives
3. Methodology, including equipment and facilities required
4. Timetable

The Dissertation Proposal form must be approved by the members of the student’s Committee and Program Director. The completed form must be submitted to GSO with the approved copy of the proposal.

Qualifying Examination
The written qualifying examination is normally administered around the time of the proposal defense. In addition, an oral qualifying examination may be required by the program or the student’s Committee. The Committee will prepare and administer the written examination (and oral examination, if required) within the program guidelines. The Qualifying Exam form notifying GSO of the outcome must be submitted by the Committee Chair and approved by the Program Director.

Admission to Candidacy
Before being admitted to candidacy, a student must fulfill the following requirements:

- Have an approved Committee on file
- Pass the comprehensive exam (if applicable)
Submit and successfully defend the dissertation proposal
Pass the qualifying exam
Have a 3.0 GPA in all credits earned
Remove all incomplete grades or deficiencies

The Application for Admission to Candidacy (https://grad.miami.edu/policies-and-forms/forms/) must be completed and approved by the Graduate School at least one semester prior to the expected semester of graduation. If there are any changes to the student’s Committee after this form is processed, the student must submit a Committee Composition Change Request Form (https://grad.miami.edu/policies-and-forms/forms/) in addition to the Change to Student’s Committee (https://wwwgraduate.rsmas.miami.edu/students/forms-guidelines-and-handbooks/) form.

Dissertation Defense
The defense must occur by the Deadline to Defend (http://grad.miami.edu/electronic-thesis-and-dissertation/defense-and-submission-deadlines/) during the semester a student intends to graduate. Students must be registered for research credits during the semester of defense.

The Announcement of Defense form must be submitted to GSO at least 14 days prior to the defense date. The student is responsible for reserving the room and obtaining approvals from all Committee members and Program Director. Each member must be given no less than 14 days to review material prior to approving the Announcement of Defense. Thus, the student must provide the Committee with a complete version of the thesis at least 1 month prior to the desired defense date. If a student is receiving a stipend, the Student Payroll End Date form should accompany the Announcement of Defense. The Committee Chair should notify GSO of the outcome of the defense via the Completion of Defense (https://wwwgraduate.rsmas.miami.edu/students/forms-guidelines-and-handbooks/) form and SACS Assessment Rubric.

Dissertation Submission
All graduating students must adhere to the ETD guidelines (https://wwwgrad.miami.edu/electronic-thesis-and-dissertation/) provided by the Graduate School. In addition to submitting an electronic copy of their manuscript to the UM Scholarly Repository, students must complete the following forms by the deadlines specified in the Academic Calendar (http://www.miami.edu/index.php/Registrar/calendar):

1. Certificate of Defense Approval: (https://grad.miami.edu/policies-and-forms/forms/) This form is the student’s proof of successful defense. Students must prepare this form at least one before the defense date for committee members to electronically sign after the successful defense.
2. ETD Final Content Approval Form: (https://grad.miami.edu/policies-and-forms/forms/) This form replaces the signed hard copy of the signature page to formally document the Committee’s approval of the content in the final manuscript. Students must complete this form prior to uploading the final manuscript to the Scholarly Repository.
3. ETD Availability Agreement Form: (https://grad.miami.edu/policies-and-forms/forms/) This form informs the Graduate School of the availability option for the final manuscript in the UM Scholarly Repository.

Defense and Submission Deadlines
The defense and submission deadlines (http://grad.miami.edu/electronic-thesis-and-dissertation/defense-and-submission-deadlines/) are set by the Graduate School. If any requirements are not met by the Deadline for Completion (http://grad.miami.edu/electronic-thesis-and-dissertation/defense-and-submission-deadlines/), the student is not guaranteed to graduate in that semester and graduation may be deferred to the following semester.

Graduation Clearance
It is the student’s responsibility to complete the graduation application through CaneLink (https://canelink.miami.edu/) before deadline specified on the Academic Calendar (http://www.miami.edu/index.php/Registrar/calendar/). Students who previously applied for graduation but did not meet the requirements outlined above must reapply to graduate in the following semester.

In order to be cleared for graduation, the student must satisfy the minimum degree requirements set by the program, and the Graduate School; fulfill all milestones noted on the RSMAS Checklist for Defense and Graduation; and complete the ETD Process (https://grad.miami.edu/electronic-thesis-and-dissertation/) by the identified deadlines. The Clearance Form must be completed by the student then returned to GSO prior to the last day of the semester.

Educational Training Program (Teaching Assistants)
RSMAS Ph.D. students are expected to be a Teaching Assistant (TA) for two courses while pursuing their degree. A training session and two teaching opportunities are offered as courses in educational training (RSM 771, RSM 772, RSM 773). The mandatory TA program will include training of new TAs, evaluation of their performance, and recognition of excellence. Faculty nominations for the RSMAS TA Excellence Awards are solicited each semester, and will be given at the end of the academic year.

The goal of the TA program goal is to make the experience as valuable as possible for the TA, the faculty, and the students taking our courses. RSMAS TAs must comply with the following requirements:

• Register for and complete the RSMAS TA training workshop, RSM 771
• Review the TA Resources posted on Blackboard
• Register for the Educational Training courses: RSM 772 and RSM 773
• Refer to the guidelines and course documentation provided with the TA appointment letters
Master of Professional Science (M.P.S.) Programs
The M.P.S. degree prepares students for science careers in industry, government, and non-profit organizations, where employment demands are growing. M.P.S. degrees were developed and implemented nationally in response to employer demands for well-rounded, highly trained employees with a breadth of knowledge and practical skills to address emerging environmental issues and improve the management of natural and cultural resources. The curriculum is structured to allow students to complete their degree in as little as 12 months (for select tracks), with the training and real-world experience necessary to prepare them for careers in today’s professional science job market.

- M.P.S. in Broadcast Meteorology (BME) (p. 854)
- M.P.S. in Climate and Society (CS) (p. 855)
- M.P.S. in Weather Forecasting (WFC) (p. 856)
- M.P.S. in Marine Mammal Science (MMS) (p. 860)
- M.P.S. in Tropical Marine Ecosystem Management (TME) (p. 861)
- M.P.S. in Aquaculture (AQU) (p. 866)
- M.P.S. in Coastal Zone Management (CZM) (p. 867)
- M.P.S. in Exploration Science (ESC) (p. 868)
- M.P.S. in Fisheries Management and Conservation (FMC) (p. 869)
- M.P.S. in Marine Conservation (MCO) (p. 870)

- Ph.D. in Ocean Sciences (OCE) (p. 888)

Atmospheric Sciences

https://www.graduate.rsmas.miami.edu/graduate-programs/atmospheric-sciences/index.html

Dept. Code: ATM

The Atmospheric Sciences (ATM) program is designed to prepare students with the tools, training, and education necessary to tackle critical research problems in the atmospheric sciences today. Our faculty are experts in a wide range of research areas, including tropical meteorology, climate dynamics, cloud and aerosol processes, and atmospheric chemistry. Their expertise and guidance and our world-class facilities prepare our students for successful careers in the atmospheric sciences and related fields.

Degree Programs

- Master of Professional Science (M.P.S.) (p. 854)
  - Requires 30 credit hours, including 24 course credit hours and 6 internship credit hours.
- Master of Science (M.S.) (p. 854)
  - Requires 30 credit hours, including 24 course credit hours and 6 research credit hours.
- Doctor of Philosophy (Ph.D.) (p. 854)
  - Requires 60 credit hours, including a minimum of 25 course credit hours and a minimum of 12 research credit hours.

Research Areas

**Atmospheric Chemistry**

The atmospheric chemistry group in ATM is interested in understanding the atmospheric emissions, transport, and fate of gases and particles that influence air quality and climate. These interests are explored through laboratory studies and fieldwork. Using state-of-the-art instrumentation and techniques, ATM scientists take measurements in tropical and high-latitude oceans, in forests and urban centers, and at the critical air-sea and troposphere-stratosphere interfaces. These measurements are used in models to predict the impact of atmospheric chemistry on human health and climate.

**Climate Dynamics & Prediction**

Climate research in ATM includes numerical climate modeling at both regional and global scales, and analysis of satellite data, global data products, and observations. There is a large focus on the diagnosis and modeling of climate variability on interannual, decadal, and millennial timescales, the prediction and modeling of El Niño, and the observation and modeling of anthropogenic climate change.

**Cloud & Aerosol Processes**

Scientists in ATM study aerosols, clouds, their interactions with each other, with radiation, and with the larger-scale environment. We strive for a better understanding of the cloudy boundary layer structure, its processes, and the effects of atmospheric transport of aerosols such as dust, smoke, and air pollutants, upon both air quality and climate. A focus on marine aerosols and south Florida’s Cloud Aerosol Rain Observatory (CARob) takes advantage of Miami’s unique location on the edge of the Atlantic basin.

**Tropical Meteorology & Hurricanes**

One broad area of research in ATM is aimed at improving our understanding and prediction of tropical weather and hurricanes. Through a combination of field observations, modeling, and theory, faculty and students study the dynamics of hurricanes: their formation, rapid intensification, and how their behavior might change in a warming climate. Other research foci include the advancement of computer model forecasts of tropical cyclones, data assimilation schemes, and observation strategies. Other
weather phenomena in the tropics are also investigated in ATM and through the Rosenstiel School, such as monsoons, the intertropical convergence zone, and the Madden-Julian Oscillation.

Other Research Areas
Researchers in ATM also perform research in a number of other areas including:

- Geophysical Fluid Dynamics
- Tornado Dynamics
- Atmospheric Boundary Layer
- Atmospheric Convection
- Model Parameterizations

Master of Professional Science (M.P.S.) Programs
There are three ATM tracks for the M.P.S. degree:

- M.P.S. in Broadcast Meteorology (BME) (p. 854)
- M.P.S. in Weather Forecasting (WFC) (p. 856)
- M.P.S. in Weather, Climate, and Society (WCS) (p. 855)

Master of Science (M.S.) Program
- M.S. in Atmospheric Sciences (ATM) (p. 857)

Doctor of Philosophy (Ph.D.) Program
- Ph.D. in Atmospheric Sciences (ATM) (p. 858)

**Mission**
The M.P.S. in Broadcast Meteorology prepares students for both on-camera and behind-the-scenes careers in broadcast meteorology, as well
as the opportunity to develop the knowledge and training necessary to enter the broader field of science journalism.

Goals

Student Learning Outcomes

- Students will learn to research, analyze, predict, and then graphically and verbally communicate local and national weather forecasts "on camera".
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write a final report and give an oral presentation based on original work/research in their chosen field completed during their internship.

Mission

This M.P.S. in Climate and Society (https://mps.rsmas.miami.edu/degree-tracks/climate-and-society/) emphasizes the relationship between
weather, climate and societal impacts. The financial consequences resulting from natural and anthropogenic climate change, rising sea levels, and extreme weather events pose important scientific and socioeconomic challenges, both in terms of urban planning and managing the financial risks associated with these changes. Employers in government, insurance, energy, and a number of other weather-impacted industries are seeking professionals who are fluent in both the fundamentals of business and the physical sciences.

**Student Learning Outcomes**

- Students will be able to understand and assess financial consequences resulting from natural and anthropogenic climate change, rising sea levels, and extreme weather events.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

**Mission**

This M.P.S. in Weather Forecasting (https://mps.rsmas.miami.edu/degree-tracks/weather-forecasting/) is designed for students who have an undergraduate degree in meteorology and seek graduate level training and experience in applied weather forecasting. The curriculum includes graduate-level course work in the analysis and preparation of weather forecasts, the effective use of numerical models, satellite, Doppler radar, and upper air data, and the application of this information to support a variety of specialized end-users, including agriculture, utilities, insurance, transportation, construction and other weather-sensitive industries.
Goals

Students will develop skills in different areas of service offered by the National Weather Service, including Severe Weather, Marine and Aviation Forecasts, Hydrology, and Tropical Cyclone Forecasting. Students will receive hands-on instruction using Weather Event Simulators developed for the National Weather Service to train their forecasters. This track also fosters skills in writing and public communication in the context of professional weather forecasting.

Student Learning Outcomes

- Weather Forecasting students will be able to analyze and prepare weather forecasts using a variety of data models and apply this information to a variety of end-users.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

M.S. in Atmospheric Sciences

Program Requirements

The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in this Handbook or by the Program Director.

All RSMAS courses are listed on the RSMAS website. All courses taken by students should be approved by their advisors. Students are recommended to consult with their advisors and the ATM Program Director regarding their choices of courses. Deviations from the requirements must be approved by the advisor and the ATM Program Director.

ATM students have a common set of required core courses. Elective courses are chosen from offerings in ATM as well as other units of RSMAS and UM.

Curriculum Requirements

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATM 701</td>
<td>Seminar in Atmospheric Sciences</td>
<td>30</td>
</tr>
</tbody>
</table>

1. Minimum of 24 course credits and 6 thesis credits.
2. The remaining course credits can be obtained by taking other graduate courses offered by ATM, RSMAS, or UM.
3. Material from the required core courses will appear on the Comprehensive Examination (along with material from other courses from the first year).
4. Grade of Master's Pass, Pass or High Pass needed to fulfill requirement.
5. For full-time students, the Comprehensive Examination should be taken near the end of their first year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Exam Committee which comprises the ATM Graduate Program Director and the instructors (or assignees) of the first year courses taken by the students.
6. The purpose of this examination is to evaluate students' understanding of materials in the courses completed up to the time of the examination and their capability of integrating these materials, and to determine whether the students are permitted to proceed in the program.
7. The Comprehensive Examination will consist of an oral part and a written part. The written part, which lasts no longer than 8 hours, consists of closed-book questions in the courses taken in the first year by each individual student. Each student must choose to answer four questions from those submitted, with a minimum of 1 question per course (up to the maximum of 4 questions). The oral part is administered by the ATM Graduate Program Director and one or more of the course instructors (or assignees), and may include questions from all the courses taken by the student. The oral exam lasts no longer than 2 hours for each student. The GPA comprises 20% of the Comprehensive Exam grade, and the written and oral parts of the Comprehensive Exams comprise 40% each.
8. A student's performance in this examination, together with his/her cumulative grade point average, will determine whether the grade of High Pass, Pass, Master's Pass or Fail is given by the Comprehensive Exam Committee. The examining board consists of faculty whose questions are answered by the student and any other RSMAS faculty who wish to participate.

Mission

The Department of Atmospheric Sciences (ATM), started in 2016, seeks to advance knowledge and understanding of the physical, chemical, and dynamical processes that determine our weather, our climate, and their interactions with the oceans and the continents. We train graduate students and young scientists to be leaders in the atmospheric sciences and related fields. Through our distinct strengths in climate dynamics, tropical meteorology, and cloud and aerosol processes, we strive to achieve excellence in research and education that will better inform the public and policy makers on how to prepare for hazards and changes in the weather-climate system.
Goals

Student Learning Outcomes

- Students will demonstrate a broad understanding of atmospheric science and how scientific research in their topical areas relates to societal issues.
- Students will demonstrate the ability to conduct high-quality atmospheric science research as evidenced by their thesis research.
- Students will demonstrate oral and written communication skills commensurate with employment as a research scientist or equivalent professional level scientist.

Ph.D. in Atmospheric Sciences

Program Requirements

The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in this Handbook or by the Program Director.

All RSMAS courses are listed on the RSMAS website. All courses taken by students should be approved by their advisors. All courses are approved by the ATM Program Director regarding their choices of courses. Deviations from the requirements must be approved by the advisor and the ATM Program Director.

ATM students have a common set of required core courses. Elective courses are chosen from offerings in ATM as well as other units of RSMAS and UM.

3. Material from the required core courses will appear on the Comprehensive Examination (along with material from other courses from the first year).
4. Grade of Pass or High Pass needed to fulfill requirement.
5. For full-time students, the Comprehensive Examination should be taken near the end of their first year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee which comprises the ATM Graduate Program Director and the instructors (or assignees) of the first year courses taken by the students.
6. The purpose of this examination is to evaluate students' understanding of materials in the courses completed up to the time of the examination and their capability of integrating these materials, and to determine whether the students are permitted to proceed in the program.
7. The Comprehensive Examination will consist of an oral part and a written part. The written part, which lasts no longer than 8 hours, consists of closed-book questions in the courses taken in the first year by each individual student. Each student must choose to answer four questions from those submitted, with a minimum of 1 question per course (up to the maximum of 4 questions). The oral part is administered by the ATM Graduate Program Director and one or more of the course instructors (or assignees), and may include questions from all the courses taken by the student. The oral exam lasts no longer than 2 hours for each student. The GPA comprises 20% of the Comprehensive Exam grade, and the written and oral parts of the Comprehensive Exams comprise 40% each.
8. A student's performance in this examination, together with his/her cumulative grade point average, will determine whether the grade of High Pass, Pass, Master's Pass or Fail is given by the Comprehensive Exam Committee. The examining board consists of faculty whose questions are answered by the student and any other RSMAS faculty who wish to participate.
9. High Pass: For students with no identifiable relevant weaknesses.
10. Pass: Students and advisors will receive feedback from the Comprehensive Exam committee on the strengths and weaknesses of the student, and possible recommendations of how to address those. This information can be used to help plan the next steps in the student's academic career.
11. Master's Pass: Students with this result will be required to defend a Master's thesis before considering whether to pursue a Ph.D. Students and advisors will receive feedback from the Comprehensive Exam committee on the strengths and weaknesses of the student, and possible recommendations of how to address those.
12. Fail: Students with this result will have an opportunity to re-take the exam once.

goals: achieve excellence in research and education that will better inform the tropical meteorology, and cloud and aerosol processes, we strive to and related fields. Through our distinct strengths in climate dynamics, students and young scientists to be leaders in the atmospheric sciences and interactions with the oceans and the continents. We train graduate and dynamical processes that determine our weather, our climate, and to advance knowledge and understanding of the physical, chemical, and marine oceanography.

mission: The Department of Atmospheric Sciences (ATM), started in 2016, seeks to advance knowledge and understanding of the physical, chemical, and dynamical processes that determine our weather, our climate, and their interactions with the oceans and the continents. We train graduate students and young scientists to be leaders in the atmospheric sciences and related fields. Through our distinct strengths in climate dynamics, tropical meteorology, and cloud and aerosol processes, we strive to achieve excellence in research and education that will better inform the public and policy makers on how to prepare for hazards and changes in the weather-climate system.

goals: To train graduate students and young scientists to be leaders in the atmospheric sciences and related fields.

student learning outcomes

- Students will demonstrate advanced knowledge of atmospheric science and how scientific research in their topical areas relates to societal issues.
- Students will demonstrate the ability to conduct high-quality research in atmospheric sciences as evidenced by their dissertation research.
- Students will demonstrate oral and written communication skills commensurate with employment as a research scientist or equivalent professional level scientist.

marine biology and ecology

https://www.graduate.rsmas.miami.edu/graduate-programs/marine-biology-and-ecology/index.html

Dept. Code: MBE

The Marine Biology and Ecology (MBE) academic program focuses on a wide range of field, laboratory, and theoretical coursework in a range of research areas, such as physiology, genetics, evolution, diseases, molecular biology, coral reef ecology, tropical marine ecosystem conservation, fish biology, ecology, conservation and management, and biological oceanography.

MBE faculty, students, and their many international collaborators participate in multi-institutional, multi-disciplinary research programs. The UM Rosenstiel School hosts many research centers and groups, such as the experimental hatchery, the Rescue-a-Reef citizen science initiative, and the world-renowned NIH/University of Miami National Resource for Aplysia.

Graduate students can choose from a diversity of research areas and coursework taught by internationally recognized scientists studying animal behavior and physiology, coastal ecosystem ecology, coral reef biology and ecology, fisheries biology and management for sustainability, genomics, mangrove and marshland ecology, marine life population dynamics, microbiology, marine toxins, and marine organism diseases, zoogeography and invertebrate systematics, and zooplankton and phytoplankton ecology.

degree programs

- Master of Professional Science (M.P.S.) (p. 860)
  - Requires 30 credit hours, including 24 course credit hours and 6 internship credit hours.
- Master of Science (M.S.) (p. 860)
  - Requires 30 credit hours, including 24 course credit hours and 6 research credit hours.
- Doctor of Philosophy (Ph.D.) (p. 860)
  - Requires 60 credit hours, including a minimum of 24 course credit hours and a minimum of 12 research credit hours.

research areas

Coral Reef and Coastal Ecology

Employs ecological, physiological and molecular approaches to understand, conserve, manage, and restore coral reefs, seagrasses, mangroves and their associated biota.
Marine Organismal and Biomedical Science
Focuses on how marine organisms respond to their environment on physiological and evolutionary time scales. This research integrates whole animal and cellular studies of physiology, biochemistry, neurobiology, genomics, molecular biology, aging, pathology and toxicology to understand factors controlling these responses and to develop these systems as models for human health.

Biological Oceanography
Focuses on adaptations, ecological interactions, food webs, and biogeochemical cycles of the ocean.

Fisheries Science
Studies the direct and indirect impacts of living marine resource exploitation on marine populations, communities and habitats and investigates solutions to the problems of unsustainable, habitat-damaging and/or inefficient fishing, including the minimization of bycatch and food web disruption.

Master of Professional Science (M.P.S.) Programs
There are two MBE tracks for the M.P.S degree:

• M.P.S. in Marine Mammal Science (MMS) (p. 860)
• M.P.S. in Tropical Marine Ecosystem Management (TME) (p. 861)

Master of Science (M.S.) Program
• M.S. in Marine Biology and Ecology (MBE) (p. 863)

Doctor of Philosophy (Ph.D.) Program
• Ph.D. in Marine Biology and Ecology (MBE) (p. 863)

M.P.S. in Marine Mammal Science
Marine Mammal Science (MMS (https://mps.rsmas.miami.edu/degree-tracks/marine-mammal-science/))

Students in the Marine Mammal Science (https://mps.rsmas.miami.edu/degree-tracks/marine-mammal-science/) (MMS) track of the Master of Professional Science (MPS) program will prepare for employment in marine mammal management (including associated ecosystems), population assessments, acoustics, and care. Please see our track website (http://mps.rsmas.miami.edu/degree-program/marine-mammal-science/) for more information about this program.

Mission

Students in this program will prepare for employment in marine mammal management (including associated ecosystems), population assessments, acoustics, and care. Coursework will integrate topics such as marine mammal medicine and pathology, medical diagnostics and laboratory analysis, population assessment and management, state and federal regulations, applied ocean acoustics, research, education, and applied behavior analysis. Students will have the opportunity to interact with medical, training, and research experts in our community, as well as conduct an internship at one of many marine mammal rehab, managed care, or research facilities. As part of the practical training incorporated into the Marine Mammal Science curriculum, most students will participate in mark-recapture surveys, public education, wild health assessments, behavior analysis and modification studies, clinical care and diagnostics, necropsies, and regional and national conferences.

Goals

Student Learning Outcomes

- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

M.P.S. in Tropical Marine Ecosystem Management

Tropical Marine Ecosystem Management (TME (https://mps.rsmas.miami.edu/degree-tracks/tropical-marine-ecosystem-management/))

The M.P.S. in Tropical Marine Ecosystem Management (TME), a track within the Department of Marine Biology and Ecology (https://marine-biology-ecology.rsmas.miami.edu/) at the Rosenstiel School of Marine and Atmospheric Science (RSMAS), provides students with advanced training in the theoretical aspects of tropical marine ecology, as well as the practical aspects needed to begin a career in this field. Please refer to the M.P.S. website (https://mps.rsmas.miami.edu/degree-tracks/tropical-marine-ecosystem-management/) for more information about the TME track.

Elective Options

Students may take any elective on the RSMAS campus with the consent of their faculty advisor. Below are a few examples of courses past students in this program used as electives.
### Mission

The Master of Professional Science Degree in Tropical Marine Ecosystem Management (https://mps.rsmas.miami.edu/degree-tracks/tropical-marine-ecosystem-management/) provides students with advanced training in the theoretical aspects of tropical marine ecology, as well as the practical aspects needed to begin a career in this field. Theory focuses on nearshore, benthic ecosystems common to tropical and subtropical regions worldwide (coral reefs, seagrasses, and mangroves) and emphasizes threats facing these ecosystems. Practical aspects of the course include field methods and techniques, taxonomy and identification of common vertebrates, invertebrates, algae and marine plants, GIS and remote sensing of shallow water marine environments, scientific diving (through the American Academy of Underwater Sciences), and small boat handling (through the Department of the Interior’s Motorboat Operator Certification Course). This degree is excellent preparation for technical positions in marine conservation,
management, and marine ecosystem science at one of a number of state and federal agencies, institutions, and NGOs.

**Student Learning Outcomes**
- Students will be able to effectively identify, understand, assess, and manage various tropical marine ecosystems.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

**Mission**

The mission of the Marine Biology and Ecology (MBE) MS program is to train the next generation of scientists in the fundamental skills, knowledge, and practice of biology of the oceanic environment. Through coursework and independent research, we strive to prepare our students for positions in academia, government, or industry in jobs that leverage their skills in critical thinking, current technical knowledge such as statistical analysis and modeling, and understanding of the global marine environment. Our program commits to inspire graduates to continued scholarship, service, and innovation in an environment that is inclusive and diverse.

**Goals**
- The goal is for MS students to demonstrate mastery of the fundamental skills, knowledge, and practice of biology of the oceanic environment, and commitment to scholarship, service, and innovation in an environment that is inclusive and diverse.

**Student Learning Outcomes**
- Students will demonstrate a broad understanding of marine and atmospheric science and an awareness of how scientific research in their topical areas bears on current human and societal issues.
- Students will be able to critically evaluate scientific literature, review previous knowledge on a topic, formulate testable hypotheses, and skillfully use available data and tools to advance knowledge in a topical area. They will be able to conduct high-quality research as evidenced by their thesis research.
- Students will demonstrate advanced oral and written communication skills, and be able to effectively communicate scientific information to a peer audience.

1. Minimum of 24 course credits and 6 thesis credits.
2. No core courses are required. Students choose courses with the advice of their committee.
3. Attendance to the MBE seminars is required every semester.
4. All MBE students must give a talk in the series annually after the first year.
5. In the second year, the qualifying examination is required of all Ph.D. students that focuses on the subject matter needed to complete the research proposed for the dissertation. The qualifying exam is 4 - 5 partial days (4 hours per day) on questions written by their committee. It is the advisor’s responsibility to provide the test and to have the student’s committee grade it in a timely manner. The scheduling of the exam sessions is the responsibility of the student’s advisor, but in all cases the written portion of the examination shall be completed within one week.

- An additional oral qualifying examination may be required by the student’s committee, but may not serve as a substitute for the written examination, which is a Graduate School requirement.
- The decision of passing or failing the qualifying examination rests with the dissertation committee. The qualifying examination (written and, if required, oral) must be successfully completed, as documented by the dissertation committee, before the student can be admitted to candidacy.
- In the event of a failure, a student may be re-examined once upon the recommendation of the student’s committee in consultation with the academic committee. If permitted, the reexamination must be given before the end of the following semester.
- Students entering the MBE Ph.D. program with a Master’s degree begin to give seminars in their first year.
Mission

The mission of the Marine Biology and Ecology (MBE) PhD program is to train the next generation of scientists in the fundamental skills, knowledge, and practice of biology of the oceanic environment. Through coursework and independent research, we strive to prepare our students for positions in academia, government, or industry in jobs that leverage their skills in critical thinking, current technical knowledge such as statistical analysis and modeling, and understanding of the global marine environment. Our program commits to inspire graduates to continued scholarship, service, and innovation in an environment that is inclusive and diverse.

Goals

The goal is for PhD students to demonstrate mastery of the fundamental skills, knowledge, and practice of biology of the oceanic environment, and commitment to scholarship, service, and innovation in an environment that is inclusive and diverse.

Student Learning Outcomes

- Students will demonstrate a broad understanding of marine and atmospheric science and an awareness of how scientific research in their topical areas bears on current human and societal issues.
- Students will be able to critically evaluate scientific literature, review previous knowledge on a topic, formulate testable hypotheses, and skillfully use available data and tools to advance knowledge in a topical area. They will be able to conduct high-quality, doctoral research as evidenced by their dissertation research.
- Students will demonstrate advanced oral and written communication skills, and be able to effectively communicate scientific information to a peer audience.

Marine Ecosystems and Society

https://www.graduate.rsmas.miami.edu/graduate-programs/marine-ecosystems-and-society/index.html

Dept. Code: MES

Students enrolled in the Marine Ecosystems and Society (MES) program work at the intersection of science and society, committed to assessing, managing, and conserving marine resources through innovation and research. Although course selections are tailored to match individual research and career objectives, our graduates acquire knowledge and expertise critical to ensuring the sustainability of natural resources.

MES faculty expertise spans quantitative and qualitative disciplines that integrate the biological, ecological, economic, and social dimensions of marine resources and how they are shaped by policy and regulatory frameworks. The essence of the MES program lies in the diversity of our faculty and curriculum, fostering the cross- and interdisciplinary collaborations necessary to solve some of the world's most challenging ocean conservation issues. The goal of our Ph.D. and M.S. program is to prepare students as future leaders in the fields of marine fisheries science, ecosystem modeling, aquaculture, conservation, ecosystem science, coastal geography, socioeconomics, cultural and natural resource management, climate change, environmental law, and marine policy.

Degree Programs

- Master of Professional Science (M.P.S.)
  - Requires 30 credit hours, including 24 course credit hours and 6 internship credit hours.
- Master of Science (M.S.) (p. 864)
  - Requires 30 credit hours, including 24 course credit hours and 6 research credit hours.
- Doctor of Philosophy (Ph.D.)
  - Requires 60 credit hours, including a minimum of 27 course credit hours and a minimum of 12 research credit hours.

Program Concentrations

- Aquaculture and Fisheries Science
- Coastal Zone Management
- Ecosystem Modeling and Sustainability
- Exploration Science
- Fisheries Management Science
- Marine Mammal Science
- Marine Population Dynamics
- Marine Resource Economics
- Ocean Law and Policy
- Shark Ecology and Conservation
- Underwater Archaeology

Master of Professional Science (M.P.S.) Programs

There are eight MES tracks for the M.P.S. degree:

- B.A./M.P.S. in Marine Ecosystems and Society (MES) (p. 865)
- J.D./M.P.S. in Marine Ecosystems and Society (MES) (p. 865)
  - The School of Law and the Rosenstiel School offer a joint degree program (https://www.law.miami.edu/academics/jd-mps-marine-ecosystems-and-society/) in law and marine ecosystems and society. Upon completion of this program, a student earns a Juris Doctor degree from the School of Law and M.P.S. degree in Marine Ecosystems and Society from RSMAS.
- M.P.S. in Aquaculture (AQU) (p. 866)
- M.P.S. in Coastal Zone Management (CZM) (p. 867)
- M.P.S. in Exploration Science (ESC) (p. 868)
- M.P.S. in Fisheries Management and Conservation (FMC) (p. 869)
- M.P.S. in Marine Conservation (MCO) (p. 870)
the field of archaeology and the broader general field of marine sciences. Coursework integrates topics such as site mapping and documentation, interpretation of shipwrecks and submerged sites, best management practices, marine protected areas, and marine survey technology. Underwater Archaeology (UARCH) students receive training as AAUS Science Divers during their first semester in the MPS Program. Students will have opportunities to work side-by-side with professional archaeologists through internships and field projects with private, public, or non-governmental agencies, both nationally and internationally, and conduct relevant fieldwork. UARCH applicants and students should be aware of and follow the guidelines (https://mps.rsmas.miami.edu/assets/pdf/dr-hanselmanns-underwater-archeology-track-guide.pdf) outlined by UARCH faculty Track Leader, Dr. Frederick Hanselmann. (https://people.miami.edu/profile/fhanselmann@rsmas.miami.edu)

Admissions
Students who apply for the joint J.D./M.P.S. program must apply to both the School of Law and to RSMAS, Department of Marine Ecosystems and Society. Prospective students must achieve a qualifying score on the Law School Admissions Test (LSAT) and on the General Graduate Record Examination (GRE) for admission to the respective schools. A minimum, combined score of 297 (Verbal + Quantitative only) is required to be considered for MPS. An applicant must notify both schools that he or she is applying for the joint J.D./M.P.S. program and, in order to remain in the joint program, must meet the minimum standards of both schools.

Credits
A student may complete requirements for both degrees within seven regular semesters or, subject to course availability, in an intensive program of six regular semesters and two full summers. The joint degree program saves a student 12 credits over earning the degrees separately. An individual would essentially complete 82 credits (rather than the normal 88) in law courses and 24 credits (rather than the normal 30) in marine and atmospheric science courses for a total of 106 credits in order to receive the J.D. and the M.P.S. degrees. A maximum of 6 credits from the law school must be petitioned and approved for transfer to the student’s graduate record in order to meet the 30-credit minimum for a master’s degree. Prior to submitting a formal petition to the Graduate School, a student’s academic advisor from the law school and the MPS Director/Associate Director must approve the credits requested for transfer.

Curriculum
The student’s work in the joint degree program, whether connected with a course, seminar or individual research project at the School of Law or the Rosenstiel School, must result in a substantial research project of publishable quality in marine law or policy or related scientific issues. Students may use their required upper-class research paper at the School of Law to fulfill this requirement. JD/MPS students should follow the MPS Checklist (https://mps.rsmas.miami.edu/our-students/form/), which outlines requirements for all JD/MPS students regardless of track.

Requirements: Juris Doctor (J.D.)
Students must complete at least 12 credits from among the following courses or seminars:

Requirements: RSMAS Courses are identified and organized by each MPS Track (https://mps.rsmas.miami.edu/about/program-requirements/)

- M.P.S. in Underwater Archaeology (UA) (p. 871)

Master of Science (M.S.) Program
- M.S. in Marine Ecosystems and Society (MES) (p. 872)

Doctor of Philosophy (Ph.D.) Program
- Ph.D. in Marine Ecosystems and Society (MES) (p. 873)

B.A./M.P.S. in Marine Ecosystems and Society

B.A. / M.P.S.
The Department of Marine Ecosystems and Society (https://marine-ecosystems.rsmas.miami.edu/) (MES), in cooperation with the Undergraduate Marine and Atmospheric Science Program (https://undergraduate.rsmas.miami.edu/), also offers a five-year B.A./M.P.S (https://undergraduate.rsmas.miami.edu/academics/majors/marine-affairs/). Program in Marine Affairs. This program enables qualified students to earn a B.A. in Marine Affairs in four years with the opportunity to earn a Master of Professional Science (https://mps.rsmas.miami.edu/) (M.P.S), with only one additional year. Conditional acceptance to the M.P.S program is based on the student’s GPA at the end of their sophomore year. Students must then take GRE exams and apply for acceptance to the graduate program at Rosenstiel during their junior year.

J.D./M.P.S. in Marine Ecosystems and Society

The University of Miami School of Law and the Rosenstiel School of Marine and Atmospheric Science (RSMAS) offer a joint degree program in law and Marine Ecosystems and Society (MES). Upon completion of this program, a student earns the Juris Doctor degree from the School of Law and a Master of Professional Science in Marine Ecosystems and Society (https://www.law.miami.edu/academics/jd-mps-marine-ecosystems-and-society/) (https://www.law.miami.edu/academics/jd-mps-marine-ecosystems-and-society/) from RSMAS, ranked as one of the top five geoscience institutions in the United States.

The M.P.S. degree allows students to focus their coursework in one of four areas:

1. Aquaculture Track: Focuses on the environmental, technological, social, economic, legal and political aspects of sustainable aquaculture.
2. Coastal Zone Management Track: Gain exposure to the legal and governance frameworks associated with the management of near-shore waters. These areas present unique challenges to resource managers in the shipping, tourism, development, fisheries, aquaculture and oil industry.
3. Marine Conservation Track: Design a curriculum around personal career goals while focusing on innovative solutions to current marine ecosystem threats. This track combines science, law, economics, and policy to foster the conservation awareness of marine ecosystems.
4. Underwater Archaeology: (http://mps.rsmas.miami.edu/underwater-archeology/) (https://mps.rsmas.miami.edu/degree-tracks/underwater-archeology/) Focuses on the theory, field techniques, and management practices necessary to work within
A student must complete 24 credits of courses from RSMAS:

Courses ([https://graduate.rsmas.miami.edu/students/course-schedules/](https://graduate.rsmas.miami.edu/students/course-schedules/)) will be updated from time to time and students should consult with a faculty advisor, or other designated person, prior to registering for any course not specifically listed above, or to ensure a course not listed will be credited toward this degree. RSMAS, Department of Marine Ecosystems and Society, makes no representation that all of the above courses will be available to any given student at all times during the course of his or her studies.

MES 619  Aquaculture III (Field Course)  3

Summer

MBS 805  MPS Internship (Enrollment in a minimum of 2 and a maximum of 6 internship credits required during a student's time in MPS. Typically 2 semesters are needed to complete all aspects of the internship phase of MPS.)  6

Credit Hours  12

Total Credit Hours  30

Mission

The Professional Masters Program in Aquaculture (https://mps.rsmas.miami.edu/degree-tracks/aquaculture/) focuses on the environmental, technological, social, economic, legal, and political aspects of sustainable aquaculture. The program covers all stages of planning and development, from site and species selection to feasibility studies, resource evaluation, hatchery and grow-out technology, and commercialization. Emphasis is placed on the environmental sustainability of commercially important marine fish species, as well as shrimp and mollusks. The program combines extensive laboratory courses with substantial hands-on experiences at the University of Miami Experimental Hatchery (https://www.rsmas.miami.edu/research/projects/hatchery/) (UMEH), working with broodstock, spawning, larval rearing, live feed production, nurseries, and shipping/transport.

Goals

Students will learn to develop and/or improve an aquaculture business.

Student Learning Outcomes

- Students will be able to effectively plan and execute an aquaculture operation including all related aspects of rearing, harvest, storage, shipping, and marketing.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

M.P.S. in Coastal Zone Management

Coastal Zone Management (CZM (https://mps.rsmas.miami.edu/degree-tracks/coastal-zone-management/))

Students will be introduced to the legal and governance frameworks on topics such as coastal fisheries management, marine protected areas, port management, tourism development, environmental impact assessment, and oil exploration.

Coastal Zone Management (MES 618) is the only required class for this track, all other classes are selected on a case by case basis during academic advisement. Enrollment in 2-6 internship credits required during a student's time in MPS. Completion of less than 2 internship credits must be approved by MPS Director. Typically 2 semesters are needed to complete all aspects of the internship phase of MPS.

Potential Courses
M.P.S. in Exploration Science

Exploration Science (ESC) (https://mps.rsmas.miami.edu/degree-tracks/exploration-science/)

Exploration Science is the applied practice and study of field research using a variety of methods, technologies, and approaches to drive question-based scientific endeavors.

This track is being offered at RSMAS in partnership with UM’s Abess Center for Ecosystem Science and Policy (http://www.cesp.miami.edu/). The Abess Center fosters innovative, interdisciplinary initiatives that bridge the gap between science and environmental policy. To learn more about the Exploration Science track, please visit the Master of Professional Science (MPS) website (https://mps.rsmas.miami.edu/degree-tracks/exploration-science/).

---
receive training as AAUS Science Divers during their first semester. Protected areas, and marine survey technology. UARCH students will be able to formulate comprehensive marine conservation plans for marine organisms and ecosystems from planning, through implementation, assessment, and outreach. Students will demonstrate professionalism in all aspects of field and lab work during their internships. Students will write up a final report and deliver a final presentation based on the work completed in their internship.

**Mission**

The Master of Professional Science in Marine Conservation (https://mps.rsmas.miami.edu/degree-tracks/marine-conservation/) provides students with advanced training in the theoretical aspects of marine science and conservation, as well as the practical aspects required to begin a career in this field. This degree track is unique in that students design a curriculum that emphasizes their personal goals and interests, while focusing on innovative solutions to current marine ecosystem and organism threats.

**Goals**

The goal of this track (https://mps.rsmas.miami.edu/degree-tracks/marine-conservation/) is to advance conservation efforts, scientific literacy and communication, public outreach and integration, and education within the marine realm. Practical aspects of the program will vary between individuals but may include exposure to field methods and techniques, GIS and remote sensing of shallow water marine environments, shark behavioral ecology and conservation, the development of environmental impact statements, coastal law, the development of social media, scientific communication, and statistics for environmental management.

**Student Learning Outcomes**

- Students will be able to formulate comprehensive marine conservation plans for marine organisms and ecosystems from planning, through implementation, assessment, and outreach.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

**M.P.S. in Underwater Archaeology**

**Underwater Archaeology (UA) (https://mps.rsmas.miami.edu/degree-tracks/underwater-archeology/)**

The MPS Underwater Archaeology (https://mps.rsmas.miami.edu/degree-tracks/underwater-archeology/) track (UARCH) is a two-year program that focuses on the theory, field techniques, and management practices necessary to work within the field of archaeology and the broader general field of marine sciences. Coursework integrates topics such as site mapping and documentation, interpretation of shipwrecks and submerged sites, best management practices, marine protected areas, and marine survey technology. UARCH students receive training as AAUS Science Divers during their first semester.

Students will have opportunities to work side-by-side with professional archaeologists through internships and field projects with private, public, or non-governmental agencies, both nationally and internationally, and conduct relevant fieldwork. **UARCH applicants and students should be aware of Dr. Hanselmann’s track guide and requirements (https://mps.rsmas.miami.edu/_assets/pdf/uarch_program_handout.pdf), with special attention to courses and/or credits for Year 2 in the program.**

Mission Goals

Students in the MPS Underwater Archaeology track (UARCH) will learn the theories, field techniques, and management strategies necessary to work on a variety of submerged fresh and saltwater sites.

Student Learning Outcomes

- Students in the MPS Underwater Archaeology track (UARCH) will learn site mapping and documentation, interpretation of shipwrecks and submerged sites, best management practices, marine protected areas, and marine survey technology to effectively apply these skills and knowledge to submerged fresh and saltwater sites.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

The MES M.S. degree requires 30 total credits. 1
Mission
The Department of Marine Ecosystems and Society (MES) fosters innovative, collaborative and multidisciplinary research and education centered on the conservation and sustainability of marine ecosystems and the services they provide to society.

Goals

Student Learning Outcomes
- Students will demonstrate an advanced understanding of a range of marine related disciplines, specifically relevant to their research (proposed and executed).
- Students will demonstrate critical thinking skills through the development and execution of an original research plan, including the application of appropriate methodologies.
- Students will demonstrate the ability to communicate ideas effectively and professionally, both in writing and orally.

1. Minimum of 24 course credits and 6 thesis credits.
   - All M.S. students are required to complete at least 12 course credits in MES.
   - A formal request for an exception to this rule can be submitted in writing to the Committee Chair, and any/all exceptions will be made at the discretion of the MES Academic Committee.
2. Course enrollment and scheduling is defined by the student and their Chair.
   - Students are affiliated with one or more of the MES tracks, and will be expected to adhere to all relevant academic requirements.
3. Students are expected to attend all MES student seminars.
4. All MES students are expected to compose a full proposal, including a thorough literature review, clearly outlined objectives, a summary of the significance of their proposed project (including broader impacts, if relevant), a detailed research plan, and a budget.
   - A proposal template will be provided, and all M.S. students are required to attend a proposal writing seminar during their second semester in residence.
   - Following the written proposal vetting process by the committee, students are required to formally defend their proposal. The purpose of the proposal defense is to ensure that each student possesses the requisite knowledge and expertise to successfully execute the proposed research project, as well as facilitate an open discussion regarding the stated objectives and experimental approach.
   - Students must submit and defend their proposal before the start of their fourth semester in residence.

The MES Ph.D. degree requires 60 total credits.

Core Courses
- MES 608 Biometrics in Marine Science
- MES 715 Advanced Biometrics in Marine Science

Electives
- MES 830 Doctoral Dissertation
- RSM 773 Educational Training 3
- RSM 772 Educational Training 2
- RSM 771 Educational Training 1
- RSM 700 Research Ethics
- MES Seminar 5
- Proposal Defense 6
- Educational Training Program (TA) 7

Required Examinations
- Qualifying Examination 4
- Comprehensive Examination 3

Required Examinations
- Qualifying Examination 4
- Comprehensive Examination 3

Additional Requirements
- RSM 700 Research Ethics
- MES Seminar 5
- Proposal Defense 6
- Educational Training Program (TA) 7
- RSM 771 Educational Training 1
- RSM 772 Educational Training 2
- RSM 773 Educational Training 3

Total Credit Hours 60

1. Minimum of 27 course credits and 12 dissertation credits.
   - 6 course credits must be taken at the 700-level.
2. Course enrollment and scheduling is defined by the student and their Chair.
   - Students are affiliated with one or more of the MES tracks, and will be expected to adhere to all relevant academic requirements.
3. MES Ph.D. students must take a comprehensive exam at the end of their second semester in residence.
   - The exam format and content is defined by the Committee Chair and members. The exam is graded as pass/fail.
   - If a student fails the exam, the option to pursue remediation occurs at the sole discretion of the Committee and the Program faculty. A failed Comprehensive Exam with no endorsement to retake the exam will result in immediate dismissal from the MES graduate program.
4. At the end of the second year in residence, all Ph.D. students must take a written qualifying exam, which emphasizes subject matter critical to the execution of the proposed dissertation research. The purpose of the qualifying examination is to demonstrate that MES doctoral students possess the requisite knowledge and expertise to be successful. The topic areas are established and agreed upon by the student, Chair, and the dissertation Committee at the proposal defense.
   - The Committee is encouraged to provide direction and readings for study, as well as establish a clear format for the exam. It is the Chair’s responsibility to host the exam and organize and distribute grades (pass/fail) in a timely manner. Students must pass the qualifying exam in order to be admitted to candidacy.
   - In the event of a failure, a student may be reexamined once upon the recommendation of the Committee, in consultation with the MES Academic Committee. If approved, the reexamination must occur before the end of the subsequent semester.
   - A supplemental oral qualifying examination may be required by the student’s Committee but cannot serve as a substitute for the written examination, which is a Graduate School requirement.
Student Learning Outcomes

- Students are required to attend all MES student seminars.
- MES Ph.D. students must host one seminar during their fourth semester at RSMAS and every year thereafter, with the exception of the semester in which they defend their dissertation.

- All MES students are expected to compose a full proposal, including a thorough literature review, clearly outlined objectives, a summary of the significance of their proposed project (including broader impacts, if relevant), a detailed research plan, and a budget. Following the written proposal vetting process by the committee, students are required to formally defend their proposal. The purpose of the proposal defense is to certify the readiness of the student to conduct dissertation research, as well as facilitate an open discussion regarding the objectives of the dissertation and the relevant experimental approach.
- The dissertation proposal is the foundation for the qualifying exam, and both must be completed no later than the end of the second year in residence.

- Ph.D. students are expected to be a Teaching Assistant (TA) for two courses while pursuing their degree.
- The mandatory TA program will include training of new TAs, evaluation of their performance, and recognition of excellence. The goal is to make the experience as valuable as possible for the TA, the faculty, and the students taking our courses.
- A training session and two teaching opportunities are offered as courses in educational training (RSM 771, RSM 772, RSM 773). Students will be registered accordingly.
- Specific requirements for TAs are outlined in the RSMAS Student Handbook.

Mission

The goal of the Marine Ecosystems and Society department is to educate, inspire, and train students to respond to the complex challenges associated with human utilization of and dependency upon vulnerable marine ecosystems. Our goal is to help our students better understand the emerging role they can play in shaping and ensuring the sustainability of marine resources, including strategic management efforts coupled with the highest standards of resource governance. Students will develop an interdisciplinary perspective through exposure to a wide breadth of intrinsically linked disciplines, including but not limited to fisheries ecosystem management, resource economics, mariculture, habitat restoration, climate change, anthropology, and social science. This facilitates their development as future leaders of the institutions and organizations charged with the responsibility of defining, utilizing, and conserving the marine environment and its resources.

Goals

To help our students better understand the emerging role they can play in shaping and ensuring the sustainability of marine resources, including strategic management efforts coupled with the highest standards of resource governance.

Student Learning Outcomes

- Students will demonstrate an advanced understanding of a range of marine related disciplines, specifically relevant to their research (proposed and executed).
- Students will demonstrate critical thinking skills through the development and execution of an original research plan, including the application of appropriate methodologies.
- Students will demonstrate the ability to communicate ideas effectively and professionally, both in writing and orally.

Marine Geosciences

https://www_graduate_rsmas_miami_edu/graduate-programs/marine-geosciences/index.html

Dept. Code: MGS

The Marine Geosciences (MGS) graduate program is focused on studying the geology, geophysics, and geochemistry of the earth system, beneath, within, and above the oceans.

Students work closely with faculty at the forefront of research on marine sedimentary systems, earthquakes, volcanoes, plate tectonics, and paleoclimate. MGS faculty and students also emphasize interdisciplinary study where geological phenomena interact with or are influenced by processes generally studied in other disciplines, such as ocean currents, climate, and biological evolution.

MGS research uses pioneering remote sensing techniques to assess the earth’s crustal movement and sedimentation in coastal zones. MGS degree programs are at the forefront of understanding carbonate depositional systems, stromatolites, reefs and deep sea sediments to learn more about past climate change by studying the interaction between biological and geological processes. Ocean observing systems, such as hydrological observatories, play prominent roles in research efforts as well.

Degree Programs

- Post-Bachelor’s Certificate (p. 874)
  • Offered for working professionals who seek specialization in Applied Carbonate Geology.
  • Requires 16 course credit hours for successful completion.
- Master of Science (M.S.)
  • Requires 30 credit hours, including 24 course credit hours and 6 research credit hours.
  • Interdisciplinary studies with expertise in physics, chemistry, mathematics, and/or biology are encouraged.
- Doctor of Philosophy (Ph.D.) (p. 875)
  • Requires 60 credit hours, including a minimum of 30 course credit hours and a minimum of 12 research credit hours.
  • Interdisciplinary studies with expertise in physics, chemistry, mathematics, and/or biology are encouraged.

Post-Bachelor’s Certificate Program

The goal of the certificate program is to provide first-rate continuing education to professionals or geology students who want to become experts in carbonate geology. To reach this goal courses are offered in carbonate sedimentology, seismic stratigraphy, petrophysics, and geochemistry for an advanced knowledge and understanding in carbonate systems. A successful completion of the program will require 16 course credits to be taken. There are ten electable 2-credit or 3-credit courses in the program. Participants will not write a thesis but the courses are structured in a way that classroom knowledge is directly used in subsequent laboratory classes and projects.

- Certificate in Applied Carbonate Geology (https://marine-geosciences.rsmas.miami.edu/academics/certificate-program/)
Master of Science (M.S.) Program
- M.S. in Marine Geosciences (MGS) (p. 875)

Doctor of Philosophy (Ph.D.) Program
- Ph.D. in Marine Geosciences (MGS) (p. 876)

1 Minimum of 24 course credits and 6 thesis credits.
2 The intent of these course requirements is to ensure preparation across the range of subfields within MGS. These requirements may be waived by permission of the MGS Program Academic Committee.
3 All students who enroll in the MGS academic program starting in fall semester are required to take a comprehensive examination by the end of their second semester. Students who enroll in spring semester may be advised to take the comprehensive exam at the end of the following spring semester.
4 The purpose of the comprehensive examination is to evaluate the student's understanding of fundamental principles, reasoning skills, and to determine if any basic deficiencies are present in the student's background after two semesters of classes.
5 The examination will consist of a written part, which usually lasts about 6-8 hours, and an oral part, which lasts about 1 hour. The results of the written portion of the exam and performance of the oral exam determine the grade given by the examining board.
6 For the M.S. degree candidate, possible grades include PASS or FAIL.
7 A grade of FAIL indicates gaps in understanding or knowledge of basic geological, geochemical, or geophysical principles. The student can retake the exam a second time in order to achieve a passing grade. If failure occurs on the second attempt, the student can be dismissed from the MGS program.
8 A grade of PASS indicates acceptable comprehension of basic principles and allows the student to complete the M.S. degree. Following completion of the M.S. degree at UM, the student may apply for the Ph.D. program and is not required to retake the comprehensive examination, unless a period of more than four years has elapsed.

Mission
The mission of the MGS M.S. program is to prepare our students for either further academic education in a Ph.D. program or professional employment in marine geology and geophysics, environmental sciences, and petroleum geology. The program is based on two main elements: well-rounded course work plus conduct of original research that leads to preparation of a publicly defended M.S. thesis.

Goals
Student Learning Outcomes
- Students completing the MGS M.S. degree will demonstrate a broad comprehension of Marine and Earth sciences. Students will understand the geological, geochemical, and geophysical processes that affect the Earth and its environment and will be able to apply this knowledge in either academic or professional careers.
- Each student will prepare an original M.S. Thesis that demonstrates his/her ability to critically evaluate scientific literature, comprehend previous knowledge on a topic, formulate testable hypotheses, and skillfully use available data and tools to advance the knowledge in that topic.
• Students will demonstrate good oral communication skills, and be able to effectively communicate and defend their scientific findings to a peer audience.

</tbody>
</table>

1 Minimum of 30 course credits and 12 dissertation credits.
2 The intent of these course requirements is to ensure preparation across the range of subfields within MGS. These requirements may be waived by permission of the MGS Program Academic Committee.
3 If a student does not follow the above requirements and performs poorly in one of these subfields on the comprehensive exam, it may trigger a requirement to enroll in the respective course as a condition for further advancement in the MGS program.
4 All students who enroll in the MGS academic program starting in fall semester are required to take a comprehensive examination by the end of their second semester. Students who enroll in spring semester may be advised to take the comprehensive exam at the end of the following spring semester.
5 The purpose of the comprehensive examination is to evaluate the student's understanding of fundamental principles, reasoning skills, and to determine if any basic deficiencies are present in the student's background after two semesters of classes.
6 The examination will consist of a written part, which usually lasts about 6-8 hours, and an oral part, which lasts about 1 hour. The results of the written portion of the exam and performance of the oral exam determine the grade given by the examining board.
7 For a Ph.D. student, a grade of either PASS or FAIL is given.
8 A PASS indicates that the student may proceed with additional coursework, research proposal development, and preparation to take the qualifying examination.
9 Failure of the exam will require the student to retake the exam at a time to be determined by the Exam Committee and the MGS Academic Committee. This retake is usually scheduled no later than the end of the following semester. If failure occurs on the second attempt, the student can be dismissed from the MGS program.
10 The qualifying examination should be taken by the end of the third year. The scheduling of the exam should be discussed with the Committee Chairperson and Dissertation Committee. A completed dissertation proposal demonstrating the ability to formulate and test a hypothesis must be submitted at least two weeks before the exam.
11 The purpose of the exam is to determine knowledge of (a) general principles of geology, geochemistry, and geophysics, (b) knowledge of the student's individual specialty, and (c) peripheral and supporting disciplines.
12 The Dissertation Committee administers a written examination on the subjects outlined above. An oral examination may follow the written exam if necessary to clarify answers, as judged by the Dissertation Committee.
13 Upon satisfactory completion of the qualifying exam, the student enters into candidacy for the Ph.D., provided all other requirements have been met.
14 If the qualifying exam is failed, the student may, at the discretion of the Dissertation Committee, be allowed one opportunity to be re-examined, but in this case no later than the end of the following semester.
15 No "partial passes" of the qualifying exam are allowed.
16 All MGS students are required to register for MGS 701 at least once and attend all meetings of the course throughout their tenure in the MGS program.
17 Students are required to give presentations and actively participate in the course.
18 All MGS students are expected to attend the department weekly seminar Geotopics.
19 The diverse lecture series presents recent and ongoing research by RSMAS faculty and visiting scientists. These presentations help provide a broad, well-rounded view of research topics in the earth sciences.
20 Ph.D. students are expected to be a Teaching Assistant (TA) for two courses while pursuing their degree.
21 The mandatory TA program will include training of new TAs, evaluation of their performance, and recognition of excellence. The goal is to make the experience as valuable as possible for the TA, the faculty, and the students taking our courses.
22 A training session and two teaching opportunities are offered as courses in educational training (RSM 771, RSM 772, RSM 773). Students will be registered accordingly.
23 Specific requirements for TAs are outlined in the RSMAS Student Handbook.

7 A PASS indicates that the student may proceed with additional course work, research proposal development, and preparation to take the qualifying examination.

8 Failure of the exam will require the student to retake the exam at a time to be determined by the Exam Committee and the MGS Academic Committee. This retake is usually scheduled no later than the end of the following semester. If failure occurs on the second attempt, the student can be dismissed from the MGS program.

Mission

The mission of the MGS Ph.D. program is to educate and train students to become the next generation of scientists conducting research in and teaching marine geology and geophysics, geochemistry, and environmental geosciences. The program emphasizes coursework during the first year, then development of and independent conduct of original research that leads to preparation of peer-reviewed publications and a publicly defended Ph.D. dissertation.

Goals

- To educate and train students to become the next generation of scientists conducting research in and teaching marine geology and geophysics, geochemistry, and environmental geosciences.

Student Learning Outcomes

- Students in the MGS Ph.D. program will demonstrate a broad comprehension of marine and Earth science, and then use this knowledge to develop an independent scientific research topic of sufficient quality and originality to lead to a Ph.D. dissertation.

- Each student will prepare an original Ph.D. dissertation that demonstrates his/her ability to critically evaluate scientific literature, comprehend previous knowledge on a topic, formulate testable
hypotheses, and independently use available data and tools to produce a significant original contribution on the topic.

- Students will demonstrate good oral communication skills, and be able to effectively communicate and defend their scientific findings to a peer audience.

https://www.graduate.rsmas.miami.edu/graduate-programs/meteorology-and-physical-oceanography/index.html

Dept. Code: MPO

The Meteorology and Physical Oceanography (MPO) graduate program was founded on the premise that oceanic and atmospheric dynamics are governed by a set of similar physical principles, and that much insight can be gained by studying their dynamics from a common perspective.

The MPO program requires students to develop expertise in both systems, and prepares students to conduct leading-edge research using a complementary set of theoretical, observational, and modeling approaches.

The MPO curriculum forms a strong foundation for research on a broad spectrum of topics that include air-sea interaction, the global thermohaline circulation, tropical cyclones, El Niño, the Madden-Julian Oscillations, and the evolution of the Earth’s climate.

**Degree Programs**

- Master of Science (M.S.) (p. 878)
  - Requires 30 credit hours, including 24 course credit hours and 6 research credit hours.
- Doctor of Philosophy (Ph.D.)
  - Requires 60 credit hours, including a minimum of 30 course credit hours and a minimum of 12 research credit hours.

**Research Areas**

The MPO program has a strong foundation in several areas in atmospheric and ocean sciences, including those presented below. Research is conducted using a variety of techniques from direct observation to theoretical and numerical modeling. Students come from a diverse range of educational backgrounds, including marine science, meteorology, physics, mathematics, and engineering.

**Climate Variability and Change**

Research covers a wide range of topics, both global and regional. We study climate variations on time scales from sub-seasonal to interannual to decadal, as well as ancient (paleo) climates and future climate changes. Efforts include analysis of satellite data, field observations and global data products, and a large focus on numerical climate modeling.

**Large-Scale Ocean Circulation**

Research covers a variety of topics, highlighting the ocean’s role in climate, including dynamics and variability of boundary currents, meridional overturning and tropical circulations, as well interaction between large-scale, mesoscale and submesoscale circulations. Particular strengths include experimental oceanography, numerical modeling with a variety of comprehensive and conceptual models, data analysis and assimilation, and theoretical studies.

**Tropical Dynamics**

The tropics have global impacts, from weather effects and hurricanes to El Niño and other climate variations. Research involves the myriad interactions of water vapor and clouds with air and wind and the underlying tropical oceans and landscapes.

**Hurricanes**

RSMAS/MPO is ideally situated for the study of hurricanes through its location in Miami and its proximity to the NOAA Hurricane Research Division and National Hurricane Center. The research includes high-resolution coupled atmosphere-wave-ocean modeling, hurricane dynamics, and novel adaptive observing and data assimilation methods.

**Regional and Coastal Oceanography**

Studies focus on key processes in coastal and shelf areas, with special interest in regional seas around South Florida, the Gulf of Mexico and the Caribbean. Particular projects address events following the Deepwater Horizon oil spill, air-sea interaction associated with hurricanes, shelf dynamics, mixing, submesoscale variability, biological-physical interactions in ecosystems, coral reef studies and the Everglades Restoration. The research involves high-resolution numerical modeling, experimental studies and data assimilation.

**Clouds, Aerosol, Precipitation, and Radiation Interactions (CAPRI)**

The cloud microphysical processes important to the global energy balance occur at spatial and time scales of seconds and meters. MPO studies such processes with aircraft and surface-based remote sensing, in situ field measurements, and large-eddy simulations, and reconciles them with analyses done at the larger scales of satellites and regional climate models.

**Satellite Remote Sensing**

RSMAS hosts a real-time satellite reception and analysis facility. MPO is involved with retrieval algorithm development, validation and analysis of sea surface temperature, ocean color, sea surface topography and surface winds. These are analyzed in the context of climate research.

**Master of Science (M.S.) Program**

- M.S. in Meteorology and Physical Oceanography (MPO) (p. 878)

**Doctor of Philosophy (Ph.D.) Program**

- Ph.D. in Meteorology and Physical Oceanography (MPO) (p. 880)

**M.S. in Meteorology and Physical Oceanography**

**Curriculum Requirements**

The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in Handbook or by the Program Director.
All RSMAS courses are listed on the RSMAS website. All courses taken by students should be approved by their advisors. Students are recommended to consult with their advisors and the MPO Program Director regarding their choices of courses. Deviations from the requirements must be approved by the advisor and the MPO Academic Committee.

All RSMAS courses are listed on the RSMAS website. All courses

taken by students should be approved by their advisors. Students are
recommended to consult with their advisors and the MPO Program
Director regarding their choices of courses. Deviations from the
requirements must be approved by the advisor and the MPO Academic
Committee.

The MPO M.S. degree requires 30 total credits.  

### Core Courses

All MPO M.S. students are required to take the following courses:

- MPO 603: Physical Oceanography
- MPO 611: Geophysical Fluid Dynamics I
- MPO 651: Introduction to Atmospheric Dynamics

and choose one of the following:

- MPO 712: Large Scale Ocean Circulation: Models and Observations
- or MPO 765: General Circulation of the Atmosphere

Electives

Students are permitted to take one Elective course. These are courses offered by MPO, RSMAS, or UM.

### Thesis Research

- MPO 810: Master’s Thesis

### Additional Requirements

- RSM 700: Research Ethics
- Comprehensive Examination
- MPO Seminar

**Total Credit Hours**: 30

---

1. Minimum of 24 course credits and 6 thesis credits.

2. The remaining 12 course credits can be obtained by taking other graduate courses offered by MPO, RSMAS, or UM.

3. Material from the required core courses will appear on the Comprehensive Examination (along with material from other courses from the first year).

4. Attendance to the MPO seminars is required every semester.

### Mission

The Meteorology and Physical Oceanography (MPO) program prepares students to conduct research in meteorology and physical oceanography. It seeks to advance students’ knowledge and understanding of the physical and dynamical processes in the atmosphere and ocean. We prepare our graduates to develop into research leaders in the fields of meteorology and physical oceanography, and thereby contribute to better informing the public and policy makers on how to prepare for hazards and changes in the Earth’s atmosphere and oceans.

### Goals

- To advance students’ knowledge and understanding of the physical and dynamical processes in the atmosphere and ocean.
Student Learning Outcomes

- Students will demonstrate knowledge in meteorology and physical oceanography.
- Students will demonstrate their ability to conduct research in meteorology and physical oceanography.
- Students will demonstrate knowledge of the discipline, critical thinking, and application of knowledge and methodology.

Ph.D. in Meteorology and Physical Oceanography Curriculum Requirements

The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in Handbook or by the Program Director.

All RSMAS courses are listed on the RSMAS website. All courses taken by students should be approved by their advisors. Students are recommended to consult with their advisors and the MPO Program Director regarding their choices of courses. Deviations from the requirements must be approved by the advisor and the MPO Academic Committee.

</table>

1 Minimum of 30 course credits and 12 dissertation credits.
   - Minimum 9 course credits should be taken from 700 level courses.
   - The credit transfer and waiver of required courses should be done during the first year of graduate study at RSMAS with approval from the graduate advisor and the MPO Academic Committee.

2 The remaining course credits can be obtained by taking other graduate courses offered by MPO, RSMAS, or UM.
   - MPO Ph.D. students are required to take at least one 3-credit course outside the MPO program, unless they have arrived with an M.S. degree from another institution.
   - Courses with the ‘RSM’ designation count as an outside course.

3 Material from the required core courses will appear on the Comprehensive Examination (along with material from other courses from the first year).
   - Grade of Pass or High Pass needed to fulfill requirement.

4 All M.S. and Ph.D. students are required to take the Comprehensive Examination. For full-time students, the Comprehensive Examination should be before the end of their first year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee which comprises the MPO Graduate Program Director and the instructors (or their assignees) of the first year courses taken by the students.
   - The purpose of this examination is to evaluate students’ understanding of materials in the courses completed up to the time of the examination and their capability of integrating these materials, and to determine whether the students are permitted to proceed to the M.S. or Ph.D. program.
   - The Comprehensive Examination will consist of an oral part and a written part.
     - The written part, which lasts no longer than 8 hours, consists of closed-book questions in the courses taken in the first year by each individual student. Each student must choose to answer four questions; at least one of the questions from GFD I and II must be answered.
     - The oral part, which lasts no longer than 2 hours for each student, may include questions from all the courses taken by the student.
   - The GPA comprises 20% of the Comprehensive Exam grade, and the written and oral parts of the Comprehensive Exams comprise 40% each.
   - A student’s performance in this examination, together with his/her cumulative grade point average, will determine whether the grade of High Pass, Pass, Master’s Pass or Fail is given by the Comprehensive Exam Committee. The examining board consists of faculty whose questions are answered by the student and any other RSMAS faculty who wish to participate.
     - High Pass: for students with no identifiable relevant weaknesses.
     - Pass: Students and advisors will receive feedback from the Comprehensive Exam committee on the strengths and weaknesses of the student, and possible recommendations of how to address those. This information can be used to help plan the next steps in the student’s academic career.
       - **NOTE:** This is a new category where a student is NOT required to defend a Master’s thesis as was the case previously, but the student and advisor may of course still decide that a Masters in the appropriate next step.
     - Master’s Pass: Students with this result will be required to defend a Master’s thesis before considering whether to pursue a Ph.D. Students and advisors will receive feedback from the Comprehensive Exam committee on the strengths and weaknesses of the student, and possible recommendations of how to address those.
     - Fail: Students with this result will have an opportunity to re-take the exam once.
The Meteorology and Physical Oceanography (MPO) program prepares students to conduct research in meteorology and physical oceanography. It seeks to advance students’ knowledge and understanding of the physical and dynamical processes in the atmosphere and ocean. We prepare our graduates to develop into research leaders in the fields of meteorology and physical oceanography, and thereby contribute to better informing the public and policy makers on how to prepare for hazards and changes in the Earth’s atmosphere and oceans.

**Goals**

- To advance students’ knowledge and understanding of the physical and dynamical processes in the atmosphere and ocean.
and interact with Earth’s climate. Scientists in OCE approach studies of Ocean Dynamics through sea-going experimentation and data analysis, development of conceptual modeling tools, data assimilation, numerical simulations, ocean prediction, and forecasting. Research topics include the dynamics and variability of boundary currents like the Gulf Stream, basin-wide meridional overturning and heat transport, mesoscale and submesoscale dynamics and stirring, turbulence, water mass formation and ventilation, oil spills, and coastal and continental shelf processes.

**Air-Sea Interaction & Remote Sensing**
The focus of this concentration is on sub-millimeter to mesoscale processes at and across the air-sea interface, from the oceanic thermocline to the atmospheric boundary layer. Research topics include surface fluxes and turbulent mixing events, wind-wave-current interactions, hurricane intensity changes, storm surge predictions, coupled tropical dynamics, underwater acoustics, internal and surface gravity waves, and coastal processes. OCE faculty, research staff, and students approach these studies using our unique wind-wave laboratory (SUSTAIN) and satellite-data facilities (CSTARS), and through field experimentation using ship-, buoy-, land-, and aircraft-based instrumentation. Coupled ocean-atmosphere modeling studies provide a framework to understand these observations, where one of the foci is tropical weather and hurricanes. Many of our research efforts have societal relevance in areas such as severe weather and wave forecasting, disaster monitoring and mitigation response, climate change, renewable energy developments, marine transportation and ship tracking, search and rescue, and pollutant dispersion.

**Marine Biogeochemistry**
Studies in this concentration focus on the physical, chemical, biological, and geological processes controlling the oceanic cycling of carbon, macronutrients (nitrogen, phosphorus, and silicon), and trace elements (e.g., iron). We conduct our work throughout the global ocean using advanced analytical and modeling techniques to assess the dynamics of these elements. Research topics include ocean acidification, nutrient limitation of productivity, global distributions of biogeochemical variables, tracers for time scales of water mass formation and circulation, air-sea exchange of materials, carbon fluxes, microbial processes, and speciation, distribution, and isotopic ratio of dissolved trace metals.

**Biophysical Interactions**
This concentration addresses the study of ocean productivity, the distribution, transport, and behavior of planktonic organisms, and their complex interactions with higher trophic levels. Researchers in OCE take a multi-prong approach, coupling the development of biophysical models with experimental field and laboratory work. OCE scientists develop new techniques and instrumentation to observe and model planktonic organism behavior and their responses to environmental signals. Research topics include the study of harmful algal blooms, plankton distribution and patchiness, trophic interactions, larval dispersal and population connectivity, biological control of physical constraints, microbial dynamics, bioacoustics, and animal navigation.

**Mission**

MPS Applied Remote Sensing (https://mps.rsmas.miami.edu/degree-tracks/applied-remote-sensing/), in conjunction with the Center for Southeastern Tropical Advanced Remote Sensing (https://www.rsmas.miami.edu/research/centers/cstars/) (CSTARS) provides students with theoretical knowledge and practical, real-world experiences geared towards a successful career in the field of remote sensing in both public and private sectors. Students already employed in this industry can also acquire additional training to expand upon their current knowledge and skill set.

**Goals**

**Student Learning Outcomes**

- Applied Remote Sensing students will learn theoretical knowledge and practical skills using a variety of remote sensing instruments to produce, measure, and interpret data from high-resolution satellite images for application to various end-users in the private and public sectors.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

**M.P.S. in Natural Hazards and Catastrophes**

Natural Hazards and Catastrophes (NHC (https://mps.rsmas.miami.edu/degree-tracks/natural-hazard-and-catastrophes/))

The University of Miami's Rosenstiel School of Marine and Atmospheric Science conducts world-class research on the earth systems responsible for natural disasters, including the atmosphere, the ocean and solid earth. To meet society's need for a skilled workforce, the Natural Hazards and Catastrophes (https://mps.rsmas.miami.edu/degree-tracks/natural-hazard-and-catastrophes/) track, within the Master of Professional Science (MPS) program, offers an educational opportunity for students seeking to fill positions offered by the private and civil sectors to assess risks and exposures associated with natural hazards. The goal is to provide students with the skills and knowledge necessary to understand earth system natural hazards (atmospheric, oceanic, geological and...
hydrological) and the data analytics tools required to assess the associated risks (e.g. statistics, data management, programming, GIS, and remote sensing).

**Mission**

MPS Natural Hazards and Catastrophes students will acquire the skills and knowledge necessary to understand earth system natural hazards (atmospheric, oceanic, geological and hydrological) and the data analytics tools required to assess the associated risks (e.g. statistics, data management, programming, GIS, and remote sensing). The strategic selection of electives exposes students to legal and regulatory
knowledge, communication and media training, and the development of project management skills, all designed to prepare them to address these challenges as future global leaders. MPS Natural Hazards and Catastrophes prepares its students for employment in several sectors, including insurance and re-insurance industry, architecture, emergency management, engineering, public health and science.

Goals
The goal is to provide students with the skills and knowledge necessary to understand earth system natural hazards (atmospheric, oceanic, geological and hydrological) and the data analytics tools required to assess the associated risks (e.g. statistics, data management, programming, GIS, and remote sensing).

Student Learning Outcomes
- Natural Hazards and Catastrophes students will learn the skills and knowledge necessary to understand earth system natural hazards (atmospheric, oceanic, geological and hydrological) and the data analytics tools required to assess the associated risks (e.g. statistics, data management, programming, GIS, and remote sensing). In addition, via the strategic selection of elective courses, students will learn the legal and regulatory knowledge, communication and media training, and the development of project management skills, all designed to prepare them to address earth system natural hazards.
- Students will demonstrate professionalism in all aspects of field and lab work during their internships.
- Students will write up a final report and deliver a final presentation based on the work completed in their internship.

M.S. in Ocean Sciences
Curriculum Requirements
The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in the OCE Handbook or by the OCE Graduate Program Director. Any uncertainties regarding the procedures and requirements should be clarified with the OCE Graduate Program Director and the RSMAS Graduate Studies Office (GSO).

All RSMAS courses are listed on the RSMAS website. Students should consult their advisors and the OCE Graduate Program Director regarding their choices of courses; courses taken by students should be approved by their advisors. Any deviations from the requirements listed below must be approved by the advisor and the OCE Graduate Program Director.

OCE students follow one of four academic tracks: **Ocean Dynamics**, **Air-Sea Interaction and Remote Sensing**, **Marine Biogeochemistry**, or **Biophysical Interactions**.

Total Credit Hours 30

1. Minimum of 24 course credits and 6 thesis credits.
2. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.
3. All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.
4. The purpose of this examination is to evaluate students' understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.
5. The comprehensive examination consists of oral and written components.
   - The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student's academic track has more than four required courses).
   - The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.

### Exam Results

- **MS-Pass:** Students with this result may complete a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
- **PhD-Pass:** Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. if the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
- **Fail:** Students with this result will have an opportunity to re-take the exam once.

A grade of **PhD-Pass** or **MS-Pass** is required for M.S. students.

- Regular attendance of the COMPASS seminar series (combined OCE, MPO, ATM seminar series) is expected; each student is required to attend at least 10 seminar sessions per semester.
- In the same seminar series, each M.S. student is expected to give at least one 15-minute presentation each year after the student passes the comprehensive examination.

- Biogeochemistry
- Marine Studies

### Additional Requirements

- Comprehensive Examination
- Research Ethics
- Master’s Thesis

### Total Credit Hours

30

---

1. Minimum of 24 course credits and 6 thesis credits.
2. Required courses are normally taken during the student’s first full year of study (beginning in the fall semester). The Comprehensive Examination will focus on the required courses.
3. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.
4. All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.

#### Comprehensive Examination

- **The purpose of this examination is to evaluate students’ understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.**

  - The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student’s academic track has more than four required courses).
  - The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.
  - Students and advisors will receive feedback from the comprehensive exam committee on the strengths and weaknesses of the student, and possible recommendations on how to address those.
  - The outcome of the exam, which is determined by the Comprehensive Examination Committee, is based on the student’s performance on this examination, together with consideration of the student’s first year academic record. Possible exam outcomes are:
    - **PhD-Pass:** Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. If the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
    - **MS-Pass:** Students with this result are required to defend a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
    - **Fail:** Students with this result will have an opportunity to re-take the exam once.
  - A grade of **PhD-Pass** or **MS-Pass** is required for M.S. students.

#### Regular Attendance

- Regular attendance of the COMPASS seminar series (combined OCE, MPO, ATM seminar series) is expected; each student is required to attend at least 10 seminar sessions per semester.
- In the same seminar series, each M.S. student is expected to give at least one 15-minute presentation each year after the student passes the comprehensive examination.

---

1. Minimum of 24 course credits and 6 thesis credits.

- In the same seminar series, each M.S. student is expected to give at least one 15-minute presentation each year after the student passes the comprehensive examination.
Mission
The Department of Ocean Sciences (OCE) seeks to advance knowledge and understanding of physical, chemical and biological processes in the oceans. We train graduate students and young scientists to be leaders in ocean-science-related fields. With distinct strengths in ocean dynamics, air-sea interactions and remote sensing, ocean biogeochemical cycles, biophysical interactions and coastal processes, we strive to achieve excellence in research and education. We seek to promote, among the public and policy makers, responsible science-based stewardship of the oceans. Our program commits to inspire graduates to continued scholarship, service, and innovation in an environment that is inclusive and diverse.

Goals
To train graduate students and young scientists for positions in ocean-science-related fields.

Student Learning Outcomes
- Proof of Fundamental Knowledge: Students will demonstrate a broad understanding of fundamentals of ocean science and an awareness of how scientific research in their topical areas relate to current societal issues.
- Capability to Explain and Defend Own Work: Students will demonstrate a comprehensive understanding of their field of work and the ability to explain their work and defend their results in oral and written communication in a way adequate for employment as a research scientist or equivalent professional level scientist.
- Capability to Give Short Presentations: Students will demonstrate the ability to explain their work and defend their key results in a short oral presentation in an environment similar to a session at a scientific conference or a professional project meeting.

Ph.D. in Ocean Sciences

Curriculum Requirements
The applicable requirements will be those in effect during that academic year when the student first registered in the Program, unless stated otherwise in the OCE Handbook or by the OCE Graduate Program Director. Any uncertainties regarding the procedures and requirements should be clarified with the OCE Graduate Program Director and the RSMAS Graduate Studies Office (GSO).

All RSMAS courses are listed on the RSMAS website. Students should consult their advisors and the OCE Graduate Program Director regarding their choices of courses; courses taken by students should be approved by their advisors. Any deviations from the requirements listed below must be approved by the advisor and the OCE Graduate Program Director.

OCE students follow one of four academic tracks: Ocean Dynamics, Air-Sea Interaction and Remote Sensing, Marine Biogeochemistry, or Biophysical Interactions.

Required Examinations
- Comprehensive Examination
- Qualifying Examination

Additional Requirements
- Dallas Murphy Writing Workshop or Writing Skills Course (RSM 780)
- RSM 700 | Research Ethics
- OCE Seminar
- Educational Training Program (TA)
- RSM 771 | Educational Training 1
- RSM 772 | Educational Training 2
- RSM 773 | Educational Training 3

Total Credit Hours 60

1. Minimum of 27 course credits and 12 dissertation credits.
2. Minimum of 9 course credits should be taken from 700-level courses.
3. Required courses are normally taken during the student’s first full year of study (beginning in the fall semester). The Comprehensive Examination will focus on the required courses.
4. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.
• All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.
• The purpose of this examination is to evaluate students’ understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.
• The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student’s academic track has more than four required courses).
• The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.
• Students and advisors will receive feedback from the comprehensive exam committee on the strengths and weaknesses of the student, and possible recommendations on how to address those.
• The outcome of the exam, which is determined by the Comprehensive Examination Committee, is based on the student’s performance on this examination, together with consideration of the student’s first year academic record. Possible exam outcomes are:
  a. **PhD-Pass:** Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. If the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
  b. **MS-Pass:** Students with this result are required to defend a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
  c. **Fail:** Students with this result will have an opportunity to re-take the exam once.
• A grade of **PhD-Pass** is required for Ph.D. students.
• Ph.D. students earning a grade of **MS-Pass** may pursue a Ph.D. after completing the M.S. degree, subject to approval by their M.S. Committee.
• Ph.D. students are expected to take the qualifying examination and dissertation proposal defense by the end of their third full year in the program. If a student needs to take the qualifying examination after that time, they will need to provide a written explanation to, and get approval from, the OCE Graduate Program Director.
• The qualifying examination consists of a written and an oral component.
  a. **While the exact format is left to the discretion of the Ph.D. Committee,** a typical written qualifying examination consists of take-home questions from all Committee members, which need to be completed within three days. The questions are usually related to the research described in the dissertation proposal. It is recommended that the presentation emphasizes future work rather than a review of previous results, which are in the written dissertation proposal.
• **Expectations of the Qualifying Examination:**
  a. **Written Examination:** The student’s written answers should be judged by Ph.D. Committee members to demonstrate that the student has adequately addressed each question.
  b. **Oral Examination:** The student should demonstrate the ability to express themselves clearly while providing satisfactory responses to questions raised by the Ph.D. Committee that relate to the written examination questions, and any other questions asked by Committee members.
  c. **Dissertation Proposal:** The dissertation proposal should be written by the student in clear English. The Proposal should demonstrate the student’s capability to produce and present research of a quality that, when completed, is suitable for submission to a peer-reviewed journal. Emphasis should be placed on the proposed research: the questions and hypotheses to be tested, the data and methodology used to test the hypotheses, and some anticipated results (which may or may not be realized). A student is encouraged to discuss the Proposal with their advisor before submitting it to all Ph.D. Committee members.
• **Possible Outcomes of the Qualifying Examination:**
  a. **Pass:** Meets all expectations.
  b. **Fail:** Unsatisfactory written dissertation proposal or unsatisfactory oral proposal defense.
• In some cases, the Ph.D. Committee may require revisions to a proposal or question/answer, or a retake of the oral part of the qualifying examination. Normally there is no need to retake the entire qualifying examination or have an additional full Ph.D. Committee meeting in such cases.
• Regular attendance of the COMPASS seminar series (combined OCE, MPO, ATM seminar series) is expected; each student is required to attend at least 10 seminar sessions per semester.
• In the same seminar series, each Ph.D. student is expected to give at least one 15-minute presentation each year after passing the comprehensive examination and at least one 45-minute presentation before defending the Ph.D.
• Ph.D. students are expected to be a Teaching Assistant (TA) for two courses while pursuing their degree.
  a. The mandatory TA program will include training of new TAs, evaluation of their performance, and recognition of excellence. The goal is to make the experience as valuable as possible for the TA, the faculty, and the students taking our courses.
  b. A training session and two teaching opportunities are offered as courses in educational training (RSM 771, RSM 772, RSM 773). Students will be registered accordingly.
  c. Specific requirements for TAs are outlined in the RSMAS Student Handbook.

---

1. Minimum of 27 course credits and 12 dissertation credits.
   - Minimum of 9 course credits should be taken from 700-level courses.
   - Required courses are normally taken during the student’s first full year of study (beginning in the fall semester). The Comprehensive Examination will focus on the required courses.

2. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.

3. All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.

4. The purpose of this examination is to evaluate students’ understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.

5. The comprehensive examination consists of oral and written components.
   - The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student’s academic track has more than four required courses).
   - The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.

6. Students and advisors will receive feedback from the comprehensive exam committee on the strengths and weaknesses of the student, and possible recommendations on how to address those.

7. The outcome of the exam, which is determined by the Comprehensive Examination Committee, is based on the student’s performance on this examination, together with consideration of the student’s first year academic record. Possible exam outcomes are:
   - **PhD-Pass:** Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. If the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
   - **MS-Pass:** Students with this result are required to defend a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
   - **Fail:** Students with this result will have an opportunity to re-take the exam once.

8. A grade of **PhD-Pass** is required for Ph.D. students.
   - Ph.D. students earning a grade of **MS-Pass** may pursue a Ph.D. after completing the M.S. degree, subject to approval by their M.S. Committee.
• Ph.D. students are expected to take the qualifying examination and dissertation proposal defense by the end of their third full year in the program. If a student needs to take the qualifying examination after that time, they will need to provide a written explanation to, and get approval from, the OCE Graduate Program Director.

• The qualifying examination consists of a written and an oral component.
  • While the exact format is left to the discretion of the Ph.D. Committee, a typical written qualifying examination consists of take-home questions from all Committee members, which need to be completed within three days. The questions are usually related to the research described in the dissertation proposal.
  • A typical oral qualifying examination consists of an hour of questions based on the written questions and other related questions, and a second hour in which the student presents their dissertation proposal. It is recommended that the presentation emphasizes future work rather than a review of previous results, which are in the written dissertation proposal.

• **Expectations of the Qualifying Examination:**
  a. Written Examination: The student's written answers should be judged by Ph.D. Committee members to demonstrate that the student has adequately addressed each question.
  b. Oral Examination: The student should demonstrate the ability to express themselves clearly while providing satisfactory responses to questions raised by the Ph.D. Committee that relate to the written examination questions, and any other questions asked by Committee members.
  c. Dissertation Proposal: The dissertation proposal should be written by the student in clear English. The Proposal should demonstrate the student’s capability to produce and present research of a quality that, when completed, is suitable for submission to a peer-reviewed journal. Emphasis should be placed on the proposed research: the questions and hypotheses to be tested, the data and methodology used to test the hypotheses, and some anticipated results (which may or may not be realized). A student is encouraged to discuss the Proposal with their advisor before submitting it to all Ph.D. Committee members.

• **Possible Outcomes of the Qualifying Examination:**
  • Pass: Meets all expectations.

**Total Credit Hours**

60

1. • Minimum of 27 course credits and 12 dissertation credits.
   • Minimum of 9 course credits should be taken from 700-level courses.
   • Required courses are normally taken during the student's first full year of study (beginning in the fall semester). The Comprehensive Examination will focus on the required courses.

2. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.
All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.

The purpose of this examination is to evaluate students’ understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.

The comprehensive examination consists of oral and written components.

- The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student’s academic track has more than four required courses).
- The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.
- Students and advisors will receive feedback from the comprehensive examination committee on the strengths and weaknesses of the student, and possible recommendations on how to address these.
- The outcome of the exam, which is determined by the Comprehensive Examination Committee, is based on the student’s performance on this examination, together with consideration of the student’s first year academic record. Possible exam outcomes are:
  - PhD-Pass: Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. If the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
  - MS-Pass: Students with this result are required to defend a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
  - Fail: Students with this result may have an opportunity to re-take the exam once.
- A grade of PhD-Pass is required for Ph.D. students.
- Ph.D. students earning a grade of MS-Pass may pursue a Ph.D. after completing the M.S. degree, subject to approval by their M.S. Committee.

Ph.D. students are expected to take the qualifying examination and dissertation proposal defense by the end of their third full year in the program. If a student needs to take the qualifying examination after that time, they will need to provide a written explanation to, and get approval from, the OCE Graduate Program Director.

The qualifying examination consists of a written and an oral component.

- While the exact format is left to the discretion of the Ph.D. Committee, a typical written qualifying examination consists of take-home questions from all committee members, which need to be completed within three days. The questions are usually related to the research described in the dissertation proposal.
- A typical oral qualifying examination consists of an hour of questions based on the written questions and other related questions, and a second hour in which the student presents their dissertation proposal. It is recommended that the presentation emphasizes future work rather than a review of previous results, which are in the written dissertation proposal.

**Expectations of the Qualifying Examination:**

a. Written Examination: The student’s written answers should be judged by Ph.D. Committee members to demonstrate that the student has adequately addressed each question.

b. Oral Examination: The student should demonstrate the ability to express themselves clearly while providing satisfactory responses to questions raised by the Ph.D. Committee that relate to the written examination questions, and any other questions asked by Committee members.

c. Dissertation Proposal: The dissertation proposal should be written by the student in clear English. The Proposal should demonstrate the student’s capability to produce and present research of a quality that, when completed, is suitable for submission to a peer-reviewed journal. Emphasis should be placed on the proposed research: the questions and hypotheses to be tested, the data and methodology used to test the hypotheses, and some anticipated results (which may or may not be realized). A student is encouraged to discuss the Proposal with their advisor before submitting it to all Ph.D. Committee members.

**Possible Outcomes of the Qualifying Examination:**

- Pass: Meets all expectations.
- Fail: Unsatisfactory written dissertation proposal or unsatisfactory oral proposal defense.

In some cases, the Ph.D. Committee may require revisions to a proposal or question/answer, or a retake of the oral part of the qualifying examination. Normally there is no need to retake the entire qualifying examination or have an additional full Ph.D. Committee meeting in such cases.

Regular attendance of the COMPASS seminar series (combined OCE, MPO, ATM seminar series) is expected; each student is required to attend at least 10 seminar sessions per semester.

In the same seminar series, each Ph.D. student is expected to give at least one 15-minute presentation each year after passing the comprehensive examination and at least one 45-minute presentation before defending the Ph.D.

Ph.D. students are expected to be a Teaching Assistant (TA) for two courses while pursuing their degree.

The mandatory TA program will include training of new TAs, evaluation of their performance, and recognition of excellence. The goal is to make the experience as valuable as possible for the TA, the faculty, and the students taking our courses.

A training session and two teaching opportunities are offered as courses in educational training (RSM 771, RSM 772, RSM 773). Students will be registered accordingly.

Specific requirements for TAs are outlined in the RSMAS Student Handbook.

**Required Examinations**
- Comprehensive Examination 3
- Qualifying Examination 4

**Additional Requirements**
- Dallas Murphy Writing Workshop or Writing Skills Course (RSM 780)
- RSM 700 Research Ethics
- OCE Seminar
- Educational Training Program (TA)
- RSM 771 Educational Training 1
- RSM 772 Educational Training 2
- RSM 773 Educational Training 3

1. Minimum of 27 course credits and 12 dissertation credits.
   - Minimum of 9 course credits should be taken from 700-level courses.
   - Required courses are normally taken during the student’s first full year of study (beginning in the fall semester). The Comprehensive Examination will focus on the required courses.

2. The remaining course credits can be obtained by taking other graduate courses offered at RSMAS or, with permission of the advisor, at other departments of UM.

3. All M.S. and Ph.D. students are required to take the comprehensive examination. For full-time students, the comprehensive examination should be taken before the end of their first full year of graduate studies at RSMAS. This examination will be arranged by a Comprehensive Examination Committee comprised of the OCE Graduate Program Director and the instructors (or their assignees) of the required courses taken by the students.

   - The purpose of this examination is to evaluate students’ understanding of materials in the required courses, and their ability to integrate and apply these materials. The outcome of the comprehensive examination determines whether students are permitted to proceed to the M.S. or Ph.D. program.
   - The comprehensive examination consists of oral and written components.
     - The oral component, which lasts no longer than 2 hours for each student, may include questions related to all the courses taken by the student.
     - The written component, which lasts no longer than 8 hours, consists of a combination of open- and closed-book questions on the material covered in up to four of the required courses taken by each student (to be selected by the student and the OCE Graduate Program Director if the student’s academic track has more than four required courses).
   - Students and advisors will receive feedback from the comprehensive exam committee on the strengths and weaknesses of the student, and possible recommendations on how to address those.
   - The outcome of the exam, which is determined by the Comprehensive Examination Committee, is based on the student’s performance on this examination, together with consideration of the student’s first year academic record. Possible exam outcomes are:
     - **PhD-Pass**: Students with this result may bypass the M.S. degree and start working toward earning a Ph.D. If the student chooses to, they may complete a M.S. degree before pursuing a Ph.D.
     - **MS-Pass**: Students with this result are required to defend a M.S. thesis and get approval from their M.S. committee before pursuing a Ph.D.
     - **Fail**: Students with this result will have an opportunity to re-take the exam once.
   - A grade of **PhD-Pass** is required for Ph.D. students.
     - Ph.D. students earning a grade of **MS-Pass** may pursue a Ph.D. after completing the M.S. degree, subject to approval by their M.S. Committee.
• Ph.D. students are expected to take the qualifying examination and dissertation proposal defense by the end of their third full year in the program. If a student needs to take the qualifying examination after that time, they will need to provide a written explanation to, and get approval from, the OCE Graduate Program Director.

  • Specific requirements for TAs are outlined in the RSMAS Student Handbook.

### Mission

The Department of Ocean Sciences (OCE) seeks to advance knowledge and understanding of physical, chemical and biological processes in the oceans. We train graduate students and young scientists to be leaders in ocean-science-related fields. With distinct strengths in ocean dynamics,
Biochemistry and Molecular Biology are sciences at the epicenter of modern biomedical research. Understanding basic biochemical pathways is key to gaining new knowledge for the prevention and combating of disease, allowing for the expansion of current boundaries in medicine and science. In addition to medical applications, molecular biology is indispensable for the development of tools implemented for environmental and bionanotechnology problems. The Department of Biochemistry and Molecular Biology (BMB) at the University of Miami is committed to maintaining our discipline as a central science and strives for excellence by sustaining the current areas of strength, fostering interdisciplinary and clinical translational research, and expanding the research portfolio to evolving areas of inquiry and discovery. Our expertise in RNA biology, understanding DNA stability and repair, studying the biophysical nature of biomolecules, and gaining insight into cellular signaling pathways has been recently expanded by the arrival of researchers specialized in the design of natural and semi-synthetic biomolecules, as well as molecular-based devices that can be employed in translational medicine and other bionanotechnology applications. The commitment of the Miller School to increase growth in the basic sciences will continue to provide our department with new and exciting opportunities to enhance our prominence in biomedical research.

A chief mission of our department is to educate future generations of investigators and medical students to become critical thinkers and the leaders in their fields. The diverse composition of our department in regards to research interests creates a unique and intellectually stimulating learning environment for students at the undergraduate, graduate, and postgraduate levels. We offer a host of courses to fulfill the curriculum to obtain a BS in Biochemistry, a MS and a PhD in Biochemistry, as well as the basic science requirements for MD and MD / PhD students. Our courses address the basic principles of biochemistry and molecular biology as well as the emerging science and future of the fields.

The department serves the worldwide scientific community through leadership roles and active participation in national and international conferences, serving in study sections and on federal agency panels. Additionally, our department’s faculty roster encompasses editors of journals and members of editorial boards, as well as board members of national and international governmental centers and members of advisory boards of companies in the private sector. Moreover, the Department is committed to serve the community by participating in a variety of outreach events to promote awareness of the importance of science and technology in relation to public health and the environment.

Our department is also unique for hosting the internationally recognized annual Miami Winter Symposium, created by Professor William Whelan, the first leader and Chair of the Department. The Miami Winter Symposium is currently managed by Nature Publishing and features world-renowned speakers in emerging areas of science and technology. This event cements our department’s goal of furthering education and discovery in biochemistry and molecular biology on an international level.

Admission Requirements
Applicants to biomedical programs should have a bachelor degree in a biological or related discipline (e.g., psychology, chemistry, engineering, physics). Although there are no prerequisite requirements, courses in general biology, cell/molecular biology, calculus, general physics, organic chemistry, physical chemistry, and biochemistry are encouraged. Applications are generally accepted from September to December for fall entry only. Select applicants will be offered an interview.

Competitive Candidates Will Have the Following:
- Excellent academic record
- Competitive GRE exam scores
- Research experience in a laboratory setting
- Publications of abstract and / or papers
- Co-authorship in a peer-reviewed journal is recommended
- Strong letters of recommendation from research scientists who know the candidate well
- Motivation to pursue state-of-the-art biomedical research

Applicants Must Submit the Following:
- Online Application
- Application Fee
- Official Academic Transcripts
- GRE General Test
- English Proficiency Exam (non-native speakers)
- Statement of Purpose
- Resume / CV

Full application instructions can be found online (http://biomed.med.miami.edu/apply/).

Master's Programs
- M.S. in Biochemistry and Molecular Biology (p. 897)

Doctoral Programs
- Ph.D. in Biochemistry and Molecular Biology (p. 898)
- Executive Ph.D. in Biochemistry and Molecular Biology (p. 895)

Executive Ph.D. in Biochemistry and Molecular Biology
Overview
There are three different tracks in which students may enter and progress towards award of the Ph.D in Biochemistry and Molecular Biology. The first track involves admission through the Program in Biomedical Sciences (PIBS). Alternatively, students may apply and be directly admitted to the PhD program. Finally, the Executive PhD allows students to complete coursework and perform research at their place of work. In all cases, students are assisted in tailoring a program to match his or her interests. In general, students complete courses offered in a variety of formats, e.g., formal lectures, seminars, and workshops. Each BMB graduate program's curriculum is designed to provide broad knowledge in the various aspects of molecular biology and biochemistry in addition to intensive training in certain specialized areas of research according to the student’s interests.

|            | Credit Hours                                               | 5            |
|            | Total Credit Hours                                          | 64           |
Mission
In agreement with the overall mission of both the University of Miami and the Miller School of Medicine, the BMB Executive PhD program strives to provide superior training in biochemical and molecular biological research and education to industrial and/or government laboratory professionals seeking a PhD degree. After the successful completion of this program, individuals will have a unique perspective on fundamental biochemical problems, resulting in more career options and increasing the likelihood that they will make important contributions to scientific progress and society.

Goals
Student Learning Outcomes
• Students will demonstrate an overall knowledge and understanding of the core concepts in biochemistry and molecular biology, including the essential skills to conduct research in biochemistry and molecular biology.
• Students will demonstrate critical thinking skills, the capability to develop hypotheses, and the ability to evaluate their hypotheses, paying attention to responsible conduct of research as appropriate.
• Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

M.S. in Biochemistry and Molecular Biology
The master's degree in BMB emphasizes laboratory-based or industrial research training and prepares students for careers in industry, academia, and government laboratories. The program is targeted to students interested in joining science workforce after the bachelor's degree in industry, academic, and government laboratories. The program is also suitable for students requiring additional background in BMB in order to pursue PhD or MD-PhD programs if they chose to pursue these paths after obtaining MS degree. The program will be useful for students who would like to transition into laboratory science workforce faster but were not prepared for laboratory or research hands-on experience during their undergraduate degree. We envision that the graduates from MS program will find career opportunities in industry or government laboratories. Additionally, these students will be better prepared for apply for PhD or MD-PhD programs.

Curriculum Requirements
The requirements for graduation with MS degree include the following:
• Successful completion of 15 credit hours of required courses and 15 credit hours of research work totaling 30 credit hours.
• A final oral comprehensive examination of the research performed. A student failing the comprehensive may be allowed one opportunity to retake it if the student's committee so advises. The re-examination may not be taken during the same semester or summer session and must be taken within one calendar year.

Ph.D. in Biochemistry and Molecular Biology

Overview

There are three different tracks in which students may enter and progress towards award of the PhD in Biochemistry and Molecular Biology. The first track involves admission through the Program in Biomedical Sciences (PIBS). Alternatively, students may apply and be directly admitted to the PhD program. Finally, the Executive PhD allows students to complete coursework and perform research at their place of work. In all cases, students are assisted in tailoring a program to match his or her interests. In general, students complete courses offered in a variety of formats, e.g., formal lectures, seminars, and workshops. Each BMB graduate program’s curriculum is designed to provide broad knowledge in the various aspects of molecular biology and biochemistry in addition to intensive training in certain specialized areas of research according to the student’s interests.

Mission

Our aim is to produce graduates who are thoroughly versed in the field of Biochemistry and Molecular Biology and who have a flexibility of approach that will allow them to take full advantage of new developments and techniques in other areas of research in whatever direction their career might lead them.

Goals

To provide students with:

• Training in discovery research and state-of-the art biomedical technologies by fostering unique and innovative research and collaborative interdisciplinary interactions among scientists of diverse backgrounds;
• An understanding of fundamental concepts in BMB and training to formulate and conduct original research;
• An ability to communicate research within the broad field of BMB as well as the community
• Training to become independent investigators.

Student Learning Outcomes

• Students will demonstrate an overall knowledge and understanding of the core concepts in biochemistry and molecular biology, including the essential skills to conduct research in biochemistry and molecular biology.
• Students will demonstrate critical thinking skills, the capability to develop hypotheses, and the ability to evaluate their hypotheses, paying attention to responsible conduct of research as appropriate.
• Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

Biomedical Sciences

biomed.med.miami.edu

Overview

The University of Miami's Miller School of Medicine is a research powerhouse, achieving international recognition for breakthroughs and advanced knowledge in diabetes, cancer, spinal cord injury, AIDS, marine science, and many other areas. Our centers of excellence are continually ranked among the nation's best, including Bascom Palmer Eye Institute, The Miami Project to Cure Paralysis, and the Diabetes Research Institute. And our new institutes such as Interdisciplinary Stem Cell Institute, Miami Institute for Human Genomics, and the Center for Computational Sciences will further enhance research. The research conducted here continues to enrich the quality of life for people worldwide.

Master of Science in Biomedical Sciences

MiBS is a full-time program that packs a core curriculum in biochemistry, molecular biology, cell biology and physiology, along with several optional courses in three customized tracks – Medicine, Research or Drug Discovery. Our courses are taught by the same faculty that teach our medical and graduate students and will be tailored to meet your needs. In addition, students participate in physician and clinical shadowing or directed research to prepare you for a career in the biomedical sciences.

PhD Programs in Biomedical Sciences

The University of Miami Miller’s School of Medicine (UMMSM) provides students a wide variety of research opportunities in the biological sciences across many disciplines and departments.

• Biochemistry & Molecular Biology (http://biomed.med.miami.edu/graduate-programs/biochemistry-and-molecular-biology/
• Cancer Biology (http://biomed.med.miami.edu/graduate-programs/cancer-biology/)
• Human Genetics & Genomics (http://biomed.med.miami.edu/graduate-programs/human-genetics-and-genomics/)
• Microbiology & Immunology (http://biomed.med.miami.edu/graduate-programs/microbiology-and-immunology/)
• Molecular & Cellular Pharmacology (http://biomed.med.miami.edu/graduate-programs/molecular-and-cellular-pharmacology/)
• Molecular Cell & Developmental Biology (http://biomed.med.miami.edu/graduate-programs/molecular-cell-and-developmental-biology/)
• Neuroscience (http://biomed.med.miami.edu/graduate-programs/neuroscience/)
• Physiology & Biophysics (http://biomed.med.miami.edu/graduate-programs/physiology-and-biophysics/)
Our courses are taught by the same faculty that teach our medical and graduate students and will be tailored to meet your needs. In addition, students participate in physician and clinical shadowing or directed research to prepare you for a career in the biomedical sciences.

MiBS prepares recent undergraduates for medical or graduate school or a career in the biomedical industry. Our master’s degree is an ideal way to use your gap year to build credentials and experience to propel yourself to any advanced degree. Students will have access to include handson faculty advising and mentoring to help you do your best and submit compelling applications. Students can begin our gap year program after their spring graduation and finish in time to start medical or graduate school the following August.

PhD Program in Biomedical Sciences
http://biomed.med.miami.edu/graduate-programs/programs-in-biomedical-sciences-pibs (http://biomed.med.miami.edu/graduate-programs/programs-in-biomedical-sciences-pibs/)

Overview

Programs in Biomedical Sciences (PIBS) at the University of Miami Miller’s School of Medicine (UMMSM) provides students a wide variety of research opportunities in the biological sciences across many disciplines and departments.

First-year students take a core curriculum that builds a solid foundation in the biomedical sciences. The common coursework in the first semester ranges from molecules to cells to systems of human physiology. Lectures are balanced by breakout sessions, in which faculty members discuss the primary literature with students in small groups. Students have the flexibility to select breakout sessions that match their interests. The core curriculum also offers critical learning opportunities in biostatistics, genomic and analytical tools. In the second semester, students select individual modular courses offered in our eight disciplines. These courses cover topics of specific relevance to graduate programs or research.
topics. Students also complete a course in Biostatistics and a workshop in BioInformatics.

**PhD Program Selection**

During their first year in the umbrella program, students complete three to four laboratory rotations in various disciplines. This opportunity allows students to explore their interests before selecting a program and dissertation mentor. Students match with mentors in specific programs and achieve program affiliation at the end of their first year in one of the following programs (for years two through five):

- Biochemistry & Molecular Biology (http://biomed.med.miami.edu/graduate-programs/biochemistry-and-molecular-biology/)
- Cancer Biology (http://biomed.med.miami.edu/graduate-programs/cancer-biology/)
- Human Genetics & Genomics (http://biomed.med.miami.edu/graduate-programs/human-genetics-and-genomics/)
- Microbiology & Immunology (http://biomed.med.miami.edu/graduate-programs/microbiology-and-immunology/)
- Molecular & Cellular Pharmacology (http://biomed.med.miami.edu/graduate-programs/molecular-and-cellular-pharmacology/)
- Molecular Cell & Developmental Biology (http://biomed.med.miami.edu/graduate-programs/molecular-cell-and-development-biology/)
- Neuroscience (http://biomed.med.miami.edu/graduate-programs/neuroscience/)
- Physiology & Biophysics (http://biomed.med.miami.edu/graduate-programs/physiology-and-biophysics/)

**Plan of Study**

Students enrolled in the first year program for the PhD in Biomedical Sciences complete the following core requirements. The curricula for years two through five can be found in the program links above.

**Program Elective Courses**

The following program courses are available to first year students in their spring semester. It is generally recommended that students only take courses in the program they wish to enter. This will put students on a timely path to graduation. Your options will be discussed in your spring course advising session.

Dept. Code: BST

Degree Programs

- Master of Science in Biostatistics (MS)
- Doctor of Philosophy in Biostatistics (PhD)

The Graduate Programs in the Department of Public Health Sciences at the University of Miami Miller School of Medicine are at the forefront of public health science with emphasis on research, education, and evidence based public health service. The Graduate Programs promote an environment of learning and inquiry, stressing the scientific method as a way of generating knowledge about common pathways in health and illness. The mission of the Graduate Programs in Public Health Sciences is to develop leaders who can expand and translate knowledge into policy and practice to promote health and prevent disease in human populations.

Admission Requirements

- **Application** - Applicants must submit their application online through SOPHAS (https://sophas.org/), the centralized application service of the Association of Schools and Programs of Public Health (ASPPH) (https://www.aspph.org/). All application materials, including transcripts, test scores, statement of purpose/personal statement, resume/CV, and letters of recommendation, must be submitted directly through SOPHAS.

- **Transcripts** - Applicants must submit official transcripts from all previously attended colleges and universities. All foreign transcripts must be official and submitted in the original language. If the original language is not English, an official translation must be submitted along with the transcript. We do not accept evaluations from foreign credentialing service organizations. All non-U.S. transcripts must be evaluated by the World Education Service (https://www.wes.org/) (WES) using ICAP Course-by-course evaluation service.

- **Official GRE Test Scores** - Applicants are required to submit GRE general exam scores (http://www.ets.org/gre/revised_general/about/) taken within the last five years.

- **English Proficiency Exam** - International students whose native language is not English and/or did not graduate from an English-teaching institution are required to submit TOEFL (https://www.ets.org/toefl/) or IELTS (https://www.ielts.org/en-us/) scores.

- **Resume/Curriculum Vitae** - Applicants must include a detailed resume including employment, public health experiences, community service, research, and academic or professional honors.

- **Statement of Purpose/Personal Statement** - Applicants are required to submit a statement of purpose that details their academic interest in the program. The statement should discuss any experience in biostatistics including training, education or other related qualifications. Applicants should discuss how earning the degree will contribute to their future professional and career goals. Applicants should also address any academic deficiencies, if applicable.

- **Letters of Recommendation** - Applicants must provide three letters of recommendation from individuals who are best able to assess their ability to be successful in a graduate degree program. Ideally, recommenders are recent professors, researchers or employers in a related field. Applicants will be asked to include the contact information of their recommenders on the SOPHAS application and recommenders will be sent an online form to complete via email.

For more information about our application process and to obtain detailed curricula on all our program offerings, please visit our website (http://publichealth.med.miami.edu/).

Masters Program in Biostatistics

- M.S. in Biostatistics (p. 905)

Doctoral Program in Biostatistics

- Ph.D. in Biostatistics (p. 906)
M.S. in Biostatistics

http://www.biostat.med.miami.edu/academics/ms-in-biostatistics/

The Master of Science (MS) in Biostatistics is an applied program intended for quantitative students seeking training in applied biostatistics. The program emphasizes applications and understanding of statistical concepts rather than theoretical and mathematical principles. The program is meant to be a terminal degree providing students with the necessary background for applying good biostatistical practices in real-world settings. Students will gain practical skills that can be applied immediately to a variety of data settings, which includes, but is not limited to, the biological life sciences public health, medical studies, and health services research.

The degree consists of 33 credits covering introductory probability, biostatistics, introductory epidemiology and public health, computing, clinical trials, introductory survival analysis, and introductory mathematical statistics. Enrichment will be provided by a statistical practicum and a seminar course.

Pre-requisites include:

1. Introductory calculus
2. Introductory linear algebra
3. Introductory computing

Mission

The mission of the Graduate Programs in Public Health is to develop leaders who can translate knowledge into policy and practice to promote health and prevent disease in human populations.

Goals

Upon completion of the Master of Science (MS) in Biostatistics degree, all graduates will be able to:

- Describe the core disciplines of public health and how they apply to improving population health.
- Apply statistical and epidemiological methods to the measurement and study of population health and the prevention of infectious and chronic disease.
- Describe concepts in probability theory, random variation and commonly used statistical distributions and mathematical statistics.
- Develop sample size and power calculations for different study designs including those from clinical trials and observational studies.
- Perform a variety of basic and advanced statistical analyses methods (estimation and inference) including explanatory data analysis, graphical descriptives, ANOVA, univariate and multiple regression models, generalized linear modeling, multivariate analysis, survival analysis, design of experiments and clinical trials, various new techniques from statistical methods, analyze cross-sectional and longitudinal data from observational and clinical trials.
- Apply quantitative and reasoning skills, as well as content-area knowledge, to analyze data from epidemiological, clinical, observational, and experimental studies.
- Interpret results from explanatory and descriptive data analysis and advanced statistical analyses to draw relevant conclusions from data.
- Develop a high level of competency in statistical programming both with SAS and R for both managing and analyzing data from different sources.
• Communicate effectively by producing summary reports, statistical analysis sections of applied papers, graphical summaries and tabular summaries of the data.
• Interact with different public health, health care and medical professionals to address statistical aspects of their research studies as a part of statistical consultation.
• Recognize potential ethical issues and implement the concepts of ethical conduct of research.

Student Learning Outcomes
• Students will develop and demonstrate effective written and oral communication skills in the presentation of public health information.
• Students will demonstrate mastery of applied statistical data analysis techniques.
• Students will develop and demonstrate the ability to make scholarly contributions to the biomedical sciences through effective statistical collaborating efforts.
• Students will master at least one statistical analysis software for data management and statistical analysis techniques.

Ph.D. in Biostatistics

The PhD in Biostatistics, offered through the Division of Biostatistics in the Department of Public Health Sciences at the Miller School of Medicine, provides a flexible curriculum to cover the basics.

Admitted PhD students are expected to take a full suite of courses including several iterations of the seminar course, a consulting practicum (or advanced computing course), and a series of four to six courses that ensure the candidate has studied a subject matter discipline within biomedical research. PhD students are also expected to take high-level courses in statistical theory, survival analysis, and high-dimensional and complex data not generally taken by MS students. The PhD program consists of 37 credits of core coursework, 6 credits of introductory public health coursework, 12 credits of electives, and 12 credits of dissertation research for a total of 67 credits to complete the degree. PhD students are expected to pass a first-year written diagnostic exam at the end of their first year of study. A second oral and written exam will be administered at the end of the third year.

To obtain detailed program curricula on the PhD in Biostatistics, please visit our website. (http://www.biostat.med.miami.edu/)

¹ BST 650 is taken for 1 credit in Fall and Spring during the first 2 years of study

Mission

The Doctorate Program in Biostatistics prepares students who have demonstrated excellence in mathematics, statistics, and the natural or social sciences to become research biostatisticians in academia, industry, or government positions, with a general focus on biostatistical applications, big data, and data science.

Goals

Graduates will be able to:
• Conduct and publish original research on the theory and/or methodology of biostatistics;
• Apply innovative theory and/or methods to scientific problems;
• Serve and lead as expert biostatisticians on collaborative scientific teams

Student Learning Outcomes
• Students will demonstrate an overall knowledge and understanding of the core concepts in Biostatistics, including the essential skills to conduct research in Biostatistics.
• Students will demonstrate critical thinking skills, the capability to develop conjectures, and the ability to make scholarly contributions.
• Students will demonstrate mastery of research competencies.

Cancer Biology

http://biomed.med.miami.edu/

Overview

The Sheila and David Fuente Graduate Program in Cancer Biology is a University-wide interdisciplinary training program that involves faculty from the basic science and clinical departments of the University of Miami. The objective of this program is to provide a unique multidisciplinary training environment for highly qualified individuals.
that will prepare them for independent research and teaching careers. The overall philosophy of the program is to integrate basic and clinical research. The scientific focus is on the biology of cancer and the development of novel diagnostic and therapeutic approaches.

The program emphasizes a multidisciplinary approach which incorporates concepts and state-of-the-art techniques from molecular biology, biochemistry, cell biology, biostatistics, genetics, genomics, immunology, proteomics, structural biology, clinical oncology, and translational research programs at the Sylvester Comprehensive Cancer Center. An important goal of the program is to provide students with a strong background in basic biomedical research coupled with an understanding of clinical aspects of cancer including diagnostic, prognostic, and therapeutic intervention. To achieve this goal, the program utilizes a unique program of study that includes lectures from both basic and clinical researchers. In addition, the program has a two-tier mentoring system in which students receive guidance from both a research mentor and a physician mentor. The research mentor is the dissertation advisor, while the physician mentor will provide the student with a clinical perspective in oncology. Through this dual mentorship, students conduct their doctoral research and obtain clinical knowledge in their area of study. The program aims to instill in students the ability to design multidisciplinary research programs in which scientific research is driven by unmet clinical challenges.

The core course in Cancer Biochemistry and Molecular Biology is a prerequisite for all CAB courses. Other required courses include Tumor Biology, Translational to Clinical Research, Student Seminars, Special Topics in Cancer Research, Dialogues with Cancer Clinicians, and Logic and Reasoning in Translational Cancer Research. (Students can also choose electives in cancer epidemiology, cellular and molecular biology, immunology, pharmacology, and microbiology with permission of the CAB Director. After joining the program and choosing a research mentor, students formulate a proposal and take a qualifying exam. Their subsequent research is guided by an individually tailored dissertation committee, including the research advisor and physician mentor.)

**Admission Requirements**

Applicants to biomedical programs should have a bachelor degree in a biological or related discipline (e.g., psychology, chemistry, engineering, physics). Although there are no prerequisite requirements, courses in general biology, cell/molecular biology, calculus, general physics, organic chemistry, physical chemistry, and biochemistry are encouraged. Applications are generally accepted from September to December for fall entry only. Select applicants will be offered an interview.

**COMPETITIVE CANDIDATES WILL HAVE THE FOLLOWING:**
- Excellent academic record
- Competitive GRE exam scores
- Research experience in a laboratory setting
- Publications of abstract and / or papers
- Co-authorship in a peer-reviewed journal is recommended
- Strong letters of recommendation from research scientists who know the candidate well
- Motivation to pursue state-of-the-art biomedical research

**APPLICANTS MUST SUBMIT THE FOLLOWING:**
- Online Application
- Application Fee
- Official Academic Transcripts
- GRE General Test
- English Proficiency Exam (non-native speakers)
- Statement of Purpose
- Resume / CV

Full application instructions can be found online (http://biomed.med.miami.edu/apply/).

**Doctoral Programs**

- Ph.D. in Cancer Biology (p. 907)

Students are encouraged to take pertinent elective courses under guidance of their Dissertation Committee and research mentor. Electives must be approved by CAB graduate program director.

- Required course credits: 36 cr. [700 level courses (required or elective)]
- Dissertation research: 24 cr.

**Mission**

The Graduate Program in Cancer Biology offers graduate training leading to a Ph.D. in Cancer Biology. It is the mission of the program to provide our students with 1) an understanding of the central concepts in cancer biology and basic biomedical science coupled with an understanding of clinical aspects of cancer including prevention, diagnosis, prognosis and therapeutic interventions and 2) the ability to formulate, conduct, analyze and communicate original research within the broad field of cancer biology including fundamental cellular processes and their derangement in cancer etiology / progression; identification and mechanisms of novel cancer therapeutics and preventative agents; and identification of novel therapeutic targets, diagnostic and prognostic markers.

**Goals**

**Student Learning Outcomes**

- At the end of the program, students will demonstrate an overall knowledge and understanding of the core concepts in cancer biology, including the essential skills to conduct cancer biology research.
- Upon completion of the program, all students will demonstrate critical thinking skills, the capacity to develop hypotheses, the ability to evaluate their hypotheses through appropriate experimental design and analysis paying attention to responsible conduct of research as appropriate.
- Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

**Cellular Physiology and Molecular Biophysics**

biomed.med.miami.edu

**Overview**

Cellular Physiology and Molecular Biophysics is focused on how human organism function by applying principles of physics to the underlying molecules and cells. The training and research emphasis in the Graduate Program in Cellular Physiology and Molecular Biophysics at the University of Miami School of Medicine is directed at determining the molecular mechanisms underlying physiological functions, such as how does the heartbeat, how does the brain work, and how do we see, smell, and taste, using biophysical techniques and analyses. More specifically, research facilities and guidance for graduate work are available in developmental neurobiology, sensory receptor mechanisms, axonal electrophysiology, ionic mechanism of the nerve impulse, electrophysiological and molecular aspects of synaptic and neuromuscular transmission, mechanisms of ion channel gating, selectivity and conductance, metabolic aspects of nervous function, molecular neuroscience, neuroimmunology, protein structure-function studies, molecular recognition, ligand-receptor interactions, axonal growth, neurotrophic factors, cytokines, gene targeting, neuronal apoptosis, nerve regeneration, molecular adhesion, and regulation of muscle contraction.

The Graduate Program in Cellular Physiology and Molecular Biophysics trains its students to use and develop state-of-the-art biophysical techniques that address fundamental questions related to molecular and cellular physiology and biophysics and developmental and molecular neuroscience. In addition, the students receive training in related biological disciplines and also in systemic physiology in order to obtain a broad viewpoint. This training prepares the students for future careers in research and teaching in academic institutions and also for careers in industry.

physiology@miami.edu

Admission Requirements

Applicants to biomedical programs should have a bachelor degree in a biological or related discipline (e.g., psychology, chemistry, engineering, physics). Although there are no prerequisite requirements, courses in general biology, cell/molecular biology, calculus, general physics, organic chemistry, physical chemistry, and biochemistry are encouraged. Applications are generally accepted from September to December for fall entry only. Select applicants will be offered an interview.

COMPETITIVE CANDIDATES WILL HAVE THE FOLLOWING:

• Excellent academic record
• Competitive GRE exam scores
• Research experience in a laboratory setting
• Publications of abstract and / or papers
• Co-authorship in a peer-reviewed journal is recommended
• Strong letters of recommendation from research scientists who know the candidate well
• Motivation to pursue state-of-the-art biomedical research

APPLICANTS MUST SUBMIT THE FOLLOWING:

• Online Application
• Application Fee
• Official Academic Transcripts
• GRE General Test
• English Proficiency Exam (non-native speakers)
• Statement of Purpose
• Resume / CV

Full application instructions can be found here (http://biomed.med.miami.edu/apply/).

Doctoral Programs

Ph.D. in Cellular Physiology and Molecular Biophysics (p. 910)

Ph.D. in Cellular Physiology and Molecular Biophysics

During the first year, the students choose several laboratories in which to do brief, introductory research projects (rotations). After the student’s selection of a faculty mentor the main emphasis of training shifts to the design and proposal of a dissertation research project, and, with its approval, laboratory research. Students report periodically on their research in discussions with other students and the faculty.

Since the Department aims to prepare its graduates for careers in research and teaching, all students in the Department are expected to participate in teaching; these teaching activities typically require no more than 1-2 weeks per year.

Total Credit Hours 62

1 Students in this program take PIB 700 twice for a total of 2 credits. Please see the Plan of Study for more information.

2 Students in this program take PHS 700 four times for a total of 4 credits. Please see the Plan of Study for more information.

Program Plan

The Department of Cellular Physiology and Molecular Biophysics’ PhD program trains highly qualified students for successful careers in research, teaching and industry. A high faculty to student ratio assures that each student receives individualized help from the faculty together with access to the latest scientific instrumentation.
Student training is enhanced by research seminars and student-oriented discussions presented by world-renowned visiting scientists, as well as by participation in research seminars and research discussion groups. We seek to provide a congenial and supportive environment in which each student develops to the fullest their abilities to reason critically, design and conduct incisive experiments, and communicate research results effectively in both written and oral formats. Our faculty's wide collective experience as successful researchers, teachers, journal editors, and peer reviewers is available to help graduates prepare for and attain research and teaching positions in academia and industry.

Please note that the following is only a sample curriculum plan. Current students must discuss their plan with their program director to make adjustments as needed. It is the student's responsibility to contact the program to verify the information.

**Mission**

The Physiology & Biophysics Ph.D. program offers training in physiological and biophysical research and education to students seeking a Ph.D. degree. The mission of the program is to provide to our students 1) the knowledge of the relevant literature in molecular and cellular physiology, the ability to formulate hypotheses about
physiological functions in humans and animal models under healthy and disease states, to critically evaluate data and draw the appropriate conclusions from the data, and the ability to present hypotheses and data in written and oral presentations, 2) training in different biophysical techniques to have the technical ability to conduct experiments to study diseases at the molecular and cellular level, to have the quantitative and computational knowledge to analyze the data, and to use the appropriate statistical methods to evaluate the data.

Goals

Student Learning Outcomes
- Students will demonstrate an overall knowledge and understanding of the core concepts in Physiology and Biophysics, including the essential skills to conduct research in Physiology and Biophysics.
- Students will demonstrate critical thinking skills, the capability to develop hypotheses, and the ability to evaluate hypotheses, paying attention to responsible conduct of research as appropriate.
- Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

Clinical and Translational Investigation

http://miamictsi.org/education/masters-program

Overview

The Master of Science in Clinical and Translational Investigation (MSCTI) at the University of Miami offers a structured educational program that trains students in the principles and practice of translational science and clinical research. Our multidisciplinary program has been designed to prepare practitioners and researchers to adapt to translational science and to overcome the perceived bottlenecks that inhibit translational research. We equip our students with the tools to navigate the complexities of translational research design, methodology, regulatory and ethical challenges.

Drawing upon the University of Miami Miller School of Medicine’s mission to educate the next generation of medical leaders and to lead life-changing discoveries that transform patient care through innovative research, the Master of Science in Clinical and Translational Investigation (MSCTI) degree program’s mission is to educate the next generation of investigators who demonstrate the ability to review, design, and conduct high-quality, multidisciplinary clinical and translational research independently.

Our educational objective is to provide an instructor-led educational curriculum that introduces students to key areas of clinical and translational research, and to produce graduates who demonstrate core competencies in clinical and translational research. Students will learn how to design independent and collaborative research projects and become well-versed in key aspects of clinical and translational investigation.

Course of Study

The Masters in Clinical and Translational Investigation can typically be completed in 4-6 consecutive terms (Fall, Spring, Summer) depending on the goals and professional responsibilities of the student. The 30 credit-hour program includes completion of structured taught courses and completion of a master’s thesis which may take the form of a completed research grant proposal or publishable manuscript. Successful completion of the MSCTI requires students to maintain a GPA of 3.0 or greater with no grade below C in any courses and successful completion of the master’s thesis.

Students who intend to complete the MSCTI program part-time must discuss their plan with their employer and make adjustments as needed to attend course lectures. Students who are studying with an F1 visa must enroll in a minimum of nine credits per semester.

Admissions Requirements

Admission Requirements

We accept applications from individuals who meet any of the following criteria:
- Individuals who have completed terminal healthcare degrees (e.g., MD, PhD, DO, RN) who are interested in pursuing additional formal didactic training to become independent investigators in clinical and/or translational science;
- Individuals who have completed terminal scientific degrees (e.g., Ph.D., DSci) who are interested in pursuing additional formal didactic training to improve knowledge and skills related to translation of basic to clinical applications; and
- Individuals who are currently enrolled in a terminal degree program (e.g., MD, PhD) who are interested in adding a year to their program to obtain a MCTSI concurrent with their terminal degree.
- Students who have completed a Bachelor’s degree who have outstanding academic credentials and an interest in obtaining a MS prior to a career in clinical translational research or a graduate program will also be eligible.

Detailed information about the application package requirements can be found here (http://biomed.miami.edu/apply/apply-mscti/).

Mission

Drawing upon the University of Miami Miller School of Medicine’s mission to educate the next generation of medical leaders and to lead life-changing discoveries that transform patient care through innovative research, the Master of Science in Clinical and Translational Investigation (MSCTI) degree program’s mission is to educate the next generation of investigators who demonstrate the core competencies necessary to review, design, and conduct high-quality, multidisciplinary clinical and translational research independently.

Goals

Our educational objective is to provide an instructor-led educational curriculum that introduces students to key areas of clinical and translational research, and to produce graduates who demonstrate core competencies in clinical and translational research. Students will learn how to design independent and collaborative research projects.
and become well-versed in key aspects of clinical and translational investigation.

**Student Learning Outcomes**

- 100% of students who complete CTI 605 Introduction to Clinical and Translational Research should demonstrate the following competencies with at least intermediate proficiency:
  - Summarize evidence from the literature on a translational research problem;
  - Critique clinical and translational research questions using data-based literature searches;
  - Assess the strengths and weaknesses of possible study designs for a given clinical or translational research question; and
  - Describe future implications of published studies on team science and translational science.

- Students who complete CTI 602 Writing for Clinical and Translational Research should demonstrate the following competencies:
  - Write introduction to a translational research manuscript or a grant specific aims page;
  - Understand the grant review process from the perspective of an applicant and a reviewer; and
  - Understand the key components of how to put together an NIH-style grant.

- The overall goal of the Capstone Project is to provide students with an opportunity for hands-on exposure to clinical/translational research. Students who complete the CTI 805 ‘Capstone Project/Masters Thesis’ of the MSCTI Program will demonstrate the following competencies:
  - Ability to plan a research activity;
  - Ability to prepare, draft, finalize, and submit all sections of a grant application;
  - Knowledge and motivation to carry out the planned research activity;
  - Ability to analyze the results of the research;
  - Ability to complete a written description of the work in the form of a well-written, properly organized thesis;
  - Ability to complete a thesis with potential for presentation at and/or participation in professional meetings and/or publication in scholarly journals; and
  - Ability to identify and work with a mentor on their project.

**Dermatology**

**Overview**

The Department of Dermatology and Cutaneous Surgery (http://dermatology.med.miami.edu/master-of-science-in-skin-biology/) offers a unique Masters of Science in Skin Biology and Dermatological Science (MS-SBDS) program. The program prepares students for careers and leadership in skin science and industry. The curriculum covers basic science and laboratory techniques, as well as management skills, grant & regulatory issues, enterprise issues, and clinical problems.

The Master of Science in Skin Biology and Dermatological Sciences program (MS in SBDS) is unique in its depth and breadth because it covers basic science research and laboratory techniques. In addition, the degree considers a variety of additional skills to help you succeed in industry and academia, for it considers management skills, grant writing, regulatory issues, enterprise formation issues, and clinical problems.

Skin biology includes many biological processes: development, perpetual differentiation and barrier maintenance, stem cell biology, tissue repair and regeneration, neogenesis, native and adapted immunity, and genetic disorders just to name a few. The areas represented in our research base include aging, microbiology, inflammation, immunology, genomics, pharmacology, biochemistry, cell and stem cell biology as well as clinical research using areas of a variety of skin disorders, aging, aesthetics, cancer, and wounds as a clinical touchpoint.

Training in all these aspects is currently not provided by any single program in the United States. Thus, a Master’s degree in Skin Biology and Dermatological Sciences will impart a unique skill set and research background. There is a growing need for knowledgeable health care professionals. Health care providers, policy makers, research scientists, academic practices in the US and in the rest of the world, as well as makers of skin and skin care products from devices, drugs and cosmeceuticals and their workers need trained personnel. The coursework in this degree program will offer essential scientific knowledge, management, and administrative skills that will be helpful for individuals desiring a skin sciences oriented career.

**Program Options**

Master of Science (MSc.) in Skin Biology and Dermatological Sciences (MS in SBDS), offers a Thesis path and Non-Thesis path.

- **Thesis Path:** The MSc. with thesis path requires completion of a laboratory research project and thesis. This option is tailored for students interested in doing research or contemplating work for a Ph.D. degree or academic career.
- **Non-Thesis Path:** The MSc. without thesis option is designed for students who wish to improve their knowledge in Skin Biology and related sciences through a rigorous series of courses. The program may fit for people from industries or organizations.

Both thesis and non-thesis options are also helpful for students seeking to apply to medical school or a dermatology residency program.

## Plan of Study (Non-Thesis Track)

### Year One

#### Fall

- DER 601: Introduction to Dermatology 1
- DER 603: Skin Biology and Pathophysiology 3
- DER 605: Microbiology and Immunology of the Skin 3
- DER 606: Dermato-epidemiology 2
- DER 631: Advances in Dermatology 1
- DER 641: Frontiers in Sciences 1

#### Spring

- DER 607: Dermatopharmacology 2
- DER 608: Photobiology and Photomedicine 1
- DER 609: Skin Carcinogenesis 2
- DER 610: Clinical Skin Diseases 2
- DER 622: Introduction to Dermatopathology 1
- DER 632: Advances in Dermatology 1
- DER 642: Frontiers in Sciences 1

#### Summer

- DER 611: Visualizing the Skin 2
- DER 612: Grant Writing 1
- DER 614: Innovation in Dermatology 1
- DER 615: Dermatology Health Care Delivery 1
- DER 623: Techniques in Skin Research- II 1
- DER 633: Advances in Dermatology 1
- DER 643: Frontiers in Sciences 1

#### Research Rotation

- DER 608: Research Thesis 6
- Total Credit Hours 37

## Plan of Study (Thesis Track)

#### Research Rotation

- DER 608: Research Thesis 6
- Total Credit Hours 30
DER 641  Frontiers in Sciences  1
Credit Hours  11

**Spring**
DER 607  Dermatopharmacology  2
DER 608  Photobiology and Photomedicine  1
DER 609  Skin Carcinogenesis  2
DER 610  Clinical Skin Diseases  2
DER 613  Techniques in Skin Research  1
DER 622  Introduction to Dermatopathology  1
DER 632  Advances in Dermatology  1
DER 642  Frontiers in Sciences  1
Credit Hours  11

**Summer**
DER 611  Visualizing the Skin  2
DER 612  Grant Writing  1
DER 614  Innovation in Dermatology  1
DER 615  Dermatology Health Care Delivery  1
DER 623  Techniques in Skin Research- II  1
DER 633  Advances in Dermatology  1
DER 643  Frontiers in Sciences  1
DER 663  Research Rotation  1
*Can be taken as DER 661 in the Fall Semester or DER 662 in the Spring Semester
Credit Hours  9

**Year Two**
**Fall**
DER 808  Research Thesis  1  6
Credit Hours  6
Total Credit Hours  37

1 DER 808 may be taken for 1-6 credits per semester in any semester for a required total of 6 credits.

**Mission**
Our mission is to foster future generations of skin scientists, physician scientists and industrial leaders in skin sciences, skin care as well as skin related drug and device development.

**Goals**
In alignment with the university’s strategic vision, the Goals of the programs are:

- Train Master’s students in a focused knowledge area of Skin Biology and Dermatological Science; and
- Train Master’s students in requisite research and research management skills,

**Student Learning Outcomes**

- Students will demonstrate advanced knowledge of the fundamentals of skin biology.
- Students will demonstrate advanced knowledge of dermatological science and disorders.
- Students will demonstrate advanced knowledge of innovation, technology and regulations in the field of Skin Biology.

**Human Genetics and Genomics**
http://biomed.med.miami.edu/graduate-programs/human-genetics-and-genomics

**Overview**
The Interdepartmental PhD Program in Human Genetics and Genomics is a multi-disciplinary program aimed at training scientists broadly in areas of human genetics and genomics relevant to human health and disease. The emerging practice of “precision medicine,” whereby clinical treatment decisions are based in part on an individual’s genomic profile, depends on “genomic literacy” among practitioners, researchers and patients. Human Genetics and Genomics is a multidisciplinary field that requires training in three core competencies: clinical, molecular, and statistical genetics. Individuals earning PhDs in Human Genetics and Genomics will have various career options, including clinical laboratory (after fellowship training and board certification), research laboratory or computational research in academia, healthcare, and the biotechnology industry.

During the first year of PIBS curriculum, students will have the opportunity to take two introductory short courses: Variation & Disease and Family Studies & Genetic Analysis. Rotations through faculty laboratories provide students with hands-on experience in various research areas. The rotations also provide the student the background necessary to select a dissertation advisor and area of research.

During the second year, the curriculum focuses on core coursework in molecular and computational genetics, biostatistics, and seminars and journal clubs.

Also, during the second year, students choose to pursue one of two tracks within the program: molecular genetics or computational genetics. Course requirements differ slightly between these two paths: students in the molecular genetics track will take Advanced Topics in Molecular Genetics while the Computational Genetics track students take Design and Analysis of Human Genomic Studies and a second course in biostatistics.

During the second and third years of study, students formulate and defend a dissertation proposal. All students participate in a 1-credit hour clinical rotation and complete a teaching practicum any time after passing the Qualifying Examination.

Applying to the Program

Admission Requirements

Applicants to biomedical programs should have a bachelor degree in a biological or related discipline (e.g., psychology, chemistry, engineering, physics). Although there are no prerequisite requirements, courses in general biology, cell/molecular biology, calculus, general physics, organic chemistry, physical chemistry, and biochemistry are encouraged. Applications are generally accepted from September to December for fall entry only. Select applicants will be offered an interview.

Competitive candidates will have the following:
- Excellent academic record
- Competitive GRE exam scores
- Research experience in a laboratory setting
- Publications of abstracts and/or papers
- Co-authorship in a peer-reviewed journal is recommended
- Strong letters of recommendation from research scientists who know the candidate well
- Motivation to pursue state-of-the-art biomedical research

Applicants must submit the following:
- Online Application
- Application Fee
- Official Academic Transcripts
- GRE General Test
- English Proficiency Exam (non-native speakers)
- Statement of Purpose
- Resume/CV

Full application instructions can be found at: biomed.med.miami.edu/apply

Doctoral Programs
- Ph.D. in Human Genetics and Genomics (p. 917)

Ph.D. in Human Genetics and Genomics

Total Credit Hours 55-68

1. HGG 601 is required for all HGG students - 1 semester credit each fall and spring semester.
2. All students must complete course requirements for either Computational or Molecular track.
3. HGG 621 / EPH 602: Required for Computational Track students only (may be taken as elective otherwise).
4. HGG 650: Required for Molecular Track students only (may be taken as elective otherwise).
5. The molecular track requires a minimum of 62 credits. The computational track requires a minimum of 65 credits.

Program Plan

The PhD in Human Genetics and Genomics (HGG) curriculum allows candidates to pursue a track in molecular or computational genetics by their second year of training; however, all students complete a core curriculum in the first three years of graduate study. Students will also participate in seminars and journal clubs in the fall and spring semesters, through all years of study.

First-year students interested in Human Genetics and Genomics are strongly encouraged to take two introductory HGG short courses in the spring semester: HGG 630 – Variation and Disease and HGG 640 – Family Studies and Genetic Analysis which are requirements for completing the HGG degree. Courses in computational/quantitative skills, including biostatistics and bioinformatics will also form part of the first year PIBS curriculum. Each PIBS student completes at least three lab rotations of nine weeks each and chooses a dissertation laboratory
(and graduate program) during the latter half of the spring semester. If necessary a fourth rotation may be possible, and in this case a laboratory choice may be deferred until June. All first year students will make short presentations to a group of faculty after each lab rotation. For these presentations the students will be divided into four groups with related research interests.

After choosing a mentor and laboratory at the end of the first year, a student becomes a member of the HGG Program. Students select and follow a track in molecular genetics or computational genetics in the first semester of year 2. At this point course requirements differ slightly between these two paths: Students in the molecular genetics track take Advanced Topics in Molecular Genetics (HGG 650) in the second semester, while the computational genetics track students take a second course in biostatistics (EPH 602) and a course in Design and Analysis of Human Genomic Studies (HGG 621).

In addition to the required core courses, all students participate in a clinical rotation and serve one semester as a teaching assistant for a core course any time after passing the Qualifying Examination.

It is expected that on average, students will complete the program in five years. Please review the complete course descriptions on the COURSE tab above. The general core curriculum is shown in the Plan of Study below:

Mission
The Interdepartmental PhD Program in Human Genetics and Genomics (HGG) aims to train scientists broadly in areas of human genetics and genomics relevant to human health and disease. Human genetics is a multidisciplinary field that requires training in three core competencies: clinical, molecular, and statistical genetics. This broad training differentiates human genetics graduate programs from other programs in molecular biology, biochemistry, epidemiology, or statistics that focus training on one of the three core areas. The mission of the HGG is to prepare the next generation of genomic scientists to conduct research in molecular, statistical and clinical genetics and to translate these research results into improved medical care and public health interventions.

Goals
Student Learning Outcomes
- Students will demonstrate an overall knowledge and understanding of the core concepts in Human Genetics and Genomics, including the essential skills to conduct research in Human Genetics and Genomics.
- Students will demonstrate critical thinking skills, the capability to develop hypotheses, and the ability to evaluate their hypotheses, paying attention to responsible conduct of research as appropriate.
- Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

MD Program
General Information
The University of Miami Miller School of Medicine enrolls approximately 198 students each year. One-hundred and fifty will be in the MD program and 48 in the 4-year, combined degree, MD-MPH Program. It has been a long-standing policy of the School of Medicine to admit students with diverse backgrounds. Therefore, qualified non-traditional students, women, socio-economically disadvantaged students, and minorities underrepresented in medicine, are especially encouraged to apply.

U.S. Citizenship
All applicants must be US citizens or permanent residents of the United States with an alien registration receipt (green) card in their possession at the time they complete the AMCAS application. Applicants who apply as permanent residents will be required to submit a photocopy of their alien registration receipt card.

Florida Residents
Since the School of Medicine is no longer subsidized by the State of Florida, Florida residents are not given preference in admissions decisions. For tuition purposes, a Florida resident is one whose parents or guardians (or the applicant, if independent) have established legal residence in, and resided permanently in, the State of Florida for twelve consecutive months immediately prior to the first day of classes. Applicants can not claim Florida residency simply on the fact that they lived in Florida coincident with attending a college or university. To receive initial consideration as a Florida resident, applicants must declare Florida as their state of residence on their AMCAS application. Exceptions to this requirement will not be granted.

Residents of Other States
The Miller School of Medicine has made a significant commitment to enroll more students from outside the state of Florida. This departure from previous policy reflects the growing national prominence of the School of Medicine and the national and international reputation of our clinical facilities and specialty centers, and our outstanding research programs.

Financial Assistance Information
The University of Miami Miller School of Medicine is a private medical school. It has been a priority of the medical school to keep the tuition and fees very reasonable. Please visit our Financial Assistance Website. (http://mededu.med.miami.edu/contact-us/student-financial-assistance/)

### Mission

The educational mission of the University of Miami Miller School of Medicine is to graduate physicians with the ability and commitment to improve the health of all populations through their leadership in patient care, research, education, and the community.

**Goals**

**Student Learning Outcomes**

- Students will demonstrate master of biomedical knowledge (i.e., anatomy, biochemistry, immunology, etc.) required to practice clinical medicine.
- Students will demonstrate clinical skills proficiency, such as performing a complete physical examination. Student competency in performing a physical examination and in clinical skills is evaluated by student performance on end of year 1 and 2 competency exercises.
- Students will demonstrate application of knowledge and skills to clinical decision-making and the practice of medicine, including formulating differential diagnoses, and a diagnostic and therapeutic plan. Student competency in organizing clinical data, synthesizing clinical information and formulating management plans is demonstrated by performance on the United States Medical Licensing Step 2 Clinical Skills Examination.

**MD/JD Program**

The University of Miami School of Law (http://www.law.miami.edu/) in partnership with the University's Miller School of Medicine propose to offer a joint MD/JD degree program. The law curriculum prepares medical students for careers in health sector law, leadership and policy. It also prepares future physicians for legal aspects of running a private medical practice or heading a group practice. This joint program allows students to obtain both MD and JD degrees in six years.

The first two years are spent in the MD program. Years three and four are focused on the JD degree and the final two years are spent completing the MD degree and the final JD credits.

In the third year, students will complete the standard first year J.D. curriculum at the School of Law for a total of 32 credits. During the fourth year, it is expected that students will complete a total of 33 credits. There are an additional 12 credits of coursework to be completed in the School of Law which will take the form of summer courses and/or intersession courses. The total number of credits to be completed through coursework at the Law School for the JD degree is 77. The remaining 11 of the 88 required JD credits will be transferred from the Medical School course work and will be double-counted toward both degrees. These credits may include co-listed courses, such as the Idea of a Hospital, an interdisciplinary course co-listed in both the Law School and Medical School (as well as other UM Schools). Students will be able to take co-listed courses and register in the program where the student would like the credits to apply. Of course, co-listed courses are particularly suitable to double-counting for the J.D. degree when taken as a Medical School course.

The Law School expects the list of recommended courses to expand in the future. Opportunities for practicums and externships will be developed as part of this program. Students will receive their J.D. degree during the May graduation of their sixth year of the joint program because some of the credits to be transferred from the School of Medicine will be taken their 6th year when electives are built into the medical school curriculum. An elective course offering which will be required for this joint degree is the Medical Legal Clinic (offered as either a 2-credit or 4-credit course) sponsored by the Law School and offered through the School of Medicine. Students who have completed all but the last five credits may walk at Law School graduation with their law school cohort. (Please
note that the 11 credits from the Medical School to be transferred to the J.D. program may not be from any Medical School courses taken prior to matriculation in the Law School.)

**MD/MBA Program**

The University of Miami Herbert Business School (http://bus.miami.edu) offers a joint M.D./M.B.A. degree program in partnership with the Miller School of Medicine. The business curriculum prepares future physicians for the business complexities related to running a private medical practice or heading a group practice, as well as prepare medical students for careers in health sector management, leadership and policy.

The M.D./M.B.A. program adds an additional year to the four-year medical school curriculum. The M.B.A. coursework ranges from financial reporting and corporate strategy to the legal aspects of health administration.

MD/MBA candidates have the option of choosing a Research Track (project based which provides practical hands on experience) or an Elective Track (provides business electives). Please refer to the curriculum for details.

Questions about the M.D. portion of the program should be directed to Senior Associate Dean Alex Mechaber, M.D., at the Miller School of Medicine, AMechabe@med.miami.edu (MOConnell@med.miami.edu), while questions about the MBA portion should be directed to Admission Advisors at the Miami Herbert Business School, 305-284-2510 or mba@miami.edu.

M.D. students are required to submit a Full-Time (https://www.applyweb.com/apply/miamibus/) MBA online application to be considered for the M.D./M.B.A. Program.

The application deadline for this program is April 1st of each year.

MD/MPH Program

The educational mission of the University of Miami Miller School of Medicine interdisciplinary MD/MPH dual degree program is to graduate physicians with the ability and desire to improve the health of all populations, especially those most vulnerable and underserved, by alleviating suffering and eliminating healthcare disparities through their leadership in patient care, research, education, health care administration and the community.

Four-Year MD-MPH Program:

The University of Miami Miller School of Medicine (UMMSM) MD/MPH program is unique in several ways. There are very few four-year MD/MPH dual degree programs offered at medical schools in the United States. Our program integrates significant components of the MPH coursework into the curriculum beginning in the first year and culminating in a required four-week clerkship in Public Health in the fourth year. In addition, the medical school has partnered with the Palm Beach County Health Department http://www.pbchd.com. This partnership provides opportunities to work with public health professionals in one of the country's most academic and comprehensive public health departments.

The program is designed to provide graduates with the clinical and research skills required to approach health problems from a population and prevention perspective by integrating the roles of the biological sciences and clinical practice into the broader sets of knowledge and practices used in public health. We will graduate physicians who are provided the academic knowledge and skills, as well as the clinical experience to improve the health of all populations, especially those most vulnerable and underserved.

The MD/MPH dual degree program is an educational track at the UMMSM that will provide:

- Both degrees in four years
  - Integrated and innovative training in both clinical medicine and public health
  - In depth training in public health that provides the skills needed to reduce death and disability at the population level
  - Two years of study at the Miami campus followed by two years at our regional medical campus in Palm Beach and Broward Counties working in our community teaching hospitals and clinics and with Department of Health professionals and faculty physicians in community settings
  - Sustainable partnerships that provide opportunities to assess and improve public health, working with Public Health physicians in clinical and public health activities during clinical rotations
  - Opportunities for community-based research to complete the required special project for the MPH degree (capstone)

MD/MS in Genomic Medicine

Be a part of the future of genomic and personalized medicine!

This 4-year concurrent master’s degree in Genomic Medicine will provide you with the background, knowledge, and understanding to integrate the ever expanding field of genomics into your practice. No matter which medical specialty you choose, genomic medicine is increasingly becoming an integral part of patient care with the use of predictive clinical sequencing, pharmacogenomics, and whole genome analysis.

Educational Mission of the MD/MS Program in Genomic Medicine

The educational mission of the program is to graduate clinicians with the ability to integrate genomic knowledge into their clinical practice. In collaboration with the Hussman Institute for Human Genomics, graduates will be trained in human genetics, family history, diagnostic genomic tests, high throughput sequencing, pharmacogenomics and the newest genomic concepts and approaches. The MD/MS degree will prepare students to be leaders in the adoption and integration of these methods in routine clinical care.

The MD/MS degree program in Genomic Medicine will provide:

- Both degrees obtained during 4 year MD degree
- Integrated and innovative training in both clinical and human genomics
- Online coursework coupled with small group learning sessions for smooth integration into your schedule
- Hands-on experience analyzing and interpreting genome sequence data
- Capstone experience featuring clinical case descriptions, journal club, and individual research projects

Applying for the MD/MS Program in Genomic Medicine: Online application (http://biomed.med.miami.edu/apply/apply-md-ms-in-genomic-medicine/)

- Applicants must be accepted first-year medical students in the UM Miller School of Medicine. The first block of MS courses begin in the 2nd academic semester (spring) of the first year.
- Applications are due by November 1st of each year.
- The academic prerequisites are the same as those for the regular MD program.
- Graduate Record Exam (GRE) test scores are not required to apply to the program.
- Applicants will be notified of their acceptance status in late November or early December for coursework that will begin in the Spring semester of the first year of medical school.
- Acceptance is contingent upon successful completion of first semester coursework.
- Tuition is equal to UM Miller School of Medicine dual degree tuition.

For additional information (http://medgen.med.miami.edu/education/msgm/), please contact Dori McLean, Manager of Programs, DMclean@med.miami.edu . (dmclean@med.miami.edu)

Curriculum Requirements

The curriculum below outlines the additional course work required to earn the Master’s in Genomic Medicine (MSGM). These courses are completed concurrently with the traditional MD curriculum which is outlined under the MD Program curriculum tab (p. 920). Please review additional information under the Plan of Study tab (p. 930)

Plan of Study - Genomic Medicine

The Master's in Genomic Medicine (MSGM) coursework is concurrent with the UM Miller School of Medicine MD Program beginning in Spring semester of the first year and ending upon completion of the MD program in the 4th year. Each course is made up of self-guided online instruction and reading and in-person small group work. In the first two years, self-guided instruction is expected to require approximately 3 hours per week of time commitment. Small group work is an additional 3-hour block of time per week that will be determined upon the MD program schedule for that semester. Up to 3 additional hours per week may be required for assignments, projects, and review. Years 3 and 4 contain a clinical clerkship elective and the MSGM Capstone that will culminate in a written portfolio and public presentation of the Capstone experience.
Overview

The Miller School of Medicine Medical Science Training Program (MD/PhD Program) provides a unique training environment for exceptionally qualified individuals who want to pursue careers in academic medicine and research. The curriculum comprises the school's outstanding preclinical and clinical training, rigorous PhD graduate training and several elements, including professional development workshops and other activities, specifically designed to enhance the MSTP training experience. There has been a long tradition of research excellence and physician scientist training at the Miller School of Medicine. With the opportunities for basic and clinical research here, Miami's diverse population and access to Latin America and the Caribbean, the backdrop of a vibrant city, make the Miller School a unique place for MSTP training.

Goals

The MSGM degree will prepare students to be leaders in the adoption and integration of these methods in routine clinical care. While multidisciplinary, this degree program's core emphasis is on clinical and translational research skills. Students completing this program will continue on to graduate medical training and future careers in medicine, incorporating the tools of genomic medicine into their clinical practices.

Student Learning Outcomes

- Students will demonstrate an overall knowledge and understanding of the core concepts in Genomic Medicine, including the essential skills to evaluate research in the field and apply results to the practice of medicine.
- Students will demonstrate critical thinking skills, the capability to develop clinical research hypotheses, and the ability to evaluate these hypotheses, paying attention to the responsible conduct of research as appropriate.
- Students will demonstrate the ability to write effective research reports and present results orally.

Medical Scientist Training Program (MD/PHD)

PhD Programs

The following doctoral programs, described elsewhere in this bulletin, participate in the MSTP. The MSTP office can provide you with further information about these programs and the research interests of their faculty.

- Biochemistry & Molecular Biology (http://biomed.med.miami.edu/graduate-programs/biochemistry-and-molecular-biology/)
- Biomedical Engineering (p. 810)
- Biostatistics (http://www.biostat.med.miami.edu/academics/phd-in-biostatistics/)
- Cancer Biology (http://biomed.med.miami.edu/graduate-programs/cancer-biology/)
- Epidemiology (http://publichealth.med.miami.edu/graduate-academic-programs/phd-in-epidemiology/)
- Human Genetics & Genomics (http://biomed.med.miami.edu/graduate-programs/human-genetics-and-genomics/)
- Microbiology and Immunology (http://biomed.med.miami.edu/graduate-programs/microbiology-and-immunology/)
- Molecular Cell & Developmental Biology (http://biomed.med.miami.edu/graduate-programs/molecular-cell-and-developmental-biology/)
- Molecular and Cellular Pharmacology (http://biomed.med.miami.edu/graduate-programs/molecular-and-cellular-pharmacology/)
- Neuroscience (http://biomed.med.miami.edu/graduate-programs/neuroscience/)
- Physiology and Biophysics (http://biomed.med.miami.edu/graduate-programs/physiology-and-biophysics/)
- Prevention Science & Community Health (http://publichealth.med.miami.edu/graduate-academic-programs/phd-in-prevention-science/)

Admission Requirements

Admission to the MSTP is highly competitive, and interested applicants are advised to apply early in the fall. AMCAS applications must be received by the Medical Admissions Office no later than December 15. Applicants must complete the minimum course requirements (http://admissions.med.miami.edu/md-programs/general-md/prerequisites/).
the MD Program to be considered for the MSTP. The Graduate Record Examination (GRE) is not required for matriculation into the MSTP.

**Competitive applicants will have the following:**

- Completed AMCAS & Secondary Application for MSTP
- Excellent academic record
- Strong MCAT scores
- Significant research experience
- Co-authorship on abstracts and/or peer-reviewed papers is desirable
- Strong letters of recommendation from research mentors and other scientists who can specifically address the applicant’s potential as a physician scientist
- Motivation to pursue a career as a physician scientist

Applications from under-represented groups, including minorities, individuals with disabilities and women, are encouraged.

All MSTP applicants are reviewed by both the MD Program Admissions Committee and the MSTP Program Admissions Committee. These evaluations proceed independently, and a student will still be considered for the MD program even after an unfavorable review by the MSTP. A successful applicant is granted admission to both the MD Program and the MSTP.

Full application instructions can be found here (http://mdphd.med.miami.edu/Admissions/).

**Curriculum Requirements - PHD**

The following doctoral programs, described elsewhere in this bulletin, participate in the MSTP. Follow the link for each program's curriculum requirements:

- Biomedical Engineering (http://bulletin.miami.edu/graduate-academic-programs/engineering/biomedical-engineering/biomedical-engineering-phd/)
- Biostatistics (http://bulletin.miami.edu/graduate-academic-programs/medicine/biostatistics/biostatistics-phd/#curriculumtext)
- Cancer Biology (http://bulletin.miami.edu/graduate-academic-programs/medicine/cancer-biology/cancer-biology-phd/)
- Epidemiology (http://bulletin.miami.edu/graduate-academic-programs/medicine/public-health/epidemiology-phd/#curriculumtext)
- Human Genetics & Genomics (http://bulletin.miami.edu/graduate-academic-programs/medicine/human-genetics-genomics/human-genetics-and-genomics-phd/)
- Microbiology and Immunology (http://bulletin.miami.edu/graduate-academic-programs/medicine/microbiology-immunology/microbiology-and-immunology-phd/)
- Molecular Cell & Developmental Biology (http://bulletin.miami.edu/graduate-academic-programs/medicine/molecular-cell-developmental-biology/#curriculumtext)
- Molecular and Cellular Pharmacology (http://bulletin.miami.edu/graduate-academic-programs/medicine/molecular-cellular-pharmacology/#curriculumtext)
- Neuroscience (http://bulletin.miami.edu/graduate-academic-programs/medicine/neuroscience/#programcontenttext
- Physiology and Biophysics (http://bulletin.miami.edu/graduate-academic-programs/medicine/physiology-biophysics/#curriculumtext)
- Prevention Science & Community Health (http://bulletin.miami.edu/graduate-academic-programs/medicine/public-health/prevention-science-community-health-phd/#curriculumtext)

**Suggested Plan of Study**

The University of Miami, Miller School of Medicine's MSTP Program is designed to be a 7-8 year path with components that allow for an integrated experience throughout the training period. The program combines training through the well-known medical education offered at the UMMSM and its diverse biomedical doctoral programs. Students are able to select among ten PhD graduate training programs (http://biomed.miami.edu/graduate-programs/mstp/requirements/biomedical-
programs can be found via the following links:

- Medical School Years 1 & 2 and 3 & 4. Suggested plans of study for PhD
- MSTP students complete their PhD coursework and research between
  - Epidemiology
  - Physiology and Biophysics
  - Biomedical Engineering
  - Human Genetics & Genomics
  - Molecular and Cellular Pharmacology
  - Cancer Biology
  - Biostatistics
  - Biochemistry & Molecular Biology
- Although there are no prerequisite requirements, courses
  - within 5 ½ years
  - A preparation for a scientific career in academia, industry, or teaching
  - within 5 ½ years

Microbiology and Immunology

http://biomed.med.miami.edu

Overview

Microbiology and Immunology is a multidisciplinary program encompassing the areas of cellular and molecular immunology, virology, microbial genetics, and pathogenic bacteriology.

The goals of the department's graduate program are to provide each student with the opportunity to acquire the theoretical background and conceptual framework with the technical research skills necessary to attain a PhD. During the first year of study, a broad educational base in all disciplines together with laboratory rotations introduce students to the diverse array of research topics. Students then choose one area of concentration for their research. The varied interests of the faculty provide numerous opportunities for student participation and a broad choice in dissertation research.

Active research in immunology includes the areas of cytotoxicity, programmed cell death, cytokine receptor signaling, clinical and experimental bone marrow transplantation, stem cell biology, gene therapy for cancer treatment, antigen recognition, cell differentiation and communication, aging of the immune system, interleukins, genetic control of immunoglobulin production, gene activation, and evolution of the immune response. Research in other areas includes molecular biology of virus-host interaction in both animal and human systems, control and regulation of bacterial pathogenesis, selective tumor chemotherapy and radiation therapy, and therapy of parasitic infections.

Goals

The goals of the MIC Graduate Program include training and acquisition of:

- A broad scientific reasoning ability and knowledge base in Microbiology and Immunology
- Technical skills required for experiments in the area of specialization
- Presentation skills required for teaching, scientific talks, manuscripts, and grants
- A preparation for a scientific career in academia, industry, or teaching within 5 ½ years

Admission Requirements

Applicants to biomedical programs should have a bachelor degree in a biological or related discipline (e.g., psychology, chemistry, engineering, physics). Although there are no prerequisite requirements, courses
in general biology, cell/molecular biology, calculus, general physics, organic chemistry, physical chemistry, and biochemistry are encouraged. Applications are generally accepted from September to December for fall entry only. Select applicants will be offered an interview.

**Competitive Candidates will have the following:**
- Excellent academic record
- Competitive GRE exam scores
- Research experience in a laboratory setting
- Publications of abstract and / or papers
- Co-authorship in a peer-reviewed journal is recommended
- Strong letters of recommendation from research scientists who know the candidate well
- Motivation to pursue state-of-the-art biomedical research

Applicants must submit the following:
- Online Application
- Application Fee
- Official Academic Transcripts
- GRE General Test
- English Proficiency Exam (non-native speakers)
- Statement of Purpose
- Resume / CV

Full application instructions can be found [here](http://biomed.med.miami.edu/apply/).

**Doctoral Programs**
- Ph.D. in Microbiology and Immunology (p. 935)

**Ph.D. in Microbiology and Immunology**

Mission

The mission and objectives of the Microbiology and Immunology Ph.D. Graduate Program are to train students who wish to attain the PhD degree by active engagement in the design and performance of basic Microbiology and Immunology research with a Biomedical Focus that is intended to provide each PhD student with:

- A broad scientific reasoning ability and knowledge base in Microbiology and Immunology with a focus on its application in human health;
- Creative, technical, analytical and ethical skills required for carrying out and interpreting experiments in a responsible manner in the area of Microbiology and Immunology;
- The ability to successfully design, produce and publish scientific discoveries emanated from their own research in Microbiology and Immunology; and
- The ability to respond to the increasing demands of collaborative and interdisciplinary research, presentation and communication skills required for presenting results in scientific talks, writing manuscripts and seeking funding through grants and proposals, teaching skills and experience, and professional preparation for a scientific career in academia, industry, health care, patent law or teaching within five years or less.

Goals

Student Learning Outcomes

- Students in the Microbiology and Immunology graduate program will complete their training within 5 years of starting graduate school with mastery in "Knowledge of Discipline", "Responsible Conduct of Research", "Use of Appropriate Methodology", "Application of Knowledge/Methodology", Critical Thinking", Effective Written Communication", and "Effective Oral Communication".
- Students will demonstrate critical thinking skills and the application of the Scientific Method by showing the capability to develop hypotheses, and the ability to evaluate their hypotheses, paying attention to responsible conduct of research as appropriate.

Molecular and Cellular Pharmacology

http://biomed.med.miami.edu/graduate-programs/molecular-and-cellular-pharmacology

Overview

Scientists in the Molecular and Cellular Pharmacology Ph. D. Program apply knowledge and techniques from diverse areas of biology, chemistry, physics, and informatics to study the action of drugs, hormones, and neurotransmitters on living systems.
The goals of the research in this department are:
- to identify new targets and pathways for development of therapeutics
- to use drugs and other bioactive molecules as tools in the study of basic biological processes
- to develop and study agents that may be beneficial in the treatment of disease

Research in this program is highly multidisciplinary, encompassing diverse fields, including genetics, biochemistry, biophysics, molecular and cell biology, imaging, computational modeling, bioinformatics and genetically engineered yeast, fly, and mouse models. The faculty are a mixture of senior scientists who are recognized leaders in their respective fields and more junior faculty with recent training in state-of-the-art approaches to important biomedical problems. Research interests of the faculty include:

**Drug Discovery and Computational Pharmacology:**
Investigators in this area focus on the use of bioinformatics, high-throughput assay development, medicinal chemistry, in vivo animal testing, and other tools to identify and develop novel molecular probes and possible lead candidates to address various therapeutic needs of interest including cancer, diabetes, cardiovascular and neurodegenerative diseases, and others. Current research is focused primarily on G-protein coupled receptors (GPCRs), receptor tyrosine kinases (RTKs), co-signaling protein-protein interactions, and other targets.

**Cardiovascular Pharmacology / Muscle Contraction**
Studies of cardiac muscle contraction and the effect of disease-causing mutations in the contractile apparatus of the heart on heart performance are being pursued. Current research areas include structure/function relationships in the proteins in health and disease, cardiotoxicity of chemotherapy agents, the role of microRNAs in cholesterol biosynthesis and smooth muscle cell plasticity, and the stem cell-based therapy for cardiac disease. In addition to cardiac myocytes, researchers investigate fibroblasts, endothelial and smooth and skeletal muscle cells.

**Neuroscience / Endocrinology**
Investigators in this area study the development, function, pharmacology, and diseases of the nervous system. Current research interests include neuronal signaling through G-proteins, Ca^{2+}, and cyclic nucleotides, control of physiological functions by neurons, endocrine pancreas and kidney; the genetic and cellular basis of neural development and degeneration using the fruit fly Drosophila melanogaster as a model system.

**Cell Biology / Cancer**
Investigators in this area study cell cycle control and cancer, gene expression, mechanisms of hormone action, signal transduction, cytoskeleton, posttranslational modification and degradation of proteins, stem cells, and novel therapeutics targeting receptors and protein kinases.

Current research interests include steroid hormone regulation of gene expression and cell proliferation; cell cycle checkpoints during DNA replication; control of cell polarity and morphogenesis; molecular basis of human lymphoma; endocrine-related cancers including prostate and breast; stem cell maintenance and therapy; and physiochemical and metabolic aspects of drug design.

**Model Systems**
Model organisms used in these studies include transgenic and knock-out/knock-in mouse, fly (Drosophila), and yeast models. Yeast and Drosophila are important models because of the powerful molecular and genetic approaches and tools available. These systems are being used to study fundamental processes such as apoptosis, cell cycle, signal transduction, membrane dynamics, cytoskeleton, cell polarity, development of the cardiovascular system, neurogenesis, and neuronal degeneration. Because most of these processes are conserved in evolution, investigators are using these systems to screen for therapeutic agents and to identify targets of pharmacologically relevant compounds. There is also research on the effect of human microbiome on drug metabolism.

Plan of Study

In the first year, students receive a solid foundation in biomedical science. The core coursework ranges from molecules to cells to systems of human physiology. Lectures are balanced by breakout sessions, in which faculty members discuss the primary literature with students in small groups. The core curriculum also offers critical learning opportunities in biostatistics and in using genomic and other databases, as well as education in ethics. Students also meet several times in small groups with experienced faculty mentors to discuss important issues of student development. In subsequent semesters, students take core courses encompassing Mechanisms of Drug Action, MCP 704, Neuropharmacology, MCP 768, Cardiovascular Pharmacology, MCP 732, Python Programming for Bioscientists, MCP 743, Systems Biology and Approaches in Pharmacology, MCP 752, and Computational Pharmacology and Fundamentals of Drug Design, MCP 753. A variety of elective courses are offered by this program and other basic science programs at the Miller School of Medicine.

Minimum credit requirements for the PhD degree are set by the University at 36 course credits (including specific required courses) and 24 credit hours of research (for a total of 60 credits). The course credits must be earned in graduate level (600 and above) courses. Students may elect to take any of the graduate courses offered by the MCP program, in addition to the mandatory courses, or choose from a large variety of advanced courses offered by other basic science programs at the University of Miami Miller School of Medicine.

The student should be working in the laboratory where he/she intends to do his/her thesis research by the summer, first year. By the beginning of the spring semester of the second year, students are required to take the Qualifying Exam (QE). The goals of the QE are (1) to assess the scientific proficiency of the student, especially his/her ability to design experiments and to write a competitive grant application; and (2) to aid the student and mentor in the process of obtaining extramural funds to support the student's stipend.

The thesis proposal is expected to be passed during the third year, Fall semester. It is important to note that in the MCP program this is not the Qualifying Exam. Rather, it is a collegial meeting with the thesis committee where the student discusses his/her preliminary data and plans for the thesis. Students normally meet with the committee for progress meetings every 9 months.

The thesis is defended in front of the entire program and also in a meeting with the committee. The average time-to-completion is 5.5 years.

Please note that the following is a sample curriculum plan. Current students must discuss their plan with their program coordinator to make adjustments as needed.

### Mission
The Graduate Program in Molecular and Cellular Pharmacology (MCP) offers graduate training leading to a Ph.D. in Pharmacology. The mission of the program is to endow our students with the skills for research work in the area of life science.

### Goals
Our students learn:
- To understand central concepts in pharmacology and basic biomedical science;
- To identify existing gaps in current knowledge about molecular and cellular pharmacology and formulate scientific hypotheses; and
- To design sound research plans, perform original laboratory or computational research, analyze data and effectively disseminate the results.

### Student Learning Outcomes
- Students demonstrate the ability to produce original research data, and publish it in peer-reviewed international scientific journals.
- Students learn to be flexible in applying their knowledge base to the rapidly changing employment environment.

### Molecular Cell and Developmental Biology
http://biomed.med.miami.edu/graduate-programs/molecular-cell-and-developmental-biology

### Overview
The graduate program in Molecular Cell and Developmental Biology offers graduate training towards the PhD degree in the fields of molecular biology.
cell biology, cell biology, developmental biology and cancer biology. In
order to provide a wide range of current research opportunities, this
program is interdisciplinary, comprised primarily of faculty from the
department of Cell Biology and includes additional faculty from several
other Departments and Centers at the Miller School of Medicine. These
include: the Departments of Microbiology & Immunology, Molecular
& Cellular Pharmacology, Medicine, Ophthalmology, Urology, Surgery,
Neurosurgery and Neurology, the Sylvester Comprehensive Cancer Center,
and the Miami Project to Cure Paralysis.

Students have the opportunity to do research in the many areas of
modern cell, molecular and developmental biology. Research topics
including the cytoskeleton, cell surface molecular biology, stem cells,
 lens, corneal and retinal biology, protein processing and sorting,
signal transduction, airway biology, regulation of gene expression
in development, podocyte biology, cancer biology, neuromuscular
development, malignant transformation, growth factors, epithelial cell
biology, organogenesis and tissue repair, pattern formation in early
development, RNA localization, mitochondrial molecular biology and
cancer therapeutics.

The primary objective of this interdisciplinary graduate program is to
prepare students for careers as independent, PhD level researchers
and educators, in both academic institutions and in the biotechnology
industry and other venues.

University of Miami, Miller School of Medicine
Office of Graduate and Postdoctoral Studies
1600 NW 10th Avenue (M-857), Suite 1128-A
Miami, FL 33136

Admission Requirements
Applicants to biomedical programs should have a bachelor degree in a
biological or related discipline (e.g., psychology, chemistry, engineering,
physics). Although there are no prerequisite requirements, courses
in general biology, cell/molecular biology, calculus, general physics,
organic chemistry, physical chemistry, and biochemistry are encouraged.
Applications are generally accepted from September to December for fall
entry only. Select applicants will be offered an interview.

COMPETITIVE CANDIDATES WILL HAVE THE FOLLOWING:
• Excellent academic record
• Competitive GRE exam scores
• Research experience in a laboratory setting
• Publications of abstract and / or papers
• Co-authorship in a peer-reviewed journal is recommended
• Strong letters of recommendation from research scientists who know
  the candidate well

• Motivation to pursue state-of-the-art biomedical research

APPLICANTS MUST SUBMIT THE FOLLOWING:
• Online Application
• Application Fee
• Official Academic Transcripts
• GRE General Test
• English Proficiency Exam (non-native speakers)
• Statement of Purpose
• Resume / CV

Full application instructions can be found here (http://
biomed.med.miami.edu/apply/).

Total Credit Hours 58-66

¹ Throughout the program the students are expected to attend
department seminars (Tuesdays at noon), journal club (on select
Wednesdays at noon), and student presentations (on Wednesdays at
noon).
may be replaced by any graduate level course in human disease or neuronal cell biology

The student should be working in the laboratory where he/she intends to do his/her thesis research by the summer, first year. Nearly all of the student's time is spent on original laboratory research – with a minimum total of 24 credit hours of research for graduation.

Plan of Study

The program's Graduate Studies Committee assists each entering student in tailoring a program to match his/her interests. First year students take courses in a core curriculum taught by faculty from the medical basic science departments. Courses are taught not only by formal lectures, but also as seminars and informal discussions. The curriculum is designed to provide broad knowledge in the various aspects of modern cell biology, developmental biology, molecular biology and biochemistry in addition to intensive training in certain specialized areas of research according to the student's interests. In the remaining years of study, nearly all of the student's time is spent on original laboratory research. Students are usually admitted in the Fall semester.

Minimum credit requirements for the PhD degree are set by the University at 36 course credits (including specific required courses) and 24 credit hours of research (for a total of 60 credits). The course credits must be earned in graduate level (600 and above) courses. Students may elect to take any of the graduate courses offered by the MDB program, in addition to the mandatory courses, or choose from a large variety of advanced courses offered by other basic science programs at the University of Miami Miller School of Medicine.

Mandatory courses for the program include Biostatistics (PIB 705), Advanced Cell Biology: Approaches to Molecular Medicine (MDB 751), Current Topics in Mammalian Development (MDB 752), Histology (MDB 753), and *Tumor Biology (MDB 765). The latter may be replaced by any graduate level course in human disease or neuronal cell biology.

*These courses are electives for MD/PhD students.

Throughout the program the students are expected to attend department seminars (Tuesdays at noon), journal club (select Wednesdays at noon), and student presentations (on Wednesdays at noon).

The student should be working in the laboratory where he/she intends to do his/her thesis research by the summer, first year. At the end of the Fall semester of the second year, students are required to take the Qualifying Exam (QE). The goals of the QE are (1) to assess the scientific proficiency of the student, especially his/her ability to design experiments and to write a competitive grant application; and (2) to aid the student and mentor in the process of obtaining extramural funds to support the student's stipend.

The thesis proposal is expected to be passed during the second year, Summer semester. It is important to note that in the MDB program this is not the Qualifying Exam. Rather, it is a collegial meeting with the thesis committee where the student discusses his/her preliminary data and plans for the thesis. Students normally meet with the committee for progress meetings every 6-9 months.

The thesis is defended in front of the entire program and also in a meeting with the committee. The average time-to-completion is 5.5 years.

Please note that the following is a sample curriculum plan. Current students must discuss their plan with their program coordinator to make adjustments as needed.
Goals
The program objectives is to provide our students with:

- A solid foundation in the fundamentals of modern molecular, cell and developmental biology through formal courses;
- An understanding of scientific theory, methods, and current research literature through scientific seminars and journal clubs; and
- Intellectual and technical expertise in modern methods of cell and molecular biology through structured laboratory research and scientific writing skills for both scientific papers and grant applications.

Student Learning Outcomes

- Students will demonstrate an overall knowledge and understanding of the core concepts in Molecular Cell and Developmental Biology, including the essential technical skills to conduct research in the Molecular Cell and Developmental Biology.
- Students will demonstrate critical thinking skills, the capability to develop conjectures, the ability to evaluate their Hypotheses, paying attention to responsible conduct of research as appropriate.
- Students will demonstrate the ability to write effective scientific reports and to present scientific results orally.

Neuroscience
http://biomed.med.miami.edu/graduate-programs/neuroscience

Overview
The Neuroscience Graduate Program, established in 1992, is an interdisciplinary / interdepartmental PhD program designed to guide trainees through the process of acquiring the research skills and the intellectual rigor needed to become independent professional neuroscientists. The program achieves these goals through coursework, journal clubs, dissertation research committee guidance, and outstanding faculty mentorship. The program also provides multiple annual forums for students to showcase their own research and learn from international research leaders.

More than 80 participating faculty are located in several departments and schools on three UM campuses including Biochemistry, Cell Biology and Anatomy, Molecular and Cellular Pharmacology, Physiology and Biophysics, and Genetics on the Medical campus. From the Coral Gables campus, we have faculty from Biology, Biomedical Engineering and Psychology, as well as several clinical departments such as Medicine, Neurological Surgery, Neurology, Ophthalmology, Otolaryngology, Pathology, Physical Therapy, and Psychiatry. In addition, we have faculty from the Rosenstiel School of Marine and Atmospheric Sciences.

Neuroscience faculty pursue a wide variety of research interests, including cellular and molecular mechanisms involved in signal transduction, gene expression in electrically excitable cells, synapse formation, neuronal growth and survival, integrative neuroscience, neuroimmunology, stroke, neuronal regeneration, autonomic control, brain metabolism and cerebral blood flow, spinal cord and brain injuries, degenerative changes within specific neural pathways in Parkinson’s and Alzheimer’s diseases, ALS, and genetic analysis of neurological disorders.

Mission
The mission of the Graduate Program in Molecular Cell and Developmental Biology is to educate students in molecular cell and developmental biology and to train highly qualified scientists for independent careers in scientific research and education.

Admission Requirements
Admission to the Neuroscience Program is through the common umbrella
of Programs in the Biomedical Sciences (PIBS), for all biomedical PhD
programs.

For more information, please visit this website (http://
biomed.med.miami.edu/graduate-programs/programs-in-biomedical-
sciences-pibs/).

Curriculum Requirements
Graduate training is the major goal of the program, with emphasis
on cellular, molecular, and genetic approaches to Neuroscience. A
single core curriculum provides the didactic scaffold of the program.
This curriculum consists of courses in Developmental Neuroscience,
Membrane Biophysics, Introductory Neuroscience, Neural Systems, and
Neuroanatomy. The core courses are supplemented with a variety of
Special Topics Short Courses. Students also attend research seminars
and a scientific journal club. The Neuroscience Steering Committee
guides the students, overseeing their coursework, until they have passed
their qualifying exams. From then on, their progress is supervised by
individually tailored dissertation committees.

### Mission

The Neuroscience Graduate Program offers training leading to a Ph.D. in Neuroscience. The program’s mission is to provide students with 1) an understanding of the central concepts in neuroscience and basic biomedical science and 2) the ability to formulate, carry out, and communicate original research in neuroscience.

### Goals

**Student Learning Outcomes**

- Students should demonstrate overall knowledge and understanding of the core concepts in neuroscience, including the essential skills necessary for conducting research in the field of neuroscience.
- Students should demonstrate critical thinking skills, the capability to develop hypotheses, and the ability to evaluate their hypotheses, paying attention to responsible conduct of research as appropriate.
- Students should demonstrate the ability to write effective scientific reports and to present scientific results orally.
- Students should, in honing research capabilities throughout their graduate careers, publish original research in peer-reviewed journals.
- Students should submit for extramural fellowships, the receipt of which will prove valuable to the student, the program, and the university.
- Students should be encouraged to formulate, carry out, and defend dissertation research in a timely manner, keeping the program’s mean time from matriculation to defense low so that the student can take the next step in his or her career.

### Ophthalmology

http://biomed.miami.edu/graduate-programs/ms-in-vision-science-and-investigative-ophthalmology

### Overview

Bascom Palmer Eye Institute is pleased to offer a unique graduate degree, the **Master of Science in Vision Science and Investigative Ophthalmology (MVSIO)**. This innovative program, the first of its kind in the world, offers comprehensive training in ophthalmic translational research, problem-based learning, management and a skill set available only at Bascom Palmer Eye Institute.

The MVSIO program focuses on science and laboratory research, including the disciplines of electrophysiology, biochemistry and molecular biology, as well as exposure to ocular clinical details and ocular pathology. It will prepare students for a planned Ph.D. graduate program in vision science and investigative ophthalmology as well as for industry jobs and future residency training.

In addition, the multidisciplinary program builds management, administrative, and entrepreneurial skills for professionals desiring a vision science-oriented career in startup companies, management of non-profit organizations, academic practices, government regulatory agencies, and medical device and pharmaceutical companies.
Led by Bascom Palmer Eye Institute’s world-class faculty and supported by leading-edge technology, the MVSIO program opens the door to new career opportunities for medical school graduates, clinicians and other professionals.

**OPH 610. Anatomy and Physiology of the Eye.** 1 Credit Hour.
This course introduces the major anatomical and physiological regions of the eye, including cornea, lens, retina, optic nerve, cranial nerves and extraocular tissues. Emphasis is placed on the relationship between the eye and others systems. Demonstrations include eye dissection, visual testing and visual perception experimentation.

**Components:** LEC.

**Grading:** GRD.

**Typically Offered:** Fall.
OPH 615. Pathology of Eye Diseases. 1 Credit Hour.
This course covers in detail the major pathologies of the eye, including congenital diseases and syndromes, infectious diseases, tumors and adult-onset degenerations. Emphasis is placed on pathophysiological mechanisms contributing to pathology, and also covers examination of the eye, diagnostic features, and management of major eye diseases. Demonstrations include histological sections, OCT, visual field and angiogram, and associated diagnostic criteria.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

OPH 620. Ocular Pharmacology, Epidemiology, and Biostatistics. 1 Credit Hour.
Course will teach local anesthetics, anti-infectious, anti-allergic agents, control of ocular pain, adverse ocular and systemic reactions caused by therapeutic agents will be part of the course. Ocular therapeutic principles (pharmacokinetics and pharmacodynamics, toxicity), sources of drug information, new drug development, drug regulations as applicable to different areas of operation including prescription writing will be discussed. An introductory course in epidemiologic and biostatistics methodology covering study design for investigation of both infectious and chronic diseases of the eye; screening programs and health services research will also be discussed. Outbreak investigation, natural history of infectious diseases, validity of clinical tests, survival analysis, and clinical trial and etiologic studies will be discussed. Methods of biostatistic evaluation of experiment design and analyses of data to decipher significant from non-significant results and general tools for statistical analyses will be reviewed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

OPH 625. Microbiology and Immunology of the Eye. 1 Credit Hour.
Students will learn concepts and terminologies of immunology, bacteriology, virology, parasitology and mycology with an emphasis on mechanisms of microbial disease transmission and host defense mechanisms. Students become familiar with the types of organisms responsible for human disease, the mechanisms by which they produce disease, and the application of this knowledge to the treatment of patients. This course integrates the biomedical disciplines of immunology and medical microbiology. Infectious and immunological diseases with relevance to the clinical setting and pharmacological approaches will be presented. A basic understanding of the classification and characteristics of infectious microorganisms, the mechanisms by which infectious agents cause disease, and methods of both prevention and treatment are highlighted. Causes and treatment of immune diseases will also be presented. Concepts of inflammation, sepsis, cell injury, tissue repair, hemodynamic disorders, genetic disorders, environmental and nutritional pathologies, immunodeficiency diseases, autoimmune and metabolic diseases will be presented. Throughout the course, small group tutorials and interactive clinical correlations based on clinical cases linking basic science concepts to clinical medicine will be presented. Tutorials, clinicopathological correlations and laboratories emphasize problem-solving skills, integration of knowledge and independent learning.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

OPH 630. Ophthalmic Genetics. 1 Credit Hour.
This course provides an overview of the influence of genetics in ophthalmology with respect to understanding pathogenic mechanisms of eye diseases, and the development of novel therapeutic strategies. The course will provide an introduction to complex and Mendelian genetics, and research strategies involved in identifying disease-associated genetic changes. Specific topics include hereditary retinal diseases, genetic associations in age related macular degeneration and glaucoma, genetics of myopia and optic nerve diseases, and mitochondrial disorders affecting the eye. Additional discussions include current gene therapy clinical trials.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

OPH 635. Electrophysiology of the eye. 1 Credit Hour.
This course will introduce the basic principles of electrophysiology of the eye, identify neural signals, neurotransmitters, molecular signaling within neurons. Additionally, the sensation and sensory systems. Emphasis is placed on the relationship between the eye and other signals and senses. Corequisite: OPH 663.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

OPH 640. Vision and Optics. 2 Credit Hours.
This course will provide an introduction to the principles of geometrical optics and its application to the study and assessment of the visual system. Topic covered will include fundamental of geometrical optics, principles of optical system components (lenses, mirrors, prisms, light sources), optics of the eye and vision correction, basic principles of visual optical instruments (loupe, microscopes, telescopes), and principles and applications of ophthalmic diagnostic and imaging systems, including ophthalmoscopes, retinoscopes, slit-lamp, keratometers, corneal topography systems, aberrometers and optical coherence tomography. Corequisite: OPH 662.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

OPH 645. Biochemistry, Cellular and Molecular Ophthalmology. 2 Credit Hours.
An introduction to biochemistry with emphasis on ocular clinical applications. Topics will include nutrition, cellular biology, biochemistry of tears, conjunctiva, and cornea. The structure and functions of proteins and enzymes as well as metabolism of carbohydrates and lipids will be discussed. Case studies and journal articles will be used to demonstrate the useful applications of these principles to oculair health-related issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

OPH 661. LAB: Basic Biochemistry, Microbiology, and Pathology. 3 Credit Hours.
Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.
OPH 662. Lab: Basic and Applied Optics and Statistics. 1 Credit Hour.
This laboratory course serves as a companion to the Vision and Optics course. It will include practical hands-on examples of the application of geometrical optical theory to the design and calculation of optical systems, provide an initial hands-on experience with basic optical system setup on an optical bench, and provide basic hands-on training or demonstration of ophthalmic diagnostic techniques and instruments, including refraction, ophthalmoscopy, retinoscopy, slit-lamp examination, aberrometry, corneal topography and optical coherence tomography. Corequisite: OPH 640.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

OPH 663. Lab: Electrophysiology, Clinical Testing and Applications. 1 Credit Hour.
This laboratory work will introduce the students to novel clinical recording techniques, electrophysiologic tests, and clinical applications of ERG, EOG, and VEP. Emphasis is placed on novel and specialized clinical applications and recordings. The course will be divided in two sections. Section one ends with focus on the effects of maturation, aging, and testing in infants. Section two will conclude with electrophysiologic findings of many clinical conditions and clinical applications of ERG, EOG, and VEP of various eye disorders/diseases. Corequisite: OPH 635.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

OPH 691. Clinical Ophthalmology Update. 2 Credit Hours.
Society, Science and Medicine. History and evolution of medicine, seminars on different aspects of medicine including a broad spectrum view of career options. The emphasis will be on the understanding and efficacy of medical treatments. For example, antibiotic resistant bacteria was discovered in 12,000 year old underground caves that makes us realize that antibiotic resistance is an old problem and we need to have an outlook bearing that in mind.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

OPH 771. PBL: Advanced and High Throughput Approaches in Science. 2 Credit Hours.
The Problem-Based Learning Method (PBL) was designed to teach students in small groups to identify specific techniques that will yield the answers to the problems. Content will include the underlying norms and principles that shaped these concepts. The courses also include plenary session presentations by experts on relevant topics and their use in preparing manuscripts and grant applications and policies regarding conduct of experiments using these techniques.
Components: ENS.
Grading: GRD.
Typically Offered: Fall.

OPH 772. PBL: Management skills and Tools for Academia and Enterprises. 2 Credit Hours.
This Problem-Based learning course will introduce grant writing, pre-award preparation, post-award management and will be taught using problem-based modules. Federal and non-federal extramural grants will be used as modules specific aspects of different segmental grants will be presented. Major research grant, training and fellowships, grants-in-aid will be taught. In addition, small business innovation research (SBIR) or STTR will be covered. Students will learn techniques to analyze markets, identify optimal opportunities, develop plans to sell their vision in order to attract talent and stakeholders. A series of problem-based lectures integrates modern business concepts from an entrepreneurial approach.
Components: ENS.
Grading: GRD.
Typically Offered: Spring.

OPH 773. PBL: Animal Models, Regulatory issues, and Research Methods. 2 Credit Hours.
Part I: The aim of this Problem-Based learning course is to provide students the basic understanding and expertise pertaining to generation and implementation of preclinical research IACUC protocol. This course consists of a problem based learning module with a focus on developing students’ understanding of various animal models in preclinical research and how to refine animal research models that meet the requirement of IACUC regulation. Part II: The purpose of this course is to provide clinical research regulatory expertise with an aim to create future leaders in the drug development industry. This regulatory science course uses a multidisciplinary approach and encompasses course work in regulatory writing techniques, quality systems, and medical device and pharmaceutical regulation. The concentration is designed to develop the student’s understanding of how to meet regulatory oversight requirements as they relate to the conduct of clinical studies. This course will prepare students to play critical roles throughout the lifecycle of pharmaceuticals, medical devices, and biologics. They provide strategic, tactical and operational direction, and support for working within regulations to expedite the development and delivery of safe and effective healthcare products to individuals around the world. The regulatory professional’s services can be utilized in research and development, clinical trials, extension of premarket approvals, manufacturing, labeling and advertising, and post-market surveillance. Knowledge of clinical research conduct and management which involves the design, execution and management of clinical trials as well as quality assurance and compliance principles are important to regulatory professionals. Course also provides highlight on how to effectively partner with experts such as writers drafting pre- and post- approval regulatory FDA submission documentation (INDs, NDAs, PMAs etc.) for product clearance or licensure, IRB reviewers and investigational Pharmacists to enhance the development of healthcare products.
Components: ENS.
Grading: GRD.
Typically Offered: Spring.

OPH 810. Ophthalmology Research Thesis. 1-7 Credit Hours.
The course allows the student to work full-time on a research project of interest under the supervision of research/clinical faculty or a team of faculty members.
Components: THE.
Grading: SUS.
Typically Offered: Fall.
Mission
Goals
Consistent with the university’s strategic vision, the goals of the programs are:

• Train Master’s students in research and research management skills; and
• Prepare students for a future PhD-level program in Vision Science and investigative Ophthalmology.

Student Learning Outcomes
PhD/MBA Program

The growing potential to make life-saving discoveries in an ever-changing global economy make this an exciting time to enhance your biomedical science PhD with an MBA! Many ambitious students are now looking to an MBA as a useful enhancement to their biomedical research experience and expand their career options.

An MBA is an investment in the future careers of biomedical graduate students. We know our alums will be future college presidents, department chairs, entrepreneurs, government officials, patent holders and CEOs of biomedical companies. This program will ensure they leave us not only as cutting-edge scientists, but also prepared for the leadership challenges they will face regardless of what lies ahead.

Regardless of career trajectory, PhDs can benefit from pursuing a business education. From a practical standpoint, the managerial skills, business acumen and financial literacy one develops from an MBA program are useful for managing labs, staff, grants or even starting a business. The biomedical industry and higher education are increasingly influenced by legal issues and shifting healthcare policy, both of which are covered by the MBA curriculum. Students will expand their networks by taking classes alongside CEO’s and business leaders enrolled in the Executive MBA program.

The immediate financial advantages of a PhD / MBA option at UM are substantial. Not only will accepted students receive 100% tuition waivers for the doctoral portion of their studies, they will receive shared credit savings and a 50% scholarship from the School of Business Administration for their MBA. In the long-term, students with MBA’s can expect to have greater earnings over the lifetime of their careers.

ogps@miami.edu

Curriculum Requirements
PhD students in the Biomedical Sciences at the Miller School of Medicine may choose to pursue a Master of Business Administration degree immediately following their doctoral studies. The MBA portion of the sequential degree may be completed in one year and consists of 44 MBA credits. The degrees must be obtained sequentially.

Application Procedure

We are accepting applications through Physical Therapist Centralized Application Service (PTCAS). Click here (http://www.ptcas.org) to apply.

The next application cycle will open on July 1. The application deadline is October 15; we encourage you to apply early. Classes begin in May of each year. Application requirements consist of the following:

1. Submission of all application materials to PTCAS. Completion of prerequisites or plan to complete by time of matriculation, with a minimum GPA of 3.0 on a 4.0 scale.
2. Demonstration of knowledge concerning the physical therapy profession by submitting:
   • A minimum of 100 hours of first-hand observation and/or work experience related to the practice of physical therapy.
   • This experience must be substantiated in writing by a registered/licensed physical therapist. The name and email of the physical therapist(s) is required for verification.
3. Submission of three to four (3-4) letters of recommendation from people who can address both the applicant’s moral character and potential as a physical therapist.
   • At least one letter must be written by a registered/licensed physical therapist, and one or more from faculty.
4. An on-site interview is required and will be offered to those applicants who have met the admission criteria.
5. Graduate Record Exam (GRE). Applicants who took the GRE before July 31, 2011 must score a minimum of 1000 on the verbal and quantitative sections combined. As of August 2011 the GRE exam and its scoring scale have changed significantly. Please visit the ETS website (http://www.ets.org/s/gre/pdf/concordance_information.pdf) for the official ETS Concordance Table. Applicants must score a minimum of 147 on the quantitative section and 149 on the verbal section. A minimum score of 3.0 on the analytical section is also required.
6. International students are to complete the PTCAS application and submit official transcripts to the DPT program instead of PTCAS. Transcripts that are not in English must include an official translation.
International applicants must have all transcripts evaluated by the University of Miami's Office of International Admissions before they can be considered for graduate study. Any transcript not in English must be submitted with an official translation. International applicants must meet all the necessary requirements to qualify for a student visa.

For more information contact:

Admissions Office
Department of Physical Therapy
5915 Ponce de Leon Blvd., 5th Floor
Coral Gables, FL 33146
Phone 305-284-4535
Email: physicaltherapy@miami.edu
Website: www.pt.med.miami.edu (http://www.pt.med.miami.edu)

**Doctor of Philosophy in Physical Therapy (PhD)**

**Application Requirements**

Applicants to the Physical Therapy PhD Studies Program must have a clinical degree in physical therapy from an accredited physical therapy program and be eligible for licensure to practice physical therapy in the United States. Students enrolled in the PhD in Physical Therapy program at the University of Miami work closely with a faculty mentor from their first days in the program. As a first step in the application process, the applicant must identify an area of interest and contact a faculty mentor involved in that area. Students are admitted to the program upon endorsement of a faculty mentor and completion of all admission requirements, with final selection made by the PhD Studies Committee. Stipend and tuition support is potentially available for qualified applicants.

The applicant must meet all the general admissions requirements of the University of Miami Graduate School. Additionally, stipulations include:

- Direct entry into the PhD program is dependent upon having any of the degrees below:
  - An entry-level Master's Degree in Physical Therapy
  - An advanced Master's Degree with a Bachelor's Degree in Physical Therapy
  - A Bachelor's Degree in Physical Therapy.

- An applicant with a Bachelor's Degree in Physical Therapy, though able to commence course work in the PhD Program, will be required to complete additional credit hours before final admission to the PhD Program.

- Official Transcripts of all college work.

- Three completed recommendation forms with at least one form completed by a physical therapist.

- A letter indicating career goals and objectives.

- Licensure or eligibility for licensure, as a physical therapist in the State of Florida (must be licensed within 1 year of admission).

- GRE scores current within the past 5 years (see minimum requirements below)

Applicants who took the GRE before July 31, 2011 must score a minimum of 1000 on the verbal and quantitative sections combined. As of August 2011 the GRE exam and its scoring scale have changed significantly. Please visit the ETS website (http://www.ets.org/s/gre/pdf/concordance_information.pdf) for the official ETS Concordance Table. Graduate Admissions will be using this concordance table when reviewing exam scores. Applicants must score a minimum of 147 on the quantitative section and 149 on the verbal section. A minimum score of 4.0 on the analytical section is also required. International applicants must submit a complete application and have all transcripts evaluated by the University of Miami's Office of International Admissions before they can be considered for graduate study. Any transcript not in English must be submitted with an official translation.

The research areas of the faculty are diverse, reflecting the clinical and scientific emphases areas of the faculty. Please refer to the Faculty Section for specifics.

For more information on the PhD degree contact:

Kathryn E. Roach, PhD, PT, Graduate Program Director
Department of Physical Therapy
5915 Ponce de Leon Blvd., 5th Floor
Coral Gables, FL 33146
Phone: 305-284-4535
email: keroach@miami.edu

**Degree Programs**

**Doctor of Physical Therapy (entry level DPT)**

The Department offers the clinical Doctor of Physical Therapy (DPT). The DPT program recognizes the importance of in-depth basic and applied science knowledge and the humanities. As such, the curriculum is carefully sequenced to allow students to develop skills in both classroom and clinical settings.

Faculty also understand the importance of presenting problem-solving skills in conjunction with fundamental physical therapy concepts so that students will develop the professional attitudes and insights required for sustained and continued growth throughout their careers.

The entry-level doctoral program (DPT) is offered under the auspices of the Department of Physical Therapy, University of Miami Miller School of Medicine.

**Doctor of Philosophy in Physical Therapy (PhD)**

The University of Miami Doctor of Philosophy in Physical Therapy program develops physical therapist students for leadership positions in academic and research settings. Along with guiding students in the development of requisite knowledge and skills, the program promotes professional socialization into the role of academic faculty. We believe preparation to teach and undertake research in a physical therapy curriculum at the university level requires excellence in three dimensions:

1. Expertise in a specified content area;
2. Advanced knowledge and skill in research methods, design, and implementation of analysis and communication of results; and
3. Proficiency in instructional design, teaching methods, and evaluation.

The successful integration of these three dimensions, each complex in its own right, provides the means for the student to develop expertise in testing, analyzing, researching, and teaching about disorders that interfere with function. Unifying these three core areas is the process of socialization to the role of a faculty member, including an awareness of academic responsibilities and sensitivity to the needs of the adult learner.

In keeping with this philosophy, students develop breadth of knowledge through completion of coursework from three basic core areas:
They develop depth by completing elective courses with the intent to build expertise in their respective areas of concentration. The successful graduate of this program will have the requisite knowledge and skills to integrate research findings and scientific theory with clinical observations. On this basis, the graduate will be prepared to perform original research aimed at developing new knowledge to enhance the scientific basis of clinical practice and theoretical principles that will advance the profession of physical therapy. The program offers opportunities for the student to gain skill in communicating theories, concepts and research findings and to experience the roles and responsibilities of an academic faculty member. Students complete a dissertation project in which they develop and conduct a unique and significant research investigation with the guidance of a Physical Therapy faculty member as research advisor.

For more information contact:

Admissions Office
Department of Physical Therapy
5915 Ponce de Leon Blvd., 5th Floor

Doctoral Programs in Physical Therapy
• D.P.T. Doctor of Physical Therapy (Entry Level) (p. 951)
• Ph.D. in Physical Therapy (p. 953)

D.P.T. Doctor of Physical Therapy (Entry Level)

To receive the Doctor of Physical Therapy degree, the candidate must:

1. Complete all coursework (103 credit hours) as required with an overall GPA of 3.0 or better.
2. Complete at least 3 credit hours of Elective coursework, in addition to the 103 credit hours.
3. Successfully complete the clinical internships (I-IV) required.

---

1 Students are required to complete a minimum of 3 elective credits in addition to the required courses. For a list of elective courses, please visit http://pt.med.miami.edu/Documents/ELECTIVES.pdf.

2 The University of Miami, Department of Physical Therapy has affiliations with 350 clinical sites locally and throughout the country. Distant internships may incur additional expenses for the student.

### Mission

The mission of the UMMSOM Department of Physical Therapy is to:

- Educate, develop and nurture the next generation of leaders in physical therapy;
- Deliver high-caliber, compassionate physical therapy care in a wide variety of settings;
- Create and disseminate new knowledge in support of the evidence based practice of physical therapy;
- Provide service to our local community and beyond; and
Preparation for Research

- Create an educational and clinical environment that embodies diversity of people and perspectives.

Goals

Specific goals and objectives for the DPT Program are the development and application of:

- The principles and practices of the professional discipline;
- Clinical decision making skills; and
- Education, leadership, management and research capability.

Thus, our graduates are prepared for future professional and societal obligations through providing leadership and contributing to both the growth of the profession, and the clinical research agenda.

Student Learning Outcomes

- DPT students will demonstrate professional behaviors appropriate for an entry level physical therapist in their interactions with all people.
- DPT Students will demonstrate clinical decision making skills appropriate for an entry level physical therapist in a variety of patient care settings.
- DPT students will demonstrate an overall knowledge and understanding of the core concepts in evidence-based practice in physical therapy including the essential critical inquiry skills necessary to utilize research literature as a foundation for the practice of physical therapy.

Ph.D. in Physical Therapy

The Doctor of Philosophy in Physical Therapy prepares physical therapists for leadership positions in academic and research settings. To accomplish this, students are required to complete coursework and structured experiences in "Teaching and Faculty Leadership" and "Research." Students develop expertise in a specific area of concentration under the guidance of their faculty mentor by developing an individual plan of study that may include both coursework and independent study and by completing their dissertation research.

Prior to admission to the PhD in Physical Therapy program, prospective students are required to identify a faculty member with research interests compatible with those of the applicant. This faculty member must agree to mentor the potential student before the PhD Committee will make a decision to admit the applicant. For applicants accepted to the program, the faculty member who agreed to mentor the student will serve as the Chair of the student’s Supervisory Committee. The Supervisory Committee Chair and the student are responsible for creating an individualized plan of study for each student. The plan of study includes mandatory coursework in:

Preparation for Teaching and Faculty Leadership

- PTS774 Role of Academic Faculty in PT (3 credits)
- PTS777 Instructional Methods in Physical Therapy Education (3 credits)
- PTS778 Teaching Practicum (3 credits)
- PTS790 Theoretical Models in Physical Therapy (3 credits)

Preparation for Research

- PTS795 Clinical Research Methods I (3 credits)
- PTS796 Applied Statistics in Physical Therapy (3 credits)

- PTS798 Research Practicum (3 credits)
- PTS843 Measuring Health Outcomes (3 credits)
- Two graduate level courses in statistics (6 credits)

Preparation in Individual Area of Concentration:

- Students typically take 18 credits of coursework in this area. This may include coursework offered by the Department of Physical Therapy, coursework offered outside the Department, and Independent Study.

Qualifying Examination

Every PhD student must take a written qualifying examination at the time that the student and the Chair of the student’s Supervisory Committee deem appropriate. Students can sit for the qualifying examination when they have completed their research practicum and all courses with the exception of an elective. The student must have a 3.0 GPA for all courses taken in the PhD program. The qualifying examination includes questions in four content areas: 1) Area of Concentration, 2) Teaching and Leadership, 3) Research, 4) Dissertation Specific Content.

Dissertation

After passing the qualifying examination, students form a dissertation committee and enter candidacy. The program requires PhD students to submit a written dissertation proposal and orally defend the proposal within 4 months of admission to candidacy. Students are required to take a minimum of 15 Dissertation credits. The program requires students to submit at least one article from their dissertation research for publication in a peer reviewed journal prior to the final public oral defense of the dissertation. Immediately following the public defense of the dissertation, the members of the dissertation committee excuse all non-committee members and further interrogate the candidate. The committee then deliberates in private to determine whether the candidate has successfully defended the dissertation. The typical time to complete a PhD in Physical Therapy is 5 years.

**Summary**

- Total Credits from Required Courses: 30
- Total Credits from Dissertation: 15
- Total Credits from Individual Plan of Study: 15

**Mission**

The University of Miami, Doctor of Philosophy in Physical Therapy is designed to prepare physical therapists for leadership positions in academic and research settings.

**Goals**

We believe that this preparation should include:

- Proficiency in instructional design, teaching methods, and evaluation;
- Advanced knowledge and skill in research methods, design, implementation of analysis and communication of results; and
- Expertise in a specified content area.

**Student Learning Outcomes**

- Students from the Physical Therapy PhD Program will demonstrate their proficiency in instructional design, teaching methods and evaluation.
- Students from the Physical Therapy PhD Program will demonstrate advanced knowledge and skill in research methods, design, data analysis and communication of results.
- Students from the Physical Therapy PhD Program will demonstrate expertise in a specified content area.

**Public Health**

http://publichealth.med.miami.edu/

**Dept. Code: EPH**

**Degree Programs**

- Accelerated MPH
- Certificate in Public Health
- Master of Public Health (MPH)
- Master of Science in Public Health (MSPH)
- Master of Science in Climate and Health (U-MSCH)
- Master of Science in Prevention Science and Community Health (MS PSCH)
- Doctor of Philosophy in Epidemiology (PhD)
- Doctor of Philosophy in Prevention Science and Community Health (PhD)

The Graduate Programs in the Department of Public Health Sciences at the University of Miami Miller School of Medicine are at the forefront of public health science with emphasis on research, education, and evidence based public health service. The Graduate Programs promote an environment of learning and inquiry, stressing the scientific method as a way of generating knowledge about common pathways in health and illness. The mission of the Graduate Programs in Public Health Sciences is to develop leaders who can expand and translate knowledge into policy and practice to promote health and prevent disease in human populations.

**Joint Degree Programs**

Joint degree programs (http://publichealth.med.miami.edu/graduate/academic-programs/) are also offered in conjunction with the School of Medicine (MD/MPH, MD/PhD), School of Law (JD/MPH), College of Arts and Sciences (MPA/MPH), (MAIA/MPH), (MLAS/MPH), and School of Nursing and Health Studies (4+1 BSPH/MPH).

- Medical Doctorate/Master of Public Health (MD/MPH)
- Medical Doctorate/Doctorate of Philosophy (MD/PhD)
- Juris Doctorate/Master of Public Health (JD/MPH)
- Master of Public Administration/Master of Public Health (MPA/MPH)
- Master of Arts in International Administration/Master of Public Health (MAIA/MPH)
- Master of Latin American Studies/Master of Public Health (MLAS/MPH)
- Bachelor of Science in Public Health/Master of Public Health (4+1 BSPH/MPH)

**Admission Requirements**

- Application - Applicants must submit their application online through SOPHAS (https://sophas.org/), the centralized application service of the Association of Schools and Programs of Public Health (ASPPH) (https://www.aspph.org/). All application materials, including transcripts, test scores, statement of purpose/personal statement,
resume/CV, and letters of recommendations, must be submitted directly through SOPHAS. Applicants to the MD/MPH and MD/PhD programs must apply through AMCAS (https://students-residents.aamc.org/applying-medical-school/applying-medical-school-process/applying-medical-school-amcas/). Joint degree applicants must apply to each program separately.

- **Transcripts** – Applicants must submit official transcripts from all previously attended colleges and universities. All foreign transcripts must be official and submitted in the original language. If the original language is not English, an official translation must be submitted along with the transcript. We do not accept evaluations from foreign credentialing service organizations. All non-U.S. transcripts must be evaluated by the World Education Service (https://www.wes.org/) (WES) using ICAP course-by-course evaluation service.

- **Official GRE Test Scores** - Applicants are required to submit GRE general exam scores (http://www.ets.org/gre/revised_general/about/) taken within the last five years. Alternatively, MCAT and LSAT scores are acceptable for the MPH/MSPH degree programs only. Applicants to the MPH and MSPH program who hold advanced degrees (MD, JD, PhD, MBBS, and other doctoral degrees) are encouraged, but not required to submit test scores.

- **English Proficiency Exam** - International students whose native language is not English and/or did not graduate from an English-teaching institution are required to submit TOEFL (https://www.ets.org/toefl/) or IELTS (https://www.ielts.org/en-us/) scores.

- **Resume/Curriculum Vitae** – Applicants must include a detailed resume including employment, public health experiences, community service, research, and academic or professional honors.

- **Statement of Purpose/Personal Statement** – Applicants are required to submit a statement of purpose that details their academic interest and career goals, as well as to the future of public health. Applicants should also address any academic deficiencies, if applicable.

- **Letters of Recommendation** – Applicants must provide three letters of recommendation from individuals who are best able to assess their ability to be successful in a graduate degree program. Ideally, recommenders are recent professors, researchers or employers in a related field. Applicants will be asked to include the contact information of their recommenders on the SOPHAS application and recommenders will be sent an online form to complete via email.

For more information about our application process, please click here (https://graduatestudies.publichealth.med.miami.edu/admissions/application-process/). To obtain detailed curricula on all our program offerings, please visit our website (http://publichealth.med.miami.edu/).

**Masters Programs in Public Health**  
- M.P.H. Master of Public Health (p. 956)  
- M.S.P.H. Master of Science in Public Health (p. 962)  
- M.S.P.S.C.H. Master of Science in Prevention Science and Community Health (p. 961)  
- M.S.C.H. Master of Science in Climate and Health (p. 960) *Pending UM Board of Trustees Approval*

**Doctoral Programs in Public Health**  
- Ph.D. in Epidemiology (p. 966)  
- Ph.D. in Prevention Science and Community Health (p. 967)

**Joint Degrees**  
- M.P.H./M.P.A in Public Health and Public Administration Joint Degree (p. 959)  
- M.P.H./M.A. Master of Arts in International Administration Joint Degree (p. 959)  
- M.P.H./L.A.S Master of Arts in Latin American Studies Joint Degree (p. 958)  
- M.D./M.P.H. Master of Public Health Joint Degree (p. 963)  

Prospective students must apply to both schools to be accepted to the joint degree programs.

1 MD/MPH students apply through the School of Medicine

**Certificate in Public Health**

http://publichealth.med.miami.edu/graduate/academic-programs/public-health-graduate-certificate

The Public Health Certificate Program is offered through the Graduate Programs in Epidemiology and Public Health. The Public Health Certificate Program covers the core content of the Master of Public Health degree program in the areas of epidemiology, biostatistics, environmental health, administration and health education and behavior. The Public Health certificate program provides a foundation in public health training for interested students in other disciplines, and earned certificate credit may be used towards completion of the MPH or MSPH degree programs at the University of Miami.

**The curriculum includes 5 courses (16 credits)**

Mission
The mission of the Graduate Programs in Public Health is to develop leaders who can translate knowledge into policy and practice to promote health and prevent disease in human populations.

Goals
Upon completion of the Public Health Certificate Program, all graduates will be able to:

- Apply statistical reasoning and quantitative methods for the purpose of analyzing public health data and participating in population-based research;
- Explain the role of multi-level occupational and environmental conditions which directly or indirectly impact the health of individuals, communities and populations;
- Apply epidemiologic methods to the measurement and study of population health and the prevention of infectious and chronic disease;
- Examine the main components and issues of the organization, financing and delivery of health services and public health systems; and
- Identify social and behavioral concepts, models and theories that form the foundation of health promotion and disease prevention.

Student Learning Outcomes
- Students will develop and demonstrate effective written and oral communication skills in the presentation of public health information.
- Students will demonstrate critical thinking skills in the core subject areas of public health.
- Students will demonstrate mastery of public health competencies.

M.P.H. Master of Public Health

MPH
The MPH degree is a professional degree for students who require a broad general academic experience in public health. Students will acquire competency in the fundamental public health disciplines. This includes research design and conduct, data analysis and policy analysis, communications, program planning and administration, public health systems and the organization of health services in the United States and Latin America, recognition and analysis of ethical issues in public health and professional practice, the needs of special populations, and the integration of these core disciplines in public health decision making. The MPH degree is a 45 credit hour program that is accredited by the Council on Education for Public Health.

Full-time students can expect to complete the MPH degree requirements within 2 years. An elective credit waiver may be available for students who enter the MPH degree program with an earned advanced degree (e.g., MD, DDS, DVM, JD).

Accelerated MPH
The Accelerated MPH program follows the same 45-credit curriculum as the MPH program, but is completed in one calendar year from summer to summer. Accelerated MPH students start the program in the summer semester, continue in fall semester, take courses during winter inter-session, continue in spring and spring inter-session, and end in the following summer semester. The course load per semester for accelerated students is greater than for traditional students; to ensure completion of the requirements within the shortened timeframe, accelerated students must follow the program plan designed under the supervision of their assigned faculty advisor from the start of the program. Students interested in the Accelerated MPH program must apply via SOPHAS selecting this program as there are unique admissions requirements. Visit the Application Process (https://graduatestudies.publichealth.med.miami.edu/admissions/application-process/) and FAQs (https://graduatestudies.publichealth.med.miami.edu/admissions/frequently-asked-questions/) on the Admissions page to learn more about the Accelerated MPH application process and admission requirements.

4+1 BSPH and MPH or MSPH
The University of Miami’s School of Nursing and Health Studies (SONHS) and the Department of Public Health Sciences (DPHS) offer a 4+1 program that combines a Bachelor of Science in Public Health (BSPH) and a Master of Public Health (MPH) or Master of Science in Public Health (MSPH). SONHS academically-qualified juniors are eligible to apply to the MPH or MSPH program. Applicants must be enrolled in the BSPH program with the SONHS and apply separately into the 4+1 BSPH/MPH (or 4+1 BSPH/MSPH). Applicants must be in good academic standing as defined by the School of Nursing at the time of submission. Acceptance into the BSPH program does not in any way indicate or guarantee acceptance to the MPH or MSPH degree program. The Graduate Record Exam (GRE) admissions requirement is waived for the BSPH students. If accepted, students complete the combined bachelor’s and master’s degree in 5 years. Accepted students take 12 credits of graduate level public health courses during their undergraduate senior year, then 3 to 6 graduate level credits the summer after completing the bachelors and the rest of graduate courses in the subsequent fall and spring semesters to complete the 45 credit MPH degree.

BSPH students must apply through SOPHAS during the undergraduate junior year by March 1 to start the program in the fall. Admission decisions regarding the entry of BSPH students into the MPH or MSPH program are made solely by the Admissions Committee of the Department of Public Health Sciences.

BSPH students interested in pursuing the 4+1 program must meet with their undergraduate advisor to develop an academic plan. The advisor will also explain the policies and procedures of the program and link the student with the graduate program advisor.

Generalist Concentration
graduates will be able to:

Upon completion of the Master of Public Health (MPH) degree, all graduates will be able to:

- Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings;
- Discuss the means by which structural bias, social inequities and racism undermine health and create challenges to achieving health equity at organizational, community and societal levels;
- Assess population needs, assets and capacities that affect communities’ health;
- Apply awareness of cultural values and practices to the design or implementation of public health policies or programs;
- Design a population-based policy, program, project or intervention;
- Explain basic principles and tools of budget and resource management;
- Select methods to evaluate public health programs;
- Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence;
- Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes;
- Advocate for political, social or economic polices and programs that will improve health in diverse populations;
- Evaluate policies for their impact on public health and health equity;
- Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making;
- Apply negotiation and mediation skills to address organizational or community challenges;
- Select communication strategies for different audiences and sectors;
- Communicate audience-appropriate public health content, both in writing and through oral presentation;
- Describe the importance of cultural competence in communicating public health content;
- Perform effectively on inter-professional teams; and
- Apply systems thinking tools to a public health issue.

Student Learning Outcomes

- Students will develop and demonstrate effective written and oral communication skills in the presentation of public health information.
- Students will develop and demonstrate the ability to make scholarly contributions to the field.
- Students will develop the skills and professional knowledge necessary to gain employment in public health practice.

**M.P.H./J.D. Master of Public Health / Juris Doctorate Dual Degree**

The University of Miami School of Law and the Miller School of Medicine’s Department of Public Health Sciences offer a joint degree program in law and public health. Upon completion of the programs, a student earns the Juris Doctor degree from the School of Law and a Master of Public Health degree from the School of Medicine. The average length of this joint program is 3.5 years (seven semesters plus 2 summer sessions). Law students begin MPH classes after completing the first year of law school.

Students who apply for the joint JD/MPH program must apply both to the School of Law and to the Graduate Programs in Public Health Sciences.

M.P.H./L.A.S. Master of Arts in Latin American Studies Joint Degree

Miami is the gateway to Latin America. As such we recognize an urgent need for public health professionals with the training and expertise needed to meet the growing public health challenges both in Latin America and the Caribbean. This dual degree program is offered jointly by the University of Miami College of Arts and Sciences and the Miller School of Medicine’s Department of Public Health Sciences. It is designed to train students for a career in public health with a focus on social policy, health management and health care in Latin America and the Caribbean as well as expatriate communities in the United States.

1 Students must demonstrate advanced language competency in Spanish, French, Portuguese, or Haitian Creole. Students may establish proficiency by passing one course taught in the target language at
the 600-level or above, or by passing a language competency exam. A major indigenous language of Latin America may be substituted for either Spanish or Portuguese. Students may petition for a waiver of examination if they have gained language competency in another manner (i.e. native speaker, upper division coursework in target language, Peace Corps service, IB credits, or Defense Language Proficiency Test).

2 Six credits worth of Regional Fundamentals in Latin America must be taken. These electives may be chosen from appropriate offerings in LAS, INS, POL, HIS, APY, or GEG, among others. Regional Fundamentals are those courses that have a clear regional or sub-regional focus (e.g. Andean Region; the Caribbean; South America; Central America; Southern Cone; Brazil; South Florida), or a cross-cutting thematic focus (e.g. Caribbean religions, Latin American Social Movements) rather than a specific country focus. The LAS Academic Director may approve courses from other departments.

M.P.H./M.A.I.A Master of Arts in International Administration Joint Degree
The Master of Arts in International Administration/Master of Public Health (MAIA/MPH) degree is offered jointly by the University of Miami College of Arts and Sciences and the Miller School of Medicine’s Department of Public Health Sciences. The MPH degree with a second master’s degree in international administration is designed for students who seek an in-depth knowledge of public health with a broader emphasis in globalization and health, international health, international health policy and international development.

M.P.H./M.P.A. Master of Public Administration Joint Degree
The Master of Public Health/Master of Public Administration (MPH/MPA) joint degree program is designed for students who seek an in-depth knowledge of public health with training in management and public policy administration. Students may complete the requirements for the MPH and MPA degrees simultaneously or in succession. It is possible for full-time students to complete both degree requirements within two and one-half academic years. Joint MPH/MPA students complete a total of 66 credits to earn both degrees.

### M.S. in Climate and Health

#### Master of Science in Climate and Health

The Master of Science in Climate and Health (MSCH) degree is offered in partnership with the Department of Public Health Sciences (Miller School of Medicine) and the Department of Atmospheric Sciences (Rosenstiel School of Marine and Atmospheric Sciences). The MSCH program will prepare future generations of professionals, research analysts, planners, decision-makers and leaders, who will have a deep understanding of the intricate relationship between human health and climate change, weather and weather anomalies (C²W²), and the ability to decipher and quantify this relationship at multiple scales ranging from gene-expression, to individual’s susceptibility to community response to region-wide morbidity and mortality burden.

The MSCH program has three specific aims. First, to provide students with conceptual, theoretical and applied understanding of the direct and indirect impacts of C²W² on human health. Second, to train students in understanding, evaluating, and assessing short- and long-term climate and weather changes, and their direct and indirect impact on disease and disability burden across different communities. And third, to prepare students to develop adaptation, mitigation, healthcare and communication strategies in the light of adaptation and infrastructure capacity of different communities to manage the health effects of C²W².

### Mission

As global warming intensifies, not only will it result in a shifting burden of disease and disability, but it will also result in unprecedented changes in the physical and biochemical characteristics of the environment. The MSCH graduate program will prepare future generations of research analysts, planners, decision-makers and leaders who will have deep understanding of the direct and indirect impacts of C²W² on human health.
understanding of the intricate relationship between climate and health, and ability to decipher this relationship.

Goals
The MSCH program will have three specific aims:

- Provide students conceptual and theoretical understanding of the direct and indirect impacts of short- and long-term climate changes on health and well-being;
- Train students in evaluating and assessing short- and long-term climate changes and their direct impact, in turn, on the burden of disease and disability, and indirect impact on burden of disease and disability through the physical and biochemical changes in the environmental characteristics due to climate changes, and
- Prepare students to evaluate (existing) and develop adaptation, mitigation, communication and healthcare strategies to manage the health effect of C2W2 across different populations with respect to their differential health risks, infrastructure and adaptation capacity.

Student Learning Outcomes
This program will train students in:

- Understanding the basic physical processes that control global and regional climate, and global and regional weather patterns and extreme weather patterns;
- Understanding the interplay between health and C2W2, the burden of disease/disability different communities and populations associated with weather and climate, and weather and climate mediated changes in the environment;
- Understanding the biophysical responses with respect to short- and long-term changes and weather patterns;
- Developing skills in collecting, managing and analyzing health, climate and associated data sets to quantify the health effects of climate incorporating hierarchical (including individual, community and region-specific) socio-physical environmental characteristics;
- Understanding the structure and administration of public health organizations and the policies that impact health programs and health services for different communities, and identifying direct and indirect roles of different stakeholders in the surveillance and management of the health effects of climate, and develop skills in evaluating the role strategies to reduce greenhouse gas emissions and associated health effects; and
- Understanding disparities in the health outcomes in communities and the attribution of climate change effects on vulnerable populations, and individual responses (from various socio-economic backgrounds) to different warning and surveillance of weather conditions that pose threat to health and well-being.

M.S. in Prevention Science and Community Health

The Master of Science degree program in Prevention Science and Community Health is a 33 credit hour program that is intended to provide students with training in the fundamentals of prevention science, including (a) the assessment of risk and protective factors that predict and modify health and behavior outcomes; (b) the development of preventive interventions that target these risk and protective factors; and (c) the implementation and evaluation of these interventions. Students in the program will develop skills in translating prevention research into demonstrable preventive action, and to successfully partner with communities and organizations for the implementation of evidence-based preventive interventions with fidelity and sensitivity to communities’ diversity and unique strengths.

The focus of this program is in line with the seven priority areas of the U.S. National Prevention Strategy (e.g., tobacco-free living, preventing drug abuse and excessive alcohol use, healthy eating, active living, injury and violence-free living, reproductive and sexual health, and mental/emotional well-being), as implemented through the Strategy’s strategic directions of creating healthy and safe communities, eliminating health disparities, providing clinical and community prevention services, and empowering people. The program is in intended to prepare students for research or technical positions in government, industry, academia, or private institutions, as well as to pursue future doctoral studies in public health.

The curriculum consists of required coursework in prevention science and public health, required coursework in statistics/research methodology, credit hours in elective coursework (chosen in consultation with the program advisor), and required credit hours dedicated to proposing and completing a research thesis.

Sample Course List to be completed by Public Health

Mission
The mission of the Graduate Programs in Public Health is to develop leaders who can translate knowledge into policy and practice to promote health and prevent disease in human populations.

The Master of Science in Prevention Science and Community Health (MS-PSCH) degree is an academic research degree designed for students
who wish to prepare for further study at the doctoral level, or to prepare for research or technical positions in government, industry, academia, or private institutions.

Goals

Upon completion of the Master of Science in Prevention Science and Community Health (MS-PSCH) degree, all graduates will be able to:

• Describe the core disciplines of public health and how they apply to improving population health;
• Apply epidemiologic methods to the measurement and study of prevention science;
• Describe the origins, foundations, and standards of prevention science;
• Design and carry out theoretically-grounded research studies that contribute to the literature on risk and protective factors, and identify their mechanisms of influence associated with health and behavior outcomes across the lifespan;
• Demonstrate knowledge of evidence-based preventive interventions and understand how to apply prevention science theories to the design, implementation, adaptation, and evaluation of preventive interventions;
• Integrate knowledge of research design, quantitative and qualitative methods, data analysis, and multi-method, multi-agent assessment methods commonly used in prevention science into their research activities;
• Demonstrate skill in disseminating their work to diverse audiences via formal academic presentations, instructional activities, and professional/academic writing; and
• Demonstrate awareness and understanding of diversity and contextual issues such as culture, identity, ethnicity, gender, sexual orientation, disability, marginalization, poverty, inequality, and religion in their research, applied activities, and professional behavior.

Student Learning Outcomes

• Students will demonstrate effective written and oral communication skills in the presentation of prevention science and related areas.
• Students will develop and demonstrate the ability to make scholarly contributions to the field.
• Students will demonstrate mastery of research competencies.

M.S.P.H. Master of Science in Public Health

The MSPH is an academic research degree designed for students who wish to prepare for further study at the doctoral level, or to prepare for research or technical positions in government, industry, academia, or private institutions. Studies will include many of the core disciplines included in the MPH degree with an additional emphasis on advanced research methods and quantitative analysis skills. The MSPH program is a 45 credit hour program that is accredited by the Council on Education for Public Health.

Full-time students can expect to complete the MSPH degree requirements within 2 years. An elective credit waiver may be available for students who enter the MSPH degree program with an earned advanced degree (e.g., MD, DDS, DVM, JD).

4+1 BSPH and MPH or MSPH

The University of Miami's School of Nursing and Health Studies (SONHS) and the Department of Public Health Sciences (DPHS) offer a 4+1 program that combines a Bachelor of Science in Public Health (BSPH) and a Master of Public Health (MPH) or Master of Science in Public Health (MSPH). SONHS academically-qualified juniors are eligible to apply to the MPH or MSPH program. Applicants must be enrolled in the BSPH program with the SONHS and apply separately into the 4+1 BSPH/MPH (or 4+1 BSPH/MSPH). Applicants must be in good academic standing as defined by the School of Nursing at the time of submission. Acceptance into the BSPH program does not in any way indicate or guarantee acceptance to the MPH or MSPH degree program. The Graduate Record Exam (GRE) admissions requirement is waived for the BSPH students. If accepted, students complete the combined bachelor's and master's degree in 5 years. Accepted students take 12 credits of graduate level public health courses during their undergraduate senior year; then 3 to 6 graduate level credits the summer after completing the bachelors and the rest of graduate courses in the subsequent fall and spring semesters to complete the 45 credit MPH degree.

BSPH students must apply through SOPHAS during the undergraduate junior year by March 1 to start the program in the fall. Admission decisions regarding the entry of BSPH students into the MPH or MSPH program are made solely by the Admissions Committee of the Department of Public Health Sciences.

BSPH students interested in pursuing the 4+1 program must meet with their undergraduate advisor to develop an academic plan. The advisor will also explain the policies and procedures of the program and link the student with the graduate program advisor.

The University of Miami Miller School of Medicine interdisciplinary MD/MPH dual degree program is to graduate leaders who can translate knowledge into policy and practice to promote health and prevent disease in human populations. The Master of Science in Public Health (MSPH) degree is an academic research degree designed for students who wish to prepare for further study at the doctoral level, or to prepare for research or technical positions in government, industry, academia or private institutions. Study will include the core disciplines included in the MPH degree with an additional emphasis on advanced research methods and quantitative analysis skills.

Goals

Student Learning Outcomes

- Students will develop and demonstrate effective written and oral communication skills in the presentation of public health information.
- Students will develop and demonstrate the ability to make scholarly contributions to the field.
- Students will demonstrate mastery of research competencies.

MD/MPH Program

The educational mission of the University of Miami Miller School of Medicine interdisciplinary MD/MPH dual degree program is to graduate physicians with the ability and desire to improve the health of all populations, especially those most vulnerable and underserved, by alleviating suffering and eliminating healthcare disparities through their leadership in patient care, research, education, health care administration and the community.

Four-Year MD-MPH Program:

The University of Miami Miller School of Medicine (UMMSM) MD/MPH program is unique in several ways. There are very few four-year MD/MPH dual degree programs offered at medical schools in the United States. Our program integrates significant components of the MPH coursework into the curriculum beginning in the first year and culminating in a required four-week clerkship in Public Health in the fourth year. In addition, the medical school has partnered with the Palm Beach County Health Department http://www.pbchd.com. This partnership provides opportunities to work with public health professionals in one of the country’s most academic and comprehensive public health departments.

The program is designed to provide graduates with the clinical and research skills required to approach health problems from a population and prevention perspective by integrating the roles of the biological sciences and clinical practice into the broader sets of knowledge and practices used in public health. We will graduate physicians who are provided the academic knowledge and skills, as well as the clinical experience to improve the health of all populations, especially those most vulnerable and underserved.

The MD/MPH dual degree program is an educational track at the UMMSM that will provide:

- Both degrees in four years
- Integrated and innovative training in both clinical medicine and public health
- In depth training in public health that provides the skills needed to reduce death and disability at the population level
- Two years of study at the Miami campus followed by two years at our regional medical campus in Palm Beach and Broward Counties working in our community teaching hospitals and clinics and with Department of Health professionals and faculty physicians in community settings
- Sustainable partnerships that provide opportunities to assess and improve public health, working with Public Health physicians in clinical and public health activities during clinical rotations
- Opportunities for community-based research to complete the required special project for the MPH degree (capstone)

Ph.D. in Epidemiology

The Doctor of Philosophy (PhD) in Epidemiology is an intensive research training program for students with prior training in Epidemiology or related disciplines. It provides advanced education and training for students seeking a professional career in medical and health-related research, as well as for physicians and other persons who have attained professional degrees and are seeking to integrate epidemiological research and methods into their ongoing careers.

As a research-focused degree, students are given the skills necessary to approach health problems to generate consequential research questions and use the most appropriate epidemiological methods to address them. The methodologically rigorous training comprises both formal classroom education and guided research with faculty mentors. Key research areas include: chronic disease epidemiology, including cancer, diabetes, and obesity; behavioral epidemiology relating to substance abuse and HIV/AIDS, occupational disease epidemiology; and health disparities.

Pre-requisites: The program is primarily designed for persons who have completed an MPH degree, as well as for physicians and others who have a master or doctoral degree in a related discipline. At a minimum, students should have successfully completed a graduate-level, foundation of epidemiology course as well as two biostatistical courses.

All PhD in Epidemiology students are required to complete 64 credit hours. These include:

- core courses in epidemiology and biostatistics
- elective coursework
- the dissertation

Please visit our website (http://publichealth.med.miami.edu/graduate/academic-programs/phd-in-epidemiology/) for additional information.

Total Credit Hours: 64

1 Students complete the Professional Development/Research Seminar multiple semesters (each Spring semester), minimum of three times; some students will complete it more than 3 times.

Mission

The mission of the Graduate Programs in Public Health is to develop leaders who can translate knowledge into policy and practice to promote health and prevent disease in human populations. The PhD program in Epidemiology is an intensive research-training program for students with prior training in epidemiology or related disciplines. All PhD students in our program have extensive contact with faculty members, in part because the program is explicitly designed to be small and interactive. The program takes advantage of South Florida’s unique opportunities for epidemiologic research, including our ever-changing mix of race, ethnicity, and cultures. In fact, many of our research programs could not be conducted elsewhere. Furthermore, because the program is located within the Miller School of Medicine, interactions with basic scientists and clinicians provide opportunities for epidemiologists to develop translational and interdisciplinary research.

Goals

Upon completion of the Doctorate in Epidemiology (PhD) degree, all graduates will be able to:

- Describe the core disciplines of public health and how they apply to improving population health;
- Recognize potential ethical issues and implement the concepts of ethical conduct of research in epidemiologic studies;
- Design epidemiologic studies applying sound methodology and assess the validity of results;
- Develop and implement data collection/management methods and tools needed for performing epidemiology investigations;
- Apply quantitative and reasoning skills, as well as content-area knowledge to analyze data from epidemiological studies;
- Utilize the application of statistical methods that are critical to epidemiologic inquiry; manage and manipulate data sets in statistical analysis software packages including SAS and R;
- Identify major chronic and infectious diseases, their general pathophysiology, descriptive epidemiology and risk factors;
- Critically evaluate scientific literature and synthesize the outcomes across studies, balancing limitations and contributions of each study;
- Articulate research questions that advance scientific knowledge and develop a proposal for extramural research funding;
- Present data at academic and professional meetings and submit scientific papers for publication in high-impact peer-reviewed journals;
- Convey epidemiologic concepts to students and peers; effectively communicate epidemiologic information to scientists, policy makers and the public;
- Conduct an advanced original research project and demonstrate mastery of the topic area;
- Read, plan, develop and present epidemiologic data outside their area of mastery; and
- Provide consultation to health professionals in conducting epidemiological research; and be prepared to work collaboratively with scientists and practitioners in other fields.

Student Learning Outcomes

- Students will develop effective written and oral communication skills in the presentation of public health information.
- Students will develop and demonstrate the ability to make scholarly contributions to the field.
- Students will demonstrate mastery of research competencies.

Ph.D. in Prevention Science and Community Health

The PhD in Prevention Science and Community Health will prepare students with the necessary expertise and interdisciplinary background to contribute to 21st century prevention and community health research. Students will be trained in both traditional and innovative areas of prevention science. These include etiology, intervention design and evaluation, innovative data collection and analyses, and implementation science.

The Prevention Science program offers students the unique opportunity to interact with faculty who specialize in all stages of the intervention development and evaluation process, as well as in various methodologies such as community-based participatory research and mixed-methods research. Program faculty are experts in cultural diversity and health disparities. They are focused on acculturation; cultural predictors of health disparities; and efficacious methods, strategies, and programs for reducing health disparities locally, nationally, and internationally. Key research areas include: substance use, HIV, cancer, diabetes, obesity, delinquency and depression.

All PhD in Prevention Science students are required to complete 75 credit hours. These include:

- course courses in intervention design, implementation science and statistics
- elective coursework
- the dissertation

Please visit our website (http://publichealth.med.miami.edu/graduate/academic-programs/phd-in-prevention-science/) for additional information.

1 Students complete the Professional Development Seminar in Years 1 and 2.

2 Students complete the Innovation Seminar in Years 3 and 4.

**Mission**

The vision of the PhD program in Prevention Science and Community Health is to become an epicenter for scholarship on etiology, intervention development and evaluation, and intervention implementation. The mission of the program is to produce prevention science and community health scholars who promote health and prevent illness at the individual, family, community, national, and global levels.

**Goals**

The PhD program in Prevention Science and Community Health trains prevention scientists and community health scholars through rigorous theoretical, methodological, and applied training. The program prepares scholars for careers in academia, research, and public policy. We aim to train the next generation of prevention scientists who will help to promote wellness, ameliorate the burden of disease, and create health equity.

**Student Learning Outcomes**

- Students will demonstrate a breadth of understanding of the general values, theories, concepts, research methodologies,
- Students will demonstrate a deep understanding and mastery of one specific areas of focus within the fields of prevention science and community health,
- Students will demonstrate their capacity to use the prevention science and community health principles to generate new knowledge.

Admission Requirements
Please consult the general section of the Graduate Bulletin for the Graduate School admission requirements.

For additional information on the Frost School of Music Graduate Admission Requirements, please visit our Graduate Admissions website (https://admissions.frost.miami.edu/graduate/).

The University is currently instituting an audit process to ensure students only take courses that are required for their degree program. Such audits will be specific to students who are receiving federal financial aid, such as federal student loans. If a student is found to be enrolled in courses not required for the degree program, federal aid may be adjusted for that student. In essence, the aid may be reduced, as aid will not be given for courses outside the degree program. Moreover, the University could incur sizable fines if federal aid is used to pay for courses outside the degree program.

Degree Programs
1. Doctor of Philosophy – Deg. Code: PhD
   a. Music Education – Conc. Code: MEDU
   a. Choral Conducting – Conc. Code: MCDC
   b. Composition – Conc. Code: MTCP
   c. Instrumental Conducting – Conc. Code: MCDI
   d. Instrumental Performance – Conc. Code: MIPF
   e. Jazz Composition – Conc. Code: MSJC
   f. Jazz Performance (Instrumental – Conc. Code: MSJI or Vocal – Conc. Code: MSJV)
   h. Multiple Woodwinds – Conc. Code: MIPW
   j. Vocal Pedagogy and Performance – Conc. Code: VPED
   k. Vocal Performance – Conc. Code: MVPF
   a. Arts Presenting & Live Entertainment Management – Conc. Code: MPRS

   k. Music Business and Entertainment Industries – Conc. Code: MBEI
   l. Music Business and Entertainment Industries Online Degree
   m. Juris Doctorate & Master of Music in Music Business and Entertainment Industries - Conc. Code: JDMM
   n. Music Education – Conc. Code: MEDU
     i. Music Education with Certification – Conc. Code: MEDC
   o. Music Therapy – Conc. Code: MTYP
     i. Music Therapy with Undergraduate Equivalency – Conc. Code: MTYE
   r. Studio Jazz Writing – Conc. Code: MSJW
   s. Vocal Performance – Conc. Code: MVPF
5. Master of Science – Deg. Code: MSMET
   a. Instrumental Conducting – Conc. Code: MCDI
   b. Instrumental Performance – Conc. Code: MIPF
   d. Vocal Performance – Conc. Code: MVPF

Entrance Exams
The Frost School of Music requires certain incoming graduate students to take an entrance exam in Music Theory. Graduate students are expected to be well-prepared for this exam. Masters students who do not pass this exam must fulfill a remediation requirement prior to completion of the final project as required for the degree. Doctoral students who do not pass the entrance exam must fulfill a remediation requirement prior to applying for Doctoral Committee Approval. Please access this link for more information.

Degree Requirements: Doctoral Degrees
**Doctor of Musical Arts (DMA)**

The purpose of the Doctor of Musical Arts is to train the most promising musicians at the highest musical and intellectual level for prominent careers in their field. The degree stresses excellence in performance, composition, scholarship, and teaching. By its nature, the Doctor of Musical Arts provides opportunities for students with proven accomplishment to prepare themselves for the professorship.

For the Doctor of Musical Arts in Performance, Keyboard Performance and Pedagogy, Composition, Jazz Composition, Jazz Performance, Vocal Pedagogy and Performance, and Conducting, the candidate must meet all the general requirements for the PhD degree with respect to residence, total minimum credit hours, and qualifying examinations. The main distinction between the two degrees pertains to the required creative activity. The DMA emphasizes performance ability, as well as performance-related research. These creative efforts replace the dissertation requirements traditionally found in the PhD. In addition to specific courses and credit hours listed in the following pages, students pursuing the DMA must meet the requirements listed below.

**Doctoral Committee for the DMA**

This committee can be the same or different from the student’s recital committee. The committee should consist of four members, including three members from the student’s major area (one of whom is the committee chair), and one member from another department of the Frost School. The committee chair will be Regular Faculty and/or hold a doctoral degree (i.e., DMA or PhD) as well as graduate faculty status. Two other committee members will be Regular Faculty or members of the Graduate Faculty. At least one member of the committee must hold a doctoral degree (i.e., DMA or PhD). Committees are first approved by the committee chair and then the Associate Dean of Graduate Studies in the Frost School before students apply for candidacy. Requests for exceptions to these committee requirements can be submitted in writing for consideration by the Associate Dean of Graduate Studies in the Frost School.

Responsibilities of the committee shall include the following:

- Overseeing the doctoral essay or lecture recital, including approval of the topic and proposal, supervision of the writing of the essay or lecture recital, assessment of the quality of the final essay or lecture recital, and the quality of the final defense. In cases where special faculty expertise is needed for a particular essay topic, changes in membership of the doctoral committee may be made. Membership of the doctoral committee is approved first by the Associate Dean of Graduate Studies in the Frost School and subsequently by the Dean of the Graduate School.

**Doctoral Cognates**

Within the 60 credit hours required for the degree, DMA students may select a formal area of study known as the cognate. A total of 12 credit hours are devoted to the cognate. If a cognate is not selected, the student should work with the advisor to select a meaningful collection of elective music courses that complement the student’s discipline.

The cognate allows the student to obtain specialized knowledge and skill in an additional area of music. For example, a student pursuing the DMA in instrumental performance may wish to obtain a cognate in musicology or music business. Completion of a cognate should give the student a heightened level of understanding in this topic area, and could give the student a competitive advantage when pursuing post-graduation opportunities. When completed, cognates are listed on the student’s official transcript.

Cognates are offered in a number of Departments within the Frost School. Students must apply to the cognate department for acceptance. This process may include an audition, interview, portfolio, or testing as determined by the cognate department. Students must complete all requirements specified for a cognate to be recognized as having completed the cognate. Otherwise, the credits will be considered electives and the cognate will not be granted. In order to ensure completion of the cognate in a timely manner, students should decide on a cognate no later than the end of their second semester of full-time study.

No credits that are otherwise required in the DMA program can apply to the cognate. Any overlap will require approved course substitutions within either the DMA program or the cognate as determined to be most appropriate by the Faculty In-Charge of the selected cognate, as well as the Associate Dean of Graduate Studies. One course substitution is allowed per cognate.

**Procedures for Completing a Doctoral Cognate**

See Procedures for Completing a Cognate on this website (https://admissions.frost.miami.edu/graduate/current-students/doctoral-cognates/):

1. Contact the Office of Graduate Studies to obtain a complete listing of required courses in a selected cognate.
2. Contact the faculty in-charge for the desired cognate.
3. Complete the application process for that cognate.
4. The designated faculty member must then complete and sign a Doctoral Cognate Acceptance Form and submit it to the Frost School Office of Graduate Studies.
5. Complete all required courses in the cognate with a grade of C- or higher. The cognate can then be listed on the student’s official transcript at time of degree conferral.

**List of Cognates, Respective Departments, and Faculty in Charge:**

- **Music Education, Department of Music Education and Music Therapy,** Stephen Zdzinski
- **Arts Presenting and Live Entertainment Management, Department of Music Media and Industry,** Gary Wood
- **Collaborative Piano, Department of Keyboard Performance,** Santiago Rodriguez
- **Conducting: Choral,** Corin Overland
- **Conducting: Instrumental,** Robert Carnochan
- **Conducting: Vocal,** Margaret Donaghue, Ross Harbaugh, Richard Todd, Svet Stoyanov
- **Jazz Performance, Department of Studio Music and Jazz,** John Daversa
- **Keyboard Pedagogy, Department of Keyboard Performance,** Naoko Takao
- **Music Business, Department of Music Media and Industry,** Serona Elton
- **Music Education, Department of Music Education and Music Therapy,** Stephen Zdzinski
Students majoring in accompanying and chamber music will present one solo recital, one chamber music recital, and three accompanying recitals. For Keyboard Performance and Pedagogy, an approved combination of recitals and pedagogy presentations is required.

Jazz Performance Majors
Students must present three full-length recitals.

Conducting Majors: Choral
No less than two approved full recitals shall be presented by each candidate.

Conducting Majors: Instrumental
Three approved public recitals (or the equivalent) with suitable performing groups must be given during the period of residency and prior to the oral examination.

Composition Majors
1. The candidate will be required to compose a piece of substantial proportions.
2. The candidate will be required to write a doctoral essay. The text will either detail the doctoral composition or discuss another topic as approved by the doctoral committee chair.
3. A public presentation of the candidate's compositions will be required. A series of smaller performances presented each semester on- or off-campus, a larger festival performance(s), or a cumulative solo recital at the terminal stages of the degree exemplify how this requirement can be fulfilled. Other options are possible with faculty approval.

DMA Final Project
By means of a written Doctoral Essay or Lecture Recital, all DMA candidates are expected to demonstrate their ability to conduct an original scholarly investigation and present its results in an articulate manner. All DMA students must pass a public oral defense of the Doctoral Essay or Lecture Recital. Detailed information on these projects and defense procedures is provided in the Frost School of Music Graduate Student Handbook (https://admissions.frost.miami.edu/graduate/current-students/).

Doctor of Philosophy (PhD)
The Doctor of Philosophy degree is offered in Music Education, and Music Education with Music Therapy Emphasis. This rigorous curriculum prepares students to become innovative researchers, scholars, and outstanding leaders in these disciplines. Graduates are uniquely-prepared for careers in higher education, research, and administration. Candidates must meet all general requirements for the PhD degree as defined by the Graduate School of the University of Miami with respect to residence, total minimum credit hours, and qualifying examinations. In addition to specific courses and credit hours listed in the following pages, students pursuing the PhD must meet the requirements listed below.

PhD Qualifying Examination
All PhD students must complete a qualifying examination that includes two components. The first component consists of writing three scholarly papers that are independent of or significant extensions of documents written as part of other coursework. The second component consists of a one-hour, oral examination focusing on the written papers. After successfully completing this exam, students can apply for Doctoral Committee Approval, defend the dissertation proposal, and apply for Doctoral Candidacy. Students who fail a qualifying exam (or a portion
of the exam) can re-take the exam, with committee approval. A student who fails a qualifying examination (or portion of the exam) twice will be dismissed from the degree program.

Qualifying exam procedures for the PhD degree can be found on our Graduate Studies website (https://admissions.frost.miami.edu/graduate/current-students/). PhD students are strongly encouraged to contact their advisors and Department Chairs to obtain more information on exam scheduling, expectations, and preparation.

**Doctoral Committee for the PhD**

All students pursuing the Doctor of Philosophy degree must establish a Doctoral Committee to oversee the dissertation. The committee should consist of five members, including three members from the student's major area (one of whom is the committee chair), and one other member from another department within the Frost School, and one faculty member from outside the Frost School. The committee chair and two other members must be members of the Graduate Faculty. Requests for exceptions to these committee requirements can be submitted in writing for consideration by the Associate Dean of Graduate Studies in the Frost School.

**Admission to Candidacy**

Doctoral students may apply for candidacy after successful completion of all qualifying examinations as well as a successful defense of the dissertation proposal. No student may receive the degree in the same semester or summer session in which he or she is admitted to candidacy.

**PhD Final Project: the Dissertation**

The culminating project for the PhD is the Doctoral Dissertation. A PhD is traditionally considered a research-oriented academic degree, thus the dissertation should consist of independent, original research that demonstrates the candidate's mastery of both subject matter and scholarly method. All PhD students must pass a public oral defense of the Dissertation. Detailed information, including defense procedures, is provided in the Frost School of Music Graduate Student Handbook (https://admissions.frost.miami.edu/graduate/current-students/).

**Degree Requirements: Masters Degrees**

**Credit Hours and Grades**

All masters degrees require a minimum of 30 credit hours. However, many masters degrees in the Frost School require more than 30 credit hours. Students are therefore advised to read the respective bulletin pages for their chosen degree program. To graduate, students must have a cumulative GPA of 3.0 (B average). Grades below C- are not considered passing.

**Master of Music Degree (MM) in:**

- Conducting, Choral or Instrumental
- Instrumental Performance
- Keyboard Performance
- Jazz Performance
- Vocal Performance

In addition to specific courses and credit hours listed in the following pages, students pursuing these Master of Music degrees must meet all requirements listed below.

**Ensemble Requirements**

The curricula for Master of Music degrees in performance and conducting include participation in one ensemble during each semester that a student is registered for 7 credit hours or more. Certain performance degrees have additional ensemble requirements as found on the respective bulletin pages.

**Conducting Recital Guidelines**

**Master’s Recital**

A compilation on DVD of conducting single or multiple works of live performances of major ensembles spread across the Masters’ experience. These performances are arranged in consultation with the major professor who assists in the preparation of the performances.

**Master’s Advanced Recital**

A full-length conducting recital is prepared and presented. The ensemble(s) and repertoire will be selected in close consultation with the major professor who will assist in the preparation process. All aspects of performance preparation including scheduling, venue arrangements, program notes, and the like will be carried out by the student under the guidance of the major professor.

**Performance Recital Guidelines**

**Master's Recital**

A full-length recital performed publicly by the student that may include chamber music in which the student's instrument plays a prominent role. Selection of repertoire is determined in consultation with the major professor who assists in the preparation of the performances.

**Master’s Second Recital**

With advisor approval, masters students in performance may give a second recital. In the Department of Instrumental Performance, this second recital may take the form of an Orchestral Mock Audition.

**Final Projects**

All masters degrees in performance and conducting require the successful completion of a final, culminating project. For example, in some performance degrees, students must perform and defend an extended comprehensive jury. In other performance degrees, students must complete a scholarly document in the form of either a Recital Paper or Extended Program Notes which must be defended before the masters recital committee. Detailed information on these documents and defense procedures are provided in the Frost School of Music Graduate Student Handbook (https://admissions.frost.miami.edu/graduate/current-students/).

Students are advised to carefully read the respective bulletin pages and consult with their assigned advisor to obtain more information on the required final project for their degree program.

**Master of Music Degree (MM) in:**

- Composition
- Jazz Pedagogy
- Keyboard Performance and Pedagogy
- Media Writing and Production
- Musicology
- Music Education
Masters Thesis or Masters Project
Students in these Master of Music degree programs must complete either a thesis or masters project and must pass a public, oral defense of their work. Detailed information on these documents and defense procedures are provided in the Frost School of Music Graduate Student Handbook (https://admissions.frost.miami.edu/graduate/current-students/).

Comprehensive Examinations
Certain masters degree programs also require students to take written Comprehensive Examinations. Students should contact their advisors to obtain specific details regarding comprehensive examination requirements. The exam is typically written and evaluated by a committee of faculty members in the student’s department who are familiar with the student’s discipline.

Per Graduate School policy, students who fail the comprehensive exam may be given one opportunity to retake the exam, with the committee’s approval. The re-take of the comprehensive exam may not be taken during the same semester as the original exam, or during a summer session. Additionally, the re-take must be completed within one calendar year of the original exam.

Master of Music Degree (MM) in:
- Music Business and Entertainment Industries

In addition to specific courses and credit hours listed in the following pages, students pursuing these Master of Music degrees must meet all requirements listed below.

Cumulative Exit Exam
Students must pass a cumulative exit exam as part of the Master of Music degree in Music Business and Entertainment Industries or Jazz Pedagogy.

Master of Arts Degree (MA) in:
- Arts Presenting and Live Entertainment Management

In addition to specific courses and credit hours listed in the following pages, students pursuing this Master of Arts degree must meet all requirements listed below.

Cumulative Exit Exam
Students must pass a cumulative exit exam as part of the Master of Arts degree in Arts Presenting and Live Entertainment Management.

Master of Science Degree (MS) in:
- Music Engineering Technology

In addition to specific courses and credit hours listed in the following pages, students pursuing this Master of Science degree must meet all requirements listed below.

Masters Research Project
Students pursuing the Master of Science degree in Music Engineering Technology must complete a substantial final project in the form of independent research that is defended before a faculty committee. Detailed information on this project and defense procedures are provided in the Frost School of Music Graduate Student Handbook (https://admissions.frost.miami.edu/graduate/current-students/).

Degree Requirements: Artist Diploma

Artist Diploma (AD) in:
- Instrumental Conducting
- Instrumental Performance
- Keyboard Performance
- Vocal Performance

The Artist Diploma is an intensive, one-year immersion in performance or conducting study for candidates with highly-developed skills. In addition to specific courses and credit hours listed in the following pages, students pursuing the AD program must also complete two, full-length (60 minute) recitals. In the Department of Instrumental Performance, one of the Artist Diploma recitals may take the form of an Orchestral Mock Audition.

Instrumental Performance
https://instrumental.frost.miami.edu/

The Frost School of Music’s Department of Instrumental Performance has programs tailored to meet the needs and interests of students – like you – who aspire to performance careers. Graduates of these programs often pursue careers as symphony musicians, university professors, concert soloists, or band or orchestra conductors. Many graduates pursue advanced study and graduate degrees for further career preparation.

As an instrumental performance major (https://instrumental.frost.miami.edu/), you will focus on developing and honing your performance skills on a selected brass, percussion, string, or woodwind instrument with assistance from faculty who have distinguished themselves as outstanding teachers and performing musicians. While the curriculum emphasizes development of tone and musicianship, as well as technical mastery of the instrument, it also includes music theory, music history and literature, orchestral literature and teaching methods. In addition, you will develop expertise in contemporary literature and chamber music performance. For more information, please visit the website for the department of Instrumental Performance (https://instrumental.frost.miami.edu/).

Doctoral Programs in Instrumental Performance

Mission

The mission of the Artist Diploma in Instrumental Performance is to:

- To stimulate the student’s awareness and artistic creativity in the field of instrumental performance
- To provide students public performance opportunities in a supportive and encouraging environment
- To provide students with the performance skills necessary to allow them to pursue professional orchestra auditions, chamber music careers, national/international competitions, continued graduate study, and any other performance objectives necessary for a career as a classical instrumentalist.

The mission of the Artist Diploma in Instrumental Conducting program is:

- To provide students with the highest quality training possible to bridge academic training with technical preparation (score reading, rehearsal technique, and physical technique) that is necessary for an entry-level career as a professional artist;
- To provide students with performance opportunities that develop and demonstrate their ability to integrate musicianship and performance practice with limited academic requirements;
- To assist students with identifying opportunities and preparation for competitions, internships, apprenticeships, and other professional venues for the classical artist including contact strategies and specific competition preparation strategies.

Goals

Student Learning Outcomes

- Students will develop instrumental Technique to an artist level. They should have the tools necessary to continue graduate study at elite level music schools or pursue professional careers as classical instrumentalists.
- Students will develop instrumental Expression to an artist level. They should develop their Expression to pursue professional careers as classical instrumentalists.
- Students will develop Creativity to professional performing artist level. They should have the tools necessary to create compelling and relevant performances that are on par with professional performing artists. The creativity will be based on aspects such as presentation, venue, staging, and collaboration.

M.M. in Instrumental Conducting

Candidates must possess and demonstrate an unquestioned gift of musical leadership based upon broad experience with instrumental ensembles. Advanced orchestration must be included in the program. Admission requirements include a baccalaureate degree in conducting or performance, accumulated practical experience with instrumental ensembles, and experience equivalent to an undergraduate requirement in orchestration. Enrollment in this major is only by special permission.

Mission

The mission of the Master of Music Degree in Instrumental Conducting is to prepare musicians to enter the music conducting profession and/or pursue doctoral studies. The Master of Music degree program in Instrumental Conducting provides students with opportunities for advanced instrumental study, analysis of style, development of technique and musicianship demonstrated through the ability to conduct ensembles. Our principal focus is on the development of high-level performance skills that will enable a student to pursue a career as a professional conductor/musician.

Goals

The program objectives are:

- To provide students with the highest quality training possible to bridge academic training into entry-level careers as professional artists;
- To provide students with performance opportunities that develop and demonstrate the integration of musicianship and performance practice;
- To assist students with identifying opportunities and preparation for competitions, internships, apprenticeships and other professional venues for the classical artist.

Student Learning Outcomes

- Students will demonstrate advanced technical and musicianship skills as well as the selection of appropriate repertoire adequate for beginning a career as a Secondary School Teacher or College Professor with a Chamber Orchestra or Wind Ensemble.
- Students will demonstrate advanced technical and musicianship skills as well as the selection of appropriate repertoire adequate for beginning a career as a Secondary School Teacher or College Professor with a Full Symphony Orchestra or Band.
- Students will demonstrate advanced rehearsal techniques and post-rehearsal assessment and reflection as adequate for beginning a career as Secondary School Teacher or College Professor.

* Ensemble Policy: Students must be enrolled in at least one advisor-approved ensemble for each semester in residence.
** Recital Policy: Students must give one, full-length recital (MIP 812 Masters Recital). Students who wish to give a second, optional recital may enroll in MIP 813 Masters Second Recital, with advisor approval, under ‘Electives’

Mission

The mission of the Master of Music Degree in Instrumental Performance is to:

- Provide students the highest quality of education available in the areas of instrumental performance and musicianship that will provide them the skills required to lead a professional performance career as a classical instrumentalist.
• To stimulate the student’s awareness and artistic creativity in the field of instrumental performance
• To provide students public performance opportunities in a supportive and encouraging environment
• To provide students the writing and research skills needed in order to adequately prepare them for study at the doctoral level.
• To provide students with essential knowledge of repertoire, in all its facets, in order that they be conversant and readily able to apply it in their performance field.

Goals

Student Learning Outcomes

• Students will develop instrumental Technique necessary to a master level. They should develop their Technique to continue graduate study at elite level music schools or pursue professional careers as classical instrumentalists.
• Students will develop instrumental Expression necessary to a master level. They should develop their Expression to continue graduate study at elite level music schools or pursue professional careers as classical instrumentalists.
• Students will demonstrate comprehensive performance skills required of a master’s degree from a leading performance music school, preparing them to pursue professional performance careers or continue study at the doctoral level.

• D.M.A. in Keyboard Performance and Pedagogy (p. 978)
• D.M.A. in Keyboard Performance (p. 978)

A.D. in Keyboard Performance

• A.D. in Keyboard performance (p. 977)

Mission

The mission of the Artist Diploma (a one-year program) in Keyboard Performance is to:

• Provide students the highest quality of education available in the areas of piano performance and musicianship that will provide the foundation for continued academic work, and which could also lead toward a professional performance career as a classical pianist.
• To stimulate the student’s awareness and artistic creativity in the field of piano performance
• To provide students public performance performance opportunities in a supportive and encouraging environment.

Keyboard Performance

https://piano.frost.miami.edu/

The Department of Keyboard Performance at the Frost School of Music is a dynamic center for music scholarship. Regardless if a student is more versed in classical or contemporary repertoire, the performance and academic opportunities are exceptional and for all areas of keyboard study (https://piano.frost.miami.edu/). A degree from the Frost School will ensure broad comprehensive training for a student in a performance-intensive environment. Degree programs incorporate performance, music research, pedagogy, and professional skills to cultivate students for a professional life in music. Graduates may seek careers as concert performers, collaborative pianists/accompanists, and/or as artist teachers. For more information, please visit the website for the department of Keyboard Performance (https://piano.frost.miami.edu/).
To provide students performance skills necessary for graduate degree auditions and national/international piano competitions.

Goals

Student Learning Outcomes

- Students will develop technical pianistic skills necessary for acceptance into a variety of graduate study institutions offering a DMA in performance and for fostering a professional career as solo pianists.
- Students will develop musicianship skills and knowledge of a large selection of the piano repertory necessary for acceptance into a variety of graduate study institutions offering a DMA in performance and for fostering a professional career as solo pianists.
- Students will develop performance and artistic presentation skills necessary for acceptance into a variety of graduate study institutions offering a DMA in performance and for fostering a professional career as solo pianists.

1 Students in this degree program take MKP 832 three times, at 2 credits each for a total of 6 credits.

Mission

The mission of the Doctor of Musical Arts degree in Keyboard Performance is to:

- Provide students the highest quality of education available in the areas of piano performance and musicianship that will provide the foundation for a successful teaching career at an institution or private studio, and which could also lead toward a professional performance career as a classical pianist.
- To stimulate the student’s awareness and artistic creativity in the field of piano performance.
- To provide students public performance opportunities in a supportive and encouraging environment.
- To provide students performance skills necessary for careers in teaching, success at national/international piano competitions, and to further their skills in performance.

Goals

Student Learning Outcomes

- Students will develop technical pianistic skills necessary for fostering a professional career as solo pianists.
- Students will develop musicianship skills and knowledge of a large selection of the piano repertory necessary for fostering a professional career as solo pianists.
- Students will develop performance and artistic presentation skills necessary for fostering a professional career as solo pianists.
- Students will develop the necessary research and writing skills for completing a Doctoral essay.

D.M.A. in Keyboard Performance and Pedagogy

Mission

The mission of the Doctor of Musical Arts degree in Keyboard Performance and Pedagogy is to educate students in:

- Teaching strategies for all levels of piano students.
- Knowledge of methods, materials, and standard teaching repertoire for all levels of piano students.
- Career preparations for college-level teaching as a pianist including professional development and use of technology.
- The performance of piano, building musicianship and technical ability to an advanced level.
- Research skills on original topics in the field of keyboard pedagogy.

Goals

Graduates of the program are prepared for careers as college or university faculty, performers, and teachers/proprietors of private and group teaching studios.

Student Learning Outcomes

- Students will synthesize musicianship and technical ability to an advanced level of piano performance.
- Students demonstrate effective research skills in the field of keyboard pedagogy and improve writing skills to prepare for the final project.
and eventually, professional presentations beyond the program of study.

- Students will demonstrate the practical career-related knowledge requisite for college-level teaching as a pianist. The topics include professional development, classroom teaching preparation, and use of technology.

**May be a performance or a lecture recital

Mission

The mission of Master of Music degree in Keyboard Performance and Pedagogy is to educate students in:

- Teaching strategies for private and group piano lessons
- Knowledge of methods, materials, and standard teaching repertoire for beginning and intermediate students
- The use of music technology available for use in teaching
- The performance of piano, building musicianship, technical ability, and the ability to assimilate a large cross-section of recital repertoire
- Research skills on original topics in the field of keyboard pedagogy.

Goals

The Master of Music degree will prepare students for careers as performers, private music teachers, entry-level positions in community colleges and some four-year institutions, and to pursue advanced degrees in music-related fields.

Student Learning Outcomes

- Students will learn teaching strategies for private and group lessons, and will be able to successfully teach in these arenas.
- Students will demonstrate knowledge and proficiency with “method” books and standard teaching repertoire for beginning and intermediate students.
- Students will build musicianship and technical ability and will assimilate a large cross-section of recital repertoire.
- Students will be able to appropriately assign repertoire and etudes with clear understanding of challenges inherent in the material and according to the need of each student.
- Students will develop skills researching an original topic in the field of keyboard pedagogy.

Music Education and Music Therapy

The Department of Music Education and Music Therapy boasts two of the most innovative programs in the country and is committed to the preparation of outstanding music educators, music therapists, and scholars at all degree levels. The department faculty members are cutting-edge scholars and researchers, holding leadership positions in internationally-prominent organizations. Their contributions to research, scholarship, and pedagogy consistently inspire their students while informing the profession at large.

Music Education

A basic premise of the Music Education (https://musiced.frost.miami.edu/) program is that music teachers must be both musicians and teachers; thus, competency as a musician is equally as important as having a strong theoretical and practical foundation in music education. Carefully coordinated courses emphasize sequencing of instruction in terms of student’s musical development and incorporate ideas drawn from theory, research, and the practical experiences of the faculty and other successful practitioners. The program seeks to transcend all areas of music teaching and learning, from birth to older adulthood, and from public schools to community programs, allowing the principles of pedagogy to be applied broadly in a wide variety of contexts. For more information, please visit the website for the Music Education program (https://musiced.frost.miami.edu/).
Music Therapy

Music therapy (https://musictherapy.frost.miami.edu/) involves using music as a tool to help people regain or develop important life skills, such as communication, physical movement, attention and memory, emotional growth or social skills. Therapeutic techniques are based on scientific knowledge regarding how the human brain and body respond to and utilize musical stimuli. Music therapists work with individuals of all ages who require treatment due to deficits in physical, cognitive or social/emotional functioning. Potential employment sites include medical or psychiatric hospitals, clinics, nursing homes, rehabilitation centers, special education or early intervention school settings, hospices, or correctional settings. Music therapy can be a rewarding career for the individual who has a strong musical background and who is interested in a health care profession. For more information, please visit the website for the Music Therapy (https://musictherapy.frost.miami.edu/) program.

Mission

The Department of Music Education and Music Therapy offers graduate degrees in Music Education and in Music Therapy that prepare students for professional careers as teachers and therapists. The mission of the Master of Music degree program in music education at the Frost School of Music is to:

- Provide the highest quality of music education expertise
- Foster advanced professional development in music teaching practice as well as music education research
- Serve the music education profession as a resource for music teachers, the education community, and the university community, locally, regionally, nationally, and internationally.

Goals

The Objectives of the MM program in Music Education are for students to:

- Apply knowledge of music education philosophy or music learning theoretical content;
- Apply knowledge of music assessment practices; and
- Demonstrate synthesis of studies through a capstone project in research (thesis and project tracks) or curriculum development (certification track).

Student Learning Outcomes

- Students in the Master of Music Program will apply knowledge of music education philosophy or music learning theoretical content in a well-conceived position paper.
- Students will apply knowledge of music assessment practices in a music assessment creation project.
- Students in Thesis and Project tracks of the MM Program will demonstrate knowledge of music education research, while students in the Certification Track will demonstrate knowledge of curriculum development and implementation.

1. Students in this degree program take MED 780 two times, at 1 credit each for a total of 2 credits.

## Mission

The mission of the Ph.D. program of the Frost School of Music is to:

- Provide the highest quality of music education and music therapy expertise
- Foster advancements in music teaching and music therapy practice, music education and music therapy research
- Serve the music education and music therapy professions as a resource for music teachers and music therapists, the music education/music therapy research community, the education community, and the university community, locally, regionally, nationally, and internationally.

## Goals

The objectives of the Ph.D. program in Music Education are to:

- Develop highly competent, independent researchers in the fields of music education and music therapy capable of developing a sustained research program;
- Prepare Ph.D. students to provide instruction to both undergraduate and graduate programs in their area of specialty (music therapy, instrumental music education, string music education, choral music education, and general music education); and
- Develop future collegiate faculty in the areas of music education and music therapy who will become leaders in the profession

## Student Learning Outcomes

- Students will become well-qualified producers of research in music education or music therapy.
- Students will demonstrate application of fundamental and specialized knowledge related to music teaching or music therapy practice.
- Students will demonstrate the ability to write publishable scholarly papers in their discipline (music education or music therapy) for various professional audiences.

## Music Media and Industry

### Music Business and Entertainment Industries

In today's fast changing, multi-billion dollar international music and entertainment industries, there are more record labels, publishers, media companies, distributors, retailers, and product manufacturers actively promoting the sale and use of music than ever before. As the market for music shifts away from physical products and traditional methods to digital online and mobile, a greater number of competent, highly-skilled executives and entrepreneurs will be needed to meet the specialized demands of the new music industry. Since 1964, the Music Business and Entertainment Industries program has been at the forefront of music business education. The MBEI program has been carefully designed to prepare qualified music business students for these emerging opportunities.

Our graduate program, where students earn a Master of Music, focuses primarily on music business courses, with the opportunity to pursue additional coursework in both the School of Business and School of
Communications. We also offer the only joint degree Juris Doctor (J.D.) and Master of Music in Music Business and Entertainment Industries (M.M.). For more information, please visit the website for the Music Business program (https://musicbusiness.frost.miami.edu/).

**Music Engineering Technology**

Since 1975, the Music Engineering Technology program at the University of Miami Frost School of Music has pioneered education in music and technology, setting the standard by which the National Association of Schools of Music (NASM) accredits other such programs around the United States. Alumni of the program have contributed significantly to the music and audio industries and upon graduation pursue careers ranging from recording engineer to software designer.

The Music Engineering Technology program offers a two-year Master of Science graduate degree for students who have completed an undergraduate degree in electrical engineering or computer science. These students study the software and hardware design of audio systems and perform independent research that culminates in a thesis project. Upon graduation, these students are widely placed in top corporations that span the audio industry. For more information, please visit the website for the Music Engineering program (https://musicengineering.frost.miami.edu/).

**Arts Presenting and Live Entertainment Management**

Arts Presenting (AP Live) is a Live Entertainment Management Program with an emphasis on the performing arts and commercial music industries. AP Live offers a curriculum that's distinctly tailored to provide a thorough understanding of marketing, promotion, management, legal aspects, risks and finance of a diversity of live entertainment endeavors. AP Live students gain hands on experience producing events, marketing and promoting concerts and working with venues on all aspects of a live entertainment performance. For more information, please visit the website for the Arts Presenting Program (https://artspresenting.frost.miami.edu/).

**Media Writing and Production**

In the Media Writing and Production program, we are dedicated to not only providing the foundational skills necessary for the student to pursue a career in the media industry, but also to stimulate and encourage student awareness of their unique gifts as a creative musician. We accomplish this by promoting critical analysis and creative problem-solving skills throughout the program. Courses are designed to provide students with a cohesive program of study that incorporates both current and foreseeable trends — from the manipulation of sound through a digital audio workstation (DAW), the hybrid use of acoustic and electronic instruments, to the implementation and use of sound libraries and synthesizers that will best prepare students for competition in today's industry. For more information, please visit the website for the Media Writing and Production (https://mediawriting.frost.miami.edu/degrees/mm-in-media-writing-and-production/) Program (https://artspresenting.frost.miami.edu/).

**Masters Programs in Music Media and Industry**

- M.A. in Arts Presenting and Live Entertainment Management (p. 985)
- M.M. in Music Business and Entertainment Industries (p. 987)

**J.D./M.M. in Music Business and Entertainment Industries**

The University of Miami School of Law and the Frost School of Music offer the first ever joint degree program in law and music business. Upon completion of this program, a student earns the Juris Doctor degree from the School of Law and a Master of Music in Music Business and Entertainment Industries degree from the School of Music.

In this specialization, students not only learn the essentials of law, but also the common practices of the music business – essential skills for becoming a successful attorney in the music industry. Through this joint program, students can complete both degrees in less time (3 to 4 years) while studying at a top law school and one of the best music schools in the country. And, as one of the four major music cities in the U.S. and as the music center for the Latin American Divisions of all major music companies, Miami offers exceptional internship and work opportunities. For more information, please visit our website (http://www.law.miami.edu/academics/jd-music.php?op=0/).

**J.D./M.A. – Master in Arts Presenting & Live Entertainment Management**

The University of Miami School of Law in partnership with the University of Miami’s esteemed Frost School of Music, Department of Music Business and Entertainment Industries, now offers a joint J.D./M.A. in Law and Arts Presenting & Live Entertainment Management.

This combination of degrees is ideal for Law School students looking to:

- Prepare for a career in entertainment law
- Develop a focus on the presentation of concerts, exhibitions, performances, and events
- Apply legal knowledge in the areas of contracts, risk management, marketing, and finance to the live entertainment/performance fields.

This program is similar to the J.D./M.M. program in Music Business and Entertainment Industries, but has a focus on the concert/performance arena.

**Certificate Programs**

- Certificate in Arts Leadership (p. 988)
- Certificate in Arts Management (p. 988)
- Certificate in Arts Presenting Fundamentals (p. 988)
- Certificates in Legal Aspects of Music Business (p. 988)
- Certificate in Music Business Fundamentals (p. 988)
- Certificate in Music Entrepreneurship (p. 989)
- Certificate in Music Rights Administration and Licensing (p. 989)
- Certificate in Tour and Live Entertainment Administration (p. 989)

Mission

The Arts Presenting and Live Entertainment Management (AP LIVE) masters degree program makes possible specialized, comprehensive and experiential learning in the multifaceted field of live arts presentations. Keen attention to leadership, project management, operations, personnel, finances and for-profit and non-profit arts business models serves as the foundation of the curricular learning, research and activity. With greater-Miami and arts connection to professional across the U.S. and beyond, students graduating from the University Miami and the Frost School of Music are fully prepared to enter the workforce as dynamic professionals poised to step in successfully to wide-varieties of arts settings around the world.

Goals

The program has three primary objectives:

- Each student is fully engaged in the entirety of Arts Presenting and Live Entertainment Management subject matter, with exposure to all of the professional-level issues of the field. To that end, courses are designed with syllabi that ensures a sequence of learning filled with each of the best-practice topics and tactics necessary for gaining professional level skills and wherewithal.
- Each student is engaged in research designed to capture far-reaching information formed from intense study and field experiences. Such research will result in (at least) two formal papers and presentations that exemplify exceptional effort and provide lasting value for the learner. Such research includes, but is not limited to creating and managing projects of various sizes, business models and implementation strategies, industry-related statistical analysis such as environmental scans, demographics and so forth, as well as the 

exploration of arts-based subjects that go to the heart of the arts presenting reason d’etre.
- Each student is introduced to professionals in the field—across the U.S. and beyond—such that they have developed a meaningful and useful network of mentors and contacts offering insights into arts presenting management issues, best practices and opportunities for further learning. The network of contacts is compelled into existence by way of course-work throughout the degree program that relies upon expert input as part of the assignments objectives, as well as professionals introduced by faculty.

Student Learning Outcomes

- Students will demonstrate the ability to create a graduate-level, high quality and extensively researched paper on a critical topic applicable to the course.
- Students demonstrate mastery of live presentations. Through research on an arts-based, course-specific topic, students organize information and share in a formal presentation as a means of exhibiting A) appropriate and effectual planning and format organizational skills, and B) proper and engaging communication competence. In so doing, students gain experience and capacities for successful live presentations frequently required in the professional field, such as funding requests, board reports, pre-concert discussions, educational lectures and more.
- Students demonstrate mastery of creating a comprehensive grant request.

*Pending Board of Trustees’ approval

**Mission**
The mission of the Media Writing and Production Masters of Music degree program is to provide the student with the skills necessary to pursue a career as a creator and producer of commercial music. The purpose of the Media Writing and Production program is to provide advanced competency as a composer, arranger and producer of commercial music. In contrast with other departments, the Media Writing and Production department culminates with the writing and defense of a thesis conforming to graduate school guidelines.

**Goals**
The program emphasizes the following objectives:

- Students will graduate in a timely manner from the program
- Students will be highly satisfied with their understanding of craft of creating music for media.
- Students will be prepared to find success in the media industry.

**Student Learning Outcomes**
- The student will develop and defend a portfolio of musical works, and compose a detailed narrative of his/her process, demonstrating advanced competencies as a composer, arranger and producer of music commensurate with current contemporary/commercial music professionals. (Thesis project.)
- The student will develop the ability to analyze and identify sonic problems encountered during the production of contemporary/commercial music. The student will demonstrate the skills necessary to execute viable solutions through advanced competencies in Digital Audio Workstation (DAW) techniques, including editing, signal processing and mixing. He/she will create acceptable final mixes of their works and generate deliverable in prescribed audio and/or video format. Student performance is measured using a standard grading system. Criteria include the sonic and aesthetic qualities of the finished product, deliverables, meeting deadlines, and musical score/DAW layout.
- The student will demonstrate the ability to compose, arrange and produce music for visual media in both virtual and acoustic formats, and prepare all deliverables including digital assets (audio files, DAW sessions, midi files and track assignments), music preparation including score layout and final mixes (stereo mix, sub mixes and stems) conforming to delivery requirements commonly required in the contemporary/commercial music industry.

**Cumulative Exit Exam**

**Total Credit Hours** 30

**Mission**
The mission of the Music Business and Entertainment Industries Program is to prepare students for careers in the music business profession, specifically in the areas involving music publishing, the record business, music distribution, music copyright and music licensing. This is accomplished through courses focused on these topics.

**Goals**

**Student Learning Outcomes**
- Students will demonstrate knowledge of the fundamentals of the music publishing industry, including music licensing, royalties, publishing agreements, and how a song catalog is commercially exploited.
- Students will demonstrate knowledge of the fundamentals of the recorded music industry, including how content is created, distributed, and marketed, and how recording agreements are structured.
- Students will demonstrate knowledge of the fundamentals of music copyright and music licensing, including how it applies to musical works and sound recordings, copyright infringement, the length of copyright protection, and international treatment of music copyrights.

Music Theory - Composition
https://composition.frost.miami.edu/index.html

Degree Programs

Known for its aesthetic diversity and openness to the ever-changing and progressive world of composition, the Frost School of Music’s Department of Music Theory and Composition (https://composition.frost.miami.edu/) has a long tradition of distinguished faculty and students. When today’s post-baccalaureate composers decide to pursue a Master’s Degree in Composition, they look to Frost faculty composers for inspiration and mentoring. At Frost, graduate students are well coached to take the next steps toward their professional maturation. They work one-on-one with our dedicated faculty to expand their music portfolios, enter competitions, apply for commissions and network in the music profession. Candidates for the Doctor of Musical Arts in Composition (D.M.A.) develop advanced research and teaching skills that are applicable to careers in higher education. For more information, please visit the website for the department of Music Theory and Composition (https://composition.frost.miami.edu/).

1 Students take each of the Composition Courses 4 times:
- Students in this degree program take MTC 715 or MTC 716 four times, at two credits each for a total of 8 credits.
- Students in this degree program take MTC 782 four times, at one credit each for a total of 4 credits.

Mission

The mission of the Doctor of Musical Arts program in Composition is to provide students with advanced preparation in the field of composition.
Goals
The goals of the program are:

• To enable students to develop advanced compositional skills beyond the level of the Master of Music degree in Composition;
• To help students consider or choose their compositional directions or options in the 21st century;
• To help students get their music performed or realized; and
• To help students develop a strong profile or identity as a composer.

Student Learning Outcomes

• Students will be able to demonstrate advanced composition knowledge.
• Students will be able to analyze music from pre-Baroque up through 21st century and of six different genre types (orchestra, opera, choral, solo, chamber, and electroacoustic).
• Students will be able to write effectively about their own compositions.

Total Credit Hours 36

Students in this degree program take MTC 767 three times, at 2 credits each for a total of 6 credits.

This program is no longer accepting students pending approval by the Southern Association of Colleges and Schools Commission on Colleges.

Mission
The mission of the Master of Music degree in Digital Arts and Sound Design is:

• To provide the highest quality and most current educational and creative environment for work relating to the creation and understanding of digital music;
• To foster advancement in composition, research, and performance of digital music;
• To provide students with advanced work in the field of digital music composition and sound design and thus enabling a career in scholarly or professional pursuit of music;
• To substantially contribute to the Frost School of Music’s role as a regional, national, and international nexus for the creation and understanding of music.

Goals
The program objectives are:

• To provide students the opportunity to develop advanced compositional skills in the digital arts;
• To prepare students to meet the needs and challenges of the musician of the 21st century;
• To provide students with the ability to complete independent and original work;
• To introduce the student to the community, institutions, and associations that support the music community;
• To give the students chances to enlarge their own experience and knowledge of music as performers, composers, or listeners, enlarging and enhancing their musical interests and abilities.

Student Learning Outcomes

• Students will display a thorough theoretical understanding and mastery of fundamental principles central to composition in the area of digital music.
• Students will create or produce musical works of varying lengths utilizing current technology and media.
• The student must display an understanding of the major technological resources important to the field.

Mission
The mission of the Master of Music in Composition is:
• To provide the highest quality and most educational and creative environment for work relating to the creation and understanding of music;
• To foster advancement in composition;
• To provide students with advanced work in the field of composition and thus enabling a career in professional or scholarly pursuit of music;
• To substantially contribute to the Frost School of Music’s role as a regional, national, and international nexus for the creation and understanding of music.

Goals
The objectives of the program are:
• To provide training for students to develop advanced compositional skills;
• To prepare students to meet the needs and challenges of the musician in the 21st century;
• To provide students with the skills, knowledge, and experience to complete independent and original work in the field;
• To give students an advanced knowledge of music as performers, composers, or listeners, enlarging and enhancing their musical interests and abilities.

Student Learning Outcomes
• Students will be able to compose musical works of artistic merit.
• Students will present a well-organized recital of their compositions.

Musicology
https://musicology.frost.miami.edu/

Degree Programs
Graduate students seeking the M.M. in Musicology at the Frost School of Music enjoy a balanced curriculum of study in music literature, analysis, performance, and research methods (https://musicology.frost.miami.edu/).

Our stellar faculty and extensive library resources help students fulfill their musical and academic goals while preparing for advanced study. Musicology majors interact and collaborate with others in a variety of musical disciplines, gaining insight into the role their own specialization plays in a thriving musical environment. For more information, please visit the website for the department of Musicology (https://musicology.frost.miami.edu/).

Other Studies in Music (Complete both options below) 6

- Non-MCY Music Elective
- MTC Elective

Electives 3
- Non-MCY Elective, In or Beyond Music

Language Proficiency 1

Total Credit Hours 30

1 Musicology students are expected to demonstrate proficiency in a language other than English, normally German, French, or Spanish. Proficiency examinations will be administered by the Department of Modern Languages and will consist of 1-2 passages from representative scholarly readings. Alternatively, enrolling in ITA 625, FRE 625, or an equivalent course at the graduate level may fulfill the requirement. This requirement should be completed by the beginning of the second year to facilitate research on the master's thesis.

Mission
Faculty and students of the Department of Musicology (MCY) in the Frost School of Music at the University of Miami advance the interdisciplinary study of music by examining how, when, where, and why people create, experience, and understand music. Coursework in the program is designed to enable students to acquire in-depth knowledge of musicology and to develop students’ abilities to write and talk effectively about relevant issues within musicology and related disciplines.

Goals

Student Learning Outcomes
• Students will acquire, demonstrate, and apply in-depth knowledge of musicology and related fields.
• Students will demonstrate discipline-specific writing skills commensurate with professional norms.
• Students will demonstrate discipline-specific oral-communication skills commensurate with professional norms.

Studio Music and Jazz
https://jazz.frost.miami.edu/

Degree Programs
The mission of the Studio Music and Jazz Instrumental Degree Programs (https://jazz.frost.miami.edu/) is to: (1) prepare jazz instrumentalists to enter the music profession or further jazz studies; (2) identify, recruit, and retain high quality students who seek to pursue studio/jazz performance as a career; (3) foster faculty creativity and performance which serves as a role model for students; (4) develop, and revise courses in jazz improvisation, jazz arranging/composition and provide on and off campus performance opportunities; (5) produce in our on
campus facility, recordings for the Down Beat Student Music Awards, compact discs, radio and Internet broadcast; and (6) provide a platform of learning that includes performance, composition/arranging, technology, conducting, scholarship and production. For more information, please visit the website for the department of Studio Music and Jazz (https://jazz.frost.miami.edu/).

**Mission**

The mission of the Doctor of Musical Arts program in Jazz Composition is to facilitate advanced composers/arrangers in developing their unique voice in jazz composition and to guide them in their continuing music career. With an emphasis on compositional originality, the Jazz Composition Program intends to provide students with opportunities for advanced study in jazz composition and orchestration to develop the jazz composition skills beyond that developed in their undergraduate and master’s programs.

**Goals**

The program objectives are to:

- Identify, recruit, and retain high quality students who are seeking to develop their jazz and studio writing skills beyond that developed in their undergraduate and master’s programs;
- Evaluate, revise, and develop curricular offerings to continue to meet the challenges facing professional musicians today;
- Maintain, present, and develop performance and outreach programs that will enable the jazz department to serve as a cultural resource in South Florida;
- Provide a creative, challenging, and nurturing educational experience that respects jazz tradition, reflects current professional trends, fosters innovation, and stimulates growth among students and faculty alike.

**Student Learning Outcomes**

- Students will excel in a tool set of skills that include most of the following:
  - Compose and arrange for large jazz ensemble, orchestrate for Symphonic Orchestra,
  - Arrange for vocal choirs,
  - Arrange for solo vocalist with small or large jazz ensemble,
  - Compose in a variety of styles of music,
  - Record and mix with Pro Tools software,
  - Edit video with Final Cut Pro software,
  - Become fluent in either Sibelius or Finale notation software.
- Students will also solidify their unique voice as a jazz composer.

Cognate/Electives

Select 12 credit hours of Cognate/Electives 12

Total Credit Hours 60

1. Jazz performance electives may be substituted for applied lesson credit hour with the permission of advisor.
2. Students in this degree program take MSJ 832 three times, at 1 credit each for a total of 3 credits.

Mission

The mission of the Doctor of Musical Arts Degree in Jazz Performance is to:

- Provide the terminal degree through advanced, in-depth study in the areas of musicianship and performance practice that will support a professional performance career as a jazz artist;
- Provide performance opportunities that integrate the skills learned in both performance and academic classes, foster creativity and research, demonstrate advanced musical techniques and a thorough understanding of historical style and performance practice;
- Continue to develop the skills for analyzing and articulating thoughts about music in a scholarly written format;
- Provide requisite skills to manage the non-performance aspects of a career.

Goals

Student Learning Outcomes

- Students will demonstrate proficiency in musical and academic presentation skills necessary to support a professional career as a leader in the music industry.
- Students will demonstrate understanding and application of jazz scholarship on an approved research project related to the major area of study.
- Students will develop individual instrumental performance skills necessary to be competitive in jazz and contemporary music professions. Students will be able to prepare difficult musical performances without assistance.

M.M. in Jazz Pedagogy

Mission

The mission of the Master of Music degree in Jazz Pedagogy is to prepare students for careers in advanced level performance, private music teaching, or entry-level jazz teaching positions in community colleges and four-year institutions of higher learning. It will also provide a foundation for further advanced graduate work at the doctoral level. The underlying philosophy is that the best teachers are also skilled performers.

M.M. in Jazz Performance, Instrumental

This program strives to identify, recruit, and retain high quality students who are seeking to develop jazz performance expertise beyond that developed in the bachelor’s degree. We maintain, present, and develop performance and outreach programs that enable the jazz department to serve as a cultural resource in South Florida. We strive to provide a creative, challenging, and nurturing environment that respects tradition, reflects current professional trends, fosters innovation, and stimulates growth among students and faculty alike.
Mission
The mission of the Master of Music Degree program in Studio Music and Jazz Performance is to prepare jazz musicians to enter the music profession and/or pursue doctoral studies. The Master of Music Program in Jazz Performance provides students with opportunities for advanced instrumental or vocal study, jazz improvisation and interaction development, and both small and large group ensemble experience. Our principle focus is on the development of high-level performance skills that will enable a student to pursue a career as a professional studio/jazz musician.

Goals
The specific objectives are:

• Provide students with advanced jazz performance expertise beyond that developed in the bachelor’s degree;
• To prepare students to meet the challenges facing professional musicians today;
• Provide students with an understanding of jazz tradition, current professional trends and an ability to innovate.

Student Learning Outcomes

• Students will demonstrate instrumental performance skills and academic understanding of the historical, theoretical, and performance practice necessary to be competitive in jazz and contemporary music professions.
• Students will develop proficiency in ensemble performance skills necessary for participation and functionality in the jazz and contemporary music professions.
• Students will develop proficiency in improvisation, composition, arranging, and interaction skills necessary for successful performance within the jazz idiom and a variety of styles appropriate to the jazz and contemporary music profession.

M.M. in Jazz Performance, Vocal

This program strives to identify, recruit, and retain high quality students who are seeking to develop jazz performance expertise beyond that developed in the bachelor’s degree. We maintain, present, and develop performance and outreach programs that enable the jazz department to serve as a cultural resource in South Florida. We strive to provide a creative, challenging, and nurturing environment that respects tradition, reflects current professional trends, fosters innovation, and stimulates growth among students and faculty alike.

**Mission**

The mission of the Master of Music Degree in Jazz Performance is to prepare jazz musicians to enter the music profession and/or pursue doctoral studies. The Master of Music Program in Jazz Performance provides students with opportunities for advanced vocal study, jazz improvisation and interaction development, and both small and large group ensemble experience. Our principle focus is on the development of high-level performance skills that will enable a student to pursue a career as a professional studio/jazz musician.

**Goals**

The specific objectives are:

- Provide students with advanced jazz performance expertise beyond that developed in the bachelor’s degree;
- To prepare students to meet the challenges facing professional musicians today;
- Provide students with an understanding of jazz tradition, current professional trends and an ability to innovate.

---

**Student Learning Outcomes**

- Jazz Vocal students will demonstrate a level of creativity with imagination and original ideas providing a new musical experience that reaches beyond the expectations of the musical task.
- Jazz Vocal students will demonstrate a mastery of fluidity, fluency and facility in their vocal technique by the time they graduate.
- Jazz Vocal students will demonstrate a mastery of expression in their interpretation of jazz literature. Interpretation will be appropriate, relevant, and complimentary beyond the expectations of the musical task.

**Mission**

The mission of the Master of Music program in Studio Jazz Writing is to prepare composers/arrangers to enter the music profession and to provide students with opportunities for advanced study in jazz and studio arranging, composition and orchestration with an emphasis on the development of high-level skills that will enable him or her to pursue a career as a professional arranger/composer. We aim to develop student jazz writing skills beyond those developed during the Bachelor’s degree.

The program objectives are:

- Identify, recruit, and retain high quality students who are seeking to develop their jazz and studio writing skills beyond that developed in their undergraduate programs;
• Evaluate, revise, and develop curricular offerings to continue to meet the challenges facing professional musicians today;
• Maintain, present, and develop performance and outreach programs that will enable the jazz department to serve as a cultural resource in South Florida;
• Provide a creative, challenging, and nurturing educational experience that respects jazz tradition, reflects current professional trends, fosters innovation, and stimulates growth among students and faculty alike.

Goals
• Provide students with opportunities for advanced study in jazz and studio arranging.
• Provide students with opportunities for advanced study in orchestration.
• Provide students with opportunities for advanced study in composition.

Student Learning Outcomes
• Students will be able to write an arrangement for large jazz ensemble (Big Band).
• Students will demonstrate an appropriate level of skill in adapting (orchestrating) music for a symphony orchestra with attention to idiomatic writing for the four choirs of the orchestral strings, winds, brass and percussion.
• Students will demonstrate musical composition/arranging, audio production, and academic skills necessary for successful participation in professional musical environments.

Vocal Performance
https://vocal.frost.miami.edu/index.html

Graduate students seeking a degree in the department of Vocal Performance have already proven themselves to be highly accomplished artists. They come to the Frost School of Music to further hone their skills, to discover new perspectives, and to gain a competitive edge for the next step in their professional careers. Candidates for our advanced degrees in performance, conducting, and pedagogy (https://vocal.frost.miami.edu/) are leaders in the various programs of the Department of Vocal Performance, and they, in turn, go on to become leaders in their respective areas of specialty. For more information please visit the website for the department of Vocal Performance (https://vocal.frost.miami.edu/).

### Mission Statement
The mission of the Doctor of Musical Arts in Choral Conducting is:

- To provide a specifically music performance-based education and to train conductors to firmly establish and demonstrate professional level conducting skills;
- To provide a platform of learning that includes performance, creativity, scholarship, and significant research;
- To foster a sense of community involvement of the arts and in the arts.

Because choral conducting students are working with an 'instrument' comprised of human singers, the variables with which they must work (as opposed to a solo instrument) are various.

### Goals
After graduation, they are prepared to work in any number of venues, including academia, sacred music setting (church music), professional choir, community choir, and more.

### Student Learning Outcomes
- Students will, through the completion of 3 degree recitals, demonstrate the ability perform as conductors with musical/stylistic awareness, as well as professional presentation and demeanor.
- Students will demonstrate a high level research and scholarship skills.

*University of Miami Academic Bulletin*
Mission

The mission of the Doctor of Musical Arts in Vocal Performance is to provide the terminal degree with advanced, in-depth study in the areas of musicianship and performance practice that will support a professional performance career as a classical singer. The student will be provided performance opportunities to integrate the skills learned in music and other classes and will continue to work in established and new areas of research and creative activities. Each student will continue to develop the skills for writing about music in a scholarly, written format.

Goals

Student Learning Outcomes

- Students will demonstrate skills as a vocal performer with advanced technical and musical skill that will support a professional career.
- Students will demonstrate performance skills in ensemble that will lead towards a professional stage career.
- Students will demonstrate writing, research, and presentation skills required of a DMA terminal degree.

Student Learning Outcomes

M.M. in Vocal Performance

Admission Requirements

The candidate must demonstrate the ability to sing in English, French, German, and Italian; be knowledgeable of the more difficult arias of opera and oratorio and of recitative in both the free and measured forms; have a thorough acquaintance with the general song literature; and be able to present a creditable recital.

Languages: If Italian (1 year), German and French (1 year of each or one semester of each) have not been completed upon entering the Master of Music in Vocal Performance degree, language courses can be taken at UM, but at the undergraduate level only. These courses/credits will not count toward the MM degree requirements. The student must show equivalent credit hours before graduation:

- Two semesters of college-level Italian
- Two semesters of college-level French
- Two semesters of college-level German

2. Students in this degree program take MVP 652 four times, at 1 credit each for a total of 4 credits.
3. Student must have approval of the studio voice teacher.

### Goals

#### Student Learning Outcomes
- Students will demonstrate their vocal skills in their singing to a professional level.
- Students will demonstrate the necessary writing skills to adequately prepare them for study at the doctoral level.
- Students will demonstrate advanced recital stage skills.

### Mission Statement

The mission of the Master of Music Degree in Vocal Performance is to:

- Provide students the highest quality of education available in the areas of vocal performance and musicianship that will provide them the skills required to lead to professional performance careers as classical singers;
- Stimulate the student’s awareness and artistic creativity in the field of vocal performance;
- Provide students public performance opportunities in a supportive and encouraging environment;
- Provide students the writing and research skills needed in order to adequately prepare them for study at the doctoral level;
- Provide career development opportunities through direct connections with professionals in the field, including directors, conductors, coaches, and other relevant individuals as chosen by the voice faculty.
Nursing and Health Studies

http://www.miami.edu/sonhs

The University of Miami (UM) School of Nursing and Health Studies (SONHS) is committed to academic excellence, the advancement of healthcare, and service to society. Opportunities are available for students to study and earn course credit in a variety of local and international settings.

Mission

The mission of the SONHS is to educate students and support faculty committed to excellence in nursing and health science. Through research, education and practice, the school will create and disseminate health knowledge and prepare culturally competent leaders to provide safe service to our community, the nation and the world.

Nursing Accreditation

The MSN and DNP programs in the SONHS are accredited by the following:

Commission of Collegiate Nursing Education (CCNE)
One DuPont Circle NW, Suite 530
Washington, DC 20036
(202) 887-6791

The anesthesia program is accredited by the following:

Council on Accreditation of Nurse Anesthesia Education Programs (COA)
222 South Prospect Avenue
Park Ridge, IL 60068-4001
(847) 692-7050 (ext. 1154)

Graduate Degrees and Academic Programs

The SONHS offers a variety of academic programs across six graduate degrees:

1. Doctor of Philosophy (PhD) in Nursing Science
   a. BSN-to-PhD
   b. MSN-to-PhD
2. Doctor of Nursing Practice (DNP)
   a. BSN-to-DNP, Nurse Anesthesia Track
   b. MSN-to-DNP (1 Year, 1 Year Plus, and 2 Year)
3. Master of Science in Nursing (MSN)
   a. Adult-Gerontology Acute Care Nurse Practitioner (Full-time and Part-time)
   b. Adult-Gerontology Primary Care Nurse Practitioner (Full-time and Part-time)
   c. Family Nursing Practitioner (Full-time and Part-time)
4. Master of Science (MS)
   a. Health Informatics (online)
5. Post-Master's Certificate
   a. Adult-Gerontology Acute Care Nurse Practitioner
   b. Adult-Gerontology Primary Care Nurse Practitioner
   c. Family Nursing Practitioner
   d. Psychiatric Mental Health Nurse Practitioner
6. Post-Bachelor’s Certificate
   a. Health Informatics (online)

Admission

Admission to graduate programs in the SONHS is subject to the rules, regulations, and procedures as set forth in the Academic Bulletin, the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/), and the SONHS website (http://www.miami.edu/sonhs/index.php/sonhs/admissions/), and as determined by each graduate nursing program, the Graduate School, and the Office of International Admission. Applicants must meet specific admission requirements (http://www.miami.edu/sonhs/index.php/sonhs/admissions/) before they may be evaluated for admission to the SONHS’ graduate programs. Applications for the SONHS’ graduate programs, except for the online Informatics programs, are submitted through NursingCAS (http://www.nursingcas.org/). Applications for the online Informatics programs are submitted through UOnline (http://www.miami.edu/online/admissions/).

Degree Requirements

The degree requirements for each SONHS graduate program are outlined under the ‘MASTERS’ and ‘DOCTORAL’ tabs above. All graduate programs are lock-step, meaning students must follow the Plan of Study under which they were admitted as listed in the Academic Bulletin and the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/), and they must successfully complete the courses in each semester to progress to the next. Students should contact their appropriate Associate Dean or Program Director, or a staff member in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to their degree requirements.

Doctor of Philosophy (PhD) in Nursing Science

The principal goal of the PhD with a major in Nursing Science is to prepare scholars and researchers who will contribute to the growth of science in nursing through recognized methods of scholarly inquiry. Admission to the doctoral program is competitive.

Doctor of Nursing Practice (DNP)

The DNP degree is a practice-focused doctorate designed for nurses seeking a terminal degree in nursing practice. The program is offered in two formats: the MSN-to-DNP and the BSN-to-DNP, Nurse Anesthesia track. The BSN-to-DNP, Nurse Anesthesia program is available as an entry into practice degree, meaning it is available to post-baccalaureate nurses with or without a master’s degree in nursing.

The outcome objectives for graduates of the DNP program are to:

- Integrate knowledge, theories, and concepts from the biophysical, psychosocial, analytical, and organization sciences to develop ethical health care systems and new frontiers for nursing practice that address health care disparities
- Evaluate research methods and findings to create an evidence base for nursing practice and health care delivery systems that reflect best practices and alleviate health care disparities
- Synthesize knowledge gained from traditional and innovative learning methods to lead quality, cost-effective health care collaborations addressing health care disparities
- Demonstrate expert clinical judgment and knowledge of health care systems to design, deliver and evaluate evidence-based care interventions to reduce health care disparities
• Model expert nursing practice and serve as mentors to nursing colleagues in their efforts to improve nursing practice and health care systems
• Employ knowledge of health care policy and economics to develop and evaluate programs to address health care disparities

Master of Science in Nursing (MSN)
The MSN degree is designed for professional nurses holding a Bachelor of Science in Nursing (BSN) degree. Registered nurses with baccalaureate degrees in other fields are also eligible to apply for admission. The following specialty tracks available in the SONHS focus on selected areas of advanced practice nursing and nursing education:

- Adult-Gerontology Acute Care Nurse Practitioner
- Adult-Gerontology Primary Care Nurse Practitioner
- Family Nurse Practitioner

Degree requirements may be completed in three semesters of full-time study or five semester of part-time study.

Master of Science (MS)
The MS in Health Informatics online program is designed to prepare graduates for rewarding informatics careers in a wide range of industries within healthcare. With the ongoing implementation of the Affordable Care Act, these roles will be essential as more organizations begin moving to electronic healthcare record systems.

Post-Master's Certificate
Post-Master's Certificate options are available in each of the following areas to students who possess a MSN degree and who wish to focus on selected areas of advanced practice nursing and nursing education:

- Adult-Gerontology Acute Care Nurse Practitioner
- Adult-Gerontology Primary Care Nurse Practitioner
- Family Nurse Practitioner
- Psychiatric Mental Health Nurse Practitioner

All students are required to complete core courses for their selected area of study and may be required to take additional courses at the graduate level based on their gap analysis.

Post-Bachelor's Certificate
The Post-Bachelor's Certificate program is designed to prepare graduates for rewarding informatics careers in a wide range of industries within healthcare. UOnline's flexible Informatics programs give students the option to complete their MS in Health Informatics while earning a Post-Bachelor's Certificate in Health Informatics along the way or to focus on just earning the Post-Bachelor's Certificate itself. The 15 credit Post-Bachelor's Certificate is made up of the first 5 classes of the MS program.

Credits completed for the Post-Bachelor’s Certificate can be applied toward the MS degree.

Academic Policies

Student Responsibilities
Students in the SONHS are responsible for fulfilling their degree requirements. Students are also responsible for complying with all provisions outlined in the Academic Bulletin and the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/), as well as all written changes to the plan of study.

Students are provided assistance by faculty advisors and other faculty members. Requests for deviation from the Plan of Study or SONHS requirements are granted only by written approval from the Associate Dean or Dean. Students who are in violation of the provisions of this Academic Bulletin may be withdrawn from classes unilaterally or have a stop placed upon their future enrollment by appropriate SONHS officials. The SONHS reserves the right to change academic requirements to include course offerings that ensure students receive the highest-quality and most-current education. Classes may be held on weekdays or weekends and will be listed as such in the course schedule. Any programmatic changes are transmitted by written notice in the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) or by an official in the SONHS.

Academic Bulletin and Student Handbook
In addition to the material listed in the Academic Bulletin, all SONHS students are held to the policies, procedures, and requirements listed in the most current Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for their respective degree program. Please note the material included in the Student Handbook is subject to change throughout the academic year and may not be reflected in the Academic Bulletin. The Student Handbook contains the most current information. Consult the appropriate Associate Dean or Program Director or reach out to a staff member in the Office of Student Services (OSS) (http://oss.sonhs.miami.edu/) to discuss questions related to academic requirements and opportunities.

Technical Standards
Nursing education requires that the accumulation of scientific knowledge be accompanied by the simultaneous acquisition of skills and professional attitudes and behaviors. The nursing degrees awarded by the UM SONHS at the completion of the educational process certifies that the individual has acquired a base of knowledge and skills required for the practice of nursing at the respective undergraduate or graduate level. To this end, all courses in the curriculum must be completed successfully. In order to acquire the knowledge and skills to function in a variety of clinical situations and to render a wide spectrum of patient care, candidates for the undergraduate and graduate degrees in nursing must have abilities and skills in five areas:

1. Observation
2. Communication
3. Motor
4. Conceptual-Integrative
5. Behavioral-Social

Technological compensation can be made for some disabilities in certain of these areas, but a candidate should be able to perform in a reasonably independent manner and exercise independent judgment.

Reasonable accommodations will be considered on a case by case basis for individuals who meet eligibility under applicable statutes. Any person expecting to need accommodations should request them prior to beginning the program, as some accommodations may not be considered reasonable and may impact an applicant’s ability to complete all components of the program.

Observation
The candidate must be able to observe demonstrations and participate in didactic courses and simulated learning opportunities. A candidate must be able to observe a patient accurately at a distance and close at hand.
Observation requires the use of common sense, as well as the functional use of the senses of vision, audition, olfaction, and palpation.

**Communication**
Candidates must communicate effectively using English in clinical and classroom settings. A candidate must be able to elicit information from patients, describe changes in mood, activity and posture, and perceive nonverbal communications. A candidate must be able to communicate effectively and sensitively with patients. Communication includes not only speech, but reading and writing. The candidate must be able to communicate effectively and efficiently with all members of the health care team in both immediate and recorded modes.

**Motor**
Candidates should have sufficient motor function to elicit information from patients by palpation, auscultation, percussion and other assessment techniques. A candidate should be able to perform nursing skills requiring the use of gross and fine motor skills (e.g. IV insertion, venous blood draw, urinary catheter insertion). A candidate should be able to execute motor movements reasonably required to provide nursing care and emergency response to patients. Examples of emergency responses reasonably required of nurses are cardiopulmonary resuscitation, medication administration, and application of pressure to stop bleeding. Candidates must perform actions which require the use of both gross and fine muscular movements, equilibrium, and functional use of the senses of touch and vision. Candidates should also be able to assist and/or participate in various lifting activities.

**Conceptual-Integrative**
These abilities include measurement, calculation, reasoning, analysis, synthesis, and retention of complex information. Critical thinking requires all of these intellectual abilities in order to provide optimal nursing care. In addition, the candidate should be able to comprehend three-dimensional relationships and to understand the spatial relationships of structures.

**Behavioral-Social**
Candidates must possess the emotional health required for the full use of their intellectual abilities, the exercise of good judgment, the prompt completion of all responsibilities attendant to the care of patients, and the development of mature, sensitive and effective relationships with patients. Candidates must be able to tolerate physically taxing workloads and to function effectively under stress in the classroom and clinical area. They must be able to adapt to changing environments, display flexibility and learn to function in the face of uncertainties inherent in the clinical environment. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that are assessed during the admissions and educational process.

**Clinical Clearance**
Before students can enter the SONHS’ graduate nursing programs, they must successfully complete a drug test and a background check. Students must have a background report without any infractions, regardless of how they were resolved or adjudicated. Accordingly, if a student’s background report contains any infractions, regardless of how they were resolved or adjudicated, he/she will not be able to successfully complete the background check and he/she will be withdrawn from the nursing program.

Students must also provide current immunizations as outlined by the SONHS and obtain a Basic Life Support (BLS) for Healthcare Providers certification from the American Heart Association prior to entry into clinical coursework. The BLS certification must include content on Automated External Defibrillators (AEDs). Additional certifications may be required for specific graduate programs.

Refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) or speak with a representative in the OSS (http://oss.sonhs.miami.edu/) for more information.

**Grades**
Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to grades, progression, and dismissal.

Graduate nursing students must earn a B or higher in each course to progress. Any graduate student who receives a “C” or lower in a nursing course will be dismissed from his or her program. A grade of “B-” or “C+” for a course is below graduate standards, and the student must repeat that course. However, a student may only repeat one course, one time. The student will be dismissed if he/she fails a second course even if he/she retook and passed the previous failed course. A passing grade in all clinical experiences is required to pass a course having a clinical component (generally listed as a “lab section” by UM). Students who are not making satisfactory progress may also receive an academic alert at mid-semester or mid-course. All grades are included in the computation of the UM overall grade point average including those that are failed or repeated.

A grade of B or higher is considered a passing grade for the MS Health Informatics program, which includes all courses completed as part of the Post-Bachelor’s Certificate Health Informatics program (if applicable).

When a course must be repeated, progression in the graduate program will be altered in order for prerequisites to be met. Such alteration will lengthen the time required to complete the graduate program.

**Grade Point Averages (GPAs)**
Students should refer to the Student Handbook (http://www.sonhs.miami.edu/academics/student-handbooks/) for more detailed information on the SONHS’ policies related to grades, progression, and dismissal.

**Requirements to Continue**
Students who are enrolled in SONHS’ graduate programs must maintain a 3.0 GPA to progress.

**Requirements to Graduate**
Students who are enrolled in SONHS’ graduate programs must maintain a 3.0 GPA to graduate.

**Prerequisites and Corequisites**
Students must successfully complete all specified prerequisites with a B or higher. Students must also register for all required corequisites at the time of enrollment. If students enroll in a course without the proper prerequisite or corequisite, they may be dropped from the course at the discretion of the course instructor, OSS, Program Director, Associate Dean, or Dean. Students should contact their appropriate Associate Dean or Program Director, or a staff member in the OSS (http://oss.sonhs.miami.edu/) to discuss any questions related to course enrollment.

**Transfer Credit**
SONHS graduate students may, depending on their program, transfer up to 9 credits toward their graduate degree at the discretion of their
Pre-immersion Course
Prior to enrollment in any SONHS graduate program, except for the Informatics programs, students must complete a mandatory online pre-immersion, orientation, and/or writing express course. These courses are listed in students' first term of enrollment but it does not affect students' GPAs. Failure to complete these courses may delay entry into the clinical nursing courses. Information about these courses will be provided to eligible students by the SONHS.

Research Experience
Students may participate in research experiences through the SONHS (http://www.miami.edu/sonhs/index.php/sonhs/research/) during their time at the UM. Students should speak with their appropriate Associate Dean or Program Director to learn more about the research opportunities available to them at the UM.

Accommodations Policy for Students with Disabilities
The SONHS adheres to standards of the Americans with Disabilities Act. Any student needing special accommodations should seek assistance through the Office of Disability Services (ODS) (http://umarc.miami.edu/arc/ODS.html), which is the primary on-campus resource responsible for the coordination of services for students with disabilities. Students must follow ODS' policies, procedures, and timelines to request assistance. Please note ODS has strict deadlines to apply for accommodations; only students who are officially registered with ODS may be granted accommodations.

Financial Assistance
Students interested in obtaining financial assistance in the form of student loans, grants, etc. should contact the Office of Financial Assistance (http://www.miami.edu/admission/index.php/ofas/).

The SONHS also offers limited merit-based and need-based scholarships to continuing students. The types of scholarships and the qualifications for them vary by semester. Continuing students who wish to be considered for SONHS scholarships must apply for such scholarships through the SONHS General Scholarship Application. Calls for applications are e-mailed to continuing students once each semester to prompt students to apply who wish to be considered for a scholarship for the next term. Additional information on SONHS scholarships as well as health science-, nursing-, and public health-related outside scholarships can be found on the SONHS Scholarships website (http://www.sonhs.miami.edu/admissions-and-financial-aid/financial-aid-and-community-scholarships/).

Full-time PhD students are considered for financial support, which may include:

1. **Tuition Scholarships**: These awards vary in amount and are intended to assist the recipient in pursuit of study and research as required by the degree. These scholarships are awarded on a competitive basis.
2. **Graduate Stipends**: These cash awards, paid monthly, are intended as part of an educational assistance program for PhD degree students. The stipends require service in the form of teaching, research assistance, or other appropriate educational activities that may be designated by the supervisor of the recipient.

Students may speak with a representative in the OSS (http://oss.sonhs.miami.edu/) if they have any questions.

Facilities
The SONHS is located on the Coral Gables Campus. The four-story, Jerusalem-stone and stucco M. Christine Schwartz Center for Nursing and Health Studies opened in Fall 2006. The building features classrooms and clinical practice labs, conference rooms, a computer lab, and a simulation academy, all equipped with the latest technology. The spacious, 53,000 square foot facility supports the work of more than 40 nurse-scientists and clinical educators and approximately 1,100 undergraduate and graduate students enrolled in the SONHS’ health science, nursing, and public health programs.

In Fall 2017, the SONHS opened the new, state-of-the-art, 41,000 square foot, 5 story Simulation Hospital (http://www.miami.edu/sonhs/index.php/simulation_hospital/). The Simulation Hospital is a one-of-a-kind facility, as it is one of the first education-dedicated simulation facilities located on a college campus. This new facility uses the latest simulation technology to provide SONHS students with the highest-quality healthcare education through a variety of simulated clinical environments. It also provides opportunities for public health-related simulation experiences and creates ample opportunities for interprofessional education (IPE).

Library resources for SONHS students are available at the Otto G. Richter Library (http://library.miami.edu/) on the Coral Gables Campus and the Louis Calder Memorial Library (http://calder.med.miami.edu/) on the Medical Campus.

Clinical experiences are offered in a variety of hospitals and health-related agencies in the community, including the University of Miami Hospital, Jackson Health System, Sylvester Comprehensive Cancer Center, Nicklaus Children’s Hospital, and approximately 170 other community partners.

BSN to DNP - Nurse Anesthesia Track

BSN-to-DNP, Nurse Anesthesia Track Degree Requirements

The BSN-to-DNP program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

To receive the BSN-to-DNP, students must:

1. Complete all course work as required with an overall GPA of 3.0 or better
2. Complete all required clinical and practice immersion hours
3. Successfully complete the DNP scholarly project before graduation
4. Successfully complete annual benchmark exams, before progressing into next phase of the program
5. Successfully pass the DNP comprehensive examination, which is an integrative experience to demonstrate students' mastery of the outcome objectives of the program
6. Pass a comprehensive clinical nurse anesthesia oral board examination

1) SIM (1 credit=2 lab hours)
*Note: This course is completed online via Blackboard prior to matriculation. Students are registered for the course in their first semester.

**Mission**

The purpose of the DNP program is to prepare scholars and researchers to contribute to the growth of nursing practice and health care delivery through recognized methods of scholarly inquiry and dissemination of practice innovations. Additionally, graduates of this program will be prepared to collaborate with PhD colleagues to provide innovative leadership to the profession and make the practice of nursing more effective.

**Goals**

**Student Learning Outcomes**

- Students will integrate knowledge, theories, and concepts from the biophysical, psychosocial, analytical, and organization sciences to develop ethical health care systems and new frontiers for nursing practice which assist with the resolution of health care disparities.
- Students will be able to evaluate research methods and findings to create an evidence base for nursing practice and health care delivery systems that reflect best practices and alleviate health care disparities.
- Students will be able to make meaningful contributions in the area of developing quality, cost effective health care collaborations addressing health care disparities.

**MS - Health Informatics (online)**

**Degree Requirements**

The health informatics field is growing. The Bureau of Labor Statistics projects that employment in the field of health informatics increases 23% by 2022, much faster than average of 11% for all occupations nationwide. The UM’s online Health Informatics program is designed to prepare graduates for rewarding informatics careers in a wide range of industries within health care, including hospitals, government, health insurance providers, medical vendors, pharmaceutical and biotechnology companies, and consulting firms. With the ongoing implementation of the Affordable Care Act, these roles will be essential as more organizations begin moving to electronic health care record systems.

The Health Informatics program prepares graduates to enter or excel in this field by offering rigorous courses, which cover:

- Information security
- Data analytics
- Project management
- Public health informatics
- Health information exchange
- Database design

The program includes a 3 credit capstone practicum, which allows students to apply the informatics knowledge they have gained to real-world situations and problems.

The Health Informatics program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific
track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the UOnline Academic Advisors (https://miami.laureatepartners.net/student-experience/student-support/).

**Admission**

For information on admission to the program please click here (https://miami.laureatepartners.net/programs/masters-in-health-informatics/).

**Plan of Study**

The Health Informatics program is a lock-step program. Students must complete the coursework in the order specified in the Plan of Study below, and they must successfully complete each course to progress to the next. Students are admitted to begin the program in the fall, spring, or summer. Questions related to degree requirements should be directed to the UOnline Academic Advisors (http://www.miami.edu/online/student-services/).

### Mission

The mission of the MS Health Informatics program is to prepare highly competent health informatics professionals who can advance the frontiers of healthcare through their leadership and innovation.

### Goals

**Student Learning Outcomes**

- Demonstrate advanced knowledge of computer information systems (Meditech, Epic, Cerner, etc), health care databases, systems administration and project management.
- Apply various strategies for maintaining information security and regulating data access.
- Students will be able to organize, retrieve, manage and develop health information data and knowledge.

### MSN - Adult-Gerontology Acute Care Nurse Practitioner

#### Degree Requirements

The Adult-Gerontology Acute Care Nurse Practitioner program may be completed by finishing one of the following tracks:

- Full-time (3 Semesters)
- Part-time (5 Semesters)

The Adult-Gerontology Acute Care Nurse Practitioner program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

**Mission**

The mission of the MSN program is to educate students and support faculty committed to excellence in the art and science of nursing and health care studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation, and the world.

**Goals**

**Student Learning Outcomes**

- Students will be able to incorporate professional ethics and social justice in the development of the advanced practice role.
- Students will demonstrate proficiency in comprehensive health assessment of individuals and families across the lifespan at an advanced practice nursing level.
- Students in the Adult Gerontology Acute Care Nurse Practitioner Track will be able to synthesize concepts and theories from the basic sciences, humanities, and medicine in learning to deliver care to this population of patients.

**MSN - Adult-Gerontology Primary Care Nurse Practitioner**

**Degree Requirements**

The Adult-Gerontology Primary Care Nurse Practitioner program may be completed by finishing one of the following tracks:

- Full-time (3 Semesters)
- Part-time (5 Semesters)
- Part-time Sylvester Program (6 Semesters)

The Adult-Gerontology Primary Care Nurse Practitioner program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). MSN to DNP

Mission

The mission of the MSN program is to educate students and support faculty committed to excellence in the art and science of nursing and health care studies through creating and disseminating health knowledge and developing culturally competent leaders to provide safe service to our community, the nation, and the world.

Goals

Student Learning Outcomes

- Students will be able to incorporate professional ethics and social justice in the development of the advanced practice role.
- Students will demonstrate proficiency in comprehensive health assessment of individuals and families across the lifespan at an advanced practice nursing level.
- Students from the Family Nurse Practitioner program will demonstrate ability to integrate information to manage acute and chronic health problems in advanced clinical practice with emphasis on strategies for health maintenance and health problems.

MSN to DNP

MSN-to-DNP Degree Requirements

The MSN-to-DNP program may be completed by finishing one of the following tracks:

- 1 Year
- 1 Year Plus
- 2 Year (Fall Entry)
- 2 Year (Spring Entry)

The MSN-to-DNP program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

To receive the MSN-to-DNP, students must:

1. Complete all coursework as required with an overall GPA of 3.0 or better
2. Complete all required clinical hours
3. Successfully complete the DNP scholarly project
4. Successfully pass a comprehensive examination, which is an integrative experience to demonstrate students’ mastery of the outcome objectives of the program

*Note: This course is completed online via Blackboard prior to matriculation. Students are registered for the course in their first semester.

Mission

The purpose of the DNP program is to prepare scholars and researchers to contribute to the growth of nursing practice and health care delivery through recognized methods of scholarly inquiry and dissemination of practice innovations. Additionally, graduates of this program will be prepared to collaborate with PhD colleagues to provide innovative leadership to the profession and make the practice of nursing more effective.

Goals

Student Learning Outcomes

• Students will integrate knowledge, theories, and concepts from the biophysical, psychosocial, analytical, and organization sciences to develop ethical health care systems and new frontiers for nursing practice which assist with the resolution of health care disparities.
• Students will be able to evaluate research methods and findings to create an evidence base for nursing practice and health care delivery systems that reflect best practices and alleviate health care disparities.

• Students will be able to make meaningful contributions in the area of developing quality, cost effective health care collaborations addressing health care disparities.

**PhD - Nursing Science**

**PhD, Nursing Science Degree Requirements**

The PhD in Nursing Science program may be completed by finishing one of the following tracks:

- BSN-to-PhD
- MSN-to-PhD

The PhD in Nursing Science program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

To receive the PhD degree, the candidate must meet all the general requirements for the PhD degree with respect to course work, residency, the qualifying examination, 12 credit hours of dissertation, and successful defense of the dissertation.

Students in the SONHS are responsible for meeting their degree requirements. It is the student’s responsibility to understand fully and comply with all the provisions of the Academic Bulletin and written changes to their Plan of Study. Students are provided assistance by faculty advisors and other faculty members. Requests for deviation from the Plan of Study or SONHS requirements are granted only by written approval from the Associate Dean or Dean. Students who are in violation of the provisions of this AcademicBulletin may be withdrawn from classes unilaterally or have a stop placed upon their future enrollment by appropriate SONHS officials. The SONHS reserves the right to change academic requirements to include course offerings that ensure students receive the highest-quality and most-current education. Classes may be held on weekdays or weekends and will be listed as such in the course schedule. Any programmatic changes are transmitted by written notice in the Student Handbook (http://www.miami.edu/sonhs/index.php/sonhs/current_students/student_handbooks/) or by an official in the SONHS.

**Mission**

The purpose of the PhD Program in Nursing is to prepare scholars and researchers to contribute to the growth of nursing science through recognized methods of scholarly inquiry and dissemination of research findings. Additionally, graduates of this program will be prepared to provide innovative leadership to the profession and make the practice of nursing more effective.

**Goals**

The program prepares students to:

- Synthesize knowledge from nursing and other disciplines to extend the science of nursing;
- Demonstrate cultural competence and ethical practices in conducting qualitative and quantitative research methods and design;
- Conduct research in a focused area of scientific inquiry;
- Disseminate scholarly findings for the purposes of building and expanding the science of nursing;
- Provide creative and visionary leadership for the advancement of nursing science; and
- Engage in scholarly interdisciplinary inquiry.

**Student Learning Outcomes**

- Students will demonstrate the ability to synthesize knowledge from nursing and other disciplines.

- Demonstrate ethical practices in designing and conducting qualitative and quantitative research studies.
- Students will develop proficiency in scholarly writing.

**Post Masters Certificate - Adult Gerontology Acute Care Nurse Practitioner**

**Degree Requirements**

A Post-Master's Certificate in Adult-Gerontology Acute Care Nurse Practitioner is available to students who possess a MSN degree and who wish to focus in this specific area of advanced practice nursing and nursing education. All students are required to complete core courses for their selected area of study and may be required to take additional courses at the graduate level based on their gap analysis.

Once the gap analysis is complete, students will be issued a Plan of Study specific to their level of preparation. The Post-Master's Certificate program is then lock-step, which means students must complete the coursework as specified in their Plan of Study and must successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

**Sample Plan of Study**

A Post-Master's Certificate in Adult-Gerontology Acute Care Nurse Practitioner is available to students who possess a MSN degree and who wish to focus in this specific area of advanced practice nursing and nursing education. All students are required to complete core courses for their selected area of study and may be required to take additional courses at the graduate level based on their gap analysis.

Post Masters Certificate - Family Nurse Practitioner

Degree Requirements

A Post-Master's Certificate in Family Nurse Practitioner is available to students who possess a MSN degree and who wish to focus in this specific area of advanced practice nursing and nursing education. All students are required to complete core courses for their selected area of study and may be required to take additional courses at the graduate level based on their gap analysis.

Once the gap analysis is complete, students will be issued a Plan of Study specific to their level of preparation. The Post-Master's Certificate program is then lock-step, which means students must complete the coursework as specified in their Plan of Study and must successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to the appropriate Associate Dean or Program Director, or staff member in the OSS (http://www.miami.edu/sonhs/index.php/sonhs/office_of_student_services/).

Post-Bachelors Certificate - Health Informatics (online)

Degree Requirements
UOnline's flexible Informatics programs give students the option to complete their MS in Health Informatics while earning a Post-Bachelor's Certificate in Health Informatics along the way or to focus on just earning the Post-Bachelor's Certificate itself. The 15 credit Post-Bachelor's Certificate is made up of the first 5 classes of the MS program. Credits completed for the Post-Bachelor's Certificate can be applied toward the MS degree.

The health informatics field is growing. The Bureau of Labor Statistics projects that employment in the field of health informatics increases 23% by 2022, much faster than average of 11% for all occupations nationwide. The UM's online Post-Bachelor's Certificate program is designed to prepare graduates for rewarding informatics careers in a wide range of industries within health care, including hospitals, government, health insurance providers, medical vendors, pharmaceutical and biotechnology companies, and consulting firms. With the ongoing implementation of the Affordable Care Act, these roles will be essential as more organizations begin moving to electronic health care record systems.

The Post-Bachelor's Certificate program is a lock-step program. Students must complete the coursework as specified in the Plan of Study for the specific track under which they were admitted and as listed in the Academic Bulletin and the Student Handbook(http://www.sonhs.miami.edu/academics/student-handbooks/). Students must also successfully complete the courses in each semester to progress to the next. Questions related to degree requirements should be directed to
the UOnline Academic Advisors (http://www.miami.edu/online/student-experience/student-support/).

**Admission**

Total Credit Hours 15

**Plan of Study**
The Post-Bachelor's Certificate program is a lock-step program. Students must complete the coursework in the order specified in the Plan of Study below, and they must successfully complete each course to progress to the next. Students are admitted to begin the program in the fall, spring, or summer. Questions related to degree requirements should be directed to the UOnline Academic Advisors (http://www.miami.edu/online/student-services/).

Total Credit Hours 15

**Mission**
The mission of the MS Health Informatics program is to prepare highly competent health informatics professionals who can advance the frontiers of healthcare through their leadership and innovation.

**Goals**

**Student Learning Outcomes**
- Demonstrate advanced knowledge of computer information systems (Meditech, Epic, Cerner, etc), health care databases, systems administration and project management.
GRADUATE STUDENT HANDBOOK FOR ONLINE STUDENTS

Message from the Dean
Graduate school at the University of Miami is a place where students gain proficiency in a specialty with the guidance of dedicated faculty in the presence of a community of world-class scholars. UM students are thought leaders and innovators whose accomplishments are showcased on a global stage. Our students represent the best and the brightest and their engagement with our faculty continues to elevate the University.

The University reserves the right to amend and update these policies at any point in the future. Amendments to these policies will be published on the University Registrar’s website.

Additional University of Miami Policies
Please also consult these policies:

• Our privacy statement (http://www.miami.edu/index.php/privacy_statement/) for our privacy and data collection policies.
• Technology policies
  • Acceptable Use of Information Technology Resources (http://www.miami.edu/it/index.php/a060_acceptable_use_of_info_tech_resources_by_students/)
  • Use of University Computing Facilities (http://www.miami.edu/it/index.php/a046_use_of_university_computing_facilities/)

About the Graduate School
The Graduate School is the administrative body overseeing all master’s and doctoral programs.

Mission and Goal Statement
The mission of the Graduate School is to promote graduate education, scholarship and research; to support individuals, departments and programs in the pursuit of excellence; to foster innovative, multidisciplinary, and interdisciplinary activities; and to maintain high ethical and academic standards in graduate studies.

The standards of study and conduct in the Graduate School are high. They are not set and maintained by the Graduate School but rather by the faculty who determine the standards for their individual program. The Graduate School through its Council sets no course requirements for a degree. It does set certain general residence, grade and examination standards. Fundamentally, the Graduate School delegates responsibility to the student and his/her program. Within this broad responsibility, the recommendation for the degree rests with the faculty.

Academic Calendar
Please visit the Office of the University Registrar (http://www.miami.edu/index.php/Registrar/calendar/) website for the most recent academic calendar for UOnline programs.

Definitions
New Student
A new student is a student who has been admitted to a program and paid the enrollment deposit but not yet completed the first 7 days of the first program course.

Continuing Student
A continuing student is a student who has completed at least the first 7 days of the first course in their program and not yet graduated from the program.

Course
A course is an educational component made up of academic content, assignments and activities, the successful completion of which earns a student credit hours toward completion of a program. A course is delivered and accessed online via a learning management system (LMS). A course is 7 weeks long.
Academic Plan/Program of Study
A series of courses that make up a full degree or certificate program. All courses in a program must be successfully completed for a student to be considered for graduation.

Academic Year
The academic year is August through July and consists of 3 terms (Fall, Spring, Summer).

Term
A term is the discrete length of time in which courses are offered. A term is 15-weeks long and encompasses two 7-week sessions with a 1-week break in between them.

• Fall Term is August – December
• Spring Term is January – April
• Summer Term is May – July

Session
A session is the discrete length of time during which a single course is completed. A session is 7-weeks long.

General Academic Requirements and Regulations
All graduate work (except for the master’s degree in Law, J.D. in Law, and M.D. degree) at the University of Miami is under the direction of the Dean of the Graduate School and the Graduate Council.

All graduate students at the University of Miami are subject to the general standards and requirements of their programs in regard to attendance, examinations, payment of fees and conduct, as well as to the specific requirements of the Graduate School. The graduate student is expected to assume the initiative in completing all requirements in the time specified.

Prospective students should note that “graduate study” means an integrated program of advanced, specialized study, based on an undergraduate major and/or adequate background, presupposing academic and personal maturity, and making much more than average demand upon the industry, initiative and scholarship of the student. The term must be distinguished from “post-graduation study” which means merely that courses, not necessarily of graduate level, are taken after the student has received a bachelor’s degree.

To preserve its ideals of scholarship, conduct, and character, the Graduate School reserves the right and the student by his/her registration concedes the right, to require the withdrawal of any student for any reason deemed sufficient by the Graduate School at any time.

Time to Completion
Time to completion starts when a student begins any program in the Graduate School. All work must be completed within three (3) years of the start date to the graduate program, for those studying for the various master’s degrees. Individual programs may set a shorter time period. Exceptions may be granted by the Dean of the Graduate School at the request of the Graduate Program Director. Course availability may vary by program and term; therefore students who may need to withdraw or take a break from their program should work directly with their Academic Advisor (https://myonlinesupport.miami.edu/advising/) to ensure timely completion within the three (3) year window.

A student is ineligible for financial aid when it becomes mathematically impossible for him/her to complete the program within 150% of the length of the program. The length of the program is the amount of time necessary for a student to complete all requirements for a degree or certificate.

Each online degree program has a minimum time within which a student may complete the degree if the student takes the courses on a continually enrolled basis. Online degrees are flexible, and the actual time to completion, within the three-year limit, can vary by student. However, if a student is not continuously enrolled for a period greater than one year, he or she must reapply to the program and will lose any tuition discounts previously applied to their account. A student may be eligible for any tuition discounts available to new students at the time of the student’s re-admission, and should contact the Online Enrollment Office to see if they qualify.

Graduate Transfer Credits
• Transfer credits from an outside institution may not be applied toward any online degree in the School of Business.
• A maximum of 6 credit hours may, with the permission of Program Director, be applied to the M.S. Ed. in Sport Administration degree online.
• Certain UOnline business courses may be transferable to other UOnline business programs. Students should contact their Academic Advisor (https://myonlinesupport.miami.edu/advising/) to see if their courses are eligible to transfer.
• Graduate credit hours transferred from another university may not be applied toward a graduate degree at the University of Miami if their age at the time of acceptance into the University of Miami program exceeds six years. On an individual basis, students may be permitted to validate over-aged credit hours by examination, with program approval.
• Students in the UOnline degree programs may not transfer or transfer credit hours from the online degree version of these programs to the campus based versions of the programs without the permission of the Program Director and the Dean of the school. Should a student obtain permission for such a transfer, they will not be admissible back to their original program once transferred.
• Students may not transfer any credits from any campus-based program to any of the UOnline programs without the permission of the Program Director and the Dean of the school.
• Students may not take any individual UOnline course and transfer credit hours from the online degree version of these programs to the campus version of the programs without the permission of the Program Director and the Dean of the school.
• Students in the UOnline degree programs may not transfer or transfer credit hours to validate over-aged credit hours by examination, with program approval.
• Students in the UOnline degree programs may not transfer or transfer credit hours from the online degree version of these programs to the campus version of the programs without the permission of the Program Director and the Dean of the school.
• Students may not take any individual UOnline course and transfer credit hours from the online degree version of these programs to the campus version of the programs without the permission of the Program Director and the Dean of the school.
• Students may not take any individual UOnline course and transfer credit hours from the online degree version of these programs to the campus version of the programs without the permission of the Program Director and the Dean of the school.

Online Program Course Information
Students should review their school’s program page for more information on course descriptions, pre-requisite requirements, and other program specifics. Course sequencing is subject to change each term and does not align with campus sequencing. For additional information on course sequencing or specific online student requirements, please contact Academic Advising (https://www.tfaforms.com/433870/).
Registration

Registration and Online Course Access

Registration starts about 4 weeks before each term. Each term contains two 7-week sessions with about a 1-week break in between each session. Students will have access to their online course via Blackboard approximately four (4) days before the first day of class. New and continuing students will be automatically registered by their advisor, and are only registered for classes at the beginning of each semester. Students may take time off from their program, but run the risk of exceeding the time to completion requirements depending on available course sequencing. Students who wish to take time off should contact their Academic Advisor (https://myonlinesupport.miami.edu/advising/) prior to their withdrawal to ensure appropriate course availability and to determine their ability to complete their degree program in the required time frame upon the student’s return. All UOnline students will have an Academic Advising hold showing in their CaneLink account throughout the remainder of their program. This hold will not be removed and is used for registration purposes only. Students should pay close attention to the Academic Calendar for important registration deadlines.

New Student Registration

Students will be eligible for registration once the University has received their enrollment deposit, paid in full, and once students have completed and passed their required Student Readiness Orientation (SRO) no later than their given deadline. Students will be registered into courses for the entire first term, both first and second sessions (2 courses per term), by the Office of the University Registrar. In some cases, students may be registered for their Session I course prior to the start of the term and registered for their Session II course up to 10 days after Session I begins. If this occurs, a student may request to have their Session II course added prior to the start of the term by contacting Academic Advising (https://www.tfaforms.com/433870/). Students will have access to the online course approximately 4 days before each session start date. New students enrolled in a Certificate program, but plan on applying to a Master’s program upon completion, are encouraged to contact Academic Advising (https://www.tfaforms.com/433870/) immediately to discuss the most optimal registration options available.

Continuing Student Registration

Students will be eligible for registration provided they have no financial or other holds on their account or are not withdrawn. If a student has previously withdrawn from their UOnline program, and it has been less than one year since they have been enrolled, the student should contact their Academic Advisor (https://www.tfaforms.com/433870/) to be re-enrolled for the upcoming term no later than the Readmission Deadline for their desired term. Please refer to the UOnline Academic Calendar (http://www.miami.edu/index.php/registrar/calendar/) for important deadlines regarding registration for continuing students. Students will be registered into courses for the entire term, both first and second sessions (2 courses per term), by the Office of the University Registrar. Students will have access to their course approximately 4 days before each session start date.

Financial, Academic and Other Holds

If students have any financial or other holds, they will not be registered into a course until they have met the requirements to remove the hold. Please refer to the UOnline Academic Calendar (http://www.miami.edu/index.php/registrar/calendar/) for important dates regarding registration for continuing students and readmission. Students will not be registered past the deadline due to delayed payments on the students account. Tuition for each term must be paid in full and can not be deferred to a future term.

Full-Time Study

All online programs are designed for students to attend full time. Students are considered full time pending they meet the credit requirements posted by the Office of the University Registrar. Students should contact their Academic Advisor (https://www.tfaforms.com/433870/) for further information on part time status.

In all cases, determination as to whether or not a student is in full-time study is the privilege of the Dean of the Graduate School and the Office of the University Registrar.

No full-time faculty member may be a full-time online student, whether or not working toward a degree. No full-time online student may be a full-time faculty member.

No full-time online student will be a principal investigator on any grant or contract, whether in name or fact. And no principal investigator will be a full-time online student.

Admissions

Applying to the Online Programs

In addition to holding the baccalaureate degree from an institution accredited by SACS or another regional accrediting body, the applicant for admission to the Graduate School should have the prerequisite coursework/work experience required by the program to which he/she is applying. In general, those applying for graduate admission should have achieved an overall average grade of “B” or better (3.0 G.P.A. on a 4.0 scale). International students will be required to give evidence of adequate knowledge of English through a TOEFL or iELTS test score.
Admission of a student to the University of Miami for any semester does not imply that such student will be re-enrolled in any succeeding academic semesters.

If students would like to apply to a UOnline program, they will need to create a profile and apply online via our online application portal found here (https://myonline.miami.edu/SignIn/). Here students will be assigned a personal Enrollment Advisor who will help guide them as the student submits all the components and required documents for their application. Students’ Enrollment Advisors will also guide them through the onboarding process and be available to answer any questions. Students will then transition to their UOnline Student Advocate who will work with them through their first year, then transition to their designated Academic Advisor for important Graduation and completion requirements throughout the remainder of their program.

International Students (who attended college/university outside of the United States)

All graduate applicants who have attended a college or university outside the United States must submit official transcripts and diplomas (if available) from all colleges and universities attended to one of the three approved evaluation services listed below. Follow the specific instructions of the selected evaluation service to request a course-by-course evaluation with degree equivalency and grade point average (gpa) calculation. We do not issue any student Visa’s for International UOnline students.

All online international students who have been admitted to an online program at the University of Miami are not eligible for an F-1 visa.

The evaluation report and copy of all the official documents used in the evaluation must be sent directly from one of the three approved evaluation services to the address below. It is the responsibility of the student to ensure their evaluation is sent to the correct address. Evaluations sent to other addresses on campus will not be received and will delay the admissions process.

University of Miami Online Enrollment Office 1320 South Dixie Highway Gables One Tower –Suite 902, Locator Code: 2991 Miami, FL 33146

The evaluation report and supporting documents are required before the Admissions Committee can review the application. Any documents received by the University will become the property of the University and will not be returned to the applicant or sent to a third party including the evaluation services.

Approved Evaluation Services

• Educational Credential Evaluators, Inc. (ECE) (https://www.ece.org/)
• World Education Services (WES) (http://www.wes.org/students/)

TOEFL (Test of English as a Foreign Language)

If students do not hold a U.S. undergraduate degree, they may be required to take the TOEFL exam. If they are required to submit a TOEFL score, students should visit this web page (http://www.ets.org/toefl/) to arrange to take the test. The TOEFL and IELTS scores are valid for 2 years after the test date. The TOEFL code for the University of Miami is 5815.

The University will consider candidates with these minimum TOEFL scores; however, TOEFL score requirements may vary by program:

<table>
<thead>
<tr>
<th>TOEFL Internet Minimum Score</th>
<th>94</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL Computer Minimum Score</td>
<td>240</td>
</tr>
<tr>
<td>TOEFL Paper Minimum Score</td>
<td>600</td>
</tr>
</tbody>
</table>

TOEFL Waiver

The TOEFL requirement may be waived for non-native English speakers provided they meet one of the following criteria:

• Students earned their undergraduate degree in a country where the official language is English (this does not include degrees from just English-speaking institutions or just a country where English is spoken).
• Students studied in the United States at an undergraduate level for at least one year or the equivalent of 30 consecutive credit hours.
• Students have lived and worked in an English-speaking country for the past two or more years.

Letters of Recommendation

Students will input their recommender’s information directly into the online application which will generate an email with a unique link sent directly to the recommender. Letters of Recommendations must be submitted directly by the student’s recommender using the unique link provided to them via email. Letters of Recommendation received in a Word document, body of an email, or any other format will not be accepted. The student’s Enrollment Advisor may provide guidance to the recommender if they have technical trouble or questions regarding the process.

Admissions & Admissions Decisions

Once the University receives the student’s complete application with all required documents, the admissions review process will start.

Regular Admit (with Official Transcripts)

If the application meets the standard admissions requirements and the University has received all official transcripts, from all institutions entered on their online application, the student will receive an offer of full admission in approximately 48 business hours after the University has received the completed application. The student will receive an official email from the Enrollment Advisor and be able to view the admissions decision via their Online Application portal.

Conditional Admit (with Unofficial Transcripts and/or Test Scores)

If the application fully meets the standard admissions requirements, the student may be conditionally admitted if the University has received and accepted the unofficial transcripts for all institutions attended, as entered on their online application, and/or the student’s unofficial test scores (if required). Unofficial transcripts may be considered acceptable ONLY IF the document is in a pdf format and ALL of the following items are legible on the transcript document:

• Name of the institution
• Student name
• Cumulative Grade Point Average (preferred)
• Course numbers
• Course names
• Credit hours earned
• Grades earned
• Degree conferred with date (if applicable)
• No other documents will be accepted

Students receive notification typically **within 48 business hours** after the University has received a complete application (including all other required documentation) that the student has been Conditionally Admitted. The notification of Conditional Admission will also address the requirements the student will have to satisfy in order to be officially admitted. The failure to meet any of these conditions will be grounds for the withdrawal of the Conditional Admission and/or the withdrawal from all programs. The student will receive an official email from his/her Enrollment Advisor and be able to view the admissions decision via your Online Application portal.

Students **MUST** pay their tuition bill or have accepted their Financial Aid Award, no later than by the payment due date. Once students are fully admitted and have paid their non-refundable enrollment deposit, and successfully passed the Student Readiness Orientation (SRO), they may be eligible to receive financial aid within the same term, provided the University has granted the student full admission during the same academic year. Students may start their course and continue through the term as long as they have been awarded Financial Aid, and have accepted their Financial Aid award no later than the first day of class. Student’s Financial Aid funds will not be disbursed until the student has participated in their first course and all official admissions documents and all required Financial Aid documents have been received. Students are responsible for checking CaneLink to ensure that their funding is ready for disbursement.

Students will not be registered for the next term until their current balance is paid in full. In the event the student's financial aid award is delayed, students should work directly with their Student Advocate or Academic Advisor to determine the appropriate next steps and ensure they meet the appropriate payment deadlines. Students should refer to the Academic Calendar (http://www.miami.edu/index.php/Registrar/calendar/) for important deadlines regarding Financial Aid Application due dates. Students may submit their FAFSA after the Financial Aid application priority consideration due date, but may have to use an alternative form of payment if their Financial Aid is not processed by the required payment deadlines.

Students should review the Monthly Payment Plan (MPP) (p. 1032) section for guidance on setting up a monthly payment plan, as well as the Payment Policies section for payment options and consequences for non-payment. Monthly payment plans are available for students at the beginning of each term. Fall and Spring MPP consist of four (4) payments; however, Summer MPP consist of three (3) payment options and is only available to online students at this time. UM Employees are not eligible for Monthly Payment Plans at this time.

Students should review the Transcripts section for official transcripts deadlines and consequences if the University has not received all official transcripts. Students should also review the UOnline (http://www.miami.edu/index.php/Registrar/calendar/) Academic Calendar (http://www.miami.edu/index.php/Registrar/calendar/) for official transcript deadlines.

**Accepting Admission**

When a student’s admission decision has been made, the student will receive an official Admissions decision email from the Enrollment Advisor which includes next steps (https://myonlinesupport.miami.edu/recently-admitted/) for accepting their offer. Students can also view the admissions decision using the online application portal found here (https://myonline.miami.edu).

A student’s Enrollment Advisor will guide him/her through the next steps (https://myonlinesupport.miami.edu/recently-admitted/) to accept their offer of admission and pay their non-refundable enrollment deposit. A student’s offer of admission has not been accepted until their non-refundable enrollment deposit has been paid.

Students will have **fourteen (14) calendar days to accept their offer of admission** by paying their non-refundable $300 Enrollment Deposit. If a student fails to accept their offer of admission within the fourteen (14) calendar day timeframe according to the Deposit Date on the official Admission letter, the student’s application will be withdrawn. Students who apply late will forfeit the full (14) calendar day acceptance policy and will be required to accept their offer no later than the last official Deposit Deadline as set on the UOnline Academic Calendar (http://www.miami.edu/index.php/Registrar/calendar/), which may be less than (14) calendar days. Students should refer to their official Admissions letter for their exact deposit deadline. If a student chooses to reapply, they will need to wait one (1) additional term before reapplying. Deferrals are not permitted unless the student has been approved for a Deferral Exception (https://qafederation.ngwebsolutions.com/Me/StartSSO.ashx?PartnerIdp=https://caneid.miami.edu/idp/shibboleth/#&TargetResource=https://dynamicformsngwebsolutions.com/ShowFormaspx?RequestedDynamicFormTemplate=2688dbb9-6031-4812-8f79-84fe37812020).

**Deferral Exception Appeal**

In extenuating circumstances, students may choose to apply for a Deferral Exception (https://qafederation.ngwebsolutions.com/Me/StartSSO.ashx?PartnerIdp=https://caneid.miami.edu/idp/shibboleth/#&TargetResource=https://dynamicformsngwebsolutions.com/ShowFormaspx?RequestedDynamicFormTemplate=2688dbb9-6031-4812-8f79-84fe37812020). Students who choose not to accept their offer of admission must apply for a Deferral Exception no later than their Deposit Deadline as specified by the Admissions letter, or will be withdrawn and will need to wait one (1) additional term before reapplying. Deferral Exception Requests are only eligible for the next immediate term. Students who would like to wait to start in future terms will need to reapply and should contact their Enrollment Advisor for additional information regarding documents required for admission. Any student who has already accepted their offer of admissions must apply for a Deferral Exception no later than the official Completed Enrollment Application Deadline for their current term as per the Academic Calendar. (http://www.miami.edu/index.php/Registrar/calendar/) Deferral requests submitted after the deadline will not be reviewed. Any student who has already been withdrawn due to missing their deposit deadline, failing their SRO requirement, or by voluntarily submitting a Withdrawal request will not be eligible to defer and must reapply.

- If a student’s Deferral Exception application is **denied**, the student’s offer of admission will be withdrawn and they must wait one (1) additional term before reapplying.
- If a student’s Deferral Exception is **approved**, the student’s start date will be updated to the next immediate term and the student will be...
sent a new admissions letter indicating the approval and updated start date.

- If a student has not accepted their offer of admission, and is approved for a deferral exception, the student will have fourteen (14) calendar days to accept their offer from the date of the deferral approval as per their deferral approval letter. If a student does not accept their offer of admission within the fourteen (14) calendar day timeframe, the student’s application will be withdrawn and the student must sit out (1) one additional term before reapplying.
- If a student has already accepted their offer of admission, and has been approved for a deferral exception, the student’s start date will be updated and a new admissions letter will be sent with the updated term and approval. If a student chooses to withdraw before the census date or is administratively withdrawn for any reason, the student must sit out one (1) additional term before reapplying to the program.

Any student who chooses to reapply for a future term is not guaranteed admission and will be subject to any changes in tuition, scholarships, and/or admissions requirements for that term.

Offer of Admission Expiration

Offers of Admission are valid for one term only unless a Deferral Exception has been granted. To officially accept the offer of admission, a student must log into Canelink (https://myonlinesupport.miami.edu/recently-admitted/) and pay their non-refundable enrollment deposit. If a student has not accepted an offer of admission within the fourteen (14) day time frame/deadline on their official Admissions Letter, he/she must reapply to the University and program after sitting out one additional term. Student should contact the Online Enrollment Office to verify what documents must be submitted for consideration.

Reapplying/Readmission

There are a few situations in which students have to reapply to a program. Students will have to reapply to a program if:

- A student’s original Offer of Admission has expired and he/she never started the online program.
- A student requests to change to a different program.
- A student has been withdrawn from his/her program for more than 1 calendar year (3 consecutive terms).
- A student failed to meet the requirements of a Conditional Admission.
- A student failed or did not complete the Student Readiness Orientation (SRO).
- A student’s Deferral Exception Appeal was denied

To reapply, students can login and start the Online Application (https://myonline.miami.edu/signup/) using their previous log-in credentials. A student should contact the Online Enrollment Office at 1-800-411-2290 if they have questions regarding the application. All students who are readmitted will need to complete the Student Readiness Orientation (SRO) by their deadline, regardless of prior completion, and adhere to all admissions deadlines as set forth in the Academic Calendar.

Not Admitted

If a student’s application does NOT meet the standard admissions requirements, he/she will receive a notification that he/she has not been admitted into the program typically within 48 business hours after the University received the student’s completed application. Students will receive an email from their Enrollment Advisor and be able to view their admissions decision via their Online Application portal (https://myonline.miami.edu/signup/).

If a student is not admitted into a program, he/she will receive an explanatory email from the Enrollment Advisor and will be able to view their admissions decision via their Online Application portal. Students may be eligible to reapply once they have met the admission requirements or choose to apply to a new program. A student’s Enrollment Advisor will contact a student to discuss their options.

Transcripts for Admissions

Official Transcripts

- MUST Arrive in a sealed envelope with the school’s stamp/seal across the back or on the institution’s official envelope
- Be opened only by a member of the University of Miami admission staff
- Have a Registrar’s signature and/or watermark and/or indented seal which appears on the transcript

Mailing Address for submission of transcripts:

University of Miami Online Enrollment Office 1320 South Dixie Highway Gables One Tower – Suite 902, Locator Code: 2991
Miami, FL 33146

Please ensure that the locator code is included in the address. Transcripts may not be received if address is missing the locator code or sent to another address on campus. Students are responsible for ensuring that they have their transcripts sent to the address above and are subject to all deadlines as per the Academic Calendar (http://www.miami.edu/index.php/registrar/calendar/).

Electronic Transcripts

Electronic transcripts will be considered official only if they are sent directly from the accredited institution and received directly by the Online Enrollment Office at etranscripts@miami.edu. A transcript sent directly to the student’s Enrollment Advisor will be considered as unofficial and will need to be re-sent to the official etranscripts address.

Official Transcripts, Scores & Conditional Admission

The University must receive official transcripts for all institutions attended, as entered on their online application, before any student can be considered fully admitted into the University.

Official Transcripts/International Evaluations Due Date

If a student was Conditionally Admitted into a program with unofficial transcripts, the University MUST receive the student’s official transcripts from all institutions attended, as entered on their online application, or International Evaluations from an approved evaluation service, by the date listed on the UOnline Academic Calendar. A student’s Admissions letter will provide the exact due date for the official transcript(s) and he/she may check Canelink to verify that the University has received the student’s official transcripts. Students should refer to the Academic Calendar (http://www.miami.edu/index.php/registrar/calendar/) for important due dates.

Official Test Scores Due Date

If a student was Conditionally Admitted into a program with unofficial test scores and is required to submit official GRE, GMAT or TOEFL...
official test scores, the University MUST receive their official test scores by the date listed on the UOnline Academic Calendar. A student’s Admissions letter will provide the exact due date for the student’s official test score(s) and he/she may check Canelink to verify that the University has received the student’s official test scores. Students should refer to the Academic Calendar (http://www.miami.edu/index.php/registrar/calendar/) for important due dates.

**UOnline Official Test Score School Codes**

**TOEFL CODES:** Institution: 5815

**GRE CODES:** Institution (All UOnline programs): 4405

**GMAT CODES:**
School of Business - UOnline Finance/Accounting Certificate: 7NV-S1-23
School of Business - UOnline Master of Finance: 7NV-S1-35
School of Business - UOnline Master of Professional Accounting: 7NV-S1-53
School of Business - UOnline Professional MBA: 7NV-S1-01
**College of Arts & Sciences-** UOnline Master of Public Administration: 7NV-HM-66
**School of Education-** UOnline Master & EdD of Applied Learning Sciences: 7NV-HM-66

**Financial Aid & Tuition Payment**

If students apply for Financial Aid, Financial Aid will be NOT be awarded until the University has received the official transcripts from all institutions attended and/or test scores, if required.

Because Financial Aid will not be awarded until official transcripts from all institutions attended and test scores are received, a student MUST pay the tuition bill by the payment due date. Students should review the Payment policies for payment options and consequences for non-payment.

**Official Transcripts and Test Scores Not Received**

If Official Transcripts and/or Test Scores (if required) are NOT received by the due date:

- A student will be removed from their current course and next course
- A student will be administratively withdrawn and may be reinstated if the University receives the student’s official transcripts.
- A student may owe a tuition balance from being withdrawn and must have their tuition bill paid in full before being eligible for reinstatement

**Enrollment Deposit**

Once students have received their offer of admission or conditional admission, they will pay a non-refundable enrollment deposit in order to accept their offer of admission. Once the deposit in full has been received, students will be required to complete and pass their Student Readiness Orientation (SRO) within (4) four weeks or by the deadline provided, in order to be eligible for their first term registration.

**What the Enrollment Deposit Is**

The enrollment deposit payment is:

- Paid one time per UOnline program
- Non-refundable including if the student’s Offer of Admission has expired, he/she failed the Student Readiness Orientation (SRO), and he/she never started the program or if they were conditionally admitted and did not meet the conditions for full admission.

- Due no later than the date listed on the academic calendar.
- Applied against a student’s 1st tuition bill
- Valid for as long as the Offer of Admission is valid:
  - If a student’s Offer of Admission for their UOnline program has expired and he/she reapplies to any program (campus-based or online), a student will be required to pay the deposit again and any applicable fees.
- Transferrable to a new UOnline program: if a student applies to a new UOnline program while the existing Offer of Admission is still valid, the student will not have to pay the deposit again.
- Not transferrable to any campus-based program.

**Paying the Enrollment Deposit**

After a student has received the Offer of Admission, the student will be provided access to Canelink (https://canelink.miami.edu) to pay the student’s enrollment deposit with the following payment options:

- Online Credit Card payment:
  - MasterCard
  - Visa
  - American Express
  - Discover
- E-check (drawn on a US bank only)
  - Bank-to-Bank, Exchange Bureau or Wire Transfer.
    - Students are responsible for any fees or currency exchange processing charged by their bank or exchange bureau when transferring funds and should account for this when sending tuition payments.
- International Payments with Flywire (http://www.miami.edu/finance/index.php/student_account_services/cashier_services-1/international_student_payments/)

**New Students**

**Student Readiness Orientation**

Once a student has been admitted and paid the non-refundable enrollment deposit, a student can start the Student Readiness Orientation. (https://myonline.miami.edu/signup/) The Student Readiness Orientation (SRO) is an interactive series of required activities in the University’s social media environment. and will be accessed by students through their UOnline student portal (https://myonline.miami.edu/signup/). During the SRO, students will meet other students, prepare for online learning at the University of Miami and familiarize themselves with their support structures and University academic policies.

Students will have (4) four weeks to complete and pass the SRO and will receive an email with their official SRO completion deadline via email from their Enrollment Advisor. For students to be fully prepared for their courses, completion of the SRO is mandatory and must be passed within (4) four weeks of submitting the enrollment deposit. Students who submit their enrollment deposit late may have less than (4) four weeks to complete the required activities and should refer to their official SRO email for their deadline. There are no extensions or exceptions allowed when completing the SRO.

Students who fail to complete or do not pass the SRO by the deadline will be administratively withdrawn and will need to wait (1) one additional term before being eligible to reapply. Additional activities, such as the New Student Checklist, (https://
Software Requirements may also be required in order for students to be prepared for class. Student should work closely with their Enrollment Advisor and Student Advocate to receive guidance on completion of these additional activities.

Successful Completion
Once students have successfully completed and passed all required activities in the Student Readiness environment, they will be eligible to register for their first term's courses. Students should review the Syllabus to ensure that they complete the required activities with a passing grade.

Program Change
If a student changes his/her program, the student may be required to complete some program-specific portions of the Student Readiness Orientation (https://myonline.miami.edu/signup/) or New Student Checklist (https://mylinesupport.miami.edu/2015/08/13/new-student-checklist/). If so, the student's Enrollment Advisor will inform the student and provide access to the relevant Student Readiness Orientation activities.

Offer of Admission Expiration
If a student's Offer of Admission has expired and he/she has not started a program, the student will be required to retake the Student Readiness Orientation (https://myonline.miami.edu/signup/) once he/she has been re-admitted into the program.

Technical Requirements
To help ensure success, students should be proficient using e-mail, the Internet, and common desktop productivity software. During the course of the program, requirements (either hardware or software) may change from the original technology recommendation. Students should consult the software/hardware requirements within the program or with the faculty member or Student Support Team (https://www.emailmeform.com/builder/form/ift36G870a5UABMY/) for any technology recommendations that may have changed since the initial recommendation mentioned below or within the program of study.

Below are some initial recommendations. Please note that these recommendations and requirements may change as technology changes and may also vary from course to course. Also please note that specific programs of study may have other specific requirements:

Recommended Setup
• Internet access required; 6-10 Mbps speed or higher recommended; Broadband is recommended as students with dial-up may experience degraded performance
• Windows Vista/7 or Mac OS X with virtualization software (like Parallels with Windows OS)
• 2GB of RAM minimum
• 40GB hard drive
• speakers, and headphone connected to the computer
• Inkjet or laser printer
• Scanner or Scanning Application for mobile devices
• Portable media (thumb drive)

Recommended Web browser—current version of Chrome
• Other Web browsers (Internet Explorer ver. 9.0 or higher or Firefox's current and next most recent releases).

Tablet/Laptop Recommendation
Students enrolled in programs that require participation in academic residencies are encouraged to use a laptop or tablet computer for their work. Some coursework may not be fully compatible with use of a tablet or mobile device; therefore, it is recommended that students have a desktop/laptop available if needed.

Additional Technology Requirements
Some programs may require additional technology requirements that are not mentioned above. Please refer to the program course(s) syllabi or course materials list in the UOnline Support Center (https://mylinesupport.miami.edu/) to review any special technology requirements for the program of study.

Cost, Fees, Billing and Payment
Tuition Includes
• Online learning environment and courses
• Application processing
• Non-refundable Enrollment Deposit (paid separately and deducted from 1st tuition bill)
• Technology fee
• Access to the online library, career center, and disability services
• Student and Technical Support

Tuition Does NOT Include
• Course Materials, Books and e-books
• Late Payment Fees, if assessed
• Graduation related fees

Your Tuition Invoice and Payment
Immediately after students have been registered into class, their tuition bill will be available in their student center through Canelink (https://canelink.miami.edu). Payment in full is due or arrangements to pay finalized by the 1st day of the 1st class of each term. If the University does not receive payment in full by this date, students will be removed from the online classes. Students are responsible for ensuring their payments are made on time regardless of whether they are utilizing a third party for payment. Students who are utilizing a third party for payment may need to find alternative payment arrangements to ensure they meet the payment deadlines as per the Academic Calendar. (http://www.miami.edu/index.php/registrar/calendar/)

Payment Currencies
A student invoice is in United States Dollars (USD) and the University accepts payment only in United States Dollar, USD.
Payment Methods
The University offers several payment methods, described below. A student’s tuition invoice will contain instructions for using these payment methods.

Credit Card
A student may pay by credit card via the University’s partner, Elavon. A student can pay with:

- MasterCard
- Visa
- American Express
- Discover

Students will be charged a processing fee of 2.5% to pay by credit card.

eCheck (ACH)
Students may pay their tuition by e-check (ACH) online through your Canelink account:

- Click on the “Student Home” tab
- Navigate to Finances section
- Click on “Account Inquiry”
- Click on “Payment” and follow the instructions.

Students will not be charged any additional fee if they pay by e-Check. For additional help, contact the Student Support Team (https://www.emailmeform.com/builder/form/ift36G870a5UABMY/).

Wire Transfer
Students may pay their tuition by wire transfer. The wire transfer instructions can be obtained through Canelink.

How to obtain wire transfer instructions:

1. Log into Canelink and go to Student Center, click on the Account Inquiry button under the Finances.
2. Click on Make a Payment to pay your tuition and select Wire Transfer Payment (USA & International).
3. Select the country from the “What country are you paying from” dropdown list. For domestic wire instructions, select the US wire transfer payment option.
4. Create a Flywire account, to track your wire payment, and enter basic identification information for the University to identify your payment.
5. The bank account wire instructions will be provided.
6. An email will be sent with a unique wire identification number.

Students should make sure their full name, student ID number, and unique wire ID number are included with the wire transfer to ensure the funds are applied correctly.

Wire/Bank Transfer Fees
Students are responsible for any fees or currency exchange processing charged by their bank or exchange bureau when transferring funds and should account for this when sending tuition payment. The University is not responsible for any fees students may incur during the transfer process.

Payment by a Third Party
A “third party sponsor” refers to any organization which formalizes a contract with the University and provides a guarantee letter assuming financial responsibility for a student’s, or group of student’s, tuition and fees, in full or portion thereof. Employers are not considered third party sponsors since sponsorship cannot be dependent upon the student’s continued employment with the organization. Students who plan on using their employers tuition reimbursement benefits are responsible for their tuition by the due date. Students with this type of assistance must inform the Financial Aid Office to ensure that financial aid is awarded appropriately and that funds are applied appropriately.

If a student’s tuition is paid via Third Party Sponsorship, the student will still remain subject to all policies, including due dates, late payment fees and financial hold rules and consequences.

Monthly Payment Plan (MPP)
Through the Monthly Payment Plan, term tuition payment is divided into 4 monthly payments for the Fall and Spring terms. The Summer term payment schedule is divided into 3 monthly payments and is only available to online students at this time. Each monthly payment is due on the 1st of the month and is not directly debited from the student’s account. UM Employees are not currently eligible to enroll in the Monthly Payment Plan at this time. UM Employees are encouraged to reach out to the Enrollment Advisor for other payment options.

- Students must pay each term in full before they will be registered for the next term (see payment methods section). This chart details the Monthly Payment Plan option available during the Fall and Spring Terms only.

<table>

</tbody>
</table>

Late Payment
- If payment is not received by payment due date, a registration hold will be placed on a student’s account the next business day.
- Once payment has been received, the registration hold issued for late payment will be removed.

Tuition Reductions, Scholarships, Special Offers
During the Enrollment and Admissions process and at the University’s discretion, tuition reductions and scholarships may be offered to incoming students. Existing students will not be eligible for any new tuition reductions offered to incoming students. A tuition reduction will remain on a student’s account for the duration of the online program for which they received the reduction provided the student remains academically eligible and does not withdraw from the program for longer than one-year. Any student who is not enrolled in their program for greater than one year, will no longer be eligible for their initial tuition reduction and must reapply for admission to a program. A student may be eligible for any new tuition reductions being offered upon reapplication to a UOnline program. Students should contact an Enrollment Advisor for current offerings and qualifying criteria.
If students qualify for a tuition reduction, their Enrollment Advisor will provide them, in writing, the formal terms and conditions specific to that tuition reduction. The reduction will be included in a student’s tuition statement/note in Financial Aid package if applicable and deducted from tuition accordingly. If financial aid is awarded prior to the tuition reduction being applied to a student’s bill, the financial aid award will be adjusted accordingly. Student should contact gradprof.finaid@miami.edu the Financial Aid Office if they have questions regarding this adjustment.

**UM Tuition Remission**

As with other special Master’s degree programs and doctorate programs, UOnline programs are not available for University of Miami Tuition Remission. Please refer to the Tuition Remission policies on the University of Miami’s Human Resources website for additional details on the benefit program.

**Tuition Increase**

The University reviews tuition rates each year and reserves the right to increase tuition for existing students.

If the University does increase tuition:

- The increase will be implemented at the beginning of the Fall term and will apply forward to any future unbilled tuition.
- Students’ tuition invoices moving forward will be adjusted to reflect the increase.

**Change Payment Plan**

Students may request to change payment plans. Currently the options are:

- Payment in Full to Monthly Payment Plan.
- Monthly Payment Plan to Payment in Full.

Payment Plan changes will be implemented only at the beginning of the next term. Students must complete any payments due for the current term as agreed under their current payment plan before they can request a new payment plan.

Students should contact the Student Support Team for more information about changing their payment plan. Formal requests must be in writing/online form.

**Billing Support**

The student’s Enrollment Advisor and Student Support Team will be able to answer questions or provide information about a student’s invoice.

**University of Miami VA Pending Payment Compliance**

In accordance with Title 38 US Code 3679 subsection (e), this school adopts the following additional provisions for any students using U.S. Department of Veterans Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation & Employment (Ch. 31) benefits, while payment to the institution is pending from the VA.

This school will not:
- Prevent the student’s enrollment
- Assess a late penalty fee to the student
- Require the student to secure alternative or additional funding

However, to qualify for this provision, such students may be required to:
- Produce the VA Certificate of Eligibility (COE) by the first day of class
- Provide a written request to be certified
- Provide additional information needed to properly certify the enrollment as described in other institutional policies

**Graduate Grading**

**Scale/Quality Points**

An average of B (3.0) is required for a graduate degree, and no “D” credit hour may be counted toward the degree. All work leading to the graduate degree and taken as a graduate student will be counted in computing the quality point average, including courses graded “D”.

No transferred credit hours are calculated into the University of Miami G.P.A.

**Grade Interpretations**

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent accomplishment.</td>
</tr>
<tr>
<td>B</td>
<td>Good accomplishment.</td>
</tr>
<tr>
<td>C</td>
<td>Fair, but below that expected of graduate students (C- is the lowest passing grade. Some programs may require higher standards.).</td>
</tr>
<tr>
<td>S</td>
<td>Symbol used for acceptable (U-unacceptable) thesis, dissertation, practicum and internship credit hour. It may be used for regular courses under special circumstances with the prior approval of the instructor, department chairmain, and the Dean of the Graduate School. The Graduate School considers a grade of “S” to indicate a minimum of a 3.0 GPA in a graduate course if a student has taken no prior coursework on the graduate level. A grade of “S” reflects that a student is in good academic standing.</td>
</tr>
<tr>
<td>D</td>
<td>Poor (not acceptable for credit hour toward the advanced degree).</td>
</tr>
<tr>
<td>F</td>
<td>Failure.</td>
</tr>
<tr>
<td>W</td>
<td>Course dropped prior to the last day for withdrawing from classes as published in the official calendar of the University. Courses dropped after last date must have approval of Dean of Graduate School. Credit hour can be earned only by successful repetition of the course.</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete work in passing status with the instructor’s permission to complete the course. (Not to be used for thesis or dissertation credit hours). Student may request an incomplete from the professor if • they have completed at least 75% of the course and • have a C or better in the course at the time of the request. The “I” should be changed to a letter grade within one (1) calendar year after it is given, unless the Academic Dean of the student’s primary school or college and the Dean of the Graduate School approve the delay. If the “I” is not changed within one year, credit hour can be earned only by successful repetition of the course. (Note: Fellowships and financial aid may be withdrawn if there is an excess accumulation of “I”s on a student’s transcript.).</td>
</tr>
</tbody>
</table>
Faculty Senate Legislation #85005(B)

Quality Points

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.00</td>
</tr>
<tr>
<td>A</td>
<td>4.00</td>
</tr>
<tr>
<td>A-</td>
<td>3.70</td>
</tr>
<tr>
<td>B+</td>
<td>3.30</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
</tr>
<tr>
<td>B-</td>
<td>2.70</td>
</tr>
<tr>
<td>C+</td>
<td>2.30</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>

<tr>
<td>D+</td>
<td>1.30</td>
</tr>
<tr>
<td>D</td>
<td>1.00</td>
</tr>
<tr>
<td>F</td>
<td>0.00</td>
</tr>
</tbody>
</table>

The quality point average is then determined by dividing the total of quality points earned by the total of credit hours attempted. The symbols “S”, “W”, and “I” are not counted as credit hour attempted.

Repeating Courses & Academic Progression

A student may appeal to repeat a course (https://myonlinesupport.miami.edu/forms/) in which a failing grade was earned, but the repetition of the course will not eliminate the previous grade from the record and the student is responsible for tuition and other costs related to the repeated course. A course may be repeated only once unless written authorization is provided by the Program Director, Dean of the School and Dean of the Graduate School, and requires program approval. Students must complete a Course Retake Appeal form (https://myonlinesupport.miami.edu/forms/) no later than the readmission deadline per the Academic Calendar for the requested retake term. All grades are included in the computation of the quality point average. If a course in which an unsatisfactory grade (as determined by the program advisor) was earned is repeated and the repeat grade is a "C-" or higher, the number of credit hours required for graduation will be increased by the number of credits repeated. Registrations which involve repeating course in which a grade of "A" or "B" has already been earned may not earn qualify points or credit hours, nor count as credits attempted.

Registrations which involve repeating a course in which a grade of "A" or "B" has already been earned may not earn quality points or credit hours, nor count as credit hours attempted.

UOnline Business Students

Graduate students in the Miami Business School who fall below the 3.0 GPA may be placed on academic probation. Within one semester after their GPA falling below 3.0, Master’s students wishing to repeat a course may petition their program director to do so. If the petition is approved by the graduate program director, the grade obtained in their second attempt will replace the original grade for purposes of calculating their GPA for clearance for graduation only. Authorization to repeat a course is limited to courses in which an unsatisfactory grade was earned (as determined by the graduate program director).

Additionally, a course may be repeated only once and students may not repeat more than two courses. The student’s transcript will continue to show all attempts and the GPA computation will include all grades earned for purposes other than computing the GPA for clearance for graduation. If a course in which an unsatisfactory grade of lower than a "B" was earned is repeated and the repeat grade is ‘C-’ or higher, the number of credits required for graduation will be increased by the number of credits repeated. Registrations which involved repeating course in which a grade of ‘A’ or ‘B’ has already been earned may not earn quality points or credit hours, nor count as credits attempted.

UOnline MSEd Sport Administration

UOnline students must earn a grade of ‘C’ or better in KIN 601 before taking KIN 602 or KIN 603. Should a student earn below a ‘C’ in KIN 601, the student will be automatically withdrawn from their Session 2 course for that term and rescheduled for the immediate next term in KIN 601 to repeat. Students failing to earn the required pre-requisite grade will be responsible for tuition for both attempts.

UOnline MS Health Informatics

The minimum passing grade for each course is a B. An overall average of B (3.0) is required for the graduate degree and certificate.

A student may receive only one (1) grade below a B while they are enrolled in the program. If that grade is below a C, the course must be repeated and a grade of B or better achieved on the retake. The repetition of the course will not eliminate the previous grade from the record and the student is responsible for tuition and other costs related to the repeated course. All grades are included in the computation of the quality point average.

Students receiving a second grade below B will be dismissed from the program regardless of their cumulative GPA.

Attendance

Military Withdrawal

Tuition refunds of 100% are granted to students who withdraw due to military service, provided they do not receive credit hour for the course (see below). A student should contact their Academic Advisor if they need to request a military withdrawal (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth&#/38;TargetResource=https://dynamicformsngwebsolutions.com).

If a student receives federal financial aid and withdraws before they complete 60% of the term, a pro rated calculation will determine the amount of financial aid the student has earned. It is based on the amount of time the student was enrolled. This calculation is independent of any charges incurred at the University.

1. On recommendation of the Dean of the school, students who withdraw after the 5th week of the session because of official orders to active duty with the Armed Forces of the United States may be awarded credit hour in any course in which they have achieved a C or better up to the time of withdrawal. Instructors must certify that the student had achieved satisfactory accomplishment on the basis of previous work in the course by awarding an appropriate grade.
Accomplishment of less than C should be entered on the permanent record as a withdrawal without prejudice (W).

2. Credit hour granted for a course under this policy should count toward graduation.

3. There should be no refund of tuition for courses for which credit hour has been granted. Refunds of courses not awarded credit hour should be on the same basis as complete withdrawals for military service.

4. The above recommendations are procedures for determining the awarding of credit hour and do not release the student from the usual withdrawal procedures.

**Attendance and Participation, 1st Week (new and continuing students)**

Online courses are not independent study courses. They involve a mixture of independent work outside the online course environment and presence within the course room. Authentic student engagement includes activities such as doing assigned readings, preparing and presenting quality assignments and participating substantively in online discussion. **Logging into the online course alone does not demonstrate adequate engagement or participation.**

Attendance during the first week of each course ensures you are on the right path to successfully completing your course and helps ensure that all students are assigned to groups with active participants to support quality group work. **Participation in an online course is defined as the submission of a gradable assignment and/or discussion post about academic matters.**

Students are required to attend, engage and participate in each of their online course(s) in an active and timely fashion. For each course, a student must participate by submitting their Week 1 assignments/discussion(s) during the first 7 calendar days from the course start date. This policy is the same for both New and Continuing students. If a new or continuing student logs in, but does not participate in any Week 1 activities by the end of day 7 (Eastern Standard Time) of a course, they will be administratively withdrawn from the program and must contact their Enrollment Advisor or Academic Advisor regarding eligibility for readmission. Because of strict accreditation and financial aid regulations, all students are required to actively participate in the course at some point during its first seven days, regardless of any due dates posted on the course’s syllabus or any extensions granted by the instructor(s). Active participation is defined as any one of the following: **submission of a gradable assignment or submission of a discussion post about academic matters.** Any student who does not actively participate in the course within the first week will be automatically withdrawn.

**Attendance by Day 7**

By the end of the Day 7 (Eastern Standard Time) of each Course, a student must log into the Blackboard classroom to actively indicate his/her intention to participate in and complete that course. If by Day 7 the student has logged in and submitted an assignment and/or discussion post and has not formally rescheduled his/her start date or withdrawn from the program the student will:

- Be considered as attending the course.
- Be obligated to pay for the course in full or make all payments in accordance with the monthly payment plan.
- Be responsible for adhering to all University policies and course policies

**No Attendance by Day 7**

Starting on the first day of each course the Enrollment Advisor or Academic Advisor will contact the student if the student has not yet logged in to the Blackboard classroom, and remind the student to do so. If the student does not log into the Blackboard classroom the **end of Day 7** (Eastern Standard Time), the student will be removed from the current course and will no longer be able to attend class. The student will be administratively withdrawn from the term and will need to contact their Enrollment Advisor or Academic Advisor to discuss their options for returning.

If a student is a **new student** and has been administratively withdrawn for lack of participation, the student will need to sit out one (1) term before being eligible to reapply in the future. A student who chooses to remain in the course will be subject to all applicable deadlines as stated in the course syllabus. Active and ongoing participation is required in all courses and lack of attendance may result in failing the course.

If a student is a **continuing student** and the Academic Advisor has been able to contact the student, the student will be encouraged to submit a withdrawal request (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) with a return date to ensure he/she is not withdrawn from the program. A student who chooses to remain in the program will be subject to all applicable deadlines as stated in the course syllabus. Active and ongoing participation is required in all courses and lack of attendance may result in failing the course.

The Enrollment Deposit will remain on the student’s account and remains non-refundable. If the student has a tuition balance, it will be voided and reissued on the 1st day of the next course for which the student is registered should the student choose to change their start date.

**Removed from Course Erroneously**

If a student believes he/she has been removed from the course **erroneously**, the student should contact his/her Academic Advisor (https://www.tfaforms.com/433870/) to discuss options.

**No Contact or Response by Day 7**

A student will be designated as a non-starter and will be administratively withdrawn, if a student has not logged into the Blackboard classroom by Day 7 and the Enrollment Advisor or Academic Advising Team has not been able to contact the student. If a student does not log into Blackboard by Day 7 of session 1 of the term, the student will be administratively withdrawn from all courses that they are enrolled in for the term (both Session 1 & 2). If a student does not log into Blackboard by Day 7 of Session 2, the student will be administratively withdrawn from Session 2 of the term only. Students will not be registered for future sessions until they meet with their Academic Advisor to discuss future course sequencing/scheduling.

**New Students**

If an Enrollment Advisor does not receive a withdrawal form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) from the student by Day 7 of the term, the student will be administratively withdrawn from the term. If the Offer of Admission expires, the student will be required to reapply to the program.
Continuing Students

If the Academic Advising Team does not receive a withdrawal form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom/ShowFormaspx?startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) from the student by Day 7 of the term, the student will be administratively withdrawn from the program. The student should contact the Academic Advising Team (https://www.tfaforms.com/433870/) if they intend to return in the future and should review the Academic Calendar for all applicable deadlines regarding readmission.

On-going Attendance

Students should continue to login and attend class every week. Students who do not participate in their courses as indicated by course requirements, or fail to notify the University that they are no longer attending by submitting a withdrawal form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom), will be at risk of failing their course. Students who miss more than one week of attendance should contact their instructor immediately and refer to their course syllabus for any late assignment policies. This may result in the requirement for the return of previously awarded federal financial aid. If the University is required to return federal student aid funds, the student will be required to pay any outstanding balance owed the University.

If a student receives federal financial aid and withdraws before they complete 60% of the term, a pro rated calculation will determine the amount of financial aid the student has earned. It is based on the amount of time the student was enrolled. This calculation is independent of any charges incurred at the University. This Federal Financial Aid calculation is separate and in addition to the Refund Policy and Schedule. If a student has questions pertaining to either policy, they should contact their Academic Advisor (https://www.tfaforms.com/433870/).

Student Change Requests

Reschedule Start Date, Student Initiated

A new student may not reschedule his/her start date once the offer of admission has been accepted unless a Deferral Exception Appeal Request (p. 1027) has been approved.

Students must submit their Deferral Exception Appeal form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom/ShowFormaspx?RequestedDynamicFormTemplate=2688d0b9-6031-4812-8f79-84fe37812020) to their Enrollment Advisor and discuss the options and any financial and academic consequences no later than the approved deferral deadline. In extra ordinary circumstances, such as a serious illness or accident, students may request to appeal their withdrawal date by contacting their Academic Advisor for more information regarding the UOnline Student Appeal process.

Choosing to Remain in the Course

If after discussing with their Enrollment Advisor students decide to remain in the course, students' Enrollment Advisor will confirm this verbal decision with the students formally, in writing via email, reiterating the financial and academic obligations. Students should reply to the email and confirm their wish to remain in the course. Students must submit a withdrawal form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) if they choose not to remain in their course and should review the Academic Calendar for applicable drop deadlines. Email requests will not be honored.

Choosing to Reschedule

Students who are approved to defer their start date will have their Deferral Exception Appeal Request (p. 1027) form processed and:

- Students will be removed from any courses currently enrolled.
- Students will be enrolled into the courses for the immediate following term from their original start date.
- Students may lose any associated tuition reductions (please see tuition reduction's terms and conditions).

Students will receive a deferral decision via the electronic form and can confirm with their Enrollment Advisor within 1-2 business days that the start date change has been completed. The student may also view their start date change in Canelink.

The Enrollment Deposit will remain on the student’s account. If a student has received the 1st tuition balance, it will be voided and reissued before the 1st day of the new start date. Students should check the Academic Calendar for future term registration time frames and will not need to complete the Student Readiness Orientation (SRO) a second time as long as the student completed and passed the SRO by the original completion deadline, as per the student’s original acceptance letter.

Financial Obligations After Day 7

If a student does not submit the Withdrawal Request form (https://qafederation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) by the end of Day 7, after Day 7 the student will be obligated to pay for the course in accordance with the refund policy and schedule and is not eligible for a credit of tuition towards the rescheduled terms.

Offer of Admission Expired

If a student’s Offer of Admissions has expired, he/she will not be able to reschedule the start date and must reapply to the Program.

Add a Course

Each active student will be registered at least 14 days before each term start into the appropriate course(s) according to the sequence and rules of the program. Any student requested changes will be implemented by 1 day before the course start to ensure proper section and group assignments. New students must contact their UOnline Student Advocate to discuss any changes or concerns about course registration. Continuing students should contact their Academic Advisor to discuss any changes or concerns about course registration. If a student misses the registration deadline for the term, they will need to wait until the following term to register. No late registration requests will be accepted. Students are registered at the beginning of each term for both sessions and no mid-term registration is allowed.
Drop a Course
A student may drop a course only before or by the end of Day 7 (Eastern Standard Time) in order to avoid financial or academic (grading) consequences as per the refund policy and course syllabus.

If a student is a new student, he/she must contact the Enrollment Advisor to discuss the need to drop a course and potentially reschedule the start date if a deferral exception is approved. Due to the scheduling and sequence of courses, new students may need to be dropped from all courses in the term and may need to wait to be rescheduled at the beginning of the next available term for their program.

If the student is a continuing student he/she must contact the Academic Advisor to discuss the need to drop a course and withdraw from the program. In some cases, due to course scheduling and sequence, a student may need to drop all courses from the term and wait to enroll in a future term. Continuing students should work closely with their Academic Advisor to discuss all rescheduling options and ensure they are meeting the required times-to-completion for their program. All students should adhere to the Academic Calendar for registration and drop deadlines. No mid-term registrations are allowed.

If a student receives federal financial aid and withdraws before he/she completes 60% of the term, a pro rated calculation will determine the amount of financial aid the student has earned. It is based on the amount of time the student was enrolled. This calculation is independent of any charges incurred at the University. If a student plans to drop a course or to withdraw from their program, they should consult both the Financial Aid withdrawal policy as well as the Refund Policy for UOnline programs to determine their financial responsibilities.

Retaking the Entire Course
If a student is required to retake an entire failed course and/or has achieved a grade lower than the required in a pre-requisite (including an incomplete 'I' grade), the student must submit a Course Retake Appeal Form (https://myonlinesupport.miami.edu/forms/) no later than the Readmission Deadline per the Academic Calendar, and get approved by the program. If approved:

- The student will be re-registered for the failed course the next time it is offered or in the next session
- If the student has already been registered into the next course in the program sequence, the registration will be adjusted.
- The student will be billed the full course tuition.
- The student can receive Financial Aid to pay for the second course retake, but if the student fails and takes the course a THIRD time, Financial Aid will not be available and the student must pay for the course tuition out-of-pocket. A student may contact their Academic Advisor for more information on payment options.

Change of Program
Students may request to change from their current program to another online program. The student must apply to the new program and provide information necessary for admission into that program. The student’s Enrollment Advisor will work with the student and the admissions staff to determine if the student is qualified to apply for a new program. Please note that program changes will be implemented as per the University’s Online academic calendar deadlines and subject to SRO completion requirements.

If the student is still a new student (has not completed the 1st 7 days from the start date) the student should contact their Enrollment Advisor. If the student is a continuing student he/she should contact the Academic Advisor to discuss all of the options and the new program admissions requirements. Tuition and any applicable tuition discounts that were previously applied to a new or continuing student’s balance will be subject to change upon changing the program.

Certificate to Master’s Students
Certificate students who are interested in completing the remaining half of the Master’s courses must formally apply and get admitted to the Master’s program in order to continue. Students should reach out to their Enrollment Advisor after their third Certificate course in order to allow enough time to apply for the Master’s degree. There is no guarantee that students will be admitted into the Master’s degree and are subject to the same admissions requirements and deadlines as a new applicant. It is the student’s responsibility to reach out to the UOnline Enrollment Department for further details on what is needed to apply. Certificate students who apply in their third course and are admitted to the Master’s program are waived from the SRO completion requirement for the Master’s program.

Non-Standard Change of Program
If a student is eligible to change into a new program, he/she will be registered into the appropriate course and start the new program in the next available term. Approved completed courses will be transferred into the new program. Students will not be charged another enrollment deposit.

If a student does not meet the admissions requirements, the student should continue to work with the Enrollment Advisor or Academic Advising on other options that may be available.

Withdraw from Course but Not Program
If a student needs to withdraw from a course but does not wish to withdraw from the program, the student should contact their Academic Advisor to discuss the academic and financial implications. The student should also review the academic calendar for important dates regarding withdrawal from a course and how the withdrawal will be reflected on the transcript. In some cases, due to course scheduling and sequencing, a student may need to drop all courses from the term and may have to wait longer than one term to be rescheduled. Continuing student should work closely with their Academic Advisor to discuss all rescheduling options and ensure they meet time-to-completion requirements for their program.

If after discussions with the their Academic Advisor the student decides to withdraw from a course, the deadlines for withdrawal, as they appear on the academic calendar, will apply. Additionally, if students withdraw from the course after the “last day to drop without a W” as per the Academic Calendar, they will:

- Be required to pay for the course in accordance with the refund policy and schedule for online programs.
- Receive a Withdrawn (W) grade for that course and, for this reason, will remain registered in that course until the course end date so the final grade can be posted to the student’s official record.

no later than the 'last day to drop With a W' as per the Academic Calendar. Any Withdrawal requests submitted after this date will not be processed for the current session. The student will remain in their current course and must be resubmit the Withdrawal form (https://qafederation.ngwebsolutions.com/sp/startSS0.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) after the course ends in order to be formally withdrawn.

**Withdraw from Program**

If students are withdrawn from the program this means they are permanently suspended from continuing with their studies. Therefore, students will not be registered for future courses or have access to the online student community, the academic environment or other related program privileges.

If a student is considering withdrawing from the program, he/she should be aware of the financial and academic consequences for doing so. There are different consequences for withdrawing **before and after Day 7**.

If a student receives federal financial aid and withdrawals before he/she completes 60% of the term, a pro rated calculation will determine the amount of financial aid the student has earned. It is based on the amount of time the student was enrolled. This calculation is independent of any charges incurred at the University as per the refund policy and schedule. Students should contact their Academic Advisor before withdrawing to fully understand their financial obligations upon withdrawal.

**Student-Initiated Withdraw from Program BEFORE Day 7**

Should a student wish to withdraw from the program **before**, or by the end of Day 7 (Eastern Standard Time) of their first course, students must submit a Withdrawal Form (https://qafederation.ngwebsolutions.com/sp/startSS0.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) by the end of Day 7 (Eastern Standard Time) of their current course to make the request. If the student decides to withdraw from the program by end of Day 7 of the current course:

- The student will be removed from their course(s).
- The student will be refunded for the course(s) in accordance with the refund policy for online programs (minus the enrollment deposit).
- The course(s) will **not** appear on the student's record.

The effective program withdrawal date will be the date/time the Withdrawal Form was submitted and should be processed within 3-4 business days by the Office of the University Registrar. Should the student's withdrawal need to be reviewed by other departments, such as Financial Aid, processing time may be extended to 14 business days.

The enrollment deposit and some program fees remain non-refundable. Any tuition payments made by the student for the course through the time of withdrawal will not be applied or credited towards any future courses the student may enroll into. If a student is using Financial Aid, a recalculation of financial aid may be required to determine if any funds need to be returned to Title IV. In this case, the calculation may take up to 45 days from the effective date of withdrawal to appear on the student's account. Students may check Canelink to review their account balance.

**Student-Initiated Withdraw from Program AFTER Day 7**

If the student would like to withdraw from the program **after Day 7** (Eastern Standard Time) of the course start, students must submit a Withdrawal Form (https://qafederation.ngwebsolutions.com/sp/startSS0.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutionscom) no later than the 'last day to drop with a W' (Eastern Standard Time) as per the Academic Calendar, of their current course to make the request. If the student decides to withdraw from the program or their current course:

- The student will be removed from any course currently enrolled.
- The student will receive a Withdrawal (W) on the student's record for their course.
- The effective program withdrawal date will be the date/time the Withdrawal Form was submitted and should be processed within 3-4 business days by the Office of the University Registrar. Should the student's withdrawal need to be reviewed by other departments, such as Financial Aid, processing time may be extended to 14 business days.

The enrollment deposit and some program fees remain non-refundable. Any tuition payments made by the student for the course through the time of withdrawal will not be applied or credited towards any future courses the student may enroll into. If a student is using Financial Aid, a recalculation of financial aid may be required to determine if any funds need to be returned to Title IV. In this case, the calculation may take up to 45 days from the effective date of withdrawal to appear on the student's account. Students may check Canelink to review their account balance.

**Administration-Initiated Withdraw from Program**

The student may be withdrawn from the program for academic progress issues, academic integrity, non-payment or other administrative issues (such as not receiving official transcripts by the deadline). In this event, the student will receive formal notification that he/she will be withdrawn from the program and may owe a balance.

The student will still be responsible for completing payment on any previously taken courses and will be subject to all billing, payment and collections policies.

**Withdraw from Institution**

If the student requested to withdraw from the program, he/she will be formally withdrawn from the Institution within 1-calendar year/365 days of the effective withdrawal date on record. Until this time, the student may still request to be reinstated to the program under certain circumstances. A student should contact Academic Advising for next steps on reinstatement if they choose to return within one year of withdrawing. Students who submit a withdrawal from the institution will need to reapply and should contact an Enrollment Advisor to help guide the admissions process. Prior coursework is not guaranteed to be applied to any programs upon readmission.

If the student is withdrawn from the program for more than one year (three (3) consecutive terms) he/she will be withdrawn from the Institution immediately and may not be reinstated either to the program
or Institution. Students who have been withdrawn from their program for more than one year will need to reapply and should contact their Academic Advisor for next steps.

Withdrawal Appeal Process
In extraordinary circumstances, such as a serious illness or accident, students may request to appeal their withdrawal date by contacting their Academic Advisor (https://www.emailmeform.com/builder/form/u0FnTh276J4GycEdxz7/) for more information on the UOnline Withdrawal Appeal process. The appeal form must be submitted within 30 calendar days from the date of withdrawal from the University or if the appeal is being submitted for a semester that is completed, the form must be submitted within 30 calendar days of the last day of the end of the semester in question. Students must adhere to the specific documentation requirements as stated on the Appeal Form and submit all required documentation, along with the completed form to registrar@miami.edu. A decision will be sent electronically to the email address provided on the Appeal Form within a months time from the date it was received.

Reinstatement to Program
If a student has been withdrawn from the program, he/she may be reinstated to the program if:

• The student was not withdrawn from the program for academic progress or misconduct reasons.
• The student was not withdrawn from the Institution or is not in the process of being withdrawn from the Institution.
• The student has no unpaid tuition balance.
• The student has been withdrawn from the program for less than 1 calendar year (365 calendar days/3 consecutive terms). If the student is withdrawn for more than 1 calendar year, he/she must reapply to the program.

Students may not credit any previously paid tuition to courses they register into once reinstated and should contact their Academic Advisor (https://www.emailmeform.com/builder/form/u0FnTh276J4GycEdxz7/) to discuss the reinstatement process and requirements.

Late Payments, Holds, Collections and Refunds

Late Payment Fees
A payment is considered late if it has not been paid by 1 day after the payment due date. Late fees may be assessed to the student’s account.

University of Miami VA Pending Payment Compliance
In accordance with Title 38 US Code 3679 subsection (e), this school adopts the following additional provisions for any students using U.S. Department of Veterans Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation & Employment (Ch. 31) benefits, while payment to the institution is pending from the VA.

This school will not:
• Prevent the student’s enrollment
• Assess a late penalty fee to the student
• Require the student to secure alternative or additional funding

• Deny the student access to any resources (access to classes, libraries, or other institutional facilities) available to other students who have satisfied their tuition and fee bills to the institution.

However, to qualify for this provision, such students may be required to:
• Produce the VA Certificate of Eligibility (COE) by the first day of class
• Provide a written request to be certified
• Provide additional information needed to properly certify the enrollment as described in other institutional policies

Financial Hold
Students are expected to pay tuition on time. Paying on time ensures timely registration into subsequent courses so that a student can continue to advance toward completing the program. Students must pay for each term in full before they can continue on to the next term.

If a student is 15 or more days past due on 1 or more invoices, he/she will be placed on Student Account/Financial Hold.

If a Student Account/Financial hold is placed, students:

• will be able to complete the current course
• will not be registered into future courses until all outstanding invoices have been paid.
• will not be able to receive transcripts or a diploma

Placement on Student Account Hold
Students will receive a reminder that payment is due as well as overdue. Students will also be notified once a Student Accounts Hold is placed on their account.

Removal From Student Account Hold
Once students have made their overdue payment, the Student Accounts Hold will be removed within 24 hours and students will be registered into the next course in the next available term.

Third Party Collections
The University utilizes third party collections services to collect on unpaid balances.

Refund Schedule
A student who withdraws or is withdrawn from the program may be entitled to a refund according to the rules outlined below.

By or Before Day 7 (Week 1) of Each Course
If a student withdraws from the program by, or before Day 7 (Eastern Standard Time) of a course, he/she will be refunded 100% of tuition paid for that course, excluding the enrollment deposit. If the student withdraws during the refund period and has not yet paid any tuition owed for that course, the Student Accounts Office will cancel the balance for that course.

Day 8-14 (Week 2) of Each Course
If a student withdraws from the program after Day 7, but not later than Day 14, he/she will receive a 50% refund.

Day 15-49 (Week 3-Week 7) of Each Course
If a student withdraws from the program on or after Day 15, he/she will receive no refund and will be obligated to pay for the entire course they are currently enrolled.
The effective withdraw date is:

- If initiated by the student, it is the date the student formally submitted the withdrawal form (https://qafeitation.ngwebsolutions.com/sp/startSSO.ping?PartnerIdpId=https://caneid.miami.edu/idp/shibboleth/#38;TargetResource=https://dynamicformsngwebsolutions.com)
- If initiated by the Administration, it is the date the administration formally entered/processed the withdrawal.

**Overpaid Tuition**

After students have withdrawn, if they paid more than what they owed on a course, they will be refunded the difference between what they paid and the amount due as determined by the refund schedule and effective withdraw date. Overpayment tuition refunds are typically processed on or about 14 days after the start of each ter; however, in certain circumstances this timeframe may be delayed. Students may check their Canelink account to view when refunds have been processed.

**Refund Policy and Schedule - Timeline and Methods**

All refunds will be paid via the payment method paid and within 30 days of the effective withdraw date on record.

**Ethics, Student Rights and Responsibilities**

Students agree to abide by the Graduate Student Honor Code.

The University of Miami expects all graduate students to adhere to the highest standards of ethics and academic integrity. All forms of academic fraud are strictly prohibited. These include, but are not limited to, plagiarism, cheating, collusion, falsification, violation of professional ethics, or misrepresentation of research data. Students certify that all work (whether an examination, dissertation, thesis, research paper, research project, form of creative expression, experimental data, or any other academic undertaking) submitted for evaluation, presentation, or publication meets these standards. Additionally, graduate students are expected to respect and appreciate the diversity of the community and to respect the rights of others, be they property, privacy, opinion, or expression. Students found to be in violation of these standards are subject to disciplinary actions by the student’s program and/or the Graduate School. All graduate students are bound by the rules and regulations of the University of Miami that apply to them. The Graduate Honor Code can be reviewed on the Dean of Students (p. 1042) website.

**Disciplinary and Grievance Procedures for Graduate Students**

Two types of procedures exist:

- Academic and
- Nonacademic.

Procedures for handling disciplinary and grievance matters are handled by the Graduate Student Appeals Committee. Contact the Graduate School for details about the appeals process. The Graduate School expects an appeal to have gone through the program or department and then the School’s Academic Dean prior to its being heard by the Graduate School. The University Ombudsperson may also be consulted. For more information, please refer to the Academic Policies page.

**Honors and Awards**

**Award of Academic Merit**

Students who obtain a 3.8 G.P.A. or better will receive an Award of Academic Merit from the Graduate School. The Award is posted on the transcript.

**Who’s Who Among Students in American Universities and Colleges**

The Graduate School solicits nominations for this award annually. Nominations are provided by Graduate Program Directors at the beginning of the spring term.

- Graduate Student Awards
- Graduate Student Organization Award
- GSA Executive Award
- Senate Award
- Academic Award
- Graduate Student Award

**Requirements for Commencement**

It is the responsibility of the student to apply for graduation through Canelink during the student’s final term prior to the deadline for the next commencement ceremony.

Both the dates for commencement and the deadline to apply for graduation are published in the online academic calendar (http://www.miami.edu/index.php/registrar/calendar/). Students who previously applied for graduation but did not receive the degree must repeat the application procedure. Deadlines for the commencement program are firm. Students will be degree candidates until they have been cleared by the Graduate School.

Participation in the commencement ceremony or the listing of a student’s name in the commencement book in no way implies or ensures graduation. A student’s graduation is contingent upon successful completion of the degree requirements and approval by the academic school or college.

Commencement ceremonies are held in May and December only. Those students completing degree requirements during the fall, spring, or summer sessions may, if they wish, participate in the graduation ceremonies of the previous or following May or December. Students receiving a Ph.D., D.M.A., D.N.P., D.P.T., or Ed.D. degree and plan to participate in the hooding ceremony and all master’s students marching in the graduation ceremony must have the approval of the graduate advisor, director, or appropriate person in the department/school to participate in the ceremonies.
Participation in commencement for students in all graduate programs is contingent upon the following:

1. The student must have met the requirements for the program.
2. The student must have a minimum of 3.00 cumulative grade point average;
3. The student may not have any outstanding debt including, but not limited to, tuition, fines, and fees. Tuition for the last term of study must be paid in full by the beginning of the final term.

Clearance for Degree Conferral
For the Graduate School to clear a student for graduation:

1. All original documents (transcripts from previous degrees entered on their online application, GRE scores, etc.) must be on record in the Graduate School (except for MBA students).
2. The Admission to Candidacy form must have been completed by the program at least one term before graduation. The Graduate School does not require application to candidacy for master's, D.P.T., nor D.N.P. degrees.
3. The student must defend his/her thesis or dissertation (if applicable) no later than two weeks before the last day of class in the term he/she wishes to graduate.
4. The student must submit his/her final, Dissertation Editor-approved thesis or dissertation with all corrections completed and final paperwork turned in to the Graduate School by the last day of exams in the term he/she wishes to graduate for their clearance to be processed in time.

Graduate Student Association
The primary function of the GSA is to promote effective graduate student participation in University affairs. The GSA serves as a liaison between graduate students, faculty, and the administration. In addition, the GSA exists as a forum to support and improve the quality of the graduate student environment at the University of Miami. The University of Miami Graduate Student Association is an active member of the National Association of Graduate-Professional Students. All graduate students at the University of Miami are members of the GSA.

Graduate Council
The mission of the Graduate Council is to promote graduate education, scholarship, and research; to support individuals, departments and programs in the pursuit of excellence; to foster innovative, multidisciplinary, and interdisciplinary activities and to maintain high ethical and academic standards in graduate studies.

Student Resources
Dean of Students Office
The mission of the Dean of Students Office is to foster the personal development of students by providing a range of programs and services that create an optimal learning and living environment. The Graduate Honor Code (https://doso.studentaffairs.miami.edu/_assets/pdf/policies/student_rights_and_responsibilities_handbook.pdf#page=10) and the Student Rights and Responsibilities Handbook (p. 1025) are two methods in which the University encourages ethical behavior in all its students. The Graduate Honor Council is a student organization which investigates violations of the Graduate Honor Code and decides appropriate action. The Dean of Students Office also oversees the University Chaplains Association, which consists of various campus ministries to serve the spiritual needs of students. For more information on these and other services offered by the Dean of Students Office, call 305-284-5353 or visit our website (https://doso.studentaffairs.miami.edu/).

Career Development
The Toppel Career Center assists undergraduate students, graduate students, and alumni in formulating their career plans and in pursuing internship opportunities.

It is the intent and desire of the University of Miami and the Toppel Career Center to provide equal employment opportunities for students and graduates regardless of race, color, national origin, religion, gender, sexual orientation, age or disabilities.

HireACane.com is a management system where students can access internships, jobs, on-campus recruiting information, career programs, and companies/organizations attending Careers Expos and Fairs. Students can only access these additional online resources by activating and logging into their HireACane.com account.

Student Disability
The Academic Resource Center (ARC) provides academic resources and support to ensure that students with documented disabilities are able to access and participate in the opportunities available at the University of Miami.

All students seeking accommodations for a disability must register with the Office of Disability Services. Students should disclose that they are a UOnline student for fastest processing times. Students should register as soon as possible so that the office has sufficient time to receive and review the necessary documentation and coordinate reasonable accommodations. To register, schedule an appointment with the ARC at 305-284-2374 or e-mail us (disabilityservices@miami.edu).

Before a determination is made regarding a request for accommodations, the student must complete the proper forms and submit current, appropriate, and full documentation of the disability as required by ARC.

SPECIAL PROGRAMS

Miami Semester/Year Program

http://www.miami.edu/miamisemester

The Miami Semester/Year – Visiting Student Program provides the opportunity for degree-seeking students attending other colleges to spend one or two semesters living, studying and doing research at the University of Miami. Domestic and international students may enroll in this program, taking advantage of our diverse academic community, renowned faculty, and beautiful South-Florida landscape.

The Miami Semester/Year – Visiting Student Program is limited to degree-seeking undergraduates in good standing attending other universities and colleges. Participating students will be required to take a minimum of twelve credits.

If an academic area of study is not listed below, please contact the Miami Semester Program office to inquire if your program of interest is available.

Course offerings are subject to change depending on availability.

American Studies

American Studies allows students to select three courses from the American Studies (AMS) Program’s course offerings, and additional classes from other departments based on availability and interests. It is an interdisciplinary approach for students to reflect on the interrelated nature of subjects like, but not limited to, Sociology, Geography, History, and Anthropology, and topics that are relevant to today’s society such as cultural diversity, the global economy, regional and geographical norms, and popular culture. The goal of this program is to assist in students’ understanding of the world around them by analyzing events, policies, societal norms and cultures, and historical events. Students may take any combination of courses that equal at least 12 credit hours.

Office of Professional Advancement - Non Credit Courses

www.continue.miami.edu/opa

Dedicated to providing the highest quality, competency-based, continuing professional education, the Office of Professional Advancement offers seminars, courses and certificate programs to meet the training and professional development needs of both corporations and individuals.

For more information, specific curriculum descriptions and a listing of current seminars, courses and workshops, contact the:

Office of Professional Advancement, Division of Continuing and International Education
University of Miami
111 Allen Hall
Coral Gables, Florida 33146-1610
305-284-4000 or email opa@miami.edu.
Business and Leadership Certificate Programs

The Business Program offerings provide a range of certificates focused on enhancing skills and improving organizational performance. The development of core skills in cutting edge disciplines, with application based learning, will prepare Program participants for profit and non-profit sectors across a broad spectrum of disciplines, including Leadership and Management, Business and Communication Skills, Consulting, Human Resources, Nonprofit, and Meeting and Event Planning.

Leadership Development and Management offerings include Executive Leadership, Fundamentals of Leadership, Managing Cross-Functional Teams, Management and Supervision, Organizational Leadership, and Strategies for successful negotiation. These Programs emphasizes the development and enhancement of vital leadership skills for those tasked with leading organizations, or have the desire to enter into one in the near future.

Business offerings include Ethical Business Decision Making, Alternative Methods of Problem Solving, Group Facilitation, Problem Solving and Decision-Making Strategies. These Programs prepare participants for the skilled, ethical decision-making, problem solving, and critical thinking skills necessary to make informed decisions that create and maintain an ethical work environment.

Human Resources offerings include Managing Organizational Change, Fundamentals of Delivering Training, and Conflict Resolution. These programs emphasize the development and enhancement of key skills for those who have the need and desire to learn how to effectively manage change, present effective training, and resolve workplace conflict to increase employee engagement, productivity, and teamwork.

The Nonprofit Programs are designed to develop and cultivate necessary skills that nonprofit managers to effectively manage challenges often associated with the nonprofit sector. Participants who currently hold a management role, or have the desire to move into a management role within a non-profit organization of any type will elevate skills in Nonprofit Operational Management, Nonprofit Fundraising, Grant Writing, and Fundamentals of Philanthropy.

Meeting and Event Planning Program participants are those tasked with or looking to engage in designing and coordinating any type of organizational meeting or event. Program areas include Fundamentals of Meeting Planning and Event Development and Negotiation Skills for Event Planners. Emphasis is placed on gaining an in-depth understanding of skills that will enable participants to help clients and/or internal organizational departments design and coordinate an effective, multifaceted meeting and/or event that will accomplish the client’s or organizational goals and objectives.

Additional Programs include Innovation and Organizational Consulting. The Innovation Program emphasizes key roles of individual entrepreneurs and organizational innovation in private and public services, design thinking as a problem-solving tool, and understanding communication approaches, leadership practices, and the relationship between the marketing and sales functions in the workplace. The Organizational Consulting Program provides the knowledge needed to think critically and solve problems creatively for an organization based on assessment of the client’s needs.

For a full list of business certificate programs offered, please visit our website (https://www.continue.miami.edu/default.aspx).

Certificate in Happiness Studies (CiHS)

The Certificate in Happiness Studies (CiHS) program is the first and only of its kind. This program explores happiness through the lens of different disciplines - including psychology and philosophy, as well as history, theology, biology, economics, literature, art, and so on. CiHS provides the knowledge and the tools to generate happiness on the individual, interpersonal, organizational, and national levels. The Certificate in Happiness Studies program is a 12-month online experience that includes academic lectures and live webinars, as well as ongoing interactions with faculty and other students.

For more detailed course descriptions, current schedule and process, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=205/).

Certified Professional Coach Program

This Coach Certificate Training Program is designed to support you in becoming a professional coach or in using coaching skills to enhance your leadership, management, and/or communication skills. This program has been written by master coaches and aligns with the International Coach Federation (ICF) Core Coaching Competencies. The University of Miami has designed a thorough program that will allow you to make a powerful leap into using coaching skills and becoming a professional coach. The Certified Professional Coach Program is a 140 hour, eleven month program designed for those interested in a career in coaching, who also want outstanding training in order to serve clients at the highest level. Additionally, it is designed for leaders, managers, human resource professionals, teachers, or service professionals (doctors, lawyers, counselors, consultants, etc.) who want to dramatically improve their ability to communicate, motivate, inspire, and empower others.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=80/).

Coding Boot Camp Certificate

University of Miami (UM) Coding Boot Camp is a 24-week, part-time web development course offered on our Coral Gables campus in partnership with Trilogy Education Services. The full-stack curriculum includes HTML5, CSS3, JavaScript, jQuery, Node.js, Java, Database Theory, MongoDB, Heroku, Git, and more.

For more detailed course descriptions, current schedule and prices, please visit our website. (http://www.continue.miami.edu/en/packagedetail.aspx?p=198/)

Cyber Security Certificate

University of Miami Division of Continuing and International Education in collaboration with HackerUSA, offers unique hands-on skill based programs in Cyber security. HackerUSA has over 20 years of experience and is a leading educational provider for cyber security training. They bring a wealth of expertise that allows our cyber security programs to be innovative and high quality. Our students will be exposed to the most advanced technologies used today and will gain real practical experience.
For more detailed course descriptions, current schedule and prices, please visit our website. (http://www.continue.miami.edu/en/subcategory.aspx?sc=108/)

Data Analytics Certificate
University of Miami (UM) Data Analytics Boot Camp, in partnership with Trilogy Education Services, is a 24-week, part-time program offered on our Coral Gables campus that will empower you to gain the knowledge and skills to conduct robust analytics on a host of real-world problems. Throughout the course, you’ll be gaining proficiency on a host of marketable technologies like Advanced Excel, Python, JavaScript, (D3.js, Leaflet.js), HTML/CSS, API Interactions, Social Media Mining, SQL, Tableau, Fundamental Statistics, Machine Learning, R, Git/GitHub and more.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=207/).

Electronic Medical Records Specialist Certificate
Manage electronic medical records and gain the professional knowledge to become an essential member of the healthcare team. Learn through hands-on practice sessions using PrimeSUITE®, electronic medical records software. The Program prepares students to sit for the Certified Electronic Health Records Specialist (CEHRS) examination through the National Health Career Association.

For detailed course description, calendar and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=169/).

Green Professional Building Skills Training (GPRO) Certificate Program
Offered in partnership with the Urban Green Council, an affiliate of the U.S. Green Building Council (USGBC), the GPRO Certificate Program is taught by GPRO-certified University of Miami instructors who are experienced professionals in the construction industry and are well-informed about sustainability issues. The program is customized for the climate and regional needs of South Florida. Participants learn to use building metrics to reduce operating costs, improve occupancy rates and raise tenant satisfaction. This knowledge enables them to implement leading-edge practices that reduce energy, water use, and waste, plus make buildings healthier and safer for occupants. The GPRO Certificate Program is offered in partnership with the UM College of Engineering’s Master of Science in Construction Management Program.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=209/).

Human Resources Management Certificate Program
This certificate provides the latest in proven techniques and strategies to effectively manage organizational challenges. The curriculum covers the following topics: Strategic Management, Legal and Regulatory Issues; Employment, Planning, and Placement; Benefits and Compensations: Development and Administration; Training and Development and Employee and Labor Relations. The HR Program is recognized by the Greater Miami Society for Human Resource Management. The comprehensive curriculum works for the newcomer as well as the seasoned professional and is especially useful to small and medium-size business owners. (6 months)

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=3/).

IT Training Certificates
The University of Miami, Division of Continuing and International Education has partnered with IT Training Solutions to offer database and informational technology non-credit certificate programs. IT Training Solution is an international training provider specializing in comprehensive IT Technical and Certification courses. Together we are empowering students to learn complex material and review concepts in an easy to use online, interactive course. We are continually updating the content in these courses to stay current with the trends and new developments in the industry. Each quarter 3-5 new titles are released.

For more detailed course descriptions, current schedule and prices, please contact us at 305-284-4000.

Instructional Design & Technology
Instructional Design & Technology is an online series of courses designed for education professionals and corporate trainers who are interested in instructional design, alternative instructional delivery systems and designing online courses or modules. It offers professionals the opportunity to bridge the gap between research and practice.

For more detailed course descriptions, current schedule and process, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=206/).

Interior Design Certificate Program
If you have always had an eye for design, and have a knack for taking an ordinary space and making it feel extraordinary, then the University of Miami Certificate in Interior Design is for you. The Certificate in Interior Design Program offers non-credit courses to those who want to enrich their cultural experiences or who are interested in improving their professional or occupational skills. Taught by industry professionals, our Certificate in Interior Design program focuses on the important fundamentals to enter the design field. A hands-on program, students will learn history of interiors, principles and elements of design, Color Theory, freehand and computer drafting, specification and materials, professional practice, and building a portfolio.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=115/).

Medical Billing and Coding Certificate
The Medical Billing & Coding Program begins with a standard block of courses necessary to obtain the foundation knowledge needed for certification in billing and coding. Essential sciences are covered in the medical terminology, anatomy & physiology, diagnostic coding, and disease pathology modules. Once these core medical topics are covered, the Program provides the learner with the knowledge and skills needed to perform diagnostic coding, using the ICD-9 and ICD-10 coding systems, and procedural coding. Students will participate in a module specific focusing on CPC® examination preparation.
Paralegal Concentration Certificates
The Paralegal Concentration Certificates provide both beginning and experienced paralegals with expansive educational and professional opportunities. These Practice Area Concentration certificate programs allow paralegals to augment current skills and focus on virtually any area of the law. Choose to specialize in one of the following areas of concentration: Contract law, Business law, Criminal law and Procedures, Bankruptcy law, Intellectual Property, Immigration law, Wills and Trust, Employment law, Real Estate law, and Litigation. Give yourself an edge in today's competitive job market. All Paralegal Concentration courses are available online so students are able to enroll at any time.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/ packagedetail.aspx?p=119/).

Paralegal Studies Certificate Program
The UM Paralegal Studies program is an intense four-month course of study which certifies the successful student as a qualified professional ready to start an exciting new career as a paralegal. Classes are taught by prominent local attorneys, Judges and Magistrates. The Paralegal Program classes are offered weekday evenings at the Coral Gables campus or as a fully online program.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/ packagedetail.aspx?p=14/).

Patient Advocacy Certificate Program
The Patient Advocacy Certificate Program is an eight-module, fully online course that prepares students to confidently take and pass the Board Certified Patient Advocate (BCPA) certification examination. Patient Advocates help patients and their families understand diagnoses, prognoses and outcomes as well as available treatment options. The Patient Advocacy Certificate Program focuses on skill development while ensuring that students are fully informed about the scope of practice of the patient advocate.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/ packagedetail.aspx?p=204/).

Personal Financial Planning Certificate Program
Designed for students preparing for professional examinations and professional practice in personal financial planning.

Our program consists of providing the highest quality CFP education through Dalton Education, a leading provider of innovative education solutions in financial planning. The founders of Dalton Education have helped thousands of financial professionals earn the CFP® certification marks with their leading CFP review course, THE DALTON REVIEW®. Students can choose from an independent, self-paced, online education program or a live, instructor – led, internet delivered program.

For detailed course description, current schedule and prices, please visit our website (http://www.continue.miami.edu/en/packagedetail.aspx?p=182/)

Post Baccalaureate Certificate in Computer Sciences
The Post Baccalaureate Certificate in Computer Science (PBC) is a non-credit program designed for people with a Bachelor of Science degree in another discipline, who wish to learn the core skills of Computer Science. Completion of the PBC will provide opportunities to apply computational techniques in other areas, to change career paths towards computing, or to continue on to graduate student in Computer Science.

The PBC includes courses in programming, computer architecture and systems, some mathematics, and an elective chosen from the many courses available in the Department of Computer Science. By completing this one-year non-credit program, students will obtain the knowledge and skills at the heart of Computer Science, opening the doors to new and exciting opportunities. Students will be able to:

• Write efficient computer programs using appropriate data structures.
• Use their understanding of computer organization and architecture to select and utilize computer systems effectively.
• Use UNIX-based computer systems, and write programs that make use of the UNIX operating system.
• Characterize the underlying theory of computational systems.
• Discuss and write about a range of topics in Computer Science (as presented in seminars).
• Use basic mathematics in the development of computer software.

Pre-requisites for the PBC program are a Bachelors Degree, Calculus I, and Computer Programming I (or equivalent). Credit can be given for prior study. At least 15 credits of PBC courses must be completed at the University of Miami.

For more detailed course descriptions, current schedule and prices, please visit our website (http://www.continue.miami.edu/en/ packagedetail.aspx?p=196/).

Project Management Professional Certificate (PMP®)
This program satisfies the educational requirement needed to qualify to take the Project Management Professional (PMP®) exam. Learn the core competencies of project management, following the Project Management institute's A Guide to the Project Management Body of Knowledge, (PMBOK®- Guide). Become proficient in the knowledge areas, process groups, skills and techniques delineated in the PMBOK® Guide to execute projects effectively and efficiently through all stages.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/ packagedetail.aspx?p=150/).

SHRM® Certification Course (SHRM-CP™/ SHRM-SCP™)
Establish yourself as a globally-recognized human resource expert by earning the new standard in HR Certification: SHRM Certified Professional (SHRM·CPT®) and SHRM Senior Certified Professional (SHRM·SCP®). Designed for SHRM credential candidates, this course will expand and test your knowledge of practical, real-life competencies in
For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=161/).

Social Media Management Education Program
University of Miami is proud to offer a Social Media Professional Certificate and Social Media Strategist Certificate through Dalton Education. This is a cutting edge program, designed to teach the business applications of social media communications. This self-paced online program is convenient, practical, and affordable with the flexibility to begin at a time that works best for you.

For more detailed course descriptions, current schedule and prices, please visit our website (http://continue.miami.edu/en/packagedetail.aspx?p=141/).

Study Abroad
www.studyabroad.miami.edu

Dept. Code: SAP
Opportunities for study abroad are available for some degree programs during the summer, fall, spring and intersession terms. Students may participate in programs led by faculty members or may participate in semester program options. In some programs it is possible to earn graduate credit hours for study taken abroad. The curriculum must be worked out by the student in conjunction with an advisor.

With over 80 unique opportunities overseas, students have many options to study abroad on UM programs that align with their interests. Students can live and learn abroad through short term and long term programs with UM faculty or at UM partner universities overseas. Programs with UM faculty are unique in their emphasis on experiential learning, pre-arranged group housing, excursions, and courses taught by UM professors and overseas academic experts. Examples of these programs include UM semester-on-locations in Prague, Shanghai, Paris, Buenos Aires, Cape Town, India, the Galapagos, and Rome, as well as short term faculty-led programs during the summer, January intersession, and spring break in Europe, Asia, Africa, and South America.

Students can also receive UM credit hours and grades while studying at any one of UM’s partner universities overseas. These programs can be undertaken for a semester, year, and/or during the summer. Among a multitude of other options, students can study Aboriginal studies at University of Sydney, be immersed in Spanish culture in Seville, explore Iceland’s unspoiled nature while studying earth sciences at the University of Iceland, immerse themselves in Japanese culture and business practices at Sophia University in Tokyo, or become acquainted with the changing panorama of international relations at University of San Andres in Argentina. Many of these programs are delivered in English so foreign language proficiency is not required for most study abroad opportunities.

Students who participate in UM Study Abroad programs will receive UM grades and credits and are able to use their existing financial aid towards semester program costs. With careful planning and academic department approval, students can apply their courses abroad to their majors, minors, cognates, or elective credits. Programs are open to sophomores, juniors, and seniors who meet posted eligibility requirements for admission such as minimum cumulative GPA.

The Schools and Colleges at UM encourage study abroad options for their students. With the assistance of the Study Abroad Office and the guidance of academic advisors, students can select a study abroad program to fit almost any major. Additionally, UM financial aid will apply to the costs of the UM programs. Students are advised to plan as early as freshman year so studying abroad can be incorporated into their academic plan.

The cost of studying abroad varies depending on the type, length, and location of the program. Students are often surprised at how affordable studying abroad can be. Students participating in a UM study abroad program will be able to use their financial aid abroad. Participants are charged full tuition for the term abroad and the financial aid package will be adjusted based on the estimated expenses of the program.

As studying abroad is seen as such an important aspect of a college career, many national and institutional scholarships are available. Interested students should begin to research scholarship opportunities early. The most prestigious study abroad scholarships, which grant up to $10,000 per semester, have applications with deadlines up to 18 months before the study abroad program begins. Several other scholarships, with deadlines similar to program application deadlines, are also available and grant up to $5,000. Learn more about finances and scholarships by visiting the Study Abroad website, speaking with the advisors in the Study Abroad Office and the Office of Financial Assistance Services.

Students enrolled in any study abroad program at a partner institution may not earn 25 percent or more of their credits toward any UM degree program (credit requirements may vary by major/level), including courses taught by UM faculty. A student who anticipates earning 25 percent or more of his/her degree credits while participating in a study abroad program must immediately inform his/her advisor or program chair, who will be responsible for notifying the appropriate parties so that advance approval can be obtained from the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC).

For additional information, contact:
Office of Study Abroad
Dooly Memorial Classroom Building, Suite 125
Coral Gables, FL 33146
Tel: 305-284-3434
Email: studyabroad@miami.edu

Summer Scholars Program
http://www.miami.edu/ssp

The Summer Scholars Program (SSP) provides a unique opportunity for high school students to study at the University of Miami for three weeks during the Summer Session B and earn 6 credit hours. Students will either live on campus or participate as a commuter. SSP is designed to expose high school students to university academics and campus life before commencing undergraduate studies. Interested high school students should seek further information and application requirements (http://www.miami.edu/gs/).

### Summer Sessions

The Summer Sessions program at the University of Miami is an exceptional opportunity for students to enhance their educational goals in a concentrated time period and for the South Florida community to take part in some of the innovative and unusual courses taught by outstanding faculty and well-known guest lecturers.
InterSession - Special Academic Programs

- January (First) and Spring Break (Second) InterSessions [link](http://www.miami.edu/intersession/)
- Summer A (First) and Summer B (Second) InterSessions [link](https://www.dcie.miami.edu/credit-degree-programs/summer-credit-sessions/summer-intersession-classes/)

January, Spring Break, Summer A (May), and Summer B (June) InterSessions are short term credit hour courses designed so you can concentrate fully on topics not normally offered during regular semesters; getting individual quality time with distinguished faculty members; and sharing knowledge with other students.

Tuition charges for January and Spring Break InterSession are separate from and in addition to your spring tuition charges (ARE NOT included in the full time 12-20 credit hours ‘Flat Rate’ of Spring Semester).

Due to the intense format of the InterSession courses, there are special drop and refund policies.

Grades:

Official grades for January (First) InterSession and Spring Break (Second) InterSession courses will be provided with the spring semester grades in May. Official grades for Summer InterSession classes will be provided at the end of the summer session in which they are offered.
ACC 211. Principles of Financial Accounting. 3 Credit Hours.
Course explores the role of accounting in providing financial information about an enterprise to decision-makers. Emphasis is placed on understanding financial accounting from a user perspective. Course covers the reporting of financial position including coverage of assets, liabilities, equity accounts, the results of operations, and cash flows. Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 212. Managerial Accounting. 3 Credit Hours.
Introduction to managerial accounting. Topics include various product costing techniques, analysis of cost behavior patterns, budgeting, and the use of accounting information to solve problems. The course is taught from a managerial perspective.
Prerequisite: ACC 211 or ACC 221 or ACC 223.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 221. Accelerated Principles of Financial Accounting. 3 Credit Hours.
This course explores the role of accounting in providing financial information about an enterprise to decision-makers. Emphasis is placed on understanding financial accounting from a user perspective. Course covers the reporting of financial position including coverage of assets, liabilities, equity accounts, the results of operations, and cash flows. This course is not open to students with credit for ACC 211.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 222. Accelerated Managerial Accounting. 3 Credit Hours.
This course provides an introduction to managerial/cost accounting. Topics include various product costing techniques, analysis of cost behavior patterns, budgeting, and the use of accounting information to solve problems. The course is taught from a managerial perspective. This course is not open to students with credit in ACC 212.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 223. Principles of Financial and Managerial Accounting. 4 Credit Hours.
This course provides an introduction to financial and managerial accounting. Since this course focuses on accounting's role in providing information for management decisions, it also includes techniques for planning and controlling business operations to achieve company goals. Topics include the accounting cycle, financial statements, and financial ratios. From a managerial perspective, topics include job?order, process costing, activity?based costing, cost behavior, cost volume profit analysis, budgets, variances, and capital budgeting.
Prerequisite: MTH 161.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 301. Cost Accounting. 3 Credit Hours.
Topics include basic cost concepts, product costing techniques including job-order and process costing, in-depth studies of techniques and issues surrounding cost allocation methods, basic approaches to solving complex accounting problems, standard cost systems and variance analysis, and variable costing. Additionally, activity-based costing concepts and methodology are introduced. Course is designed to provide students with the necessary skills to perform basic cost accounting.
Prerequisite: ACC 212 or ACC 222 or ACC 223.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ACC 311. Intermediate Accounting I. 3 Credit Hours.
The accounting principles which shape the financial reporting practices followed by entities that prepare financial statements in accordance with generally accepted accounting principles are discussed. Course also includes the determination of income components and balance sheet elements with brief coverage of the statement of cash flows.
Prerequisite: ACC 212 Or ACC 223 or Pre/Corequisite: ACC 222.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

ACC 312. Intermediate Accounting II. 3 Credit Hours.
A continuation of ACC 311. Course focuses on more complex accounting applications such as leases, postretirement benefits, accounting for income taxes, and other topics. Additionally, the course includes coverage of the statement of cash flows.
Prerequisite: ACC 311.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 315. Accounting for Health Care Organizations. 3 Credit Hours.
This course develops a working knowledge of the financial accounting and reporting processes in health care, services industry, and governmental organizations. Focus is on accounting in health care, service industry and for-profit organizations. This will not count as an accounting course for accounting majors and will not satisfy any accounting requirements needed to sit for the CPA exam in Florida.
Prerequisite: ACC 212 or ACC 222 and Requisite: HSMP major.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ACC 402. Auditing. 3 Credit Hours.
Course provides an introduction to the field of auditing. It concentrates on conducting an audit of financial statements in accordance with generally accepted auditing standards. Course covers accounting information systems, audit planning, audit risk and materiality assessments, evaluation of internal control, audit evidence, documentation, and audit reports.
Prerequisite: ACC 311.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ACC 403. Fundamentals of Taxation. 3 Credit Hours.
Basic concepts of federal income taxation applicable to all taxpayers. The principles of individual income taxation, the tax consequences of property transactions, and an introduction to the impact of income taxes on corporations and partnerships are discussed. Emphasis is placed on study of the basic income tax formula including income exclusion, inclusions, statutory deductions, exemptions, and credits. The fundamentals of tax research are also introduced.
Prerequisite or Corequisite: ACC 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 404. Advanced Taxation. 3 Credit Hours.
Study of Federal income tax laws and regulations as they affect corporations, partnerships, their owners, and employees. Emphasis is placed on tax planning aspects of formation, operation, reorganization, distribution, and liquidation of corporations and partnerships. Also includes an introduction to estate and gift taxation.
Prerequisite: ACC 403.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 406. Accounting Systems. 3 Credit Hours.
Contemporary accounting systems are computer based. Course covers the nature, design, implementation, and controls in computerized systems as well as manual systems. Micro computers are used as a learning tool.
Prerequisite: ACC 311.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 411. Advanced Accounting. 3 Credit Hours.
The primary focus of the course is on business combinations and preparing consolidated financial statements. Additionally, there is coverage of the accounting principles and practices applied to foreign operations and partnerships.
Prerequisite or Corequisite: ACC 312 AND Requisite: Junior Standing or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 496. Directed Studies in Accounting. 1-3 Credit Hours.
Supervised readings, individual research project, or independent investigation of selected non-STEM related problems in the discipline. Offered only by special arrangement with supervising faculty member who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 497. Directed Studies in Accounting. 1-3 Credit Hours.
Supervised readings, individual research project or independent investigation of selected STEM-related problems in the discipline. Offered only by special arrangement with supervising faculty member who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 498. Special Topics in Accounting. 3 Credit Hours.
Special topics in selected non-STEM areas of Accounting. Requisite: Business School And Junior Or Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 499. Special Topics in Accounting. 3 Credit Hours.
Special topics in selected STEM areas of Accounting. Requisite: Business School And Junior Or Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 506. Internal Auditing. 2 Credit Hours.
Course explores the unique issues associated with the internal audit function. Additionally, the ethical code applicable to internal auditors is discussed.
Prerequisite: ACC 402. And Requisite: Accepted into the Accelerated Program.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 522. Advanced Issues in Auditing. 3 Credit Hours.
Course covers advanced issues which arise in audit practice including audit reporting issues, fraud detection and reporting, attestation engagements, special reporting issues, compilation and review engagements, scope of services issues, and other new issues which have a significant impact on audit practice.
Prerequisite: ACC 402. And Requisite: Accepted into the Accelerated Program.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 524. Accounting for Governmental and Not-for-Profit Entities. 2 Credit Hours.
The course introduces accounting within the environment of modern government and not-for-profit organizations. Emphasis is placed on financial accounting and reporting, current accounting issues, and managerial activities.
Prerequisite: ACC 312 and Requisite: Accepted into the Accounting Accelerated Program.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 530. International Financial Reporting Standards. 1 Credit Hour.
This course provides an overview of International Financial Reporting Standards (IFRS). The course will begin with a study of IFRS Framework and will then examine a number of the major topics covered in the Intermediate Accounting courses. The perspective will be a comparison between IFRS and U.S. generally accepted accounting principles (U.S. GAAP).
Prerequisite: ACC 312 and Requisite: Accepted into the Accounting Accelerated Program.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ACC 550. Accounting Internship. 1-3 Credit Hours.
Student is individually assigned to operating business firm or other organization to gain insight into management practice in area of career interest. Periodic reports and conferences are required. Approval of chairman is required at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 555. Accounting Departmental Honors Research Project. 3 Credit Hours.
Research project to fulfill requirements for Departmental Honors Accounting.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

ACC 572. Advanced Financial Analysis. 2 Credit Hours.
This course builds on the analytical techniques developed in the prerequisite financial accounting courses to augment your understanding of more complex financial reporting issues and to introduce you to the valuation of equity investments. The view point is that of the user of financial statements, particularly from the standpoint of an equity investor or purchaser of a business. We discuss each financial reporting issue in terms of its effect on assessments of a firm's profitability and risk. This course is designed primarily for students who expect to be intensive users of financial statements as part of their professional responsibilities.
Prerequisite: ACC 312. And Requisite: Accepted into the Accounting Accelerated Program.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 600. Accounting for Decision-Making and Control. 3 Credit Hours.
The course focuses on the use and understanding of basic financial and managerial accounting reports. The course is oriented to the user of financial data rather than the preparer of the data. Coverage of basic accounting assumptions and current issues affecting accounting processes and reporting are included, but detailed accounting procedures are not emphasized. Completion of the course should permit students to understand accounting information and to communicate with professional accountants. Does not satisfy any accounting requirements needed to sit for the CPA exam in Florida.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 602. Analysis of Financial Statements. 1-3 Credit Hours.
Course emphasizes the fundamental techniques of financial statement analysis. Building upon core accounting and investment concepts, the course covers the analysis (including ratio analysis) and interpretation of financial accounting information including the balance sheet, income statement, and statement of cash flows. The course also examines the use of accounting information in investment and credit decisions.
Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 604. Seminar in Cost Accounting. 2 Credit Hours.
Course covers four major segments. First, it reviews the basic concepts and tools associated with management control systems. Second, it underscores the importance of decentralization and the impact it has on decision making. Third, it examines the strategic place for cost management. Examples include the adoption of the balanced scorecard, quality control, productivity, and environmental cost management. Fourth, the course brings costing and control tools into the discussion of decision making.
Prerequisite: ACC 301. Or ACC 634.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 606. Internal Auditing. 2 Credit Hours.
Course explores the unique issues associated with the internal audit function. Additionally, the ethical code applicable to internal auditors is discussed.
Prerequisite: ACC 312. Or ACC 633. And ACC 402. Or ACC 635.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 607. Financial Accounting and Reporting. 3 Credit Hours.
Basic concepts of accounting designed to increase understanding of the function of accounting statements and their limitations. The generally accepted principles governing the preparation of financial reports and the use of accounting information in investment and credit decisions. Does not satisfy any accounting requirement needed to sit for the CPA Exam in Florida. Limited to Executive MBA students only.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ACC 608. Managerial Accounting. 3 Credit Hours.
Current managerial accounting techniques and theories. Topics include the use of accounting data in making decisions and planning and control systems for implementation of decisions. Does not satisfy any accounting requirements needed to sit for the CPA Exam in Florida. Limited to Executive MBA students only.
Prerequisite: ACC 607.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ACC 610. Financial Reporting Research. 2 Credit Hours.
The objective of the course is to familiarize students with researching financial information of publicly traded companies and to provide an introduction to accounting research related to the content and presentation in SEC filings. The course will emphasize searching and accessing as well as understanding and interpretation of financial information presented in SEC filings (e.g., 10-K, 10-Q, Proxy Statements). Accounting topics covered will include accounting information and the capital markets, earnings management, earnings quality, effect of recognition vs. disclosure in accounting reports and the role of the SEC in regulating financial reporting.
Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 611. Auditing Seminar. 2 Credit Hours.
Practical applications of auditing and research into audit matters. Emphasis of the course is placed on cases involving audit failures, appropriate auditing procedures, reporting, and exercise of audit judgment.
Prerequisite: ACC 402. Or ACC 635.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 616. CPA Review I. 3 Credit Hours.
The CPA Review is an essential ingredient of the accounting accelerated accounting track. Students must provide proof of satisfactory completion of an approved course of study for two parts of the CPA exam (Regulation and Financial Accounting and Reporting). This course cannot be used to meet the State of Florida's educational requirements for taking the CPA exam.
Prerequisite: ACC 411.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 617. CPA Review II. 3 Credit Hours.
The CPA Review is an essential ingredient of the accounting accelerated accounting track. Students must provide proof of satisfactory completion of an approved course of study for two parts of the CPA Exam (Business Environment and Concepts, and Auditing and Attestation). This course cannot be used to meet the State of Florida's educational requirements for taking the CPA exam.
Prerequisite: ACC 411.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 620. Accounting Controls in Information Technology. 2 Credit Hours.
Course develops students' understanding of the theory and practice of relational database management systems in the accounting view of enterprise-wide databases. With a focus on controls, students build accounting systems elements related to main accounting transaction cycles, the revenue cycle, and the purchase cycle.
Prerequisite: ACC 406. Or ACC 636.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

ACC 622. Advanced Issues in Auditing. 3 Credit Hours.
Course covers advanced issues which arise in audit practice including audit reporting issues, fraud detection and reporting, attestation engagements, special reporting issues, compilation and review engagements, scope of services issues, and other new issues which have a significant impact in audit practice. Not open to students with credit in ACC 522.
Prerequisite: ACC 402. Or ACC 635.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 623. International Accounting and Taxation. 2 Credit Hours.
Course covers tax accounting and business considerations in the global business environment. U.S. tax issues involved in international transactions, working across national borders, the Foreign Corrupt Practices Act, money laundering and uses of accounting information in managing an international business. Not open to students with credit for ACC 523.
Prerequisite: ACC 211. Or ACC 600. Or ACC 607. Or ACC 670.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 624. Accounting for Governmental and Not-for-Profit Entities. 2 Credit Hours.
The course introduces accounting within the environment of modern government and not-for-profit organizations. Emphasis is placed on financial accounting and reporting, current accounting issues, and managerial activities. Not open to students with credit for ACC 524.
Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 626. Litigation and Advisory Services. 2 Credit Hours.
This course provides an overview of fraud perpetrated against an organization, including employee theft, vendor fraud, customer fraud, and management fraud. Students will learn about different investigative techniques for quantifying fraud, and how fraud can be detected and prevented as well as the accountants' role in litigation, such as acting as expert witness.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 627. Accounting Regulations and Compliance. 2 Credit Hours.
This course is designed to expose and educate students in a number of rules and regulations faced by the accounting profession, with an emphasis on the financial industry. This course will cover in moderate depth, regulatory agencies and the compliance of the regulations the agencies are charged with upholding. Students will also be exposed to regulatory and compliance programs, bribery and corruption acts such as the Foreign Corrupt Practices Act and the UK Bribery Act, and various anti-money laundering provisions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ACC 628. Introduction to Accounting Analytics. 2 Credit Hours.
This course introduces students to applications of data analytics techniques in accounting which includes: financial reporting, managerial accounting, taxation, and auditing.
Prerequisite: ACC 301. And ACC 402. And ACC 403.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 630. International Financial Reporting Standards. 1 Credit Hour.
This course provides an overview of International Financial Reporting Standards (IFRS). The course will begin with a study of IFRS Framework and will then examine a number of the major topics covered in the Intermediate Accounting courses. The perspective will be a comparison between IFRS and U.S. generally accepted accounting principles (U.S. GAAP).
Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 631. Advanced Financial Accounting Topics. 2 Credit Hours.
Coverage of the Generally Accepted Accounting Principles governing business combinations, the preparation of consolidated financial statement including local and foreign subsidiaries, and other financial reporting topics.
Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 632. Intermediate Accounting I. 2 Credit Hours.
The accounting principles which shape the financial reporting practices followed by entities that prepare financial statements in accordance with generally accepted accounting principles are discussed. Course also includes the determination of income components and balance sheet elements with brief coverage of the statement of cash flows. Does not count towards the credits needed to graduate.
Prerequisite: ACC 211. And ACC 212.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 633. Intermediate Accounting II. 2 Credit Hours.
The accounting principles which shape the financial reporting practices followed by entities that prepare financial statements in accordance with generally accepted accounting principles are discussed. Course also includes the determination of income components and balance sheet elements with brief coverage of the statement of cash flows. Does not count towards the credits needed to graduate.
Prerequisite: ACC 311. Or ACC 632.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 634. Cost Accounting. 2 Credit Hours.
Topics include basic cost concepts, product costing techniques including job-order and process costing, in-depth studies of techniques and issues surrounding cost allocation methods, basic approaches to solving complex accounting problems, standard cost systems and variance analysis, and variable costing. Additionally, activity-based costing concepts and methodology are introduced. This course does not count towards the credits needed to graduate.
Prerequisite: ACC 212.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 635. Auditing. 2 Credit Hours.
Course provides an introduction to the field of auditing. It concentrates on conducting an audit of financial statements in accordance with generally accepted auditing standards. Course covers accounting information systems, audit planning, audit risk and materiality assessments, evaluation of internal control, audit evidence, documentation, and audit reports. This course does not count towards the credits needed to graduate.
Prerequisite: ACC 311. Or ACC 632. And ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 636. Accounting Systems. 2 Credit Hours.
Contemporary accounting systems are computer based. Course covers the nature, design, implementation, and controls in computerized systems as well as manual systems. Micro computers are used as a learning tool. This course does not count towards the credits needed to graduate.
Prerequisite: ACC 211. And ACC 212.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 639. Income Taxation and Business Entities. 2 Credit Hours.
This course is designed to be the second tax course students who are interested in the business applications of federal income tax laws, as they affect corporations, partnerships, and their owners. Emphasis is placed on tax planning aspects of formation, operation, liquidation, and distributions of corporations and partnerships. Not open to students with credit in ACC 404 or equivalent.
Prerequisite: ACC 403. Or ACC 673.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ACC 640. Corporate Taxation I. 2 Credit Hours.
Course covers treatment of the corporate form of organization, its related opportunities, and problem areas, including formation, tax formula, non-liquidating and liquidating distributions, capital structure, redemptions, alternative minimum tax.
Prerequisite: ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ACC 641. Corporate Taxation II. 2 Credit Hours.
An in-depth study of taxable and nontaxable corporate reorganizations. An introduction to affiliated corporations, requirements for consolidated returns, and their associated problems and opportunities are discussed. Prerequisite: ACC 640.
Components: LEC. 
Grading: GRD.
Typically Offered: Fall.

ACC 642. Seminar in Taxation. 2 Credit Hours.
Investigation of current topical areas in taxation. Prerequisite: ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 643. Tax Research. 2 Credit Hours.
Study of the tax practice environment including the Treasury Department, the Courts, and the legislative history of the Internal Revenue Code. Ethics in tax practice are also examined. Course includes training in the use of tax services such as RIA Checkpoint and LEXIS, in performing tax research. A research methodology for solving tax problem cases is studied and cases to be researched are assigned. Prerequisite: ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 645. Partnership Taxation. 2 Credit Hours.
Taxation of partners and other flow-through entities. Partnership formation, termination, distribution, liquidation, and sales of partnership interests are covered. Limited partnerships in conjunction with their use as tax shelters are discussed as well as family partnerships, limited liability companies, and LLPs. Prerequisite: ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 647. Estates and Gift Taxes. 2 Credit Hours.
Estate and gift planning for shifting wealth from one individual to another by death, gift, or by the use of trusts. Property included in the decedent's gross estate valuation methods, gifts in contemplation of death, jointly held property, life insurance, transfers with retained life estates, bequests, revocable transfers, the marital deduction, powers of appointment, gifts of present and future interest, and gifts to minors are covered. Prerequisite: ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 648. Financial Reporting Implications of Income Taxes. 2 Credit Hours.
This course is designed to provide the foundation necessary to understand the financial accounting and reporting of book-tax differences. The course will cover the preparation of the income tax provision and related financial statement disclosures in conformity with U.S. GAAP (FASB ASC 740) Prerequisite: ACC 312. Or ACC 633. And ACC 404. Or ACC 639.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 649. Issues in Tax Policy. 2 Credit Hours.
This course looks at the process through which our tax laws are created and the important policy issues inherent in individual and corporate income taxes, consumption taxes, and wealth transfer taxes. Topics in this course are not limited to U.S. taxation and include an examination of systems used in other countries (such as the VAT) as possible alternatives to our current tax. Prerequisite: ACC 403. Or ACC 673.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 650. Accounting Internship. 1-3 Credit Hours.
Student is individually assigned to operating business firm or other organization to gain insight into management practice in area of career interest. Periodic reports and conferences required. Prerequisite: ACC 312. Or ACC 633.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 660. Managerial Accounting in Healthcare Organizational. 3 Credit Hours.
This course covers Managerial Accounting concepts applied to healthcare organizations. Topics include cost allocation and management control systems. Prerequisite: ACC 212. Or ACC 608. Or ACC 671.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 662. Taxation of Multinational Corporations. 2 Credit Hours.
This course introduces the fundamental tax concepts underlying U.S. taxation of international transactions. Topics include the taxation of U.S. corporations with income from foreign sources, intercompany pricing, anti-tax avoidance provisions, and tax treaties. Prerequisite: ACC 640.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 664. Global Mergers and Acquisitions: Accounting and Related Issues. 2 Credit Hours.
This course focuses on the financial, cultural, and strategic aspects of international mergers and acquisitions (M&A) activity and has a global, cross-cultural perspective. It presents a strategic view of the M&A process, examining managerial decision making in the planning, execution, and post-merger phases. Prerequisite: ACC 312. Or ACC 633.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 665. Health Care Financial and Managerial Accounting. 2-3 Credit Hours.
This course covers managerial and financial accounting concepts applied to health care organizations. Topics include cost allocation and management control systems. Prerequisite: ACC 403. Or ACC 673.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ACC 666. Accounting for Sustainability. 2 Credit Hours.
Most large firms now report metrics of progress towards the firm’s goals with respect to environmental, social, and governance (ESG) aspects of sustainability, often integrating sustainability reporting with financial reporting. The course examines the value of sustainability reporting in terms of indicating efficiency, risk, and brand capital. The course analyzes emerging metrics for sustainability and emerging reporting systems. The course also examines SEC and other regulations for reporting sustainability, and how such reporting is viewed by stakeholders.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 670. Financial Reporting and Analysis. 2 Credit Hours.
The course focuses on the analysis and use of financial accounting information in the evaluation of corporate performance. The course initially demonstrates the accounting process and resulting generation of financial statements. Building on these core accounting concepts, the course emphasizes the understanding of financial statements prepared under U.S. and International Accounting Standards and the analysis of these financial statements including common size analysis, ratio analysis, the impact of taxes, and credit analysis. Completion of the course enhances the student’s ability to read, interpret, and analyze financial statements for making investment, credit, acquisition, and other evaluation decisions. Limited to MBA students and Executive MBA students. Does not satisfy any accounting requirements needed to sit for the CPA Exam in Florida.

Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 671. Accounting for Decision Making. 2 Credit Hours.
The course focuses on the use of accounting information in reporting managerial performance and making business decisions. The course covers the preparation and use of managerial accounting information for use in planning, budgeting, control, break-even analysis and pricing, including the impact of taxes. Completion of the course will enhance the student’s ability to understand managerial accounting reports and use this information in making business decisions. Limited to MBA students and Executive MBA students. Does not satisfy any accounting requirement needed to sit for the CPA Exam in Florida.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 672. Advanced Financial Analysis. 2 Credit Hours.
Advanced Financial Analysis and Valuation builds on the analytical techniques developed in the basic financial statement analysis course, Accounting 670: Financial Reporting and Analysis, to augment your understanding of more complex financial reporting issues and to introduce you to the valuation of equity investments. The viewpoint is that of the user of financial statements, particularly from the standpoint of an equity investor or purchaser of a business. We discuss each financial reporting issue in terms of its effect on assessments of a firm’s profitability and risk. This course is designed primarily for students who expect to be intensive users of financial statements as part of their professional responsibilities.

Prerequisite: ACC 211. Or ACC 607. Or ACC 670.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ACC 673. Taxation for Business and Investment Decisions. 2 Credit Hours.
This course is designed to be the first tax course for students who are interested in acquiring the basic knowledge that all executives and investors should have about our federal income tax system. It studies basic concepts of federal income taxation applicable to all taxpayers. The basic income tax formula is studied including income exclusions, inclusions, statutory deductions, exemptions, and credits as well as property transactions. Completion of this course will enhance the students’ appreciation of the role of taxation in making investment, employment-related, and business decisions. Not open to students with credit in ACC 403 or equivalent.

Prerequisite: ACC 312. Or ACC 633.

Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ACC 675. Compensation, Incentives and Strategic Control. 2 Credit Hours.
Internal control is the process by which owners influence manager’s of organization to implement the organization’s strategies. They key idea is that different organizations typically have different strategies which in turn require different control systems for effective implementation. Internal control involves both formal systems and informal processes. Accounting 675 will begin by describing the formal aspects of management control such as the design of responsibility centers, budgets and standards, performance reports and management compensation. We will then explore the economic and financial reporting consequences (perhaps unintended) of various performance measurement mechanisms. In particular, we will focus on issues of short-termism, earnings, management, and attendant control failures that plague Corporate America today. Finally, we will discuss some of the regulatory changes brought about in recent times (e.g., Sarbanes Oxley) to address the apparent widespread control system failures.

Prerequisite: ACC 301. Or ACC 634.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 677. Forensic Accounting. 2 Credit Hours.
This course provides an overview of fraud perpetrated against an organization, including employee theft, vendor fraud, customer fraud, and management fraud. You will learn how to investigate and quantify fraud, and how it can be detected and prevented as well as the accountants’ role in litigation, such as acting as expert witness.

Prerequisite: ACC 312. Or ACC 633. And ACC 402. Or ACC 635.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ACC 681. Introduction to Financial and Managerial Accounting. 4 Credit Hours.
The first half of the course explores the role of accounting in providing financial information about an enterprise to decision-makers. Emphasis is placed on understanding financial accounting from both a preparer as well as user perspective. Course covers the reporting of financial position including coverage of assets, liabilities, equity accounts, the results of operations, and cash flows. Topics covered in the second half include various product costing techniques, analysis of cost behavior patterns, budgeting, and the use of accounting information in decision making from a managerial perspective.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 682. Intermediate Accounting. 4 Credit Hours.
The accounting principles guiding the financial reporting practices of entities that prepare financial statements in accordance with generally accepted accounting principles are discussed. The course begins with a detailed discussion of the components of the income statement as well as the balance sheet followed by more complex accounting applications such as leases, post retirement benefits, accounting for income taxes, and other topics. Additionally, the course includes coverage of the statement of cash flows.
Prerequisite: ACC 681.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 683. Taxation. 4 Credit Hours.
The course begins with a discussion of basic concepts of federal income taxation applicable to all taxpayers. The principles of individual income taxation, the tax consequences of property transactions, and an introduction to the impact of income taxes on corporations and partnerships are discussed. Emphasis is placed on study of the basic income tax formula including income exclusions, inclusions, statutory deductions, exemptions, and credits. This is followed by a study of Federal income tax laws and regulations as they affect corporations, partnerships, their owners, and employees. Emphasis is placed on tax planning aspects of formation, operation, distribution, and liquidation of corporations and partnerships.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 684. Accounting Information Systems. 4 Credit Hours.
Course covers the nature, design, and implementation of accounting information systems. The objective of the course is to develop students' understanding of the theory and practice of relational database management systems in the accounting view of enterprise-wide databases. With a focus on controls, students build accounting system elements related to main accounting transaction cycles, the revenue cycle, and the purchase cycle.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 685. Financial Statement Analysis and Valuation. 4 Credit Hours.
This course emphasizes the fundamental techniques of financial statement analysis. Building upon core accounting and investment concepts, the course covers the analysis and interpretation of financial accounting information including the balance sheet, income statement, and statement of cash flows. The course also examines the use of accounting information in investment and credit decisions including the valuation of equity investments. The viewpoint is that of the user of financial statements, particularly from the standpoint of an equity investor or purchaser of a business.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.

ACC 686. Auditing. 4 Credit Hours.
Course focuses on conducting an audit of financial statements in accordance with generally accepted auditing standards. Course covers accounting information systems, audit planning, audit risk and materiality assessments, evaluation of internal control, audit evidence, documentation, and audit reports. This is followed by discussion of advanced issues which arise in audit practice including audit reporting issues, fraud detection and reporting, attestations and special reporting issues, compilation and review engagements, scope of services issues, and other new issues which have a significant impact on audit practice.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 687. Advanced Cost Accounting. 4 Credit Hours.
The course focuses on the use of accounting information in reporting managerial performance and making business decisions. The course covers the preparation and use of managerial accounting information for use in planning, budgeting, control, pricing, and in making other business decisions. Topics include in-depth studies of techniques and issues surrounding cost allocation methods, approaches to solving complex accounting problems, standard cost systems and variance analysis, and variable costing. Additionally, the formal aspects of management control such as the design of responsibility centers, budgets and standards, performance reports and management compensation will be discussed.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ACC 688. Advanced Accounting and Financial Reporting. 4 Credit Hours.
The primary focus of the course is on business combinations and preparing consolidated financial statements. Additionally, the accounting principles and practices applied to foreign operations and partnerships will be discussed along with foreign currency translation issues. This will be followed by an exploration of complex financial reporting issues of contemporaneous interest.
Prerequisite: ACC 682.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ACC 689. Current Issues in Accounting. 4 Credit Hours.
Current issues in accounting focuses on international financial reporting standards and accounting for governmental and not-for-profit organizations. This course introduces core concepts and tools of accounting and financial reporting for managers of global, governmental, and not-for-profit organizations.
Prerequisite: ACC 682.
Components: DIL.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 690. Fraud and Forensic Accounting: Ethics and Legal Environment. 4 Credit Hours.
This course focuses on conducting fraud examinations and includes discussion of procedures used in forensic accounting examinations and the rationale supporting such procedures.
Prerequisite: ACC 682 And ACC 685.
Components: DIL.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 698. Selected Topics. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ACC 699. Directed Readings. 1-3 Credit Hours.
Individually supervised research projects in selected fields. Approval of supervising professor as to topic and evaluation of project required at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ACC 701. Empirical Accounting Research I. 3 Credit Hours.
This is the first course in Empirical Accounting Research for Ph.D. students. The course introduces students to the data sources; current techniques for accessing and analyzing accounting data; research methods employed in hypothesis testing; and the literature on positive accounting theory, accounting anomalies, institutional accounting, and disclosure. The emphasis will be on current research with a historical perspective.
Components: THI.
Grading: GRD.
Typically Offered: Fall.

ACC 702. Empirical Accounting Research II. 0-3 Credit Hours.
This is the second course in Empirical Accounting Research for Ph.D. students. In this course, students will explore research on analyst estimates and stock recommendations, industry research in accounting, and empirical research on compensation. The course will critically evaluate the theory, research design, and methodology employed in these studies. Prerequisite: ACC 701 or permission from the instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ACC 823. Topics in Empirical Accounting Research I. 3 Credit Hours.
This is the first course in Empirical Accounting Research for Ph.D. students. The course introduces students to the data sources; current techniques for accessing and analyzing accounting data; research methods employed in hypothesis testing; and the literature on positive accounting theory, accounting anomalies, institutional accounting, and disclosure. The emphasis will be on current research with a historical perspective.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ACC 824. Topics in Empirical Accounting Research II. 3 Credit Hours.
This is the second course in Empirical Accounting Research for Ph.D. students. In this course, students will explore research on analyst estimates and stock recommendations, industry research in accounting, an empirical research on compensation. The course will critically evaluate the theory, research design, and methodology employed in these studies.
Components: SEM.
Grading: GRD.
Typically Offered: Spring.

ACC 825. Comprehensive Test Preparation. 1-3 Credit Hours.
Doctoral students who are preparing for their qualifying examinations may use this course designation. Enrolled students must develop, with the approval of their advisor, a ‘Plan of Study’ for these credits.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

ACC 826. Introduction to Textual Analysis in Accounting Research. 3 Credit Hours.
This course will provide students with essential practical skills to apply popular textual analysis methods and help develop understanding of the key concepts and challenges associated with textual analysis and data analysis.
Components: SEM.
Grading: GRD.
Typically Offered: Spring.

ACC 830. Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the PhD. The student will enroll for credit as determined by their advisor, but not for less than a total of 24. Not more than 12 hours of ACC 730 may be taken in a regular semester, nor more than six in a summer session. Where a student has passed their qualifying examinations they may take the maximum allowable credit stated above.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
Aerospace Studies (AIS)

AIS 101. Heritage and Values 1. 1 Credit Hour.
This course provides an introduction to the Air Force, hopefully encouraging students to pursue an AF career or at least seek additional information to be better informed about the role of the USAF. The course allows students to examine general aspects of the Department of the Air Force, AF Leadership, Air Force benefits, and opportunities for AF officers. The course also lays the foundation for becoming an Airman by outlining our heritage and values. As a foundational course, this course also provides a historical perspective such as lessons on war and US military, AF operations, principles of war, and airpower (see the complete lesson list below). As a whole, this course provides students with a knowledge-level understanding for the employment of air and space power, from an institutional, doctrinal, and historical perspective. The students will be introduced to the Air Force way of life and gain knowledge on what it means to be an Airman. A succinct perspective of the course objective is to sell the AF as a career and lay a strong foundation built on AF Core Values.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

AIS 102. Heritage and Values 2. 1 Credit Hour.
A continued introduction to the Air Force, hopefully encouraging students to pursue an AF career or at least seek additional information to be better informed about the role of the USAF. The course allows students to examine general aspects of the Department of the Air Force, AF Leadership, Air Force benefits, and opportunities for AF officers. The course also lays the foundation for becoming an Airman by outlining our heritage and values. As a foundational course, this course also provides a historical perspective such as lessons on war and US military, AF operations, principles of war, and airpower (see the complete lesson list below). As a whole, this course provides students with a knowledge-level understanding for the employment of air and space power, from an institutional, doctrinal, and historical perspective. The students will be introduced to the Air Force way of life and gain knowledge on what it means to be an Airman. A succinct perspective of the course objective is to sell the AF as a career and lay a strong foundation built on AF Core Values.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AIS 150. Leadership Laboratory. 0 Credit Hours.
Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment 155 Commander and Operations Flight Commander.
Components: LAB.
Grading: CNC.
Typically Offered: Fall & Spring.

AIS 201. Team and Leadership Fundamentals I. 1 Credit Hour.
This course is designed to provide a fundamental understanding of both leadership and team building. It is imperative that cadets are taught from the beginning that there are many layers to leadership, including aspects that don't always jump to mind. Such things include listening, understanding themselves, being a good follower and problem solving efficiently. The students will apply these leadership perspectives when completing team building activities and discussing things like conflict management. Students should demonstrate basic verbal and written communication skills. Cadets will apply these lessons at Field Training.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

AIS 202. Team and Leadership Fundamentals 2. 1 Credit Hour.
This course is designed to provide a fundamental understanding of both leadership and team building. It is imperative that cadets are taught from the beginning that there are many layers to leadership, including aspects that don't always jump to mind. Such things include listening, understanding themselves, being a good follower and problem solving efficiently. The students will apply these leadership perspectives when completing team building activities and discussing things like conflict management. Students should demonstrate basic verbal and written communication skills. Cadets will apply these lessons at Field Training.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AIS 301. Leading People and Effective Communication I. 3 Credit Hours.
A continued course designed to build on the leadership fundamentals taught in previous level courses. The cadets will have the opportunity to utilize their skills as they begin more of a leadership role in the detachment. The goal is for cadets to have a more in-depth understanding of how to effectively lead people, and provide them with the tools to use throughout their detachment leadership roles. Secondly, cadets will hone their writing and briefing skills. Many of the cadets will be uncomfortable with public speaking, and this semester is designed to get them used to briefing. The course continues into advanced skills and ethics training that will prepare them for becoming an officer and a supervisor.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

AIS 302. Leading People and Effective Communication 2. 3 Credit Hours.
A continued course designed to build on the leadership fundamentals taught in previous level courses. The cadets will have the opportunity to utilize their skills as they begin more of a leadership role in the detachment. The goal is for cadets to have a more in-depth understanding of how to effectively lead people, and provide them with the tools to use throughout their detachment leadership roles. Secondly, cadets will hone their writing and briefing skills. Many of the cadets will be uncomfortable with public speaking, and this semester is designed to get them used to briefing. The course continues into advanced skills and ethics training that will prepare them for becoming an officer and a supervisor.
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
AIS 401. National Security, Leadership Responsibilities and Commissioning Preparation 1. 3 Credit Hours.
Cadets enrolled in this course should comprehend the basic elements of national security policy and process. The student should comprehend the air and space power operations as well as understand selected roles of the military in society and current domestic and international issues affecting the military profession. Cadets should comprehend the responsibility, authority, and functions of an Air Force commander and selected provisions of the military justice system. The final semester of this course is designed to prepare cadets for life as a second lieutenant. This is a great time for instructors to include any information they feel would help their cadets as they transition from military life to civilian life. 
Corequisite: AIS 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

AIS 402. National Security, Leadership Responsibilities and Commissioning Preparation 2. 3 Credit Hours.
Cadets in this course should comprehend the basic elements of national security policy and process. Typically Offered: Spring.

Africana Studies (AAS)

AAS 150. Introduction to Africana Studies. 3 Credit Hours.
Experiences of African American and other African-descended peoples with emphasis on social, cultural, political, etc.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

AAS 260. History of Slavery in the Atlantic. 3 Credit Hours.
The emergence and eventual abolition of the Trans-Atlantic slave trade and its effects on both old and new world.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

AAS 290. Special Topics. 3 Credit Hours.
Content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AAS 350. Black Leadership in the U.S.. 3 Credit Hours.
Black leaders and leadership organizations. Emphasis on their role in overcoming oppression and barriers to advancement.
Prerequisite: 3 Credits in AAS.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

AAS 390. Special Topics. 3 Credit Hours.
Content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

AAS 490. Senior Seminar in Africana Studies. 3 Credit Hours.
Content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

American Studies (AMS)

AMS 101. Introduction to American Studies. 3 Credit Hours.
An interdisciplinary approach to American Studies with attention to a particular theme or period.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 301. Topics in American Studies. 0-3 Credit Hours.
Content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AMS 310. The United States in the World. 3 Credit Hours.
The culture and history of the United States in a global framework.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AMS 321. Topics in American Studies: History. 3 Credit Hours.
This course explores the field of history (including the study of experiences, texts, and theoretical aspects of individual and cultural pasts) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 322. Topics in American Studies: Literature. 3 Credit Hours.
This course explores the field of literature (including the study of experiences, texts, and theoretical aspects of literary expression) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 323. Topics in American Studies: Politics. 3 Credit Hours.
This course explores the field of politics (including the study of experiences, texts, and theoretical aspects of polity or institutional governance) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
AMS 324. Topics in American Studies: Religion. 3 Credit Hours.
This course explores the field of religion (including the study of experiences, texts, and theoretical aspects of religious beliefs and institutions) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 325. Topics in American Studies: Law. 3 Credit Hours.
This course explores the field of law (including the study of experiences, texts, and theoretical aspects of jurisprudence and legal culture) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 326. Topics in American Studies: Education. 3 Credit Hours.
This course explores the field of education (including the study of experiences, texts, and theoretical aspects of literacies and the education of individuals and communities) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 327. Topics in American Studies: Film. 3 Credit Hours.
This course explores the field of film (including the study of experiences, texts, and theoretical aspects of cinematic expression) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 328. Topics in American Studies: Music. 3 Credit Hours.
This course explores the field of music (including the study of experiences, texts, and theoretical aspects of musical composition and expression) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 329. Topics in American Studies: Art. 3 Credit Hours.
This course explores the field of art (including the study of experiences, texts, and theoretical aspects of aesthetics and creative expression) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 330. Topics in American Studies: Sociology. 3 Credit Hours.
This course explores the field of sociology (including the study of experiences, texts, and theoretical aspects of human engagements in society) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 331. Topics in American Studies: Geography. 3 Credit Hours.
This course explores the field of geography (including the study of experiences, texts, and theoretical aspects of spatial and regional studies) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 332. Topics in American Studies: Anthropology. 3 Credit Hours.
This course explores the field of anthropology (including the study of experiences, texts, and theoretical aspects of human cultural development) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 333. Topics in American Studies: Environmental Studies. 3 Credit Hours.
This course explores the field of environmental studies (including the study of experiences, texts, and theoretical aspects of environmentalism and sustainability) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 334. Topics in American Studies: Ethnic Studies. 3 Credit Hours.
This course explores the field of ethnic studies (including the study of experiences, texts, and theoretical aspects of racialized ethnic groups) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 335. Topics in American Studies: Women's and Gender Studies. 3 Credit Hours.
This course explores the field of gender studies (including the study of experiences, texts, and theoretical aspects of gender) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 336. Topics in American Studies: LGBTQ Studies. 3 Credit Hours.
This course explores the field of LGBTQ studies (including the study of experiences, texts, and theoretical aspects of LGBTQ individuals and groups) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 337. Topics in American Studies: Cultural Studies. 3 Credit Hours.
This course explores the field of cultural studies (including the study of experiences, texts, and theoretical aspects of culture/cultural groups) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
AMS 338. Topics in American Studies: International Studies. 3 Credit Hours.
This course explores the field of international studies (including the study of experiences, texts, and theoretical elements emerging from international or global arenas) in relation to a U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

AMS 339. Topics in American Studies: Urban Studies. 3 Credit Hours.
This course explores the field of urban studies (including the study of experiences, texts, and theoretical aspects of urban or city life) within and in relation to the U.S. context. Specific focus and content vary by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AMS 350. History and Culture of South Florida. 3 Credit Hours.
The history and culture of South Florida from a multidisciplinary perspective.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

AMS 399. Independent Study. 1-3 Credit Hours.
By arrangement with instructor; content varies.
Components: LEC.
Grading: CNC.
Typically Offered: Offered by Announcement Only.

AMS 401. Seminar in American Studies. 3 Credit Hours.
Content varies by semester.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

AMS 499. Independent Study. 3 Credit Hours.
By arrangement with instructor; content varies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

AMS 501. Senior Project. 3 Credit Hours.
All majors must complete either an individual research project or an internship at a local cultural or civic institution. Either option must be approved by the program director.
Components: THI.
Grading: GRD.
Typically Offered: Spring.

AMS 505. Honors Thesis. 3 Credit Hours.
American Studies majors with a cumulative GPA of at least 3.5 in AMS courses and an overall GPA of at least 3.0 may earn departmental honors by completing AMS 505: honors thesis. Candidates for departmental honors are responsible for finding a faculty member to serve as the thesis advisor. Students would take AMS 501 in the fall semester or the senior year and AMS 505 in the spring to complete the honors thesis.
Components: THI.
Grading: GRD.
Typically Offered: Spring.

Anthropology (APY)

APY 100. Introduction to Forensic Investigation (EXP). 3 Credit Hours.
Students will go into the field to gain an introductory understanding about skeletal identification and crime lab processes.
Requisite: Plan of Summer Scholar Program.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 101. Introduction to Anthropology. 3 Credit Hours.
A broad overview of archaeology, cultural anthropology, biological anthropology, and linguistics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 105. HIV: Sex, Science, and Society. 3 Credit Hours.
The important role that science plays and has played in ameliorating suffering for mankind. We will include an analysis of the scientific, human, and policy-related issues associated with HIV/AIDS.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 109. Anthropology of Religion. 3 Credit Hours.
Through themes such as myth, word and text, symbol, gender, pilgrimage, embodiment, and ritual, students learn about lived religion through anthropological research and field methods. The course also exposes introductory-level students to diverse world religious traditions: Korean folk religion, Indonesian Islam, Hinduism in diaspora, Judaism across cultures, Japanese temple Shinto traditions, and more.
Components: LEC.
Grading: GRD.

APY 200. Introduction to Forensic Investigation (EXP). 3 Credit Hours.
Students will learn the basics of the human bone structure and how it relates to anthropology and forensic studies.
Requisite: Plan of Summer Scholar Program.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 201. Principles of Archaeology. 3 Credit Hours.
History, methods, and theory of archaeology with an outline of the main characteristics of the prehistoric record throughout the world.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 202. Principles of Cultural Anthropology. 3 Credit Hours.
Cultural anthropology, including such topics as economics, politics, kinship and families, health systems, religion, and personality.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 203. Principles of Physical Anthropology. 3 Credit Hours.
The origin and biological development of the human species; human evolution explored by means of the fossil record of prehistoric population; differentiation and adaptation of contemporary populations in various world environments; the comparison of humans and other primates with respect to biological and behavioral variability.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
APY 204. Principles of Linguistic Anthropology. 3 Credit Hours.
Human linguistic principles of phonology, morphology, and grammar to construct a framework for understanding the operation of language in cultural context. The functions of human language in structuring ideological, economic, and political realms.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 205. Medicine and Health Care in Society. 3 Credit Hours.
A sociohistorical analysis of the intersection between medicine, health care and society, using examples throughout the world. It will reflect on 'taking-for-granted' concepts such as the 'body, risk, illness and healing' and their relationships to culture, power, and society, as well as the plurality of narratives and discourses on health and healing practices.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 208. Short-Changed in the City. 3 Credit Hours.
Marginalization plagues sub-populations in almost every large city. An anthropological view of this problem and its origins, presented through readings, discussions, lectures and field trips.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 230. The Sounds of the World's Languages. 3 Credit Hours.
The range of sounds produced by the speakers of the world's languages. An introduction to phonetics, with a focus on acoustically-oriented methods used in contemporary phonetics.
Prerequisite: APY 204.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 301. World Prehistory. 3 Credit Hours.
The global prehistoric record, with emphasis on the development of social complexity and ancient states.
Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 302. Ethnographies of Black Life. 3 Credit Hours.
Themes that have shaped Anthropology’s engagement with Black Life. Critique between Black Studies and the social Sciences with particular focus on the discipline of anthropology, interrogation of the methods and theoretical frameworks employed to empirically distill the social conditions and political formations of black diasporic peoples.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

APY 306. Human Evolution. 3 Credit Hours.
The macroevolution of humans using the fossil record of vertebrates, including the development of uniquely human behavioral and anatomical adaptations, and of diversity in living populations.
Prerequisite: APY 201 or APY 203.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 307. Human Adaptation. 3 Credit Hours.
Human biological adaptation to different environments and stress is examined anthropologically within an evolutionary framework. Mechanisms of adaptation to temperature extremes and other climatic variables, high altitude, disease, nutritional stress, urbanization, extraterrestrial conditions, and other environmental challenges are described in relation to biological and behavioral variations among human populations. The limits of human performance and human adaptive potential in the present and future are explored.
Prerequisite: APY 201 and APY 202 and APY 203 and BIL 101 and BIL 109.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 309. Evolution of Human Behavior. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 310. Primate Behavior and Adaptation. 3 Credit Hours.
The taxonomy, distribution, anatomy, social behavior and adaptations to habitats of human and non-human primates as seen from an evolutionary perspective.
Prerequisite: APY 203.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 315. Folk and Alternative Medicine. 3 Credit Hours.
Historical and cultural backgrounds of health therapies, including theoretical bases of traditional ethnomedical, nonwestern, and complementary medical systems.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 320. The Evolution of Language. 3 Credit Hours.
Popular contemporary hypotheses on the origins and development of language.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 340. Marine Archaeology. 3 Credit Hours.
Location, excavation, and study of submerged sites.
Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 345. Blood and Chocolate: Ancient Civilizations of Mesoamerica. 3 Credit Hours.
An archaeological approach to understanding the major pre-Columbian cultures of Mesoamerica, from Olmec to Aztec periods, with emphasis on the ancient Maya. The particular accomplishments of this area such as the domestication of chocolate and corn, hieroglyphic writing, and elaborate sacrificial rituals will be explored.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
APY 356. Florida Archaeology. 3 Credit Hours.
Archaeological remains of ancient cultures in the Florida peninsula, from initial occupation to the Colonial Period.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 360. Anthropology of Food. 3 Credit Hours.
Evolution of human diet, basic nutrition, food taboos, effects of domestication, effects of diet on skeletal remains, analysis of your own food habits, and the impact of certain foods on the biocultural evolution of our species.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 361. Gender and Language. 3 Credit Hours.
The ways in which language is used in the constitution of gender from a cross-cultural perspective. Course is co-listed with WGS 361.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 362. The Languages of the World. 3 Credit Hours.
The world's languages. The primary focus is on major differences and similarities among the structural properties of languages from diverse regions and linguistic families. In short, an introduction to linguistic typology.
Prerequisite: APY 204.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 376. Economic Anthropology. 3 Credit Hours.
The structure and operation of the small-scale economy in the social system is examined. The interrelationship between social and economic systems, and the formation of non-market economies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 377. Anthropology of Political Systems and Discourse. 3 Credit Hours.
Political systems and processes in tribal societies, with special emphasis on dispute settlement, the organization of political control, and the use of oratory. Case studies from Latin American and African examples.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 384. Caribbean Archaeology. 3 Credit Hours.
An examination of human lifeways in the Antillean archipelago from first settlement through the development of complex socio-political structures in the Late Ceramic Age and ultimately the arrival of European and African migrants.
Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 385. Caribbean Cultures. 3 Credit Hours.
Caribbean societies, including ethnic diversity, production and exchange, domestic organization, and belief systems.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 391. Gender in Ancient Cultures. 3 Credit Hours.
A cross-cultural examination of the role gender played in ancient complex culture areas, such as Mesoamerica, Mesopotamia, and the Mediterranean, with emphasis on using the archaeological record to reconstruct social roles.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 392. Sex and Culture. 3 Credit Hours.
A cross-cultural examination of sex roles and sexuality; gender identity, division of labor, functions of marriage, sexual practices, reproductive control, and political relationships between the sexes.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 393. Drugs and Culture. 3 Credit Hours.
Cross cultural review of human drug use with special attention to the use of drugs in cultural context.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 394. Comparative Religion. 3 Credit Hours.
A cross-cultural investigation of differing levels of religious belief systems examined from both etic and emic points of view.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 395. Gender, Race, and Class. 3 Credit Hours.
To explore human differences, we will interrogate common sense as: thinking about gender, race, and class. Certain queries will be addressed. What roles do scientific practice, political systems, and popular media play in shaping our thinking about differences? Where do we draw the line between biological fact and social construction? How do these facets of identity intersect and inform individuals' everyday experiences? How might knowledge allow us to speak truth to power when institutional oppression occurs? An anthropological perspective will provide the central frame, though feminism, history, medicine, biology, psychology, and law will inform our considerations.
Prerequisite: APY 202 or GSS 201.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 396. Youth Culture, Identity, and Globalization. 3 Credit Hours.
Youth cultural practices and experiences in various urban contexts in the world. Particular emphasis is placed on marginalization, identity and commodification of violent practices as embedded in the globalization processes.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 397. Violence and Ritual. 3 Credit Hours.
Various theories of ritual and violence with reference to ethnographically-based topics. It will explore the role of symbols, rituals and ideologies in shaping and contesting power within nations and other political communities.
Prerequisite: APY 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
APY 398. Coastal Cultures. 3 Credit Hours.
The investigation, analyses, and legal aspects of human remains recovered from crime scenes and mass disasters. Prerequisite: APY 203 or APY 414.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 399. The Anthropology of Kinship and Family in America. 3 Credit Hours.
Theories of kinship and the family. It will examine emergence of new patterns of kinship networks and construction of individuals. Ethnographic materials will be drawn from the Americas and the Caribbean, particularly Brazil, Cuba, Haiti, Jamaica and the United States. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 405. Readings in Anthropology. 1-3 Credit Hours.
Supervised readings on special topics in Anthropology. Prerequisite: APY 202 and GSS 201.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 406. Readings in Anthropology. 1-3 Credit Hours.
Supervised readings on special topics in Anthropology. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 413. Medical Anthropology. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 414. Human Osteology. 3 Credit Hours.
Identification and interpretation of the human skeleton, including age, sex, hard tissue pathology and traumas. Prerequisite: APY 203.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

APY 415. Forensic Anthropology II: Fieldwork. 3 Credit Hours.
The investigation, analyses, and legal aspects of human remains recovered from crime scenes and mass disasters. Prerequisite: APY 203 or APY 414.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 416. Bioarchaeology-Peopling the past. 3 Credit Hours.
Contextualization of bodies in space, cultural milieu and time are the primary focus of this course. Students will explore bioarchaeology's history, development and major topical concerns. Prerequisite: APY 201 or APY 203.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 417. Archaeometry: The Science of Material Culture. 3 Credit Hours.
The archaeological application of a physical science (physics, chemistry, geology, etc.) techniques to answer pertinent anthropological questions about past societies. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 418. Seminar in Anthropology. 3 Credit Hours.
Consideration of special topics in physical anthropology, linguistics, archaeology and ethnology and their interrelationships. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 419. Politics of the Past. 3 Credit Hours.
The intersection of archaeology, politics, capitalism, and discrimination to consider the presentation, misconstrual, revision, and reclamation of the past. Lecturing will be kept to a minimum, as the bulk of the class will be devoted to discussion and debate. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 420. Archaeology, Architecture, and the City. 3 Credit Hours.
Ancient architectural remains in the global anthropological perspective, emphasizing the role of architecture in shaping the evolution of social and political interactions. Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 421. Interpreting Bodies. 3 Credit Hours.
Perceptions, representations, and regulation of the physical body as a gendered and sexual site, as a source of pleasure, as a means of social validation, and as an object of coercion. Writing Credit. Lecturing will be kept to a minimum, as the bulk of the class will be devoted to discussion and debate. Prerequisite: APY 202 and GSS 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 422. Pseudoscience in Archaeology. 3 Credit Hours.
Reconstructions of how people lived in the past that claim scientific validity, use the terminology of science, but are unsupported by evidence, can be called pseudoscientific. This course critically evaluates the field of pseudoscientific archaeology by applying the scientific method, logic, and common sense. Prerequisite: APY 203.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 423. Paleopathology: Health and disease in ancient peoples. 3 Credit Hours.
Paleopathology aims to familiarize students with the range of health conditions that present in preserved human remains and to explain the linkages between disease prevalence and culture, economics, and politics. Prerequisite: APY 414 and APY 416.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
APY 435. Anthropology of Nature and Environment. 3 Credit Hours.
This course is an introduction to the anthropological investigation of nature, biology, and environment. Taking examples from cultural anthropology and the subfields of environmental anthropology, political ecology, and the anthropology of science, the course builds an understanding of the various ways in which ideas about nature and human nature and nature making practices shape our contemporary world: its places, spaces, life forms, and forms of life.
Prerequisite: APY 202.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 480. Undergrad Internship Anthropology. 3-9 Credit Hours.
The purpose of the undergraduate internship is practical application of coursework to hands-on learning with field and laboratory research conducted in partnership with an academic, governmental, non-profit and/or private sector business entity. The goal is to acquire and practice skill sets required for advancement in professional careers. Students may elect to participate in more than one internship because of the four-field approach of the discipline of Anthropology.
Prerequisite: APY 201 or APY 202 or APY 203 or APY 204.
Components: DIL.
Grading: GRD.
Typically Offered: Summer.

APY 484. Anthropological Theory. 3 Credit Hours.
Theoretical frameworks directing data collection and research methodology in anthropology.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 485. Archeological Theory and Technique. 3 Credit Hours.
Theoretical traditions that shape modern archaeological research design and interpretation.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

APY 486. Advanced Colloquy in Black Feminist Theory and Praxis: Major Works of 7 Black Feminist Thinkers. 3 Credit Hours.
Black feminist theory, produced primarily by Black women scholars, artist and activists, throughout the diaspora, constitutes a distinctive and influential body of politics and thought. Black feminist's uninvited interventions in Black politics, arts and letters—produced at the interstices of violence, silence, invisibility, or forgetting—exposes and makes available a wider horizon of possibilities than had been proposed before its emergence. The central theoretical innovation of this praxis (later claimed by theorists of various stripes), is the multiple—‘interlocking’, ‘intersectional’, ‘compounded’—constitutions of “identity,” oppression, aesthetic sensibilities, for example, and therefore of roads toward freedom. This distinctive body of work is not only interdisciplinary, multilingual; but also constitutive to specific geographies, politics, experiences, and particular intellectual and political streams.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

APY 502. Field Studies in Anthropology. 3-6 Credit Hours.
Field research in advanced topics in Cultural, Archaeological, Linguistic and/or Biological Anthropology. Preparation of data for professional presentation and publication is stressed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 505. Museum Internship. 3 Credit Hours.
Field work and on-site experience in museum studies conducted in conjunction with the major museums in Miami. Training and research in methods and techniques in museology.
Prerequisite: APY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 506. Workshop in Anthropology. 3-6 Credit Hours.
This course is designed for upper level and graduate students to participate in special topics in Anthropology and related fields.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 511. Artlab At Lowe. 3 Credit Hours.
Organizing an art exhibition at the Lowe Art Museum. Taught by a different faculty member each year.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

APY 512. Advanced Medical Anthropology. 3 Credit Hours.
Applications of theories and methods of medical anthropology to problems in human health and disease.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 518. Advanced Seminar in Anthropology. 3 Credit Hours.
Specialized topics in Anthropology to involve students into current research specializations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 601. Advanced Seminar in Archaeology, Theory and Practice. 3 Credit Hours.
History and theoretical foundation of modern archaeology; ethics, professional standards, and best practices in archaeology; cultural heritage management with special emphasis on NAGPRA; compliance with Secretary of the Interior standards, Section 106 regulatory knowledge and skills for compliance with government regulations, and current topical literature on archaeology.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
APY 602. Advanced Seminar in Cultural Anthropology. 3 Credit Hours.
The application of the anthropological perspective, data collection and
analyses methods, and theoretical foundations of traditional cultural
anthropology to understanding and working on solving human problems
in the modern world. Topics include the design, conduct, and application
of modern ethnographical methods to research venues in business,
governmental/NGO agencies, conflict studies, natural disasters, medical,
globalization and financial organizations.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 603. Advanced Seminar in Biological Anthropology. 3 Credit Hours.
The historical and theoretical foundations of modern biological
anthropology. Topics include ethics and standards for human subjects;
applied bioarchaeology, biological anthropology in medical/legal settings,
primatology, Human biology and adaptive diversity, modern perspectives
on race, and skeletal biology of modern peoples. The development of
professional research and writing skills for the discipline is integral to
course goals.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 604. Advanced Seminar in Linguistic Anthropology. 3 Credit Hours.
Core aspects of linguistics theory, and consider the ways in which
modern linguistic techniques can be applied in the investigation of
both common and uncommon typological patterns in the world’s 7000+
languages. Requisite: Graduate Status or Permission of Instructor.
Requisite: Graduate Status or Permission of Instructor. Typically Offered:
Fall & Spring.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 605. Museum Internship. 3 Credit Hours.
Field work and on-site experience in museum studies conducted in
conjunction with the major museums in Miami. Training and research in
methods and techniques in museology.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 611. Methods of Anthropological Research. 3-6 Credit Hours.
Concentration on research methods for Cultural, Archaeological,
Linguistic, and/or Biological Anthropology.
Components: RSC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 612. Advanced Medical Anthropology. 3 Credit Hours.
Applications of theories and methods of medical anthropology to
problems in human health and disease.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 615. Advanced Museum Internship. 3 Credit Hours.
Field work and on-site experience in museum studies conducted in
conjunction with the major museums in Miami. Training and research in
methods and techniques in museology.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 616. Advanced Workshop in Anthropology. 3-6 Credit Hours.
This course is designed for graduate students to participate in special
topics in Anthropology and related fields.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 628. Advanced Graduate Seminar. 3 Credit Hours.
Specialized topics in Anthropology to involve students into current
research specializations.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 690. Teaching Practicum in Anthropology. 3 Credit Hours.
Logistics and pedagogical issues of teaching anthropology, including
skill set and materials suitable for employment in settings for which the
master’s is the required, e.g., two-year schools. The student will evaluate
texts, create teaching materials for a given subfield, master commonly-
available electronic teaching and learning tools, and teach one class as
directed.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

APY 696. Advanced & Graduate Colloquy in Black Feminist Theory and
Praxis: Major of 7 Black Feminist Thinkers. 3 Credit Hours.
Black feminist theory, produced primarily by Black women scholars,
artist and activists, throughout the diaspora, constitutes a distinctive
and influential body of politics and thought. Black feminist’s uninvited
interventions in Black politics arts and letters– produced at the
interstices of violence, silence, invisibility, or forgetting– exposes and
makes available a wider horizon of possibilities than had been proposed
before its emergence. The central theoretical innovation of this praxis
(later claimed by theorists of various stripes), is the multiple-‘interlocking’,
‘intersectional’, ‘compounded’–constitution of ‘identity’. oppression,
aesthetic sensibilities, for example, and therefore of roads toward
freedom. This distinctive body of work is not only interdisciplinary,
multilingual; but also constitutive to specific geographies, politics,
experiences, and particular intellectual and political streams.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

APY 699. Directed Reading in Anthropology. 3-6 Credit Hours.
Supervised readings on special topics in Anthropology, allowing
the student to work independently with an Anthropology professor,
conducting research on a topic of both of their choosing.
Components: IND.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
APY 702. Field Studies in Anthropology. 3-6 Credit Hours.
Field research in advanced topics in Cultural, Archaeological, Linguistic
and/or Biological Anthropology. Preparation of data for professional
presentation and publication is stressed.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 805. Graduate Internship: Professional Practice of Anthropology. 1-9
Credit Hours.
An internship designed to provide valuable career-related work
experience in a real-world setting, e.g., institutions, organizations and/or
businesses. Students will identify an opportunity, supervisor, and write a
proposal as to the relevancy to their goals. The Internship may be paid or
unpaid. This course may be repeated.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

APY 810. Master's Degree Thesis Preparation and Writing. 1-9 Credit
Hours.
Preparation/completion of a written thesis for the master's degree
when the student has completed the thesis research, is engaged in
writing the thesis, and expects to use the facilities and resources of the
Anthropology department and the university; enrollment is required when
the completed thesis is defended and approved. This course may be repeated
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

Applied Marine Physics (AMP)

AMP 536. Modeling of Physical-Biological Interactions. 3 Credit Hours.
The course is designed to teach students the basics components for
building coupled physical biological models. Students will be able to
understand the processes affecting from low- to high-trophic level
organisms in the planktonic environment. Emphasis will be given on
numerical simulations of mechanisms involved in: Plankton distribution
and patchiness; Trophic interactions (NPZD); Larval behavior and
transport; Marine population connectivity.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

MAP 264. Vocal Techniques. 2 Credit Hours.
Components: LEC.
Grading: GRD.

Arabic (ARB)

ARB 101. Elementary Arabic I. 4 Credit Hours.
Fundamental writing and grammar principles; pronunciation; simple
reading and translation. Closed to native speakers.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARB 102. Elementary Arabic II. 4 Credit Hours.
Modern Standard Arabic; oral and written exercises. Closed to native
speakers.
Prerequisite: ARB 101.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARB 201. Intermediate Arabic I. 4 Credit Hours.
Modern Standard Arabic; oral and written exercises. Closed to native
speakers.
Prerequisite: ARB 102.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARB 202. Intermediate Arabic II. 3 Credit Hours.
Readings designed to integrate listening comprehension, speaking,
and writing skills in Modern Standard Arabic. Discussion of Arab
society, history and culture. Closed to native speakers.
Prerequisite: ARB 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARB 203. Advanced Arabic. 3 Credit Hours.
5th semester course in Modern Standard Arabic. Continued development
of all four language skills (listening, speaking, reading, and writing)
together with study of cultural aspects of the Arab world. Conducted in
Arabic. Closed to students who graduated from a high school in which
the primary language of instruction was Arabic.
Prerequisite: ARB 202.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARB 204. Arabic 204: Advanced Arabic II. 3 Credit Hours.
The sixth course of the Modern Standard Arabic sequence within the
Arabic Studies Program. The three primary goals of the Arabic language
sequence are: (1) developing oral and written communicative abilities in
Arabic; (2) understanding the rich culture of the Arabic-speaking world
through engaging with texts and cultural artifacts; (3) studying and
understanding the Arabic language, from grammar and spelling to writing
with coherence, cohesion and accuracy.
Prerequisite: ARB 203.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARB 207. Arabic for Heritage Learners. 3 Credit Hours.
Arabic for Heritage Learners is a 200 level course specifically designed
for students of Arab descent who fulfilled the equivalent of ARB 201. The
course will hone students’ ability in critical reading, writing, debate, and
discussion of pertinent topics in Arab culture. The course material will
focus on the history of Arab culture, literature, film, and music. By the end
of the semester students will develop their ability in critical reading and
writing in MSA.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ARB 208. Arabic for Heritage Learners II. 3 Credit Hours.
Arabic 208 is combined with the sixth course of the Modern Standard Arabic sequence within the Arabic Studies Program. The three primary goals of the Arabic language sequence are: (1) developing oral and written communicative abilities in Arabic; (2) understanding the rich culture of the Arabic-speaking world through engaging with texts and cultural artifacts; (3) studying and understanding the Arabic language, from grammar and spelling to writing with coherence, cohesion and accuracy. Prerequisite: ARB 202 or ARB 207.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARB 251. Levantine Colloquial Arabic I. 3 Credit Hours.
This course will enable students to converse in the colloquial Arabic dialects of the Levant (Jordan, Lebanon, Palestine, and Syria). Development of communicative abilities in speaking and comprehension, as well as reading and writing (as used in social media, theater, etc.) of colloquial Levantine Arabic. Closed to native speakers (students educated in schools where Arabic was the language of instruction); heritage learners at the beginning level may be accommodated. Prerequisite: ARB 201.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 310. Topics in Arabic Literature and Culture in Translation. 3 Credit Hours.
Specific topics within the literature and cultures of the Arabic-speaking world, including literary, cinematic, and artistic representations of central themes or issues, and the cultural production of particular historical periods or national or immigrant groups. This course is taught in English and does not fulfill the CAS foreign language requirement. May be repeated for credit if topics vary. Prerequisite: ENG 106 or ENG 107.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 312. Arab Cultures: A Cultural History of the Arab World. 3 Credit Hours.
Study of the main points of Arab cultural history, from Pre-Islamic times to the period following European colonization with an emphasis on intellectual history and literary and visual arts. This course is taught in English and does not fulfill the CAS foreign language requirement. Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 315. Topics in Gender and Sexuality in Translation. 3 Credit Hours.
Topics in gender and sexuality in the context of the Arab world, through literary and/or cultural studies. This course is taught in English and does not fulfill the CAS foreign language requirement. May be repeated for credit if topics vary. Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 394. Arabic Internship. 1-3 Credit Hours.
The internship is an opportunity to apply analytical, interpretative, and creative skills developed in coursework. Internships ordinarily take place outside the University and they involve UM faculty supervision, as well as supervised on-site experience in an Arabic-speaking cultural, business, or not-for-profit organization. Students need to fill out the Internship Application Form. Normally 27 internship hours are required per credit earned. A maximum of three semester hours of internship credit may be counted toward the student's degree program. Permission of MLL faculty member is required (the host will apply documentary evidence of the hours worked). Prerequisite: ARB 204.
Components: PRA.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARB 410. Language and Power in the Arab World. 3 Credit Hours.
The multiple languages and linguistic registers present in the Arab world and, through materials from linguistics, anthropology, political science, music, art, and literature, leads them into an exploration of the main socio-linguistic features of Arabic and their broader cultural ramifications. This course is conducted in English. It does not fulfill the College of Arts & Sciences language requirement. Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 591. Directed Readings. 1-3 Credit Hours.
Directed readings (Independent study) in Arabic Studies.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARB 625. Arabic for Graduate Students. 0 Credit Hours.
The Arabic language through a communicative approach implementing the use of new vocabulary and applied use of grammatical theories thereby advancing reading comprehension as well as writing skills. The main focus of this class is on communication in Arabic where we aim for maximum use of the language in the classroom. The instructor will strive to speak exclusively in Arabic during class, and students will be expected to do the same with their instructor and classmates
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARB 641. Elementary ARB I for Graduate Students. 0 Credit Hours.
Designed to develop graduate students' communicative abilities in speaking, reading, writing, and comprehending Arabic, as well as to provide an introduction to the Arabic-speaking world.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARB 642. Elementary ARB II for Graduate Students. 0 Credit Hours.
Continuation of ARB641. Designed to develop graduate students' communicative abilities in speaking, reading, writing, and comprehending Arabic, and continued study of the Arabic-speaking world.
Prerequisite: ARB 641.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ARB 651. Intermediate ARB I for Graduate Research. 0 Credit Hours.
For graduate students with previous study of elementary-level Arabic. Designed to enhance graduate students' communication skills at the intermediate level. Intended principally for students who will carry out research in areas related to the Arabic-speaking world.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 652. Intermediate ARB II for Graduate Research. 0 Credit Hours.
For graduate students with previous study of Arabic at the intermediate level. Designed to enhance graduate students' communication skills in both written and spoken Arabic at the high-intermediate level. Intended primarily for students who will carry out research related to the Arabic-speaking world.
Prerequisite: ARB 651.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 653. Advanced ARB I for Graduate Research. 0 Credit Hours.
Designed to enhance graduate students' communication skills in the Arabic language at the advanced-low level. Intended principally for students who will carry out research related to the Arabic-speaking world.
Prerequisite: ARB 651.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 654. Advanced ARB II for Graduate Research. 0 Credit Hours.
Designed to enhance graduate students' communication skills in the Arabic language at the advanced-intermediate level. Intended principally for heritage learners who will carry out research related to the Arabic-speaking world.
Prerequisite: ARB 653.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 657. Intermediate Arabic - Graduate Heritage. 0 Credit Hours.
Designed to enhance graduate students’ communication skills in the Arabic language at the high-intermediate level. Intended principally for heritage learners who will carry out research related to the Arabic-speaking world.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 658. Advanced ARB for Graduate Heritage Learners. 1 Credit Hour.
Designed to enhance graduate students' communication skill in the Arabic language at the advanced-low level. Intended principally for heritage learners who will carry out research related to the Arabic-speaking world.
Prerequisite: ARB 657.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall, Spring, & Summer.

ARB 691. Directed Readings. 1-3 Credit Hours.
Directed readings (Independent study) in Arabic Studies.
Components: THI.
Grading: GRD.
 Typically Offered: Offered by Announcement Only.

ARB 692. Directed Readings. 1-3 Credit Hours.
Directed Readings at the graduate level.
Components: THI.
Grading: GRD.
 Typically Offered: Fall & Spring.

Architecture (ARC)

ARC 101. Architecture Design I. 6 Credit Hours.
Introduction to architectural design as an intellectual and aesthetic discipline directed at the analysis, interpretation, synthesis and transformation of the physical environment. Topics include concept, site, form, analysis, use of precedents and anthropometrics and human behavior.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall.

ARC 102. Architecture Design II. 6 Credit Hours.
Architectural response to shelter, space and setting requirements. Topics include design thinking skills, programming, site analysis, use of precedents and anthropometrics and human behavior.
Components: LEC.
Grading: GRD.
 Typically Offered: Fall.

ARC 109. Introduction to Architecture. 3 Credit Hours.
(Includes Design & History) Introduction to architectural ideas and principles including composition, space, form, function, history and methods of exploring architectural and urban design problems. Students will learn the relationship between two dimensional and 3 dimensional spaces through analytical drawing and model making. Course pedagogy includes weekly lectures in history and theory to better inform the design process. This course will encourage intuitive action, rapid visual analysis and interpretation.
Components: LEC.
Grading: GRD.
 Typically Offered: Summer.

ARC 110. Visual Studies. 3 Credit Hours.
Concurrent with the ARC 109 course, the visual studies course explores Architectural drawing as a means of discovery, exploration, analysis and representation. Coursework begins with freehand drawing, in which students explore and refine their observation and representational skills, followed by an introduction to digital drawing and 3-d fabrication used in the profession today. The students will develop a portfolio in book format that illustrates the body of work produced during the three-week program.
Components: LEC.
Grading: GRD.
 Typically Offered: Summer.

ARC 111. Visual Representation I. 3 Credit Hours.
An introduction to architectural representation as exploration, selection coordination and acquisition of visual knowledge including analog and digital techniques. Topics include: orthographic and oblique projections, geometric constructions, sketching, shade and shadow, and basic knowledge of digital tools.
Components: STU.
Grading: GRD.
 Typically Offered: Fall.
ARC 112. Visual Representation II. 3 Credit Hours.
An intermediate course that continues methods integration introduced in Visual Representation I with an increased focus on three dimensional projections.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 121. Architecture and Culture. 1 Credit Hour.
Architecture as an intellectual and aesthetic discipline. Focus on design theory, language, typology, image, form, context, and case studies.
Corequisite: ARC 101, 111.
Component: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 122. Architecture and Behavior. 1 Credit Hour.
The course focuses on the study of human behavior and its relationship to the design process. Topics include: cultural diversity, social equity and the application of psychological factors in the design of buildings and their environment.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 141. On-Site Survey of European Architecture and Urbanism. 3-6 Credit Hours.
On site introduction to architecture and the city with a historical review of European architecture and urban form from the classical to the contemporary. Students travel with faculty to survey selected European architectural and urbanistic precedents at specific locations. Elective course open to all majors; lecture and seminar format.
Component: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ARC 203. Architecture Design III. 6 Credit Hours.
The course focuses on the design of urban form and its relationship to the natural environment. Topics include: site analysis and design, context, climate, access and circulation and landscape.
Component: STU.
Grading: GRD.
Typically Offered: Fall.

ARC 204. Architecture Design IV. 6 Credit Hours.
The design course focuses on building materials, techniques and structure as active constituents of architecture design. Focus on orientation, enclosure, low-energy responses, selection and assembly of construction materials, short and intermediate span structural systems.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 213. Visual Representation III. 3 Credit Hours.
An advanced representation course that builds on the tools and methods of visual Representation I & II while introducing students to more advanced techniques of three dimensional modeling that integrates analog and digital techniques. Topics covered include: composition, diagramming, research and analytical drawing, perspective, and the integration of digital tools.
Component: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 223. Architecture and the Environment. 1 Credit Hour.
Architectural response to natural environmental requirements. Focus on climate, control, natural energy use, ecosystems, energy flow, environmental intervention, case studies of vernacular building techniques.
Component: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 230. Building Technology I: Materials and Methods. 3 Credit Hours.
Material characteristics of enclosure and structural systems, case studies in traditional and modern building construction. Topics include properties of building materials: wood, masonry concrete, steel and glass construction techniques; on-site and off-site processes; exterior finishes; assembles, detailing and basic building code concepts.
Component: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 231. Building Technology: Structural Systems. 3 Credit Hours.
Structural systems: the tectonics, patterns and behavior of the elements of building structures. Topics: Equilibrium, stability, vertical and lateral building envelope and financial considerations.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 267. History of Architecture I: Ancient, Medieval and Renaissance. 3 Credit Hours.
Studies of the history of architecture and urban design. Focus on religious and secular monuments and their settings, domestic architecture and infrastructure, regional constructional and compositional traditions from prehistory to the end of the sixteenth century. Corequisite: ARC 203.
Component: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 268. History of Architecture II: Baroque through Contemporary. 3 Credit Hours.
Studies of the history of architecture and urban design. Focus on religious and secular monuments and their settings, domestic architecture and infrastructure, regional constructional and compositional traditions from the end of the sixteenth century through to the present. Corequisite: ARC 204.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 292. Introduction to Architecture Design I. 3 Credit Hours.
Survey of the architecture profession and introduction to architecture design for non-architecture majors. Role, opportunities, vocabulary, visual awareness, techniques and procedures of design.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 293. Introduction to Architecture Design II. 3 Credit Hours.
Continuation of ARC 292 and an introduction to the interactions between architecture and the engineering disciplines for non-architecture majors. Theories of building and site design, technology as an integral component of design, program, site, climate and methodology.
Component: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 294. Introduction to the Development of Architecture. 3 Credit Hours.
Introduction to architecture for non-architecture majors. Vocabulary, themes, principles and processes of design, cultural, social, economic and technological influences demonstrated through historic examples.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 301. Architecture Design. 3 Credit Hours.
Comprehensive building and site design for students transferring into the architecture program at third year level. Topics include human, environmental, cultural and technological factors.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 305. Architecture Design V. 6 Credit Hours.
The design course focuses on the analysis and design of housing typologies within the context of the city. Topics include: programming, research and the integrated evaluation and design making in the design process.
Components: STU.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 306. Architecture Design VI. 6 Credit Hours.
The design course focuses on the ability to demonstrate skills associated with making integrated architectural design decisions across multiple systems. Students must display an ability to make design decisions within a complex architectural project while demonstrating broad integration and consideration of environmental stewardship, technical documentation, accessibility, site conditions, life safety, environmental systems, structural systems, and building envelope systems and assemblies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 323. On Site Study of Selected Architecture and Urbanism. 3-6 Credit Hours.
On-site study of specific architectural and/or urbanistic precedents at selected locations. Focus on specific period(s) and/or architect(s). Elective course open to all majors.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ARC 324. On Site Graphic Analysis of Selected Architecture and Urbanism. 3 Credit Hours.
On-site analysis and illustration of specific architectural and/or urbanistic precedents at selected locations. Diagrams, sketches, and drawings recording, analyzing and evaluating buildings and places. Focus on specific period(s) and/or architect(s). Elective course open to all majors.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ARC 326. Environmental Building Systems I. 3 Credit Hours.
Environmental and Safety Systems. Topics include mechanical - HVAC and conveyors; building envelope and assemblies, plumbing - fixtures and pipes; safety systems - fire safety and emergency and signal systems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 363. Environmental Building Systems II. 3 Credit Hours.
Principles and applications of light and acoustics. Topics include natural and artificial light - planning for sunlight, problems and solutions for interior and exterior illumination; sound - properties, problems and solutions in new and existing spaces. Principles and applications of electrical equipment and wiring design.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 371. Ancient Architecture. 3 Credit Hours.
History of architecture and human settlements. Western European prehistory, Egypt, Mesopotamia, Persia, Aegean and Mediterranean, Greece, Rome.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 373. Early Christian, Byzantine, and Medieval Architecture. 3 Credit Hours.
History of architecture and human settlements. Early Christian and Byzantine architecture in Italy, the Near East, Greece, North Africa, Eastern Europe, Medieval architecture in Western Europe.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 382. Architecture and Culture in Italy. 3 Credit Hours.
A cultural and historical framework in preparation for participation in the Rome program. A range of topics, including architecture, art, history, cinema, literature and politics presented by University faculty from a variety of disciplines. Required for participation in the Rome Program.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 407. Architecture Design VII. 3-6 Credit Hours.
Elective design studio course: student and faculty select areas of in-depth study. Topics are broadly defined and vary from semester to semester.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 408. Architecture Design VIII. 3-6 Credit Hours.
Elective component: student and faculty select areas of in-depth study. Topics are broadly defined and vary from semester to semester.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 452. Management of Professional Practice. 3 Credit Hours.
Overview of the practice and the profession, legal and ethical concerns, business types and management practices, traditional and non-traditional practices and services, contracts and contractual relationships.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 475. Colonial Architecture. 3 Credit Hours.
History of architecture and human settlements. Colonial Architecture from the 1 6th through the 19th centuries in North and South America, the Caribbean, India and Africa.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 476. 19th and 20th Century Architecture. 3 Credit Hours.
History of architecture and human settlements. America and Europe during the 19th and 20th centuries; cultural, technological and theoretical development.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 481. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 482. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 483. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 500. Architecture Theory. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 501. Architecture Design and Theory I. 6 Credit Hours.
Cultural, human and environment component and architectural responses to these: Social and aesthetic concepts, architectural psychology, climatic principles, programming analysis and design.
Components: STU.
Grading: GRD.
Typically Offered: Fall.

ARC 502. Architecture Design and Theory II. 6 Credit Hours.
Technology component; materials, structure, and environmental control systems as a framework for architectural design. Construction materials and methods, structural systems, mechanical systems.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 503. Architectural Design and Theory III. 6 Credit Hours.
Legal and economic component; government and finances as active constituents of architecture design. Zoning regulations, building codes, principles of public health, safety and welfare, market and feasibility studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 504. Architecture Design and Theory I. 6 Credit Hours.
Cultural, human and environment component and architectural responses to these: Social and aesthetic concepts, architectural psychology, climatic principles, programming analysis and design.
Components: STU.
Grading: GRD.
Typically Offered: Fall.

ARC 507. Architecture Design. 6 Credit Hours.
Elective component: student and faculty select areas of in-depth study. Topics include building types, environment, energy, community design, etc.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 509. Architecture Design IX. 3-6 Credit Hours.
Elective component: student and faculty select areas of in-depth study. Topics include building types, environment, energy, community design, etc.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 510. Architecture Design X. 3-6 Credit Hours.
Elective component: student and faculty select areas of in-depth study. Topics include building types, environment, energy, community design, etc.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 511. Visual Representation I. 3 Credit Hours.
Issues covered in the course will deal with the illustration of ideas in architectural manner. Students are to use the skill of drawing and model-making, either by hand or on the computer, as their new language. Topics will include how to read, understand, and create design drawings, to draw from observations and analyze their subject matter, to be able to distinguish the relevance of a particular drawing and to structure how they present their information. Students will be instructed to properly craft their work in and outside of studio in an effort to see their work evolve and improve.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 512. Advanced Visual Analysis. 3 Credit Hours.
Drawing as a means of analyzing and recording visual experience. Composition, form, light, color and drawing as a primary device in the mental registration of visual experience.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ARC 513. Advanced Visual Representation. 3 Credit Hours.
Students will learn to carefully evaluate space, color, depth, hierarchy, balance and scale in all architectural visual representation. The assignments will explore different media as it is used in the profession including but not limited to: diagrams, renderings, plans, elevations, sections, and axonometric. Through lectures and workshops, the course will provide a combination of both theoretical and practical lessons encompassing the fundamentals of architectural visual representation. The course will also include parallel lectures on typography, architectural graphic design, and verbal presentation. The lectures will be given by highly regarded industry professionals who will address the way that students can be aware of and understand typography, verbal presentation, and graphic design fundamentals as it relates to architecture. The class will consist of three parts. Part I introduces students to the fundamentals of 3d modeling and drafting as part of a representation workflow. The exercise will include both urban and building scales. Part II concentrates on understanding and dissecting more complex geometries through advance use of digital parametric software such as Grasshopper. Part III focuses on visual representation based on a studio project with emphasis on graphic techniques for final presentations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 514. Michelangelo. 3 Credit Hours.
Drawing as a form of research across mediums to understand historical research and interpretation of Michelangelo's work.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 515. Computer Modeling. 3 Credit Hours.
Three-dimensional, computer modeling, and rendering. Lecture, problem solving exercises and laboratory.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 516. Architectural Watercolor Renderings. 3 Credit Hours.
This course will use freehand drawing and watercolor painting as a vehicle to study and record the urban and architectural conditions of Coral Gables and other South Florida sites. Particular emphasis will be placed on the analytical potential of sketches (recording space, light, surfaces and color).
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 517. Construction Documents. 3 Credit Hours.
Working drawings and specifications. Form, content and role of constituent part s of working drawings and specifications by using case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 518. Documentation of Historic Architecture. 3 Credit Hours.
Principles of preservation and restoration, research methods, measured drawings, surveying methods, and case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 519. Architecture and Color. 3 Credit Hours.
This course focuses on the theory and practice of color and its application to architectural design. Topics include color history from Newton through Alber, the relationship between color practice in science versus art, and the discipline of color in architecture from the Neoclassical movement through the Modern Movement.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 523. Urban Design Competition. 1-3 Credit Hours.
Intensive, collaborative urban design project, combining master planning and real estate development expertise, to be submitted to international peer reviewed competition. Project teams are comprised of students from several different degree programs, such as architecture, urban design, real estate development, business, and law.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 524. Selected Topics in Interior Architecture Design. 3 Credit Hours.
Principles and technical components of interior design. Topics include interior volumetrics, finishes, furnishings and lighting.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 525. Landscape Arch Design I. 3 Credit Hours.
Analysis and design of landscape spaces. Studies in historical precedent, gardens, parks, plazas, squares, and response to urban and architectural context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 526. Landscape Arch Design II. 3 Credit Hours.
Analysis and design of landscape spaces. Topics include ecological principles, landforms and plant materials.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 527. Architecture Photography. 3 Credit Hours.
Photography with emphasis on architectural subjects. Introduction to visual principles, photographic equipment, materials, and techniques.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 528. Historic Preservation. 3 Credit Hours.
Basic design principles for the rehabilitation of historic buildings and districts. Evaluating character-defining details; significance analysis; context of setting issues within historic districts; applying the Secretary of the Interior's Standards for rehabilitation.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 529. Research in Design-Methods and Procedures. 3 Credit Hours.
Application of research methods and procedures to design issues. Historical, descriptive, analytic, experimental research methods; tools for data manipulation and communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 531. Building Technology II: Structural Systems. 3 Credit Hours.
Structural systems: The tectonics, patterns and behavior of the elements of building structures. Topics: Equilibrium, stability, vertical and lateral loads, building envelope and financial considerations.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 532. Building Structures I. 3 Credit Hours.
The structural behavior of simple frame structures. Topics include techniques to determine basic system layout and preliminary dimensioning of key subsystems and members.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 533. Building Structures II. 3 Credit Hours.
The structural behavior of complex structures. Topics include prestressed systems, waffle and space trusses, curved structures and longspan buildings.
Prerequisite: ARC 532.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

ARC 534. The Palazzo in Italian Architecture. 3 Credit Hours.
Study of the development of the Renaissance and Baroque palazzo in Rome and other important centers of art and culture. Emphasis on the socio-political context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 535. Historic Italian Urbanism. 3 Credit Hours.
Study of Italian cities and towns from medieval to contemporary times, including a comparative analysis of history and form.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 536. Italian Gardens. 3 Credit Hours.
Study of Italian garden design during the Renaissance, Baroque and Mannerist periods. Emphasis on historical and political context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 537. Research in Rome. 3 Credit Hours.
An exploration of Roman history, architecture and urban form through lectures, on site study and drawing assignments. Emphasis on chronological and spatial sequence of development.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 538. Interior Architecture Design. 3 Credit Hours.
Principles and technical components of interior design. Topics include activity, analysis, finishes, furniture, fixture, lighting, and acoustics.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 539. Adaptation to Climate Change. 3 Credit Hours.
Introduction to the phenomena and related discussion on the topic of climate change. Review of current scientific evidence, tactics for mitigation of emissions and other causal actions, followed by study of the adaptation required by changing conditions. Class assignments include creative proposals for adaptation action.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 540. Tropical Architecture. 3 Credit Hours.
A discussion of tropical architecture and the theme of tropicalism. Research, analysis and documentation in drawing of selected case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 541. Seminar on Town Design. 3 Credit Hours.
Introduction to the lexicon of urbanism; analytical presentations of the concepts of: region, town, neighborhood, corridor, district, and building type; interdisciplinary presentations, review, and criticism of current town and urban design projects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 542. Seminar on Housing. 3 Credit Hours.
Introduction to domestic building typology; exploration of the concepts of low, medium, and high density housing with attention to social, environmental, and economic issues; presentations of current case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 543. Seminar on Retrofit of Suburbia. 3 Credit Hours.
Introduction to the critical reconstitution of the city; theory and history of the concepts of revitalization and redevelopment; presentations, review, and criticism of current case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 544. Architecture of Palladio. 3 Credit Hours.
On site study of the architecture and urbanism of Andrea Palladio. Emphasis on the artistic precedents of the Veneto Region.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 545. Urban Composition. 3 Credit Hours.
Survey and analytical review of urban rooms as the vessel of human activity in urban culture. Study of proportional and compositional aspects of urban rooms together with economic, social, and cultural factors. Readings and discussion format.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 546. Studies of Havana. 3 Credit Hours.
Analysis of the physical structure of a major city and its environments including an exploration of its history and iconographic themes, mapping and building studies.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 547. Architecture and Urban Identity. 3 Credit Hours.
Study of the relationship between architecture and urbanism focusing
on the ways by which architecture provides urban identity and image of
place. Case studies relating monuments, fabric and urban plans to their
culture, time and place. Lecture and seminar format.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 548. Seminar in Community Development. 3 Credit Hours.
Study of the contemporary context for the development of the
physical environment. Examination of public, private and third sector
implementation of building and community design. Format: guest
speakers, readings, discussions, and seminar.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 549. Construction and Project Management. 3 Credit Hours.
Management of construction projects including legal considerations and
and techniques of management science applied to construction. Includes
engineering methods of cost and time estimating, and exercises in
applications of engineering economics, flow charts, tracking progress,
construction contracts, indemnity agreements, and network planning
techniques including CPM and PERT.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 550. Professional Lecture Series. 3 Credit Hours.
Exposure to the various professional disciplines in South Florida that
make contributions to the design process. Case study analysis and
evaluation of current building project, from time of initial formulation
through completion, including research, diagrammatic studies, site visits
and lectures.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 551. Contemporary Theories of Architecture. 3 Credit Hours.
Theoretical basis of modern architecture and different present currents
and movements. Agrarianism, technism, orthodoxy, brutalism, scientism,
revivalism, consumerism, rationalism, classicism.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 553. Structural Design Theory. 3 Credit Hours.
Relationship of structural systems to architectural design. Case studies
in theories of structure, form and construction.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 554. Architecture of South Florida. 3 Credit Hours.
History of architecture and human settlements. Studies of significant
architectural landmarks and urban design of the South Florida Region,
chronological growth of Miami, Miami Beach, Coral Gables, Key West and
Palm Beach.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 555. 18th and 19th Century American Architecture and Architects. 3
Credit Hours.
The course concentrates on the development of early American
architecture, Architects and Urbanism, primarily but not exclusively to
17th, 18th and 19th centuries with particular emphasis on theoretical,
technological and cultural developments in America.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 556. Contemporary Latin American Architecture. 3 Credit Hours.
The course seeks to examine the ways in which architecture and the
built environment are shaped by, and shape, globalization. It examines
the meaning of contextual modernism in the sphere of architecture and
urbanism. It will discuss how acquired influences, design culture and
economic dependency become the defining elements of contemporary
Latin American Architecture today.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 557. Design and Fabrication Techniques. 3-6 Credit Hours.
Design, construction and detailing of wood and other materials as applied
to furnishings and interiors. Workshop includes research, exercises,
documentation and a final project.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 558. Theories of Landscape Architecture. 3 Credit Hours.
Leading theories of landscape architecture which have influenced current
considerations of nature, landscape and design, including concerns such
as urban heat island effect, climate change resilience, and health impacts
of landscape.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 559. Sustainability and LEED Exam Prep. 1-3 Credit Hours.
Study of U.S. Green Building Council standards for environmental
efficacy in building and neighborhood design. Emphasis on fundamental
knowledge of green building concepts, including transportation, energy,
water and air quality. Includes preparation for LEED Accreditation Exam
and registration for exam that provides the credential signifying expertise
in green building and a LEED rating.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 560. Contemporary Latin American Architecture. 3 Credit Hours.
An examination of Contemporary Latin American Architecture and
Urbanism from the turn of the 20th Century to the present day. The work
of some of the great figures on Latin American Modernism such as
Niemeyer and Barragan, to contemporary figures such as Paulo Mendes
da Rocha and Isay Weinfeld will be discussed. The influence of the
Modern Movement in Europe and Le Corbusier will be reviewed. Large
scale City Plans such as Lucio Costa’s Plan for Brasilia and Roberto
Burle-Marx’s designs for Flamengo Park and Copacabana in Rio de
Janeiro will be analyzed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 568. History of Architecture II: Baroque through Contemporary. 3 Credit Hours.
Studies of the history of architecture and urban design. Focus on religious and secular monuments and their settings, domestic architecture and infrastructure, regional constructional and compositional traditions from the end sixteenth century through to the present. Corequisite: ARC502.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 569. Directed Readings. 3 Credit Hours.
A structured program of readings and essays organized by the student and his/her graduate supervisor constituting a preparation for graduate research in the student’s chosen area of interest.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 570. Modern Architecture. 3 Credit Hours.
History of architecture, landscape, and city design in the modern era.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 572. Selected Topics in World Architecture. 3 Credit Hours.
History of architecture and human settlements. Islamic Near East, North Africa, Hindu and Buddhist India, Nepal, S. E. Asia, China, Japan, Pre-Columbian America.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 574. Renaissance Architecture. 3 Credit Hours.
History of architecture and human settlements. Renaissance and Baroque architecture in Italy, France, Spain and Portugal, Great Britain, Austria, Germany, and neighboring countries.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 577. The Architecture of Alvar Aalto. 3 Credit Hours.
An examination of the architecture of Alvar Aalto through the analysis of selected buildings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 578. Italian Rationalist Architecture. 3 Credit Hours.
History of Italian architecture and urban design between 1914 and 1950: cultural, technological, and theoretical developments; relationship between architecture, politics and propaganda; related survey of the period in other countries (France, German, Soviet Union).
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 579. An Introduction to Resilient Building and Community Design. 3 Credit Hours.
This course introduces students to the relationships between climate, resiliency, architecture and urbanism; building awareness of the growing challenges and opportunities ahead, and the intersections between these disciplines. What does resilience mean in this broader context, and how should escalating stressors and shocks be addressed? Students learn about climate sciences, then research, document, and analyze evolving resilient design strategies, at the scale of buildings, neighborhoods and cities, in the end, applying those lessons to a given case study site; developing a holistic set of resilient design recommendations. During the course, students interact with specialists in the fields of architecture and urban design, as well as related fields, such as engineering, social, marine and environmental sciences, and/or policymakers, to better comprehend first-hand the interwoven scientific, social, environmental, and governmental ramifications to resilient design. Lastly, students learn the mechanics of participatory design methods employed to engage communities in related efforts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 580. Professional Advancement, Internship + Research (PAIR). 3 Credit Hours.
Research Component of PAIR program. Student, host office and faculty collaboratively develop a focused, in-depth research project related to the tasks the student is completing as part of the Internship Component of the PAIR program. Application and PAIR committee acceptance required prior to enrollment.
Components: RSC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 581. Special Problems. 1-3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 582. Special Problems. 3-6 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 583. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 584. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ARC 585. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ARC 586. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ARC 590. History of Cities. 3 Credit Hours.
Historical overview of the origin and development of cities around the world. Emphasis on intentional form of settlements (the ideal) as well as response to economic and political imperatives such as trade and defense (the real).
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 592. Cinema and Architecture. 3 Credit Hours.
The class studies the relationship between architecture and cinema. Lectures, film screenings, and readings, explore the origin and development of filmic space with an emphasis on its relation to the real and poetic image of the city. The class analyzes selected films as they relate to, comment, criticize, and anticipate the development of contemporary concepts of space, urban space, interior space, etc.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 593. Computer Animation. 3 Credit Hours.
Explores the use of computer animation and advanced visualization techniques in architecture with emphasis on texture and lighting, spatial choreography and story-boarding.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 594. Geographic Information Systems in Urban Design. 3 Credit Hours.
Exploration of Geographic Information Systems (GIS) in urban design. Principles of GIS and their application to spatial analysis, data management and visualization.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 596. Interactive Multimedia in Design. 3 Credit Hours.
Integration of text, video, sound, and computer graphics to create an interactive electronic information medium.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 597. Designing for the Internet of Things. 3 Credit Hours.
This course examines how current research and development in embedded computation bears on architecture, landscape, and urbanism. Students will explore the implications and impact of ubiquitous computing in its potential to change the way we conceive, construct, inhabit and interact with our buildings, landscapes, and cities.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ARC 598. Introduction to Programming for Architects. 3 Credit Hours.
As digital tools continue to play an increasing role in the Architect's toolkit, it is becoming increasingly important that Architects not only understand how to use and navigate these tools but to customize and adapt them to their specific needs. Learning how to program allows Architects to start to fully utilize the potential in digital tools by maximizing the possibilities in not only 3D modeling and digital fabrication but in responsive architecture, embedded computation and animating spaces contributing to a more dynamic and potentially interconnected built environment.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 601. Urban Design Studio I. 6 Credit Hours.
Introduction to urban design principles and techniques, in the master planning of a new community. Emphasis on the sustainability of human settlements within the context of degradation of natural systems and resource depletion; regional environmental and infrastructure systems; transportation and traffic; transit-oriented development; land use, building, and thoroughfare types.
Components: STU.
Grading: GRD.
Typically Offered: Fall.
ARC 602. Urban Design Studio II. 6 Credit Hours.
Design projects focusing on contemporary challenges and goals for existing settlements, including urban and suburban disinvestment and deterioration, urban redevelopment, social equity, resilience and adaptation to climate change, design for healthy communities and active living, and urban agriculture.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ARC 603. Urban Design Studio III. 6 Credit Hours.
Urban design projects that deploy full range of techniques for regional control of urban growth. Application of advanced technologies, including smart cities, innovations in transportation and traffic engineering, energy generation and conservation, and emissions reduction.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.
ARC 604. Architecture Design and Theory I. 6 Credit Hours.
The inaugural design studio focuses on the role of architectural design as an integrative discipline. Using Miami as a laboratory and drawing from natural specimens, the studio will examine the relationship between nature, landscape and the built environment. It will use research and analysis, design thinking skills, ordering systems, site design, materials, methods, structure, light, space, and tectonics as a means of developing a meaningful design process. Components: STU.
Components: STU.
Grading: GRD.
Typically Offered: Fall.
ARC 605. Architecture Design and Theory II. 6 Credit Hours.
This introductory design studio focuses on the role of architectural design as a responsive discipline. The studio will look at how architectural form is informed by thoughtful consideration of materials and methods of construction, as well as programming and context. Situated in an urban environment rich in material, stylistic and typological history, the studio will challenge students to develop a careful reading of place while responding to urban context, topography, and other site requirements. By considering issues of precedent, composition, display, and identity, it will examine the production of meaning in architecture.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 606. Architectural Design and Theory III. 6 Credit Hours.
The Rome Design Studio operates as a form of design-based critical inquiry into issues of urban design, architecture, and the adaptive reuse and transformation of buildings and spaces. Drawing will be explored as a means of analysis, in order to observe and record the urban and architectural conditions of Rome. Students will discover the layers of Rome, combining archaeology with architecture and urban history. Coursework emphasizes a critical reassessment of the historic urban sites relative to questions of program, infrastructure, and cultural changes.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 607. Architecture Design and Theory IV. 6 Credit Hours.
Advanced Design Studio based course addressing more complex and ambitious topics related with the built environment, the ability to prepare and solve a program through design, materials, technique, technology, social human centered aspects of architecture, structure, architecture as light and space, site and context and environmental issues.
Components: STU.
Grading: GRD.
Typically Offered: Fall.

ARC 608. Architecture Design. 3-6 Credit Hours.
Advanced Design Studio focusing on skills associated with making integrated architectural design decisions across multiple systems. Design decisions within a complex architectural project will focus on the consideration and broad integration of environmental stewardship, technical documentation, accessibility, site conditions, life safety, environmental systems, structural systems, and building envelope systems and assemblies.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 609. Architecture Design. 3-6 Credit Hours.
Specialization component: student and faculty select areas of in-depth study in housing, resiliency, healthcare, urban design, housing and hospitality, historic preservation etc.
Components: STU.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 610. Architecture Design Degree Project. 6 Credit Hours.
The Architecture Design Degree Project studio offers two options: 1) an independent design research project (design thesis) on a topic selected and developed by the student, or 2) a graduate research studio. Design Thesis is an opportunity for each student, working with a faculty advisor, to define an individual position with regard to the discipline of Architecture. The graduate research studio, led by a faculty member, will investigate relevant or thematic issues of architecture. All graduating students will be required to present their Degree Project, comprising research, analysis and creative work, as a book.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 611. Visual Representation. 3 Credit Hours.
Issues covered in the course will deal with the illustration of ideas in architectural manner. Students are to use the skill of drawing and model-making, either by hand or on the computer, as their new language. Topics will include how to read, understand, and create design drawings, to draw from observations and analyze their subject matter, to be able to distinguish the relevance of a particular drawing and to structure how they present their information. Students will be instructed to properly craft their work in and outside of studio in an effort to see their work evolve and improve.
Components: STU.
Grading: GRD.
Typically Offered: Fall.

ARC 612. Advanced Visual Analysis. 3 Credit Hours.
Drawing as a means of analyzing and recording visual experience. Composition, form, light, color and drawing as a primary device in the mental registration of visual experience.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 613. Advanced Visual Representation. 3 Credit Hours.
Students will learn to carefully evaluate space, color, depth, hierarchy, balance and scale in all architectural visual representation. The assignments will explore different media as it is used in the profession including but not limited to: diagrams, renderings, plans, elevations, sections, and axonometric. Through lectures and workshops, the course will provide a combination of both theoretical and practical lessons encompassing the fundamentals of architectural visual representation. The course will also include parallel lectures on typography, architectural graphic design, and verbal presentation. The lectures will be given by highly regarded industry professionals who will address the way that students can be aware of and understand typography, verbal presentation, and graphic design fundamentals as it relates to architecture. The class will consist of three parts. Part I introduces students to the fundamentals of 3d modeling and drafting as part of a representation workflow. The exercise will include both urban and building scales. Part II concentrates on understanding and dissecting more complex geometries through advance use of digital parametric software such as Grasshopper. Part III focuses on visual representation based on a studio project with emphasis on graphic techniques for final presentations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 614. Michelangelo. 3 Credit Hours.
Drawing as a form of research across mediums to understand historical research and interpretation of Michelangelo's work.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 615. Advanced Visualization Techniques. 3 Credit Hours.
Beginning at the urban scale, students will engage with the concept of mapping and the graphical representation of an urban environment. This will be done through site analysis and investigation of existing conditions for the neighborhood of Miami Beach, FL. After the urban analysis, students will transition into the building scale and analyze a 'Lifeguard House' in Miami Beach. Students will be asked to rethink and redesign the lifeguard house using Rhino 30. Each student will produce drawings including elevations, plans, sections, and exploded axonometric of their new design. Lastly, students will create a physical model using the laser cutter.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 616. Architectural Watercolor Renderings. 3 Credit Hours.
This course will use freehand drawing and watercolor painting as a vehicle to study and record the urban and architectural conditions of Coral Gables and other South Florida sites. Particular emphasis will be placed on the analytical potential of sketches (recording space, light, surfaces and color).
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 617. Construction Documents. 3 Credit Hours.
Working drawings and specifications. Form, content and role of constituent parts of working drawings and specifications by using case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 618. Documentation of Historic Architecture. 3 Credit Hours.
Principles of preservation and restoration, research methods, measured drawings, surveying methods, and case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 619. Architecture and Color. 3 Credit Hours.
This course focuses on the theory and practice of color and its application to architectural design. Topics include color history from Newton through Alber, the relationship between color practice in science versus art, and the discipline of color in architecture from the Neoclassical movement through the Modern Movement.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 620. Responsible Architecture. 3 Credit Hours.
A responsible architecture is one that takes into consideration aesthetics, ecology, sustainability, history, context (urban or otherwise), as well as the health, welfare, and joy of the people who occupy it. This course will address architecture from a distinctly humanist viewpoint, keeping in mind how man is inextricably connected to his environment, both architectural and natural. To focus on sustainability, typology, urbanism, or aesthetics alone would be to negate architecture’s interconnectedness. The creation of a responsible architecture requires this multi-layered approach.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 621. Housing, Infrastructure and Transportation. 3 Credit Hours.
Case studies in sustainable urban design. Survey and assessment of innovations in community design and building. Examples from the late nineteenth century to contemporary practice illuminate environmental, social, and economic goals and impacts in urban design.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 622. Urban Design History and Theory. 3 Credit Hours.
Part I: Survey of housing theories and projects with emphasis on morphological context, typology and composition - focus on topics of modernity. Part II: Introduction to thoroughfare design and walkability principles; description of urban, suburban, rural and regional infrastructure.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 623. Urban Design Competition. 1-3 Credit Hours.
Intensive, collaborative urban design project, combining master planning and real estate development expertise, to be submitted to international peer reviewed competition. Project teams are comprised of students from several different degree programs, such as architecture, urban design, real estate development, business, and law.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 624. Select Topics in Interior Architecture Design. 3 Credit Hours.
Principles and technical components of interior design. Topics include interior volumetrics, finishes, furnishings and lighting.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 625. Landscape Arch Design I. 3 Credit Hours.
Analysis and design of landscape spaces. Studies in historical precedent, gardens, parks, plazas, squares, and response to urban and architectural context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 626. Landscape Arch Design II. 3 Credit Hours.
Analysis and design of landscape spaces. Topics include ecological principles, landforms and plant materials.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ARC 627. Architecture Photography. 3 Credit Hours.
Photography with emphasis on architectural subjects. Introduction to visual principles, photographic equipment, materials, and techniques.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 628. Historic Preservation. 3 Credit Hours.
Basic design principles for the rehabilitation of historic buildings and districts. Evaluating character-defining details; significance analysis; context of setting issues within historic districts; applying the Secretary of the Interior’s Standards for rehabilitation.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 629. Research in Design-Methods and Procedures. 3 Credit Hours.
Application of research methods and procedures to design issues. Historical, descriptive, analytic, experimental research methods; tools for data manipulation and communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 630. Building Technology I: Materials and Methods. 3 Credit Hours.
Material characteristics of enclosure and structural systems, case studies in traditional and modern building construction; Topics include properties of building materials: wood, masonry concrete, steel and glass construction techniques; on-site and off-site processes; exterior finishes, assemblies, detailing and basic building code concepts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 631. Building Technology II: Structural Systems. 3 Credit Hours.
Structural systems: The tectonics, patterns and behavior of the elements of building structures. Topics: Equilibrium, stability, vertical and lateral loads, building envelope and financial considerations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 632. Building Structures I. 3 Credit Hours.
The structural behavior of simple frame structures. Topics include techniques to determine basic system layout and preliminary dimensioning of key subsystems and members.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 633. Building Structures II. 3 Credit Hours.
The structural behavior of complex structures. Topics include prestressed systems, waffle and space trusses, curved structures and longspan buildings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

ARC 634. The Palazzo in Italian Architecture. 3 Credit Hours.
Study of the development of the Renaissance and Baroque palazzo in Rome and other important centers of art and culture. Emphasis on the socio-political context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 635. Historic Italian Urbanism. 3 Credit Hours.
Study of Italian cities and towns from medieval to contemporary times, including a comparative analysis of history and form.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 636. Italian Gardens. 3 Credit Hours.
Study of Italian garden design during the Renaissance, Baroque and Mannerist periods. Emphasis on historical and political context.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 637. Research in Rome. 3 Credit Hours.
An exploration of Roman history, architecture and urban form through lectures, on site study and drawing assignments. Emphasis on chronological and spatial sequence of development.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 638. Interior Architecture Design. 3 Credit Hours.
Principles and technical components of interior design. Topics include activity, analysis, finishes, furniture, fixture, lighting, and acoustics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 639. Adaptation to Climate Change. 3 Credit Hours.
Introduction to the phenomena and related discussion on the topic of climate change. Review of current scientific evidence, tactics for mitigation of emissions and other causal actions, followed by study of the adaptation required by changing conditions. Class assignments include creative proposals for adaptation action.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 640. Tropical Architecture. 3 Credit Hours.
A discussion of tropical architecture and the theme of tropicalism. Research, analysis and documentation in drawing of selected case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 641. Seminar on Town Design. 3 Credit Hours.
Introduction to the lexicon of urbanism; analytical presentations of the concepts of: region, town, neighborhood, corridor, district, and building type; inter disciplinary presentations, review, and criticism of current town and urban design projects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 642. Seminar on Housing. 3 Credit Hours.
Introduction to domestic building typology; exploration of the concepts of low, medium, and high density housing with attention to social, environmental, and economic issues; presentations of current case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ARC 643. Seminar on Retrofit of Suburbia. 3 Credit Hours.
Introduction to the critical reconstitution of the city; theory and history of the concepts of revitalization and redevelopment; presentations, review, and criticism of current case studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 644. The Architecture of Palladio. 3 Credit Hours.
On site study of the architecture and urbanism of Andrea Palladio. Emphasis on the artistic precedents of the Veneto Region.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 645. Urban Composition. 3 Credit Hours.
Survey and analytical review of urban rooms as the vessel of human activity in urban culture. Study of proportional and compositional aspects of urban rooms together with economic, social, and cultural factors. Readings and discussion format.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 646. Studies of Havana. 3 Credit Hours.
Analysis of the physical structure of a major city and its environments including an exploration of its history and iconographic themes, mapping and building studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 647. Architecture and Urban Identity. 3 Credit Hours.
Study of the relationship between architecture and urbanism focusing on the ways by which architecture provides urban identity and image of place. Case studies relating monuments, fabric and urban plans to their culture, time and place. Lecture and seminar format.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 648. Seminar in Community Development. 3 Credit Hours.
Study of the contemporary context for the development of the physical environment. Examination of public, private and third sector implementation of building and community design. Format: guest speakers, readings, discussions, and seminar.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 649. Advanced Visual Analysis. 1-3 Credit Hours.
Survey of digital and analogue representation techniques for urban designers.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 650. Professional Lecture Series. 3 Credit Hours.
Real estate transactions and deal structuring from the development perspective. Using the case study method, the course explores the key components and the disciplines needed for successful real estate transactions and projects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 651. Contemporary Theories of Architecture. 3 Credit Hours.
Theoretical basis of modern architecture and different present currents and movements. Agrarianism, technism, orthodoxy, brutalism, scientism, revivalism, consumerism, rationalism, classicism.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 652. Management of Professional Practice. 3 Credit Hours.
Overview of the practice and the profession, legal and ethical concerns, business types and management practices, traditional and non-traditional practices and services, contracts and contractual relationships, disputes and risk management.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 653. Structural Design Theory. 3 Credit Hours.
Relationship of structural systems to architectural design. Case studies in the ories of structure, form and construction.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 654. Architecture of South Florida. 3 Credit Hours.
History of architecture and human settlements. Studies of significant architectural landmarks and urban design of the South Florida Region, chronological growth of Miami, Miami Beach, Coral Gables, Key West and Palm Beach.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 655. 18th and 19th Century American Architecture and Architects. 3 Credit Hours.
The course concentrates on the development of early American architecture, Architects and Urbanism primarily but not exclusively to 17th, 18th and 19th centuries with particular emphasis on theoretical, technological and cultural developments in America.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 656. Contemporary Latin American Architecture. 3 Credit Hours.
The course seeks to examine the ways in which architecture and the built environment are shaped by, and shape, globalization. It examines the meaning of contextual modernism in the sphere of architecture and urbanism. It will discuss how acquired influences, design culture and economic dependency become the defining elements of contemporary Latin American Architecture today.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 657. Design and Fabrication Techniques. 3-6 Credit Hours.
Design, construction and detailing of wood and other materials as applied to furnishings and interiors. Workshop includes research, exercises, documentation and a final project.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 658. Theories of Landscape Architecture. 3 Credit Hours.
Leading theories of landscape architecture which have influenced current
c onsiderations of nature, landscape and design, including concerns such
as urban heat island effect, climate change resilience, and health impacts
of landscape.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 659. Sustainability and LEED Exam Prep. 1-3 Credit Hours.
Study of U.S. Green Building Council standards for environmental
efficacy in building and neighborhood design. Emphasis on fundamental
knowledge of green building concepts, including transportation, energy,
water and air quality. Includes preparation for LEED Accreditation Exam
and registration for exam that provides the credential signifying expertise
in green building and a LEED rating.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 660. Contemporary Latin American Architecture. 3 Credit Hours.
An examination of Contemporary Latin American Architecture and
Urbanism from the turn of the 20th Century to the present day. The work
of some of the great figures on Latin American Modernism such as
Niemeier and Barragan, to contemporary figures such as Paulo Mendes
da Rocha and Isay Weinfeld will be discussed. The influence of the
Modern Movement in Europe and Le Corbusier will be reviewed. Large
scale City Plans such as Lucio Costa's Plan for Brasilia and Roberto
Burle-Marx's designs for Flamengo Park and Copacabana in Rio de
Janeiro will be analyzed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 661. Building Technology I: Materials and Methods.. 3 Credit Hours.
Material characteristics of enclosure and structural systems, case
studies in traditional and modern building construction. Topics include
properties of building materials: wood, masonry concrete, steel and
glass construction tech- niques; on-site and off-site processes; exterior
finishes; assemblies, detailin g and basic building code concepts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 662. Environmental Building Systems I. 3 Credit Hours.
Environmental and Safety Systems. Topics include mechanical - HVAC
and conveyors; plumbing - fixtures and pipes; electrical - equipment and
wiring design; safety systems - fire safety and emergency and signal
systems.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 663. Environmental Building Systems II. 3 Credit Hours.
Principles and applications of light and acoustics. Topics include natural
and artificial light - planning for sunlight, problems and solutions for
interior and exterior illumination; sound - properties, problems and
solutions in new and existing spaces electrical equipment and wiring
design.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 665. Computer Modeling. 3 Credit Hours.
Three-dimensional, computer modeling, and rendering. Lecture, problem
solving exercises and laboratory.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 666. History of Architecture I. 3 Credit Hours.
Studies of the history of architecture and urban design. Focus
on religious and secular monuments and their settings, domestic
architecture and infrastructure, regional constructional and
compositional traditions from prehistory to the end of the sixteenth
century.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 667. History of Architecture II. 3 Credit Hours.
Studies of the history of architecture and urban design. Focus
on religious and secular monuments and their settings, domestic
architecture and infrastructure, regional constructional and
compositional traditions from the end of the sixteenth century through to
the present.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 669. Directed Readings. 3 Credit Hours.
A structured program of readings and essays organized by the student
and his/her graduate supervisor constituting a preparation for graduate
research in the student's chosen area of interest.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 670. Modern Architecture. 3 Credit Hours.
History of architecture, landscape, and city design in the modern era.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 671. Ancient Architecture. 3 Credit Hours.
History of architecture and human settlements. Western European
prehistoric, Egy pt, Mesopotamia, Persia, Aegean and Mediterranean,
Greece, Rome.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 672. Selected Topics in World Architecture. 3 Credit Hours.
History of architecture and human settlements. Islamic Near East, North
Africa, Hindu and Buddhist India, Nepal, S. E. Asia, China, Japan, Pre-
Columbian America.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 673. Early Christian, Byzantine, and Medieval Architecture. 3 Credit
Hours.
History of architecture and human settlements. Early Christian and
Byzantine ar chitecture in Italy, the Near East, Greece, North Africa,
Eastern Europe, Medieval architecture in Western Europe.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ARC 674. Renaissance Architecture. 3 Credit Hours.
History of architecture and human settlements. Renaissance and Baroque architecture in Italy, France, Spain and Portugal, Great Britain, Austria, Germany, and neighboring countries.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 675. Colonial Architecture. 3 Credit Hours.
History of architecture and human settlements. Iberian and British Colonies from the 16th through the 19th centuries: North and South America, Caribbean, India and Africa.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 676. 19th and 20th Century Architecture. 3 Credit Hours.
History of architecture and human settlements. America and Europe during the 19th and 20th centuries; cultural, technological and theoretical development.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 677. The Architecture of Alvar Aalto. 3 Credit Hours.
An examination of the architecture of Alvar Aalto through the analysis of selected buildings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 678. Italian Rationalist Architecture. 3 Credit Hours.
History of Italian architecture and urban design between 1914 and 1950: cultural, technological, and theoretical developments; relationship between architecture, politics and propaganda; related survey of the period in other countries (France, Germany, Soviet Union).
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 679. An Introduction to Resilient Building and Community Design. 3 Credit Hours.
This course introduces students to the relationships between climate, resiliency, architecture and urbanism; building awareness of the growing challenges and opportunities ahead, and the intersections between these disciplines. What does resilience mean in this broader context, and how should escalating stressors and shocks be addressed? Students learn about climate sciences, then research, document, and analyze evolving resilient design strategies, at the scale of buildings, neighborhoods and cities, in the end, applying those lessons to a given case study site; developing a holistic set of resilient design recommendations. During the course, students interact with specialists in the fields of architecture and urban design, as well as related fields, such as engineering, social, marine and environmental sciences, and/or policymakers, to better comprehend first-hand the interwoven scientific, social, environmental, and governmental ramifications to resilient design. Lastly, students learn the mechanics of participatory design methods employed to engage communities in related efforts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 680. Professional Advancement, Internship + Research (PAIR). 3 Credit Hours.
Research Component of PAIR program. Student, host office and faculty collaboratively develop a focused, in-depth research project related to the tasks the student is completing as part of the Internship Component of the PAIR program. Application and PAIR committee acceptance required prior to enrollment.
Components: RSC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 681. Special Problems. 1-3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: STU.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARC 682. Special Problems. 3-6 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 683. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 684. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 685. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 686. Special Problems. 3 Credit Hours.
Group or individual investigations of significant architectural issues, offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 690. History of Cities. 3 Credit Hours.
Historical overview of the origin and development of cities around the world. Emphasis on intentional form of settlements (the ideal) as well as response to economic and political imperatives such as trade and defense (the real).
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ARC 691. Housing and the Contemporary City. 3 Credit Hours.
Housing is a relatively new field and discipline, born of the complex interplay of urban development, building traditions, architectural innovation and basic human needs. The role of housing in building the city, and the role of the city in determining the shape and content of housing, will be the point of departure for this survey and seminar. The student is expected to gain an understanding of how building typology, history, urban traditions, site design, the functional issues of lifestyle and culture affect the critical issue of housing design. Simultaneously, an awareness of the role of housing design in the creation and articulation of urban space will be studied.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ARC 692. Cinema and Architecture. 3 Credit Hours.
The class studies the relationship between architecture and cinema. Lectures, film screenings, and readings, explore the origin and development of filmic space with an emphasis on its relation to the real and poetic image of the city. The class analyzes selected films as they relate to, comment, criticize, and anticipate the development of contemporary concepts of space, urban space, interior space, etc.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARC 693. Computer Animation. 3 Credit Hours.
Explores the use of computer animation and advanced visualization techniques in architecture with emphasis on texture and lighting, spatial choreography and story-boarding.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 694. Geographic Information Systems in Urban Design. 0-3 Credit Hours.
Exploration of Geographic Information Systems (GIS) in urban design. Principles of GIS and their application to spatial analysis, data management and visualization.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 695. Interactive Multimedia in Design. 3 Credit Hours.
Integration of text, video, sound, and computer graphics to create an interactive electronic information medium.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 696. Advanced Topics. 3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics will be shown in the printed class schedule, following the title ‘Advanced Topics’.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 697. Designing for the Internet of Things. 3 Credit Hours.
This course examines how current research and development in embedded computation bears on architecture, landscape, and urbanism. Students will explore the implications and impact of ubiquitous computing in its potential to change the way we conceive, construct, inhabit and interact with our buildings, landscapes, and cities.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ARC 698. Introduction to Programming for Architects. 3 Credit Hours.
As digital tools continue to play an increasing role in the Architect’s toolkit, it is becoming increasingly important that Architects not only understand how to use and navigate these tools but to customize and adapt them to their specific needs. Learning how to program allows Architects to start to fully utilize the potential in digital tools by maximizing the possibilities in not only 3D modeling and digital fabrication but in responsive architecture, embedded computation and animating spaces contributing to a more dynamic and potentially interconnected built environment.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARC 699. Directed Research. 1-6 Credit Hours.
The course addresses the issues of design as research and pre-design. Students will develop research, write a thesis statement, select a site, prepare a site documentation and site analysis, and develop an architectural program for the thesis project, select pertinent case studies and diagram them. This work will be collected and presented as both a presentation and in book form. In addition, the course prepares students for an independent design project through thoughtful development of a thesis question, site and program. The preparation of the thesis question will require the development of basic research strategies and methods, and understanding of how to find an evaluate sources, the analysis and synthesis of information, the development of a research plan and a design method, and the written and oral presentation of these skills to an outside audience.
Components: RSC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 701. Masters Final Project. 6 Credit Hours.
Individually supervised projects. Required as a 6 credit course for all Master of Architecture in Computing students electing a final project.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARC 720. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis or final project for the master’s degree after the student has enrolled for the permissible cumulative total in ARC 699 or ARC 710 (usually six credits). Credit not granted. May be regarded as full-time residence.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ARC 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THE.
Grading: GRD.
Typically Offered: Spring.

Art (ART)

ART 101. Introduction to Drawing I. 3 Credit Hours.
Contour, cross-contour, perspective, proportion, chiaroscuro, and gesture in pictorial composition.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ART 102. Introduction to Drawing II. 3 Credit Hours.
Experimentation, chance, exaggeration, movement, texture, and color in pictorial composition.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 103. Two-Dimensional Design. 3 Credit Hours.
Line, rhythm, shape, pattern, value, and color in pictorial composition.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ART 104. Intro to 3D Design. 3 Credit Hours.
A background in the elements of three-dimensional aesthetics that will broaden students' understanding and creativity in making sculptural objects. This course is the foundation for further study in sculpture, glass, and ceramics courses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ART 105. Figure Drawing. 3 Credit Hours.
Drawing the human figure: proportion, anatomy, perspective, gesture, and expressive line.
Prerequisite: ART 101.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 106. Introduction to Painting. 3 Credit Hours.
Materials and techniques of easel painting.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 107. Introduction to Drawing III. 3 Credit Hours.
Continuation of ART 101 with emphasis on Renaissance perspective and alternative systems of spatial representation. Survey of materials and methods. Introduction of color.
Prerequisite: ART 101.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ART 109. Introduction to Electronic Media. 3 Credit Hours.
Computer skills for desktop publishing and digital imaging.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 180. Studies in Studio Art. 1-3 Credit Hours.
Studio studies taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.
ART 260. Special topics in Ceramics. 3 Credit Hours.
Rotating topics course with a focus on developing modeling skills with clay through various forming methods.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 261. Hand-Built Ceramics I. 3 Credit Hours.
Beginning hand-building techniques: pinching, coiling, slab construction; introduction to glazing and firing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 262. Wheel Thrown Ceramics I. 3 Credit Hours.
Introduction to wheel throwing, glazing and firing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 263. Introduction to Glass Blowing. 3 Credit Hours.
Forming shapes and vessels from molten glass by the use of a blow pipe and glass tools.
Prerequisite: ART 104.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 268. Figure in Clay I. 3 Credit Hours.
Introduction to modeling the human figure in clay with emphasis on form, volume, proportion, basic anatomy, and gesture.
Prerequisite: ART 104 or ART 261.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 291. Graphic Design I. 3 Credit Hours.
A comprehensive approach to understanding design fundamentals and the practice of graphic communications.
Prerequisite: ART 109.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 301. Intermediate Painting I. 3 Credit Hours.
Painting in oil and acrylic. Emphasis on experimentation and creative expression.
Prerequisite: ART 202.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 302. Intermediate Painting II. 3 Credit Hours.
Painting in oil and acrylic; emphasis on experimentation and creative expression.
Prerequisite: ART 202.
Components: LEC.
Grading: GRD.

Typically Offered: Offered by Announcement Only.

ART 305. Intermediate Figure Drawing. 3 Credit Hours.
Continuation of ART 105.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 306. Special Topics in Studio Art for Undergraduate Students. 3 Credit Hours.
Course devoted to exploring new topics in studio art practice and theory, including media specific and/or inter-disciplinary approaches. Course content to be determined by instructor.
Components: STU.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 310. Intermediate Digital Photography. 3 Credit Hours.
Prerequisite: ART 210.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 311. Color Digital Photography. 3 Credit Hours.
Prerequisite: ART 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 312. Alternative Processes Photography. 3 Credit Hours.
Nineteenth Century Photographic Processes. From the Cyanotype to the Collodion Print, all in the service of creative expression.
Prerequisite: ART 311.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 315. Socially Engaged Art. 3 Credit Hours.
Contemporary art practices and the role of visual arts in creating social change, through lectures, group discussions, Individual art projects and a collaborative, hands-on community-based art project. Note: This is a new course implemented as part of the Engaged Faculty Fellows program to provide students with the opportunity for civic engagement within the context of art-making.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ART 317. Intermediate Sculpture I. 3 Credit Hours.
Incorporation of symbol and metaphor to achieve meaning, use of additional materials and technical processes.
Prerequisite: ART 217.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 318. Intermediate Sculpture II. 3 Credit Hours.
Continuation of ART 317.
Prerequisite: ART 317.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 351. Intaglio/Relief II. 3 Credit Hours.
Continuation of ART 251. Additional processes such as mezzotint, relief printing from woodblocks, multiple block printing, photographic xerox transfers and photo etching.
Prerequisite: ART 251.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 352. Lithography II. 3 Credit Hours.
Continuation of ART 252. Color printing from stones, aluminum plates and photo litho plates. Combination of lithography with other print media.
Prerequisite: ART 252.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 353. Silkscreen II. 3 Credit Hours.
Continuation of ART 253, including silkscreening on canvas, larger format work, and advanced photo silkscreen techniques.
Prerequisite: ART 253.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 354. Computer Assisted Printmaking: Lithography and Silkscreen. 3 Credit Hours.
The use of inkjet and laser printers to make positives for black and white and process color work in photo lithography; custom color separations for multiple screen printing.
Prerequisite: ART 254.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 355. History of Philosophy of Art. 3 Credit Hours.
An examination of the history of philosophical work on the arts (including literature, visual art, and music) from ancient times through the mid twentieth century.
Prerequisite: ART 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 361. Hand-Built Ceramics II. 3 Credit Hours.
Continuation of ART 261.
Prerequisite: ART 261.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 362. Wheel Thrown Ceramics II. 3 Credit Hours.
Continuation of ART 262.
Prerequisite: ART 262.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 363. Cast Glass Processes. 3 Credit Hours.
The art of cast glass including sand casting and lost wax techniques.
Prerequisite: ART 263 or ART 104.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 364. Intermediate Glass Blowing. 3 Credit Hours.
Exploration of glass working techniques.
Prerequisite: ART 264.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 368. Figure in Clay II. 3 Credit Hours.
As continuation of ART 268, this intermediate course will focus on modeling The human figure in clay with emphasis on form, volume, proportion, anatomy, and gesture.
Prerequisite: ART 268.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 391. Graphic Design II. 3 Credit Hours.
Development of form and conceptual design. Contemporary visual rhetorical strategies such as metaphors, puns, irony and methonymy.
Prerequisite: ART 291.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 392. Multimedia III. 3 Credit Hours.
Video art, multimedia, installation art and interactive animation.
Prerequisite: ART 109.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 401. Advanced Painting I. 3 Credit Hours.
Development of a personal style in painting.
Prerequisite: ART 301 and ART 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 402. Advanced Painting II. 3 Credit Hours.
Continuation of ART 401.
Prerequisite: ART 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 405. Advanced Figure Drawing. 3 Credit Hours.
Continuation of ART 305.
Prerequisite: ART 305.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ART 406. Special Topics in Studio Art for Undergraduate Students. 3 Credit Hours.
Course devoted to exploring new topics in studio art practice and theory, including media specific and/or inter-disciplinary approaches. Course content to be determined by Instructor.
Components: STU.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 407. Special Topics: Renaissance and Baroque Art. 3 Credit Hours.
Seminar on changing topics in Renaissance and Baroque Art. Prerequisite: ARH 132.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 410. Advanced Digital Photography I. 3 Credit Hours.
Development of a personal style in digital imaging. Course is designed for students to pursue a semester long thematic project. Prerequisite: ART 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 411. Experimental Photography. 3 Credit Hours.
Course content determined by faculty member teaching it from studio lighting class to the Artist Book Project. May be repeated for credit. Prerequisite: ART 311.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 417. Advanced Sculpture I. 3 Credit Hours.
Individual and collaborative installation and site-specific art. Prerequisite: ART 317.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 418. Advanced Sculpture II. 3 Credit Hours.
Development of a personal visual vocabulary. Prerequisite: ART 417.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 451. Intaglio/Relief Ill. 3 Credit Hours.
Continuation of ART 351. Prerequisite: ART 351.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 452. Lithography Ill. 3 Credit Hours.
Continuation of ART 352. Prerequisite: ART 352.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 453. Silkscreen Ill. 3 Credit Hours.
Continuation of ART 353. Prerequisite: ART 353.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 454. Computer Assisted Printmaking: Intaglio and Relief. 3 Credit Hours.
Continuation of ART 354, photo etching and relief processes. Prerequisite: ART 354.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 462. Advanced Ceramics. 3 Credit Hours.
Development of expressive skills in either handbuilding or wheel throwing techniques. Prerequisite: ART 361 or ART 362.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 468. Figure in Clay Ill. 3 Credit Hours.
As continuation of ART 368, this advanced course will focus on modeling the human figure in clay with emphasis on form, volume, proportion, anatomy, gesture and expressive handling of clay. Prerequisite: ART 368.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 491. Graphic Design III. 3 Credit Hours.
Advanced page layout coupled with extensive use of typography with applications in page design for advertising and collateral projects. Prerequisite: ART 391.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 493. Illustration. 3 Credit Hours.
Contemporary illustration for print, new media, portfolio and exhibition. Prerequisite: ART 393.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 499. Honors Thesis. 3-6 Credit Hours.
Formal thesis and project including an exhibition supervised by member of the department faculty. Prerequisite: ART 401.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 501. Advanced Painting III. 1-6 Credit Hours.
Course content decided between student and professor. Prerequisite: ART 402.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 502. Advanced Painting IV. 1-6 Credit Hours.
Continuation of ART 501. Prerequisite: ART 501.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ART 503. Advanced Painting V. 1-6 Credit Hours.
Course content decided between student and professor. An independent study course may be repeated.
Prerequisite: ART 502.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 504. Advanced Painting VI. 1-6 Credit Hours.
Course content decided between student and professor. An Independent Study course may be repeated.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 505. Advanced Painting VII. 1-6 Credit Hours.
Current readings and/or technical concerns not covered in the regular curriculum. Course content will vary each semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 506. Special Topics in Studio Art for Undergraduate Students. 3 Credit Hours.
Course devoted to exploring new topics in studio art practice and theory, including media specific and/or inter-disciplinary approaches. Course content to be determined by instructor.
Components: STU.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 509. Independent Study in Other Media. 1-6 Credit Hours.
Course content decided between student and professor. Independent study course may be repeated.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 510. Advanced Digital Photography 2. 3 Credit Hours.
Course content decided between student and professor. May NOT be repeated for credit.
Prerequisite: ART 410.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 511. Advanced Digital Photography 3. 3 Credit Hours.
Continuation of ART 510. May NOT be repeated for credit.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 512. Independent Study in Photography. 1-6 Credit Hours.
Course content decided between student and professor. An independent study course may be repeated.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 517. Advanced Sculpture III. 3 Credit Hours.
Examination of ongoing work in relationship to historical and contemporary interpretations issues.
Prerequisite: ART 418.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 518. Advanced Sculpture IV. 3 Credit Hours.
Continuation of ART 517.
Prerequisite: ART 517.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 551. Intaglio/Relief IV. 3 Credit Hours.
Advanced work in intaglio/relief processes: course requirements decided between student and professor.
Prerequisite: ART 451.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 552. Lithography IV. 3 Credit Hours.
Advanced work in lithography: course requirements decided between student and professor.
Prerequisite: ART 452.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 553. Silkscreen IV. 3 Credit Hours.
Advanced work in silkscreen.
Prerequisite: ART 453.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 554. Computer Assisted Printmaking. 3 Credit Hours.
Advanced work in computer assisted printmaking; course requirements decided between student and professor.
Prerequisite: ART 454.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 555. Topics in Printmaking. 1-6 Credit Hours.
Current readings and/or technical concerns not covered in the regular curriculum. Course content will vary each semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 562. Contemporary Ceramic Art. 3 Credit Hours.
Development of artistic style and technical abilities in relation to contemporary trends in ceramic art.
Prerequisite: ART 462.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 563. Independent Study in Ceramics/Glass. 1-6 Credit Hours.
Course content decided between student and professor. An independent study course may be repeated.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ART 564. Directed Research and Projects in Ceramics/Glass. 3 Credit Hours.
Historical to contemporary approach to ceramics; furthering of the technical ability, and development of artistic style.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 591. Portfolio/Business of Design. 3 Credit Hours.
Individually supervised graphic design portfolio. Professional practices in design.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 592. Special Projects/Multimedia/Portfolio. 3 Credit Hours.
Video Art, print design, illustration or multimedia portfolio preparation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 593. Seminar in Professional Practices. 1-6 Credit Hours.
Advanced course with a required placement in a professional design or multimedia setting. Classroom sessions on professional topics and issues. Portfolio required.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 599. Exhibition Preparation. 3 Credit Hours.
A seminar class devoted to the preparatory work needed to plan and promote a solo exhibition, including installation/lighting concerns. Preliminary written assignments will also be given in preparation for ART 710 Thesis.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 602. Advanced Painting iX. 1-6 Credit Hours.
Continuation of ART 601.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 603. Problems in Studio Art. 1-6 Credit Hours.
Course content will be decided in conference between candidate and instructor. This course may be repeated for credit.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 604. Seminar in Studio Art. 3 Credit Hours.
Special topics in selected area of studio art.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ART 606. Special Topics in Studio Art for Graduate Students. 3 Credit Hours.
Course devoted to exploring new topics in studio art practice and theory, including media specific and/or inter-disciplinary approaches. Course content to be determined by Instructor.
Components: STU.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 609. Independent Study in Other Media. 1-6 Credit Hours.
Course content decided between student and professor. Independent study course may be repeated.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 630. Graduate Digital Photography I. 1-6 Credit Hours.
Advance Digital Photography Course: Content decided between student and professor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 631. Graduate Digital Photography II. 1-6 Credit Hours.
Advance Digital Course: Content decided between student and professor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 632. Graduate Independent Study in Photography. 1-6 Credit Hours.
Independent Study in Photography: Content decided between student and professor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 633. Graduate Digital Photography III. 1-6 Credit Hours.
Content decided in conference between candidate and instructor. Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 634. Graduate Digital Photography IV. 1-6 Credit Hours.
Continuation of ART 610.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 641. Graduate Painting I. 1-6 Credit Hours.
Self-directed study in consultation with instructor. Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 642. Graduate Painting II. 1-6 Credit Hours.
Self-directed study in consultation with instructor. Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 643. Graduate Painting III. 1-6 Credit Hours.
Self-directed study in consultation with instructor. Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ART 644. Graduate Painting IV. 1-6 Credit Hours.
Self-directed study in consultation with instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 645. Graduate Painting V. 1-6 Credit Hours.
Self-directed study in consultation with instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 646. Advanced Painting VIII. 1-6 Credit Hours.
Professional and concentrated experiences in media and subject matter decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 651. Intaglio/Relief. 1-6 Credit Hours.
Advanced intaglio/relief processes: course requirements decided between candidate and professor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 652. Lithography. 1-6 Credit Hours.
Advanced lithography. Course requirements decided between candidate and professor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 653. Silkscreen. 1-6 Credit Hours.
Advanced work in silkscreen.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 655. Topics in Printmaking. 1-6 Credit Hours.
Current readings and/or technical concerns not covered in the regular curriculum.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 663. Portfolio/Business of Design. 3 Credit Hours.
Individually supervised graphic design portfolio. Professional practices in design.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 664. Special Projects/Multimedia/Portfolio. 1-6 Credit Hours.
Video Art, print design, illustration or multimedia portfolio preparation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ART 665. Graphic Design. 3 Credit Hours.
Advanced graduate projects in graphic design.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 666. Multimedia. 3 Credit Hours.
Advanced graduate projects in multimedia.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 667. Experimental Illustration for Print and Interactive Media. 3 Credit Hours.
Exploration and innovation of contemporary illustration and digital publishing. Research and practice of new styles of international illustration for print and interactive media.
Prerequisite: ART 663 or ART 665.
Components: STU.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 671. Graduate Sculpture I. 1-6 Credit Hours.
Examination of ongoing work in relationship to historical and contemporary interpretations issues.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 672. Graduate Sculpture II. 1-6 Credit Hours.
Continuation of ART 671. Content decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 673. Graduate Sculpture III. 1-6 Credit Hours.
Content decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 674. Graduate Sculpture IV. 1-6 Credit Hours.
Continuation of ART 673. Content decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 675. Graduate Sculpture V. 1-6 Credit Hours.
Content decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 676. Graduate Sculpture VI. 1-6 Credit Hours.
Content decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ART 681. Writing About Art. 3 Credit Hours.
Writing about art on a professional level.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ART 682. Contemporary Ceramic Art I. 1-6 Credit Hours.
Development of artistic style and technical abilities in relation to contemporary trends in ceramic art.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 683. Contemporary Ceramic Art II. 1-6 Credit Hours.
Development of artistic style and technical abilities in relation to contemporary trends in ceramic art.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 684. Contemporary Ceramics Art III. 1-6 Credit Hours.
Content to be decided in conference between candidate and instructor.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 685. Contemporary Ceramics Art IV. 1-6 Credit Hours.
Continuation of ART 661.
Grading: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 686. Contemporary Ceramic Art V. 1-6 Credit Hours.
Continuation of ART 685: Contemporary Ceramic Art IV
Prerequisite: ART 685.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 687. Contemporary Ceramic Art VI. 1-6 Credit Hours.
Continuation of ART 686: Contemporary Ceramic Art V
Prerequisite: ART 686.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 688. Independent Study in Ceramics/Glass. 1-6 Credit Hours.
Theory, history and practice of Video Art and contemporary documentary film and their various manifestations. Creation of conceptual videos for exhibition, web and interactive media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 689. Directed Research and Projects in Ceramics/Glass. 3 Credit Hours.
Historical to contemporary approach to ceramics; furthering of the technical ability, and development of artistic style.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 693. Seminar in Professional Practices. 1-6 Credit Hours.
Advanced course with a required placement in a professional design or multimedia setting. Classroom sessions on professional topics and issues. Portfolio required.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 699. Exhibition Preparation. 3 Credit Hours.
A seminar class devoted to the preparatory work needed to plan and promote a solo exhibition, including installation/lighting concerns. Preliminary written assignments will also be given in preparation for ART 810 Thesis.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ART 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

ART 820. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis for the master's degree after the student has enrolled for the permissible cumulative total in ART 810 (usually six credits). Credit not granted. May be regarded as full time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

Art History (ARH)

ARH 131. Survey of Western Art I. 3 Credit Hours.
The art of western cultures from pre-history through the Middle Ages.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARH 132. Survey of Western Art II. 3 Credit Hours.
The art of western cultures from the Renaissance through the 20th century.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ARH 207. History of Photography. 3 Credit Hours.
A study of photography as a visual medium of expression and communication: a chronological examination of its origins, styles and uses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring.

ARH 220. Student Docent Practicum at the Lowe Art Museum. 1 Credit Hour.
Students gain hands-on training and practical experience on becoming a museum docent.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ARH 225. Introduction to Museum Studies. 3 Credit Hours.  
An introductory study of the practices and methodologies that shape and guide curatorial studies within the context of museums and similar institutions.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 250. Special Topics in Non-European Art. 3 Credit Hours.  
Special topics in Non-European art.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 260. Islamic Art. 3 Credit Hours.  
Islamic art from the 7th to the 17th century including architecture, manuscript illumination, textiles, ceramics, and small-scale luxury objects. Study of Islam as a religious and political entity showing how the Islamic world defined itself in cultural creation.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Fall.

ARH 270. Spanish Art. 3 Credit Hours.  
A chronological study from prehistory to the present, addressing significant periods in Spanish art history, and establishing the unique characteristics of this art. How the effects of historical conditions (Islamic presence on the peninsula, American colonies, Franco) have defined Spain as distinct from its European neighbors.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 320. Aesthetics and Meaning in African Art and Cultures. 3 Credit Hours.  
This course is designed to historically, materially, artistically, and politically engage the diversity of artistic production and cultural life on the African continent.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Fall & Spring.

ARH 321. Andean Art. 3 Credit Hours.  
South American art from formative times through the Incan empire and the Spanish conquest (A.D. 1521).  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 325. Museum Studies Internship. 3 Credit Hours.  
The Museum Studies internship is an independent study course in which the student works on educational projects or programs in a museum.  
Components: FL.  
Grading: GRD.  
Typically Offered: Fall & Spring.

ARH 326. Art of Japan. 3 Credit Hours.  
The Arts of South Asia with selections from India and Thailand.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Fall & Spring.

ARH 327. Art of China. 3 Credit Hours.  
The Art of East Asia with selections from China, Korea, and Japan.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Fall & Spring.

ARH 332. Greek Art. 3 Credit Hours.  
The art of ancient Greek civilization.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 333. Roman Art. 3 Credit Hours.  
Roman art from the 1st century B.C. through the 4th century A.D.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 335. Early Christian and Byzantine Art. 3 Credit Hours.  
Christian art from the second through the fifteenth centuries in Rome and the Byzantine Empire.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 336. Medieval Art. 3 Credit Hours.  
Western European art from the 4th through the 12th century.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 337. Italian Renaissance Art. 3 Credit Hours.  
The painting, sculpture, and architecture of Florence in the 15th century.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 338. Sixteenth Century Italian Art. 3 Credit Hours.  
The painting, sculpture, and architecture of Italy in the 16th century.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 339. Northern Renaissance Art. 3 Credit Hours.  
The painting of France and the Netherlands in the 14th and 15th centuries.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 340. Baroque Art. 3 Credit Hours.  
Art and architecture of the seventeenth century, focusing on major cultural centers in Europe and the Americas.  
Prerequisite: ARH 132.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.

ARH 341. Eighteenth-Century European Art. 3 Credit Hours.  
European art from 1700-1820, including Rococo and Neoclassicism, ending with Goya in Spain.  
Prerequisite: ARH 132.  
Components: LEC.  
Grading: GRD.  
Typically Offered: Offered by Announcement Only.
ARH 342. Nineteenth-Century European Art. 3 Credit Hours.
Neo-Classicism, Romanticism, Realism, Impressionism, 1760-1900.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 343. Modern Art. 3 Credit Hours.
Cezanne to Surrealism. Primarily European Art c. 1880-1940 in the context of the development of Modernism and its aesthetic theories.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 344. Contemporary Art. 3 Credit Hours.
American and European Art from the Second World War to the present in its social, political, and theoretical contexts.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARH 345. Contemporary Art in American Culture. 3 Credit Hours.
A critical survey of visual art practices from the 1950s to the present within the United States. By analyzing the multiple legacies of the early avant-garde, the role of nationalism, and the development of the global art market, this course will consider the social, political, and philosophical questions raised by postmodernism and its formative influence on American art after WWII.
Prerequisite: ARH 131 or ARH 132.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARH 346. History of Graphic Design. 3 Credit Hours.
Evolution of Graphic Design from the invention of writing through the twentieth century concentrating on contemporary themes and technical innovations.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARH 347. Special Topics in Art History. 3 Credit Hours.
Changing topics in Western and non-Western art that focus on a specific movement, style, or artist.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 349. Special Topics in Art and the Law. 3 Credit Hours.
Changing topics on the relationship between art and law, with a particular focus on policy and the art world.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 357. Critical Issues in the History Photography. 3 Credit Hours.
The history and theory of photography in visual culture and an exploration of debates regarding how this medium of mass communication has transformed our perceptions and conceptions of art, society, and culture over the past two centuries.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 360. Art and Cinema. 3 Credit Hours.
Exploration of the relationship between art, art history, and cinema.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 365. Latin American Modernism. 3 Credit Hours.
The art and theories of Latin American Modernism.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 385. Studies in Art History. 1-3 Credit Hours.
Art History studies taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

ARH 405. Special Topics in Medieval Art. 3 Credit Hours.
Changing topics in Medieval Art.
Prerequisite: ARH 131.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 408. Special Topics in Modern Art. 3 Credit Hours.
Seminar on changing topics in Modern Art.
Prerequisite: ARH 132.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 409. Special Topics in Contemporary Art. 3 Credit Hours.
Seminar on changing topics in contemporary art.
Prerequisite: ARH 132.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 411. Special Topics: Museum Studies. 3 Credit Hours.
Seminar on changing topics in Museum studies.
Prerequisite: ARH 225. Requisite: Two additional art history courses.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 420. Cuban Art, Art History, and the Creation of the Modern Cuban Subject. 3 Credit Hours.
This seminar focuses on the fine art, visual culture, and performance history of Cuba during the 19th and 20th centuries.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 450. Seminar in Methodology and Theory in the History of Art. 3 Credit Hours.
Basic methodologies that inform the discipline of art history and an introduction to the key authors and ideas that have shaped and continue to shape how critics and art historians write about art.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ARH 505. Problems in Art History. 3 Credit Hours.
A means by which the student of advanced standing may investigate areas of a specialized nature, or those which are not offered as a regular part of the curriculum. Course content will be decided in joint conference between student and instructor.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 506. Problems in Art History. 3 Credit Hours.
A means by which the student of advanced standing may investigate areas of a specialized nature, or those which are not offered as a regular part of the curriculum. Course content will be decided in joint conference between student and instructor.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 507. Museum Studies Seminar. 3 Credit Hours.
The museum as an institution and as a site for the construction of knowledge. Students will also explore the relationship between museums and academia.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 508. Museum Exhibition. 3 Credit Hours.
Organizing an art museum exhibition, and participating in the installation. Writing and composing the catalogue.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 509. Museum Internship. 1-3 Credit Hours.
UM sponsored internship with Miami-area museum.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 510. Arts Administration Internship. 1-3 Credit Hours.
UM sponsored internship with Miami-area arts institution.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 511. Artlab @ the Lowe. 3 Credit Hours.
Organizing an art exhibition at the Lowe Art Museum. Taught by a different faculty member each year.
Prerequisite: ARH 131 and ARH 132.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARH 530. Seminar in Art History. 3 Credit Hours.
Special topics in western and nonwestern art. Semester's topic will be announced.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 540. History of Museums and Collecting. 3 Credit Hours.
History of museums and collecting practices in western Europe and the United States from the sixteenth to the twentieth century.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 560. Seminar in Nineteenth and Twentieth Century Art. 3 Credit Hours.
Special topics including museum practices and theory, women's art and contemporary issues.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 570. Seminar in Non-European Art. 3 Credit Hours.
Special Topics in Non-European Art.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 598. Seminar in Contemporary American Art. 3 Credit Hours.
Issues in Art since 1960: Aesthetic theories and ideological issues generated in contemporary art as expressed in the writing of artists and art critics.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ARH 605. Problems in Art History. 3 Credit Hours.
Students conduct independent, graduate research on an art historical topic approved by faculty.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 606. Problems in Art History. 3 Credit Hours.
Students conduct independent, graduate research on an art historical topic approved by faculty.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 607. Museum Studies Seminar. 3 Credit Hours.
The museum as an institution and as a site for the construction of knowledge. Students will also explore the relationship between museums and academia.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 608. Museum Exhibition. 3 Credit Hours.
Organizing an art museum exhibition, and participating in the installation. Writing and composing the catalogue.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 609. Museum Internship. 3 Credit Hours.
UM sponsored internship with Miami-area museum.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ARH 610. Arts Administration Internship. 1-3 Credit Hours.
UM sponsored internship with Miami-area arts institution.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.
ARH 611. Artlab @ the Lowe. 3 Credit Hours.
Organizing an art exhibition at the Lowe Art Museum. Taught by a different faculty member each year.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ARH 630. Seminar in Art History. 3 Credit Hours.
Special topics in western and nonwestern art. Semester’s topic will be announced.
Components: LEC.
Grading: GRD.

ARH 640. History of Museums and Collecting. 3 Credit Hours.
History of museums and collecting practices in western Europe and the United States from the sixteenth to the twentieth century.
Components: SEM.
Grading: GRD.

ARH 650. Seminar in Theory and Methodology in the History of Art. 3 Credit Hours.
Basic methodologies that inform the discipline of art history and an introduction to the key authors and ideas that have shaped and continue to shape how critics and art historians write about art.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 660. Seminar in Nineteenth and Twentieth Century Art. 3 Credit Hours.
Special topics including museum practices and theory, women’s art and contemporary issues.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 670. Seminar in Non-European Art. 3 Credit Hours.
Special Topics in Non-European Art.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ARH 698. Seminar in Contemporary Art. 3 Credit Hours.
Issues in Art since 1960: Aesthetic theories and ideological issues generated in contemporary art as expressed in the writing of artists and art critics.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ARH 810. Master’s Thesis. 1-6 Credit Hours.
The student working on his/her master’s thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

ARH 820. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis for the master’s degree after the student has enrolled for the permissible cumulative total in ARH 710 (usually six credits). Credit not granted. May be regarded as full time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

Atmospheric Science (ATM)

ATM 102. Introduction to Weather and Climate. 3 Credit Hours.
The structure, physics, dynamics and thermodynamics of the atmosphere. Weather, weather forecasting, climate and climate change.
Components: LEC.
Grading: GRD.

ATM 243. Weather Forecasting. 3 Credit Hours.
Application of physical principals to weather forecasting. Use interpretation of computer-generated forecast guidance products of the U.S. Weather Service.
Prerequisite: ATM 103 or MSC 103 and MTH 108 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 244. Tropical Weather and Forecasting. 3 Credit Hours.
Introduction to tropical weather systems, with an emphasis on hurricanes, and syntheses of observational data and numerical model predictions to create forecasts
Prerequisite: ATM 103 and ATM 243.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 265. Atmospheric Chemistry. 3 Credit Hours.
ATM 265 is focused on those aspects of environmental chemistry of most relevance to meteorology students. The class fulfills the American Meteorological Society (AMS) chemistry expectations for a Bachelor’s Degree in Meteorology, and in addition, addresses further recommendations from the AMS. AMS expects knowledge of atomic structure and chemical bonding, and, of the properties of gases. Recommended ‘beyond the basics’ goals include air quality and environmental science applications.
Prerequisite: ATM 103.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ATM 303. Meteorological Instrumentation and Observation. 3 Credit Hours.
Techniques for measuring meteorological variables at the ground and in the free atmosphere.
Prerequisite: ATM 103, and PHY 101 or PHY 205 or PHY 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 305. Atmospheric Thermodynamics. 3 Credit Hours.
Equation of state; water vapor and moist air thermodynamics; phase changes and latent heat; buoyancy and atmospheric convection; thermodynamic diagrams.
Prerequisite: PHY 201 or PHY 205.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 306. Advanced Principles in Broadcasting Meteorology. 3 Credit Hours.
Broadcast meteorology including the production of professional weather briefings and weather news for on camera delivery. Emphasis on accurately communicating complex meteorological concepts, use of computer graphics, and on-camera delivery.
Prerequisite: ATM 103 and ATM 243.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 307. Introduction to the Physics of Climate. 3 Credit Hours.
The Physical mechanisms which govern the earth’s climate and climate variability.
Prerequisite: ATM 305 or MSC 305.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 321. Scientific Programming in the Atmospheric Sciences. 3 Credit Hours.
An introduction to scientific programming in a linux environment using the FORTRAN 90/95 language with specific applications to Meteorology.
Prerequisites: CSC 120.
Prerequisite: CSC 120 or MSC 203.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 371. Readings in Atmospheric Science. 1-2 Credit Hours.
Library research with faculty supervision. Bibliography to be submitted in preparation for laboratory and/or field research project.
Components: DIS.
Grading: GRD.
Typically Offered: Fall & Spring.

ATM 405. Atmospheric Dynamics I. 3 Credit Hours.
Derivation and scaling of the equations of atmospheric motion; hydrostatic and geostrophic balance; circulation and vorticity.
Prerequisite: ATM 305 (or MSC 305) and MTH 310 or MTH 211.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 406. Atmospheric Dynamics II. 3 Credit Hours.
Baroclinic and barotropic instability; boundary layer dynamics; mathematical principles of numerical weather prediction; maintenance of the general circulation.
Prerequisite: MSC 405 or ATM 405.
Components: LEC.
Grading: GRD.

ATM 407. Weather Analysis. 4 Credit Hours.
Three-dimensional analysis of synoptic-scale weather systems; application of the fundamental laws of atmospheric dynamics to observed weather patterns; practical questions of worldwide data exchange and display.
Prerequisite: ATM 305 or MSC 305.
Components: LEC.
Grading: GRD.

ATM 411. Research in Atmospheric Science. 1-3 Credit Hours.
Individual, independent research projects with faculty supervision. A formal written report is required that satisfies signed contract with faculty supervisor.
Requisite: Junior or Senior Standing.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ATM 412. Undergraduate Thesis in Atmospheric Science. 1 Credit Hour.
Students will write a formal thesis summarizing the results of independent research carried out under faculty supervision.
ATM 411 AND Senior Standing.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 511. Geophysical Fluid Dynamics I. 3 Credit Hours.
The basic equations of state, continuity, and motion. Topics include wave motions, group velocity, theory of stratified fluids and internal waves turbulence.
Components: LEC.
Grading: GRD.

ATM 532. Broadcast Meteorology. 3 Credit Hours.
Students will learn the proper techniques involved in preparing and presenting a complete and professional weathercast with a heavy emphasis on communication skills, computer graphics, and on-camera delivery.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ATM 533. Atmospheric Boundary Layer. 3 Credit Hours.
The boundary layer is the lowest 1-2 km of the atmosphere, where we live. It is necessary to understand boundary layer processes to pursue research in clouds and radiation, weather and climate, air/sea/land interaction, and chemistry of the lower atmosphere. In this course, students will learn the basic physical concepts, from observational, theoretical and modeling perspectives.
Requisite: Senior Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 534. Introduction to Atmospheric Chemistry. 3 Credit Hours.
This course covers the basic principles of atmospheric chemistry. Concepts taught will include gas phase reactions, the production and destruction of ozone, aerosol size and composition.
Requisite: Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ATM 536. Hurricanes. 3 Credit Hours.
This course is intended to provide a broad overview of tropical cyclones, starting from the basic structure, dynamics and thermodynamics, then expanding through to observations, modeling, forecasting and impacts.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 537. Natural Hazards: Atmosphere and Ocean. 3 Credit Hours.
This course is designed to provide students with an understanding of natural hazards in both the atmosphere and ocean. In the atmosphere, we will explore both weather events such as storms and hurricanes and tornadoes as well as longer term phenomena such as monsoons and excess rainfall in the tropics. Oceanographically, the course will address hazards such as storm surge and flooding, rogue waves, rip currents, and tsunamis that occur on short time scales as well as the longer term effects such as sea level rise and the impacts of El Niño and La Niña oceanographic conditions on weather conditions. Thus, the course focus is on hazards and their impacts around the globe.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 553. Climate Change. 3 Credit Hours.
Overview of the physical processes which regulate the earth's climate and response to forcing.
1 year of Calculus 1 year Physics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 554. Climate Variability. 3 Credit Hours.
This class will cover the physical mechanisms that govern the earth's climate and climate variability. It is intended for beginning graduate students in marine and atmospheric science, and upper-level undergraduate physical science students.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 562. Advanced Weather Forecasting. 3 Credit Hours.
Students will learn the skills needed in researching and preparing a professional weather forecast. There is a plethora of forecast resources available online. Students will learn about using these forecast resources and share resources of their own. Specifically, we will cover topics such as the basics of atmospheric meteorology, large and small scale weather forecasting, operational weather forecasting, tropical weather, severe weather, nor'easters, lake effect snow, oscillations and various other weather phenomena. During the course of the semester a couple of Guest speakers in various parts of the field will visit to discuss relevant topics.
Prerequisite: ATM 243 and ATM 305 and ATM 405.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 563. Mesoscale Meteorology and Severe Storms. 3 Credit Hours.
Course topics include the structure and dynamics of clouds, thunderstorms, and mesoscale convective systems, radar and satellite observations of clouds and precipitation, severe storm forecasting, mesoscale disturbances, frontal and orographic clouds, and precipitation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 581. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 582. Special Topics. 3 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 583. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 584. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 585. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 611. Geophysical Fluid Dynamics I. 3 Credit Hours.
The basic equations of state, continuity, and motion. Topics include wave motions, group velocity, theory of stratified fluids and internal waves turbulence.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ATM 614. Introduction to Weather and Climate. 3 Credit Hours.
This course will cover the structure, physics, dynamics and thermodynamics of the atmosphere; including weather analysis, weather forecasting, climate and climate change. Contemporary topics covered in this class will include global warming, the ozone hole, hurricanes, thunderstorms and other severe weather phenomena.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 624. Applied Data Analysis. 3 Credit Hours.
The course is intended to jump-start students in strategies for fruitful computer interaction practices for careers in MPO areas of science. Academic topics include key concepts in probability & statistics, issues of graphical evidence and inference, linear models and regression, spectral analysis, and matrix decomposition. Practical topics include hands-on exercises in data analysis and the sharing of code/results and interpretation. Students do projects on data from their research or interests.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 632. Broadcast Meteorology. 3 Credit Hours.
Students will learn the proper techniques involved in preparing and presenting a complete and professional weathercast with a heavy emphasis on communication skills, computer graphics, and on-camera delivery.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 633. Atmospheric Boundary Layer. 3 Credit Hours.
The boundary layer is the lowest 1-2 km of the atmosphere, where we live. It is necessary to understand boundary layer processes to pursue research in clouds and radiation, weather and climate, air/sea/land interaction, and chemistry of the lower atmosphere. In this course, students will learn the basic physical concepts, from observational, theoretical and modeling perspectives.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 634. Introduction to Atmospheric Chemistry. 3 Credit Hours.
This course covers the basic principles of atmospheric chemistry. Concepts taught will include gas phase reactions, the production and destruction of ozone, aerosol size and composition.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 636. Hurricanes. 3 Credit Hours.
This course is intended to provide a broad overview of tropical cyclones, starting from the basic structure, dynamics and thermodynamics, then expanding through to observations, modeling, forecasting and impacts.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 637. Natural Hazards: Atmosphere and Ocean. 3 Credit Hours.
This course is designed to provide students with an understanding of natural hazards in both the atmosphere and ocean. In the atmosphere, we will explore both weather events such as storms and hurricanes and tornadoes as well as longer term phenomena such as monsoons and excess rainfall in the tropics. Oceanographically, the course will address hazards such as storm surge and flooding, rogue waves, rip currents, and tsunamis that occur on short time scales as well as the longer term effects such as sea level rise and the impacts of El Niño and La Niña oceanographic conditions on weather conditions. Thus, the course focus is on hazards and their impacts around the globe.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 651. Introduction to Atmospheric Dynamics. 3 Credit Hours.
This course surveys the dynamics of atmospheric flow and the physically-grounded description and depiction of weather phenomena. It is intended to serve as core preparation for incoming PhD students whose research will be dynamical, while also serving as an accessible overview for students in other subdisciplines. For these reasons, it stresses phenomena and the essentials of our physical discourses about them (emphasizing useful approximations and lucid treatments), with enough exposure to the underlying full-complexity fundamentals to facilitate more advanced study in the future.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 652. Introduction to Atmospheric Physics. 3 Credit Hours.
The goal of this class is to develop an understanding of the fundamental physical processes governing cloud behavior and atmospheric radiative transfer, including atmospheric thermodynamics. The class will focus on processes with temporal scales of one day or less, and spatial scales of 1km or less, and will recognize the links to weather and climate, or through the student presentations. Students will learn about: cloud formation, lifetime, and dissipation, and how clouds interact with the aerosol, thermodynamic, and dynamic environments; about how clouds and clear skies interact with sunlight and infrared. This course is split into two sections: the first half will cover thermodynamics and cloud physics, and the second half will cover atmospheric radiation. Guest lectures by advanced graduate students and postdoctoral research associates will introduce students to current research areas.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 653. Climate Change. 3 Credit Hours.
Overview of the physical processes which regulate the earth's climate and response to forcing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 654. Climate Variability. 3 Credit Hours.
This class will cover the physical mechanisms that govern the earth's climate and climate variability. It is intended for beginning graduate students in marine and atmospheric science, and upper-level undergraduate physical science students.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
ATM 660. Tropospheric Chemistry I. 3 Credit Hours.
Process-Oriented lower atmospheric chemistry. Topics include photochemical oxidant formation, nighttime chemistry, air-sea exchange, cloud droplet and aerosol reactions, physical properties of aerosols, and transport properties of the troposphere.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 662. Advanced Weather Forecasting. 3 Credit Hours.
Students will learn the skills needed in researching and preparing a professional weather forecast. There is a plethora of forecast resources available online. Students will learn about using these forecast resources and share resources of their own. Specifically, we will cover topics such as the basics of atmospheric meteorology, large and small scale weather forecasting, operational weather forecasting, tropical weather, severe weather, nor’easters, lake effect snow, oscillations and various other weather phenomena. During the course of the semester a couple of Guest speakers in various parts of the field will visit to discuss relevant topics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 663. Mesoscale Meteorology and Severe Storms. 3 Credit Hours.
Course topics include the structure and dynamics of clouds, thunderstorms, and mesoscale convective systems, radar and satellite observations of clouds and precipitation, severe storm forecasting, mesoscale disturbances, frontal and orographic clouds, and precipitation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 681. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 682. Special Topics. 3 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 683. Special Topics. 1-4 Credit Hours.
Lectures, special projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 684. Special Topics. 1-4 Credit Hours.
Lectures, special projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 685. Special Topics. 1-4 Credit Hours.
Lectures, research projects or directed readings in special topics related to Atmospheric Sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ATM 701. Seminar in Atmospheric Sciences. 1 Credit Hour.
Oral presentation of research and special topics by students, faculty, and visiting scientists.
Components: SEM.
Grading: SUS.
Typically Offered: Fall & Spring.

ATM 711. Geophysical Fluid Dynamics II. 3 Credit Hours.
The focus of this course is on the effects of stratification, on time variable phenomena, and on the interaction between large-scale circulation and mesoscale eddies. Course topics include quasi geostrophic scale analysis, Rossby waves, barotropic and baroclinic instability, wave-mean flow interaction and non-geostrophic waves.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 713. Predictability. 3 Credit Hours.
Introduction to concepts of predictability and error growth, beginning from the seminal papers of Ed Lorenz, and expanding into state estimation, data assimilation, forecast sensitivity and ensemble prediction.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 716. Lagrangian Fluid Dynamics and Predictability. 3 Credit Hours.
The ash cloud produced by the eruption of Eyjafjallajokull in Iceland, the oil spill produced by the explosion of the Deepwater Horizon drilling rig in the Gulf of Mexico, and release of debris and radioactive contamination into the Pacific Ocean after the Fukushima nuclear reactor was hit by the Tohoku tsunami, are examples of events that have caused considerable impact to the environment. They all represent problems in Lagrangian ocean or atmospheric dynamics in which predicting where the material released into the environment will be transported by the ocean currents or winds is critical. A common approach to predict the outcome of an event like the above is to run an ocean or atmosphere circulation model simulations and then integrate the resulting velocity fields from a given release location to predict pollutant trajectories. An important drawback of such an approach is that the predictions are highly sensitive to small changes in the release time and location. Attempts to cope with the sensitivity to initial conditions include running several different models for the same scenario, but this typically leads to even larger distributions of advected tracers, hiding the key organizing structures of the flow. Improved understanding and forecasting requires novel notions and techniques capable of casting light on why material is transported the way it is by a given flow. The goal of this course is acquaint the student with a series of recent developments originated at the interface of nonlinear dynamics and fluid dynamics that have led to a number of novel such notions and techniques.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 731. Air-Sea Interaction. 3 Credit Hours.
Oceanic and atmospheric mixed layers including fluxes of heat, momentum, moisture and salt between the ocean and atmosphere; vertical distribution of energy sources and sinks at the interface including the importance of surface currents; forced upper ocean dynamics, the role of surface waves on the air-sea exchange processes and ocean mixed layer processes.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ATM 732. Climate Dynamics. 3 Credit Hours.
Basic understanding of the Earth's Climate System and its variability on time scales ranging from weeks to millennia. Topics include internal atmospheric variability, coupled ocean-atmosphere interactions, and the theory, observations and modeling of climate change.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 750. Reaction Kinetics and Molecular Dynamics. 3 Credit Hours.
Theories and experimental techniques for studying kinetics in the gas-phase, association, unimolecular and bimolecular reactions, chain reactions, flames, statistical theories, potential energy surfaces, collision dynamics, kinetics in solution and the solid-state, experimental methods, diffusion-controlled processes, transition state theory, thermal decomposition, and nucleation are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 752. Vortex Dynamics. 3 Credit Hours.
This course will cover fundamental to advanced topics in vortex dynamics. A review of fluid dynamics and vorticity in two dimensions will be followed by studies of vortex dynamics in three-dimensional, incompressible flow and in three-dimensional, stratified flow.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 761. Atmospheric Chemistry II. 3 Credit Hours.
Advanced atmospheric chemistry.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 764. Atmospheric and Oceanic Turbulence. 3 Credit Hours.
Structure and dynamics of planetary boundary layers, turbulent transport processes, Fickian and statistical theories of turbulence, influence of stratification, and rotation on turbulent motion are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 765. General Circulation of the Atmosphere. 3 Credit Hours.
Course topics include structure and behavior of planetary scale motions, energy, momentum, and moisture budgets of the general circulation, and models of the general circulation and climatic change.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ATM 767. Spectral and Finite Element Methods in Computational Fluid Dynamics. 3 Credit Hours.
The simulation of fluid flows in geometrically complex domains (like ocean basins) and/or with high fidelity requires the adoption of new discretization techniques that can simultaneously handle the complicated geometry and permit high accuracy solution. The finite element method has traditionally been used to tackle the geometric complexity while spectral methods have been developed to handle high accuracy in simple geometries. Here we present an approach to handle both complexity within a single framework, namely the spectral element method. The course starts by describing the weak formulation common to all finite element methods which, by design, are geometrically flexible. The second part of the course describe how high order polynomial can be implemented within the finite element framework to achieve high accuracy rates.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 768. ENSO Dynamics, Prediction, and Predictability. 3 Credit Hours.
This course will provide students with a comprehensive observational and mechanistic understanding of the El Nino and the Southern Oscillation (ENSO) phenomena and how ENSO impacts the natural variability of the global climate system. Topics will include: Observations and theories of the seasonal and interannual changes in the ocean circulation and temperature, and interactions with the atmosphere; equations of motion and theories of tropical ocean and atmosphere circulation; tropical wave dynamics; large scale air-sea coupling; mechanisms for ENSO: delayed oscillator theory, recharge oscillator theory, slow SST modes; ENSO prediction and predictability; ENSO-monsoon-Indian Ocean interactions; Global climate response to ENSO; decadal ENSO variability; ENSO in a changing climate. This course has a phenomenological focus, which complements current MPO course offerings. In particular, students who have taken dynamic and physical meteorology, ocean general circulation or geophysical fluid dynamics will be exposed to how general theory (e.g., wave dynamics) relates to particular phenomena and current research foci. In addition, student will have the opportunity to design and implement numerical hypothesis testing experiments.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ATM 774. Advanced Studies. 1-4 Credit Hours.
Supervised study of special interest to graduate students.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ATM 805. MPS Internship. 1-6 Credit Hours.
The MPS internship is an approved, supervised internship project with an organization engaged in activities associated with the student's degree track. The internship results in a collaborative project, written report, and oral presentation on a topic approved by the student's advisory committee. Up to 6 credits are necessary for graduation.
Components: PRA.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
ATM 810. Master Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ATM 830. Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credit as determined by his/her advisor but not for less than a total of 12. Not more than 12 hours of ATM 830 may be taken in a regular semester, nor more than six in a summer session. Where a student has passed his/her (a) qualifying examinations, and (b) is engaged in an assistantship, he/she may still take the maximum allowable credit stated above.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Biochemistry and Molecular Biology (BMB)

BMB 110. Scientific Basis of Forensic Analysis. 3 Credit Hours.
Basic science topics including mathematics, physics, chemistry, and biology are introduced and related to understanding specific topics in forensic analysis such as fingerprint and blood type analyses. Heavy emphasis is given to hands on, in class projects in which students learn to analyze and interpret experimental observations and outcomes.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 145. Introduction to BMB Research. 2 Credit Hours.
Students will collaborate on a research project and learn valuable laboratory skills. The goal for this course is to make students 'research-ready' through an active, inquiry-based, platform for developing core competencies in biology, genetics, BMB (biochemistry & molecular biology), bioinformatics, scientific discourse and ethics.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 245. Foundations in BMB Research. 2 Credit Hours.
Students shadow a research assistant in the lab of a BMB faculty member and learn about the research projects and techniques used by the group. Students will assist in preparing reagents, conducting experiments, analyzing data and generating brief reports. Attendance in lab group meetings is expected. Students maintain a weekly online journal and will write a paper describing the research in the lab and proposing a research problem and approach to solve in BMB545.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BMB 251. Contemporary Topics in BMB. 1 Credit Hour.
Contemporary topics in Biochemistry and Molecular Biology (BMB).
Using primary research articles that underlie scientific news in popular press, students participate in weekly discussions and give at least one group presentation. Students learn and develop practical skills in critical reading and presentation of primary research findings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 250. Introduction to Biochemistry and Nutrition. 3 Credit Hours.
The composition of food and the composition and functioning of a typical cell are described in chemical terms, leading to an understanding of how life processes such as digestion, and metabolism occur and are regulated at the level of individual molecule and reactions. Applications of biochemistry and nutrition are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 401. Biochemistry for the Biomedical Sciences. 4 Credit Hours.
The biochemical composition, structure, and cellular metabolism of proteins, carbohydrates, lipids, and nucleic acids are rigorously described, emphasizing problem solving strategies required of biomedical field applications.
Prerequisite: CHM 201 or CHM 222. And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 402. Principles of Experimental BMB. 2 Credit Hours.
An active, inquiry-based, platform for developing core competencies in biochemistry & molecular biology, making students 'research ready'. Corequisite or Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 411. Readings in BMB. 1 Credit Hour.
Students read and discuss one BMB primary research article each week and answer a set of questions meant to provoke critical evaluation of the work. The course introduces students to critical reading of the primary literature in BMB and is open to students at any level. Peer-mentoring and informal student-led instruction is central to the course.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 417. Nutrients, Enzymes, and Metabolic Flux. 3 Credit Hours.
How macronutrients (carbohydrates, protein, and lipids) and (ii) micronutrients (vitamins and minerals) are obtained in the diet, digested, absorbed, and processed. Then, students learn to formulate mechanisms of enzyme catalysis and inhibition, further applying to graphical analysis of authentic enzyme kinetic and binding data. Last, such analytical skills are used to more rigorously examine metabolic flux control points. Students finish this course with thorough mechanistic understanding of (i) macronutrient composition, intake, and energy production and (ii) requirements of micronutrients in controlling enzyme-catalyzed reactions that produce energy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 501. Senior Seminars. 1 Credit Hour.
Students attend seminars of their own choosing, presented by either visiting/residing faculty or graduate/postdoctoral students on recent research topics in BMB or any other discipline in the basic biomedical sciences. Students write short reports on these seminars and critically evaluate the presentations. This course can be taken more than once. Prerequisite: BMB 401.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.
BMB 506. Biomedical Case Studies. 1 Credit Hour.
Students explore topics in BMB in the context of solving problems presented in a clinical/biomedical framework. Students work in small groups and independently to acquire, critically evaluate, synthesize and present information.
Corequisite or Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 507. Protein Structure, Function and Biology. 3 Credit Hours.
The physical characteristics and behavior of proteins are described, including structure, folding, dynamics, modifications, and interactions. In addition, experimental approaches to protein structure and function are addressed. Readings include both textbook assignments and current research articles, and a term paper is written and submitted for writing credit.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BMB 509. Molecular Biology of the Gene. 3 Credit Hours.
Biochemical processes involved in the flow of genetic information in both prokaryotes and eukaryotes are described, including DNA replication, repair, genetic recombination, RNA transcription and processing, protein synthesis, control of gene expression, cell differentiation, and recombinant DNA technology. Extensive classroom discussion is mandatory. Reading includes BMB primary research papers, course notes and a textbook.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 511. Topics in BMB. 3 Credit Hours.
Students independently explore the literature in BMB with guidance by a BMB Faculty mentor. BMB primary research literature in an area of mutual interest to the student and the Faculty mentor (usually a content expert in that area) is discussed. Students prepare a paper or other appropriate product (e.g. computer software, a structural model, a dynamic simulation) for evaluation. Writing credit is available for papers.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BMB 514. Genetics and Genomics: Principles, Mechanisms, and Use. 3 Credit Hours.
The quantitative and analytical problem solving, as well as spatial reasoning in genetics. The course will propose genetic hypotheses, identify genetic predictions, create genetic systems for challenging these predictions, and analyze genetic data to solve practical problems.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BMB 516. Neuroendocrinology. 3 Credit Hours.
Explore the principles of neuroendocrinology and the role of hormones as signaling molecules in the body. Students will study the mechanisms of hormone action and the regulation of hormone levels. An emphasis on the integration of endocrine and nervous systems is included.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BMB 519. Epigenetics and Nutrition. 3 Credit Hours.
How epigenetic mechanisms control gene expression and (ii) how epigenetic modifications are propagated. Then, students explore how such epigenetic control and inheritance can be modulated through diet and nutrition. Class participation and attendance are required, since in class discussion will be largely based on emerging and late-breaking topics from recent literature.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 545. Research Problems in BMB. 3-12 Credit Hours.
Participation in the research laboratory of a faculty mentor to work on an independent research project. Students develop abilities to formulate good questions and sound hypotheses, design practical experiments, collect and analyze useful data, and make justifiable conclusions.
Students maintain a weekly online journal, write a paper, and present their research in the lab. Two semesters of BMB 545 are required to write a thesis (pre-requisite for graduating with honors in BMB).
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BMB 555. Cellular Structure, Function, and Biology. 3 Credit Hours.
Students learn composition and function of cellular organelles, and closely examine their biogenic and degradative pathways. Next, students learn cell signaling pathways and mechanisms controlling mitosis, meiosis, and cytokinesis that account for inherited traits. Studies of the molecular basis of cell-cell and cell-matrix interactions provide students with better understanding of tissue stability and function. Modern perspectives regarding stem and cancer cell biology are explored, along with new cell-based therapeutic strategies.
Prerequisite: BMB 401.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 601. Research Journal Club. 1 Credit Hour.
All MS students must participate in the BMB Journal Club course. In this course, pre-doctoral trainees are required to critically review published paper(s) of their choice in the BMB topic area in Fall semester and present their research findings in Spring semester. The MS students will participate in this course and will write summary of the presentation.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 605. Principles of Biochemistry and Molecular Biology. 3 Credit Hours.
This course is divided into three parts. Part 1, examine the biochemical composition and structure of the four basic types of biological macromolecules: (i) carbohydrates, (ii) nucleic acids, (iii) proteins, and (iv) lipids. In addition, students will learn the composition and function of dietary nutrients and vitamins. Part 2, study how genetic information flows from its storage as DNA sequence to its expression as functional RNA and protein molecules. A particular emphasis will be towards understanding control of gene expression by various epigenetic and signaling mechanisms. Part 3, learn how metabolic pathways are used to convert food molecules into energy and chemical intermediates used for biosynthesis of our own cellular materials.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BMB 610. Advanced Topics in Biochemistry and Molecular Biology. 3 Credit Hours.
This is a special-topics course for graduate students and advanced undergraduate students. This course will focus on nanotechnology and its applications in medicine. This course offers an introductory concept of an interdisciplinary field of nanotechnology for students with physical, chemical, biological, medical, and engineering background. This course will be focused on nanomaterials, engineering of nanomaterials, cellular and intracellular interactions of nanoparticles, nanotechnology-based drug delivery systems, nano-based diagnosis, nanotoxicology, and clinical translational aspects of nanomedicines. Unique properties, which are offered by the materials at the nanoscale, will be discussed. Nanotechnology in sensing and diagnostics will be discussed. The topics to be discussed are of considerable interest across a broad range of areas in medicine, chemistry, biology, physics, pharmacy, medicine, mathematics, and engineering.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 614. Molecular Genetics. 3 Credit Hours.
There are 4 major sub-disciplines of genetics. This course will focus on the first three and leave assessment of quantitative traits as needed for students work. The sub-disciplines include, 1. transmission genetics: basic principles of genetics and how traits are passed from one generation to the next. 2. Molecular genetics: the chemical nature of genes and genomes; how genetic information is encoded, replicated, and expressed. It includes the cellular processes of replication, transcription, and translation - by which genetic information is transferred from one molecule to another – and gene regulation - the processes that control the expression of genetic information. 3. population genetics: the genetic composition of groups of individual members of the same species and how that composition changes over time and geographic space, and 4. quantitative genetics: deals with phenotypes that vary continuously (in characters such as height or mass) – as opposed to discretely identifiable phenotypes and gene-products (such as eye color, or the presence of a particular biochemical).
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 615. Structural Biology and Applications to Drug Discovery (Masters). 3 Credit Hours.
This course provides an introduction to structural biology and illustrates how understanding the relationship between structure and function of biological macromolecules drives drug discovery. The course will be in three parts, with the first covering experimental and computational tools of structural biology – X-ray crystallography, cryo-electron microscopy and molecular modeling. The second part of the course will look at examples where structural biology has influenced drug design. The final part of this course will look at structures of nucleic acid (DNA and RNA) binding proteins and how they inform drug discovery.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 617. Readings in Molecular Biology. 1 Credit Hour.
Discussion of classical papers in molecular biology beginning with the concept of the gene and continuing into modern studies. Format consists of student presentations and group discussions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BMB 630. Research in Biochemistry and Molecular Biology. 1-9 Credit Hours.
This will form the most significant portion of the MS student's degree program. Students will perform research with a mentor that they choose depending upon their research interest. A committee consisting of 3 faculty from the graduate program will be formed to evaluate student for the final oral comprehensive examination. The final oral exam will be scheduled in the last semester of the study. This oral comprehensive exam will involve the review of all experimental data and the entire presentation. During the examination, the mentor is responsible for allotting appropriate time for questions by all participants. Students are expected to understand the significance of their findings, display adequate knowledge of the relevant literature and know the theory and limitations of methods employed. Students must demonstrate the ability to independently design, execute and interpret original experiments. This group will make a decision to pass or fail a student's oral comprehensive exam.
Components: RSC.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BMB 632. Internship in Biochemistry and Molecular Biology. 1-9 Credit Hours.
Through this course, students in the industrial track will participate in an internship in industry. The students’ mentor/course instructor will help in identifying internship opportunities for students and monitor their progress.
Components: FLD.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BMB 633. Capstone project in Biochemistry and Molecular Biology. 1-3 Credit Hours.
This course will help students learn how to prepare presentations as well as write reports and publications. Students will also learn about the latest advances in the biochemistry field and upcoming topics of interest to the field to help them prepare for their careers. Students will write a report-based on the industrial internship. They will also prepare a presentation about the work performed. The students’ mentor/course instructor will provide guidance as needed in writing the report and presentation.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BMB 641. Essentials of Biotechniques I. 3 Credit Hours.
Students will be introduced to variety of techniques used in biotechnology research. The course will be a combination of lectures and hands-on technique experience. The course will teach students both traditional and new techniques used in BMB.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

BMB 642. Essentials of Biotechniques II. 3 Credit Hours.
Students will be introduced to variety of techniques used in biotechnology research. The course will be a combination of lectures and hands-on technique experience. The course will teach students both traditional and new techniques used in BMB.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.
**BMB 645. Research Problems in Biochemistry, Cell and Molecular Biology. 2-3 Credit Hours.**
Laboratory research problems in various areas of biochemistry, cell biology, and molecular biology, including literature search, experimental design, data gathering, and evaluation of results. This course is the mechanism by which graduate laboratory rotations are done in preparation for selection of Ph.D. mentor.

**Components:** LEC.

**Grading:** GRD.

**Typically Offered:** Fall, Spring, & Summer.

**BMB 680. Responsible Conduct of Research. 1 Credit Hour.**
In this course, ethical case studies are discussed, and an introduction to laboratory management is provided. Short lectures and discussion are conducted to provide students with the ability to tackle dilemmas and pitfalls associated with the responsible conduct of research. Information is provided on regulatory requirements of conducting research, including safety issues and the use of humans, animals, and radioactive/bio hazardous material. The obligations of scientists with respect to public policy and advocacy are also discussed. In addition, students will participate in an online RCR training course (RST-401/501/601 sections) offered by the Collaborative Institutional Training Initiative (CITI) Program at UM. A CITI Program RCR course typically requires around 4 hours to complete. These students receive an "S" (satisfactory) grade for a CITI RCR course after the completion of the online module. This online training course will serve as yearly continuation of RCR training after completion of the Research Ethics course. Additionally, every semester faculty in the department present a seminar related to topics in research ethics. Students also attend an online training in RCR. Several professional skills workshop such as grant writing workshop, career workshops, and seminars by professional scientists related to career are organized by the BMB department as well as the Office of Graduate studies. Students will attend these series of events.

**Components:** LEC.

**Grading:** SUS.

**Typically Offered:** Fall.

**BMB 701. Research Journal Club. 1 Credit Hour.**
All registered BMB students must participate in the Journal Club/Seminar. Students are required to critically review published paper(s) of their choice and describe in detail the findings described therein. Senior students will present their own research.

**Components:** LEC.

**Grading:** GRD.

**Typically Offered:** Fall & Spring.

**BMB 702. Biochemical Science Seminar. 1 Credit Hour.**
The Biochemistry and Molecular Biology (BMB) department has an active seminar program that meets on every Friday at noon. In this program seminars are presented by the BMB faculty (primary and secondary), invited speakers within the University of Miami and from other universities, government agencies, and industry. All BMB Graduate Students enrolled in this course will be required to attend this seminar and and will have informal interactions with speaker, and exchange ideas at lunch on the seminar day.

**Components:** LEC.

**Grading:** GRD.

**Typically Offered:** Offered by Announcement Only.

**BMB 705. Principles of Biochemistry and Molecular Biology. 3 Credit Hours.**
This course is divided into three parts. In Part 1, you will examine the biochemical composition and structure of the four basic types of biological macromolecules: (i) carbohydrates, (ii) nucleic acids, (iii) proteins, and (iv) lipids. In addition, you will learn the composition and function of dietary nutrients and vitamins. Most important, you will be introduced to nature's catalytic substances termed "enzymes", paying special attention to their mechanisms of action and regulation. In Part 2, you will study how genetic information flows from its storage as DNA sequence to its expression as functional RNA and protein molecules. Here, you will give particular emphasis towards understanding control of gene expression by various epigenetic and signaling mechanisms. In Part 3, you will learn how metabolic pathways are used to convert food molecules into energy and chemical intermediates used for biosynthesis of our own cellular materials. You are expected to finish this course with rigorous understanding of the biochemical composition, structure, and cellular metabolism of proteins, carbohydrates, lipids, and nucleic acids. This will enable you to read and understand advancing topics and applications in a vast array of biomedical specialties.

**Components:** DIL.

**Grading:** GRD.

**Typically Offered:** Fall & Spring.

**BMB 709. Advanced Biochemistry and Molecular Biology. 3 Credit Hours.**
This course is a continuation course for BMB 616. It covers essentially the same topics as BMB 616 but at a more advanced level. It brings the student to the forefront of research in Molecular Biology. The course material is discussed exclusively in the form of original research papers. Based on this experience, students are required to propose experimental approaches to biological problems and defend them.

**Components:** LEC.

**Grading:** GRD.

**Typically Offered:** Fall.

**BMB 710. Advanced Topics in Biochemistry and Molecular Biology. 1-5 Credit Hours.**
This course is offered by various faculty members in the department on a rotating basis depending upon their expertise. For example, an advanced topic course in Nanomedicine offered by Dr. Deo and Dr. Dhar covers these topics through lectures.

**Components:** DIL.

**Grading:** GRD.

**Typically Offered:** Fall & Spring.

**BMB 711. Best Practices in BMB Instruction. 1-3 Credit Hours.**
Graduate students in the basic sciences will explore different approaches to science course development, implementation and assessment. This includes identifying gaps in the curriculum, creating classroom structure that reflects the content and execution of classroom activities, identifying and gathering appropriate material from the primary research literature, instructing undergraduates in how to become highly interactive self-directed learners, providing formative feedback to improve student achievement throughout a course, proper design and implementation of assessment tools, student communication, classroom management and ethics.

**Components:** DIS.

**Grading:** GRD.

**Typically Offered:** Fall & Spring.
BMB 714. Molecular Genetics. 4 Credit Hours.
This course deals with mechanisms and fundamental concepts of genetic inheritance. The first part of the course is devoted to the genetics of bacteria and bacteriophages. Topics include genetic implementation, recombination, suppression, transposition, conjugation, transformation, transduction, and regulation of prokaryotic gene expression. The second part of the course covers selected topics in eukaryotic genetics (including molecular genetics of yeast, mitochondria, Drosophila, mice and humans). Problem solving is emphasized in homework and exams. The objective of the course is to provide students with an appreciation of the value of molecular genetics as a tool they can use to solve a wide variety of problems in bio-medical research.
Components: DIL.
Grading: GRD.
Typically Offered: Spring.

BMB 715. Structural Biology and Applications to Drug Discovery. 2 Credit Hours.
This course focuses on the relationships between structure and function in biological macromolecules, and how this knowledge has led to the discoveries of new drugs.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BMB 716. Bioinformatics of Gene Regulation and Protein Function. 3 Credit Hours.
Among the skills required to become a successful interdisciplinary life scientist is the ability to navigate biological databases to better understand gene and protein function. Genome sequences contain the signals that guide differential gene expression and encode structural RNAs, regulatory RNAs and proteins. This course will introduce the tools, databases and evolutionary considerations that help us understand the regulation of gene expression and predict protein function. The biochemical and regulatory functions encoded in genomic DNA sequences will be explored using bioinformatics techniques including gene finding, BLAST searches, PubMed searches, high-throughput dataset mining, multiple alignments, phylogenic analysis, identification of conserved functional domains and motifs, assessment of protein-protein and protein-ligand interactions, gene context and co-occurrence analysis. secondary and tertiary structural analysis, metabolic and cellular modeling, and phenotypic analysis. The databases, tools and tutorials available at websites developed by the National Center for Biotechnology Information, EMBL-EBI, the Protein Data Bank, and others will be used as supporting course materials. Each week will have a set of online videos and instructions to complete before the weekly live lecture. The live lecture consist of a one hour slide presentation and one half-hour of Q&A discussions. Competency in bioinformatics will be assessed by a midterm and a final exam.
Components: DIL.
Grading: GRD.
Typically Offered: Fall.

BMB 717. Nutrients, Enzymes, and Metabolic Flux. 3 Credit Hours.
Students learn how macronutrients (carbohydrates, protein, and lipids) and (ii) micronutrients (vitamins and minerals) are obtained in the diet, digested, absorbed, and assimilated. Then, students learn to formulate mechanisms of enzyme catalysis and inhibition. Such analytical skills are then used to more rigorously examine enzymes that control specific points of metabolic flux. Students finish this course with thorough mechanistic understanding of (i) macronutrient composition, intake, and energy production and (ii) requirements of micronutrients and hormones in controlling metabolic balance.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BMB 719. Fundamentals of Epigenetics. 3 Credit Hours.
The influence of nutrition on gene expression through modification of DNA and proteins in chromatin is described (i.e., epigenetics). Also, genetic variations, as well as the influence of bacterial flora of the digestive tract, are considered with respect to abilities to metabolize various dietary components. Students learn how to gather information about course topics and present their findings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BMB 720. Research in Residence. 0 Credit Hours.
Used to establish research in residence for the thesis for the master’s degree after the student has enrolled for the permissible cumulative total in BMB 710 (usually six credits). Credit not granted. May be regarded as full time residence.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BMB 731. Special Work. 1-3 Credit Hours.
Special work, lecture, or laboratory or a combination of these, as determined by advisor in accord with student’s individual interest.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BMB 810. Master’s Thesis. 1-6 Credit Hours.
The student working on his/her master’s thesis enrolls for this credit. In most departments not to exceed six credits, as determined by his/her advisor.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

BMB 830. Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credit as determined by his/her advisor but not for less than a total of 24. Not more than 12 hours of BMB 730 may be taken in a regular semester, nor more than six in a summer session. Where a student has passed his/her (a) qualifying examinations, and (b) is engaged in an assistantship, he/ she may still take the maximum allowable credit stated above.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
BMB 840. Doctoral Dissertation- Post Candidacy. 1-12 Credit Hours. Required for all PhD candidates. The student will enroll for credits as determined by the Office of Graduate and Postdoctoral Studies. Components: DIL. Grading: SUS. Typically Offered: Fall & Summer.

BMB 850. Research in Residence. 1 Credit Hour. Used to establish research in residence for the Ph.D., after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. Credit not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School. Components: THE. Grading: SUS. Typically Offered: Fall, Spring, & Summer.

Biology (BIL)

BIL 101. Introductory Biological Science. 3 Credit Hours. An introduction to life sciences for the non-major. Students with credit in BIL 150 may NOT take this course to fulfill the natural science requirement. Not for credit in the biology major or minor. Components: LEC. Grading: GRD. Typically Offered: Fall, Spring, & Summer.

BIL 102. Humans and Biotechnology. 3 Credit Hours. Major aspects of the biotechnology field for non-science majors. Students will learn about genetically modified organisms, biofuels from algae, detergents with enzymes, bacteria that eat oil, pigs that appear green, and much more. Not for credit in the biology major or minor. Components: LEC. Grading: GRD. Typically Offered: Offered by Announcement Only.

BIL 103. Introduction to Ecology. 3 Credit Hours. Overview of ecological and evolutionary principles; relationships of organisms to living and non-living aspects of the environment; human impact on ecosystems. Not for credit in the biology major or minor. Components: LEC. Grading: GRD. Typically Offered: Fall.

BIL 104. Genetics and Society. 3 Credit Hours. Genetics for non-science majors. The basics of DNA, genes, gene function, genomes and inheritance. Application of genetics to real-world issues, both personal and societal, from the history of life to challenges and opportunities we face in the modern times at the molecular level. Components: LEC. Grading: GRD. Typically Offered: Fall.

BIL 105. Biology of Plants. 3 Credit Hours. Evolution and diversity of the plant kingdom; economic and cultural importance of plants to humans. Not for credit in the biology major or minor. Components: LEC. Grading: GRD. Typically Offered: Offered by Announcement Only.

BIL 106. Biology of Animals. 3 Credit Hours. Evolution and diversity of the animal kingdom and the relationship between humans and other animals. Not for credit in the biology major or minor. Components: LEC. Grading: GRD. Typically Offered: Offered by Announcement Only.

BIL 108. Molecular Journey to Being Human. 3 Credit Hours. With a focus on the human species, students will explore the nature of DNA and proteins, the origin of life, RNA World hypothesis, the origins of human ancestors and modern humans, the recently-completed Human Genome Project, the genetic basis human diversity, and the ethics of using genetic knowledge to improve the quality of human life. Components: LEC. Grading: GRD. Typically Offered: Offered by Announcement Only.

BIL 110. Human Hereditary Disease. 3 Credit Hours. An overview of genetics, emphasizing human traits and disorders and their effects on individuals, families, and society. Discover the beauty of human nature, and our knowledge of it, as you develop an understanding of human genetics. Components: LEC. Grading: GRD. Typically Offered: Offered by Announcement Only.

BIL 111. General Biology Honors Seminar. 1 Credit Hour. Special topics in biology correlated with BIL 150. Corequisite: BIL 150. Components: SEM. Grading: GRD. Typically Offered: Fall.

BIL 112. General Biology Honors Seminar. 1 Credit Hour. Special topics in biology correlated with BIL 160. Components: DIS. Grading: GRD. Typically Offered: Fall.

BIL 114. First Year Information. 0-1 Credit Hours. First year seminar for incoming Biology majors. Facilitation and encouragement of development of critical thinking skills, proficiency in oral and written expression, and an ability to solve problems by integrating knowledge from different disciplines in Biology. Components: SEM. Grading: GRD. Typically Offered: Spring.

BIL 115. First Year Information. 0-1 Credit Hours. First year seminar for incoming Biology majors. Facilitation and encouragement of development of critical thinking skills, proficiency in oral and written expression, and an ability to solve problems by integrating knowledge from different disciplines in Biology. Components: SEM. Grading: GRD. Typically Offered: Fall.
BIL 150. General Biology. 4 Credit Hours.
Principles of biology at the cellular, genetic, and organismal levels of organization. Cell structure and function, energy transduction, biological information transfer, genetics, physiology.
Prerequisite/Corequisite: ENG 105 Or ENG 106 Or ENG 107 Or AP ENG COMP =>5 Or SAT Verbal 700 or higher Evidence Base Read and Write Or 32 or higher ACT ENG And ALEKS MTH=>55 Or AP Cal AB score =>3 Or AP Cal BC score=>3 Or SAT MTH Sect Score =>600 Or ACT MTH=>25.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BIL 151. General Biology Laboratory. 1 Credit Hour.
A laboratory approach to applying the scientific method. Experimental design and hypothesis testing at the cellular and molecular level.
Corequisite: BIL 150.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Summer.

BIL 152. HHMI General Biology Laboratory. 1 Credit Hour.
Laboratory exercises to accompany BIL 150. Student teams engage in two inquiry-based laboratory research projects, each lasting six weeks, per semester.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

BIL 153. Introductory Biology/Chemistry Laboratory I. 1 Credit Hour.
Integrated biology and chemistry laboratory exercises for first year students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

BIL 160. Evolution and Biodiversity. 4 Credit Hours.
Evolution and ecology of life on Earth. Systematics, biodiversity, evolutionary theory and mechanisms, with emphasis on the morphological, ecological, and behavioral adaptations of the diversity of life.
Prerequisite: BIL 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BIL 161. Evolution and Biodiversity Laboratory. 1 Credit Hour.
A laboratory approach to applying the scientific method. Experimental design and hypothesis testing at the organismal and ecological level.
Corequisite: BIL 160.
Components: LAB.
Grading: GRD.
Typically Offered: Spring & Summer.

BIL 162. HHMI Evolution and Biodiversity Laboratory. 1 Credit Hour.
Laboratory exercises to accompany BIL 160. Student teams engage in two inquiry-based laboratory research projects, each lasting six weeks, per semester.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BIL 163. Introductory Biology/Chemistry Laboratory II. 1 Credit Hour.
Integrated biology and chemistry laboratory exercises for first year students. Corequisite: BIL 160 and CHM 112 or CHM 221.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

BIL 190. Studies in Biology. 1-5 Credit Hours.
Special topics taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

BIL 194. Studies in Biology. 1-5 Credit Hours.
Special topics taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

BIL 195. Studies in Biology. 1-5 Credit Hours.
Special topics taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

BIL 213. HIV and Emerging Diseases: Sex, Science, and Society. 3 Credit Hours.
The importance and value of science in ameliorating human suffering. Students will hear from virologists, immunologists, cell biologist behavioral scientists, primary care physicians, health care providers, drug discoverers) policy makers, vaccinologists, and HIV-infected individuals aiming to inspire and encourage students to be enthusiastic about science and scientific research on emerging diseases.
Prerequisite: BIL 150 and BIL 151 or BIL 101.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 220. Evolution and Disease. 3 Credit Hours.
Evolutionary perspectives on genetic disorders, cancer, virulence, drug resistance and diet. The role of biodiversity in understanding pathogens and parasites, emerging disease, natural products and drug discovery. How diseases have shaped human evolution.
Prerequisite: BIL 150 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 223. Plants and People. 3 Credit Hours.
A multi-disciplinary survey of ethnobotany and economic botany, emphasizing the ecosystem services that plants provide to humans. Prerequisite: BIL150 and BIL160 Or Consent of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 226. General Botany. 3 Credit Hours.
Survey of the plant kingdom, including evolution, plant diversity, reproduction, structure, function and ecology.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BIL 227. General Botany Laboratory. 1 Credit Hour.
Laboratory exercises to accompany BIL 226.
Pre/Corequisite: BIL 223 or BIL 226 Or Consent of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 228. Medical Botany. 3 Credit Hours.
History of medical botany, approaches to health by different cultures, separation and identification of secondary compounds and mechanisms of action. Molecular and physiological action of different secondary compounds in the treatment of common western ailments. In vivo identification of local medicinal plants.
Prerequisite: BIL 150 and BIL 151 and BIL 160 and BIL 161 for Biology Majors or Minors.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 230. Introduction to Marine Biology. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 231. Introduction to Marine Biology Laboratory. 1 Credit Hour.
Experimental laboratory exploring ecology, physiology and behavior of marine organisms in southern Florida marine habitats. Exercises cover laboratory techniques in behavior, functional morphology, productivity, fisheries research, osmoregulation and community ecology.
Pre/Corequisite: BIL 230.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

BIL 244. Hormones and Behavior. 3 Credit Hours.
A comparative approach to the relationship between hormonal mechanisms and behavior in both animal model systems and humans. An introduction to the endocrine system, sex differences in behavior, parental behavior, hormones and social behavior, learning and memory, stress and affective disorders, interactions between brain, hormones and behavior from a historical perspective viewing the emergence of key theories.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 250. Genetics. 3 Credit Hours.
The nature, organization, replication, expression, and evolution of the genetic materials.
Prerequisite: BIL 150 and BIL 151 or BIL 152 or BIL 153. BIL 161 or BIL 162 or BIL 163.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BIL 251. Genetics Laboratory. 2 Credit Hours.
Laboratory exercises in genetics.
Pre/Corequisite: BIL 250.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 255. Cellular and Molecular Biology. 3 Credit Hours.
Structure, molecules, and functions of cells.
Prerequisite: BIL 150 and BIL 160. BIL 151 or BIL 152 or BIL 153. BIL 161 or BIL 162 or BIL 163.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BIL 256. Cellular and Molecular Biology Laboratory. 2 Credit Hours.
Laboratory exercises in cellular and molecular biology involving current research techniques and applications.
Pre/Corequisite: BIL 255 or BIL 559.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BIL 267. Science Documentary: Autism. 3 Credit Hours.
This course brings together students in both science and communication to collaborate on content intended to reach audiences on multiple platforms. Students will be exposed to both history and cutting edge research surrounding Autism Spectrum Disorders. Students will connect with people in the local community, and collaborate on short documentary films as well as audio exercises.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 268. Neurobiology. 3 Credit Hours.
Neurons, organization of the nervous system, electrical properties of neurons, neurotransmitters, receptors, synaptic transmission, sensory and motor system, and complex brain functions.
Prerequisite: BIL 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 269. Research Design. 1 Credit Hour.
Research design, analysis, and interpretation of scientific research.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 280. Writing in Biology. 0 Credit Hours.
Writing instruction by faculty using biological topics in BIL courses offered at the 200 level.
Components: IND.
Grading: SUS.
Typically Offered: Fall & Spring.
BIL 281. Undergraduate Learning Internship in Biology. 1 Credit Hour.
Undergraduate Learning Intern in Biology Students serve as peer mentors in a laboratory setting, assisting a graduate laboratory instructor in teaching basic biological concepts to first year undergraduates in BIL 151 and BIL 161.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 284. Special Laboratory Topics in Biology. 1-4 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. May be combined/co-listed with other departments or programs.
Prerequisite: BIL 150 and BIL 151 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 285. Special Topics in Biology. 3 Credit Hours.
Topics relevant to the biological sciences, co-listed with other departments or programs.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 286. Clinical Medicine I. 3 Credit Hours.
Bi-weekly clinical rotations with physicians at Miller School of Medicine and simulation labs at the Gordon Center.
BIL 150 and BIL 160 AND CHM 111 or 121 AND CHM 113 and CHM 112 or CHM 221 AND CHM 114.
Components: PRA.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BIL 287. Clinical Medicine II. 3 Credit Hours.
A continuation of Clinical Medicine I; bi-weekly clinical rotations with physicians at Miller School of Medicine and simulation labs at the Gordon Center.
Prerequisite: BIL 286.
Components: PRA.
Grading: CNC.
Typically Offered: Spring.

BIL 299. Seminar in Research Problems. 1 Credit Hour.
Discussion of current research of the Biology Faculty.
Prerequisite: BIL 150 and BIL 151 or BIL 152 or BIL 153 and BIL 160 and BIL 161 or BIL 161 or BIL 162 or BIL 163.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 315. Marine Biota and Biogeochemical Cycles. 3 Credit Hours.
The diverse sources, transformations, and sinks of chemical constituents in the sea; distribution of dissolved and particulate materials in the sea. Role of marine organisms in marine biogeochemical cycling and the marine carbon cycle and its interaction with the terrestrial biosphere and atmosphere.
Prerequisite: MSC 320.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 316. Global Primary Production. 3 Credit Hours.
Photosynthesis supports the vast majority of life on planet earth. Although terrestrial and aquatic photoautotrophs share the same basic photosynthetic mechanisms, the physical environment and the fate of primary product on differ on land versus in the sea. This course reviews the magnitude and processes that shape primary production in terrestrial, oceanic, and freshwater habitats. It includes the fate of primary production in the earth’s biomes, and the role of terrestrial and aquatic productivity in regulating, and responding to, variable climate.
Prerequisite: BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 320. Evolutionary Biology. 3 Credit Hours.
Microevolution, including mutation, genetic variation, natural selection, genetic drift, gene flow, and nonrandom mating. Evolutionary insights into behavior, including kin selection, sexual selection, and evolutionary game theory. Theories on the origins of life on Earth, its diversification and history. Human evolution, creationism, and the current extinction crisis.
Prerequisite: BIL 150 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 321. Invertebrate Zoology. 4 Credit Hours.
Biology of invertebrates, with emphasis on tropical and subtropical marine forms. Field work and combined lecture-laboratory sessions.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 324. The Biology of Fishes. 3 Credit Hours.
Selected topics on the ecology and physiology of fishes. Lectures on reproduction, respiration, osmoregulation, sense systems, hormonal control.
Prerequisite: BIL 255 and BIL 360.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 328. Biology of Birds. 4 Credit Hours.
General biology of birds. Lectures emphasizing avian behavior, evolution, ecology, and conservation. Field trips and laboratory emphasizing identification and systematics of South Florida birds. Lecture 3 hours, Laboratory one hour. Six weekend field trips, 6 hours each.
Prerequisite: At least one BIL course at the 200-level.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BIL 329. Marine Vertebrate Zoology. 3 Credit Hours.
The form and function of the vertebrate lineage of marine animals from early chordates to the evolution of cartilaginous and bony fish and the emergence of tetrapods, those that evolved from marine ancestors and have since returned to the seas. A comparative point of view will be used to assess the anatomy and physiology of each taxonomic group as well as behavioral and ecological adaptations related to their life history. Topics will include the emergence of the vertebrate body plan and the evolution of fish from agnathans through modern teleosts, as well as the tetrapod lineage of marine reptiles, marine birds, and marine mammals. Discussion of critical points in vertebrate evolution where genome-wide duplication events occurred as well as instances of convergent evolution in various lineages.
Prerequisite: MSC 230.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 330. Ecology. 3 Credit Hours.
The interactions of living organisms with each other and with their abiotic environment.
Prerequisite: BIL 250 or BIL 255. Calculus strongly recommended.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 331. Ecology Laboratory. 2 Credit Hours.
Lab and field exercises in ecology. Some Saturday field trips required.
Pre/Corequisite: BIL 330.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 332. Tropical Ecology. 3 Credit Hours.
Tropical ecosystem including world distribution of tropical climate biogeographical regions, deserts and environmental factors, grassland and primary production, savannah population dynamics, energy flow, biogeochemical cycling, succession, and biodiversity of tropical ecosystem.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 333. Conservation Biology. 3 Credit Hours.
The challenges facing conservation practitioners and the toolkit that has been developed to face these threats. Examination of important conservation cases and how endangered species and ecosystems are distributed across the globe; common threats to biodiversity and methods that have been developed to face these threats at both species and landscape scales; government implementation of conservation strategies. Students will read papers from the primary literature on a weekly basis that provide examples of how conservation tools are developed and implemented. Biology 330 (Ecology) is recommended.
Prerequisite: BIL 150 and BIL 151 and BIL 160 and BIL 161. BIL 330 recommended.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 334. Biogeography and Conservation. 3 Credit Hours.
The modern science of biogeography and its implications for the design of spatial strategies to conserve biodiversity and ecosystem services. Examination of the history of biogeography and its geographical and ecological foundations. Study of the fundamental biogeographic processes and uses them to investigate the evolution of biotas and explain the current biogeographic patterns. Exploration of the emerging field of conservation biogeography and its applications.
Pre/Corequisite: BIL 330.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 335. Tropical Field Biology. 3 Credit Hours.
Intensive field study in the Costa Rican rainforest conducted during semester recesses with additional pre-trip lectures. Requires payment of trip costs.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 336. Hurricanes and Ecology. 2 Credit Hours.
The ecology of disturbance by looking at hurricane impacts on coastal communities of South Florida. The course includes reading journal articles, and understanding the ecological theory behind succession and fragmentation of communities after storms. Weekend trips are required.
Prerequisite: BIL 150 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 337. Coastal Ecology. 3 Credit Hours.
Unprecedented pressure from population growth, tourism, and resource exploitation of coastal ecosystems provides a theme for an overview of current coastal ecology, especially within a conservation and management framework. Hands-on learning in ecohydrology, coastal oceanography, integration of biological communities, and coastal wetland classification for tropical Florida and the insular Caribbean. Students will review and actively participate in water quality and environmental monitoring.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 343. Animal Communication. 3 Credit Hours.
How communication evolves and functions across species, from invertebrates to humans, through a range of acoustic, visual, and chemical signals. How physical constraints shape animal signals, how animals convey information through signaling, and how honesty is maintained in communication systems. Signaling in a variety of contexts, including mate attraction, competition, and predation.
Prerequisite: At Least 3 Credits of BIL 200 Level or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 348. Climate Change and Public Health. 3 Credit Hours.
The mechanisms by which climate change adversely affects human health, and the policy options for mitigating our exposure.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 350. Survey of Marine Mammals. 3 Credit Hours.
The evolution and ecology of the cetaceans, pinnipeds, manatees, and allies: Natural history, zoo geography, physiology, husbandry, and biomedical aspects.
Prerequisite: BIL 150 and MSC 230.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 351. Molecular Genetics Laboratory. 2 Credit Hours.
Classical and molecular genetics experimental techniques. Content will include dominant and recessive mutations, regulation of gene expression, transgenes and transposons, DNA and RNA sequencing, and other essential molecular genetic methods and principles demonstrated through original experiments in the model organism, Caenorhabditis elegans.
Prerequisite: BIL 250.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 352. Techniques in Scanning Electron Microscopy. 3 Credit Hours.
Tissue preparation, use of the scanning electron microscope, photography, and analysis and manipulation of digital images. Lecture 1 hour; laboratory 5 hours.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 353. Projects in Scanning Electron Microscopy. 2 Credit Hours.
Individual research projects in scanning electron microscopy. Six hours of laboratory.
Prerequisite: BIL 352.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 354. Biology of Phages. 3 Credit Hours.
The molecular biology, ecology, and clinical relevance of phages, the prokaryotic viruses that are the most abundant and diverse biological entities on the planet. Current and emerging topics in phage research, including phage genetic information storage and transfer, replication cycles, genome structure, lateral gene transfer, recombination and evolution, phage modulation of biogeochemical cycles, viromics and bioinformatics, prophages and the evolution of human pathogens, and phage therapy.
Prerequisite: BIL 150 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 356. Endocrinology. 3 Credit Hours.
The endocrine glands and the chemistry, mechanisms of action, and physiological effects of hormones. Emphasis on vertebrate hormones, including clinical aspects of human endocrinology.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 357. Seminar in Biology. 1 Credit Hour.
Seminar on selected topics in biology.
Prerequisite: BIL150 and BIL160 and BIL151 or BIL152, or BIL153 and BIL161 or BIL162 or BIL163.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 360. Comparative Physiology. 3 Credit Hours.
How animals work and the physiological processes that allow for animal life. Fundamental aspects of physiology, such as homeostasis, metabolism, function of the nervous system, endocrine function, movement, gas and water transport. The relationship between structure and function through comparisons across diverse animal taxa. Emphasis on critical thinking and application of the scientific method.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 365. Endocrinology. 3 Credit Hours.
The endocrine glands and the chemistry, mechanisms of action, and physiological effects of hormones. Emphasis on vertebrate hormones, including clinical aspects of human endocrinology.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 367. Biology of Cancer. 3 Credit Hours.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 369. Fundamentals of the Biology of Aging. 3 Credit Hours.
How and why we age. The biology of aging at the molecular, cellular, and organismal levels in a comparative and evolutionary context.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 371. Readings in Biology. 1 Credit Hour.
Independent readings on selected topics in biology under the supervision of individual faculty.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 372. Readings in Biology. 1 Credit Hour.
Independent readings on selected topics in biology under the supervision of individual faculty.
Components: IND.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 374. Seminar in Biology. 1 Credit Hour.
Seminar in selected topics in biology.
Prerequisite: BIL150 and BIL160 and BIL151 or BIL152, or BIL153 and BIL161 or BIL162 or BIL163.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 375. Seminar in Biology. 1 Credit Hour.
Seminar on selected topics in biology.
Prerequisite: BIL150 and BIL160 and BIL151 or BIL152, or BIL153 and BIL161 or BIL162 or BIL163.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 376. Complementary and Integrative Medicine. 2 Credit Hours.
Almost 40% of Americans use health care approaches outside of mainstream Western medicine. These non-traditional approaches include acupuncture, meditation, massage therapy, reiki, yoga, hypnotherapy, chiropractic manipulation, and herbal medicine. Some of these approaches seem to hold promise in the healing process, while others have had little research to date. In this course, we will examine scientific evidence for the efficacy of these different approaches.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 380. Writing in Biology. 0 Credit Hours.
Writing instruction by faculty using biological topics in BIL courses offered at the 300 level.
Components: IND.
Grading: SUS.
Typically Offered: Fall & Spring.

BIL 381. Workshop Leaders in Biology I. 0-1 Credit Hours.
Peer-led Team Teaching of workshops for groups of BIL 150 students. May be taken once only for credit in the BIL major, but may be taken additional times for a general education credit. Students may serve as workshop leaders for a second time for a stipend if they (1) have taken the course once before and (2) are graduating seniors.
Components: IND.
Grading: SUS.
Typically Offered: Fall & Spring.

BIL 382. Workshop Leaders in Biology II. 0-1 Credit Hours.
Peer-led Team Teaching of workshops for groups of BIL 160 students. May be taken once only for credit in the biology major, but may be taken additional times for general education credit. Students may serve as workshop leaders for a second time for a stipend if they (1) have taken the course once before and (2) are graduating seniors.
Components: DIS.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 384. Special Laboratory/Field Topics in Biology. 1-4 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. Maybe combined/co-listed with other departments or programs. Prerequisite: BIL 150 and BIL 151 and BIL 160 and BIL 161.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 385. Special Topics in Biology. 2-6 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. May be co-listed with other departments or programs.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 386. Science Made Sensible Teaching Internship. 3 Credit Hours.
A teaching internship in which students spend at least 60 hours in Miami Dade County Public Schools assisting teachers with science education. Contributions to bimonthly workshops and group meetings, creation of lesson plans following Sunshine State Guidelines. One BIL course at the 200 level or higher.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 389. Nonacademic Career in Biology. 2 Credit Hours.
Speakers recruited from local biotech companies, conservation organizations, science museums, the National Park Service, and Customs as well as invasive species specialists, medical dosimetrists, principals of schools seeking biology teachers, and others will give weekly seminars about their practice of science in their occupations. Following each seminar, students will meet with speakers in an informal setting to discuss the particulars and or prospects of the career in question. The express purpose of this course is to provide students with an idea of the utility of their biology degree in the workplace. Papers or writings that pertain to a particular career will be assigned prior to the seminar so that students will be ready with questions for the speaker.
Prerequisite: 1 Course in BIL 200 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 390. Studies in Biology. 1-5 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. May be co-listed with other departments or programs.
Components: SEM.
Grading: GRD.

BIL 395. Studies in Biology. 1-5 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. May be co-listed with other departments or programs.
Components: LEC.
Grading: GRD.

BIL 399. DNA and the Changing World. 3 Credit Hours.
This is an online course, not intended for biology majors. It covers in-depth knowledge of DNA, gene, gene function, genome and inheritance with the focus on applying the knowledge to real-world issues; both personal and societal, from the history of life to challenges and opportunities in the modern times at the molecular level. Does not count towards a Biology major or minor.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 402. Seminar in Biology. 1 Credit Hour.
Seminar on selected topics in Biology.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 403. Neuroscience Laboratory. 4 Credit Hours.
Research methods and laboratory experiments in contemporary neuroscience from individual cells to behavior. Scientific writing and computer applications in experimental design and analysis. Combined lecture and laboratory.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 415. Coral Reef Science and Management. 3 Credit Hours.
Coral reefs as biophysical and socioeconomic systems. Coral reef typology, geomorphology, biotic and abiotic components of coral reef ecosystems.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 426. Native and Introduced Plants of the Galapagos. 3 Credit Hours.
The unique vegetation and introduced flora of the Galapagos Islands in Ecuador. Current conservation measures used to control the threats affecting native flora, and future prospects for conserving indigenous plants and for ensuring their rational utilization. Taught in the Galapagos as part of the UGalapagos semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 432. Ecology in the Galapagos. 3 Credit Hours.
Organisms in relation to their environment, with focus on interactive, hands-on learning that connects empirical nature with abstract thinking. Lectures, discussion and fieldwork on ecosystem ecology, plant dispersal and colonization; organisms’ responses to spatial and temporal variability in their environments, plant/animal interactions. Origins and effects of invasive species and actions of bio-control agents. Taught in the Galapagos as part of the UGalapagos semester.
Prerequisite: BIL 332.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 433. Conservation in Practice. 3 Credit Hours.
Intersection between economic development, science and conservation in one of the world’s most pristine and fragile ecosystems, the Galapagos Islands. Exploration of how tourism offers an alternative to unsustainable fisheries that once drove the local economy, yet has created a new set of pressures on the people and the environment. Mitigation efforts, science, and international conservation mesh with an understanding of local politics, customs and cultures. Taught in the Galapagos as part of the UGalapagos semester.
Prerequisite: BIL 432.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 434. Behavioral Ecology of the Galapagos. 3 Credit Hours.
Functional aspects of animal behavior, including topics such as animal communication, optimal foraging, mating systems, sexual selection, and the evolution of cooperation. Studies of the behavior of Galapagos organisms are emphasized.
Prerequisite: BIL 150 and BIL 151 or BIL 152 or BIL 153 and BIL 160 and BIL 161 or BIL 161 or BIL 162 or BIL 163.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 435. Origins, Ecology and Conservation of Insular Diversity. 1-3 Credit Hours.
Three-week field course in the Solomon Islands. Ecological and evolutionary processes that maintain and create biological diversity in tropical islands. Natural selection, island biogeography, phylogenetics, community assembly, predator-prey interactions, sexual reproduction, mating systems, and social behavior. On-site field surveys and experiments. Combined lecture and laboratory/field course.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

BIL 436. Stable Isotope Ecology. 3 Credit Hours.
Stable isotopes of essential elements (Oxygen, Carbon, Nitrogen, Hydrogen and Sulfur) as natural tracers of ecological processes. Principles of Chemistry, Physics and Biology will be integrated to allow interpretation, via these tracers, of how fundamental elements are cycled through the biosphere.
Prerequisite: BIL 330.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 441. Animal Behavior. 3 Credit Hours.
Mechanistic and evolutionary aspects of animal behavior. A survey of systems that illustrate the control, development and function of behavior in a variety of animals.
Prerequisite: BIL 150 and BIL 160.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 442. Animal Behavior Laboratory. 2 Credit Hours.
An exploration of the amazing behaviors of animals from an explicitly evolutionary perspective. The study of the diversity of behavior in nature as shaped by natural and sexual selection. Topics will include: resource acquisition and defense, predator avoidance, mate choice and competition for mates, and cooperative behavior. Labs are inquiry based, with students designing, conducting and analyzing experiments to test hypotheses. Students will develop their scientific communication skills throughout the semester by gaining experience in oral presentations and writing manuscripts. Note that this course will involve two required field trips off campus.
Prerequisite: BIL 150 and BIL 160.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 450. The Biology of Symbiosis. 3 Credit Hours.
Symbiosis, interactions between species that live in close physical association, in particular those between microbes and multicellular eukaryotic hosts is fundamental to almost all aspects of biology. Building discipline specific knowledge about symbiosis. The course includes engagement with the scientific literature as a professional researcher, and development of foundational skills for presentation and synthesis of scientific information in visual, oral and written form.
Prerequisite: BIL 250 Or BIL 330.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 452. Evolution and Conservation Genetics. 3 Credit Hours.
Integration of evolutionary theory and genetics to address conservation problems and their solutions. Theory and empirical information pertaining to evolution on islands and the impact of humans on endemic species. Natural selection, sexual selection, population genetics, niches, diversity, and conservation in the context of the Galapagos Islands.
Prerequisite: BIL 150 and BIL 151 or BIL 152 or BIL 153 and BIL 160 and BIL 161 or BIL 161 or BIL 162 or BIL 163.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BIL 454. Biological Core Concepts Through Medical Case Studies. 3 Credit Hours.
A capstone course in which students will complete a series of medically-oriented case studies. Knowledge of biology, chemistry, math, and physics will be applied to real-world issues. Critical thinking will be used to solve basic medical problems, and facilitate understanding of the interdisciplinary nature of medicine.
Requisite: BIL 150 And BIL 151 And BIL 160 And BIL 161 Or equivalent And one BIL 200 level or higher course.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 455. Developmental Biology. 3 Credit Hours.
A study of the process by which a fertilized egg gives rise to a multicellular organism with organs, tissues and cell types that are structurally and functionally distinct and are arranged in a characteristic three-dimensional body plan. This course will take a comparative approach using invertebrate and vertebrate models to cover the current understanding of the cellular, molecular and genetic mechanisms that regulate the development of animals. Evolutionary mechanisms and the biomedical relevance of developmental biology will be emphasized.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 456. Developmental Biology Laboratory. 2 Credit Hours.
Experimental analysis of animal development using a variety of techniques including experimental embryology, microscopy, molecular biology, genetics and immunochemistry. Following a short series of introductory labs and lectures, students will develop an independent research proposal and will spend the remaining weeks of the semester working on their projects under the guidance of the instructors. This class is restricted to students who have taken cell and molecular biology, developmental biology OR genetics.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 458. Advanced Science Made Sensible Teaching Internship. 3 Credit Hours.
Training and teaching assistance for undergraduate workshops or laboratories, under the direct supervision of faculty. Specific topic is indicated by course subtitle. This course may be taken no more than twice for credit in the Biology major or minor, and if taken twice, teaching assistance must be for two different BIL courses. May be taken multiple times for general elective credit only.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 481. Undergraduate Teaching Assistant Training in Biology. 1-3 Credit Hours.
A teaching internship in which students spend at least 60 hours in Miami Dade County Public Schools assisting teachers with science education. Contributions to bimonthly workshops and group meetings, development of problem-based lesson plans to promote critical thinking. Prerequisite: BIL 386.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 482. PRISM Teaching Fellow. 2 Credit Hours.
Undergraduate mentors to PRISM students, and teaching fellows to PRISM course instructors in biology.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 484. Special Laboratory Topics in Biology. 1-4 Credit Hours.
Topics relevant to the biological sciences, listed as subtitle. May be combined/co-listed with other departments or programs.
Prerequisite: BIL 200 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 485. Special Topics in Biology. 2-6 Credit Hours.
Topics relevant to the biological sciences, co-listed with other departments or programs.
Components: DIS.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 486. Advanced Science Made Sensible Teaching Internship. 3 Credit Hours.
A teaching internship in which students spend at least 60 hours in Miami Dade County Public Schools assisting teachers with science education. Contributions to bimonthly workshops and group meetings, development of problem-based lesson plans to promote critical thinking. Prerequisite: BIL 386.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 491. Departmental Seminar in Biology. 1 Credit Hour.
Research seminars by distinguished biologists.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

BIL 492. Departmental Seminar in Biology. 1 Credit Hour.
Research seminars by distinguished biologists.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BIL 495. Projects in Biology. 2 Credit Hours.
Individual, original laboratory or field research supervised by a member of the department faculty and concluded by a formal written report.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.
BIL 496. Projects in Biology. 2 Credit Hours.
Individual, original laboratory or field research supervised by a member of the department faculty and concluded by a formal written report.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 497. Projects in Biology. 2 Credit Hours.
Individual, original laboratory or field research supervised by a member of the department faculty and concluded by a formal written report.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 498. Senior Thesis. 2 Credit Hours.
Formal thesis preparation supervised by a member of the departmental faculty including a public oral defense and submission of the written document to the department.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 499. Research Colloquium. 1 Credit Hour.
Discussion of current research done by undergraduate students.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 511. Advanced Biostatistics. 4 Credit Hours.
Statistical analyses needed to understand, present, and publish biological research. Examples will primarily be drawn from the biomedical and ecological fields. The course will begin with a review of descriptive statistics, probability theory, and univariate distributions, followed by an overview of experimental design and analysis of categorical data using contingency tables. This will be followed by a unit on parametric analysis of univariate data including both simple and multiple linear regression, model selection, and analysis of variance. The final unit will cover non-parametric versions of these analyses and more advanced multivariate statistical methods. Lectures will be accompanied by a computer lab in which students learn hands-on statistical analysis in SAS JMP.
Prerequisite: At least one BIL course at the 300 level.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 515. Object-Oriented Programming and Agent-Based Modelling. 3 Credit Hours.
Hands-on training in object-oriented programming using Java, including Java statistical packages, and in the development of agent-based and individual-based simulation models for ecological, physiological, social, economic and physical sciences. Introductions to cellular automatons and modes based on social and behavioral networks. No prior programming experience required.
Prerequisite: At least one BIL course at the 200 level.
Components: LEC.
Grading: GRD.

BIL 520. Evolution. 3 Credit Hours.
Evidence for evolution; microevolution including natural selection, kin selection, genetic drift, gene flow, mutation, and evolutionary game theory; macroevolution including speciation, adaptation, phylogenetics, origin of life, and extinction.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 521. Phylogenetics. 3 Credit Hours.
Concepts and methods in phylogenetic systematics. The importance of phylogenetic trees in biology. Use of phylogenies in taxonomy, trait evolution (including homology, adaptations and key innovations), biogeography, speciation, diversification rates, molecular evolution, molecular clocks, and gene duplication.
Prerequisite: BIL 250.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 523. Advanced Biology of Marine Invertebrates. 4 Credit Hours.
Detailed study of major phyla of marine invertebrates. Special emphasis on taxa found in waters off southern Florida. Field course. Lectures, laboratory, special projects, and seminars.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 525. Herpetology. 3 Credit Hours.
Systematics, biogeography, and evolutionary biology of amphibians and reptiles, with emphasis on modern families. Combined lecture and laboratory.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 531. Advanced Field Ecology. 5 Credit Hours.
Principles of and practical experience in quantitative sampling of community structure, plant and animal populations, and animal activities. Emphasis on individual projects. Lecture, 3 hours; laboratory/field, 10 hours on alternate Saturdays, plus research projects.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 535. Molecular Ecology. 3 Credit Hours.
Molecular markers and analyses, and their applications to different problems in biology. Appropriate sampling, methods for assessing genetic diversity and differentiation. Approaches to studying gene flow, tools for behavioral ecology, remote sampling, tracking individuals, and paternity analysis, hybridization and speciation, DNA bar codes, and gene expression from a population biological perspective.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 536. Molecular Ecology Laboratory. 1 Credit Hour.
Laboratory techniques, molecular tools, applications, and analysis methods commonly used by researchers in the areas of molecular ecology and population genetics.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 537. Ecosystem Ecology. 3 Credit Hours.
Concepts and models of energy and nutrient flow, food webs, successional processes, human influences and effects of spatial heterogeneity.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 539. Conservation and Protected Areas. 3 Credit Hours.
The science and policy of park planning and management will be
explored through four case studies. The case studies will explore key
concepts in ecology and population biology relating to loss of habitat,
habitat fragmentation, invasive species, pollution and declines in
population size.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 551. Population Genetics and Genomics. 3 Credit Hours.
Introduction to population genetics, which examines the evolutionary
processes that affect the genetic composition of natural populations:
mutation, genetic drift, natural selection, and gene flow. Theoretical and
empirical aspects will be examined via mathematical models, methods
of measuring genetic variation, and readings of published case studies.
Taxonomic focus will be broad and will include both model organisms
(e.g., Drosophila), and non-model organisms.
Prerequisite: BIL 250.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 552. Bioinformatics Tools. 3 Credit Hours.
Databases and tools of bioinformatics as relevant to research in
genomics and molecular biology. Bioinformatics applications.
Information retrieval, analytical tools, BLAST searches, promoter analysis,
protein structure- function analysis and various applications.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 553. Biomedical Data Science. 3 Credit Hours.
Computational skills for analysis of genomic data sets. Basics of using
a command line interface (text editor, Unix/Linux/iOSX), and logging into
and getting started on Pegasus2. Python will be used to write scripts
for downloading, manipulating, and analyzing data. File sharing and
version control using github will be introduced at this stage, which
will include RCR training. Analysis, interpretation, and presentation
of Next Generation Sequencing data set (RNAseq, exome, or whole
genome; public or their own. Interpreting and presenting results, to enable
students to extract information from the data rather than just statistically
analyze it.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 554. Electron Microscopy. 4 Credit Hours.
Techniques in transmission electron microscopy (TEM) including
tissue preparation, use of the electron microscope, photography, and
interpretation of micrographs. Lecture, 1 hour; laboratory, 6 hours.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 555. Projects in Electron Microscopy. 2 Credit Hours.
Individual research projects in transmission electron microscopy, 6 hours.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 556. Ecological and Evolutionary Genomics. 3 Credit Hours.
The evolution of genomes, and the ecological interactions that drive their
evolution.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 559. Life in the Cell. 3 Credit Hours.
A comprehensive, advanced overview of the molecular biology of the cell,
cells, and genomes.
Prerequisite: BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 565. Evolution and Development. 3 Credit Hours.
Exploration of the relationship between common descent and biological
diversity, principally changes in organismal development through time.
Prerequisite: BIL 250 or BIL 255.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 568. Evolution and Development of Nervous Systems. 3 Credit Hours.
Mechanisms/pathways/modules underlying formation of the nervous
system during embryo development. How some properties of nervous
systems have resisted change while others have diverged dramatically
during evolution.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 575. Advanced Special Studies in Biology. 1-6 Credit Hours.
Content of course will vary by semester. Content in any semester will be
indicated via subtitle in the class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 580. Writing in Biology. 0 Credit Hours.
Writing instruction by faculty using biological topics in BIL courses
offered at the 500 level.
Components: IND.
Grading: SUS.
Typically Offered: Fall & Spring.

BIL 591. Studies in Biology. 1-5 Credit Hours.
Special topics taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

BIL 592. Studies in Biology. 1-5 Credit Hours.
Special topics taken at other institutions with no direct equivalents.
Components: LEC.
Grading: GRD.

BIL 610. Lab Group Meeting. 1 Credit Hour.
Weekly seminar meeting for discussion of research projects and other academic issues in graduate faculty research laboratories. (Fall semesters)
Components: DIS.
Grading: GRD.
Typically Offered: Fall.
BIL 611. Lab Group Meeting. 1 Credit Hour.
Weekly seminar meeting for discussion of research projects and other academic issues in graduate faculty research laboratories. (Spring semesters)
Components: DIS.
Grading: GRD.
Typically Offered: Spring.

BIL 612. Graduate Core I. 3 Credit Hours.
Foundations of genome structure and how the information encoded in genomes is regulated by intrinsic and extrinsic factors during development and evolution. Major topics include genome structure, gene regulation, cells, development, physiology and EvoDevo.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 613. Graduate Core II. 3 Credit Hours.
Foundations of key ecological and evolutionary theory. Major topics in Ecology include population, community, physiological and ecosystem ecology. Major topics in Evolution include principles of natural selection, speciation, biodiversity, population genetics, neutral theory, molecular evolution, phylogenetics, and systematics.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 614. Professional Writing and Grantsmanship. 3 Credit Hours.
Elements of argumentative writing, reader-oriented writing strategies, fundability of submitted grants, and techniques for mastering presentation venues such as posters and talks.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 615. Object-Oriented Programming and Agent-Based Modelling. 3 Credit Hours.
Hands-on training in object-oriented programming using Java, including Java statistical packages, and in the development of agent-based and individual-based simulation models for ecological, physiological, social, economic and physical sciences. Course includes introductions to cellular automata and models based on social and behavioral networks. No prior programming experience required.
Prerequisite: At least one BIL course at the 200 level.
Components: LEC.
Grading: GRD.

BIL 616. Professional Skills I. 1 Credit Hour.
Training and development in the skills necessary to become an accomplished professional scientist. Instruction on preparation, submission, and review of manuscripts; viewing and attending poster sessions; presenting scientific talks; communicating effectively with colleagues, lab partners, and the student's principal investigator.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 618. Advanced Biostatistics. 4 Credit Hours.
This course will provide an overview of statistical analyses needed to understand, present, and publish biological research. Examples will primarily be drawn from the biomedical and ecological fields. The course will begin with a review of descriptive statistics, probability theory, and univariate distributions, followed by an overview of experimental design and analysis of categorical data using contingency tables. This will be followed by a unit on parametric analysis of univariate data including both simple and multiple linear regression, model selection, and analysis of variance. The final unit will cover non-parametric versions of these analyses and more advanced multivariate statistical methods. Lectures will be accompanied by a computer lab in which students learn hands-on statistical analysis in SAS JMP.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BIL 620. Evolution. 3 Credit Hours.
Evidence for evolution; microevolution including natural selection, kin selection, genetic drift, gene flow, mutation, and evolutionary game theory; macroevolution including speciation, adaptation, phylogenetics, origin of life, and extinction.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BIL 621. Phylogenetics. 3 Credit Hours.
Concepts and methods in phylogenetic systematics. The importance of phylogenetic trees in biology. Use of phylogenies in taxonomy, trait evolution (including homology, adaptations and key innovations), biogeography, speciation, diversification rates, molecular evolution, molecular clocks, and gene duplication.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 622. Plant Identification in an Evolutionary Context. 3 Credit Hours.
An exploration of the plants in the on-campus Gifford Arboretum as well as other plants that students interact with in their daily environment (foods, beauty products, fibers, medicines, poisons, etc.)
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 623. Advanced Biology of Marine Invertebrates. 4 Credit Hours.
Detailed study of major phyla of marine invertebrates. Special emphasis on taxa found in waters off southern Florida. Field course. Lectures, laboratory, special projects, and seminars.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 625. Advanced Herpetology. 3 Credit Hours.
Systematics, biogeography, and evolutionary biology of amphibians and reptiles, with emphasis on modern families. Combined lecture and laboratory.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 630. Population and Community Ecology: Theory. 3 Credit Hours.
Classical and contemporary theory in population and community ecology including population dynamics, matrix models, life tables, predator-prey models and food webs.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 631. Advanced Field Ecology. 5 Credit Hours.
Principles of and practical experience in quantitative sampling of community structure, plant and animal populations, and animal activities. Emphasis on individual projects. Lecture, 3 hours; laboratory/field, 10 hours on alternate Saturdays, plus research projects.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 632. Population and Community Ecology: Theory II. 3 Credit Hours.
Classical and contemporary theory in population and community ecology including population dynamics, matrix models, life tables, predator-prey models and food webs.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 633. Conservation Biology. 3 Credit Hours.
Challenges facing conservation practitioners and the toolkit that has been developed to face them. Distribution and value of biodiversity, threats to biodiversity, and methods that have been developed to face these threats at both species and landscape levels. Government implementation of conservation strategies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 634. Stable Isotope Ecology. 3 Credit Hours.
Stable isotope analysis applied to ecological questions such as nutrient cycling, photosynthesis and trophic level studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 635. Molecular Ecology. 3 Credit Hours.
Molecular markers and analyses, and their applications to different problems in biology. Appropriate sampling, methods for assessing genetic diversity and differentiation. Approaches to studying gene flow, tools for behavioral ecology, remote sampling, tracking individuals, and paternity analysis, hybridization and speciation, DNA bar codes, and gene expression from a population biological perspective.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 636. Tropical Biology: An Ecological Approach. 8 Credit Hours.
The tropical environment and biota; ecologic relations, communities and evolution in the tropics. Conducted in Costa Rica under the Organization for Tropical Studies. Lecture, laboratory, and fieldwork.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 637. Ecología de Poblaciones. 7 Credit Hours.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 638. Tropical Managed Ecosystems. 8 Credit Hours.
Application of ecological principles to problems in agriculture, forestry, conservation and natural resource management in the tropics. Conducted in Costa Rica under the Organization for Tropical Studies.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 639. Ecosystem Ecology. 3 Credit Hours.
Concepts and models of energy and nutrient flow, food webs, successional processes, human influences and effects of spatial heterogeneity.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 641. Animal Behavior. 3 Credit Hours.
Amazing behaviors of animals from an evolutionary perspective, including how the diversity of behavior in nature is shaped by natural and sexual selection.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 645. Developmental Biology. 3 Credit Hours.
A study of the process by which a fertilized egg gives rise to a multicellular organism with organs, tissues and cell types that are structurally and functionally distinct and are arranged in a characteristic three-dimensional body plan. This course will take a comparative approach using invertebrate and vertebrate models to cover the current understanding of the cellular, molecular and genetic mechanisms that regulate the development of animals. Evolutionary mechanisms and the biomedical relevance of developmental biology will be emphasized.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 649. Seminar in Behavior. 1 Credit Hour.
Discussion of current literature in animal behavior. This course may be repeated for credit.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

BIL 650. The Biology of Symbiosis. 3 Credit Hours.
Symbiosis, interactions between species that live in close physical association, in particular those between microbes and multicellular eukaryotic hosts is fundamental to almost all aspects of biology. Building discipline specific knowledge about symbiosis. The course includes engagement with the scientific literature as a professional researcher, and development of foundational skills for presentation and synthesis of scientific information in visual, oral and written form.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BIL 651. Population Genetics and Genomics. 3 Credit Hours.
Population genetics, which examines the evolutionary processes that affect the genetic composition of natural populations: mutation, genetic drift, natural selection, and gene flow. Theoretical and empirical aspects will be examined via mathematical models, methods of measuring genetic variation, and readings of published case studies. Taxonomic focus will be broad and will include both model organisms (e.g., Drosophila), and non-model organisms.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 652. Bioinformatics Tools. 3 Credit Hours.
Databases and tools of bioinformatics as relevant to research in genomics and molecular biology. Bioinformatics applications. Information retrieval, analytical tools, BLAST searches, promoter analysis, protein structure-function analysis and various applications.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 653. Bioinformatics Algorithms. 3 Credit Hours.
The complexity of bioinformatics computations. Introduction to Perl and Bioperl. Pattern matching and sequence homology. Genome assembly. Transcription factor binding site recognition and motif finding, gene prediction, phylogeny, micro array analysis, RNA folding, gene design and synthesis.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 654. Electron Microscopy. 4 Credit Hours.
Techniques in transmission electron microscopy (TEM) including tissue preparation, use of the electron microscope, photography, and interpretation of micrographs. Lecture, 1 hour; laboratory, 6 hours.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 655. Techniques in Scanning Electron Microscopy. 3 Credit Hours.
Tissue preparation, use of the scanning electron microscope (SEM), photography, and analysis and manipulation of digital images. Lecture 1 hour; laboratory 5 hours.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 656. Ecological and Evolutionary Genomics. 3 Credit Hours.
The evolution of genomes, and the ecological interactions that drive their evolution.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 661. High Altitude Biology and Medicine. 3 Credit Hours.
High altitude biology and medicine: Mechanisms of hypoxia resistance influencing the requirement to match oxygen supply and demand throughout the oxygen cascade. Topics drawn from genomics, integrated physiology, population genetics, biochemistry, gene expression, evolution, and alpine medicine. Taxonomic examples from the literature will include humans, other mammals, birds, reptiles, amphibians, and fish.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 665. Evolution and Development. 3 Credit Hours.
Exploration of the relationship between common descent and biological diversity, principally changes in organismal development through time.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 668. Evolution and development of Nervous Systems. 3 Credit Hours.
Mechanisms/pathways/modules underlying formation of the nervous system during embryo development. How some properties of nervous systems have resisted change while others have diverged dramatically during evolution.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 675. Advanced Study in Plant or Animal Sciences. 1-6 Credit Hours.
Content of course will vary by semester. Content in any semester will be expressed as course subtitle.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BIL 678. Current Topics in Biological Research - DVP. 1 Credit Hour.
Content will vary by semester. Readings and discussions with eminent scholars temporarily resident in the department's Distinguished Visiting Professor program.
Components: SEM.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BIL 680. Research Ethics. 0 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 689. Nonacademic Careers in Biology. 2 Credit Hours.
Speakers recruited from local biotech companies, conservation organizations, science museums, the National Park Service and Customs as well as invasive species specialists, medical dosimetrists, principals of schools seeking biology teachers, and others will give weekly seminars about their practice of science in their occupations. Following each seminar, students will meet with speakers in an informal setting to discuss the particulars and or prospects of the career in question. The express purpose of this course is to provide students with an idea of the utility of their biology degree in the workplace. Papers or writings that pertain to a particular career will be assigned prior to the seminar so that students will be ready with questions for the speaker.
Prerequisite: BIL 200 or Higher.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BIL 810. Master's Thesis. 1-6 Credit Hours.
The student working on their Master's thesis enrolls for credit, in most departments not to exceed six, as determined by the student's advisor. May be regarded as full time residence.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
BME 100. Introduction to Biomedical Engineering for Summer Scholars. 3 Credit Hours.
This introductory course is designed to expose high school students to biomedical engineering. The program is designed for the exemplary high school student interested in applied mathematics and science. The students will be provided with an understanding and some hands-on experience on topics relative to the discipline of Biomedical Engineering. The course content changes throughout the 3-week duration and includes topics on lasers, medical imaging, biomaterials, bioelectricity and biomechanics. The students will be able to understand the challenges associated with the design, testing and FDA clearance of biomedical devices and the importance of the scientific methods in engineering. The laboratory and field trip experiences will deal with the design and testing of a bio electric device. Summer Scholar Students only.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

Biomedical Engineering (BME)

BME 101. Introduction to Innovation: Learning About Innovation by Innovating. 3 Credit Hours.
Introduction to diverse methods and tools that promote and nurture student creativity, entrepreneurship, teamwork, and skills for creating business plans that consider ethical, global, and financial issues. Students will learn to use the Maker Space facility to implement their design ideas.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 110. Discrete Structures. 3 Credit Hours.
Foundational concepts and techniques in the design and analysis of algorithms, including the study of discrete structures such as graphs and trees. Students will learn computational methods for solving problems in discrete mathematics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 111. Introduction to Biomedical Engineering II. 3 Credit Hours.
Introduction to Biomedical Engineering II provides an introduction to biomedical engineering analysis, design, and manufacturing processes. Ethics, Regulatory Factors, and Biomedical Design Tools (mechanical, electrical, and computer tools) are introduced. Students will also be given lectures from both Biomedical Engineering researchers and industrial professionals concerning their experiences and the current trends within the field. Hands on experience is provided.
Prerequisite: BME 111.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 112. Introduction to Biomedical Engineering. 2 Credit Hours.
Introduction to engineering for non-engineers with emphasis on real-world engineering systems and services which are changing the way we live, communicate, learn, play, and care for ourselves, our communities and our planet. Students will learn how to use modern tools to observe and design simple engineering systems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 123. Explorations in Engineering. 3 Credit Hours.
Introduction to engineering for non-engineers with emphasis on real-world engineering systems and services which are changing the way we live, communicate, learn, play, and care for ourselves, our communities and our planet. Students will learn how to use modern tools to observe and design simple engineering systems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 211. Introduction to Programming for Biomedical Engineers. 3 Credit Hours.
This course will provide a comprehensive introduction to programming using MATLAB. The students will learn MATLAB functions for importing, analyzing, visualizing and exporting data, numerical computation, modeling and solving biomedical engineering problems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 265. Medical Systems Physiology. 3 Credit Hours.
Human physiological processes from a bioengineering and medical point of view. Pertinent aspects of anatomy, biophysics, biochemistry, and disease mechanisms are also included.
Prerequisite: BIL 150. And CHM 111.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BME 266. Human Physiology Laboratory. 1 Credit Hour.
This course provides a series of laboratory experiments to assist students to learn human physiology through noninvasive measurements by using the Powerlab Physiology Data Acquisition station. Following introductory lectures in the lab, students will assemble measurement probes, connect different devices, collect data under normal and stimulating conditions, and perform data analysis. Lab report is required for each experiment.
Prerequisite: Or Corequisite: BME 265.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 302. Cellular Engineering. 3 Credit Hours.
Cellular engineering addresses issues related to understanding and manipulating cell structure-function relationships. This course is intended to bridge between cell biologists and engineers, to understand quantitatively cell biological aspects. Central to biomaterial and tissue engineering is our use of cells and our understanding of their interactions with their environment. It is important to understand how cells respond to external signals from their substrata or their milieu, how they move, and what they need in order to perform their desired function. Students are provided with an introduction to engineering principles and modeling at the cellular level. Of particular interest are cyto mechanics, receptor/ligand binding, genetic engineering, enzyme kinetics, and metabolic pathway engineering.
Prerequisite: BIL 150. And CHM 111.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 303. Cell Engineering Lab. 1 Credit Hour.
The principles of cell engineering will be presented in a hands-on laboratory experience. General techniques learned will include sterile methods, cell culture techniques, cell imaging, DNA cloning and cell transfection, microcontact printing. Cell engineering topics include cell cycle/metabolism, adhesion, signal transduction, and assessment and fabrication of 2D culture substrates. Prerequisite: BIL 150 and BIL 151.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 305. Biomedical Technology. 3 Credit Hours.
Non-mathematical introduction to technical and clinical aspects of biomedical engineering. Biomedical signals and instrumentation, sensors, transducers, physiological measurements, laboratory instrumentation, implants, cardiac assist devices, radiology, ultrasound, CT, MRI, transmission, and scanning electron microscopy. Field trips to clinical and research laboratories are included. Open only to non-BME students.
Prerequisite: BIL 150 and CHM 111.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 310. Mathematical Analysis in Biomedical Engineering. 3 Credit Hours.
Mathematical modeling of physiological and other biomedical engineering systems and devices. Basic engineering principles and mathematical tools are covered for rigorous understanding of physiological regulation and control in biosystems.
Prerequisite: MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 311. MATLAB for Biomedical Engineers. 1 Credit Hour.
Laboratory course for applications of Matlab in biomedical engineering. Upon the completion of this course, students will be able to write Matlab scripts to solve engineering problems and perform basic analysis and processing of biomedical signals. The course includes Matlab programming environment; Matlab variables; FOR, IF and WHILE statements, plotting and advanced graphics, user defined functions, symbolic computation, data file management and graphical user interfaces. The course concludes with a final project focused on biomedical applications.
Prerequisites: ECE 118 and BME 310. Or Corequisite: BME 310.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 312. Biomedical Statistics and Data Analysis. 3 Credit Hours.
The course will provide a comprehensive introduction to biostatistical models and methods, with applications in clinical trials research, observational studies, physiology, genomics and public health. Various examples will be solved using MATLAB and the results will be compared and discussed. A brief introduction to R will be provided.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 320. The Evolution of Technology. 3 Credit Hours.
Organized and taught by an interdisciplinary team, this innovative course is designed for juniors and seniors. An experimental elective, the course uses multimedia to explore the ways in which innovation is driven by the needs of society and individuals, and nurtured by improvements in tools and production. Five broad subject areas will receive special attention: survival, communication, transportation, entertainment and medicine.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 330. Foundations of Medical Imaging. 3 Credit Hours.
Physical and biological principles of medical imaging, including ultrasound, X-ray, nuclear magnetic resonance, electrical impedance and optical imaging. Propagation and interaction of ultrasonic waves, light waves, X-ray photons, and nuclear radiation in hard and soft biological tissue. Corequisite: BME 310.
Prerequisite: PHY 206. And PHY 207. Or Pre/Corequisite: BME 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BME 335. Biomaterials. 3 Credit Hours.
Introduction to the field of Biomaterials. Review of materials science for four main types of biomaterials: ceramics, metals, polymers, and composites. Lectures on special topics given by guest lecturers who are active in their specific areas, under supervision of the instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 375. Fundamentals of Biomechanics. 3 Credit Hours.
Application of solid and fluid mechanics to describe the mechanical behavior of human motion, mechanical behavior of soft and hard biological tissues, cells and biofluids. Review of fundamental concepts and techniques of mechanics (stress, strain, constitutive relations). Focus on mechanical properties of specific tissues, including tendon, skin, smooth muscle, heart muscle, cartilage, and bone. Cellular and biofluid mechanics will be presented.
Prerequisite: MTH 311. And PHY 205.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 395. Undergraduate Research in Biomedical Engineering. 1-3 Credit Hours.
Research and/or design projects consisting of an individual investigation of current problems. Offered by special arrangement only.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 399. Cooperative Education. 1 Credit Hour.
Practical application of classroom theory through alternating semester or summer employment with firms offering positions consistent with the student’s field of study. May be repeated.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 401. Biomedical Design. 3 Credit Hours.
Introduction to the clinical problem-based design for undergraduate biomedical engineering students. Focus will be on need identification, concept generation, prototype development and testing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 402. Senior Design I. 2 Credit Hours.
This course deals with the introduction phase of an individual or group project for seniors. Concepts on projects related to the hypotheses/testing protocols, design limitations (constraints), and validation of the design in Biomedical Engineering will be discussed. Scheduled individual or group report presentations are required.
Prerequisite: BME 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 403. Senior Design II. 1 Credit Hour.
This course deals with the completion phase of an individual or group project for seniors. Concepts on projects related to the hypotheses/testing protocols, design limitations (constraints), and validation of the design in Biomedical Engineering will be discussed. Scheduled individual or group report presentations are required.
Prerequisite: BME 402.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 440. Biomedical Measurements. 0-4 Credit Hours.
Introduction to the principles of measurements in physiological and biological systems, as well as a discussion of measurable parameters, transducers, sensors, signal conditioning, and processing. Laboratory experiments are conducted in parallel with the course.
Prerequisite: ECE 201. And ECE 204.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 450. Biomedical Transport Phenomena. 3 Credit Hours.
Fundamentals of transport phenomena in biological systems including diffusion, osmosis, convection, electrophoresis, and transport with binding. Applications to cell electrophysiology and drug delivery. Introduction to physiological fluid flow in tissues.
Prerequisite: BME 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 460. Introduction to Physiological Fluid Mechanics. 3 Credit Hours.
The role of transport processes in biological systems, mathematical modeling of physiological fluid transport, conservation of mass and momentum rheology of blood flow in large and small vessels, approximation methods for the analysis of complex physiological flow, fluid flow in the circulation and tissue. Basic engineering principles and mathematical tools are covered for rigorous understanding of physiological fluid flow.
Prerequisite: BME 310 and PHY 206.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 470. Biomedical Signal Analysis. 3 Credit Hours.
Time and frequency description, analysis and processing of biophysical and physiological signals. This course covers analytical and computational tools for measuring, manipulating and interpreting signals fundamental to biomedical engineering. Fourier analysis, Fourier transform, data acquisition, averaging, digital filter design, discrete Fourier transform, correlation, convolution, coherence are discussed.
Prerequisite: BME 211.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BME 480. Biomedical Instrumentation. 3 Credit Hours.
Analysis and design of systems and electronic circuits in biomedical instrumentation including modeling and simulation of dynamic measurement systems and implementation of analog signal processing. The functional principles, operation, clinical context and technological trends of medical instrumentation systems used in clinical and research applications will be discussed.
Prerequisite Or Corequisite: BME 440.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 506. Computer Aided Design in Biomedical Engineering. 1 Credit Hour.
Laboratory course for computer based two and three dimensional drawing and design based on ProEngineer. Parametric design, parts, features, assemblies for complex modeling. Applications in biomedical engineering design.
Prerequisite: BME 112. And BME 211.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 507. LabView Applications for Biomedical Engineering. 1 Credit Hour.
Laboratory course for computer based instrumentation and design based on Labview. Virtual instrumentation, data acquisition and display, GPIB instrument control, biomedical applications in biosignal recording, and monitoring are discussed.
Prerequisite: BME 112. And BME 211.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 510. Introduction to Medical Robotics. 3 Credit Hours.
This course will discuss the basic principles of robotics and focus on its medical applications. The course integrates previously learned math, programming and imaging knowledge into an application platform to enable students to understand fundamentals of robotics methods in biology and medicine and to train students to build a robotics prototype through hands-on projects.
Prerequisite: BME 211. And BME 310. And BME 330.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 512. Regulatory Control of Biomedical Devices. 3 Credit Hours.
Regulatory agencies and requirements, Food and Drug Administration, 510(k) and premarket approval (PMA), international regulatory requirements, ISO 9000 series, CE, UL, product and process validation, quality engineering, quality improvement programs, rapid prototyping, packaging and sterilization, and project management are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 513. Biomedical Systems Engineering. 3 Credit Hours.
This course provides students with an understanding and appreciation of Biomedical Systems Engineering with emphasis on current day industrial project management and product development processes. The components of Systems Engineering to be presented include: functional system analysis, requirements analysis, translation of functions and requirements into a system and product architecture, and, finally, testing methods to verify the biomedical product meets all design requirements. Decision methodology, alternative concept analysis, trade-off studies, integration of human factors, manufacturability, reliability, maintainability, feasibility demonstration, and safety are all addressed as part of the product design system. The entire product development life cycle will be analyzed with relevant concepts from initial market evaluation, to requirement development, through final product manufacturing and product launch. The regulatory environment for biomedical devices will also be presented for both US FDA and international compliance. The lectures will provide detailed notes on the subjects; other articles as handouts or additional readings will also be assigned.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 520. Medical Imaging System. 3 Credit Hours.
Engineering and scientific principles of medical imaging systems. The concepts of instrumentation and diagnostic applications of different techniques and systems are presented. Demonstrations or exhibitions of medical systems are given in the visits to clinic and research laboratories. Topics include digital image and image processing fundamentals, radiographic (X-ray, CT), magnetic resonance (MRI) and radio-isotopic (PET) systems, and associated image reconstruction techniques. Basic concepts and simulation of imaging systems are emphasized.
Prerequisite: ECE 201. And BME 211. And BME 330. Or Corequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 521. Medical Imaging Applications. 3 Credit Hours.
Medical applications of imaging systems and image processing techniques. Topics include image fundamentals (resolution, format, and storage), image processing fundamentals (transformation, compression, enhancement, segmentation, registration, and reconstruction), and image analysis fundamentals (calibration, quantification, correlation, linearity and depiction). Course includes dedicated computer laboratory projects and demonstrations given in clinical and research laboratories at the medical campus. Corequisite: BME 570 or equivalent.
Prerequisite: BME 211. And BME 330. Or Corequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 522. Scanning Electron Microscopy for Engineers. 3 Credit Hours.
Physics of transmission and scanning electron microscopy including x-ray spectroscopic analysis. Students will learn to independently operate and use the SEM for imaging in its role in research and engineering. Each student will be responsible for several imaging assignments and an independent research project related to their field of interest.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.
BME 525. Special Problems. 1-3 Credit Hours.
Research and/or design projects consisting of an individual investigation of current problems. Offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 526. Special Problems. 1-3 Credit Hours.
Research and/or design projects consisting of an individual investigation of current problems. Offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 535. Advanced Biomaterials. 3 Credit Hours.
Applications of biomaterials in different tissue and organ systems. Relationships between physical and chemical structure of materials and biological system response are discussed as well as choosing, fabricating, and modifying materials for specific biomedical applications. Prerequisite: BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 540. Microcomputer-Based Medical Instrumentation. 3 Credit Hours.
Principles and design of microcomputer-based biomedical instruments, analog and digital signal conversion, microcomputer hardware and software design, algorithm development for medical applications, medical signal processing with microcomputers, software safety in life support systems, and current applications are discussed. Prerequisite: ECE 315. And ECE 304. Or ECE 211.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 541. Medical Electronic Systems Laboratory. 2 Credit Hours.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BME 545. Biomedical Optical Instruments. 3 Credit Hours.
Introduction to geometrical optics, light sources, detectors, and fiber optics with an emphasis on engineering aspects and medical applications. Fiber-optic delivery systems for medical applications, optics of the eye and visual instruments, and optical instruments used in medicine (microscopes, endoscopes, ophthalmic instruments) are discussed. Hands-on sessions in the laboratory are included. Prerequisite: PHY 206. And PHY 207. And MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 546. Medical Applications of Lasers. 3 Credit Hours.
Review of geometrical optics, fiber optics, wave optics, laser physics, and technology. Medical laser systems, optical properties of tissue, light propagation in tissue, laser-tissue interactions, and surgical applications of lasers are also covered. Hands-on sessions in the laboratory are included. Prerequisite: PHY 206. And PHY 207. And MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 555. Fundamentals of Computational Neuroscience. 3 Credit Hours.
Major concepts include neural signaling and communication from the single neuron to system of neural ensembles and the role of neural computation in engineering applications. Theory and principles of information processing in the brain are presented. Experimental data and computer simulations are used to provide real examples for students experimentation. Prerequisite: BME 265 and Corequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 556. Principles of Cellular and Tissue Engineering. 3 Credit Hours.
Introduction to cellular and tissue engineering. Current therapeutic approaches for lost/damaged tissue or organ function, tissue engineering strategies to replace/repair tissue or function: infusion of cells, production and delivery of tissue-inducing substances, cells placed on or within biomaterial scaffolds, examples of tissue engineering applications: skin, heart muscle, blood vessels, and blood. Prerequisite: BME 302. And BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 565. Cell and Tissue Engineering Laboratory. 1 Credit Hour.
The principles of cell and tissue engineering will be presented in a hands-on laboratory experience. General techniques learned will include sterile methods, cell culture techniques and integration of cells within biomaterials. Cell engineering topics include cell cycle/metabolism, adhesion, signal transduction, and assessment. Tissue engineering topics include fabrication, biomaterials/scaffolds and cell integration, and functional assessment. Pre/Corequisite: BME 565 Or BME 302.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 566. Tissue Engineering Lab. 1 Credit Hour.
The principles of tissue engineering will be presented in a hands-on laboratory experience. General techniques learned will include hydrogel spectroscopy analysis, swelling tests, permeability tests, rheological tests, cell culture techniques, cell imaging, cell culture in hydrogels. Cell & Tissue engineering topics include cell cycle/metabolism, adhesion, biomaterials synthesis and characterization, biocompatibility. Prerequisite: BME 302 and BME 303. And Corequisite: BME 335 or BME 565.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.
BME 570. Advanced Biomedical Signal Processing. 3 Credit Hours.
This course provides an overview of advanced topics in biomedical signal processing with an emphasis on practical applications. Topics include quantitative description, analysis, on-line and real-time processing of biophysical and physiological signals (cardiovascular, neural, sensory, muscular, respiratory and other) using adaptive, learning, pattern recognition and data dimension reduction methods.
Prerequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 571. Introduction to Biosignal Processing Lab. 1 Credit Hour.
Laboratory course in conjunction with BME 570 course. Corequisite: BME 570.
Prerequisite: BME 570. Or Corequisite: BME 570.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 575. Biomechanics II. 3 Credit Hours.
Applications of linear and nonlinear viscoelastic concepts to the biomedical characteristics of biological tissues and structures at small and large deformations of blood flow, experimental methods of analysis, artificial organs, and life-support systems.
Prerequisite: BME 375. And BME 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 581. Radiation Biology and Physics. 3 Credit Hours.
The principles, methods, and results of radiation biology with physics applications in radiation therapy will be introduced in the course. The course will focus on mechanisms of radiation and biological system interaction, biological aspects of the foundation of radiation therapy, and mathematical models for radiobiological analysis.
Prerequisite: BME 265.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 582. Radiation Therapy Physics. 3 Credit Hours.
The principles and instrumentation of radiation dosimetry with focus on the applications in radiation therapy will be introduced in this course. The course will emphasize radiation dose computation algorithms and applications in treatment dose planning. The course will also cover a categorized dosimetric analysis of radiation therapy to different clinical conditions.
Prerequisite: BME 310. Or Pre/Corequisite: BME 581.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 583. Radiation Protection. 3 Credit Hours.
This course covers radiation safety principles for all areas of clinical medical physics, including regulatory requirements for personnel, equipment and facilities and detailed structural shielding design requirements for medical facilities. The student will become proficient in practical aspects of radiation safety objectives and regulatory requirements in clinical practice, including those for patients, members of the general public and staff. Students will learn the principles for designing and installing structural shielding in clinical facilities that satisfies both regulatory requirements and clinical needs.
Prerequisite: BME 581. Or Pre/Corequisite: BME 582.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 585. Immunoengineering. 3 Credit Hours.
Immunoengineering is a novel interdisciplinary field that combines biomaterial science and bioengineering design with immunology to develop cutting edge technology for the prevention, rapid diagnosis and treatment of infectious diseases, cancer, autoimmune and inflammatory diseases. The goal of this course is to provide a basic background in immunology that will allow understanding the need for immunoengineering and providing the tools to be able to design novel vaccines, anti-inflammatory agents, and immunotherapy. Application of biomaterials for immunoengineering applications will be reviewed through lectures, reading assignments and journal clubs. This course will provide valuable knowledge of an emerging field that will impact both the academic and industrial world.
Prerequisite: BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 587. Finite Element Analysis for Engineers. 3 Credit Hours.
Introduction to the finite-element method. Hands-on applications of FEMLAB software to the analysis of structural, thermal, chemical, electro-magnetic, optical, and fluid flow problems.
Prerequisite: MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 599. Cooperative Education.. 1 Credit Hour.
Practical application of classroom theory through alternating semester or summer employment with firms offering positions consistent with the student’s field of study. Course may be repeated. Periodic reports and conferences are required.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 601. Unified Medical Sciences I. 3 Credit Hours.
Treatment of the basic biological and medical elements in physiological systems. The anatomy, physiology, biophysics, biochemistry and certain aspects of clinical medicine are unified with an emphasis on cellular and subcellular systems. Not open to BME undergraduates.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BME 602. Unified Medical Sciences II. 3 Credit Hours.
Treatment of the basic biological and medical elements in physiological systems. The anatomy, physiology, biophysics, biochemistry, and certain aspects of clinical medicine are unified with an emphasis on cardiovascular, renal, digestive, endocrine, and reproductive systems. Not open to BME undergraduates.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 603. Unified Medical Science III. 3 Credit Hours.
Treatment of the basic biological and medical elements in physiological systems. The anatomy, physiology, biophysics, biochemistry, and certain aspects of clinical medicine are unified with an emphasis on neural, sensory, and muscular systems. Not open to BME undergraduates.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 606. Computer Aided Design in Biomedical Engineering. 1 Credit Hour.
Laboratory course for computer based two and three dimensional drawing and design based on ProEngineer. Parametric design, parts, features, assemblies for complex modeling. Applications in biomedical engineering design.
Prerequisite: BME 112. And BME 211.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 607. LabView Applications for Biomedical Engineering. 1 Credit Hour.
Laboratory course for computer based instrumentation and design based on Labvie w. Virtual instrumentation, data acquisition and display, GPIB instrument control, biomedical applications in biosignal recording, and monitoring are discussed.
Prerequisite: BME 112. And BME 211.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 610. Introduction to Medical Robotics. 3 Credit Hours.
This course will discuss the basic principles of robotics and focus on its medical applications. The course integrates previously learned math, programming and imaging knowledge into an application platform to enable students to understand fundamentals of robotics methods in biology and medicine and to train students to build a robotics prototype through hands-on projects.
Prerequisite: BME 211. And BME 310. And BME 330.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 612. Regulatory Control of Biomedical Devices. 3 Credit Hours.
Regulatory agencies and requirements, Food and Drug Administration, 510(k) and premarket approval (PMA), international regulatory requirements, ISO 9000 series, CE, UL, product and process validation, quality engineering, quality improvement programs, rapid prototyping, packaging and sterilization, and project management are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 613. Biomedical Systems Engineering. 3 Credit Hours.
This course provides students with an understanding and appreciation of Biomedical Systems Engineering with emphasis on current day industrial project management and product development processes. The components of Systems Engineering to be presented include: functional system analysis, requirements analysis, translation of functions and requirements into a system and product architecture, and, finally, testing methods to verify the biomedical product meets all design requirements. Decision methodology, alternative concept analysis, trade-off studies, integration of human factors, manufacturability, reliability, maintainability, feasibility demonstration, and safety are all addressed as part of the product design system. The entire product development life cycle will be analyzed with relevant concepts from initial market evaluation, to requirement development, through final product manufacturing and product launch. The regulatory environment for biomedical devices will also be presented for both US FDA and international compliance. The lectures will provide detailed notes on the subjects; other articles as handouts or additional readings will also be assigned.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 620. Medical Imaging System. 3 Credit Hours.
Engineering and scientific principles of medical imaging systems. The concepts of instrumentation and diagnostic applications of different techniques and systems are presented. Demonstrations or exhibitions of medical systems are given in the visits to clinic and research laboratories. Topics include digital image and image processing fundamentals, radiographic (X-ray, CT), magnetic resonance (MRI) and radio-isotopic (PET) systems, and associated image reconstruction techniques. Basic concepts and simulation of imaging systems are emphasized.
Prerequisite: ECE 201. And BME 211. And BME 330. Or Corequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 621. Medical Imaging Applications. 3 Credit Hours.
Medical applications of imaging systems and image processing techniques. Topics include image fundamentals (resolution, format, and storage), image processing fundamentals (transformation, compression, enhancement, segmentation, registration, and reconstruction), and image analysis fundamentals (calibration, quantification, correlation, linearity and depiction). Course includes dedicated computer laboratory projects and demonstrations given in clinical and research laboratories at the medical campus. Corequisite: BME 570 or equivalent.
Prerequisite: BME 211. And BME 330. Or Corequisite: BME 470.
Components: LEC.
Grading: GRD.

BME 622. Scanning Electron Microscopy for Engineers. 3 Credit Hours.
Physics and operating principles of scanning electron microscope (SEM), transmission electron microscope (TEM), and optical light microscope. Biological tissue preparation, storage, fixation and digital image storage. Each student will learn to use the SEM in the design and/or analysis of a biomedical device.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.
BME 625. Special Problems. 1-3 Credit Hours.
Research and/or design projects consisting of an individual investigation of current problems. Offered by special arrangement only.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 626. Special Problems. 1-3 Credit Hours.
Research and/or design projects consisting of an individual investigation of current problems. Offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 635. Advanced Biomaterials. 3 Credit Hours.
Applications of biomaterials in different tissue and organ systems. Relationships between physical and chemical structure of materials and biological system response are discussed as well as choosing, fabricating, and modifying materials for specific biomedical applications. Prerequisite: BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 640. Microcomputer-Based Medical Instrumentation. 3 Credit Hours.
Principles and design of microcomputer-based biomedical instruments, analog and digital signal conversion, microcomputer hardware and software design, algorithm development for medical applications, medical signal processing with microcomputers, software safety in life support systems, and current applications are discussed. Prerequisite: ECE 315. And ECE 304. Or ECE 211.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 641. Medical Electronic Systems Laboratory. 2 Credit Hours.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BME 645. Biomedical Optical Instruments. 3 Credit Hours.
Introduction to geometrical optics, light sources, detectors, and fiber optics with an emphasis on engineering aspects and medical applications. Fiber-optic delivery systems for medical applications, optics of the eye and visual instruments, and optical instruments used in medicine (microscopes, endoscopes, ophthalmic instruments) are discussed. Hands-on sessions in the laboratory are included. Prerequisite: PHY 206. And PHY 207. And MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 646. Medical Applications of Lasers. 3 Credit Hours.
Review of geometrical optics, fiber optics, wave optics, laser physics, and technology. Medical laser systems, optical properties of tissue, light propagation in tissue, laser-tissue interactions, and surgical applications of lasers are also covered. Hands-on sessions in the laboratory are included. Prerequisite: PHY 206. And PHY 207. And MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 655. Fundamentals of Computational Neuroscience. 3 Credit Hours.
Major concepts include neural signaling and communication from the single neuron to system of neural ensembles and the role of neural computation in engineering applications. Theory and principles of information processing in the brain are presented. Experimental data and computer simulations are used to provide real examples for students experimentation. Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 665. Principles of Cellular and Tissue Engineering. 3 Credit Hours.
Introduction to cellular and tissue engineering. Current therapeutic approaches for lost/damaged tissue or organ function, tissue engineering strategies to replace/repair tissue or function: infusion of cells, production and delivery of tissue-inducing substances, cells placed on or within biomaterial scaffolds, examples of tissue engineering applications: skin, heart muscle, blood vessels, and blood. Prerequisite: BME 302. And BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 666. Cell and Tissue Engineering Laboratory. 1 Credit Hour.
The principles of cell and tissue engineering will be presented in a hands-on laboratory experience. General techniques learned will include sterile methods, cell culture techniques and integration of cells within biomaterials. Cell engineering topics include cell cycle/metabolism, adhesion, signal transduction, and assessment. Tissue engineering topics include fabrication, biomaterials/scaffolds and cell integration, and functional assessment. Pre/Corequisite: BME 565. Or BME 665. Or BME 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 667. Tissue Engineering Lab. 1 Credit Hour.
The principles of tissue engineering will be presented in a hands-on laboratory experience. General techniques learned will include hydrogel spectroscopy analysis, swelling tests, permeability tests, rheological tests, cell culture techniques, cell imaging, cell culture in hydrogels. Cell & Tissue engineering topics include cell cycle/metabolism, adhesion, biomaterials synthesis and characterization, biocompatibility. Co-requisite: BME 635 or BME 665.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

BME 670. Advanced Biomedical Signal Processing. 3 Credit Hours.
This course provides an overview of advanced topics in biomedical signal processing with an emphasis on practical applications. Topics include quantitative description, analysis, on-line and real-time processing of biophysical and physiological signals (cardiovascular; neural, sensory, muscular, respiratory and other) using adaptive, learning, pattern recognition and data dimension reduction methods. Prerequisite: BME 470.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BME 671. Introduction to Biosignal Processing Lab. 1 Credit Hour.
Laboratory course in conjunction with BME 570 course. Corequisite: BME 570.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 675. Biomechanics II. 3 Credit Hours.
Applications of linear and nonlinear viscoelastic concepts to the biomedical characteristics of biological tissues and structures at small and large deformations of blood flow, experimental methods of analysis, artificial organs, and life-support systems.
Prerequisite: BME 681. Or Pre/Corequisite: BME 682.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 681. Radiation Biology and Physics. 3 Credit Hours.
The principles, methods, and results of radiation biology with physics applications in radiation therapy will be introduced in the course. The course will focus on mechanisms of radiation and biological system interaction, biological aspects of the foundation of radiation therapy, and mathematical models for radiobiological analysis. Corequisite or prerequisite: BME 502 or permission of instructor.
Corequisite: BME 602.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 682. Radiation Therapy Physics. 3 Credit Hours.
The principles and instrumentation of radiation dosimetry with focus on the applications in radiation therapy will be introduced in this course. The course will emphasize radiation dose computation algorithms and applications in treatment dose planning. The course will also cover a categorization of dosimetric analysis of radiation therapy to different clinical conditions.
Prerequisite: BME 310. Or Pre/Corequisite: BME 681.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 683. Radiation Protection. 3 Credit Hours.
This course covers radiation safety principles for all areas of clinical medical physics, including regulatory requirements for personnel, equipment and facilities and detailed structural shielding design requirements for medical facilities. The student will become proficient in practical aspects of radiation safety objectives and regulatory requirements in clinical practice, including those for patients, members of the general public and staff. Students will learn the principles for designing and installing structural shielding in clinical facilities that satisfies both regulatory requirements and clinical needs.
Prerequisite: BME 681. Or Pre/Corequisite: BME 682.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 685. Immunoengineering. 3 Credit Hours.
Immunoengineering is a novel interdisciplinary field that combines biomaterial science and bioengineering design with immunology to develop cutting edge technology for the prevention, rapid diagnosis and treatment of infectious diseases, cancer, autoimmune and inflammatory diseases. The goal of this course is to provide a basic background in immunology that will allow understanding the need for immunoengineering and providing the tools to be able to design novel vaccines, anti-inflammatory agents, and immunotherapy. Application of biomaterials for immunoengineering applications will be reviewed through lectures, reading assignments and journal clubs. This course will provide valuable knowledge of an emerging field that will impact both the academic and industrial world.
Prerequisite: BME 335.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 687. Finite Element Analysis for Engineers. 3 Credit Hours.
Introduction to the finite-element method. Hands-on applications of FEMLAB software to the analysis of structural, thermal, chemical, electro-magnetic, optical, and fluid flow problems.
Prerequisite: MTH 311.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 699. Cooperative Education.. 1 Credit Hour.
Practical application of classroom theory through alternating semester or summer employment with firms offering positions consistent with the student’s field of study. Course may be repeated. Periodic reports and conferences are required.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 702. Organs on Chips. 3 Credit Hours.
This course provides a comprehensive introduction to engineering the living and non-living components of cellular systems in a dish. The first part of the course will focus on cell source, with an emphasis on human stem cell acquisition and differentiation. The second part of the course will focus on biomaterials and methods for engineering tissues. The final portion of the course will be a survey of tissue engineering in the clinic today and existing ‘Organ on Chip’ platforms. Throughout the course, laboratory principles will be discussed, including cell culture and gene editing. Most of the assigned reading will be recent primary literature articles.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BME 705. Senior Design Project. 3 Credit Hours.
Team-based capstone design project. Students will apply the Biodesign concepts learned in BME 401, including the phases of identify, invent and implement. In the identify phase, students will perform unmet-need identification, technical and economic feasibility and screening to end with a need statement and a set of specifications and constraints. In the invent phase, the students design a proof of concept prototype and perform a technological de-risking exercise by means of a killer experiment. In the implement phase, student teams develop a device for which a risk analysis is completed, and verification protocols are designed and performed. Student teams are required to report their progress on a regular basis.
Prerequisite: BME 401.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 706. Master's Project. 3 Credit Hours.
Comprehensive MS research or design project in biomedical engineering. Open only to students who are enrolled in the MS program. This course is a requirement for all MS students in biomedical engineering.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 711. Accelerated Basic Science Curriculum. 1-9 Credit Hours.
Beginning in the latter part of June each year, extending to the middle of February of the ensuing year, the following accelerated and intensive complete basic science medical curriculum is offered: Embryology, Gross Anatomy, Histology, Biochemistry, Neuroanatomy, Biophysics and Neurophysiology, Systematic Physiology, Pathology, Medical Microbiology, and Pharmacology. A single grade will be entered on the graduate transcript for this course. MD-PhD Students Only
Components: LEC.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BME 713. Application of Computers in Medicine. 3 Credit Hours.
Applications in the clinical and medical research laboratories for physiological data acquisition, analysis, and management of patient records. Differences among computer systems and languages for clinical and research activities are also covered.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 722. Scanning Electron Microscopy Special Projects. 3 Credit Hours.
An advanced course for graduate students with basic skills in SEM. Course is open only to masters or Ph.D. students. Students will have an opportunity to do independent research under supervision of the instructor on special projects of interest that may be related to their field of study as long as it is not part of their thesis or dissertation.
Prerequisite: BME 522 Or BME 622.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 723. Neurosensory Engineering. 3 Credit Hours.
Biophysics of neural communication, quantitative electroencephalography and evoked potentials, sleep, seizure, anesthesia and intraoperative monitoring, neural stimulation, artificial and biological neural networks, cochlear and visual implants, brain and muscle stimulation.
Prerequisite: BME 603. And BME 570. Or BME 670.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 724. Neuromotor Engineering. 3 Credit Hours.
Advances in Neural Engineering have led to improved medical-device designs with novel functions. This course focuses on the engineering approaches, R&D advances, and the technical principles of NeuroMotor medical implants. Neural Engineering theory and applications from the perspectives of electronics design, neural signal analysis, and neurophysiology will be covered.
Prerequisite: BME 603.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 725. Special Problems. 1-3 Credit Hours.
Research and/or design projects through an individual investigation of current problems. Offered by special arrangement only.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 726. Special Problems. 1-3 Credit Hours.
Research and/or design projects through an individual investigation of current problems. Offered by special arrangement only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 728. Advanced Topics. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title ‘Advanced Topics’.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 729. Advanced Medical Imaging. 3 Credit Hours.
Analysis of contemporary medical imaging systems and the associated technologies. The course focuses on principles of advanced medical imaging systems. Topics include multimodality imaging, three-dimensional image reconstruction and visualization, clinical and research applications, and derivation and comparison of algorithms.
Prerequisite: BME 620.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 731. Advanced Topics. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title ‘Advanced Topics’.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BME 732. Advanced Topics. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title 'Advanced Topics.'
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BME 735. Auditory and Visual Neural Systems. 3 Credit Hours.
Design and application of auditory and visual neural systems and devices for medical purposes. Methodologies and instrumentation using electrophysiological, psychophysical and other measurements are explored focusing on diagnostic and therapeutic applications.
Prerequisite: BME 603.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 740. Implantable Biomedical Devices. 3 Credit Hours.
Development and advances in implantable materials and devices especially those used as electrically driven prostheses. Topics include pacemakers, defibrillator s, catheters, neurological stimulators, heart assist, bone repair, and other diagnostic and therapeutic devices. The historical, medical significance, business, economic, and technical aspects of these devices and the associated instruments for monitoring are discussed. Fundamentals of electrochemical corrosion and stimulation as well the technology of implantable power sources are reviewed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 745. Biomedical Optical Imaging and Diagnostics. 3 Credit Hours.
Review of geometrical optics, fiber optics, and tissue optics. Introduction to physical optics: interference, diffraction, and polarization; optical imaging resolution limits, super-resolution imaging, advanced optical microscopy, and optical coherence tomography (OCT). Imaging through scattering tissue, imaging and diagnostics with polarized light, fluorescence, infrared, and Raman spectroscopy and applications are also discussed. Optical diagnostics using scattered light: laser Doppler flowmetry, and dynamic light scattering; and opto-chemical and evanescent wave sensors are also covered.
Prerequisite: BME 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 760. Stem Cell-Based Tissue Engineering. 3 Credit Hours.
Principles and advanced topics on cellular and tissue engineering. Topics include biodegradable and non-biodegradable biomaterials, cytokines, the traditional and stem cell-based tissue engineering approaches, bioreactors and special topics such as bone, cartilage and other tissues.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 761. Stem Cell Design. 3 Credit Hours.
Stem cell engineering is a relatively new field of research that focuses on using stem cells and tissue derived products to repair damaged or diseased tissues. This course will examine through the most recent publications the role of stem cells and tissue derived donors for tissue repair, wound healing, and as well as regeneration/repair. In addition, we will highlight the use of engineered products developed from tissue banks associated with the different type of cells for clinical application. The course will use a mix of lectures/article presentations and discussion format to effectively present relevant information.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BME 779. Biomedical Engineering Seminar Series. 1 Credit Hour.
A course for Biomedical Engineering doctoral students. Students will attend lectures and roundtable discussions with leading experts from both academia and industry.
Components: SEM.
Grading: SUS.
Typically Offered: Fall & Spring.

BME 780. Graduate Scholarship in Biomedical Engineering. 3 Credit Hours.
A course for Biomedical Engineering doctoral students. Students will learn to critically review scientific journal articles as well as NIH research proposals (i.e. R01, R03, F30/31 and R21 ). Students will also learn how to read federal grant application guidelines and determine what is required for a highly competitive written application. The students will have the opportunity to prepare their own research proposal in the form of an F31 NIH application on a biomedical engineering topic of interest. Students will also learn how to prepare and present their research findings at conferences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BME 781. Radiation Dosimetry and Physics. 3 Credit Hours.
Application of radiation physics in the field of radiation therapy. The course will cover the relevant subjects of modern physics, the basic modalities and basic instrumentations of radiation therapy, the principles of radiation physics and radiation dose computation and quality assurance of radiation therapy instruments. The subject of radiation protection will also be discussed.
Prerequisite: BME 582. Or BME 682.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 783. Radiation Therapy Physics Clinical Rotation. 3 Credit Hours.
Students will observe clinical activities at a designated radiation therapy center for ten hours per week. Rotation includes observation of daily treatment, simulation, dose planning, physics quality assurance and routine physics support activities (special physics consultation, weekly physics chart check, monitoring radiation safety activities, support of brachytherapy procedures). Students will meet with the course instructor one and a half hours/week to discuss the schedule and the progress of the rotation activities. Students need to submit reports on each radiation therapy category.
Prerequisite: BME 682. And BME 781.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BME 784. Medical Physics Journal Club. 1 Credit Hour.
The course aims to keep track of recent developments in the field of Medical Physics for therapeutic and diagnostic purposes in oncology through reading, discussion and presentation of identified scientific papers from the major journals of Medical Physics among enrolled students.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BME 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BME 820. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis for the master's degree after the student has enrolled for the permissible cumulative total in BME 710 (usually six credits). Credit not granted. May be regarded as full time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 825. Continuous Registration--Master's Study. 1 Credit Hour.
To establish residence for non-thesis master's students who are preparing for major examinations. Credit not granted. Regarded as full time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BME 830. Pre-candidacy Doctoral Dissertation. 1-12 Credit Hours.
Doctoral dissertation credits taken prior to Ph.D. student's candidacy. The student will enroll for credit as determined by his/her advisor. Not more than 12 hours of BME 730 may be taken in a regular semester, nor more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Doctoral dissertation credits taken after Ph.D. student has been admitted to candidacy. The student will enroll for credit as determined by his/her advisor. Not more than 12 credits in BME 740 may be taken in a regular semester, nor more than six credits in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BME 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the Ph.D., after the student has enrolled for the permissible cumulative total in appropriate doctoral research. Credit not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Biostatistics (BST)

BST 605. Statistical Principles of Clinical Trials. 3 Credit Hours.
This course is designed for individuals interested in the statistical aspects of clinical trials. Topics include types of clinical research, study design, treatment allocation, randomization and stratification, quality control, sample size requirements, patient consent, and interpretation of results. This course will additionally cover strengths and limitations of alternative study designs such as quasi-experiments and observational studies. Common sources of bias in these alternative study designs will be described along with design approaches to minimize bias.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BST 610. Introduction to Statistical Collaboration. 3 Credit Hours.
This course gives students exposure to issues arising in biostatistics consulting and collaboration. Students will learn how to identify the scientific objectives of a study and to develop a statistical strategy appropriate for those objectives. The student will become familiar with problems arising in consulting situations, specifically relating to identification of study objectives and framing of research questions, study design, power and sample size determination and choice of analytical approach. The student will learn to communicate through presentation of oral and written reports, and through student and faculty critiques of these reports. This course is open only to MS and PhD Biostatistics students or instructor’s permission.
Prerequisite: Academic Plan: BSTS_PHD or BSTS_MS.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

BST 625. Survey of Statistical Computing. 3 Credit Hours.
This three credit course aims to familiarize students with the basic use of SAS and R for routine statistical analysis and prepare them for more advanced courses and/or thesis research. Statistical computation will be illustrated with examples in medical research, biological study and business. The focus of the course is on the computing environment, therefore a thorough discussion of statistical theories will not be provided. It is expected that students will already be prepared statistically.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BST 630. Longitudinal and Multilevel Data. 3 Credit Hours.
This course offers students an introduction to linear and generalized linear models for the analysis of multi-level and longitudinal biomedical data. The course will also provide students with the opportunity to develop the skills necessary to perform analysis of these types of data using statistical software packages.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BST 640. Modern Numerical Multivariate Methods. 3 Credit Hours.
This course covers multivariate topics from both a classical as well as modern perspective. Topics to include: Multivariate Normal Distribution; Spectral Decomposition; Principal Component Analysis; Canonical Correlation Analysis; Newton's Method; Steepest Descent; Gradient Boosting; Coordinate Descent Algorithms; Trees; Forests; Discriminant Analysis. The R programming language (http://www.r-project.org) will be used extensively throughout the course for computation and statistical analysis.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BST 649. Advanced Individual Study. 1-3 Credit Hours.
Individual work on a special project under faculty guidance.
Components: IND.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BST 650. Topics in Biostatistical Research. 1 Credit Hour.
The course consists of a series of research level presentations in contemporary biostatistics research (broadly defined) by diverse outside speakers as well as faculty in the Division of Statistics or in other units on campus who are hosting presentations in biostatistics research. The emphasis will be on new methodologies and new developments in existing methodologies. However, recent developments on the implementation and comparison of methodology and on data types may also be included.
Components: LEC.
Grading: SUS.
Typically Offered: Fall & Spring.

BST 660. Spatial Statistics. 3 Credit Hours.
Spatial data commonly arise from many fields including business, ecological, and health studies. This course will cover advanced techniques to tackle the spatial correlation. Topics include variogram estimation, spatial prediction, spatial point pattern analysis, estimating function based methods and others. Real data examples will be used to motivate and illustrate the use of the methods.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BST 665. Design and Analysis of Clinical Trials. 3 Credit Hours.
This first part of this course is an advanced treatment of the key ideas underlying the design and analysis of contemporary clinical trials. By the end of the course, students will have learned the statistical foundations of Phase I, II, and III trials from the standpoint of classical Frequentist, Bayesian, and adaptive designs. In addition, students will learn the usual mechanisms for preparing a clinical trial protocol, data safety and monitoring, interim analysis, and proper close out of a trial.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BST 670. Bayes Data Analysis: Theory and Computing. 3 Credit Hours.
This first part of this course is an advanced and comprehensive treatment of the foundations of Bayesian theory. Beginning with the Bayesian alternative to sampling theory, the course covers Savage's axioms, the standard Bayesian inference procedure, subjective Bayes interpretation and prior selection, the minimax and complete class theorems, a variety of Bayesian principles (likelihood, stopping time etc.), and a selection of standard parametric and non-parametric examples. The second part focuses on the computational implementation of Bayesian inference, namely Gibbs sampling, Metropolis-Hastings, and other Markov-Chain-Monte Carlo techniques for obtaining the posterior and posterior quantities. Computational examples will be illustrated using R and WinBUGS. Special topics will include approximate Bayes computing (ABC) and particle methods.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BST 675. Intermediate Probability. 3 Credit Hours.
This course covers the basic foundations of probability to limit theorems at an intermediate level. Topics to include are events, random variables and their distributions, discrete and continuous random variables, generating functions, markov chains and convergence.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BST 676. Introduction to Generalized Linear Models. 3 Credit Hours.
This course provides a unifying framework for formulation, estimation and inference using generalized linear models and towards the end examines some modern day extensions. Throughout the course, real data applications from medicine will be used and extensive use will be made of the R programming language.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BST 680. Advanced Statistical Theory. 3 Credit Hours.
The first part of this course is a searching treatment of many of the key ideas underlying hypothesis testing and estimation. In particular, several of the main theorems in mathematical statistics will be stated and proved in full detail. By the end of the course, students will have acquired enough background material for the treatment of a special topic, through a mix of lectures and assignments. Topics will include asymptotic expansions, information theory and non-parametrics.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BST 690. Theory of Survival Analysis. 3 Credit Hours.
Survival analysis is an important tool of statistic with many applications. In this course, without losing sight of such applications, we will give special emphasis to the probabilistic foundations, in terms of counting processes and martingales. Topics include: Failure time models, inference in parametric models, Cox models, counting processes and martingales, likelihood, competing risks and analysis of recurrent event data. The R programming language will be used.
Prerequisite: MTH 524, MTH 525, and BST 680.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BST 691. High Dimensional and Complex Data. 3 Credit Hours.
This course will cover some salient topics in high dimensional data analysis focusing on the uniqueness of the problem and discussing various analyses including error rate control methods, model based shrinkage, prediction, set analysis, cluster analysis, bump hunting and (if time permits), graphical models.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring & Summer.

BST 692. Case Studies in Biostatistics. 3 Credit Hours.
This course will demonstrate cases where commonly used statistical methods break down. It will give students the opportunity to apply new tweaks to common statistical methods and/or use entirely new techniques to address real applied biostatistics problems. Students will be presented with data that the UM faculty are working on, they will be asked to apply statistical methods that they have learned in previous classes and then they will study and apply new methods to handle complexities that are not well handled by the common techniques. The goal of the class is to give students the opportunity to apply their existing skills, study methods for identifying problems and then learn new methods to deal with complexities.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BST 695. Special Topics. 3 Credit Hours.
The course is designed to allow the listing of special topics within the Division of Biostatistics degree programs and cross list topics with other department's offerings.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BST 830. Doctoral Dissertation (pre-candidacy). 1-12 Credit Hours.
Required of all candidates for the PhD. The student will enroll for credit as determined by his/her advisor but not for less than a total of 24. Not more than 12 hours of BST 730 may be taken in regular semester, nor more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring & Summer.

BST 840. Doctoral Dissertation (Post-Candidacy). 1-12 Credit Hours.
Required of all candidates for the PhD. The student will enroll for credits as determined by his/her advisor but not for less than a total of 24. Not more than 12 hours of BST 740 may be taken in regular semester, nor more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring & Summer.

BST 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the PhD. after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. Credit not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring & Summer.

Business (BUS)

BUS 101. First Step: Freshman Integrity, Responsibility, and Success through Teamwork. 3 Credit Hours.
This course is designed to provide entering freshman business majors with an enriched curriculum that examines key issues in the global business environment and emphasizes the importance of ethical business practices. The course culminates with a team project that encourages students to address real world problems and encourages a lifelong commitment to civic engagement.
Requisite: Business School.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring & Summer.

BUS 150. Business Analytics. 3 Credit Hours.
The primary purpose of this course is to build skills in learning and using software technologies to support business-oriented problem solving and decision making. Specifically, you will develop the ability to solve problems, to organize and analyze data using spreadsheet and database software, and to learn to distribute information to others through the effective use of collaborative technologies and the Web. Case problems will cover areas such as accounting, finance, marketing, statistics and operations management. Professors from several business school departments will discuss how their disciplines use spreadsheets to solve problems.
Requisite: Business School.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring & Summer.

BUS 155. Exploration of Faculty Research in SBA. 1 Credit Hour.
Students will be exposed to some of the SBA's top faculty researchers to learn more about research opportunities and styles of research methodologies within business.
Components: LEC.
Grading: CNC.
Typically Offered: Offered by Announcement Only.

BUS 156. Global Business Studies Introductory Seminar. 1 Credit Hour.
This course is designed to provide entering freshman business majors with an enriched curriculum that examines key issues in the global business environment and emphasizes the importance of ethical business practices. The course culminates with a team project that encourages students to address real world problems and encourages a lifelong commitment to civic engagement.
Components: THI.
Grading: GRD.
Typically Offered: Spring.
BUS 200. Introduction to Business. 3 Credit Hours.
Businesses today operate in an exceedingly complex environment. Such factors as commodity prices, labor and capital markets, as well as trends in tastes and preferences are constantly changing. This course will explore many of the key issues facing business decision makers in the contemporary environment, including an introduction to business ethics and corporate social responsibility. The course will take an interdisciplinary perspective, touching on essentially all of the business functions including economics, finance, accounting, marketing, management, and business communications. Using approaches from different business disciplines, students will gain insight into the structures and systems of business, as well as the strategies that firms use to compete effectively in the global business environment. BUS200 serves as the foundational course for the Business Cognate in People & Society, and it is offered for Gen Ed credit only. Requisite: Non Business Majors.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 201. Money. 3 Credit Hours.
Financial decisions are at the heart of success in today’s economy. Thus, financial literacy and the ability to manage personal finances is increasingly important. This GENERAL EDUCATION course delivers a comprehensive introduction to savings and borrowing, investments, and insurance, including such topics as budgeting, banking and consumer credit, the purchase of residential real estate, planning for retirement, starting a business, and understanding basic financial statements. Not for credit toward any business major or minor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 202. Introduction to the Legal Environment of Business. 3 Credit Hours.
The course provides an overview of legal principles impacting business. Students will explore fundamental features of the U.S. judicial system, conflict resolution, the domestic system of property rights, the U.S. Constitution, and the regulatory process, as they relate to the business firm or business as a societal actor. Topical areas may include business ethics, consumer protection, employment discrimination laws, privacy concerns, the law of competition, and environmental regulation.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 203. Managing Effectively: A Skills Development Approach. 3 Credit Hours.
This Business Cognate course focuses on the seven core skills used by successful managers in their day to day work. Students will explore these skills, how they are applied and practiced in organizational settings, how they enable organizational success, and how they fit with the students’ own capabilities. The course uses an action-based learning format that makes students participants in the process whereby they assess, practice, and enhance their own managerial skills.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 204. Intro to Corporate Sustainability. 3 Credit Hours.
This course introduces students to issues associated with business and sustainability, through the lens of corporate governance and corporate citizenship. Readings, class sessions, and assignments are designed to instill in students a practical understanding of key corporate sustainability frameworks, challenges and opportunities, institutions, and actors in the global corporate context. Students will learn to apply alternative decision making models to current business activities.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 206. Principles of International Business. 3 Credit Hours.
This course is designed to provide nonbusiness students with an understanding of what global business is, in particular how international business is conducted across countries with different sets of formal and informal institutions. It also addresses the issues facing multi-national corporations and the factors influencing their success or failure globally.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 211. Professional Development for Finance and Accounting. 1 Credit Hour.
This one-credit course is designed to immerse undergraduate BSAF students in professional development, including inculcating in them a deeper understanding of areas of specialization within accounting and finance, and of careers within those specialties, creation of a career direction and trajectory, development of job search strategies, enhancing their communication and networking skills, building and creating a compelling resume for these industries, and both general and specific interview techniques. It is designed to improve these students’ preparedness to find and secure internships and permanent placement offers, and ultimately to be successful in these industries.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BUS 255. Business and Society: Inquiry and Discourse. 1-3 Credit Hours.
This course will explore the relationships between business firms and their regulatory, ethical, political, cultural, and social environments. Students will be exposed to a wide range of source materials and academic activities, with the objective of developing their capacity for principled professionalism.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

BUS 256. Global Business Studies Seminar II. 1 Credit Hour.
This honors seminar introduces the key political movements and concepts that have shaped society in the region studied.
Components: THI.
Grading: GRD.
Typically Offered: Fall.
BUS 300. Critical Thinking and Persuasion for Business. 3 Credit Hours.
The modern businessperson faces a constantly evolving environment and
must be able to confront and respond to an array of business issues. At
the heart of an effective response is a critical, comprehensive analysis
coupled with the ability to meaningfully and persuasively communicate
to various constituents. This course prepares business students for this by exposing them to a
three-step process of problem solving in which they critically analyze the
problem, and then communicate their analysis both in writing and orally.
Prerequisite: ENG 106 with a C- or better AND Requisite: Business School.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 356. Global Business Studies Seminar III. 1 Credit Hour.
This honors seminar facilitates understanding of economic challenges
faced by business communities, connecting regional studies work with
business curriculum. May be conducted in language of the region.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 400. Senior Experience for Business Students. 0 Credit Hours.
The Miami Business School Senior Experience (SBX) is a virtual, self-paced, credit/no credit course specially designed to assist business
seniors in successfully navigating the final year at the University of
Miami Business School. The course collects the various tasks required
of business seniors under a single LMS-enhanced umbrella, making it
easier for students to track completion of mandated assignments within
established deadlines. SBX also serves as a hub for peer networking
and for access to relevant resources for senior-level students, related
to professional life, graduate study, and young alumni leadership
opportunities. Videos, power points, blogs, threaded discussions, as
well as detailed instructions and web-links for required activities for
graduating seniors are only a click away.
Requisite: Business School and Senior Standing.
Components: DIL.
Grading: SUS.
Typically Offered: Fall, Spring & Summer.

BUS 428. Multidisciplinary Action Projects. 1-3 Credit Hours.
The University of Miami Business School's Multidisciplinary Action
Projects course (UMAP) places students with organizations throughout
the world to address pressing organizational challenges. Students work
in teams with guidance from faculty advisors to develop actionable and
valuable recommendations for sponsoring organizations.
Components: EXP.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 456. Global Business Studies Seminar IV. 1 Credit Hour.
The honors seminar is designed to introduce students to research
methods and structuring a thesis question/argument.
Requisite: Global Business Studies co-major.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 496. Directed Studies in Business. 1-3 Credit Hours.
Supervised readings, individual research project, or independent
investigation of selected non-STEM related problems in the discipline.
Offered only by special arrangement with supervising faculty member,
who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 497. Directed Studies in Business. 1-3 Credit Hours.
Supervised readings, individual research project or independent
investigation of selected STEM related problems in the discipline.
Offered only by special arrangement with supervising faculty member,
who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 498. Special Topics in Business. 1-3 Credit Hours.
Special topics in selected non-STEM areas of Business.
Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 499. Special Topics in Business. 1-3 Credit Hours.
Special topics in selected STEM areas of Business.
Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 555. Business Departmental Honors Research Project. 3 Credit
Hours.
Research project to fulfill requirements for Departmental Honors in
Business.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BUS 556. Global Business Studies Seminar V. 1 Credit Hour.
This directed study course provides individual supervision in thesis
writing.
Requisite: Global Business Studies co-major.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

This honors seminar is designed for completion of the thesis writing and
individualized preparation for thesis defense.
Requisite: Global Business Studies co-major.
Components: THI.
Grading: GRD.
Typically Offered: Spring.

BUS 600. Critical Thinking and Persuasion for Business/Non-native
English Speakers. 2 Credit Hours.
Critical thinking skills are developed by studying questions that
transcend any single business discipline. Utilizing a variety of written
formats, students hone analytic and persuasive skills, with emphasis on
identifying critical issues, developing reasoned positions, and making
compelling written arguments.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BUS 601. MBA Math Module. 0-3 Credit Hours.
This course provides the student with the necessary mathematical skills to progress toward an MBA degree. The course begins with a review of algebra and continues with the fundamentals of differential and integral calculus. The focus is on applying these concepts in solving business problems.

Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BUS 602. Critical Thinking and Effective Writing. 1 Credit Hour.
Critical thinking skills are developed by studying questions that transcend any single business discipline. Utilizing a variety of written formats, students hone analytic and persuasive skills, with emphasis on identifying critical questions, developing reasoned positions, and making compelling written arguments.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BUS 603. Critical Thinking and Effective Speaking. 1 Credit Hour.
Builds on critical thinking and writing skills acquired in BUS 602. Topics include oral persuasion, prepared and impromptu speeches and dealing with the media, defending one’s view before adversarial audiences, display of data, and effective use of visual aids.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 604. Career Development and Enrichment. 0-1 Credit Hours.
This course will expose students to a variety of academic and industry career lectures, events, and workshops to enhance their MBA experience. The focus is to establish added-value to an MBA student through real world and relevant access to information and resources beyond the traditional curriculum.

Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

BUS 605. Residential Session Abroad. 1-6 Credit Hours.
One two-week session of the Global Executive MBA program is held abroad. During this corporate and international experience students attend lectures and institutional visits. This experience exposes students to other cultures and different perspectives on business issues, and widens international networking opportunities.

Components: LEC.
Grading: SUS.
Typically Offered: Fall.

BUS 610. Critical Thinking and Persuasion for Business. 2 Credit Hours.
The modern businessperson faces a constantly evolving environment and must be able to confront and respond to an array of business issues. At the heart of an effective response is a critical, comprehensive analysis coupled with the ability to meaningfully and persuasively communicate that assessment and recommendations to a variety of constituencies. This course prepares business students for this by exposing them to a three-step process of problem solving in which they critically analyze the problem, and then communicate their analysis both in writing and orally. The critical thinking and communication elements of the course are supplemented with additional practical applications relating to career readiness, job search and job procurement.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BUS 622. Global Business Consulting. 1-6 Credit Hours.
The Global Business Consulting (GBC) project is a collaborative course offered by participating CIBER schools to their Graduate Students. Students in related disciplines work in teams both virtually and in person on real business issues with multinational and local businesses and not-for-profits. Project supervision and final grade provided by Faculty Advisor.

Components: PRA.
Grading: GRD.
Typically Offered: Spring.

BUS 624. Asian/Pacific Business Environment- International Trip. 1-4 Credit Hours.
Course content, dates and location will vary from semester to semester at selected universities.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 625. Latin America Business Environment - International Trip. 1-4 Credit Hours.
Course content, dates and location will vary from semester to semester at selected universities.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 628. Multidisciplinary Action Projects. 1-4 Credit Hours.
The Multidisciplinary Action Projects core course (MAP) places students with organizations throughout the world to address pressing organizational challenges. Students work in teams with guidance from faculty advisors to develop actionable and valuable recommendations for sponsors. For students, MAP provides an opportunity to augment and integrate knowledge of fundamental business concepts and tools learned in classroom settings. MAP also offers opportunities to develop and test both critical thinking and leadership skills through practical experience with real business challenges. For sponsoring organizations, MAP offers access to a high-caliber team of 4-6 students, the latest in business tools, and test both critical thinking and leadership skills through practical experience with real business challenges.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BUS 629. Graduate Business Exchange Program. 1-16 Credit Hours.
Course content may vary from semester to semester at selected
universities.
Components: LEC.
Grading: SUS.
Typically Offered: Fall & Spring.

BUS 630. Fundamentals of Economics, Accounting, and Finance. 4 Credit
Hours.
This course provides an overview of business economics, accounting,
and finance. Economic themes primarily focus on microeconomic topics
such as demand, supply, elasticity, and forms of competition. Accounting
concepts include corporate financial statements, cost-volume-profit
analysis, and traditional and activity-based cost accounting. Finance
topics include time value of money, capital budgeting basics, foreign
exchange, risk and return, modern portfolio theory, and financial markets.
The course includes an integration of many of these concepts through an
exposure to business plan development.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 631. Business Analytics and Operational Excellence. 4 Credit Hours.
This course combines three disciplines that form the basis of a modern
analytical approach to business management: statistics, optimization,
and operations management. Many of the concepts covered are cross-
disciplinary and can be applied to a variety of business functions
and situations. Although specific examples will be used during the
course to illustrate each concept, instruction will focus on the general
applicability of the material. Topics to be covered include: numerical and
categorical data, population/sample, parameter/statistic, introduction
to excel, frequency distributions, histograms, pie charts, measures of
variability, pivot tables, measures of association, random variables and
distributions, sampling, types of hypothesis and of statistical errors,
linear programming, network models, sensitivity analysis, integer and
goal programming, forecasting, inventory management and location
analysis.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 632. Introduction to Strategy, Market, and Management. 4 Credit
Hours.
This integrated course focuses on the external environment in which
business firms operate and on the management techniques through
which managers organize and motivate human resources to support
strategic initiatives. It emphasizes in particular three critical sets of
actors: customers, competitors, and employees. The purpose of the
course is to introduce the student to basic conceptual frameworks and
analytic models that managers use to a) identify and understand the
customer segments that make up a marketplace, b) formulate strategies
that achieve a competitive advantage within that marketplace, and c) lead
and motivate employees in the execution of competitive strategies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 633. Business Plan Fundamentals and Communications. 4 Credit
Hours.
This course provides students with the fundamentals in the development
and preparation of a business plan, as well as of oral and written
business communications. Students, after exploring new venture
opportunities, will develop a comprehensive business plan, including
its functional components (marketing, finance, operational, human and
intellectual capital plans), the support with which to secure the needed
financial and human resources, and the organization to manage the
new venture. Students will also enhance their communication skills with
which to identify critical issues, develop reasoned positions, display data,
use visual aids effectively, state persuasive and compelling arguments
for written documents as well as prepared and impromptu speeches, and
deal with the media.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BUS 634. Research Project. 1-6 Credit Hours.
Individually supervised research project in selected field. Scope of work
must be approved by supervision instructor prior to registration. Total
enrollment may not exceed six credits.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BUS 635. Research Project. 1-6 Credit Hours.
Investigation and research in special areas of interest. Offered by special
arrangement. The study will be supervised and graded by a faculty
member.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BUS 636. United States Business Environment - Domestic Trip. 1-4 Credit
Hours.
Course content, dates and location will vary from semester to semester at
selected universities.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BUS 640. Quantitative and Analytical Fundamentals for Finance. 1-4 Credit Hours.
This four-credit course provides graduate students with an intensive review of the fundamentals of financial accounting and finance, and as well as microeconomic concepts and quantitative skills, needed as appropriate foundation to pursue the Master of Science in Finance degree or other master degrees that entail taking an elective course in finance. Topics include: Math concept review (functions, exponents, notation, weighted average, derivatives as applied to maximization/ minimization); Measures of central location, variability, and association; Supply and demand curves, elasticity; Profit maximization; Markets: perfect competition, monopoly, oligopoly; Economic role of Government (monetary and fiscal policy, regulation, taxation); Basic financial statements (income statement, balance sheet, statement of cash flow, statement of changes in shareholders’ equity); Working capital, noncurrent liabilities and owners’ equity, investments and long-lived assets; Common size and ratio analysis; Principles in finance; Time value of money; Valuation (including bonds and stocks); Fixed income securities; Term structure of interest rates; Interest rate risk and duration; Capital markets, how securities trade, intermediaries; Capital market efficiency, arbitrage; Risk and return, portfolio math; Diversifiable vs. non-diversifiable risk; Asset Pricing Models (CAPM, beta, Fama-French); Capital structure; Capital budgeting; Cost of capital; Foreign exchange and global investing: Introduction to derivatives. The course will be taught over taught over a two-week period, primarily in lecture, homework, and test format.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

BUS 650. Introduction to the Miami EMBA for the Americas. 1 Credit Hour.
This course provides incoming Executive MBA students an orientation to program tools and resources central to program success. Students will receive training in Blackboard, learn to access e-materials and navigate the business fundamental virtual modules, and increase their knowledge of business networking and influence. Students will also be introduced to business information resources and research strategies that they will use throughout the program. They will partake in Case Study preparation and receive an overview of the Integrated Project from Global Management, Global Enterprise, and Global Strategic Marketing perspectives. Students will also receive guidance on operating in teams both virtually and during the residency components of the program. Students will also participate in a corporate visit. This orientation also helps build a sense of affiliation among students and with the University.
Components: LEC.
Grading: SUS.
Typically Offered: Fall.

BUS 651. Global Strategic Marketing. 4 Credit Hours.
The purpose of this course is to acquaint the student with the theories and practice of strategic marketing management in the Americas. This course will enable the student to understand markets, develop strategies to capture value, and develop marketing plans based on the nature of national as well as international markets. Specifically, the issues of strategic marketing in the context of firm level strategy will be addressed, as well as issues of value capture and delivery, customer life-time value, pricing, distribution, branding and communication in markets.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BUS 652. Global Strategy. 2-4 Credit Hours.
The purpose of this course is to change how the strategic environment is viewed, how students think about their own organizations and other others, and how strategy and its execution is viewed. This course will help the student: understand organizations as complex systems embedded in a set of evolving cooperative and competitive economic relationships; identify the distinct resources and capabilities that form the foundation of an organization’s competitive advantage; formulate business strategies that anticipate imitation and competitor response; evaluate the relationship between a firm’s competitive advantage and its growth opportunities; understand the role of the corporate center in supporting and enhancing the competitive success of operating divisions; and see the interplay of organizational structures, systems, networks, and influence centers that form the basis of effective strategy implementation.
Components: LEC.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

BUS 653. Global Institutions and Economy. 2-4 Credit Hours.
This course considers how a country's legal and economic institutional arrangements influence managerial strategy involving goods, services and financial flows across nations. The course addresses how economic problems are dealt with by institutional arrangements in different ways around the world. Discussions will emphasize the influence that these institutional arrangements have on managerial project strategy when firms operate across borders. Specific emphasis will be placed on legal, economic and financial institutions in the Americas.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BUS 654. Corporate Financing and Investing. 4 Credit Hours.
This course considers financing and investing within the corporation. As such, it will consider the theoretical structure of the problem, the boundaries that management faces and how these decisions are made by management. The inter-residency portion will focus on the theoretical development and computational aspects of solving the problems. The residency portion will emphasize case discussion and simulation to demonstrate the practical implementation as well as integrating these concepts into the overall management picture. The objective of the course is to develop your understanding of the principles that define financial decision making in the firm. These topics are an important component of the strategic planning and top-level management of the firm. The course will guide you through the theory and computational aspects applying the theory, then through application to situations that will enhance and cement your understanding. Finance theory is universal and therefore does not apply to any given country or system. All of the applications will be international, multinational, or global in context. A central theme of the course is decision making. Specifically we will focus on the financial aspects of major strategic decisions. We will build on previous courses to understand how institutions, accounting, legal structures and more, affect these decisions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
BUS 655. Public Policy and Health. 3 Credit Hours.
Development of public policy at the federal, state and local level. Policy process, models of policy analysis, policy development in several government service areas, and plans for policy change. Special emphasis on health policy formulation, implementation and the use of epidemiological tools in health policy analysis.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

BUS 656. Integrated Business Project. 1-6 Credit Hours.
The Integrated Project course (IP) requires students to formulate, develop and implement three business projects that address pressing organizational challenge, over the 17-month duration of the EMBA for the Americas. Students may work in teams or individually to develop actionable and valuable recommendations for their chosen organization and present project outcomes to faculty advisors during the February, June and October residencies. For students, IP provides an opportunity to augment and integrate knowledge of fundamental business concepts and tools learned in classroom settings. IP also offers opportunities to develop and test both critical thinking and leadership skills through practical experience with real business challenges.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 657. Optimizing Human Capital. 2-4 Credit Hours.
The 21st century workplace has often been characterized as the "Age of Intellectual Capital," a time in which competitive advantage is linked intricately to optimizing human resources in distinctive ways. In this dynamic, global marketplace, Darwin rules. To survive, organizations must provide the best products, the best services they are committed to providing their customers.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BUS 660. High Performance Leadership. 4 Credit Hours.
The High Performance Leadership course was developed to help executives build a high-performance work environment and effectively operate in the multi-cultural environment of the Americas and the World. The course is divided into two parts. The first part, the inter-residency concentration will concentrate on the facets of high-performance leadership. It will explore the fundamentals of leadership; investigate the major leadership theoretical concepts; explore a wide-range of leadership research; convey practical leadership implications; and share lessons in conquering self-leadership. This section will be taught online through readings, discussion boards, and case and leader analyses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 661. Enhancing Global Operations. 4 Credit Hours.
This course focuses on how to manage more complicated global networks; how to optimize service and quality levels of performance; and, how to minimize risks yet maintain required capacities. Operational transformation requires commitment and expertise in strategy and execution to achieve lasting improvements. This course draws on research and real world issues confronting manufacturing and service companies today, providing strategic frameworks to enable executives to make smart choices so that their firms can deliver the products and services they are committed to providing their customers.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 664. Public Policy and Health. 3 Credit Hours.
Development of public policy at the federal, state and local level. Policy process, models of policy analysis, policy development in several government service areas, and plans for policy change. Special emphasis on health policy formulation, implementation and the use of epidemiological tools in health policy analysis.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

BUS 658. Business Analytics. 2-4 Credit Hours.
One of the strengths of Business Analytics is its broad applicability. The skills learned in this module can be used in virtually any context of business, including but not limited to: finance, marketing, strategy, operations, logistics, transportation, health care, real estate, sports, manufacturing, etc. For that reason, rather than focusing on a single central theme, as do other modules in the MEMBAA program, the Business Analytics module touches on a variety of themes that illustrate its potential.
Components: LEC.
Grading: SUS.
Typically Offered: Fall & Spring.
BUS 662. Decision Making in Global Environment. 4 Credit Hours.
This course provides students with a systematic way to carefully think about decisions to arrive at more informed choices while doing business globally and specifically in the Americas. The course covers structuring decisions, creating alternatives, making tradeoffs among conflicting objectives, accounting for uncertainties and risk tolerance, and analyzing and evaluating alternatives. The course is intended to make participants aware of decision making issues surrounding global business, the dynamic issues surrounding their context, and how these affect managerial strategy. An objective of the course is to increase participants’ competence in managerial decision making related to globalization, institutions, incentives, corporate governance, regulation, business law, international finance and accounting, organizations and management (including culture), and international trade.
Components: LEC.
Grading: SUS.
Typically Offered: Fall & Spring.

BUS 663. Entrepreneurship and Innovation. 2-4 Credit Hours.
This course considers entrepreneurship and innovation within the Americas, together with a special emphasis on the Latin American context. The course covers the building blocks of the entrepreneurial process and pays special attention to the family business model where ownership is closely held. The objective of the course is to develop an understanding of the venture formulation process within the Americas and the processes that surround this. The topics of innovation; venture capital; venture formation; human capital; market dynamics; technological readiness; role of government, regulation, and culture will be assessed. An objective of the course is to consider new models for venture design such as the agile model of development and the creation of the business canvases, a lean version of the traditional business plan.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 698. Selected Topics. 1-6 Credit Hours.
Topics in selected areas of business.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BUS 801. Introduction to Commercial Real Estate: Analysis and Field Experience. 3 Credit Hours.
Students enrolled in the Accelerated MBA in Real Estate program are required to participate in a one-week, four module, on-campus class followed by a full-time internship at a local Commercial Real Estate Institution during the first summer of the program. Module I: Students are introduced to the complexities of commercial construction techniques used in South Florida and the important links between architectural plans and economic value to owners and tenants. Module II: Students are introduced to the terminology and financial analysis of commercial real estate. Module III: Students are introduced to the application of real estate finance and valuation principles using ARGUS Valuation – DCF. Module IV: Students participate in a required internship at a local Commercial Real Estate Institution. Regarded as a full-time student.
Components: THI.
Grading: GRD.
Typically Offered: Summer.

BUS 802. Commercial Real Estate Field Experience. 3 Credit Hours.
Students enrolled in the Accelerated MBA in Real Estate program are required to participate in a full-time internship at a local Commercial Real Estate Institution during the first fall semester of the program. This internship is subsequent to their previous summer internship (BUS 700). Regarded as a full-time student.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

Business Law (BSL)

BSL 212. Introduction to Business Law. 3 Credit Hours.
Introduction to business law and ethics for the undergraduate student. Topics include business ethics, contracts (the nature and requisites, formation, interpretation, performance and breach, and remedies), and sales (Uniform Commercial Code, Convention on the International Sale of Goods, transfer of title, warranties, and rights and remedies of buyers and sellers).
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BSL 304. Corporate Law. 3 Credit Hours.
Introduction to the law and regulation of corporations and other business entities. Topics include: tort and other business liabilities, agency and fiduciary duty, partnerships, limited liability companies, corporations (including the legal relationships underpinning their financial structure, director and officer liability, and laws relative to change of control), securities regulation, and antitrust law.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 305. Legal and Social Aspects of Business Regulation. 3 Credit Hours.
An introduction to the legal and ethical issues arising out of business and the regulatory environment. Topics include business ethics and subjects as environmental law antitrust, securities, administrative process, consumer protection, and employment regulation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 306. Introduction to Corporate Sustainability. 3 Credit Hours.
This course introduces students to issues associated with business and sustainability, through the lens of corporate governance and corporate citizenship. Readings, lectures, class discussion, and student projects are designed to instill in students a practical understanding of key corporate sustainability frameworks, challenges and opportunities, institutions, and actors in the global corporate context. Students will learn to apply alternative decision making models to current business activities.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
BSL 324. Negotiation. 3 Credit Hours.
This experiential course is designed to introduce undergraduate business students to the theory and practice of negotiation. The lectures and readings will discuss negotiation theory, equipping students with the concepts and terminology to prepare and execute value-creating, interest-based negotiations. Negotiation exercises will provide the student with an opportunity to apply the theoretical elements of the course in live, simulated negotiations. Extensive review of these simulated negotiations through classroom discussion and film analysis will assist students in cementing their understanding of the use of negotiation theory in practice. Although negotiation theory is applicable to a wide variety of academic contexts, this course focuses on negotiations in the practice of law and business.
Requisite: Business School or Business Law minor AND Prerequisite: BSL 212 or equivalent or BUS 202 AND Sophomore Standing or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 333. Legal Aspects of Real Estate Transactions. 3 Credit Hours.
Legal principles controlling the acquisition, ownership, financing, and development of real property. Topics include nature and acquisition of rights in real property, theory of estates, co-ownership, fixtures, easements, legal descriptions, evidence of title, title insurance, deeds, mortgages, closing the sales and mortgage transactions, condominiums and cooperatives, brokers, and land use.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 401. The Law of Financial Transactions. 3 Credit Hours.
Overview of the law of commercial finance as it relates to existing and emergent payment systems, secured credit, and bankruptcy. Topics include: negotiable instruments, bank deposits and collections, secured transactions, personal and commercial bankruptcies, and accountant liability.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 412. International Business Law. 3 Credit Hours.
International law and organizations, international sales, credits and commercial transactions, U.S. trade law, and the regulation of the international market place are discussed.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 424. Intellectual Property Law. 3 Credit Hours.
This course is designed to acquaint the business student with the general framework of laws that regulate innovation, marketing, competition, and business development in the U.S. Special emphasis will be placed on discussion of ethical issues in information property, unfair competition, and management of intellectual property across various industries.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 435. Law of Entrepreneurship. 3 Credit Hours.
Overview of the legal aspects of entrepreneurship and business management. Special emphasis on entity formation, intellectual property protection, capital formation, securities, tax planning, and risk management.
Prerequisite: BSL 212 or equivalent or BUS 202 or Entrepreneurship Minor for Non-Business Students AND Sophomore Standing or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BSL 460. Health Care Law and Ethics. 3 Credit Hours.
This course is designed to offer students an appreciation of the legal foundations and ethical considerations in healthcare administration in the U.S. The readings and classroom discussion assist the student in (1) understanding the legal framework of relationships and institutions in healthcare, and (2) appreciating some of the particularly delicate ethical implications of decision-making in this field. Case study will promote the ability to analyze both. Special emphasis is placed on discussion of ethical issues in healthcare administration, including access to care, allocation of scarce resources and privacy.
Prerequisite: BSL 212 or equivalent or BUS 202 AND Business School or Business Law minor AND Sophomore Standing or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BSL 476. The Law of Risk. 3 Credit Hours.
This course offering will analyze risk in business and examine the tools that the law offers to identify danger and risk in the workplace and shift and minimize potential losses. This highly interactive course will first examine the various sources of legal risk, from criminal liability to employment discrimination to personal injury claims and toxic tort exposures. It will then examine the ways business and law pool, shift, and minimize risk. This seminar-style course will also include a significant experiential, hands-on component. Students will also practice contract construction and interpretation in a workshop environment.
Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 485. Managing the Legal Factor. 3 Credit Hours.
This course offers the business manager a frank and analytical view of law and legal practice as they affect business decision-making. It addresses both the issues of cost containment and relationships between counsel and the company with the objective of achieving a more effective management of the legal function in business.
Prerequisite: BSL 212 or equivalent AND Requisite: Senior Status and Legal Studies major or Business Law minor. For Business Students only.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 496. Directed Studies in Business Law. 1-3 Credit Hours.
Supervised readings, individual research project, or independent investigation of selected non-STEM related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BSL 497. Directed Studies in Business Law. 1-3 Credit Hours.
Supervised readings, individual research project or independent investigation of selected STEM-related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 498. Special Topics in Business Law. 3 Credit Hours.
Special topics in selected non-STEM areas of Business Law. Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 499. Special Topics in Business Law. 3 Credit Hours.
Special topics in selected STEM areas of Business Law. Prerequisite: BSL 212 or equivalent or BUS 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 555. Business Law Departmental Honors Research Project. 3 Credit Hours.
Research project to fulfill requirements for Departmental Honors in Business Law.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BSL 612. Legal Aspects of International Business. 3 Credit Hours.
International legal framework, transactional legal issues in finance, marketing, management, distribution, and a review of theory and practice of negotiations. Case studies on such topics as legal implications of GATT, European Competition, C.I.S.G., and Export Import Rules are also included.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 624. Negotiation: Theory and Practice. 2-3 Credit Hours.
This experiential course is designed to introduce graduate business students to the theory and practice of negotiation. The lectures and readings will discuss negotiation theory, equipping students with the concepts and terminology to prepare and execute value-creating, interest-based negotiations. Negotiation exercises will provide the student with an opportunity to apply the theoretical elements of the course in live, simulated negotiations. Extensive review of these simulated negotiations through classroom discussion and film analysis will assist students in cementing their understanding of the use of negotiation theory in practice. Although negotiation theory is applicable to a wide variety of academic contexts, this course focuses on negotiations in the practice of law and business.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 675. Advanced Business Law. 2 Credit Hours.
Advanced Business Law focuses on the following substantive subject areas commonly encountered by Certified Public Accountants and tested on the Uniform Certified Public Accountancy Examination: business ethics, contracts (including formation, performance, breach, and remedies), commercial transactions under UCC Article 2, commercial paper, agency principles, and secured transactions. Special attention is given to the areas tested on Regulation section of the Uniform CPA Exam.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BSL 685. Legal Aspects of Health Administration. 2-3 Credit Hours.
Derivation of rule of law governing health providers, vicarious liability of administrative and medical personnel, informed consent, and other related problems are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BSL 690. Legal and Ethical Implications of Business Decision Making. 2 Credit Hours.
The course provides an introduction to our legal and governmental regulatory system, as well as a review of constitutional considerations for businesses. Morality and ethics are defined and distinguished. Applied philosophy is then introduced, to give the student a foundation upon which to analyze the ethical dimensions of common business questions. The relationship between the letter and the spirit of the law is examined. Specific business topics and their legal and ethical aspects are then addressed. This includes, but is not limited to, discussion of the following areas: consumer relationships; business organizations; the balancing of corporate vs. individual power (employee rights and responsibilities, employment discrimination); and the emerging ethic of a global economy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BSL 691. The Public Corporation: Legal Perspectives. 2 Credit Hours.
The Public Corporation: Legal Perspectives reviews the laws governing the formation, operation, regulation, and governance of the public corporation with the objective of providing the graduate business student a sophisticated examination of the legal and social aspects of managing the money of others. Further, the course examines the rules and regulations governing the raising of capital from the public through the sale of securities for the development of and investment in a private enterprise.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BSL 692. Legal Implications of International Business Transactions. 2 Credit Hours.
International legal framework, transactional legal issues in finance, marketing, management, and distribution. Case studies in substantive international legal topics such as international sales contracts, international documentary sale, international terms of trade, legal implications and substantive rules governing international finance, collections, payments, and letter of credit, the resolution of international disputes with a particular emphasis and examination upon the management of litigation, enforcement of foreign judgments, and alternative dispute resolution are also included.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
BSL 694. Real Estate Law. 2 Credit Hours.
Real Estate Law focuses on the U.S. legal system as it relates to the buying, selling, and financing of real property. In addition to traditional text material, the analysis of U.S. court cases is used to detail the legal factors of ownership rights and liabilities, specific interests in real property, contracting issues related to the purchase and sale of real property, as well as financing and closing the real estate transaction. The course provides a problem-solving experience, which is intended to develop graduate students’ critical thinking process as well as their skills in oral and written communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BSL 695. Legal Implications in Executive Decision Making. 3 Credit Hours.
Law and legal process are examined as they mix with the politics and ethics of business, including the weight given to legal implications in the executive decision-making process.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 696. Legal and Ethical Implications in Executive Decision Making. 3 Credit Hours.
Business and public administration cases requiring identification of the legal, ethical, and social elements as well as the determination of the weight such elements should have in setting policy are discussed. Integration of law and ethics with public and business administration is also included.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BSL 698. Selected Topics. 1-3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

Business Technology (BTE)

BTE 120. Introduction to Business Technology and Programming. 3 Credit Hours.
This Course covers the fundamentals of technology focusing on programming logic and structured programming principles including problem solving, algorithm design, and program development using Python The course introduces the student to object-oriented programming through a study of the concepts of program specification and design, algorithm development, and coding and testing using a modern software development environment. Students learn how to write programs in an object-oriented high-level programming language (Python). Topics covered include fundamentals of algorithms, flowcharts, problem solving, programming concepts, classes and methods, control structures, arrays, and strings, data structures and object oriented programming. Throughout the semester, problem-solving skills will be stressed and applied to solving computing problems. Weekly assignments will provide hands-on experience in topics covered in this course.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 210. Fundamentals of Business Technology and Innovation. 3 Credit Hours.
This course covers the fundamental technologies used in business today. Topics include information technology platforms; enterprise technology concepts; network infrastructure; enterprise resource planning; information security; technology architectures; internet; cloud, mobile, and web platforms; analytical technologies; business intelligence; expert systems, and Big Data. Students work on an innovation project to create a specification/business canvas for a new technology product. Requisite: Business School.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BTE 320. Introduction to Programming. 3 Credit Hours.
This course covers the fundamentals of programming logic and structured programming principles—including problem solving, algorithm design, and program development—using a high level programming language. Topics covered include fundamentals of algorithms, flowcharts, problem solving, programming concepts, classes and methods, control structures, arrays, and strings, pointers, and data structures.
Requisite: Miami Business School or BTE Minor or CSC Major or Minor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

BTE 324. Object-Oriented Programming. 3 Credit Hours.
This course introduces the concepts and fundamental techniques of object-oriented programming. Topics include: data abstraction, encapsulation, inheritance, polymorphism, class library, graphics/GUI, exception handling, multithreading, multimedia, files and streams, Internet applets, application development, integrated development environment, interactive program debugging and the eXtensible Markup Language (XML).
Prerequisite: BTE 320 or equivalent.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 360. Systems Analysis and Design. 3 Credit Hours.
This course introduces the techniques of systems analysis and design. Topics include: the Software Development Life Cycle (SDLC), Agile Programming, Extreme Programming, lean software development, Universal Modeling Language (UML), requirements modeling, data modeling, user interface design, data design, normalization, systems architectures, implementation methods, and testing methodologies.
Prerequisite: BTE 320 or CSC 120 or ECE 118 or equivalent.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 361. Design of Information Systems. 3 Credit Hours.
Continuation of BTE 360. Topics include concepts, tools, and techniques of systems design, prototyping, file/database design, and physical process modeling. Students work in groups to design an application system for a business related problem.
Prerequisite: BTE 360.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BTE 389. Launching HighTechnology Ventures. 3 Credit Hours.
This course develops an understanding of the entrepreneurial processes as they apply to new technology ventures. Topics include: venture formation, venture and angle investments, innovation and creativity, business plan creation, human capital, ethics, and intellectual property.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 400. Web-Mobile-Cloud. 3 Credit Hours.
This course introduces the basics of the cloud computing paradigm and examines how to implement different algorithms for different web and mobile applications in the cloud. The course covers the principles, systems, and applications of cloud computing that integrate web applications, smart phones, and tablets with cloud computing infrastructure. The student will be introduced to the basics of Infrastructure, Platform, and Software as a Service (IaaS/PaaS/SaaS), as well as to cloud platforms such as Google App Engine, Microsoft Azure, and Amazon Web Services (AWS).
Prerequisite: BTE 320.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BTE 401. Computers in an Inter-Networked Society. 3 Credit Hours.
This course provides students with fundamental knowledge of the technology and tools that integrate big data, cloud, and mobile computing within a business and social context. Students will study these technologies and their impact on socioeconomic, political, organizational, and personal environments. The course covers the cultural components of a social media society and examines the systems and processes that need to be developed for effective management of that environment.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 412. Foundations of Business Enterprise Technologies. 3 Credit Hours.
This course provides an understanding of the foundations of enterprise technologies. Topics include: making the business case for technology, distributed architectures, customer relationship management systems (CRM), enterprise resource planning systems (ERP), requirements modeling and design for enterprise systems, software development and outsourcing for the enterprise, enterprise productivity technologies (RFID, internet of things, machine data), 3D-design technologies, cloud technologies, and technologies for the global enterprise.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 413. Big Data Strategy. 3 Credit Hours.
This course provides an introduction to the area of business intelligence termed Big Data. The concepts of high volume, velocity, and variety data are examined. The course examines how big data can be used to create business intelligence strategies in the areas of marketing, product development, systems deployment, and innovation. The course utilizes business intelligence software and Structured Query Languages (SQL) to analyze data. Other Big Data topics covered include the ethics, security, streaming data, sourcing, emergent technologies, and international data regulations.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 417. Fundamentals of Tech Project Management. 3 Credit Hours.
This course is designed to provide the fundamental project management knowledge necessary for a business manager, consultant, project manager, IT professional, and/or team member to successfully initiate and plan IT and other business projects. It is structured to provide principles, methodology, and practical information through a combination of lectures, group collaboration and hands-on exercises. Emphasis is placed on the importance of standardization and best practices as defined by the PMI's Project Management Body-of-Knowledge (PMBOK®).
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BTE 420. Python Programming for Fintech. 3 Credit Hours.
The course covers the fundamentals of object-oriented programming, logic and structured programming principles including problem solving, algorithm design, and program development using Python with focus on financial programming applications. Topics covered include fundamentals of algorithms, flowcharts, problem-solving, programming concepts and methodologies, control structures, arrays, and strings, classes and class-methods, data structures and object oriented programming concepts including classes, methods, inheritance and polymorphism.
Requisite: Sophomore Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 421. Design of Information Systems. 3 Credit Hours.
Continuation of BTE 420. Topics include concepts, tools, and techniques of systems design; prototyping; file/database design; and physical process modeling. Students will work in groups to design an application system for a business related problem.
Prerequisite: BTE 420.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 422. Tech Foundations of Fintech. 3 Credit Hours.
The course covers multiple disciplines of technology and how they are individually and collectively applied in financial systems, transactions, payments, and data lifecycles. The course aims to develop a student's understanding of key technological components such as cloud computing, Internet of Things(IoT), Big Data and Machine Learning, Artificial Intelligence, Blockchain technologies, data security, privacy and technology regulations as they relate to financial transactions, financial institutions, public and private business entities, governments, regulations and an overall monetary system.
Requisite: Sophomore Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BTE 423. Database Management Systems. 3 Credit Hours.
This course covers the foundations of database management systems (DBMS). Topics include: database systems design, SQL, the relational model, entity-relationship modeling, distributed DBMS, object DBMS, web technology and DBMS, semi-structured data, XML, business intelligence, data warehousing, data warehousing design, introduction to OLAP, and a brief overview of data mining. Students will engage in hands-on exercises for the design and implementation of database business applications. Prerequisite: BTE 320.
Components: LEC.
Grading: LEC.
Typically Offered: Fall & Spring.

BTE 430. Business Networks. 3 Credit Hours.
In this course, students will learn the underlying concepts and technologies in the field of business networks with specific focus on their applications in businesses. Topics covered include: network types, networking standards, protocols, and architectures; the characteristics of physical and logical networking components and technologies; the security issues that affect network systems and their implications on business applications; the technical and organizational issues concerning wireless networks; emerging networking technologies and software tools for designing and troubleshooting various aspects of networks.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.

BTE 450. Introduction to Health Informatics. 3 Credit Hours.
The course develops an understanding of the role of information systems and technology within a healthcare organization. It examines the business and technical issues associated with the selection, deployment and use of health informatics, both in the clinical and back office areas. Health informatics, for the purpose of the course, is defined as the convergence of information technology, information management, and health care, at various levels, ranging from simple data gathering, to the design and implementation of new health care information systems.
Components: LEC.
Grading: LEC.
Typically Offered: Fall.

BTE 465. Web Application Development. 3 Credit Hours.
This course will explore Internet and mobile application development methodologies. Topics include: HTML 5, CSS3, scripting languages (JavaScript), jQuery, AJAX, web services, Web Servers (IIS and Apache) and relational databases (MySQL/Apache Derby/Java DB)—all the skills and tools needed to create dynamic Web-based and mobile applications. The coverage will be both on the client side and the server side of Web-based applications, and the course will provide instruction on building rich Internet applications that enhance the presentation of online content and give web applications the look and feel of desktop applications. Students in the course will build Web-based, client/server, database-intensive, multi-tier, and mobile business applications. Prerequisite: BTE 320.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.

BTE 496. Directed Studies in Business Technology. 1-3 Credit Hours.
Supervised readings, individual research project, or independent investigation of selected non?STEM related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 497. Directed Studies in Business Technology. 1-3 Credit Hours.
Supervised readings, individual research project, or independent investigation of selected STEM related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 498. Special Topics in Business Technology. 3 Credit Hours.
Special topics in selected non?STEM areas of Business Technology. Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.

BTE 499. Special Topics in Business Technology. 3 Credit Hours.
Special topics in selected STEM areas of Business Technology. Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.

BTE 523. Big Data Development. 3 Credit Hours.
This course covers foundational techniques and tools required for data science and big data analytics. The course delivers a thorough overview of and hands-on experience with Big Data technologies, including: Hadoop, Mapreduce, Association rules, Large scale supervised machine learning, Data streams, Clustering, NoSQL systems (Casadenra, Pig, Hive), and applications, including recommendation systems, Web, and security. Students will also examine current research and publications in Data Science/Big Data Analytics, with emphasis on systems and algorithms for large-scale advanced data analysis. Prerequisite: BTE 320.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.

BTE 524. Mobile Apps Development. 3 Credit Hours.
This course covers the fundamentals of programming logic and structured programming principles—including problem solving, algorithm design, and program development for mobile environments—with a focus the Android Platform. The course introduces the requirements and methodologies for developing dedicated and client-server applications that target smartphones, tablet computers, and other mobile devices. Topics include: memory management, communications, power systems, APIs, and among others. The techniques studied are applicable to and can be transitioned to the iOS or Windows 8 platforms. Prerequisite: BTE 320 and BTE 324.
Components: LEC.
Grading: LEC.
Typically Offered: Offered by Announcement Only.
BTE 535. Information Security. 3 Credit Hours.
This course introduces the principles of computer security. Information is an important strategic and operational corporate asset that needs to be protected from data breaches. This course investigates some of the security measures that can be employed to safeguard information and explores some of the tools and techniques used in designing these measures. Students will examine how system designs, network protocols, and software engineering practices can result in vulnerabilities. They will also explore how to detect and mitigate vulnerabilities in existing systems and, so, how to design and implement better future systems. Additional topics include ethical hacking, social engineering strategies, and other approaches to managing vulnerabilities.
Prerequisite: BTE 320.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 550. Business Technology Internship. 1-3 Credit Hours.
Student is individually assigned to operating business firm or other organization to gain insight in information technology practice in the area of career interest. Periodic reports and conferences are required.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BTE 555. Business Technology Departmental Honors Research Project. 3 Credit Hours.
Research project to fulfill requirements for Departmental Honors in Business Technology.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

BTE 565. Mobile to Cloud: Developing Distributed Applications. 3 Credit Hours.
This course introduces students to the basics of the emerging cloud computing paradigm. It also examines how to implement different algorithms for different applications in the cloud and how to deploy mobile applications in the cloud. The course covers the principles, systems, and applications of mobile cloud computing that integrates smart phones and tablets with virtualized distributed computing infrastructure. Students will learn the fundamentals of a variety of systems such as virtual machines, the principles and practices of client/server architectures, the concepts and practices of Infrastructure, Platform, and Software as a Service (IaaS/PaaS/SaaS), cloud platforms such as Google App Engine, Microsoft Azure, and Amazon Web Services(AWS), as well as security issues.
Prerequisite: BTE 320 and BTE 324.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 601. Programming for Distributed Systems. 2 Credit Hours.
This course covers the fundamentals of programming logic and structured programming principles including problem solving, algorithm design, and program development using Python. The course introduces the student to object-oriented programming through a study of the concepts of program specification and design, algorithm development, and coding and testing using a modern software development environment. Students learn how to write programs in an object-oriented high-level programming language Python. Topics covered include fundamentals of algorithms, flowcharts, problem solving, programming concepts, classes and methods, control structures, strings, and data structures. Throughout the semester, problem solving skills will be stressed and applied to solving computing problems. Weekly assignments will provide hands-on experience in topics covered in this course.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 610. Foundations of Management Information Systems. 2 Credit Hours.
Course is designed to provide the foundations in management information systems information systems required to understand and effectively use an enterprise wide information system. Topics include the role of the CIO, managing Information Technology (IT) as a strategic resource, business process reengineering, IT planning, IT governance and communication, the Internet, and eBusiness.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 612. Enterprise Technologies. 2 Credit Hours.
Course addresses the needs of business students who wish to expand their understanding of information technology fundamentals. Focusing upon their use in today's enterprises, the course aims to provide students with knowledge of a variety of technological concepts commonly used in the IT Organization's systems development initiatives and enables students to understand the implications of deploying such technologies within the enterprise.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 613. Business Intelligence Technologies. 2 Credit Hours.
Course facilitates business decision makers in their understanding of data analysis tools that operate over data warehouses and 'data marts' more commonly referred to as Business Intelligence. Course focuses upon using technologies to drive effective data driven decision making through effective mining of corporate data warehouses, thus improving operational efficiency and ultimately increasing profitability. Students are exposed to the concepts, analysis techniques, data cubes, and manipulation of information extracted from a data warehouse that enables the formulation and execution of business strategies. Data analysis case studies are used to reinforce students' understanding and strategic use of results to accomplish business objectives.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BTE 617. Information Technology Project Management. 2 Credit Hours.
Course covers the identification and development of information technology plans for projects supporting the organization's business objectives and all activities required in the initiating, planning, executing, controlling, and closing phases of the project's lifecycle. Course is intended to provide the body of knowledge and best practices necessary for a new Consultant, Business Analyst or Project Manager to successfully perform his/her responsibilities on a wide variety of IT enterprise projects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 620. Database Development for High Performance Computing. 2 Credit Hours.
Course enables software developers to understand the fundamental database concepts, practice, and emerging trends in relational database design and implementation for high performance computing. Formal query languages are covered including SQL, No SQL and relational object-orientated databases are examined. Other topics include database performance tuning and query optimization, distributed database systems, administration and security.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 621. Management Information Systems. 3 Credit Hours.
Course is designed to give prospective managers a foundation in MIS sufficient to understand and effectively use information systems. Topics include types of information systems, role of MIS in organizations, CIO issues, ERP systems, and electronic commerce.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 622. High Performance Computing. 2 Credit Hours.
The course is designed to introduce HPC and Big Data Compute environments. Topics include: Cloud concepts, container concepts, distributed file systems, dockers, fundamentals of the ETL process, introduction to the Hadoop environment, Pig, Hive and JAQL, BigSQL, and SQL.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 623. Database Management Systems. 3 Credit Hours.
Course covers the fundamental concepts of database management systems using the Oracle DBMS. Topics include database theory and terminology, logical modeling, normalization, SQL language, database design and implementation, database administration, data security, database transaction/concurrency, and data backup.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

BTE 624. Mobile Apps Development. 3 Credit Hours.
The course covers the programming languages associated with the iPhone application. Topics include the development platform, the libraries used, memory management, communication and power systems, APIs and tools associated with application development for the mobile environment.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 630. Fundamentals of Local and Wide Area Networks. 3 Credit Hours.
Course provides the graduate student the necessary knowledge to understand the design, integration, technologies, and services of local and wide area net works (LANs and WANs) in the business environment. Topics include signal transmission and propagation, standards and protocols, data communications media and devices, layered/encapsulated communications based on the hybrid TCP/IP-OSI standards, small and large-site PC LANs, Frame Relay, ATM, Virtual Private Networking (VPN), Telephony, Internet technologies, and network security.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 631. Computer and Network Security. 3 Credit Hours.
Protection of computers and networks against unauthorized access, access control, encryption, firewalls, proxy, digital certificates, and software security are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 635. Comp Communication Security. 3 Credit Hours.
The course covers technical and managerial aspects associated with the deployment of mobile communication platforms such as phones and tablets. The course investigates and introduces some of the security measures that can be employed to safeguard these devices and explores some of the tools used in designing these measures. Topics includes: Ethical Hacking, social engineering strategies, and other approaches to managing these vulnerabilities.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 640. Data Communications and Networking. 3 Credit Hours.
The course addresses advanced topics in computer networks from the perspective of a business decision-maker. The course begins with a focus on signal propagation, media characteristics, and digital and analog encoding techniques. It continues with a study of datalink, network, and transport layer functions as defined by the OSI and TCP/IP models. The architecture of the Internet is explored and routing algorithms for wired, wireless, and peer-to-peer networks are introduced. Course concludes with a high-level overview of the top OSI layers. After taking the class the students should be able to critically evaluate network solutions based on the capabilities and limitations of the equipment.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 646. IT Planning and Project Management. 3 Credit Hours.
Course covers the development of information technology strategic and tactical plans for projects supporting the organization's business objectives and project management as applied to planning, implementing, controlling networking, information systems and e-commerce projects. Course is intended to provide a body of knowledge necessary for a new Consultant or Project Manager to successfully initiate, plan, manage, control, and report on a variety of project types. People skills required in the areas of team selection, structure, conflict resolution, and leadership is also covered.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
BTE 650. Introduction to Health Informatics. 3 Credit Hours.
The course develops an understanding of the role of information systems and technology within a healthcare organization. It examines the business and technical issues associated with the selection, deployment and use of health informatics, both in the clinical and back office areas. Health informatics, for the purpose of the course, is defined as the convergence of information technology, information management, and health care, at various levels, ranging from simple data gathering, to the design and implementation of new health care information systems.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

BTE 665. Applied Software Project Development. 3 Credit Hours.
Advanced concepts and techniques in application project development. Topics include project management, program testing, documentation, application installation, and application maintenance. Students will work on a group project to sharpen their implementation skills. Prerequisite: CIS 223 or 226 or equivalent.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

BTE 680. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 682. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 684. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 685. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 686. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 687. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 688. Topics in Business Technology. 3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 689. Topics in Business Technology. 1-3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 690. Directed Study in Business Technology. 1-3 Credit Hours.
Investigation and research in special areas of interest. Offered by special arrangement.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

BTE 691. Directed Study in Business Technology. 1-3 Credit Hours.
Investigation and research in special areas of interest. Offered by special arrangement.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

Cancer Biology (CAB)

CAB 701. CAB Student Seminar. 1 Credit Hour.
This course (required of 2nd and 3rd year students) offers instruction on the fundamental elements of scientific speaking. The ability to communicate effectively is essential for scientists. All CAB students are required to present their research each year as a 25 min (2nd year students) or 55 min seminar (3rd year and above). Students who are 4th year+ give seminars but are not enrolled.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAB 705. Translational to Clinical Research. 0-1 Credit Hours.
Beginning in the fall of their second year, students participate in 'Translational to Clinical Research', which spans years two through four of the program. Students are introduced to clinical trials, pathology reviews, tumor boards, the protocol review process and have an opportunity to interact with physicians who care for cancer patients and conduct clinical trials. The student's Physician Mentor advises and directs the student in the most relevant activities to attend and discusses the student's experience with them every semester. Students are required to attend 2 meetings each semester for a total of 12 meetings in addition to discussion with their Physician Mentors. A short written report of each review meeting of the student's experience is required. Didactic seminars are not accepted.
Components: DIS.
Grading: SUS.
Typically Offered: Fall.

CAB 710. Cancer Biochemistry and Molecular Biology. 3 Credit Hours.
This is an entry-level lecture course designed to introduce students to the major concepts and principles of cell growth deregulation in cancer with a major emphasis on molecular mechanisms. Topics include: oncogenes, tumor suppressors, mechanisms of uncontrolled cell growth, receptors and intracellular signal transduction pathways.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CAB 712. Special Topics in Cancer Research - Viral Oncology and Tumor Immunology Module. 2 Credit Hours.
This module emphasized state of the art knowledge of each discipline, student participation in a problem based learning context. Topics include viral carcinogenesis and epidemiology, Hepatitis, Herpes, Epstein Barr and Human Papilloma Viruses, Kaposi’s Sarcoma, viral induced lymphomas, viral oncology, and mechanisms of anti-tumor immunity.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAB 713. Special Topics in Cancer Research - Molecular Cancer Therapeutics Module. 2 Credit Hours.
This module explores the signal transduction pathways critical for cancer cell proliferation and survival that may provide new therapeutic targets, approaches for identification and validation of molecular targets within these pathways. Students are introduced to the strategies used in the discovery and design of biological and drug based therapies, and the implementation of clinical trials.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAB 714. Cancer Epidemiology, Prevention and Biobehavioral Oncology. 2 Credit Hours.
The overall philosophy of this module is to introduce students to the basic principles of biobehavioral oncology and cancer epidemiology and cancer prevention and control. The course will explore cancer epidemiology approaches used to identify the molecular and genetic mechanisms of cancer risk and progression and how these are used to develop predictive models in treatment response. Methods for identifying social, environmental, and biological reasons for cancer disparities among different populations will also be covered. Sections on bio-behavioral oncology include: health behavior change processes in persons at risk for and diagnosed with cancer; methods to improve adaptation to cancer diagnosis and treatment, psychosocial intervention research techniques and bio-behavioral processes explaining their effects on health and quality of life (QOL), translation of behavioral and psychosocial intervention to the community, symptom/treatment side effects management approaches, predictors of late effects of cancer treatment and development of preventative interventions.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAB 715. Special Topics in Cancer Research - Breast and Genitourinary Cancers Module. 2 Credit Hours.
This module highlights key aspects of the cellular and molecular mechanisms of breast, prostate, renal and bladder cancers as well as providing an overview of cancer detection, diagnosis, and therapy. Emerging research opportunities are identified. Topics include estrogen receptor and androgen receptor signaling, cancer progression, endocrine therapies and resistance. Key signaling pathways and the biology of metastasis will be discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAB 720. Dialogues with Cancer Clinicians (PIBS Module). 1 Credit Hour.
This module features physician mentors of the Cancer Biology Graduate Program who will discuss clinical aspects of cancer treatment with an emphasis on continuity of care of newly diagnosed patients between disciplines and will articulate unmet clinical needs and research. Mentors will provide clinical perspectives on their areas of specialization as it relates to patient care including diagnosis, staging, therapy, and outcomes.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAB 731. Special Work. 1-3 Credit Hours.
Independent, faculty assigned study.
Components: IND.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAB 750. Logic and Reasoning in Translational Cancer Research: Bench to Bedside Part 1. 3 Credit Hours.
An important facet of the Cancer Biology Ph.D. Program is the training of students in the interrelationships between basic research and clinical medicine, i.e., translational research. The goal of this advanced course is to expose students to the scientific reasoning and logic underlying problem solving in clinical cancer research. This course is designed to help students integrate information and develop the thought processes necessary to critically evaluate information in the literature and experimental approaches, conceptualize problems in the field and identify areas for scientific exploration. Students learn how the knowledge obtained from basic research laboratories is applied to clinical problems including prevention, diagnosis, prognosis, and therapeutic treatment of cancer. Specific examples of translational research, i.e., laboratory to clinic are emphasized. Students also learn the key role of clinical observation in identifying basic research problems.
Components: LEC.
Grading: SUS.
Typically Offered: Spring.

CAB 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her Master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAB 820. Master's Research in Residence. 1 Credit Hour.
Students must be registered in the semester they plan to defend. Used to establish research in residence for the Master's degree, after the student has been enrolled for the permissible cumulative total in appropriate Master's research. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAB 830. Dissertation Research - Pre Candidacy. 2 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credits as determined by the Office of Graduate Studies but not less than a total of 24. Not more than six in the summer. If a student has a) passed qualifying exam(s) and (b) is engaged in an assistantship, he/she may still take the maximum allowable credits.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring & Summer.
CAB 840. Doctoral Dissertation - Post Candidacy. 1-12 Credit Hours.
Required for all Ph.D. candidates. Grade will remain IP until student dissertation is accepted by Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAB 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the Ph.D., after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. Credit is not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Chemistry (CHM)

CHM 101. Chemistry and Society. 3 Credit Hours.
The basic principles of chemistry for the non-science major with an emphasis on understanding the chemistry of the world around us, especially as it pertains to the choices we make as consumers and as a society. Integrated themes include energy, the environment, food and nutrition, health and personal care, and other contemporary societal issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 103. Chemistry for the Health Sciences I. 3 Credit Hours.
Essentials of chemistry as they apply to biological systems
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 104. Chemistry for the Health Sciences II. 3 Credit Hours.
A continuation of CHM 103, with emphasis on organic and biological chemistry, including biochemical processes and metabolism. Lecture, 3 hours.
Prerequisite: CHM 103 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 105. Chemistry for the Health Sciences I (Laboratory). 1 Credit Hour.
Designed for those students in CHM 103 requiring a laboratory course.
Laboratory, 3 hours.
Pre/Corequisite: CHM 103 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

CHM 106. Chemistry for the Health Sciences II (Laboratory). 1 Credit Hour.
Designed for those students in CHM 104 requiring a laboratory course.
Laboratory, 3 hours.
Pre/Corequisite: CHM 104 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CHM 110. Chemical Problem Solving. 3 Credit Hours.
Chemical problem solving strategies to prepare students for more advanced studies in the sciences. Focusing on basic concepts in chemistry, chemical problem solving, and mathematical preparation for future studies.
Components: LEC.
Grading: GRD.

CHM 111. Principles of Chemistry I. 3 Credit Hours.
Fundamental principles of chemical science.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 112. Principles of Chemistry II. 3 Credit Hours.
Continuation of CHM 111. Lecture, 3 hours.
Prerequisite: CHM 111 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 113. Chemistry Laboratory I. 1 Credit Hour.
Basic laboratory techniques in chemistry.
Corequisite: CHM 121 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 114. Chemistry Laboratory II. 1 Credit Hour.
Continuation of CHM 113. Intermediate laboratory techniques and quantitative analysis. To accompany CHM 112. Laboratory, 3 hours.
Corequisite: CHM 112 or CHM 221 and with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 121. Principles of Chemistry. 4 Credit Hours.
Fundamental principles of chemical science for studies in the discipline.
Pre or Corequisite: MTH 140 or higher or Prerequisite: CHM 110 with a grade of C- or higher or Prerequisite: SAT Math Score >/= 730 Or ACT Math Score >/= 31 Or AP Calc AB score = 4 Or AP Calc BC score = 3 Or ALEKS score >/= 76.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 151. Chemistry for Engineers. 3 Credit Hours.
Fundamental principles of chemistry for engineering students. Not recommended for students that plan to enter Medical School. Lecture, 3 hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 153. Chemistry Laboratory for Engineers. 1 Credit Hour.
An introductory laboratory course to accompany CHM 151. The techniques of chemistry for engineering students.
Pre/Corequisite: CHM 151 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.
CHM 201. Organic Chemistry I (Lecture). 3 Credit Hours.
The chemistry of carbon compounds. Required of chemistry majors, and premedical students; recommended for majors in life sciences. Lecture, 3 hours.
Prerequisite: CHM 112 Or CHM 221 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 202. Organic Chemistry II (Lecture). 3 Credit Hours.
Continuation of CHM 201. Lecture, 3 hours.
Prerequisite: CHM 201 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 205. Chemical Dynamics Laboratory. 1 Credit Hour.
Introduction to techniques of chemistry.
Prerequisite: CHM 221 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 206. Organic Reactions and Synthesis Laboratory. 1-2 Credit Hours.
Continuation of CHM 205
Prerequisite: CHM 205. And Corequisite: CHM 202 or CHM 222. And with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 214. Quantitative Analytical Chemistry. 3 Credit Hours.
An introduction to quantitative chemical analysis. Topics will include statistical analysis of analytical data, a review of stoichiometry, analytical separation processes, chemical and acid-base equilibria, and an introduction to potentiometric, titrimetric, gravimetric, and spectrophotometric methods of analysis.
Prerequisite: CHM 202 with a grade of C- or higher. And MTH 162. or MTH 172.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 221. Introduction to Structure and Dynamics. 4 Credit Hours.
The chemistry of carbon compounds.
Prerequisite: CHM 121 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 222. Organic Reactions and Synthesis. 4 Credit Hours.
Continuation of CHM 221.
Prerequisite: CHM 221 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 304. Structural Identification of Organic Compounds. 3 Credit Hours.
The fundamental principles of ultraviolet/visible, infrared, nuclear magnetic resonance and mass spectrometry. How the combination of these sophisticated analytical techniques can be used to elucidate the structures of organic compounds.
Prerequisite: CHM 202 and CHM 206.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 316. Instrumental Analytical Chemistry. 3 Credit Hours.
Modern methods of quantitative analysis. Lecture, 3 hours.
Prerequisite: CHM 360 and CHM 214 Or CHM 360 and CHM 304. And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 320. Instrumental Methods in Chemistry and Biochemistry. 2 Credit Hours.
Instrumental methods in modern chemistry and biochemistry, including spectrometric, electrochemical, and chromatographic (separation) Laboratory, 8 hours. Satisfies writing requirement.
Prerequisite: CHM 214 or CHM 304 And Corequisite: CHM 316. And with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CHM 331. Physical Chemistry for Premedical Students. 3 Credit Hours.
Fundamentals of thermodynamics as applied to gases, liquids and solutions; chemical kinetics and other selected topics. Lecture, 3 hours.
Prerequisite: CHM 112 with a grade of C- or higher And MTH 161 And PHY 102.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 360. Physical Chemistry I (Lecture). 3 Credit Hours.
Introduction to physical chemistry including thermodynamics, gaseous and liquid states, solutions, homogeneous and heterogeneous equilibrium. Lecture, 3 hours.
Prerequisite: CHM 112 with a grade of C- or higher And MTH 162 or MTH 172. Requisite: One Semester of Physics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 364. Physical Chemistry (Laboratory I). 1 Credit Hour.
Representative experiments in physical chemistry. Laboratory, 4 hours.
Pre/Corequisite: CHM 360 or CHM 331 And with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.
CHM 365. Physical Chemistry II (Lecture). 3 Credit Hours.
Chemical kinetics, introductory quantum chemistry, molecular spectroscopy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 381. Workshop Leaders in Chemistry I. 1 Credit Hour.
Students engaged in Peer-Led Team Teaching of workshops for groups of CHM 111 and/or CHM 112 students may enroll for this course. May be repeated.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 382. Workshop Leaders in Chemistry II. 1 Credit Hour.
Students engaged in Peer-Led Team Teaching of workshops for groups of CHM 111 and/or CHM 112 students may enroll for this course. May be repeated.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 391. Chemistry Internship for Credit. 1-3 Credit Hours.
Provides chemistry majors with an opportunity to apply skills learned in coursework within settings outside the university. For example students can work in local schools, assisting instructors and mentoring students. They can also work in companies or government agencies for a defined period of time with clearly delineated goals to expand their expertise and practical knowledge of chemistry. Each enrolled student will be closely mentored by a faculty member.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 401. Environmental Chemistry. 3 Credit Hours.
Major environmental features of the earth; Role of natural and synthetic chemicals in the environment; Atmospheric and aquatic pollution; Application of acid-base theory and oxidation reduction to environmental problems.
Prerequisite: CHM 201 or CHM 222. And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 441. Inorganic Chemistry (Lecture). 3 Credit Hours.
The relation of atomic and molecular structure to chemical and physical properties; introduction to nonaqueous solvents, coordination compounds, solid state chemistry and nuclear reactions. Lecture, 3 hours. Prerequisite: CHM 365.
Prerequisite: CHM 365 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 442. Inorganic Chemistry (Laboratory). 1 Credit Hour.
Synthesis of inorganic compounds and determination of their physical and chemical properties. CHM 541 is a co-requisite for ACS chemistry majors. Laboratory, 3 hours.
Prerequisite: CHM 365 and CHM 541 And with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CHM 444. Physical Chemistry (Laboratory II). 1 Credit Hour.
Continuation of CHM 464. Laboratory, 4 hours.
Prerequisite: CHM 365 with a grade of C- or higher.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CHM 488. Undergraduate Research. 1-3 Credit Hours.
Laboratory research under the direction of a member of the chemistry faculty. Thesis optional. Course may be repeated for credit.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 490. Honors Research. 1-3 Credit Hours.
Laboratory research under the direction of a member of the Chemistry faculty. Thesis required. Course may be repeated for credit.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 515. Makings of a Scientist. 3 Credit Hours.
By analyzing achievements and advise of few successful scientists, chemists in particular will highlight what qualities are needed to be a successful scientist. Importance of motivation, perseverance, communication skills, adhering to ethical guidelines and ability to deal with colleagues and co-workers will be brought out. Career options available for a trained chemist and how different each one is will be pointed out. Overall this is a course in multi-mentoring of graduate students who are aiming for a career in science and hope to be successful researchers in science, particularly in chemistry.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 520. Physical Organic Chemistry. 3 Credit Hours.
Aspects of chemical bonding, acids and bases, stereochemistry, aromaticity, pericyclic reactions, linear free energy relationships, transition state theory, excited state chemistry, reactive intermediaries, mechanisms of uni- and bi-molecular reactions.
Prerequisite: CHM 202 and CHM 360 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 522. Synthetic Organic Chemistry. 3 Credit Hours.
Functional group transformations, Synthon approach. Retro-synthetic analyses, multistep syntheses.
Prerequisite: CHM 202 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 524. Supramolecular Chemistry. 3 Credit Hours.
Complexation, recognition, and catalysis as applied to bio-organic chemistry. Steric, polar, and lipophilic interactions as well as proximity effects in the design of synthetic enzyme mimics, cationic transport species, etc.
Prerequisite: CHM 365 and CHM 520 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CHM 525. Structural Organic Chemistry. 3 Credit Hours.
Use of electronic and vibrational spectroscopy in structure elucidation.
Structure elucidation by modern NMR; EI, CI, MALDI and Electrospray
mass spectrometry. Assignment of absolute configuration of chiral
centers.
Prerequisite: CHM 202 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 526. CHM523 Medicinal Chemistry. 3 Credit Hours.
Medicinal chemistry is primarily concerned with the development of drug
molecules, and the interpretation of their mode of action at the molecular
level, with an emphasis on chemical synthesis.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 530. Fluorescence Spectroscopy and Microscopy. 3 Credit Hours.
The photophysical properties of organic compounds that illustrates the
fundamental principles of fluorescence. It also explains how fluorescence
spectra and images can be recorded and how these powerful analytical
techniques can be used to address significant problems in biology and
medicine.
Prerequisite: CHM 304 and CHM 360 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 535. Molecular and Supramolecular Photochemistry. 3 Credit Hours.
Generation of a model that will help rationalize/predict excited state
reactions. A brief background on physical aspects of photochemistry will
be given. Exploring and understanding of reactions that are triggered by
light. Importance of light in life will be highlighted.
Prerequisite: CHM 201 and CHM 202 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 541. Principles of Bonding and Reactivity in Inorganic Chemistry. 3
Credit Hours.
Bonding principles necessary to understand the structure, stability, and
fundamental reactivity of main group and transition metal inorganic
compounds.
Prerequisite: CHM 365 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 553. Modern Quantum Chemistry. 3 Credit Hours.
Many-electron wave functions and operators. Hartee-Fock approximation,
density functional theory, configuration interaction, and many-body
perturbation theory.
Prerequisite: CHM 365 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 565. Principles of Spectroscopic Techniques. 3 Credit Hours.
Spectroscopic techniques: nuclear magnetic resonance (NMR), mass
spectra (MS), ultraviolet (UV), visible infrared (IR), fluorescence, and other
specialized spectroscopic techniques.
Prerequisite: CHM 365 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 575. Principles of Nuclear Magnetic Resonance and
Multidimensional Spectroscopy. 3 Credit Hours.
Theory of nuclear magnetic resonance; Bloch equations; relaxation
theory; time-domain versus frequency domain spectroscopies, and
principles of multidimensional spectroscopy.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 581. Advanced Analytical Chemistry. 3 Credit Hours.
Provides a strong foundation in the most important concepts in advanced
analytical chemistry, including electrochemistry, chemical separations,
and bioanalytical chemistry, and in the different classes of instrumental
analytical techniques available to current chemists.
Prerequisite: CHM 214 and CHM 316 And with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 591. Topics in Chemistry. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability
of faculty. Subtitles describing the topics to be offered will be shown in
parentheses in the printed class schedule following the title, 'Topics in
Chemistry'.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 592. Topics in Chemistry. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability
of faculty. Subtitles describing the topics to be offered will be shown in
parentheses in the printed class schedule following the title, 'Topics in
Chemistry'.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 593. Readings in Chemistry. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement.
May be repeated for credit.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 594. Readings in Chemistry. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement.
May be repeated for credit.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CHM 615. Makings of a Scientist. 3 Credit Hours.
By analyzing achievements and advise of few successful scientists, chemists in particular, will highlight what qualities are needed to be a successful scientist. Importance of motivation, perseverance, communication skills, adhering to ethical guidelines and ability to deal with colleagues and co-workers will be brought out. Career options available for a trained chemist and how different each one is will be pointed out. Overall this is a course in multi-mentoring of graduate students who are aiming for a career in science and hope to become successful researchers in science, particularly in chemistry.
Prerequisite: CHM 202 with a grade of C- or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 620. Physical Organic Chemistry. 3 Credit Hours.
Aspects of chemical bonding, acids and bases, stereoechemistry, aromaticity, pericyclic reactions, linear free energy relationships, transition state theory, excited state chemistry, reactive intermediaries, mechanisms of uni- and bi-molecular reactions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 622. Synthetic Organic Chemistry. 3 Credit Hours.
Functional group transformations, Synthon approach. Retro-synthetic analyses, multistep syntheses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHM 624. Supramolecular Chemistry. 3 Credit Hours.
Complexation, recognition, and catalysis as applied to bio-organic chemistry. Steric, polar, and lipophilic interactions as well as proximity effects in the design of synthetic enzyme mimics, cationic transport species, etc.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 625. Structural Organic Chemistry. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 626. Structural Organic Chemistry. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHM 630. Fluorescence Spectroscopy and Microscopy. 3 Credit Hours.
The photophysical properties of organic compounds that illustrates the fundamental principles of fluorescence. It also explains how fluorescence spectra and images can be recorded and how these powerful analytical techniques can be used to address significant problems in biology and medicine.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 635. Molecular and Supramolecular Photochemistry. 3 Credit Hours.
Generation of a model that will help rationalize/predict excited state reactions. A brief background on physical aspects of photochemistry will be given. Exploring and understanding of reactions that are triggered by light. Importance of light in life will be highlighted.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 641. Principles of Bonding and Reactivity in Inorganic Chemistry. 3 Credit Hours.
Bonding principles necessary to understand the structure, stability, and fundamental reactivity of main group and transition metal inorganic compounds.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 653. Modern Quantum Chemistry. 3 Credit Hours.
Many-electron wave functions and operators. Hartee-Fock approximation, density functional theory, configuration interaction, and many-body perturbation theory.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 655. Electrochemistry. 3 Credit Hours.
Modern electrochemical techniques including voltammetry, chronocoulometry, rotating disk electrode, and ultramicroelectrodes.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 665. Principles of Spectroscopic Techniques. 3 Credit Hours.
Spectroscopic techniques: nuclear magnetic resonance (NMR), mass spectra (MS), ultraviolet (UV), visible infrared (IR), fluorescence, and other specialized spectroscopic techniques.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 675. Principles of Nuclear Magnetic Resonance and Multidimensional Spectroscopy. 3 Credit Hours.
Theory of nuclear magnetic resonance; Bloch equations; relaxation theory; time- domain versus frequency domain spectroscopies, and principles of multidimensional spectroscopy.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CHM 681. Advanced Analytical Chemistry. 3 Credit Hours.
Provides a strong foundation in the most important concepts in advanced analytical chemistry, including electrochemistry, chemical separations, and bioanalytical chemistry, and in the different classes of instrumental analytical techniques available to current chemists.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 691. Topics in Chemistry. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule following the title, 'Topics in Chemistry'.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 692. Topics in Chemistry. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule following the title, 'Topics in Chemistry'.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 693. Readings in Chemistry. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement. May be repeated for credit.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 694. Readings in Chemistry. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement. May be repeated for credit.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 779. Chemistry Seminar. 1 Credit Hour.
Participation in the departmental seminar program. Required each semester the student is in residence and not enrolled in CHM 680 (excluding summer sessions).
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 780. Chemistry Seminar. 1 Credit Hour.
Participation in the chemistry department seminar program, including an oral presentation of special topics.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 785. Introduction to Research. 2 Credit Hours.
Research principles and practices, independent study in selected subject areas, and/or oral presentation of a proposed research topic. Open only to graduate students working toward the M.S. or Ph.D. in chemistry.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 788. Problems in Research Planning. 2 Credit Hours.
Formulation of a research program for investigating an original problem not related to the candidate's major laboratory research. A brief written summary and an oral defense of the plan will be required.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHM 805. Research Practices. 1-3 Credit Hours.
Research experiences in special techniques. For students electing the non-thesis M.S. option. May be repeated for a total not to exceed six credits.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

CHM 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most departments not to exceed six, as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CHM 820. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis for the master's degree after the student has enrolled for the permissible cumulative total in CHM 710 (usually six credits). Credit not granted. May be regarded as full-time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHM 830. Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credit as determined by his/her advisor, but for not less than a total of 12 hours. Up to 12 hours may be taken in a regular semester, but not more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CHM 840. Post-candidacy Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. who have advanced to candidacy. The student will enroll for credit as determined by his/her advisor, but not for less than a total of 12. Up to 12 hours may be taken in a regular semester, but not more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CHM 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the Ph.D. and D.A., after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. Credit not granted. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
CHM 880. Doctoral Dissertation Seminar. 1 Credit Hour.
Required of all candidates for the Ph.D. degree when defending their doctoral dissertation during their final term. A written dissertation and an oral defense of the Ph.D. dissertation will be required.
Prerequisite: CHM 830 and CHM 840.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

Chinese (CHI)

CHI 101. Elementary Chinese (Mandarin). 3 Credit Hours.
Conversation, grammar, reading, elementary composition.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHI 102. Elementary Chinese (Mandarin). 3 Credit Hours.
Continuation of CHI 101, conversation, grammar, reading, elementary composition.
Prerequisite: CHI 101.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHI 195. Transfer Credit. 1-3 Credit Hours.
Awarded for 100-level course work at another institution for which UM has no direct equivalent.
Components: LEC.
Grading: CNC.
Typically Offered: Fall, Spring, & Summer.

CHI 201. Intermediate Chinese I. 3 Credit Hours.
Expanding further on language skills (grammar, composition and reading) while introducing students to aspects of Chinese customs, history and culture. Closed to native speakers.
Prerequisite: CHI 102.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHI 202. Intermediate Chinese II. 3 Credit Hours.
Continuation of CHI 201. Further development of reading, writing, speaking and listening skills in Mandarin Chinese. CLOSED TO NATIVE SPEAKERS.
Prerequisite: CHI 201.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CHI 203. Advanced Chinese. 3 Credit Hours.
This course is designed to develop students’ ability to use Chinese in a more advanced way. The course emphasizes accurate comprehension, expansion of vocabulary, and development of the ability to use increasing complex grammatical and sentence structures. In addition to improving their language abilities, students will also be exposed to different areas of Chinese culture.
Prerequisite: CHI 202.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CHI 204. Advanced Chinese II. 3 Credit Hours.
The course aims to develop students’ ability to use Chinese in a more advanced way by continuing Chinese 203’s emphasis on accurate comprehension, expansion of vocabulary, and development of the ability to use increasing complex grammatical and sentence structures. In addition to improving their language abilities, students will also be exposed to different areas of Chinese culture.
Prerequisite: CHI 203.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 210. Experiencing Chinese Culture through Art and Design. 3 Credit Hours.
A broad exposure on both traditional and modern Chinese arts, crafts, designs, architectures, and other cultural elements. Through discussions, hands on art projects, and cultural excursions, students will examine how traditional and contemporary Chinese values and beliefs are expressed in Chinese arts, crafts, designs, and architecture. An opportunity to truly immerse in Chinese culture. Students will visit historical and cultural sites. Local Chinese artists and scholars will co-teach certain sessions. Students will be guided to conduct cultural interviews and presentations to develop their own understanding on Chinese values and perspectives. This course takes place in Beijing during summer term. And it will be taught primarily in English.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

CHI 295. Transfer Credit. 1-3 Credit Hours.
Awarded for 200-level course work at another institution for which UM has no direct equivalent.
Components: LEC.
Grading: CNC.
Typically Offered: Fall, Spring, & Summer.

CHI 301. Advanced Reading and Diction Chinese. 3 Credit Hours.
Use of Chinese in a more advanced way to achieve greater fluency in a variety of written and spoken genres. Course materials incorporate authentic Chinese materials in genres including formal speech, short story, debate, op-ed essay, and newspaper. The course emphasizes accurate comprehension, expansion of vocabulary, and development of the ability to use increasing complex grammatical and sentence structures, in particular, formal speech and written language. In addition to improving their language abilities, course materials are also geared towards deepening students understanding of many different areas of Chinese culture.
Prerequisite: CHI 204.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHI 310. Topics in Chinese Literature and Culture in Translation. 3 Credit Hours.
Specific topics within the literature and cultures of the Chinese-speaking world, including literary, cinematic, and artistic representations of central themes or issues, and the cultural production of particular historical periods or national or immigrant groups. This course is taught in English and does not fulfill the CAS foreign language requirement. May be repeated for credit if topics vary.
Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CHI 311. Comparative Literature in East Asia. 3 Credit Hours.
An introduction to the East Asian literary tradition (in China, Japan, and Korea) while introducing the methods of and issues surrounding comparative literary study. The course is structured thematically, according to particular motifs and themes that become central in Chinese, Japanese, and Korean literature. Themes to be studied include the non-human bride; romantic ideals and the romance narrative; the otherworldly journey; the dream; and the modern nation. It also seeks to challenge pre-conceived notions about East Asian literature and culture to instill a nuanced understanding of East Asian literary traditions.
Prerequisite: ENG 106.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CHI 312. The Esoteric and the Mundane in the Chinese Literary Tradition. 3 Credit Hours.
A variety of important genres and themes in the Chinese literary tradition through the close reading of texts spanning three millennia. Particular attention is paid to notions of humanity, divinity, and monstrosity. The course is taught in English.
Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHI 315. The Powerful Women of Medieval China in History, Fiction, and Modern Media. 3 Credit Hours.
An interdisciplinary examination of the portrayals of ruling-class women who lived during the medieval period in China and who have become a part of the Chinese literary-historical tradition. Works to be examined include short stories, novels, plays, films, and television. This course is taught in English.
Prerequisite: ENG 106 or ENG 107.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHI 322. Cultural Topics. 3 Credit Hours.
A variety of important genres, issues, and themes related to Chinese culture through the close reading and analysis of texts. Topics may include film, religion, gender, epistemology, visual arts, immigration, travels, the preternatural. Note: Students will complete all readings and written assignments in Chinese. Course is open only to students with native or native-level fluency in Chinese.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CHI 394. Chinese Internship. 1-3 Credit Hours.
The internship is an opportunity to apply analytical, interpretative, and creative skills developed in coursework. Internships ordinarily take place outside the University and they involve UM faculty supervision, as well as supervised on-site experience in an Chinese-speaking cultural, business, or not-for-profit organization. Students need to fill out the Internship Application Form.Normally 27 internship hours are required per credit earned. A maximum of three semester hours of internship credit may be counted toward the student’s degree program. Permission of MLL faculty member is required (the host will apply documentary evidence of the hours worked).
Prerequisite: CHI 204.
Components: PRA.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 395. Transfer Credit. 1-3 Credit Hours.
Awarded for 300-level course work at another institution for which UM has no direct equivalent.
Components: LEC.
Grading: CNC.
Typically Offered: Fall, Spring, & Summer.

CHI 495. Transfer Credit. 1-3 Credit Hours.
Awarded for 400-level course work at another institution for which UM has no direct equivalent.
Components: LEC.
Grading: CNC.
Typically Offered: Fall, Spring, & Summer.

CHI 591. Directed Readings. 1-3 Credit Hours.
Provides Directed Readings in Chinese.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

CHI 641. Elementary CHI I for Graduate Students. 0 Credit Hours.
Continuation of CHI 651. Designed to develop graduate students’ communicative abilities in speaking, reading, writing, and comprehending Chinese, as well as to provide an introduction to Chinese Studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 642. Elementary CHI II for Graduate Students. 0 Credit Hours.
Continuation of CHI 641. Designed to develop graduate students’ communicative abilities in speaking, reading, writing, comprehending Chinese, and continued engagement in Chinese Studies.
Prerequisite: CHI 641.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 651. Intermediate CHI I for Graduate Research. 0 Credit Hours.
For graduate students with previous study of elementary-level Chinese. Designed to enhance graduate students’ communication skills in the Chinese language at the intermediate level. Intended principally for students who will carry out research in Chinese Studies.
Prerequisite: CHI 641.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 652. Intermediate Chinese II for Graduate Research. 0 Credit Hours.
For student with previous study of Chinese at the intermediate level. Designed to enhance graduate students’ communication skills in the Chinese language at the high-intermediate level. Intended principally for students who will carry out research in Chinese Studies.
Prerequisite: CHI 651.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CHI 653. Advanced Chinese I for Graduate Research. 0 Credit Hours.
Designed to enhance graduate students’ communication skills in the Chinese language at the advanced-low level. Intended principally for students who will carry out research in Chinese Studies.
Prerequisite: CHI 652.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CIM 103. Survey of Motion Pictures. 3 Credit Hours.
Examination of the aesthetic, social, and economic aspects of the motion picture industry. Concentration on the present state of the medium with particular emphasis on future trends.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 111. Web Lab. 3 Credit Hours.
This course is a practical introduction to web design. Students will learn how to produce websites using the latest web practices and techniques. Throughout each unit of the course, students will learn the skills to plan, layout, and build websites using HTML, CSS, and Javascript. Students will also learn how to optimize and market their websites.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 113. Documentary Approaches. 3 Credit Hours.
Students will explore the varied forms and narrative approaches used in contemporary documentary filmmaking to understand the position of the filmmaker as a storyteller.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 120. Internet, Media, and Society. 3 Credit Hours.
Internet, Media, and Society is a foundational course intended to give perspectives on the continuing progression of technology through the lens of media and popular culture. Students will learn about the historical roots of the internet and early tech pioneers, including the various technologies, trends, and subcultures that bubbles up along the way, creating our current media and technological landscapes. From this perspective, students will gain an appreciation and greater understanding of how things came to be, especially the Internet's role in shaping society and their everyday lives.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 122. Introduction to Game Studies. 3 Credit Hours.
This course is an introduction to the study of games as cultural, historical, and socially relevant artifacts. Students will gain an understanding of how games are used to accomplish specific communications goals and will also learn how society can often shape and be shaped by games. The course provides students with the foundation needed to be effective at critiquing, designing, and evaluating games.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 126. Introduction to Screenwriting. 3 Credit Hours.
Creation and formatting of narrative material for motion pictures. Emphasis on writing the short film.
Components: DIL.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 151. Introduction to Digital Filmmaking. 3 Credit Hours.
Lectures and laboratory work to acquaint the student with the basic techniques of motion pictures. Students make short films using digital equipment to develop an understanding of the motion picture as a creative tool of communication and expression.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 206. History of International Cinema. 3 Credit Hours.
This course is an examination of the origin and history of the motion picture. Narrative and non-fiction genres, in the American and World Cinemas, from 1890 to the present are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 211. Interaction Design. 3 Credit Hours.
In this class, students will familiarize themselves with the discipline of interaction design (IxD) and user experience (UX). Students will learn how to design interactive prototypes for applications that connect users to information, products, services, and/or space.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 251. Motion Picture Workshop: Storytelling. 3 Credit Hours.
The practice of the grammar of cinematic language including shot selection, composition, pacing, story clarity, performance, pre-visualization and pre-planning for the creation of short narrative projects. Through critiques, students en counter and interact with an audience of their peers. This course requires students to master contemporary technology in use in the profession.
Prerequisites: CIM 103, CIM 151.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 294. Special Topics in Motion Pictures. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CIM 310. Introduction to Game Design. 3 Credit Hours.
This is an introductory course about game design, theory, and development, and how games align themselves as a lens of study for all interactive media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 315. 2D Character Design. 3 Credit Hours.
This is a comprehensive course devoted to the development of skills in creating characters for 2D animation and games. Students will develop an understanding of how shape language relates to the characters personality through the creation of weekly exercises. The course will be delivered in the form of studio projects, individual and class critiques, lectures, discussions, workshops and readings.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 326. Intermediate Screenwriting. 3 Credit Hours.
Study of, and practice in, writing feature length, narrative motion pictures. Development of story line in treatment form, attention to cinematic structure, the development of character, and its presentation on screen is discussed.
Prerequisite: CIM 126.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 329. Writing for Series Television. 3 Credit Hours.
An introduction to the structures and techniques of writing situation-comedy and dramatic series television.
Prerequisite: CIM 126.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 351. Intermediate Filmmaking. 3 Credit Hours.
This course is an introduction to intermediate level techniques and methodologies for digital production of all contemporary media genres including narrative, documentary, experimental and music performance. Students will work in crews, collaboratively, with specific assigned roles throughout the production work flow.
Prerequisite: CIM 206 and CIM 251.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 353. Post Production Sound Editing and Design. 3 Credit Hours.
Post production sound editing and design is a seminar/workshop that provides a practical and theoretical introduction to sound and its function in the narrative moving image process. The course explores the process from production recording through the final mix. Requisite: Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 355. Essentials of Documentary Film. 3 Credit Hours.
This course is designed to teach students how to tell compelling cinematic documentary stories with a clear and effective point-of-view. We will compare and analyze various styles of documentary storytelling and use these methods in creating effective documentaries films. An emphasis will be put on the various styles of documentary filmmaking.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 356. Cinematography. 3 Credit Hours.
An overview of the cinematographer’s process from script to screen. Working with camera, lighting, and grip equipment on exercises and projects is discussed.
Prerequisite: CIM 251.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 357. Editing. 3 Credit Hours.
Introduction to the theory and practice of motion picture editing. Short editing assignments are designed to develop students’ understanding of aesthetic, and technical considerations in the art of dramatic editing.
Prerequisite: CIM 251.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 360. 360° Immersive Filmmaking and Storytelling. 3 Credit Hours.
A hands-on course dedicated to design and produce 360° immersive video. Through a wide selection of materials, including videos, 360° films, articles, and presentations, students will develop a strong foundation on storytelling techniques, technologies (cameras, microphones, VR headsets, software), and best practices used across immersive media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 364. Business of Motion Pictures. 3 Credit Hours.
Students will get an overview of how content is created and who the players are. They will practice synthesizing information and translating it into a strategic plan for a business or individual career path in the entertainment industry.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 366. Writing the Genre Script. 3 Credit Hours.
This course is an online course on screenwriting. Students will learn to analyze films through the lens of genres, including Drama, Comedy, Horror, Romance, Sci-Fi, and Coming of Age, to write scripts, and to critique genre conceits of assigned films.
Prerequisite: CIM 126.
Components: DIL.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 394. Special Topics in Motion Pictures. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CIM 395. Directing Techniques I. 3 Credit Hours.
To teach the craft of directing through exercises, screen work, and readings.
Prerequisite: CIM 251.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 401. Nonfiction Film and Digital Media. 3 Credit Hours.
An examination of American and world nonfiction films and media.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 402. Global Issues and Filmmaking: An Interdisciplinary Approach. 3 Credit Hours.
We will study U.S. foreign aid policies and programs with efforts to stimulate international development, encourage humanitarian engagement, elicit diplomacy and/or promote international and national security. Case studies will focus on global health aid programs, along with other important aid initiatives. Written and oral assignments will be complemented by short analytical film created and produced by students. This will include an historical analysis on the type and purpose of foreign aid, existing online news media sources about the foreign aid programs, expert video interviews, and the coverage and editing of a class debate to fully capture the theoretical and practical foundations of international aid in the twenty-first century.
Requisite: Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 403. Film Directors. 3 Credit Hours.
The study of the film authorship through a focus on specific directors.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 404. Aspects of Contemporary Cinema. 3 Credit Hours.
Study of contemporary movements in American and world cinemas.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 405. Representations of Sport in Popular Culture. 3 Credit Hours.
This course presents approaches to understanding and contextualizing representations of sports in cinema, television, and digital media. Students gain valuable skills in critical thinking, analysis, and evaluation as they learn to reflect on the various ways sports are portrayed in selected media and popular culture.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 406. Genres. 3 Credit Hours.
Study of selected genres from a variety of critical perspectives. Issues pertaining to methodologies of defining and categorizing film are discussed.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 407. National Cinemas. 3 Credit Hours.
Selected films from Europe, Asia, Africa and Latin America will be studied in relation to their diverse social, political and cultural contexts.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 408. Women, Media, and Popular Culture. 3 Credit Hours.
Examination of film, media, and gender representation from the perspective of feminist theory and cultural studies. Students explore the many ways that women have been portrayed, and how they have portrayed themselves, within popular culture.
Requisite: Junior Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 409. Legal Aspects of Motion Pictures. 3 Credit Hours.
The law, contracts, and negotiating techniques of the business affairs aspects of the production of motion pictures.
Requisite: Junior Status or Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 413. Mobile Application Development. 3 Credit Hours.
This course will provide students the ability to conceptualize, design, and develop a mobile application of their choosing. It covers various approaches to the development of mobile software applications using current development environments, frameworks, and programming paradigms. This course focuses on hands-on learning through which students practice with programming assignments and demonstrate the apps through virtual simulators and physical mobile devices.
Prerequisite: CIM 440.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 414. Design with AI. 3 Credit Hours.
This course will provide students with the ability to understand the purpose, strengths and limitations of artificial intelligence (AI) technologies in order to design smart applications for everyday use. It covers topics including state-of-the-art AI technologies and the design principles for developing applications with such technologies. Issues such as ethics, bias, accountability, and privacy in these applications will also be discussed.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.
CIM 416. Building Virtual Worlds. 3 Credit Hours.
The purpose of this course is to explore the construction of virtual environments. Students will learn the principles of constructing interactive 3D environments using a game engine. Students will be responsible for creating a world that can be interacted with on various platforms, including virtual and mixed reality.
Prerequisite: CIM 440 or CSC 120 or ECE 118.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CIM 424. Augmented Reality. 3 Credit Hours.
This course will provide students the ability to design and develop augmented reality apps. It covers various approaches to designing and programming augmented reality apps using the latest technologies and devices. Students will be given hands-on programming assignments and learn about the key advantages in each of the approaches via in-class discussions.
Prerequisite: CIM 440 or CSC 120 or ECE 118.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CIM 426. Advanced Screenwriting. 3 Credit Hours.
A continuation of CIM 326. Study of, and practice in, writing feature length, narrative motion picture scripts. Attention is given to cinematic structure, the development of character, and its presentation on screen. Emphasis is placed on bringing the script to a completed draft.
Prerequisite: CIM 326.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 429. Advanced Television Writing. 3 Credit Hours.
This course explores how to create, format, and write the original Television Pilot and treatment. The class will cover TV pilot format, length, structure as well as techniques in creating TV characters and situations for both comedy and dramatic episodic TV.
Prerequisite: CIM 329.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 431. Human Computer Interaction. 3 Credit Hours.
This course will teach students about the importance human computer interaction (HCI) in the design, implementation, and evaluation of interactive computing systems for human use. The course will provide both practical application and theoretical knowledge of HCI, with practical concerns balanced by discussion of relevant theory from the literature of computer science, human factors, and interaction design.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

CIM 439. Front End Fundamentals. 3 Credit Hours.
This course focuses on the job-ready skills and production workflow techniques in highest demand for front end web developers. Students will learn, practice and demonstrate the skills and principles needed to make effective use of these technologies.
Prerequisite: CIM 111 or JMM 341.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 440. Intro to Creative Coding. 3 Credit Hours.
This course will introduce students to the building blocks of creative coding within the visual and media environment.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 444. Internet and Media Activism. 3 Credit Hours.
In this course, students will examine the role of media in shaping social reform to document social issues such as poverty, human rights, social inequities, the environment, and powerless groups. We will review the philosophy and history of media as activism ranging from photography, documentary, cinema, the Internet, social media and newer forms of media. Emphasis is placed on developing a critical understanding of current media advocacy practices with a conscious goal; awareness, change minds, to affect policy, and action. At the end of the semester, students will have a fully developed project concept.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 451. Advanced Filmmaking Workshop. 3 Credit Hours.
The theory and practice of motion pictures production from script to screen. Lecture and laboratory. Students will develop and produce a narrative, a documentary, or an experimental work of their choice.
Prerequisite: CIM 351.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 455. Science Documentary: Autism. 3 Credit Hours.
This course brings together student citizens across science, communication, and education to collaborate on content intended to reach audiences on multiple platforms. Students will be exposed to both the history and cutting edge research surrounding Autism Spectrum Disorder. In addition to learning the neuroscience and genetics that underlie autism spectrum disorders, students will connect with people in the local community - to lend these issues a face and context. Students will gather information from readings, experts at the University of Miami, and the larger South Florida Community. Students will work in teams to share expertise from their fields of study to generate content for community consumption.
Components: LEC.
Grading: GRD.

CIM 456. Advanced Cinematography. 3 Credit Hours.
Advanced work with camera, lighting, and grip equipment on exercises and projects.
Prerequisite: CIM 356. Or Requisite: Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 457. Advanced Editing. 3 Credit Hours.
Advanced concepts in aesthetics and theories of picture and sound editing, mixing, color correction, and finishing techniques.
Prerequisite: CIM 357. Or Requisite: Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CIM 458. Documentary Production. 3 Credit Hours.
Students produce two short digital documentaries and explore various approaches to the documentary film.
Prerequisite: CIM 151.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 462. Motion Picture Marketing and Distribution. 3 Credit Hours.
Economic and marketing considerations in the production and distribution of motion pictures.
Prerequisite: CIM 364.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 465. Creative Producing. 3 Credit Hours.
Students will discover what their creative voice is as a producer; sharpen their communication skills (networking, pitching, coverage & notes); and will learn the nuts and bolts of what a producer does.
Prerequisite: CIM 364.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 471. Designing Games for Impact. 3 Credit Hours.
Students will explore the use of games as a communication tool for social good and will create their own game-based interventions.
Prerequisite: CIM 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 489. Projects in Screenwriting. 3 Credit Hours.
Individual study. This course and CIM 499 cannot count for more than three credits towards a Communication major or minor.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 494. Internship in Cinema and Interactive Media. 1-3 Credit Hours.
Prescribed study and supervised work with practitioners in motion pictures.
Requisite: Sophomore Status, cumulative GPA of 2.5, and Permission of Instructor.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 499. Projects and Directed Research. 1-3 Credit Hours.
Individual study. No more than three credits may be counted toward a Communication major or minor.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 501. Principles of Aesthetics and Analysis. 3 Credit Hours.
Provides graduate students with introductory immersion in aesthetics, analysis, and history of film and media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 510. Foundation of Screenwriting. 3 Credit Hours.
This course explores the fundamental skill set necessary to manipulate the basic elements of cinematic writing. The course will investigate common dramatic elements found in all screenplays as well as teach format principles of feature, TV and emerging media scripts.
Prerequisite: CIM 126.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 511. Writing the Short Film. 3 Credit Hours.
A course in the fundamentals of screenwriting focused on the creation of a 15-30 page screenplay suitable for an MFA project film. Study of and practice in writing short narrative motion picture scripts. Focus is placed on concept, content, cinematic story structure and presentation of character.
Prerequisite: CIM 510.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 513. UX Research Methods. 3 Credit Hours.
This course provides a comprehensive overview of User Experience research methods and how they are incorporated into the product development lifecycle. Students will learn about user-centered design and will conduct a wide range of research methods including ethnography, questionnaires, online studies, and usability testing. There will be considerable focus on practicing research skills and reporting findings from these activities.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 514. Motion Picture Studio. 3 Credit Hours.
This course allows students the time to enhance and exhibit their knowledge and skills in Motion Picture. Students will fine-tune their final film projects, polishing their final cuts for film festival submission to film festivals and professional consideration.
Motion Picture Major and Senior Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 515. Interactive Media Studio. 3 Credit Hours.
The Interactive Media Studio is designed to allow a student to enhance his or her accumulated knowledge and skills in interactive Media. This course prepares students to gain employment in the field by creating and producing a professional design portfolio and resume. Students will also gain knowledge about how to set up, prepare for, and conduct themselves during professional interviews.
Requisite: Senior Standing and Interactive Media Majors.
Components: STU.
Grading: GRD.
Typically Offered: Spring.
CIM 518. Seminar in Documentary Film History: Cinéma-vérité. 3 Credit Hours.
The primary focus of this course will be on the half-century old school or tradition of documentary filmmaking associated with the terms “Cinéma-vérité” and “direct cinema”. Through close analysis of selected classic and contemporary documentaries, the class will explore their historical significance, their aspirations and achievements as films, and their ways of addressing the aesthetic, epistemological, political and moral issues that inevitably arise when filmmakers take their sync-sound camera into the world and undertake to film life as it is really lived.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 519. Seminar in Documentary Production. 3 Credit Hours.
The Seminar in Documentary Production is the capstone production class within the documentary track of the Cinema and Interactive Media Department. Students are entered into the course based on a proposal that outlines their documentary project.
Prerequisites: CIM 255, CIM 458 or JMM 541.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 523. Advanced 3D Character Design and Motion Capture. 3 Credit Hours.
This course covers the 3D game art development pipeline from modeling, texturing, rigging and animation to motion capture, and special effects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 526. Adaptation. 3 Credit Hours.
This course will examine the craft and techniques of adapting sources such as novels, short stories, plays, articles, comic books, Shakespeare to the screen.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 529. Nonfiction Film. 3 Credit Hours.
An examination of American and world nonfiction films.
Prerequisites: CIM 204 or CIM 205.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 535. Human Centered Design. 3 Credit Hours.
This course takes a comprehensive look at human limitations and abilities and how they are key to interaction design and a great user experience. Students will learn about human behavior and how to apply UX guidelines to the design of digital interfaces. Students will also learn how to produce design deliverables for real world practice.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 541. Technology Trends. 3 Credit Hours.
Trends is a foundation course intended to promote a dialogue about the current state of business, art, health, culture, and innovation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 542. Physical Computing. 3 Credit Hours.
This course explores how to build a bridge between the physical and digital world. Students will learn to develop software and hardware to sense and respond to physical interaction. Through various projects, students will learn how to program sensors and other electronic components to convert the human senses into creative inputs and outputs, such as lights, sounds, and movement. Students will learn the ideation and design process through challenges presented in their assignments and personal projects. In this course students will also learn how to design for and use various digital fabrication tools, such as 3D printing, laser and paper cutting, and CNC milling. Students will have access to work hands on with these fabrication tools to enhance and build their prototypes.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 543. Designing Innovation. 3 Credit Hours.
In this course you will be introduced to and will apply human centered design techniques and systems thinking to achieve goal-directed design of interactive systems. Students will work in small teams to iteratively generate and refine design concepts and to thoroughly document their design process.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 545. Managing Interactive Media Projects. 3 Credit Hours.
This course takes a comprehensive look at managing interactive media projects from inception to implementation and maintenance.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 550. Motion Graphics and Compositing. 3 Credit Hours.
Methods, techniques and aesthetics of 2D computer animation and compositing including animated text, title design, and green screen.
Prerequisite CIM 206.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 551. Advanced Motion Graphics and Compositing. 3 Credit Hours.
Extend the 2D skills of students who have taken CIM 550 to 3D motion graphics and animation. Emphasis on title design and animation. Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 552. Motion Picture Marketing and Distribution. 3 Credit Hours.
Economic and marketing considerations in the production and distribution of motion pictures.
Prerequisite CIM 206.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 553. Advanced Motion Picture Marketing. 3 Credit Hours.
Advanced marketing considerations in the distribution of motion pictures.
Prerequisite: CIM 552.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CIM 560. Directing the Actor. 3 Credit Hours.
The purpose of this course is to teach and practice the craft of directing, including text analysis, characterization, visualization, design, intention and rehearsal: to train students to articulate their ideas to actors and film crew.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 566. Character and Dialogue. 3 Credit Hours.
An examination of the craft and techniques of creating original characters and dialogue.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 590. Prototyping Techniques. 3 Credit Hours.
This course covers accepted prototyping techniques introducing students to a wide variety of approaches for different kinds of user experience design problems and platforms. Students will learn to develop preliminary iterations of a solution to a design problem in order to communicate the essence of their idea without committing to a costly implementation.
Prerequisite: CIM 111.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 591. Designing Playful Experiences. 3 Credit Hours.
Students will analyze and design games to gain vocabulary and tools to design playful interactive systems. Students will be exposed to a range of popular game prototyping technologies and will create several mini-projects as well as one final game project created using the platform of their choice.
Prerequisite: CIM 211 or CIM 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 593. Dynamic Data. 3 Credit Hours.
This course teaches data analysis through the development of interactive web applications. The course focuses on communicating through computer programming. Students will learn to build and use databases as a primary source and explore data as content. For this course students will be required to build custom software solutions through web programming languages that utilize third party APIs to interpret, analyze and manipulate data.
Prerequisite: CIM 440 or JMM 422.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 594. Special Topics in Cinema and Interactive Media. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Requisite: Junior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 595. Directing Techniques. 3 Credit Hours.
To build a more advanced set of professional skills and practices through scene work, shooting, and collaboration.
Prerequisite: CIM 251. Or Requisite: Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 599. Advanced Projects and Directed Research. 1-6 Credit Hours.
Individual study. May be repeated for a maximum of six credits.
Components: ADR.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 601. Principles of Aesthetics and Analysis. 3 Credit Hours.
Provides graduate students with introductory immersion in aesthetics, analysis, and history of film and media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 602. Global Issues and Filmmaking. 3 Credit Hours.
We will study U.S. foreign aid policies and programs with efforts to stimulate international development, encourage humanitarian engagement, elicit diplomacy and/or promote international and national security. Case studies will focus on global health aid programs, along with other important aid initiatives. Written and oral assignments will be complemented by short analytical film created and produced by students. This will include a historical analysis on the type and purpose of foreign aid, existing online news media sources about the foreign aid programs, existing online news media sources about the foreign aid programs, expert video interviews, and the coverage and editing of a class debate to fully capture the theoretical and practical foundations of international aid in the twenty-first century.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 603. Film Directors. 3 Credit Hours.
This course will address the conditions of authorship in film through an intensive study of the films of two or more directors, whose careers will serve as case studies. These directors will be historically important and their work will represent significant achievements in the art of film.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 604. Aspects of Contemporary Cinema. 3 Credit Hours.
The study of the ways in which film communicates. Intensive analysis and criticism of cinematic techniques exemplified through particular films.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 606. Genres. 3 Credit Hours.
A study of selected movie genres from a variety of critical perspectives. Issues pertaining to selfhood, sexual difference, and other concerns of present-day film criticism will be examined.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
CIM 608. National Cinemas. 3 Credit Hours.
Selected films from Europe, Asia, Africa and Latin America will be studied in relation to their diverse social/political and cultural contexts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 609. Legal Aspects of Motion Pictures. 3 Credit Hours.
The law, contracts, and negotiating techniques of the business affairs aspects of the production of motion pictures.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 610. Foundation of Screenwriting. 3 Credit Hours.
This course explores the fundamental skill set necessary to manipulate the basic elements of cinematic writing. The course will investigate common dramatic elements found in all screenplays as well as teach format principles of feature, TV and emerging media scripts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 611. Writing the Short Film. 3 Credit Hours.
A course in the fundamentals of screenwriting focused on the creation of a 15-30 page screenplay suitable for an MFA project film. Study of and practice in writing short narrative motion picture scripts. Focus is placed on concept, content, cinematic story structure and presentation of character.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 612. Writing for Episodic Television. 3 Credit Hours.
The course will explore the art and craft required to write a 'spec' Television episode. The course will explore how TV writing differs from feature writing and how the TV writer/producer business model works. By the end of the course the student will have finished an hour-long 'spec' script for an existing TV show or a two-part sitcom teleplay.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 613. Mobile Application Development. 3 Credit Hours.
This course will provide students the ability to conceptualize, design, and develop a mobile application of their choosing. It covers various approaches to the development of mobile software applications using current development environments, frameworks, and programming paradigms. This course focuses on hands-on learning through which students practice with programming assignments and demonstrate the apps through virtual simulators and physical mobile devices.
Prerequisite: CIM 640.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 614. Design with AI. 3 Credit Hours.
This course will provide students with the ability to understand the purpose, strengths and limitations of artificial intelligence (AI) technologies in order to design smart applications for everyday use. It covers topics including state-of-the-art AI technologies and the design principles for developing applications with such technologies. Issues such as ethics, bias, accountability, and privacy in these applications will also be discussed.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 615. 2D Character Design. 3 Credit Hours.
This is a comprehensive course devoted to the development of skills in creating characters for 2D animation and games. Students will develop an understanding of how shape language relates to the characters personality through the creation of weekly exercises. The course will be delivered in the form of studio projects, individual and class critiques, lectures, discussions, workshops and readings.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CIM 616. Building Virtual Worlds. 3 Credit Hours.
The purpose of this course is to explore the construction of virtual environments. Students will learn the principles of constructing interactive 3D environments using a game engine. Students will be responsible for creating a world that can be interacted with on various platforms, including virtual and mixed reality.
Prerequisite: CIM 640 or CSC 120 or ECE 118.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CIM 617. Seminar in Documentary Film History: Cinéma-vérité. 3 Credit Hours.
The primary focus of this course will be on the half-century old school or tradition of documentary filmmaking associated with the terms “Cinéma-vérité” and “direct cinema”. Through close analysis of selected classic and contemporary documentaries, the class will explore their historical significance, their aspirations and achievements as films, and their ways of addressing the aesthetic, epistemological, political and moral issues that inevitably arise when filmmakers take their sync-sound camera into the world and undertake to film life as it is really lived.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 618. Seminar in Documentary Production. 3 Credit Hours.
The Seminar in Documentary Production is the capstone production class within the documentary track of the Cinema and Interactive Media Department. Students are entered into the course based on a proposal that outlines their documentary project.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 620. Cinematography. 3 Credit Hours.
This hands-on course provides students with the aesthetic and technical aspects of professional concepts and techniques in film and digital media cinematography.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
CIM 621. Narrative Production. 3 Credit Hours.
An introduction to film and digital production techniques on narrative projects. Emphasis on collaboration, group process and social purpose. Students will be expected to produce a short film abroad as part of this course.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 622. UX Research. 3 Credit Hours.
The course provides a comprehensive overview of User Experience research methods and how they are incorporated into the product development lifecycle. Students will learn about user-centered design and will conduct a wide range of research methods including ethnography, questionnaires, online studies, and usability testing. There will be considerable focus on practicing research skills and reporting findings from these activities.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 623. Advanced 3D Character Design. 3 Credit Hours.
This course covers the 3D game art development pipeline from modeling, texturing, rigging and animation to motion capture, and special effects.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 624. Augmented Reality. 3 Credit Hours.
This course will provide students the ability to design and develop augmented reality apps. It covers various approaches to designing and programming augmented reality apps using the latest technologies and devices. Students will be given hands-on programming assignments and learn about the key advantages in each of the approaches via in-class discussions.
Prerequisite: CIM 640 or CSC 120 or ECE 118.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

CIM 625. Game Development Studio. 3 Credit Hours.
Game Dev Studio is a project-based course devoted to developing a game. In groups, students will start with a concept and create prototypes that will be refined through multiple iterations and playtests. Your final game will either be a well-polished 2D or 3D digital game.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 626. Adaptation. 3 Credit Hours.
This course will examine the craft and techniques of adapting sources such as novels, short stories, plays, articles comic books, and public domain material such as Shakespeare to the screen.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 629. Nonfiction Film. 3 Credit Hours.
An examination of American and world nonfiction films.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 630. Introduction to Editing. 3 Credit Hours.
Introduction to the theory and practice of motion picture editing. Short editing assignments are designed to develop students' understanding of aesthetic, and technical considerations in the art of dramatic editing.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 631. Human Computer Interaction. 3 Credit Hours.
This course will teach students about the importance human computer interaction (HCI) in the design, implementation, and evaluation of interactive computing systems for human use. The course will provide both practical application and theoretical knowledge of HCI, with practical concerns balanced by discussion of relevant theory from the literature of computer science, human factors, and interaction design.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 635. Human Centered Design. 3 Credit Hours.
This course takes a comprehensive look at human limitations and abilities and how they are key to interaction design and a great user experience. Students will learn about human behavior and how to apply UX gridlines to the design of digital interfaces. Students will also learn how to produce design deliverables for real world practice.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 636. Collaborative Innovation Laboratory. 3 Credit Hours.
In this collaboration studio course, students will form small teams and undertake real-world projects with a partnering organization. Students will be provided a design brief outlining project objectives identified by the partnering organization. Over the course of the semester, students will research, brainstorm, design, and test innovative interactive solutions for this core objective, including proposing ideas and presenting prototypes to the partnering organization. Projects that satisfy the partner's needs may result in ongoing work for full implementation and exposure for students' work.
Components: LAB.
Grading: GRD.

CIM 639. Front End Fundamentals. 3 Credit Hours.
This course focuses on the job-ready skills and production workflow techniques in highest demand for front end web developers. Students will learn, practice and demonstrate the skills and principles needed to make effective use of these technologies.
Prerequisite: CIM 640.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 640. Intro to Creative Coding. 3 Credit Hours.
This course will introduce students to the building blocks of creative coding within the visual and media environment. Students will learn to create dynamic images, type and interfaces, that can translate into web, mobile and print forms. Students will learn programming fundamentals that translate in virtually all programming platforms.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
CIM 641. Technology Trends. 3 Credit Hours.
This is a foundation course intended to promote a dialogue about the current state of business, art, health, culture, and innovation.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 642. Physical Computing. 3 Credit Hours.
This course explores how to build a bridge between the physical and digital world. Students will learn to develop software and hardware to sense and respond to physical interaction. Through various projects, students will learn how to program sensors and other electronic components to convert the human senses into creative inputs and outputs, such as lights, sounds, and movement. Students will learn the ideation and design process through challenges presented in their assignments and personal projects. In this course students will also learn how to design for and use various digital fabrication tools, such as 3D printing, laser and paper cutting, and CNC milling. Students will have access to work hands on with these fabrication tools to enhance and build their prototypes.
Prerequisite: CIM 640.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 643. Designing Innovation. 3 Credit Hours.
In this course you will be introduced to and will apply human centered design techniques and systems thinking to achieve goal-directed design of interactive systems. Students will work in small teams to iteratively generate and refine design concepts and to thoroughly document their design process.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 644. Internet and Media Activism. 3 Credit Hours.
In this course, students will examine the role of media in shaping social reform to document social issues such as poverty, human rights, social inequities, the environment, and powerless groups. We will review the philosophy and history of media as activism ranging from photography, documentary, cinema, the Internet, social media and newer forms of media. Emphasis is placed on developing a critical understanding of current media advocacy practices with a conscious goal; awareness, change minds, to affect policy, and action. At the end of the semester, students will have a fully developed project concept.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 645. Managing Interactive Media Projects. 3 Credit Hours.
This course takes a comprehensive look at managing interactive media projects from inception to implementation and maintenance.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 651. Motion Graphics and Compositing. 3 Credit Hours.
Methods, techniques and aesthetics of 2D computer animation and compositing including animated text, title design, and green screen.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 654. Advanced Motion Graphics and Compositing. 3 Credit Hours.
Extend the 2D skills of students who have taken CMP 550 to 3D motion graphics and animation. Emphasis on title design and animation.
Prerequisite: CIM 651.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 655. Science Documentary: Autism. 3 Credit Hours.
This course brings together student citizens across science, communication, and education to collaborate on content intended to reach audiences on multiple platforms. Students will be exposed to both history and cutting edge research surrounding Autism Spectrum Disorder. In addition to learning the neuroscience and genetics that underlie autism spectrum disorders, students will connect with people in the local community - to lend these issues a face and context. Students will gather information from readings, experts at the University of Miami, and the larger South Florida Community. Students will work in teams to share expertise from their fields of study to generate content for community consumption.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 658. Documentary Production. 3 Credit Hours.
An introduction to the documentary genre including the production of a documentary from start to finish.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 660. Directing the Actor. 3 Credit Hours.
The purpose of this course is to teach and practice the craft of directing, including text analysis, characterization, visualization, design, intention and rehearsal: to train students to articulate their ideas to actors and film crew.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 661. 360° Immersive Filmmaking and Storytelling. 3 Credit Hours.
A hands-on course dedicated to design and produce VR/360° immersive video. Through a wide selection of materials, including videos, 360° films, articles, and presentations, students will develop a strong foundation on storytelling techniques, technologies (cameras, microphones, VR headsets, software), and best practices used across immersive media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 666. Character and Dialogue. 3 Credit Hours.
An examination of the craft and techniques of creating original characters and dialogue.
Prerequisite: CIM 610.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CIM 670. The Independent Producer. 3 Credit Hours.
Beyond covering the role of the producer, this hands-on class offers students a place to workshop their thesis projects. Students will brand themselves or their company and leave with a packaged project ready to take to market.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 686. Online Screenwriting. 3 Credit Hours.
The student will prepare and complete the first act of a feature-length screenplay or the student will prepare and commence the rewrite of an existing screenplay.
Components: DIL.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 690. Prototyping Techniques. 3 Credit Hours.
This course covers accepted prototyping techniques introducing students to a wide variety of approaches for different kinds of user experience design problems and platforms. Students will learn to develop preliminary iteration of a solution to a design problem in order to communicate the essence of their idea without committing to a costly implementation.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 691. Capstone. 3 Credit Hours.
The capstone seminar is designed to demonstrate a student's accumulated training in Interactive Media in a single original project of their choice, subject to the instructor's approval and under the additional supervision of a faculty mentor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 692. Advanced Systems: Designing Playful Experiences. 3 Credit Hours.
Students will analyze and design games to gain vocabulary and tools to design playful interactive systems. Students will be exposed to a range of popular game prototyping technologies and will create several mini-projects as well as one final game project created using the platform of their choice.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 693. Dynamic Data. 3 Credit Hours.
This course teaches data analysis through the development of interactive web applications. The course focuses on communicating through computer programming. Students will learn to build and use databases as a primary source and explore data as content. For this course students will be required to build custom software solutions through web programming languages that utilize third party APIs to interpret, analyze and manipulate data.
Prerequisite: CIM 640.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 694. Motion Picture Marketing and Distribution. 3 Credit Hours.
Economic and marketing considerations in the production and distribution of motion pictures.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 695. Advanced Motion Picture Marketing. 3 Credit Hours.
Advanced marketing considerations in the distribution of motion pictures.
Prerequisite: CIM 694.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 696. Directing Techniques. 3 Credit Hours.
To build a more advanced set of professional skills and practices through scene work, shooting, and collaboration.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 697. Topics in Film Analysis. 3 Credit Hours.
Content varies by semester. Topics such as Film Directors, National Cinemas, Silent Film, Contemporary Cinema. Course may be repeated for credit if content varies.
Prerequisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 705. Production Management. 3 Credit Hours.
A comprehensive examination of the skills and techniques employed by line producers and production managers in the preproduction, production, and post-production of motion pictures.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 707. Pedagogy and Film. 3 Credit Hours.
This course covers a range of traditions in pedagogy, including history, theory, and practical applications. Intended for those who are currently teaching—or who intend to teach—at the college level, the course provides grounding in foundational approaches as well as a familiarity with recent research advancements in pedagogy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 710. Writing the Feature-Length Screenplay. 3 Credit Hours.
Study of and practice in writing feature-length, narrative motion picture scripts. Focus is placed on cinematic structure and presentation of character. Classes will generally be conducted as follows: a discussion of screenplay craft, an in-depth analysis of various films from the writer’s POVs, and a critique of the various stages of your fellow student screenplays as they evolve throughout the semester.
Prerequisite: CIM 510.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
CIM 727. Scriptwriting. 3 Credit Hours.
Study of and practice in writing feature-length, narrative motion picture scripts. Focus is placed on cinematic structure and presentation of character.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CIM 730. Advanced Editing. 3 Credit Hours.
An examination of the art and techniques of post-production designed for students completing advanced motion picture projects. Lectures, group discussions and screenings. Emphasis on rhythm, dramatic moments, character arcs, symbolic vs. thematic editing, elements of sound editing, sound design, and professional mastering standards. This class is designed to develop editorial skills that will prepare students for professional careers in editing. In-depth examination of effects and sound palettes of the Avid Media Composer, as well as a discussion of how to integrate visual effects from external applications. Finishing and mastering techniques for a variety of mediums as well as a reel building will be covered.
Prerequisite: CIM 630.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 738. Writing the Short Film. 3 Credit Hours.
A course in the fundamentals of screenwriting focused on the creation of a 15-30 page screenplay suitable for an MFA project film.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 740. Sound Design. 3 Credit Hours.
Sound Design through seminar and workshop provides a practical and theoretical introduction to sound and its function in the narrative moving image process. The course utilizes professional environments to instruct in the basics of sound editing, studio recording and mixing as it is practiced in the film industry. It will also present the aesthetic use of sound and its integral part in the moving image narrative process.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 750. From Script to Screen. 3 Credit Hours.
Advanced production concepts and techniques explored in a variety of media. Students will produce an approved film or script. The class will explore the language of motion picture and how this language is utilized in the story telling process. Knowledge of both the practical and aesthetic aspects of film will be stressed at all times.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 752. Advanced Cinematography. 3 Credit Hours.
Advanced technical and photographic principles begun in CMP 651. Preparation for the filming of the MFA project film.
Prerequisite: CIM 620.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 756. Motion Picture Post-Production Procedures. 3 Credit Hours.
An examination of the esthetics of editing, recording, re-recording, and laboratory procedures following completion of principal photography.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CIM 760. Directing the Camera. 3 Credit Hours.
An introduction to directing actors in low budget, independent films utilizing traditional, modern and evolving directorial techniques used by independent and traditional film makers: analyzing and orchestrating scripted material, developing a directorial concept, creating indelible characterizations, building a visual image, auditioning and casting the talent, blocking and directing the untrained amateur or highly skilled professional actor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CIM 794. Motion Picture Internship. 1-3 Credit Hours.
Prescribed study and supervised work with practitioners in motion pictures.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CIM 795. Special Topics in Cinema and Interactive Media. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 799. Advanced Projects and Directed Research. 1-6 Credit Hours.
Individual study, involving a project, paper or a program of research designed in consultation with a supervising faculty member. No more than six credits may be counted toward the degree.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CIM 815. MFA Thesis. 1-6 Credit Hours.
The focus is on completing the culminating thesis project, in consultation with the student’s selected committee and thesis chair.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CAE 100. Introduction to Civil, Architectural, and Environmental Engineering. 3 Credit Hours.
This introductory course is designed to expose high school students to a variety of specific disciplines within the civil engineering arena to assist them in making informed decisions about possible college majors. The program is designed for the exemplary high school student interested in applied mathematics and science. All students enrolled in this course will gain experience in problem solving, engineering mechanics, computer simulation, and laboratory activity. The course content changes throughout the 3-week duration and includes topics on civil engineering, environmental engineering, and architectural engineering. The students will be provided with an understanding and some hands-on experience on topics relative to the disciplines of civil, architectural, and environmental engineering. Via an introduction to several case histories, the students will be able to understand the challenges associated with the design and construction and importance of the scientific methods in engineering. The laboratory and field trip experiences will deal with bridge building, material testing, water purification, and building systems.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

CAE 111. Introduction to Engineering I. 3 Credit Hours.
Use of engineering tools for problem solving. Computer techniques for data acquisition, analysis and presentation, software design, and computer aided drafting are covered. Development of design skills is achieved through several design and building competitions. Introduction to professional ethics and intellectual property rights, MATLAB, AutoCAD, and programming in C++ is also included.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 112. Introduction to Engineering II. 2 Credit Hours.
Hands-on applications of various surveying instruments for leveling, angles and distance measurements, and other engineering applications. Hands on application of Geographic Information Systems, including ArcView and extensions.
Prerequisite: CAE 111.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 115. Introduction to Engineering II (Surveying). 1 Credit Hour.
Hands on application of various surveying instruments. Leveling, angles and distance measurements.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 210. Mechanics of Solids I. 3 Credit Hours.
Vectors, force systems, equilibrium, analysis of frames, machines, trusses for internal forces, friction, centroids, moment of inertia, and shear and bending moment diagrams are discussed.
Prerequisite: Engineering Program - PHY 205 And MTH 151 Or 161 Or 171.
Non-Engineering Program - PHY 101 Or 103 Or 160 Or 201 And MTH 130 Or 141 Or 161 Or 171.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 211. Mechanics of Solids II. 3 Credit Hours.
Fundamental material behavior including stresses, strains, and deformations associated with axial, bearing, flexural, shear, thermal, and torsional loading. Composite beams, elastic buckling of columns, combined loading, Mohr's Circle, and statically indeterminate analysis of axial members is also included.
Prerequisite: CAE 210.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 212. Structural Laboratory. 1 Credit Hour.
Laboratory techniques, tests for tension, compression, shear, bending, and torsion are discussed. Models, similitudes, buckling of columns, and review of current research are also included. Laboratory 3 hours.
Pre or Corequisite: CAE 211 and IEN 311.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 213. Behavior of Structural Systems I. 3 Credit Hours.
The course begins with a review of basic structural principles. From this basis, analysis and design of simple axial loaded structural systems and members is covered. Through the use of project based learning the students are introduced to the principles of statics using both graphical and calculated methods. Concurrent and non-concurrent systems are defined and analysis of concurrent systems is covered in this course. Structural systems based on concurrent forces are covered including cable suspension structures, concrete shells, trusses, fan like structures and membrane structures. The requirements of building codes are included in the lectures. The class concludes with discussion of structural materials and failure modes accompanied with a visit to the Civil/Architectural Engineering Laboratory.
Prerequisite: ARC 231.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 240. Environmental Pollution. 3 Credit Hours.
Exploration of contemporary environmental issues. Introduction to engineering approaches for protecting and cleaning up the environment, techniques for assessing the impact of human activity on the environment, strategies for pollution control and implementation of environmental mitigation measures.
Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 310. Structural Analysis. 3 Credit Hours.
Analysis of statically determinate and indeterminate structures for internal forces, external reactions, displacements, including influence lines.
Prerequisite: CAE 211.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CAE 313. Behavior of Structural Systems II. 3 Credit Hours.
Upon completion the students will understand the application of fundamental methods of structural frame systems and their place in architectural design. The bending action of beams, including shear and moment diagrams and shear and bending stress calculations are covered. Structural material design for steel, concrete, wood and masonry are covered as separate topics. They will also understand the integration of basic elements into structural systems that resist both gravity and lateral loads. The course allows students to develop foundation and framing systems.
Prerequisite: CAE 213.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 320. Concrete Structures. 3 Credit Hours.
Course topics include design of concrete beams, columns, structural systems one-way slabs, and isolated footings by ultimate design methods.
Pre or Corequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 321. Steel Structures. 3 Credit Hours.
Design of tension, compression, flexural members, and beam columns using load and resistance factor design are discussed. Introduction to design and detailing of welded and bolted connections is also included.
Pre or Corequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 330. Fluid Mechanics. 3 Credit Hours.
Properties of fluids, gas systems, pressure distribution in static fluids, and hydrostatical forces on plane and curved surfaces are discussed. Kinematics and dynamics of fluid motion, dimensional analysis and similitude, flow in closed conduits, pumps, design of water distribution systems, and an introduction to flow in open channels is also included.
Prerequisite: CAE 211. And PHY 206.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 340. Introduction to Environmental Engineering. 3 Credit Hours.
Environmental mass and energy balances, introduction to environmental chemistry, air pollution, water pollution, sustainable solid waste management, risk assessment, and global atmospheric change are discussed.
Prerequisite: MTH 162, and CHM 111 or CHM 151.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 345. Environmental Laboratory and Analysis. 3 Credit Hours.
Laboratory-based course focusing on the analysis of environmental samples including water, wastewater, air, and solids. Basic analytical techniques and quality control are also included as well as an introduction to advanced analytical measurements.
Prerequisite: CHM 112 And CAE 340.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 350. Transportation Engineering I. 3 Credit Hours.
Prerequisite: MTH 211 and Requisite: Junior Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 361. Building Information Modeling I. 3 Credit Hours.
The course prepares students to utilize AutoCAD and Building Information Modeling (BIM) in a coordinated, integrated and consistent approach for the Architecture, Engineering and Construction (AEC) Industry. The basics of AutoCAD drafting and usage are covered in the first five weeks of the course. The remaining time is dedicated to high-quality 4 dimensional BIM modeling, including 3D modeling of buildings and building components, embedded cost-estimating and scheduling for the construction process. Basics of REVIT Structure and MEP are also covered.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

CAE 370. Geotechnical Engineering I. 3 Credit Hours.
Soil composition and classification, excavation, grading, fill compaction, stress distribution in soils, one-dimensional flow of water through soil, laboratory, and field permeability, effective stress concept, calculation of consolidation, field settlement, bearing capacity, and design and analysis of shallow foundations are discussed.
Prerequisite: CAE 211. And Corequisite: CAE 371.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 381. Building Mechanical Systems I: Hvac Fundamentals. 3 Credit Hours.
Prerequisite: MAE 303 and Corequisite: CAE 330.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CAE 395. Undergraduate Research. 1-3 Credit Hours.
Designed for the undergraduate student who wishes to engage in research. Not for graduate credit or for baccalaureate graduation credit. Subject and credit to be arranged with the instructor.
Components: THI.
Grading: GRD.
Typically Offered: Spring.

CAE 399. Internship. 1 Credit Hour.
Practical application of classroom theory through employment with firms offering positions consistent with the student’s field of study. Courses may be repeated.
Components: IND.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAE 400. Preparation for FE Exam. 1 Credit Hour.
Review of material in preparation for the Fundamentals of Engineering (FE) examination. For credit only.
Requisite: Senior Status.
Components: LEC.
Grading: CNC.
Typically Offered: Offered by Announcement Only.

CAE 402. Professional Engineering Practice. 3 Credit Hours.
Principles of engineering economics and economic evaluation of engineering projects. A discussion of professional practice issues including the philosophy and methodology of engineering, professional licensure and ethics. Discussion of the business aspects of engineering including business organization, management, contracts and legal issues. Engineering leadership in the formulation of public policy.
Requisite: Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 403. Senior Design Project I - Engineering Design. 3 Credit Hours.
A two semester comprehensive design project applying the knowledge acquired during earlier coursework and implementing the pedagogy of life-long learning. Team projects incorporate interdisciplinary design skills, engineering standards and realistic constraints. The faculty coordinator working with several practicing design professionals provide consultation, guidance, and recommendations on aspects of preparing the construction documents required for project procurement and construction. Using the designs produced in CAE 403 the course develops the drawings, specifications and calculations required for a comprehensive construction documents package.
Prerequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 421. Timber Structural Systems. 3 Credit Hours.
Engineering properties of timber, design of tension, compression, and flexural members are covered. The design and detail of connections and hardware, and the design of timber systems and heavy timber construction is also included. Prerequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 440. Water Quality Control Systems. 3 Credit Hours.
Physical, Chemical and Biological Transformations; Water and Wastewater Treatment Processes; Water Treatment Plant Design; Wastewater Treatment Plant Design; Case Studies
Prerequisite: CAE 330. And CAE 340.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 450. Transportation Engineering II. 3 Credit Hours.
Transportation system planning and design. Advanced geometric design for highway and railway/transit. Human, vehicle, and environmental factors affecting the design, operation, and safety of transportation systems. Planning and design of both landside/airside aspects of airport facilities. Water port and multi-modal facilities design.
Prerequisite: CAE 350.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CAE 460. Construction Management. 3 Credit Hours.
An introduction to the management of construction projects including legal considerations as well as the techniques of management science applied to construction. The course includes engineering methods of cost and time estimating, and exercises in applications of engineering economics, network planning techniques, including CPM and PERT are introduced. The management principles of time and cost control are also explored. Computer application of project management tools are included.
Prerequisite: Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 470. Foundations and Earth Retaining Systems. 3 Credit Hours.
Natural soil deposits and subsoil exploration. Geotechnical analysis and design of shallow and deep foundations. Theories of lateral earth pressure. Design and analysis of earth-filled retaining systems.
Prerequisite: CAE 330. And CAE 370. And CAE 371.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 480. Plumbing and Life Safety for Buildings. 3 Credit Hours.
Design of building environmental systems including domestic cold and hot water systems, sanitary storm and special waste systems, fuel gas systems, building life safety systems and architectural acoustics.
Prerequisite: CAE 330.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 481. Building Mechanical Systems II: HVAC Systems. 3 Credit Hours.
Applies engineering principles to the design of heating, ventilating, and air conditioning (HVAC) systems for buildings. Covers air distribution systems, air handling units, coils and heat exchangers, water distribution systems, and primary systems.
Prerequisite: CAE 381. And CAE 330.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 510. Structural Mechanics. 3 Credit Hours.
Analysis of stress and deformation of solids. Application to systems in the elastic and inelastic range. Topics include beams of special geometry and support, stress concentrations, stresses in elastic foundations, torsion, energy methods, failure theories, and brittle fracture.
Prerequisite: CAE 211. And CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 511. Advanced Structural Analysis. 3 Credit Hours.
General methods of indeterminate analysis. Elements of energy method in indeterminate analysis of axial, flexural torsional, and composite members. Basic flexural and stiffness methods and matrix development are also included.
Prerequisite: CAE 211. And CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 520. Advanced Design of Concrete Structures. 3 Credit Hours.
Analysis and design of reinforced concrete elements in the context of the current ACI Building Code; beams subjected to combined loading, flat plates, flat slabs, slender columns, connections, and concrete building systems are included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 521. Advanced Design of Steel Structures. 3 Credit Hours.
Steel framing systems, design of members and connections of braced and rigid frames, design for torsion, and design of steel-concrete composite members are discussed.
Prerequisite: CAE 310. And CAE 321.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 522. Design of Prestressed Concrete Structures. 3 Credit Hours.
Materials and systems for prestressing, design of prestressed concrete members for flexure and shear, camber, deflection, and crack control are discussed. Design of continuous beams, compression members, two-way concrete floor systems, and the loss of prestress are also included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 523. Design of Masonry Structures. 3 Credit Hours.
Masonry construction. Design of flexural and compression members, bearing walls, shear walls, diaphragms, and connections of masonry structures. Arches, vaults, and buttresses are also included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 525. Timber Structural Systems. 3 Credit Hours.
Engineering properties of timber, design of tension, compression, and flexural members are covered. The design and detail of connections and hardware, and the design of timber systems and heavy timber construction is also included.
Prerequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 530. Water Resources Engineering II. 3 Credit Hours.
Runoff models, routing models, water-quality models, and evapotranspiration models. Design of storm water management systems. Principles of groundwater flow. Design of wells and wellfields for public water supply. Legal regulatory, and economic components of water-resources management systems. Comprehensive design project.
Prerequisite: CAE 430.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
CAE 531. Surface-Water Hydrology. 3 Credit Hours.
Rainwater characteristics, abstraction processes, surface-runoff, routing, and
water-quality models. Design of stormwater-management systems,
evapotranspiration, and regional water-management is also included as
well as case studies.
Prerequisite: CAE 430.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 532. Ground-Water Hydrology. 3 Credit Hours.
Governing equations of ground-water flow. Numerical modeling of
ground-water flow. Analytic and semi-analytic solutions to the flow
equations. Principle of superposition and method of images. Saltwater
intrusion. Ground-water flow in the unsaturated zone. Engineered
systems. Introduction to contaminant fate and transport in ground water.
Prerequisite: CAE 430.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 533. Water-Quality Control in Natural Systems. 3 Credit Hours.
Water quality regulations, fate and transport processes, water-quality
control in rivers, lakes, wetlands, oceans, and ground water.
Pre or Corequisite: CAE 430. And CAE 440.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 540. Environmental Chemistry. 3 Credit Hours.
Kinetics, equilibrium, acid-base, oxidation-reduction, and reaction
chemistry applied to water and wastewater engineering.
Prerequisite: CHM 112.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 541. Engineering Systems for Disease Control and Bioremediation. 3
Credit Hours.
Classification of microorganisms. Microbial agents of infectious
diseases and modes of disease transmission. Control of pathogens
through water and waste treatment, food protection, and insect control.
Microbial ecology and bioremediation systems. Laboratory exercises in
microbiology.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 542. Solid and Hazardous Waste Engineering. 3 Credit Hours.
Solid-waste characteristics, recycling, incineration, hazardous waste
characteristics, prevention, and physical and chemical treatment are
covered. Design projects are also included.
Prerequisite: CAE 340.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 543. Air Pollution Control Engineering. 3 Credit Hours.
Fundamentals of air pollution and air quality; properties and control of
particulates, volatile organic compounds, carbon monoxide, sulfur oxides,
and nitrogen oxides; motor vehicle emissions; health and aesthetic
effects (acid rain, visibility), laws and regulations, meteorology and
pollutant transport in the atmosphere; indoor air pollution.
Prerequisite: MAE 303. And CAE 330. Or MAE 309.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 545. Sustainable Construction. 3 Credit Hours.
Drivers and foundations of sustainable construction. Principles of
sustainable construction: integrated planning and design, life-cycle
view of projects, resource selection and optimization, protection of the
natural environment, toxics and pollutants elimination, durability and
quality. Green building assessment initiatives, green building policies, and
code impacts. Evaluation of the environmental impacts of construction
operations. Innovative design and construction practices. Economic
viability. Subtropical and coastal issue and opportunities. Case studies.
Pre or Corequisite: CAE 403. Or CAE 404.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 560. Computer Aided Architectural Engineering Design. 3 Credit
Hours.
The course prepares students to utilize Building Information Modeling
(BIM) and Building Performance Analysis (BPA) in a coordinated,
integrated and consistent approach in the Architecture, Engineering and
Construction (AEC) Industry. The basics of high-quality 5 dimensional
BIM modeling are covering including 3D modeling of buildings and
building components, imbedded cost-estimating and the phasing the
construction process. Basics of REVIT Structure and MEP are also
covered. BPAC components covered include climate analysis, daylighting,
wind and airflow analysis, solar radiation analysis and whole building
energy analysis. Upon completion student will receive a PBA certification
from Autodesk.
Requisite: Junior Status or Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 570. Advanced Foundation Engineering. 3 Credit Hours.
Rock and soil formation. Subsurface exploration. Advanced design
and analysis of shallow and deep foundations. Design and analysis of
cofferdams.
Prerequisite: CAE 470.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 581. Energy-Efficient Building Design. 3 Credit Hours.
Concepts and methods of energy-efficient building design and
sustainable performance. Topics cover building envelope, mechanical,
power and lighting, and service water heating systems. Computer-
based energy simulation methods and building energy standards are
emphasized.
Prerequisite: CAE 481.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CAE 582. Building Energy Modeling and Simulation. 3 Credit Hours.
Modeling and analysis of building energy performance using state-of-the-art whole building energy simulation programs. Topics include dynamic simulation of heating and cooling loads in buildings, modeling of building equipment and control system, and integrated simulation of equipment and building loads.
Pre-Co-requisite: CAE 581.
Components: LEC.
grading: GRD.
Typically Offered: Spring.

CAE 590. Special Topics. 1-3 Credit Hours.
Sub-titles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title 'Special Topics.'
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 595. Special Problems. 1-3 Credit Hours.
Project course introducing methods of research through an individual investigation of current problems. Offered by special arrangement only.
Components: IND.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 604. Master's Design Project. 3 Credit Hours.
Course is taken in place of CAE 404 for students accepted to the Bachelor to Master (4+1) degree program in the CAE Department. A project elaborating on a topic from the students Senior Design course is the basis of the course. See CAE 403 and CAE 404 for the description of the Senior Design Project.
Prerequisite: CAE 403.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 610. Structural Mechanics. 3 Credit Hours.
Analysis of stress and deformation of solids. Application to systems in the elastic and inelastic range. Topics include beams of special geometry and support, stress concentrations, stresses in elastic foundations, torsion, energy methods, failure theories, and brittle fracture.
Prerequisite: CAE 211. And CAE 310.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 611. Advanced Structural Analysis. 3 Credit Hours.
General methods of indeterminate analysis. Elements of energy method in indeterminate analysis of axial, flexural torsional, and composite members. Basic flexural and stiffness methods and matrix development are also included.
Prerequisite: CAE 211. And CAE 310.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 620. Advanced Design of Concrete Structures. 3 Credit Hours.
Analysis and design of reinforced concrete elements in the context of the current ACI Building Code; beams subjected to combined loading, flat plates, flat slabs, slender columns, connections, and concrete building systems are included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
grading: GRD.
Typically Offered: Spring.

CAE 621. Advanced Design of Steel Structures. 3 Credit Hours.
Steel framing systems, design of members and connections of braced and rigid frames, design for torsion, and design of steel-concrete composite members are discussed.
Prerequisite: CAE 310. And CAE 321.
Components: LEC.
grading: GRD.
Typically Offered: Fall.

CAE 622. Design of Prestressed Concrete Structures. 3 Credit Hours.
Materials and systems for prestressing, design of prestressed concrete members for flexure and shear, camber, deflection, and crack control are discussed. Design of continuous beams, compression members, two-way concrete floor systems, and the loss of prestress are also included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 623. Design of Masonry Structures. 3 Credit Hours.
Masonry construction. Design of flexural and compression members, bearing walls, shear walls, diaphragms, and connections of masonry structures. Arches, vaults, and buttresses are also included.
Prerequisite: CAE 310. And CAE 320.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 625. Timber Structural Systems. 3 Credit Hours.
Engineering properties of timber, design of tension, compression, and flexural members are covered. The design and detail of connections and hardware, and the design of timber systems and heavy timber construction is also included.
Prerequisite: CAE 310.
Components: LEC.
grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 630. Water Resources Engineering II. 3 Credit Hours.
Runoff models, routing models, water-quality models, and evapotranspiration models. Design of storm water management systems. Principles of groundwater flow. Design of wells and wellfields for public water supply. Legal regulatory, and economic components of water-resources management systems. Comprehensive design project.
Prerequisite: CAE 430.
Components: LEC.
grading: GRD.
Typically Offered: Fall.
CAE 631. Surface-Water Hydrology. 3 Credit Hours.
Rainwater characteristics, abstraction processes, surface-runoff, routing, and water-quality models. Design of stormwater-management systems, evapotranspiration, and regional water-management is also included as well as case studies.
Prerequisite: CAE 430.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 632. Ground-Water Hydrology. 3 Credit Hours.
Prerequisite: CAE 430.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 633. Water-Quality Control in Natural Systems. 3 Credit Hours.
Water quality regulations, fate and transport processes, water-quality control in rivers, lakes, wetlands, oceans, and ground water.
Pre or Corequisite: CAE 430. And CAE 440.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 640. Environmental Chemistry. 3 Credit Hours.
Kinetics, equilibrium, acid-base, oxidation-reduction, and reaction chemistry applied to water and wastewater engineering.
Prerequisite: CHM 112.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 641. Engineering Systems for Disease Control and Bioremediation. 3 Credit Hours.
Classification of microorganisms. Microbial agents of infectious diseases and modes of disease transmission. Control of pathogens through water and waste treatment, food protection, and insect control. Microbial ecology and bioremediation systems. Laboratory exercises in microbiology.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 642. Solid and Hazardous Waste Engineering. 3 Credit Hours.
Solid-waste characteristics, recycling, incineration, hazardous waste characteristics, prevention, and physical and chemical treatment are covered. Design projects are also included.
Prerequisite: CAE 340.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 643. Air Pollution Control Engineering. 3 Credit Hours.
Fundamentals of air pollution and air quality; properties and control of particulates, volatile organic compounds, carbon monoxide, sulfur oxides, and nitrogen oxides; motor vehicle emissions; health and aesthetic effects (acid rain, visibility), laws and regulations, meteorology and pollutant transport in the atmosphere; indoor air pollution.
Prerequisite: MAE 303. And CAE 330. Or MAE 309.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 660. Sustainable Construction. 3 Credit Hours.
Pre or Corequisite: CAE 403. Or CAE 404.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 661. Computer Aided Architecture Engineering Design. 3 Credit Hours.
The course prepares students to utilize Building Information Modeling (BIM) and Building Performance Analysis (BPA) in a coordinated, integrated and consistent approach in the Architecture, Engineering and Construction (AEC) Industry. The basics of high-quality 5 dimensional BIM modeling are covering including 3D modeling of buildings and building components, embedded cost-estimating and the phasing the construction process. Basics of REVIT Structure and MEP are also covered. BPAC components covered include climate analysis, daylighting, wind and airflow analysis, solar radiation analysis and whole building energy analysis. Upon completion student can receive a PBA certification from Autodesk.
Requisite: Senior Status.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 665. Facilities Operation and Management. 1-3 Credit Hours.
Facilities management courses based on core concepts of International Facility Management Association (IFMA) involving management of corporate needs, health, safety, security, operation and maintenance of physical facilities. This course will focus on development and understanding of sustainable facilities management responsibilities involving the building envelope, preventative maintenance, system operational efficiencies, data analytics and intelligent building systems, building security, maintenance staffing, infrastructure utility requirements as well as holistically integrated assets, people, corporate strategic planning and technology. Additionally development of skills to engage in facilities management functions which include EPA environmental / waste disposal, fleet management and statuary regulations as well as emergency management planning will be emphasized.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
CAE 669. Construction Management Seminars. 1 Credit Hour.
Seminar series on construction management required for all students in the construction Management MS program. The faculty coordinator will set up a series of weekly Seminars on topics such as risk management, construction safety, environmental conservation and policy, conflict resolution, ethics, quality control and construction permitting. Speakers will include leading researchers and specialists from the construction industry. Grades will be based on reports submitted by the students on the seminar topics.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 670. Advanced Foundation Engineering. 3 Credit Hours.
Prerequisite: CAE 470.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 681. Energy-Efficient Building Design. 3 Credit Hours.
Concepts and methods of energy-efficient and environmentally-friendly building design. Topics include energy and sustainable design strategies, climate, passive and active solar design, passive cooling systems, day lighting, and computer simulation of energy flows in buildings. A quantitative understanding of energy fundamentals, examples from practice, and design exercises using computer simulation programs are emphasized.
Prerequisite: CAE 481.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 682. Building Energy Modeling and Simulation. 3 Credit Hours.
Modeling and analysis of building energy performance using state-of-art whole building energy simulation programs. Topics include dynamic simulation of heating and cooling loads in buildings, modeling of building equipment and control system, and integrated simulation of equipment and building loads.
Pre-Co-requisite: CAE 581.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CAE 690. Special Topics. 1-3 Credit Hours.
Sub-titles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title 'Special Topics.'
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 691. Special Topics in Construction Management. 1-3 Credit Hours.
This interdisciplinary project based course is focused on addressing site specific, regionally relevant construction problems. The topics may include environmentally adaptable solutions to most geographic locations worldwide and built to incorporate a variety of "sub-systems" such as renewable energy power sources, a net-zero water recycling system, integrated food production as well as use of innovative material and construction method options. Through research and innovation approaches, this course will inspire collegiate students to become the next generation of building science professionals who are prepared to meet the growing imperative for environmentally responsive and highly resilient building designs. Specifically, this course will help provide future architects, engineers, construction managers, and entrepreneurs with the skills and experience needed to fully integrate sustainability and building science into ultra-efficient buildings that are cost-effective and meet the design constraints of the mainstream building industry.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 695. Special Problems. 1-3 Credit Hours.
Project course introducing methods of research through an individual investigation of current problems. Offered by special arrangement only.
Components: IND.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 702. Finite Element Methods. 3 Credit Hours.
Variational principles and their application to finite element methods. Applications to: plane stress and plane strain, three-dimensional stress analysis, bending of plates, and axi-symmetric shells. Lecture, 3 hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 711. Theory of Elasticity. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 712. Structural Reliability. 3 Credit Hours.
Basic theory and tools of structural reliability including theory of probability, statistical assessments as well as inference and model building. Topics include: review probability theory; descriptive statistics; uncertainty modeling; estimation and model building; structural reliability theory; first and second order reliability methods; Level I methods/code calibration; load combinations; Bayesian decision analysis and reliability updating.
Prerequisite: IEN 311.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CAE 714. Structural Dynamics. 3 Credit Hours.
Elementary structural dynamic analysis covering single degree-of-freedom and multiple degree-of-freedom systems. Topics include: free, damped and forced vibrations; transmissibility and ground motion; arbitrary, step and pulse excitation; numerical evaluation; rigid and flexible bodies; natural frequencies and modes; tuned-mass dampers; responses and spectrum; practical indications as well as an introduction to wind and earthquake engineering.
Prerequisite: CAE 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 716. Fracture Mechanics. 3 Credit Hours.
Theory of fracture mechanics for linear elastic and nonlinear material behavior; energy release rate, stress intensity factor, and J-integral with practical application to brittle fracture and fatigue. Case studies involving civil infrastructure such as bridges, buildings, pipelines and ships. Metallurgical aspects of fatigue and fracture.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 730. Environmental Hydrology. 3 Credit Hours.
Principles of ecohydrology, agricultural hydrology, impacts of climate change, fundamentals of remote sensing and geographic information systems for hydrologic applications, statistical applications in hydrology.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 731. Wastewater Treatment and System Design. 3 Credit Hours.
Characterization of domestic wastewater and flows. Sources of wastewater and health considerations. Unit processes for treatment of wastewater including screening, sedimentation, filtration, flocculation, flotation, activated sludge, disinfection, sludge digestion, and sludge disposal.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 732. Water Treatment and System Design. 3 Credit Hours.
Drinking water treatment standards, philosophy of setting standards, public health aspects of organic and inorganic contaminants, basis for design of treatment facilities, design of unit processes for aeration, sedimentation, coagulation, filtration, softening, disinfection, and oxidation are covered. Theory of membrane processes, ion exchange, and water treatment plant residuals are also included.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 735. Water and Wastewater Engineering: Treatment and Reuse. 3 Credit Hours.
Physical treatment processes; Chemical unit processes; Advanced biological treatment processes; Sludge treatment and disposal; Industrial water supply and wastewater treatment; Membrane systems for wastewater treatment and case studies; Advanced wastewater treatment and reuse; Environmental nanotechnology.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 733. Risk Analysis. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 744. Risk Management and Resilience. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 762. Construction Project Management. 3 Credit Hours.
This course is designed to provide a practical background and working knowledge of how Construction Projects are developed and managed through professional Program Management. Elements consisting of Program Organization, Program and Project conception, Project planning, Scoping, effective project communication strategies, budgeting, scheduling, controls, resource and cost management and behaviors of the Program Manager to lead. The Project Management Body of Knowledge (PM BoK) guide relating to scope, time, cost, quality and other knowledge areas for planning and control of projects throughout their entire lifecycle. This course will also explore various applications that use construction project management software such as Primavera, eBuilder, etc. as interactive platform tools. Key leadership skills and managerial styles needed to effectively build, manage, and lead a successful project team.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 765. Construction Accounting and Finance. 3 Credit Hours.
This course will investigate the theory and practice of financing large projects. Insights into the logic of capital structure decisions – the mix of debt and equity, the choices among debt alternatives, private/public partnerships - will require an understanding of financial theory and an investigation of the relevant literature will be conducted. Accounting techniques will be reviewed that will provide students with a toolset for performing financial analyses in the construction industry. Finally, case projects will be evaluated by the class and decisions made regarding project viability using the tools presented during the course.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CAE 769. Construction Management Capstone Course. 3 Credit Hours.
The Construction Management Capstone Project is taken during the final semester of study in the MS in construction management program. It is designed to reinforce the knowledge and skills acquired during the program of study via a simulated construction project. The faculty coordinator will pair student teams with industry partners who will guide them through the steps in planning, coordination and execution of a building project. The course will provide students experience in the use of various project management tools in a virtual setting. Site visits and interaction with the project members will also provide experience in solving complex and strategic issues that often arise on actual construction projects. A comprehensive project report will be due at the end of semester which will be graded by the faculty coordinator in consultation with the industry partners.

Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CAE 780. Indoor Environmental Modeling. 3 Credit Hours.
Prediction of indoor environment using computational fluid dynamics techniques. Advanced topics in thermal comfort and indoor air quality. Basic concepts of turbulence modeling and numerical methods for natural, forced, and mixed convection and jet flows indoors. Simulation of air velocity, temperature, and contaminant concentrations in buildings. Comparison of the simulated results with measured data.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 781. Advanced Building Energy Modeling and Simulation. 3 Credit Hours.
Equation-based object-oriented building energy modeling. Coupling of different building simulation tools. Applications in rapid prototyping of new building systems, model-based design and evaluation of building control, and building performance evaluation.
Prerequisite: CAE 582. Or CAE 682.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CAE 790. Advanced Topics. 1-3 Credit Hours.
Subject matter offerings based upon student demand and availability of faculty. Subtitles describing the topics to be offered will be shown in parentheses in the printed class schedule, following the title 'Advanced Topics'.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 791. Advanced Topics in Construction Management. 1-3 Credit Hours.
This interdisciplinary project based course is focused on addressing complex site specific, regionally relevant construction problems. The course may follow CAE 691 taken during an earlier semester or expand on topic(s) investigated by a different student enrolled in CAE 691 during the same semester. The topics may include environmentally adaptable solutions to most geographic locations worldwide and built to incorporate a variety of "sub-systems" such as renewable energy power sources, a net-zero water recycling system, integrated food production as well as use of innovative material and construction method options. Through research and innovation approaches, this course will inspire collegiate students to become the next generation of building science professionals who are prepared to meet the growing imperative for environmentally responsive and highly resilient building designs. Specifically, this course will help provide future architects, engineers, construction managers, and entrepreneurs with the skills and experience needed to fully integrate sustainability and building science into ultra-efficient buildings that are cost-effective and meet the design constraints of the mainstream building industry.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 795. Special Problems. 1-3 Credit Hours.
Research and/or design projects. Individual investigation of current problems. Offered by special arrangement only.

Components: IND.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CAE 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her Master's thesis enrolls for credit as determined by his/her advisor. Credit is not awarded until the thesis has been accepted.

Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAE 820. Research in Residence. 1-6 Credit Hours.
Used to establish research in residence for the thesis for the Master’s degree after the student has enrolled for the permissible cumulative total in CAE 810. Credit not granted. May be regarded as full-time residence.

Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAE 825. Continuous Registration--Master's Study. 1 Credit Hour.
To establish residence for non-thesis master's students who are preparing for major examinations. Credit not granted. Regarded as full-time residence.

Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CAE 830. Pre-Candidacy Doctoral Dissertation. 1-12 Credit Hours.
Doctoral dissertation credits taken prior to the Ph.D. student's candidacy. The student will enroll for credit as determined by his/her advisor. Not more than 12 credit hours of CAE 830 may be taken in a regular semester, nor more than 6 credit hours in a summer session.

Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
CLA 210. The Greek and Latin Roots of English. 3 Credit Hours.
Equips students with the tools needed to analyze and understand the meanings of English words with Ancient Greek and Latin roots. Special attention will be paid to legal and medical terminology.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CLA 211. Medical Terminology. 3 Credit Hours.
Medical Terminology is an introduction to the international vocabulary of medical science derived from Ancient Greek and Latin. We will approach this topic linguistically, beginning with the roots of ancient words and examining the rules and techniques by which Greek and Latin elements (prefixes, suffixes, and stems) are constructed into medical and scientific vocabularies. We will also look at some of the intellectual contributions of Graeco-Roman civilization to modern science and medicine.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CLA 219. Writing on Greek and Roman Mythology. 3 Credit Hours.
A companion writing course for students enrolled in CLA 220, Greek and Roman Mythology.
Requisite: Not Allow Enrollment in CLA 219 if already Enrolled/Took CLA 220.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 220. Greek and Roman Mythology. 3 Credit Hours.
The major political, cultural, and social themes that appear in Greek and Roman mythology, examining literary and material evidence.
Requisite: Not Allow Enrollment in CLA 220 if already Enrolled/Took CLA 219.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 221. Sports and Society in the Ancient World. 3 Credit Hours.
The role of sports in ancient Greek and Roman culture. Topics covered include: Mycenaean bull-Jumping; athletic events in Homer; the Olympic games; chariot racing and gladiatorial combat at Rome; and the connection between public athletics and religion. Students learn to interpret literary and iconographic evidence, and study architectural remains such as the stadium at Olympia, the Circus Maximus, and the Colosseum.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 222. Sexuality and Gender in the Ancient World. 3 Credit Hours.
Basic questions of sexuality and gender in ancient Greece and Rome: What does it mean to be male or female? What can we discover about ourselves from the way(s) we have sex? How are all these things related to life, love, power?
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 224. The Heroic Journey. 3 Credit Hours.
The figure of the Hero On a Journey has long captivated the minds of story-tellers and audiences. This motif, known as 'The Monomyth,' speaks the profoundest hopes and fears of humankind. This course will examine the Monomyth as it occurs particularly in the classical tradition from Gilgamesh to Tolkien.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CLA 225. Magic and the Occult in Antiquity. 3 Credit Hours.
A broad sweep of evidence for magic and the occult in the ancient Mediterranean world. The focus is Graeco-Roman Egypt, renowned in antiquity for occult arts such as divination, daemonology, astrology, and alchemy. The primary sources analyzed are diverse, and include magical formulae, manuals, recipes, curses, philosophical writings, and literary accounts, in particular those by Lucian and Apuleius, purporting to provide true tales of magic.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 226. Greek and Roman Art. 3 Credit Hours.
The course is an introduction to ancient Greek and Roman art within its socio-political and religious context. It includes a survey of stylistic movements, elements of architecture, and a brief historical background for each period outlined in the syllabus.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 231. Sciences in Ancient Greece and Rome. 3 Credit Hours.
The beginnings of scientific investigation in ancient Greece and its development and codification under the Roman Empire.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 232. Ancient Greek and Roman Law. 3 Credit Hours.
This course examines selected trials from ancient Greece and Rome both as a way to understand these legal systems in themselves and as a way to explore the cultures, values, and biases that shaped them.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 233. Ancient Medicine. 3 Credit Hours.
Provides a historical survey of evidence, practices, and ideas from the world of ancient medicine.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 241. Daily Life in Ancient Greece. 3 Credit Hours.
This course introduces key concepts, events, and personalities of Greek culture.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 242. Daily Life in Ancient Rome. 3 Credit Hours.
Introduces key concepts, events, and personalities of ancient Roman culture.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 243. The Art of Government in Greece and Rome. 3 Credit Hours.
Introduces key concepts and models of Greek and Roman Statecraft, including the polis democracy, the Republic and the Empire.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 244. Ancient Rhetorical Theory. 3 Credit Hours.
The historical development of, and key topics in, theories of persuasive communication developed by the ancient Greeks and Romans.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 271. Ancient Philosophy. 3 Credit Hours.
What is knowledge, and how can it be known? Why be moral? What is justice? What is the good life? If we really have free will, can there be such a thing as destiny? In what does friendship consist? What exactly is love? What is the meaning of death? These and other questions were addressed powerfully by the ancient Greeks and Romans. This course will explore such crucial philosophical themes, along with the actual method(s) of inquiry that the ancients devised for examining them. Major figures such as Plato and Aristotle will be featured, along with fragments of the Presocratics and selections from other ancient philosophers.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 301. Ancient Greece. 3 Credit Hours.
Greek civilization from the Late Bronze Age to the end of Greek independence at the battle of Chaeronea in 338 B.C.E.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CLA 302. The Hellenistic Age. 3 Credit Hours.
Conquests of Alexander the Great and the spread of Greek culture in the Near East under Alexander's successors until the death of Cleopatra in 31 B.C.E.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CLA 303. The Roman Republic. 3 Credit Hours.
Roman civilization from the establishment of the Republic until the Battle of Actium in 31 B.C.E.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CLA 304. The Roman Empire. 3 Credit Hours.
Roman civilization from the reign of Augustus in 37 B.C.E. to the Fall of Rome in 476 C.E.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CLA 305. What is a Classic?. 3 Credit Hours.
An explanation of what it means to designate a work of art as 'a classic', in our own culture as well as in other times and places. In order to arrive at a more sophisticated understanding of the category, readings will be chosen from a variety of texts, selected from the world's treasury of acknowledged 'classics', beginning from the canon of ancient Greek and Roman literature that for many centuries has been the touchstone of Western civilization.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 310. Survey of Ancient Greek Literature and Culture. 3 Credit Hours.
A broad introduction (in English translation) to the literature of the Roman Republic and Empire. The Greek heritage behind Latin literature will be highlighted. Readings will be chosen from authors such as Catullus, Cicero, Vergil, Horace, Ovid, Petronius, Juvenal, Tacitus, and Suetonius, and from genres such as epic and lyric poetry, oratory, history and satire.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 311. Survey of Classical Latin Literature and Culture. 3 Credit Hours.
A broad introduction (in English translation) to the literature of the Roman Republic and Empire. The Greek heritage behind Latin literature will be highlighted. Readings will be chosen from authors such as Catullus, Cicero, Vergil, Horace, Ovid, Petronius, Juvenal, Tacitus, and Suetonius, and from genres such as epic and lyric poetry, oratory, history and satire.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 315. The Classical Epic Tradition. 3 Credit Hours.
The course treats the rise and development of the Western epic tradition from Homer, Lucretius, and Virgil in the classical world, through Dante in the Middle Ages, Milton in the Renaissance, and Wordsworth and Eliot in modernity.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 322. Monsters and Fantastical Creatures in Western Antiquity and Other Cultures. 3 Credit Hours.
An explanation of the notion of the 'monster' and the 'fantastic creature' in a range of literary and visual representations from classical antiquity (the Greek and Roman World) and other cultures from various time periods. Starting with Hesiod's 'Catalogue of Monsters' we examine the following questions: Whose mental projection is embodied in a given monster? Are there different categories of monsters? What does the monster represent? What fears does the monster crystallize?
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 323. The Ancient World on Screen. 3 Credit Hours.
How do we represent the ancient Greeks and Romans in modern media? What happens to the books the ancients wrote when these are turned into modern films, TV shows or video games?
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CLA 324. Classical Myth and Contemporary Art. 3 Credit Hours.
The use, adaptation, transformation, and re-figuring of Classical myth in contemporary art. The artwork will range from photographs to installations and videos. We will use theories drawn from both art criticism and literary criticism. Female artists and post-feminist theory will figure prominently as a way to bring a broader perspective to a scrutiny of the marked gender imbalance in Classical myth.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 325. The Vampire in Folklore, Fiction, and Film. 3 Credit Hours.
By pondering the role of vampires and other such monsters, in folklore, fiction, and film, this course attempts to ponder such fundamental questions as 'What does it mean to be human?' and 'What are the implications of death?' The tradition will be traced from its earliest antecedents in the ancient world to its latest manifestations in current fiction and screen media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 326. What Does it Mean to be Human. 3 Credit Hours.
Questions of Artificial Intelligence, the Singularity, Superintelligence, and Robotics capture our imaginations (and sometimes stir profound anxiety and fear). But are these technological developments merely phenomena of the 20th and 21st centuries? Or are the key issues entailed already adumbrated in the literatures and cultures of the ancient Greeks and Romans? This course explores the parameters of that most-fundamental question of the Humanities: What does it mean to be human? Is 'human' a discrete category with well-defined boundaries, or have fuzzy logic and the dizzying pace of technological percentage a human body must be organically/naturally produced (as opposed to mechanically/technologically engineered) in order to be considered human. The course will entail reading assignments from the Greek and Roman classics (in English translation); weekly screenings of movies (including television programs); and in-class discussion.
Components: SEM.
Grading: GRD.

CLA 327. Heroes Ancient and Modern. 3 Credit Hours.
'What is a hero?' Throughout time and across a variety of cultures, beginning with the ancient Greeks various types or categories of 'hero' are considered from these cultures, including the classical model of the aristocratic héroïs; the Monomyth Hero (most famously formulated by Joseph Campbell); Public & Private Heroes; the Tragic Hero; the Comic Hero; the Antihero; the so-called 'Dark Hero'; and the modern 'Superhero.' Key elements will include the relations between [a] the heroic and the divine, and [b] the notion of the hero and the concepts of social and civic leadership in the 21st century.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CLA 340. Greek Tragedy. 3 Credit Hours.
Readings in English of the tragedies of Aeschylus, Sophocles, and Euripides.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 341. Comedy in Ancient Athens and Rome. 3 Credit Hours.
The comic plays of the ancient Greeks and Romans in English translation. The focus is close reading and analysis of plays by Aristophanes, Menander, Plautus, and Terence, with a view to their socio-political, cultural, and historical milieu. The final weeks are devoted to reception of these works by Shakespeare and Molière.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 360. Women in Greek and Roman Antiquity. 3 Credit Hours.
The lives of women in ancient Greece and Rome. The historical panorama extends from the Mycenaean period ca. 1200 BC to the end of the Roman Empire in the West, 476 AD. The role and influence of Women as mothers and wives in control of the household will be examined in detail. Other themes such as love, death, marriage, divorce, legal and social status, foreign women, spinster, wise women such as Diotima and Aspasia, Women in the arts and women of power, these will be considered through a close study of historical and literary texts as well as material culture.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 370. Self and Other in the Ancient World. 3 Credit Hours.
The course examines Greek and Roman depictions of outsiders in a wide range of ancient texts and material sources.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CLA 372. Greek Religion. 3 Credit Hours.
Examines the religious thought and practice of the ancient Greek-speaking world from the Bronze Age to the first century CE. Major topics include ritual, sacrifice, prayer, chthonic and sky deities, oracles, and mystery-cults. Students will learn to interpret primary source material, such as the epic poems of the archaic period, the so-called Homeric Hymns, and objects of material culture.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CLA 373. Religions of Rome. 3 Credit Hours.
The religious practices of ancient Romans. Major topics include
the machinery or state cult, the importation of foreign divinities to
Rome, the deification of emperors, and Roman attitudes towards the
Christians. Students will learn to interpret primary source material, such
as the writings of Varro, Cicero, the historians, and St. Augustine, and
archeological evidence
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CLA 401. Special Topics in Classics. 3 Credit Hours.
This course will address a specific author, topic or text (appearing as a
subtitle). Required readings will be in English. Analogous to REL 404-409
courses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 402. Special Topics in Classics. 3 Credit Hours.
This course will address a specific author, topic or text (appearing as a
subtitle). Required readings will be in English. Analogous to REL 404-409
courses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 403. Special Topics in Classics. 3 Credit Hours.
This course will address a specific author, topic or text (appearing as a
subtitle). Required readings will be in English. Analogous to REL 404-409
courses.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 404. Special Projects in Classics. 3 Credit Hours.
This course will address a specific project in Classics (appearing as a
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 405. Special Projects in Classics. 3 Credit Hours.
This course will address a specific project in Classics (appearing as a
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 406. Special Projects in Classics. 3 Credit Hours.
This course will address a specific project in Classics (appearing as a
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 422. Aristophanes. 3 Credit Hours.
Readings from Aristophanes' plays in the original Ancient Greek.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CLA 491. Directed Reading in Classics. 1-3 Credit Hours.
Content to be determined by faculty member and registering student(s).
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 492. Directed Reading in Classics. 3 Credit Hours.
This course will address a specific author, topic or text (appearing as a
subtitle). Analogous to REL 401-403 courses and to (existing)CLA 491.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 493. Directed Reading in Classics. 3 Credit Hours.
This course will address a specific author, topic or text (appearing as a
subtitle). Analogous to REL 401-403 courses and to (existing) CLA 491.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 495. Senior Thesis I. 3 Credit Hours.
Part I of the project or thesis normally completed in the senior year.
Components: THE.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 496. Senior Thesis II. 3 Credit Hours.
Part II of the project or thesis normally completed in the senior year.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 505. Seminar in Ancient Studies. 3 Credit Hours.
Topics in Greek and Roman studies.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
CLA 605. Graduate Seminar in Ancient Studies. 3 Credit Hours.
A graduate-level seminar focused on various topics in Classical history,
literature and culture.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CLA 691. Direct Readings in Classical Studies for Graduate Students. 3
Credit Hours.
Graduate students will pursue supervised, directed readings on various
classical topics.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
Clinical and Translational Investigation (CTI)

CTI 602. Writing for Translational and Clinical Science. 2 Credit Hours.
This introductory core course will be taught by the Masters of Science in Clinical and Translational Investigation (MSCTI) Program Directors, as well as various guest lecturers. The focus of the course will be on developing grant and manuscript writing skills in the area of clinical and translational science across the translational science spectrum.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CTI 603. Research Ethics. 3 Credit Hours.
Course focuses on topics related to what is sometimes called the 'responsible conduct of research' (RCR). It covers the landscape of 'scientific integrity' - both the principles and day-to-day practicalities of research ethics. The course is inter-disciplinary in its approach. Readings and other materials used as part of the course draw on the examples from many academic fields, and are intended to have application to any academic or professional area of study in which research is conducted.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CTI 604. Advanced Independent Study. 1-3 Credit Hours.
Individual work on a special project and/or additional coursework under faculty guidance.
Components: IND.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CTI 605. Introduction to Team Science and Entrepreneurship. 2 Credit Hours.
This introductory core course will introduce students to fundamental topics in translational science related to team science and entrepreneurship. Through a series of lectures, participatory exercises, and guided discussions, students will learn practical strategies for engaging in team science and for developing a translational research project into an entrepreneurial endeavor.
Components: DIS.
Grading: GRD.
Typically Offered: Fall.

CTI 805. Capstone Project / Master's Thesis. 1-6 Credit Hours.
The Capstone Project is an opportunity for MSCTI students to apply the principles and practices of clinical and translational research, and is a vital component in the training of impactful clinical and translational investigators. Students will engage in research, produce publishable content, and advance their research careers.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Communication (COM)

COM 101. Mass Media Communication in Society. 3 Credit Hours.
A survey of the history, development, structure, and effects of mass communication media.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 250. Freedom of Expression and Communication Ethics. 3 Credit Hours.
An examination of the concept of freedom of expression, its philosophical roots, its application of contemporary issues in communication, and of the basics of moral philosophy (ethics) and moral reasoning.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 302. Structured Research and Practice at SoC Consultancy. 1-3 Credit Hours.
Students will engage in structured participation in programmatic research and applied practice through the SoC Consultancy.
Requisite: Sophomore or Higher and Min Cumulative GPA 2.5.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

COM 395. Honors Seminar in Communication. 3 Credit Hours.
An examination of central issues and topics in the field of Communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

COM 401. Honors Communication Colloquium. 3 Credit Hours.
An examination of central issues and topics in the field of Communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

COM 406. Special Topics in Communication. 3 Credit Hours.
Course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COM 499. Senior Honors Project/Thesis. 3 Credit Hours.
The focus is on completing the culminating thesis project, in consultation with the student's selected committee and thesis chair.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 601. Theories of Communication. 3 Credit Hours.
Comparison of theories dealing with the processes and effects of communication is discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COM 602. Methods of Communication Research. 3 Credit Hours.
A comprehensive survey of communication research methods. Qualitative and quantitative approaches will be explained and practiced.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COM 603. Qualitative Research Methodologies. 3 Credit Hours.
Research methods and theories for participant-observation, phenomenology, symbolic interactionism, ethnography, content analysis, and historical-critical interpretation.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
COM 604. Advanced Communication Research Methods and Statistics. 3 Credit Hours.
Provides an advanced examination of the problems and methods found in quantitative communication research.
Prerequisites: COM 601, COM 602.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
COM 605. Theories and Methods for Mass Communication Research. 3 Credit Hours.
This course will introduce you to the theoretical concepts and research methodologies that apply to work in, and study of, journalism and mass communication. The curriculum stresses critical thinking skills necessary to evaluate the credibility of research findings offered by various organizations, including government, business and academia.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
COM 606. Visual and Narrative Theories. 3 Credit Hours.
This course surveys theories of film, visual communication, design, game and interactive theory, critical analysis, cultural studies.
Prerequisite: COM 601 and Requisite: Doctoral Standing.
Components: SEM.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
COM 607. Survey of Media Production. 3 Credit Hours.
This course gives students an overview on how to produce compelling media stories. Students will learn key concepts and design principles used in modern media production. Students will develop a website and a short film using learned key concepts in creating and effective multimedia experience.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COM 608. Designing and Producing Messages. 3 Credit Hours.
Drawing on message design theories from areas such as persuasion and discourse studies and using creative and secondary research skills, students design and implement a production such as a public service announcement, short documentary, microsite, game prototype, or data visualization project.
Prerequisite: COM 601 and 602 and 607.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
COM 609. Special Topics in Communication. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
COM 610. Doctoral Colloquium. 1-3 Credit Hours.
This course will introduce students to the nature and scope of doctoral study. The topics of this course include different aspects of engaging productively with the doctoral program, such as developing a research program, publication, grant writing, and job search dynamics.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.
COM 612. Pedagogy. 3 Credit Hours.
This course focuses on the traditions as well as the recent advances in pedagogy, including its historical, theoretical and practical applications with the aim of preparing students to teach at the University level.
Requisite: Graduate Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COM 620. Structured Research and Practice in SoC Consultancy. 1-3 Credit Hours.
Students engage in programmatic research and applied practice through structured participation at the SoC Consultancy.
Requisite: Graduate and Min Cumulative 3.0 GPA.
Components: PRA.
Grading: GRD.
Typically Offered: Fall.
COM 672. Seminar in Persuasive Communication. 3 Credit Hours.
This course is designed to provide students with a basic understanding of the role of communication in the persuasion process. This will be achieved by exploring historical and contemporary theories of persuasion as well as examining research that has focused on persuasion.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COM 682. Directed Readings. 1-3 Credit Hours.
Students work independently with a professor, researching a topic in a selected area. Repeatable up to 6 credits.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
COM 695. Independent Research. 3 Credit Hours.
An in-depth, hands-on course in which students conduct a research project using the specified research method. May include experimental design, advanced qualitative methods, content analysis, or survey methods. Repeatable up to 6 credits.
Prerequisites: COM 602, COM 603.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
COM 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for credit, in most
departments not to exceed six, as determined by his/her advisor. Credit is
not awarded until the thesis has been accepted.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 820. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the thesis for the master's
degree after the student has enrolled for the permissible cumulative total
in COM 710 (usually six credits). Credit not granted. May be regarded as
full time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 825. Continuous Registration--Master's Study. 1 Credit Hour.
To establish residence for non-thesis master's students who are
preparing for major examinations. Credit not granted. Regarded as full
time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 830. Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credit
as determined by his/her advisor, but for not less than a total of 12 hours.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COM 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the Ph.D., after the student
has been enrolled for the permissible cumulative total in appropriate
doctoral research. Credit not granted. May be regarded as full-time
residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

Communication Studies (COS)

COS 112. Interpersonal Communication. 3 Credit Hours.
Overview of current theories of interpersonal communication.
Consideration is given to impression formation, relationship between
self-concept and others, function of language in social interaction, and
development and maintenance of relationships.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

COS 120. Exploring Human Communication. 3 Credit Hours.
Course content focuses on behavioral science research highlighting
verbal and nonverbal skills, knowledge, and abilities necessary for
effective communication in a broad range of contexts, including
romantic relationships, business interactions, political campaigns, health
promotion, and persuading and influencing people in general.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 210. Writing for Communication Studies. 3 Credit Hours.
Principles of writing, reviewing literature, and synthesizing research for
communication studies and the social sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 211. Public Speaking. 3 Credit Hours.
Introduction to effective audience communication including theory and
extensive practice in oral presentations.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 220. Communication Theory. 3 Credit Hours.
Survey of basic communication theories and models. Study of processes,
functions, levels, and general principles of human communication.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 212. Interview Skills. 3 Credit Hours.
Study of interview skills, listening techniques, voice and diction.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 304. Intercollegiate Debate Theory and Practice. 1 Credit Hour.
A course designed to teach students how to compete successfully in
intercollegiate debate, and to reinforce training through practice and
competition.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

COS 311. Advanced Oral Advocacy. 3 Credit Hours.
Advanced presentational speaking to persuade including theory and
extensive practice.
Prerequisite: COS 211.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 314. The Power of Dialogue. 3 Credit Hours.
Students learn how to engage in and lead constructive dialogue about
sensitive, emotional, and controversial issues in the public and private
spheres.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 316. Small Group Communication. 3 Credit Hours.
Techniques of discussion applied to goal-oriented, small group situations.
Consideration is given to research methods, leadership, and conflict
resolution. Theory is applied to active classroom participation.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COS 318. Nonverbal Communication. 3 Credit Hours.
Theory and application of selected areas of research in nonverbal communication is addressed. Discussion of environment, space, body movement, posture, eye contact, facial expression, vocal cues, and physical appearance is included.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 324. Health Communication. 3 Credit Hours.
This course is designed to provide a broad introduction to human communication in a health-care context. Emphasis will be on issues of social support, patient-health professional/caregiver interaction, organizational culture, planning health promotion campaigns, and cultural conceptions of health and illness.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 328. Sports As Communication. 3 Credit Hours.
This is a course which introduces students to the study of spectator and participation sports as communication and to communication within sports.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 330. Conflict Management. 3 Credit Hours.
This course provides an understanding of conflict dynamics and strategies for constructive conflict management.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 333. Business Communication. 3 Credit Hours.
Study and practice in the major forms of spoken and written communication in the context of businesses and other professional organizational settings. Requisite: Sophomore Standing or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

COS 336. Political Communication. 3 Credit Hours.
A review of the history, strategies, theories and trends in political campaign communication in the United States.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 343. Introduction to Intercultural Communication. 3 Credit Hours.
Introduction to communication among people from diverse cultures. Application of communication theory to intercultural sensitivity and cultural diversity is emphasized.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 351. Qualitative Research Methods. 3 Credit Hours.
Course is designed to introduce students to a sample of qualitative research methods used in communication. Prerequisites: COM 110, COS 210.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 352. Critical Research in Communication. 3 Credit Hours.
This is a course in rhetorical criticism. Students will gain an understanding of rhetorical theory as it is applied to the analysis and evaluation of significant public communication events. Prerequisites: COM 110, COS 210.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 353. Quantitative Communication Research Methods and Analyses. 3 Credit Hours.
Introduction to communication research methods. Application of quantitative measurement techniques and statistical analyses will be discussed as well as the use of microcomputer statistical programs. Prerequisites: COM 110, COS 210.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

COS 354. Organizing for Action. 3 Credit Hours.
Students will learn a range of communication strategies and tactics to advocate for and effect social change.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 355. Applied Communication Research Methods. 3 Credit Hours.
Students learn to read and interpret quantitative and qualitative research methods. Students develop skills in basic qualitative methods (focus groups, observation) and quantitative methods (surveys, polls, comparisons, basic statistical analysis) for use in daily and professional life.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 360. Speech Writing. 3 Credit Hours.
This is a course on written speeches, speechwriting, and delivering speeches from manuscripts. Students will write, review and edit their own work, and will work in teams engaging peer review and corporate authorship to produce manuscripts for a variety of types and purposes of speeches employing a broad range of strategies for proof, language, and engagement.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 377. Argumentation and Critical Thinking. 3 Credit Hours.
Argumentation theory and practice are discussed. Rhetorical and philosophical foundations of argumentation and their application in various settings including academic debate are also covered.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
COS 391. Undergraduate Special Topics in Communication Studies. 3 Credit Hours.
Course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 405. Practicum in Communication Studies. 1-3 Credit Hours.
Structured participation in programmatic research and applied practice in the community.
Requisite: Junior Status.
Components: PRA.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 418. Organizational Communication. 3 Credit Hours.
Introduction to organizational communication theory. Consideration of structure, function, and effects of communication in organizations are analyzed. Emphasis is placed on principles needed for decision making and effective management of organizational communication processes.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 426. Patient-Provider Communication. 3 Credit Hours.
This class focuses on the interpersonal environment of patient-provider interaction. The primary purpose of this course is to describe best practices for coming to shared meaning and decision-making between medical professionals and patients in healthcare settings.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 427. Health Behavior and Risk. 3 Credit Hours.
This course introduces students to different theories and models of health communication that are frequently used to develop persuasive health messages. It draws on health communication messaging theory, as well as literature in public health, psychology, and medicine.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 472. Persuasion. 3 Credit Hours.
A review of theory, research, and practice of the intentional use of symbols to influence attitudes, beliefs, and actions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 473. Words that Shaped the World. 3 Credit Hours.
A study of great speakers and speeches in important international settings.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 474. Presidential Debates. 3 Credit Hours.
History, impacts, content and strategies of televised presidential campaign debates.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 477. Engaged Communication. 3 Credit Hours.
Capstone course designed for communication studies majors. Provides students opportunities to apply knowledge of communication theory and associated research skills through their personal engagement in community or organizational service and action research.
Prerequisites: COM 110, COS 210, COS 351, COS 354. Requisite: Senior Status or Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

COS 479. Capstone for Communication Studies. 3 Credit Hours.
Capstone course designed for communication studies majors. Provides students with the opportunity to apply knowledge of communication theory and research skills through development of capstone project.
Prerequisites: COM 110 and COS 210 and COS 351 and COS 353.
Requisite: Senior Standing.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 498. Communication Studies Internship. 1-3 Credit Hours.
Prescribed study and supervised work with practitioners in organizations.
Requisite: Junior Status.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 499. Projects and Directed Research. 1-3 Credit Hours.
Individual study. No more than three credits may be counted toward a Communication major or minor.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 545. Intercultural Communication: International Perspectives. 3 Credit Hours.
Effects of cultural attitudes, beliefs, and attributions on meaning assignment. Effects of language on the structure of thought. Ethics and process of the diffusion of cultural innovations are analyzed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 546. Intercultural Communication: Domestic Perspectives. 3 Credit Hours.
Effects of cultural attitudes, beliefs, and attributions on meaning assignment. Diffusion of cultural innovations, prejudice, discrimination, and equality are discussed. Emphasis is placed on intercultural interactions within the United States.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 560. The Executive Communicator. 3 Credit Hours.
Audience analysis, speech writing, delivery in professional presentations, theory, and history of great speeches are covered. Detailed critiques of student speaking styles and performances are also included.
Prerequisite: COS 211. Requisite: Junior Status or Permission of Instructor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
COS 591. Advanced Special Topics in Communication Studies. 3 Credit Hours.
This course subject matter varies according to announced special topic. See class schedule for details.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 599. Advanced Projects and Directed Research. 1-6 Credit Hours.
Individual study. Course may be repeated to a maximum of six credits.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

COS 616. Small Group Processes. 3 Credit Hours.
Techniques of discussion applied to goal-oriented, small group situations. Consideration is given to research methods, leadership, and conflict resolution. Theory is applied to active classroom participation.
Components: LEC.
Grading: GRD.

COS 618. Seminar in Nonverbal Communication (NVC). 3 Credit Hours.
Theory and application of selected areas of research in nonverbal communication is addressed. Discussion of environment, space, body movement, posture, eye contact, facial expression, vocal cues and physical appearance is included.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

COS 620. Gender Issues in Leadership. 3 Credit Hours.
This course utilizes case studies of innovative executives to analyze different leadership and communication styles between men and women.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 630. Conflict Management. 3 Credit Hours.
This course provides an understanding of conflict dynamics and strategies for constructive conflict management.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 645. Intercultural Communication: International Perspectives. 3 Credit Hours.
Effects of cultural attitudes, beliefs, and attributions on meaning assignment. Effects of language on the structure of thought. Ethics and process of the diffusion of cultural innovations are analyzed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 646. Intercultural Communication: Domestic Perspectives. 3 Credit Hours.
Effects of cultural attitudes, beliefs, and attributions on meaning assignment. Diffusion of cultural innovations, prejudice, discrimination, and equality are discussed. Emphasis is placed on intercultural interactions within the United States.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 647. Culture and Organizations. 3 Credit Hours.
This course explores the effects of cultural diversity on communication in organizations. Diffusion of innovations, prejudice, discrimination, and equality are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 651. Survey of Health Communication. 3 Credit Hours.
This course is intended to provide a graduate-level introduction to the study of health communication. Accordingly, it covers a wide range of topic areas informed by an equally diverse range of theories, research paradigms, and applied foci.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 652. Culture and Health. 3 Credit Hours.
This class is designed to give participants an overview of the problems, issues, and processes involved with communicating with people of different cultural and subcultural backgrounds about issues of health and illness.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 653. Organizations, Communication, and Health. 3 Credit Hours.
This class focuses on the organizational, interpersonal and intercultural dimensions of communication in health care settings. It draws on material from the communication discipline as well as work from medical sociology, anthropology, medicine, humanities and discourse studies.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 654. Risk Communication. 3 Credit Hours.
This course will offer a foundational understanding of the psychological and sociological bases of risk perceptions that are necessary for effective risk communication.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 655. Health Communication Interventions. 3 Credit Hours.
This course will focus on the planning, development, and assessment of health communication intervention messages and materials.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 660. The Executive Communicator. 3 Credit Hours.
Audience analysis, speech writing, delivery in professional presentations, theory, and history of great speeches are covered. Detailed critiques of student speaking styles and performances are also included.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 674. Seminar in Interpersonal Communication. 3 Credit Hours.
This course focuses on theoretical approaches to interpersonal communication. Emphasis is placed on current research including fundamentals of relationships, developmental issues, interaction management, and interpersonal competence.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 680. Organizational Training and Development. 3 Credit Hours.
This course is designed to provide an examination of internal organizational communication in order to understand appropriate strategies for training and development of supervisors and employees.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

COS 682. Seminar in Organizational Communication. 3 Credit Hours.
This course explores theoretical perspectives and the impact of communication in organizations. Critical analysis includes management styles, decision-making, group interaction, conflict resolution, and diffusion of innovations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

CSC 119. Computers and Society. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 118. Information Technology and Society. 3 Credit Hours.
A variety of topics on information technology and society through various course activities including research papers, experiments, and by reading articles. The topics covered include but are not limited to: history of computing, hardware mechanisms, algorithms design, software development principles, software tools, security, and artificial intelligence.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Summer.

CSC 210. Computing for Scientists. 3 Credit Hours.
Prerequisite: MTH 141 or MTH 151 or MTH 161 or MTH 171.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 115. Social and Ethical Issues in Computing. 3 Credit Hours.
History, social context and methods and tools of analysis. Professional and ethical responsibilities. Intellectual property. Privacy and civil liberties.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 110. Introduccion a la Informatica, en espanol. 3 Credit Hours.
An introduction to the fundamental notions of computing, from the hardware through to the applications used in society today. Taught in Spanish.
Prerequisite: SPA 301 or SPA 302 or SPA 303 or SPA 307.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 116. Cybersecurity: An Introduction to Security in Cyberspace. 3 Credit Hours.
Components: LEC.
Grading: GRD.

CSC 100. Introduction to Computer Science. 3 Credit Hours.
This course provides an introduction to the fundamental concepts of computer science. Topics include binary representation, logic gates, Boolean algebra, digital circuits, and computer architecture.
Prerequisite: MTH 108 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 200. Introduction to Programming. 3 Credit Hours.
An introduction to computer programming. Topics include programming languages, data structures, algorithms, and software design.
Prerequisite: MTH 108 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 215. Introduction to Python for Arts & Humanities. 3 Credit Hours.
The Python programming language for students without prior programming experience, coming from a background of Arts and Humanities.
Prerequisite: MTH 108 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 220. Computer Programming II. 4 Credit Hours.
Common APIs including list, priority queue, set, and map, and their efficient implementations in an object-oriented language using fundamental data structures. Sorting and other applications of recursion. Combining asymptotic analysis and experiments to extrapolate running times. Using APIs in a software project.
Prerequisites: CSC 120 or BTE 324 or ECE 218 and MTH 108 or MTH 140 or MTH 141 or MTH 161 or MTH 162 or MTH 171 or MTH 172 or MAS 110.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
CSC 298. Sophomore Topics in Computer Science. 1-3 Credit Hours.
Sophomore Topics in Computer Science - Content varies by semester.
Requisite: At Least 6 credits of CSC courses.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 314. Computer Organization and Architecture. 3 Credit Hours.
Digital logic and digital systems. Machine level representation of data.
Assembly level machine organization. Memory system organization and
architecture. Interfacing and communication. Functional organization.
Multiprocessing and alternative architectures
Prerequisite: CSC 220 or BTE 324 or ECE 218 and Corequisite: MTH 309.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 315. Introduction to Python for Scientists. 3 Credit Hours.
Python Programming for students with science majors. Python
programming basics. Python packages for scientific applications,
especially data science and machine learning applications.
Prerequisite: MTH 161 and MTH 224.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 317. Data Structures and Algorithm Analysis. 3 Credit Hours.
Basic algorithmic analysis. Algorithmic strategies. Fundamental
computing algorithms. Distributed algorithms. Cryptographic algorithms.
Geometric algorithms.
Prerequisite: CSC 220 or ECE 318 and MTH 309.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 322. System Programming. 3 Credit Hours.
C programming: Program structure, core language elements, pointers.
System tools for C programming. Programming for UNIX: The system call
interface, interfaces to the internet. Scripting.
Prerequisite: CSC 220 or ECE 318.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 329. Introduction to Game Programming. 3 Credit Hours.
Fundamental programming issues in game design: Software design;
Version control; Basic graphics; GUI programming. Large-scale game
project: Team development of a functional game; Graphics and GUI
component; Networking component; Core game engine.
Prerequisite: CSC 220 or ECE 318.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 330. Android Programming. 3 Credit Hours.
The android/Eclipse programming environment. The Android execution
model. User interfaces. Media. Data storage areas. Sensors and
actuators. The Android market.
Prerequisite: CSC 220.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 398. Junior Topics in Computer Science. 1-3 Credit Hours.
Junior Topics in Computer Science - Content varies by semester.
Requisite: At Least 9 credits of CSC courses.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 401. Computer Science Practicum I. 1 Credit Hour.
Implementation of techniques, algorithms, and data structures being
taught in a co-requisite computer science course.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 402. Computer Science Practicum II. 1 Credit Hour.
Implementation of techniques, algorithms, and data structures being
taught in a co-requisite computer science course.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 403. Computer Science Practicum III. 1-3 Credit Hours.
Implementation of techniques, algorithms, and data structures being
taught in a co-requisite computer science course.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 405. Computer Science Seminars. 1 Credit Hour.
A range of topics in Computer Science, as embodied in the seminars
hosted by the Department.
Requisite: At least 12 credits of CSC courses.
Components: SEM.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 410. Computer Science Project Planning. 1-3 Credit Hours.
Planning for the implementation of a Computer Science project,
including: Problem analysis, System architecture design, Algorithm and
data structure selection, User interface design, Verification and validation
plan, and Prototyping.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 411. Computer Science Project Implementation. 1-3 Credit Hours.
Implementation of a Computer Science project, including: Hardware
preparation, Component implementation, System integration, Verification
and validation, and Documentation.
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 412. Computer Science Internship. 1-3 Credit Hours.
A commercial computing environment. Normally 50 internship hours are
required per credit earned (the host company must supply documentary
evidence of hours worked).
Components: PRA.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 419. Programming Languages. 3 Credit Hours.
Prerequisite: CSC 317 or CSC 517.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 421. Principles of Computer Operating Systems. 3 Credit Hours.
Prerequisite: CSC 314 and CSC 322.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 422. Computer Networks. 3 Credit Hours.
Prerequisite: CSC 314 and CSC 322.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 423. Database Systems. 3 Credit Hours.
Prerequisite: CSC 322 or ECE 322.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 424. Computer Networks. 3 Credit Hours.
Prerequisite: CSC 314 and CSC 322.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 427. Theory of Computing. 3 Credit Hours.
Sets, relations, and languages. Automata theory. Basic computability theory. Turing machines. The complexity classes P and NP.
Prerequisite: CSC 220 or ECE 318 and MTH 309.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 431. Introduction to Software Engineering. 3 Credit Hours.
Prerequisite: CSC 317 or CSC 322 or CSC 517.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 481. Teaching Assistant Training in Computer Science. 1-3 Credit Hours.
Training and teaching assistant for a specific course, in computer laboratories. May be taken multiple times, assisting maximally twice for a given course.
Components: PRA.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 498. Senior Topics in Computer Science. 1-3 Credit Hours.
Senior Topics in Computer Science - content varies by semester. Requisite: At least 12 credits of CSC courses.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 506. Logic. 3 Credit Hours.
Prerequisite: MTH 230 or PHI 210 or PHI 510.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 507. Data Security and Cryptography. 3 Credit Hours.
Prerequisite: CSC 317 or CSC 427.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

CSC 518. Interpreters and Compiler Theory. 3 Credit Hours.
Prerequisite: CSC 419.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 528. Introduction to Parallel Computing. 3 Credit Hours.
Parallel computing systems shared-memory parallel programming, with open MP distributed-memory parallel programming, software with open MP, distributed-memory parallel programming, software with open MP, distributed-memory parallel programming, software with open MP.
Prerequisite: CSC 220 or ECE 318 and MTH 210.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 529. Introduction to Computer Graphics. 3 Credit Hours.
Prerequisite: CSC 220 or ECE 318 and MTH 210.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 540. Algorithm Design and Analysis. 3 Credit Hours.
Design techniques include divide-and-conquer, greedy method, dynamic programming, backtracking. Time and space complexity. Sorting, searching, combinatorial and graph algorithms.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 545. Introduction to Artificial Intelligence. 3 Credit Hours.
Prerequisite: CSC 317 or ECE 318 and MTH 224 or ECE 310 or IEN 310.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 547. Computational Geometry. 3 Credit Hours.
Algorithms for solving geometric problems arising from application domains including graphics, robotics, and GIS.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 548. Bioinformatics Algorithms. 3 Credit Hours.
Prerequisite: CSC 120 or CSC 210 and BIL 150 or BIL 104 or BIL 352 or BIL 552 or CSC 552.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CSC 549. Biomedical Data Science. 3 Credit Hours.
The computational skills needed for analysis of genomic and biomedical data sets, including: The basics of a command line interface; programming in (bio-)python; running programs on Pegasus2; writing scripts for downloading, manipulating, and analyzing data; file sharing and version control using github; analyzing a Next Generation Sequencing data set, and interpreting the results; and responsible conduct of Research.
Prerequisite: CSC 120 and BIL 150.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 550. Computational Neuroscience. 3 Credit Hours.
Prerequisite: MTH 162 and MTH 224.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 552. Bioinformatics Tools. 3 Credit Hours.
Databases and tools of bioinformatics, as relevant to research in genomics and molecular biology. Bioinformatics applications. Information retrieval, analytical tools, BLAST searches, promoter analysis, and protein structure-function analysis, and various applications.
Prerequisite: BIL 250 or BIL 150.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CSC 555. Multimedia Systems. 3 Credit Hours.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 556. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 618. Interpreters and Compiler Theory. 3 Credit Hours.
Prerequisite: CSC 419.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 623. Theory of Relational Databases. 3 Credit Hours.
Prerequisite: CSC 423.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 629. Introduction to Computer Graphics. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 632. Introduction to Parallel Computing. 3 Credit Hours.
Parallel computing systems. Shared-memory parallel programming, with open MP, distributed-memory parallel programming, software with open MPI software package. Applications: vector and matrix operations, sorting, image processing.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 640. Algorithm Design and Analysis. 3 Credit Hours.
Design techniques include divide-and-conquer, greedy method, dynamic programming, backtracking. Time and space complexity. Sorting, searching, combinatorial and graph algorithms.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 645. Introduction to Artificial Intelligence. 3 Credit Hours.
Prerequisite: CSC 545.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 647. Computational Geometry. 3 Credit Hours.
Algorithms for solving geometric problems arising from application domains including graphics, robotics, and GIS.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 649. Bioinformatics Algorithms. 3 Credit Hours.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CSC 650. Computational Neuroscience. 3 Credit Hours.
Prerequisite: MTH 162 and MTH 224.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 656. Multimedia Systems. 3 Credit Hours.
Prerequisite: CSC 317.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 657. Directed Reading. 2-4 Credit Hours.
Directed reading in Computer Science - content varies by semester.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 658. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 659. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 660. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 668. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 669. Topics in Computer Science. 1-3 Credit Hours.
Topics in Computer Science - content varies by semester.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 670. Seminar for Graduate Students I. 1-3 Credit Hours.
Flexible topics of interest to graduate students.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 672. Seminar for Graduate Students II. 1-3 Credit Hours.
Flexible topics of interest to graduate students.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 707. Logic Programming. 3 Credit Hours.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 711. Theory of Computation. 3 Credit Hours.
 Recursive functions, Markov algorithms, Turing machines. Unsolvability. Prerequisite: CSC 317 or CSC 517.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 712. Complexity Theory. 3 Credit Hours.
 Models of computations, Blum's axioms, intractability, NP-completeness. Prerequisite: CSC 427.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 724. Mobile Wireless Systems. 3 Credit Hours.
 Cellular Systems, multiple access techniques, wireless networking, mobile IP, power management, user location information management, TDMA, CDMA, and GSM systems, data broadcasting. Prerequisite: CSC 424.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 732. Parallel Algorithms. 3 Credit Hours.
 Parallel computation models; sorting networks; parallel algorithms for sorting, searching, graph problems, prefix computation, pattern matching, and fast Fourier transforms; theory of P-completeness, the class NC. Prerequisite: CSC 317.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

CSC 746. Neural Networks and Deep Learning. 3 Credit Hours.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 749. Automated Reasoning. 3 Credit Hours.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 751. Semantic Web. 3 Credit Hours.
 An overview of the underlying semantic web technologies. Ontology construction and implementation using tools and APIs (logic, XML, RDF, RDFS). Theoretical and practical aspects of knowledge representation (description logic, RDF, RDFS, SPARQL, SROIQ(D)). Designing and debugging ontologies (ontology engineering, entailment tools, project). Prerequisite: CSC 317 and MTH 309.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 752. Autonomous Robotic Systems. 3 Credit Hours.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 756. Advanced Multimedia Systems. 3 Credit Hours.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 757. Advanced Topics in Computer Science. 1-3 Credit Hours.
 Advanced Topics in Computer Science

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 758. Advanced Topics in Computer Science. 1-3 Credit Hours.
 Advanced Topics in Computer Science

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

CSC 759. Advanced Topics in Computer Science. 1-3 Credit Hours.
 Advanced Topics in Computer Science

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
CSC 793. Research Project. 1-6 Credit Hours.
Supervised research project preceding dissertation research for the Ph.D.
Components: IND.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 794. Research Project. 1-6 Credit Hours.
Supervised research project preceding dissertation research for the Ph.D.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 810. Master's Thesis. 1-6 Credit Hours.
The student working on his/her master's thesis enrolls for the number of
credits as determined by his/her advisor. Credit is not awarded until the
thesis has been accepted.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

CSC 825. Continuous Registration--Master's Study. 1 Credit Hour.
To establish residence for non-thesis master's students who are
preparing for major examinations. Credit not granted. Regarded as full
time residence.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

CSC 830. Pre-Candidacy DOCTORAL DISSERTATION. 1-12 Credit Hours.
Required of all candidates for the Ph.D. The student will enroll for credit
as determined by his/her advisor, but for not less than a total of 12 hours.
Up to 12 hours may be taken in a regular semester, but not more than six
in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CSC 840. Post-Candidacy Doctoral Dissertation. 1-12 Credit Hours.
Required of all candidates for the Ph.D. who have advanced to candidacy.
The student will enroll for credit as determined by his/her advisor, but not
for less than a total of 12. Not more than 12 hours of CSC 740 may be
taken in a regular semester, nor more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

CSC 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for Ph.D. students after the
student has enrolled for permissible cumulative total in appropriate
doctoral research. Regarded as full-time residence.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Dance (DAN)

DAN 102. Stretching and Body Work. 1 Credit Hour.
Stretching techniques and examination of various body therapy
concepts.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 111. Modern Dance, Level One. 2 Credit Hours.
Introduction to the discipline of modern dance designed to develop
understanding and skill in the basic vocabulary. Open to all students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 121. Ballet, Level One. 2 Credit Hours.
Introduction to the discipline of classical ballet designed to develop
understanding and skill in the basic vocabulary. Open to all students.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 130. Orientation to Dance. 2 Credit Hours.
Introduction to dance as an art form for those interested in career
opportunities in dance education. Required for prospective dance minors.
Open to all students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

DAN 140. Theatre Dance Forms. 2 Credit Hours.
Introduction to movement skills and stylistic elements of theatrical forms
of dance. Open to all students.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DAN 190. Improvisation. 2 Credit Hours.
Experience in selective and basic processes of movement involvement
both individual and group. Open to all students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

DAN 211. Modern Dance, Level Two. 3 Credit Hours.
Continuing exploration of modern dance basic techniques and theoretical
concepts. Open to all students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 221. Ballet, Level Two. 3 Credit Hours.
Study of ballet designed to extend technical skill and prepare student for
intermediate level work. Open to students with formal ballet training or
permission
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 240. Cultural Dance Forms. 2 Credit Hours.
Introduction to movement skills and stylistic elements of dance forms
from various cultures. Open to all students.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 250. World History of the Dance. 3 Credit Hours.
Introductory exploration of dance history in relation to life, thought, and
culture.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
DAN 280. Dance Composition Level 2. 3 Credit Hours.
Introduction to choreography through creative problem solving by exploring and experimenting with the basic elements of dance: space, time, energy, and motion. Emphasis is on compositional studies.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DAN 285. Creative Dance for Children. 2 Credit Hours.
Introduction to theories and methods of teaching dance to children of elementary school age. Open to all students.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

DAN 286. Teaching Dance to Children. 2 Credit Hours.
Theory and practice of teaching dance to preschool and school age children. Open to all students.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DAN 288. Dance Composition Level 3. 3 Credit Hours.
Continuation of creative problem solving by exploring, experimenting, and combining the basic elements of dance: space, time, energy and motion. Emphasis is on expansion of ideas for stage productions.
Components: LAB.
Grading: GRD.
Typically Offered: Fall & Spring.

DAN 311. Modern Dance, Level Three. 3 Credit Hours.
Intermediate study of modern dance techniques and theoretical concepts.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 321. Ballet Level Three. 3 Credit Hours.
Study of classical ballet at intermediate/advanced level. Open to students with formal ballet training.
Components: LAB.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 380. Dance Composition Level 3. 3 Credit Hours.
Continuation of creative problem solving by exploring, experimenting, and combining the basic elements of dance: space, time, energy and motion. Emphasis is on expansion of ideas for stage productions.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

DAN 385. Methods of Teaching Dance (K-12). 3 Credit Hours.
Content for teaching dance in a variety of settings including public school grades K-12. Required for dance minor.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DAN 411. Modern Dance; Level Four. 3 Credit Hours.
Advanced study of modern dance technique and theatrical concepts.
Components: LAB.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 421. Ballet, Level Four. 3 Credit Hours.
Study of Classical ballet at an advanced level. Permission of Instructor
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 450. History of Modern Dance. 3 Credit Hours.
Study of development, philosophies, and theories of American and European modern dance.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

DAN 493. Special Projects in Dance. 1-3 Credit Hours.
Advanced individual instruction pertaining to faculty member's area expertise and student's area of interest. This course includes a culminating project.
Components: IND.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 494. Special Topics in Dance. 1-3 Credit Hours.
Advanced group/classroom instruction pertaining to faculty member's expertise and students' areas of interest.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 550. Women in Theatrical Dance. 3 Credit Hours.
Women in Dance; the most prominent dancers and choreographers from the 19th and 20th centuries who helped shape western theatrical dance art.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

DAN 585. Methods of Teaching Dance K-12 (Advanced). 3 Credit Hours.
An advanced study of the dance curriculum content in a variety of settings including public schools, grades K-12.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

DAN 593. Special Projects in Dance. 1-3 Credit Hours.
Advanced individual instruction pertaining to faculty member’s area expertise and student’s area of interest. This course includes a culminating project.
Components: IND.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DAN 594. Special Topics in Dance. 1-3 Credit Hours.
Advanced group/classroom instruction pertaining to faculty member’s expertise and students’ areas of interest.
Components: SEM.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
DER 600. Cutaneous Biochemistry, Cell Biology and Genetics. 1-3 Credit Hours.
This course will bring students to basic, fundamental and integrated sciences of human skin in biochemistry, cellular and molecular biology, and genetics. The course will cover various topics from skin cellular and molecular structure, function and biology, to their genes, DNA, RNA and protein, biochemical reactions, metabolism, and genetic processes that transmit biological information and regulation. This course will help students to understand the fundamental concepts on and connection between genes, structure and functions of human skin. The course is specifically designed and required for students who do not have strong background in human biochemistry and/or cell biology. Other students may elect this course to prepare for the subsequent vigorous studies in the MS degree program in Skin Biology and Dermatological Sciences. This is a hybrid course therefore students are required to attend campus-based classroom lectures (28 hours) and online sessions of live lectures or pre-recorded presentations (20 hours).
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 601. Introduction to Dermatology. 1 Credit Hour.
The aim of the course is to familiarize participants with the basic subject of dermatology and the most common terminology. Students will be introduced to the subject of dermatology, subspecialties in dermatology, structure of the skin (basic anatomy and physiology), terminology (primary and secondary cutaneous lesions), and examples of the most common dermatological conditions.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 602. Skin Anatomy and Histology. 1 Credit Hour.
This course familiarizes students with the structure and morphology of the skin and its appendages. Students will be exposed to the basic aspects of skin anatomy and histology, of skin epidermis, dermis, dermal-epidermal junction and subcutaneous tissue, skin appendages of hair, sebaceous gland, sweat glands, and skin microvasculature and sensitive nerve endings, and to the relationships between structures, functions and diseases.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 603. Skin Biology and Pathophysiology. 3 Credit Hours.
This course helps students to understand the fundamental concepts on and connection between structure and function of the skin. The course will include biology of major skin cell types of keratinocytes, fibroblasts, endothelial cells, melanocytes and Langerhans cells. It will cover biology of skin metabolism, skin appendages, skin matrix, cutaneous vasculature, neuroendocrine system and major processes required for cutaneous barrier function during normal and pathophysiological states. Molecular and cellular mechanisms of cutaneous wound healing, matrix remodeling, tissue regeneration and skin ageing will be also included into coursework.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 604. Microbiology of the Skin. 1 Credit Hour.
This course covers skin microbiota/microbiome in health and disease, and bacterial species that cause most common skin infections such as Staphylococcus aureus (folliculitis, impetigo, abscesses, pyoderma, toxic-shock syndrome, staphylococcal scalded skin syndrome, wound infections); Streptococcus pyogenes (impetigo, erysipelas, cellulitis, necrotizing fasciitis, rheumatic fever, scarlet fever, wound infections), and Corynebacterium spp. (wound infections), etc. It addresses bacterial biofilms and their importance in skin infections.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
DER 605. Microbiology and Immunology of the Skin. 3 Credit Hours.
This course covers skin microbiota and immune components of the skin in healthy and disordered states. The microbiology will cover bacterial species that cause most common skin infections such as Staphylococcus aureus (furunculosis, impetigo, abscesses, pyoderma, toxic-shock syndrome, staphylococcal scalded skin syndrome, wound infections); Streptococcus pyogenes (impetigo, erysipelas, cellulitis, necrotizing fasciitis, rheumatic fever, scarlet fever, wound infections), and Corynebacterium spp. (wound infections), etc. The bacterial biofilms and their importance in skin infections will also be addressed. The skin hosts the same immunocompetent cell types found throughout the body -T cells, B cells, macrophages, eosinophils, neutrophils, etc. -as well as its own skin-specific subpopulations-Langerhans cells, keratinocytes, and dermal dendrocytes. The second part of the course will cover the biology of immunology of the skin in normal functioning and underlying both intradermal allergic reactions and skin-specific autoimmune disorders (alopecia areata, vitiligo, psoriasis), as well as the standard treatments for each. Further, this course addresses unique immune environments within the skin, such as the immune privilege of the hair follicle, and wound infection.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 606. Dermato-epidemiology. 2 Credit Hours.
Students will be introduced to the emerging discipline in skin epidemiology or Dermatooepidemiology, to obtain an overview of incidence rates and time trends of skin disorders in the US and in the world, learn biostatistical tools in data analysis including descriptive statistics, hypothesis testing, analysis of variance, and regression analysis. Students gain an appreciation for disparity in the disease outcomes among populations and various barriers contributing to current disparity. Students will also learn about various state and national registries for skin cancer and some other skin disorders available for database research.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DER 607. Dermatopharmacology. 2 Credit Hours.
This course familiarizes students with the mechanisms of drug action, FDA-indications, off-label uses, safety and efficacy, side effects and necessary monitoring and important drug interactions relevant to topical and systemic medications used in dermatology. The course covers skin barrier and transdermal drug delivery (structure of the skin barrier, factors affecting the skin barrier, strategies to enhance transdermal drug delivery), major drugs used in dermatology including glucocorticosteroids, retinoids, antimicrobials, immunomodulators, agents used in oncology, hormonal therapy, other systemic medications (antimalarials, colchicine, dapsone, leukotriene inhibitors, antithistamines, thalidomide) and topic medications.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 608. Photobiology and Photomedicine. 1 Credit Hour.
This course discusses fundamental concepts on photobiology and phototherapy with Ultraviolet light (UV) B, Excimer Laser, UV A, PUVA (psoralen + UV A), Photopheresis, and Photodynamic therapy. The course will cover photobiology, photochemistry and mechanisms of actions. Treatment protocols with clearing phase and maintenance phase, indications, adverse effects and complications, practice and techniques and future directions will be also included into coursework.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 609. Skin Carcinogenesis. 2 Credit Hours.
This course considers the etiology, pathophysiology, epidemiology, types, prognosis and various treatment of the most common types of skin cancers will be covered. Skin cancer is by far the most common type of cancer affecting the humans. More than 50% of all the cancers combined are skin cancers. The most common skin cancer is Basal Cell Carcinoma (BCC). The second most common type is Squamous Cell Carcinoma. One of the most serious form of skin cancer is Melanoma. There are other types of skin cancers that affect us. One in 5 Americans develop skin cancer during their lifetime.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 610. Clinical Skin Diseases. 2 Credit Hours.
This course gives students a clinical overview of the common skin disorders encountered by society. It discusses the most common skin diseases such as acne, seborheic dermatitis, and xerosis, with an emphasis on pathogenesis, and current research in these conditions. Older treatments will be compared to newer treatments with respect to efficacy as well as cost to patients.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 611. Visualizing the Skin. 2 Credit Hours.
This course covers basic and advanced techniques of visual examination and digital photography of the skin and hair. Topics include macrophotography of the skin and scalp, dermatoscopy, processing of biopsies for histology, routine and special histological staining, microscopy with regular and special lights, immunohistochemistry and immunofluorescence, and recent advances of non-invasive methods of visualizing the skin in depth such as optical coherence tomography and in vivo confocal microscopy.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

DER 612. Grant Writing. 1 Credit Hour.
The course presents approaches and important aspects of preparation of some major grant applications to including government funding from National Institute of Health (NIH) such as Research grants (R formats) for academia and Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) grants for industries and grants from Department of Defense. Major sources, tools and policies for grant application and management will be discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
DER 613. Techniques in Skin Research. 1 Credit Hour.
This course will cover different areas of research techniques employed in studying skin biology/ pathophysiology that span from in vitro cell based assays, ex vivo skin or reconstructed skin equivalents to in vivo animal models to study skin biology and skin diseases, and will integrate various molecular, cellular and tissue based methods. The course will balance multiple teaching methods from traditional didactics to individual and group “hands-on” laboratory experience and training. Its main approach will be using skin specimen (human or animal) as a major source and starting point. It will follow progression from simple methods (cell-based) to more complex (organotypic and tissue-based techniques) to in vivo animal models in pre-clinical trials. The course will also cover high throughput approaches in skin genomics, genetics and proteomics, and use and analysis of big data as well.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 614. Innovation in Dermatology. 1 Credit Hour.
The aim of this course is to familiarize the participants with the tools of innovation. It will cover the strategic processes of how to ideate, formulate, innovate and push through new ideas from concept to implementation. This course will also cover the issues related to patent and how to protect the intellectual property.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

DER 615. Dermatology Health Care Delivery. 1 Credit Hour.
This course prepares students for positions of leadership in skin care and skin health-related industrials and organizations. The course focuses on the educational needs of professionals already fully employed in the health care industry, as well as those aspiring to careers in the field. The course considers practical administrative skills as well as broad strategic and theoretical perspectives to students who wish to expand their knowledge of management and administration as applied to the skin care industry, with emphasizes in the development of business; technical, administrative, and leadership concepts as they apply to the clinical practice and skin care industry. TeleHealth, TeleDermatology and Clinical Outreach will also be discussed. This course considers the topics on the development of business, technical, administrative, and leadership concepts as they apply to the health care industry. Students will consider issues pertaining to animal use and protection and human subject in research, regulatory requirements and allied issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 622. Introduction to Dermatopathology. 1 Credit Hour.
This course is the continuation of the course DER 602 Skin Anatomy and Histology. The aim of the course is to give students a general introduction to clinical histopathology in common skin disorders. The course will familiarize students with basic terms of histopathological changes in skin tissue, basic characteristic pattern recognitions, clinic-pathologic correlations, and histopathologic features of common skin diseases.
Prerequisite: DER 602.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 623. Techniques in Skin Research- II. 1 Credit Hour.
This course is the continuation of the course DER 613 Techniques in Skin Research-I. It will teach students how to approach and solve research problems with different strategies and methods. Various research models specific to skin research will be discussed including angiogenesis, aging, cancer, endocrinology, hair, itching and sensation, wound repair and tissue regeneration, therapeutic research in drug transdermal and systemic deliveries, and clinical skin disease research and therapeutic trials as well. Students will also consider issues pertaining to animal use and protection and human subject in research and allied issues.
Prerequisite: DER 613.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 631. Advances in Dermatology. 1 Credit Hour.
This hour-long seminar course is held in conjunction with Dermatology Grand Rounds, which will be the basis of this course. The purpose is to help students to keep up with advances in investigative dermatological research and patient care. The lectures are delivered by Dermatology full time faculty, voluntary faculty, visiting dermatologists/investigators, and physicians and investigators from related disciplines at the University of Miami. This series covers various aspects of skin biology, dermatology, and related disciplines.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DER 632. Advances in Dermatology. 1 Credit Hour.
This hour-long seminar course is held in conjunction with Dermatology Grand Rounds, which will be the basis of this course. The purpose is to help students to keep up to date in advances in investigative dermatological research and patient care. The lectures are delivered by Dermatology full time faculty, voluntary faculty, visiting dermatologists/investigators, and physicians and investigators from related disciplines at the University of Miami. This series covers various aspects of skin biology, dermatology, and related disciplines.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 633. Advances in Dermatology. 1 Credit Hour.
This hour-long seminar course is held in conjunction with Dermatology Grand Rounds, which will be the basis of this course. The purpose is to help students to keep up to date in advances in investigative dermatological research and patient care. The lectures are delivered by Dermatology full time faculty, voluntary faculty, visiting dermatologists/investigators, and physicians and investigators from related disciplines at the University of Miami. This series covers various aspects of skin biology, dermatology, and related disciplines.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.
DER 641. Frontiers in Sciences. 1 Credit Hour.
This course will be in conjunction with Dermatology Journal Clubs. Students will participate in the presentation, discussion and critiques of the publications in peer-reviewed journals in both basic sciences and clinical aspects, not limited to the field of dermatology, with emphasis in translational research and research applications. In addition, this course will be run in conjunction with Dermatology Research Conferences. It will provide the most recent updates on various aspects of dermatological sciences ranging from molecular mechanisms of normal skin regeneration and repair to pathologies such as impaired healing disorders and skin cancer. Faculty, fellows, and students from each research laboratory will present their research discoveries. Each MS thesis track student will be required to present their own research projects during their thesis period.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

DER 642. Frontiers in Sciences. 1 Credit Hour.
This course will be in conjunction with Dermatology Journal Clubs. Students will participate in the presentation, discussion and critiques of the publications in peer-reviewed journals in both basic sciences and clinical aspects, not limited to the field of dermatology, with emphasis in translational research and research applications. In addition, this course will be run in conjunction with Dermatology Research Conferences. It will provide the most recent updates on various aspects of dermatological sciences ranging from molecular mechanisms of normal skin regeneration and repair to pathologies such as impaired healing disorders and skin cancer. Faculty, fellows, and students from each research laboratory will present their research discoveries. Each MS thesis track student will be required to present their own research projects during their thesis period.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

DER 643. Frontiers in Sciences. 1 Credit Hour.
This course will be in conjunction with Dermatology Journal Clubs. Students will participate in the presentation, discussion and critiques of the publications in peer-reviewed journals in both basic sciences and clinical aspects, not limited to the field of dermatology, with emphasis in translational research and research applications. In addition, this course will be run in conjunction with Dermatology Research Conferences. It will provide the most recent updates on various aspects of dermatological sciences ranging from molecular mechanisms of normal skin regeneration and repair to pathologies such as impaired healing disorders and skin cancer. Faculty, fellows, and students from each research laboratory will present their research discoveries. Each MS thesis track student will be required to present their own research projects during their thesis period.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

DER 661. Research Rotation. 1 Credit Hour.
This elective course will be offered in all three semesters in the first year. Thesis Path students will elect to take this course during the first year. Students will rotate through 1-3 research labs to explore a variety of potential topics for thesis. Thesis path students are required to take at least 1 lab rotation (1 credit) prior to their lab selection for thesis by the end of 2nd semester. Non-thesis path students will have the option to take this elective course as an opportunity to get hands-on experience in laboratory research and learn research techniques.
Components: LAB.
Grading: GRD.
Typically Offered: Fall.

DER 662. Research Rotation. 1 Credit Hour.
This elective course will be offered in all three semesters in the first year. Thesis Path students will elect to take this course during the first year. Students will rotate through 1-3 research labs to explore a variety of potential topics for thesis. Thesis path students are required to take at least 1 lab rotation (1 credit) prior to their lab selection for thesis by the end of 2nd semester. Non-thesis path students will have the option to take this elective course as an opportunity to get hands-on experience in laboratory research and learn research techniques.
Components: LAB.
Grading: GRD.
Typically Offered: Spring.

DER 663. Research Rotation. 1 Credit Hour.
This elective course will be offered in all three semesters in the first year. Thesis Path students will elect to take this course during the first year. Students will rotate through 1-3 research labs to explore a variety of potential topics for thesis. Thesis path students are required to take at least 1 lab rotation (1 credit) prior to their lab selection for thesis by the end of 2nd semester. Non-thesis path students will have the option to take this elective course as an opportunity to get hands-on experience in laboratory research and learn research techniques.
Components: LAB.
Grading: GRD.
Typically Offered: Summer.

DER 670. Dermatology Clinical Shadowing. 1-3 Credit Hours.
This course will consist of shadowing with a clinical faculty dermatologist in clinics in the Department of Dermatology and Cutaneous Surgery at the University of Miami (minimum 2-3 hours per week for each credit hour). This course is for students who are interested in clinical dermatology or medicine. It will give students firsthand experience in clinical dermatology. Students will be rigorously monitored for progress by clinical faculty mentors. Student will be required to write a case report or present a case report at the end of the semester.
Prerequisite: DER 601.
Components: CLN.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.
DER 700. Thesis. 1-6 Credit Hours.
A 6-credit research thesis course will be required for students who choose M.S. Thesis track. Research work will be performed in fall semester in the second year. For timing reasons, students will choose a mentor’s lab by the end of the second semester and select a thesis proposal after rotation through 1-2 prospective mentors’ labs. Students will be required to provide a proposal to a thesis committee drawn from members of program faculty. The majority of these mentoring faculty are members of the UM Graduate Faculty with a track record of graduate level teaching, research funding, and/or have (had) graduate students in their labs. The thesis proposal should be written such that the data collection will be completed within one semester. Mentors will provide support for students with necessary reagents, supplies, and equipment, etc. needed for completion of the thesis project. The committee will monitor the student closely and will also identify an alternate lab, should the project did not make satisfactory progress within first two months. The committee will also evaluate by the end of the first year prior to the start of thesis work to determine if students have spent time rotation with prospective mentor’s lab, evaluated the prospect of a project, and worked towards defining and completing a thesis project. A thesis requires an oral defense and a written paper evaluated and approved by the thesis committee convened for that purpose. The oral defense is open to the university community and the public. The student should distribute the thesis paper to the thesis committee for preliminary approval at least 10 days prior to the oral defense. The written paper should be of quality to be submitted for publication as first author or a co-author. Students may request to extend the length of thesis work and/or later date of thesis defense with the approval of the thesis committee and the program committee.
Components: THE.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

DER 808. Research Thesis. 1-6 Credit Hours.
A 6-credit research thesis will be required for students who choose the Thesis Path. For the timing reasons, students will choose a mentor’s lab by the end of the first year and select a thesis proposal after rotation through 1-3 research labs (DER 661, DER 662, or DER 663). Students are required to conduct campus-based thesis research in the second year in the research laboratories with faculty mentors in the Department of Dermatology and Cutaneous Surgery. The length of the thesis research, including written thesis paper and oral defense, varies depending on each project, usually 4-12 months. Students need to discuss with their thesis mentor research topic, thesis committee, duration and expectation. Prerequisite: DER 661 or DER 662 or DER 663.
Components: THE.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

Economics (ECO)

ECO 211. Principles of Microeconomics. 3 Credit Hours.
Fundamental course devoted to the development and application of basic analytical tools and principles required for an understanding of major economic problems and policy alternatives available for their solution. A particular emphasis is devoted to microeconomic analysis. Topics include the study of markets under varying conditions of competition, including market deficiencies such as pollution, prices, and resource allocation distribution of income, including poverty problems, the economics of the firm and the government, and international economic relations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 212. Principles of Macroeconomics. 3 Credit Hours.
Fundamental course devoted to macroeconomic analysis. Topics include national income and employment analysis, money and banking, economic growth, and comparison of different economic systems, including the problems of developing the less developed world.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 213. Principles of Economics. 4 Credit Hours.
This course introduces the study of the economic behavior of individuals, firms, and markets; as well as the analysis of the economy as a whole, both in terms of short-run fluctuations (the business cycle) and long-run determinants of economic growth.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 300. Microeconomic Theory and Applications. 3 Credit Hours.
Intermediate level analysis of the role of price in resource allocation in markets of varying degrees of competition. It focuses on the process of decision-making by individuals and firms, and the welfare consequences. Special attention is devoted to economic applications. Prerequisite: ECO 211 or ECO 213 and MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 301. Macroeconomic Theory. 3 Credit Hours.
Intermediate level analysis of the measurement, determination, and control of aggregate economic activity. Prerequisite: ECO 212, MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 302. Microeconomic Theory. 3 Credit Hours.
Intermediate level analysis of the role of price in resource allocation in markets of varying degrees of competition, as well as in the determination of wages, rent, interest, profits, and public policy. Prerequisite: ECO 211 or ECO 213 and MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.
ECO 303. Macroeconomic Theory. 3 Credit Hours.
Intermediate level analysis of the measurement, determination, and control of aggregate economic activity.
Prerequisite: ECO 212 or ECO 213 and MAS 110 or MTH 130 or MTH 141 or Higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 307. Public Economics. 3 Credit Hours.
This course surveys the role of governments in the economy by surveying several topics in public finance and public policy; it is designed to be a link between the theory and several policy-relevant applications. Students will acquire the microeconomic tools and techniques to identify, analyze, and solve public policy and political economy problems. Students will also learn to apply the theory to current events such as the policy debates over social security, health care, education, and tax reform. Selected topics: budget analysis and scoring; correction of externalities and provision of public goods; public choice theory and government failure; fiscal federalism and redistribution; role of government in education, social security, and health care; income distribution and welfare programs; optimal taxation and tax inefficiencies; taxes on labor supply, savings, capital gains, and business income; fundamental tax reform and consumption taxation. This is an elective class addressed to economics majors, minors, and any student with an interest in the topics.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 311. Labor Economics (I). 3 Credit Hours.
Course surveys the structure and functioning of labor markets. Topics include determinants of labor supply and labor demand, economics of wage differentials, economic impact of labor unions, discrimination in labor markets, and the labor market effects of various government policies such as payroll and income taxes, educational subsidies, and minimum wage laws. The central goal of the course is to provide the student with a framework for analyzing diverse issues related to the labor sector of the economy.
Prerequisite: ECO 300. Or ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 333. Industrial Economics and Public Policy. 3 Credit Hours.
This course surveys several topics in industrial economics, regulation, and antitrust; it is designed to be a link between the theory and several applications. Students will acquire the microeconomic tools and techniques to identify, analyze, and solve industrial economics and government competition policy problems, and will learn to apply the theory to many real-world markets and current economic events. Selected topics: price discrimination; product differentiation; advertising; network effects; consumer search and digital markets; auctions; bargaining; vertical restraints and mergers; collusion and cartels; innovation and intellectual property; natural monopolies and regulation; and antitrust policies. This is an elective class addressed to economics majors, minors, and any student with an interest in the topics.
Requisite: ECO 300 OR ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 345. Environmental Economics. 3 Credit Hours.
This course determines the appropriate way to regulate economic activity so as to achieve an optimal balance between competing environmental and economic goals. Economic reasoning is used to evaluate causes and consequences of environmental problems. The course rigorously evaluates various types of environmental regulation, including 'cap-and-trade,' command and control mandates, and pollution taxes. Other specific topics include public goods, externalities, cost benefit analysis, non-market valuation, and international trade and development and the environment.
Prerequisite: ECO 211 or ECO 213.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 351. Economics of Development. 3 Credit Hours.
This course studies factors underlying economic development, measures of and goals for development, principles applicable to problems of development, the role of markets and planning in development, social, cultural, and political factors affecting economic development, and comparative rates of progress in different countries.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 371. Latin America and the Global Economy. 3 Credit Hours.
An analysis of the historical growth of major Latin American countries, with emphasis on the post World War II period. Topics include industrialization, foreign investment, international trade and regional integration, agrarian reform, inflation, and development strategies and planning within the context of Latin America.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 379. The Political Economy of Growth. 3 Credit Hours.
This course studies the causes of economic growth such as geography, culture, institutions, human and physical capital, as well as technology. It examines the role they play in the development process, casting light in their order of importance for growth and into which growth determinants are amenable to policy change.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 386. Health Economics. 3 Credit Hours.
The course applies the tools of microeconomic analysis to the health care sector. It examines how models of demand and supply apply to the health care sector in general, and in particular to the health insurance, the hospital, the physicians, and the pharmaceutical sectors. By examining the actors and issues in this market, students are able to discuss policy issues from an economic perspective.
Prerequisite: ECO 300. Or ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECO 403. Monetary Economics. 3 Credit Hours.
Analysis of the role of money in economic affairs. Topics include the determinants of the money supply and interest rates, money and prices, money and stability, and growth. Emphasis is placed on current problems and policies.
Prerequisite: ECO 301 or ECO 303.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 420. Economic Growth. 3 Credit Hours.
Course covers selected topics in economic growth. Topics include stylized facts associated with economic growth, the theoretical study of economic growth, and empirical tests of those theories. Course work is supplemented by case studies of individual countries, particularly developing countries.
Prerequisite: ECO 301 or ECO 303.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 430. Applied Econometrics. 3 Credit Hours.
This course introduces basic econometric techniques for analyzing economic data. The goal is to make students sophisticated consumers and skilled producers of empirical analysis, which will be attained by extensive work on a variety of real-world data like students' test scores, CEO wages, mortgage applications, cigarette demand, stock market capitalization, inflation, GDP and interest rates. Learning how to use econometric analysis software is an integral part of the course.
Prerequisite: ECO 211 or ECO 213 and MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 441. International Trade Theory. 3 Credit Hours.
Study of the principles of comparative advantage and the gains from international trade. Analysis of tariffs, quotas, and protectionism is included.
Prerequisite: ECO 300 or ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 442. International Monetary Economics. 3 Credit Hours.
Analysis of models of the exchange rate, the balance of payments, and monetary policy in an open economy.
Prerequisite: ECO 301 or ECO 303.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 443. Economic Analysis of Energy and Commodity Markets. 3 Credit Hours.
This course explores the principles of energy economics, commodity markets and advanced macroeconomics. It discusses the main trends in energy production and consumption, the methods of analysis in energy and commodity markets, and the main challenges in the energy sector. The analysis of oil prices and the economics of oil exporting countries is emphasized.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 444. Game Theory in Economic Applications. 3 Credit Hours.
This course is an introduction to the techniques and questions of modern microeconomics. The course will expose you to the techniques of game theory, the workhorse of modern microeconomics, and will apply those techniques to the analysis of a variety of economics situations and institutions.
Prerequisite: MAS110 or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 445. Global Economics: Trade and Currencies. 3 Credit Hours.
In this course, students are exposed to two fundamental topics which are primordial to the understanding of any economic, political and/or social circumstance in any given country at any given time: (1) The evolution and meaning of the business cycle and capitalism, and (2) The effect of international trade and currencies. These two themes have sparked debates for centuries as they have great implications in the development of countries. Also, this course challenges students' critical thinking and analytical skills with a wide range of controversial readings on these two topics. This course is divided into four sections. The first one introduces students to the idea of the business cycle. The second section aims at explaining how capitalism was born and how it has evolved in the 19th and 20th centuries. Then, the course centers on explaining capitalism today and presents criticisms. And finally, students analyze how the business cycle and capitalism has unfolded and affected certain countries in Latin America.
Prerequisite: ECO 301 or ECO 303.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECO 460. Industrial Organization. 3 Credit Hours.
This course shows how microeconomic theory can be used to understand the diverse practices encountered in real-world markets between the extreme cases of perfect competition and monopoly. Topics to be covered include strategic pricing behavior, collusion, advertising and information, vertical integration, vertical restraints, regulation and a review of empirical literature.
Prerequisite: ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 496. Directed Studies in Economics. 1-3 Credit Hours.
Supervised readings, individual research project, or independent investigation of selected non-STEM related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 497. Directed Studies in Economics. 1-3 Credit Hours.
Supervised readings, individual research project or independent investigation of selected STEM-related problems in the discipline. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ECO 498. Special Topics in Economics. 3 Credit Hours.
Special topics in selected non-STEM areas of Economics.
Prerequisite: ECO 300. Or ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 499. Special Topics in Economics. 3 Credit Hours.
Special topics in selected STEM areas of Economics.
Prerequisite: ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 510. Mathematical Economics and Applications. 3 Credit Hours.
The course will focus on specific applications of microeconomic theory, which may vary each semester. Topics may include choice under uncertainty, game-theoretic models of insurance markets, principal-agent problems, and basic auction theory. The discussion of each application will be preceded by a discussion of the mathematical tools required. The mathematics topics covered may include basic theory of sets and functions, concave / convex functions and their role in optimization, expectations, conditional probability, Bayes rule, and order statistics.
Prerequisite: ECO 211 or ECO 213 and MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 511. Empirical Labor Economics. 3 Credit Hours.
A theoretical and empirical analysis of how labor markets operate. A survey of the literature, problems, and methodology of modern labor economics. Human capital analysis, the wage structure, job search and job-matching models, time-allocation models, the economic impact of labor unions, labor market discrimination, the determinants of labor demand and supply, and the factors affecting government policy relating to the labor sector is also included.
ECO 430.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 512. Topics in Mathematical Economics. 3 Credit Hours.
This course shows how modern economic techniques can be used to identify optimal managerial decisions and industrial developments. Diverse real-world economic applications are examined.
Prerequisite: ECO 211 or ECO 213 and MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 520. Econometrics. 3 Credit Hours.
Statistical methods of estimating and testing mathematical model of economic relationships.
Prerequisite: ECO 211 or ECO 213 and MAS 110, or MTH 130 or MTH 141 or higher.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 521. Advanced Macroeconomic Theory. 3 Credit Hours.
The primary objective of this course is to introduce the student to the mathematical presentation of the major Classical, Neo-classical, Keynesian, and Neo-Keynesian macroeconomic models.
Prerequisite: ECO 301 or ECO 303.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 532. History of Economic Thought. 3 Credit Hours.
Historical development of economic doctrines and theory. Topics and individuals discussed include mercantilism, physiocracy, Adam Smith, Thomas Malthus, David Ricardo, J. S. Mill, Karl Marx, marginal analysis, Alfred Marshall, and J. M. Keynes. Special emphasis is placed on the effect of historical insights upon the contemporary core of economic theory.
Prerequisite: ECO 213 or ECO 211 and ECO 212.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 533. Advanced Microeconomic Theory. 3 Credit Hours.
An introduction to the mathematical approach to microeconomic theory. Topics include consumer/household behavior, the theory of the firm, resource allocation, welfare economics, and uncertainty theory.
Prerequisite: ECO 302.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 555. Economics Departmental Honors Research Project. 3 Credit Hours.
Research project to fulfill requirements for Departmental Honors in Economics.
Components: THI.
Grading: SUS.
Typically Offered: Offered by Announcement Only.

ECO 600. Econometrics. 3 Credit Hours.
Statistical methods for estimating and testing mathematical models of economic relationships.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 601. Graduate Macroeconomic Theory. 3 Credit Hours.
The primary objective of this course is to introduce the student to the mathematical presentation of the major Classical, Neo-classical, Keynesian, and Neo-Keynesian macroeconomic models.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 602. Advanced Microeconomic Theory. 3 Credit Hours.
An introduction to the mathematical approach to microeconomic theory. Topics include consumer/household behavior, the theory of the firm, resource allocation, welfare economics, and uncertainty theory.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECO 603. Monetary Theory and Policy. 3 Credit Hours.
Current monetary theory and its use and application in fiscal and monetary policymaking. Topics include the rational expectations hypothesis, time inconsistency, and the role of the government budget constraint.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 604. Topics in Applied Macroeconomics. 3 Credit Hours.
Course acquaints students with current substantive issues in macroeconomics. Topics include consumption determination, savings behavior, bequest behavior, fiscal policy effects on interest rates, consumption, real exchange rates, trade balances, and inflation.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 610. Mathematical Economics and Applications. 3 Credit Hours.
The course will focus on specific applications of microeconomic theory, which may vary each semester. Topics may include choice under uncertainty, game-theoretic models of insurance markets, principal-agents problems, and basic auction theory. The discussion of each application will be preceded by a discussion of the mathematical tools required. The mathematics topics covered may include basic theory of sets and functions, concave / convex functions and their role in optimization, expectations, conditional probability, Bayes rule, and order statistics.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 611. Labor Economics (III). 3 Credit Hours.
The formulation and testing of models of labor markets. The application of the tools of microeconomics and econometrics to the analysis of labor markets. Leading contributions in the areas of dynamic analysis of labor markets, human capital investment, the determinants of the wage structure, time allocation and search models, dual and internal labor market models, and analysis of government policy are discussed.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 612. Economic Strategies for Firms and the Industry. 3 Credit Hours.
This course shows how modern economic techniques can be used to identify optimal managerial decisions and industrial developments. Diverse real-world applications are examined.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 613. Microeconomics of Sustainability. 2 Credit Hours.
The course examines production and costs from a sustainability perspective, emphasizing the tradeoffs associated with reducing energy and other natural resources in production processes. Conditions under which reducing natural resources while using more of other inputs reduces total costs without sacrificing production are derived. Extensions are studied in which the same conditions are derived under a more general definition of costs which includes the costs of natural resource use to society and to brand reputation. The course then examines consumer demand for energy efficient products, emphasizing financing arrangements which allow the household to avoid the up-front fixed costs of energy efficient durable goods. Finally, the course examines externalities: actions by the firm which impose costs or benefits to society in a way which is not accounted for by prices.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 614. Valuing Public Goods. 2 Credit Hours.
While the costs of becoming more sustainable are relatively straightforward for the firm to quantify, the benefits to society (social benefits) are more difficult to determine. Nonetheless, assessing how clientele and other external stakeholders value sustainable practices is important if firms are to prioritize their efforts. This course will introduce students to the world of non-market valuation: the valuation of goods and services for which no true market exists with prices to reveal how much consumers are willing to pay. This class will provide a solid foundation for any manager to begin to understand how to appropriately value sustainable practices, enabling the firm to choose projects that provide the most social benefit net of implementation costs.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 615. Managing Regulation Compliance. 2 Credit Hours.
Sustainability initiatives must be integrated with a complex set of government regulations. Regulation systems such as standards, tradeable permits, and taxes are analyzed from the firm’s point of view. Regulation systems are also studied when compliance costs are uncertain or changing over time. Many modern regulation systems allow firms to earn credits by over-complying, which can be sold or banked for future use. The course will study compliance/credit management, including over the business cycle and when regulation changes over time. The value of compliance/over-compliance to the firm’s brand and to society/external stakeholders is integrated into the optimal compliance decision.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECO 616. Sustainability and Market Dynamics. 2 Credit Hours.
The course studies the impact of sustainability initiatives on the organization of firms in the market. The course derives conditions under which sustainability initiatives favor market entrants over incumbent firms and the reverse. The course studies the use of sustainability initiatives by firms to segment the market. The value of sustainability initiatives in oligopolistic versus competitive markets are also studied. Finally, the value of sustainability initiatives to external stakeholders and to the firm's brand is integrated with the benefits and costs of changes in the competitiveness of the market resulting from the sustainability initiatives.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 617. Enterprise Risk Management. 2 Credit Hours.
Tools for the measurement and mitigation of risk are developed. Measurement tools include value at risk measures, expert opinion, and the use of market prices. Mitigation tools include catastrophe bonds, derivatives such as weather derivatives, and adaptations (building resilience). Risks that are relevant to sustainability, such as fat tailed risk and environmental catastrophes, are emphasized. The value of environmental risk reduction to the firm and society are derived.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 620. Advanced Econometrics. 3 Credit Hours.
Advanced econometric methods including advanced techniques in multiple regression, Bayesian methods, maximum likelihood estimators, distributed lag models, spectral analysis, and Monte Carlo studies are discussed.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 621. Advanced Macro Analysis. 3 Credit Hours.
Theory of the determination of national income, employment, and price levels. Course emphasizes mathematical solutions of Classical, Keynesian, and other economic models.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 625. Applied Econometrics. 3 Credit Hours.
Practical applications of econometrics are surveyed. Computer packages are used to examine economic data. Topics include the series analysis, limited dependent variable models, pooling cross section and time series data, model selection, and rational expectations models.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 633. Advanced Micro Analysis. 3 Credit Hours.
Theory of the behavior of firms and households and the determination of prices and resource allocation in a decentralized economy.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 634. Advanced Micro Analysis II. 3 Credit Hours.
Continuation of ECO 633. Advanced analysis of theory of the household and firm emphasizing recent approaches. Analysis of decisions over time, duality relationships, advanced demand theory, risk and uncertainty, behavioral theories of the firm, and technological change are covered.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 645. Regulations Economics. 3 Credit Hours.
This course examines public policies for dealing with problems arising in markets in which competitive forces are weak. The focus is on monopolies, oligopolies, cartels, and other environments where market mechanisms are unlikely to produce outcomes that benefit consumers more than the alternatives involving costly government intervention.

Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECO 650. Essentials of Economics. 2 Credit Hours.
This course provides an introduction to the core concepts of economics. Topics include allocation of scarce resources by the laws of supply and demand, use of the market place as the principle organizing tool of the economy, externalities, and market failure. Pollution of the environment is treated as a needed correction to be done by public regulation through taxation and legislation. The principal forms of firm organization and dissolution are also discussed. Applications of the laws of supply and demand are made to forecasting demand and analyzing cost structure. The entry and exit of firms and the valuation of the firm is also covered.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 655. Managerial Decisions in a Global Economy. 2 Credit Hours.
Modern techniques of economic analysis and decision science are applied to the management of the firm in a global environment. Business planning and the determinants of supply and demand are an integral part of the course. The principal forms of business organization and dissolution are reviewed. The major issues confronted by the firm: Principal-agent problem (or how to motivate managers to act in the best interest of the owners, the shareholders), moral hazard, discounting of free cash flow and terminal value, economies of scale and scope, and strategic management decision making are covered.

Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECO 660. Essentials of Economic Theory. 3 Credit Hours.
An economic study of the environment in which the decision making process takes place in management and the functional areas. Structured especially for students without an undergraduate background in economics. Credit not applicable toward 36-credit professional MBA component.

Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ECO 691. Managerial Economics. 3 Credit Hours.
Application of economic analysis to the formulation and solving of management problems and the determination of business policy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 692. Applied Economics. 3 Credit Hours.
This course is to provide practice in applying economic principles for graduate students with a basic understanding of economic theory.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECO 695. Global Economics. 2 Credit Hours.
This is a course in global economics with focus on economic policies and country risk. We study the aggregate behavior of macroeconomics variables that are relevant for business decisions. We take into account the interaction of the national economy with the rest of the world. In other words, we do global economics and study the roles of monetary and fiscal policies in an open economy, foreign direct investment, and the exchange rate.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ECO 698. Selected Topics. 1-3 Credit Hours.
Topics in selected areas of specialization.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 699. Directed Study. 1-3 Credit Hours.
Graduate-level supervised readings, individual research project or independent investigation of selected economics problems. Offered only by special arrangement with supervising faculty member, who approves topic and evaluation process at time of registration.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

ECO 750. Applied Economics: IO. 3 Credit Hours.
The first part of the course will focus on static analysis of market outcomes. The emphasis will be on empirical work, and there will be a number of places where we take digressions into econometric and computational issues. The second part will focus on related fields (bargaining, auctions and market design), and then move on to dynamic analysis in I.O. (both single and multiple agent dynamic models).
PRE-REQUISITE: ECO 602 AND ECO 633.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECO 860. The Theory of International Trade. 3 Credit Hours.
This course presents rudiments in trade theory and open macroeconomics. International arbitrage as well as determination of the values of currencies and stocks.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

Ecosystem Science and Policy (ECS)

ECS 111. Introduction to the Earth's Ecosystem. 3 Credit Hours.
Earth's ecosystems and the interactions of humans with them. Concepts in ecology, environmental science and policy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 112. Field Problems in Ecosystem Science and Policy. 2 Credit Hours.
Problem solving in ecology and environmental management. Class projects and case studies providing experience in identifying problems, quantifying scientific issues and considering management options and outcomes. Extensive field experience.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 113. Introduction to Environmental Policy. 3 Credit Hours.
Theories and case studies from various fields, including anthropology, economics, ethics, geography, political science and psychology, will be used to explore the multiple perspectives that influence group and individual perceptions of environmental issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 195. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 196. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 197. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 198. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.
ECS 201. Seminar Series in Contemporary Environmental Issues I. 1
Credit Hour.
Current environmental topics involving interaction of science and policy.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ECS 202. Seminar Series in Contemporary Environmental Issues II. 1
Credit Hour.
Current environmental topics involving interaction of science and policy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 204. Environmental Statistics. 3 Credit Hours.
An overview of parametric and nonparametric statistics with an
emphasis on applications in the analysis of environmental data.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 215. Introduction to Private Urban and Suburban Green Spaces. 1
Credit Hour.
Faculty supervised research & application projects in indoor, urban,
and suburban green spaces. Topics of focus include green walls, roof
gardening, edible gardening, permaculture, sustainable gardening,
composting & vermiculture, gardening for wildlife, and backyard ecology.
No previous ecology or gardening experience required.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 232. Ecological Principles and Environmental Applications. 3 Credit
Hours.
Overview of the science of ecology and its basic principles. Covers
aspects of organismal ecology (including population genetics, structure,
growth and regulation; adaptations and responses to the physical
environment and biological communities); community ecology; and
ecosystems (including energy flow, biogeochemical cycles, and biomes).
Students will learn to apply ecological principles to understand and solve
environmental problems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 272. Special Topics in Ecosystem Science and Policy. 1-3 Credit
Hours.
Content varies by semester and is indicated in parentheses following
course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 295. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
For courses taken at other institutions that have no equivalents here.
Components: LEC.
Grading: GRD.

ECS 296. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
For courses taken at other institutions that have no equivalents here.
Components: LEC.
Grading: GRD.

ECS 297. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
For courses taken at other institutions that have no equivalents here.
Components: LEC.
Grading: GRD.

ECS 298. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
For courses taken at other institutions that have no equivalents here.
Components: LEC.
Grading: GRD.

ECS 299. Studies in Ecosystem Science and Policy. 1-5 Credit Hours.
For courses taken at other institutions that have no equivalents here.
Components: LEC.
Grading: GRD.

ECS 301. Tools for Environmental Decision-Making: The Quantitative
Perspective. 3 Credit Hours.
Quantitative decision-making techniques and methodologies.
Prerequisite: ECS 111 and ECS 112. or Requisite: Plan of ECS.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 302. Perspectives on Environmental Decision Making. 3 Credit
Hours.
Techniques for assessing human impacts on the environment. Covers
approaches from law, ethics, anthropology and includes cases involving
local, regional and global environmental management issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 309. Microbes and the Environment. 3 Credit Hours.
This course is designed to provide students in geology, biology and
environmental science a fundamental understanding of the role microbes
play in shaping the Earth and its environments as well as the basic
principles and approaches to studying these interactions in both modern
and ancient settings. The metabolic diversity displayed by microbial
communities makes them an integral component of global elemental
cycles. In this regard, microorganisms have shaped our planet over the
past 4 billion years and continue to do so in a very prominent way. The
goal of this course is to learn about microbial diversity and metabolism,
and the ability of microbes to shape and influence the environment.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 310. Sustainable Living. 3 Credit Hours.
Sustainable Living explores ways of living that can be sustained
for thousands of years, without further damage to earth, ocean and
atmosphere. Topics covered include renewable energy, agricultural
practices, water issues, green building, low carbon transportation and
healthy living/eating. Students advocate for sustainable practices of their
choice in writing and in oral/visual presentations. Frequent field trips.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 312. Environment Assessment. 3 Credit Hours.
Execution of environmental due diligence in the context of property
transactions and land and water pollution in a technical, regulatory, and
legal framework, including how client advocacy and regulatory detail
influence project design.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECS 323. Population, Sustainability, and the Media. 3 Credit Hours.
Explores opposing views of population growth and environmental sustainability through the media and cinema: contrasts 'Doomsters' who believe population growth and resource consumption threaten human survival and pro-growth 'Boomsters' who believe human ingenuity and technology will continue to allow humankind to prosper.

Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 325. Hazards and Disasters: The Nature-Society Interface. 3 Credit Hours.
Borrows from themes in Geography, Urban Planning, Anthropology and Policy Studies to explore how human-environmental interactions determine the distribution, causes and consequences of natural hazards and disasters.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 332. Ecology and Land Use in the Galapagos. 3 Credit Hours.
Fundamental principles of ecology manifested on Isla Isabela will be employed to evaluate land usages including subsistence and production agriculture, animal husbandry, fuel wood and timber, and conservation with ecotourism. Habitats, flora, and fauna from the vicinity of Puerto Villamil to the rim of Volcán Sierra Negra; analysis of agricultural practices and problems of the mist zone on this volcano's southeastern flank.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 335. Biodiversity in Peru. 3 Credit Hours.
The focus is on developing skills to analyze and value the components of biodiversity, identifying its potentials and the tools to make sustainable use and conservation possible.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 337. Latin America and the Environment. 3 Credit Hours.
Theoretical dimensions of current environmental challenges in Latin America and examines their ecological, social, economic, and political dimensions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 342. Decision-Making and the Environment. 3 Credit Hours.
Provides a comprehensive overview of the art and science of decision modeling in natural resources policy management. Students learn to understand and develop basic decision models, interpret the results and communicate them to non-analytical decision makers.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 345. Economics of Natural Resources and the Environment. 3 Credit Hours.
A comprehensive overview of the economics of national, international, and global environmental problems. A unifying theme throughout is sustainable development defined as 'maximizing the net benefits of economic development while maintaining the services and quality of natural resources over time'. We will use economic reasoning to examine causes and consequences of environmental and resource problems, and measures for dealing with them.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 352. Environmental Ethics. 3 Credit Hours.
Theoretical and practical issues in the field of environmental ethics.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 357. Global Food: A Hands-On Approach. 3 Credit Hours.
Application of principles of permaculture via designing and creating a small 'global farm' on campus to grow perennial food crops which are unique to the South Florida environment. We learn by doing, cultivating plants that hold the solution to world hunger problems.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 360. Readings in Ecosystem Science and Policy. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement with a faculty member. May be repeated for credit.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 361. Readings in Ecosystem Science and Policy. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement with a faculty member. May be repeated for credit.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 362. Readings in Ecosystem Science and Policy. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement with a faculty member. May be repeated for credit.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 363. Readings in Ecosystem Science and Policy. 1-3 Credit Hours.
Supervised readings on special topics. Offered by special arrangement with a faculty member. May be repeated for credit.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 371. Readings in Ecosystem Science and Policy. 1-2 Credit Hours.
Supervised readings on special topics. Offered by special arrangement with a faculty member. May be repeated for credit.
Components: DIS.
Grading: GRD.
Typically Offered: Offered by Announcement Only.
ECS 372. Special Topics in Ecosystem Science and Policy. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 373. Topics in Ecosystem Science. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 374. Topics in Environmental Policy. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 375. Topics in Environment and the Humanities. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 376. Topics in Environmental Communication. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 377. Topics in Environmental Economics and Development. 3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 379. Special Topics in Ecosystem Science and Policy. 1-4 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 380. Field Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
Field course to various U.S. and international regions, focusing on current and historic interactions of humans with the local environment. Includes water, land, and mineral resources as well as impacts on local ecosystems. Emphasis on current management efforts and potential impacts of climate change.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 381. Field Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
Field course to various U.S. and international regions, focusing on current and historic interactions of humans with the local environment. Includes water, land, and mineral resources as well as impacts on local ecosystems. Emphasis on current management efforts and potential impacts of climate change.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 385. Civic Engagement in the Galapagos. 3 Credit Hours.
This course is part of the UGalapagos semester held in the Galapagos and is open only to students who have been accepted by the Department of Biology. This field course offers you a rare chance to examine human interactions in a highly politicized landscape of conservation. You will learn historical development and contemporary issues of Latin America from an interdisciplinary perspective, through the cultural, political and social lens of the Galapagos.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 391. Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
(Not offered: transfer credit only) Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 392. Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
(Not offered: transfer credit only) Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 393. Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
(Not offered: transfer credit only) Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 394. Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
(Not offered: transfer credit only) Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 395. Studies in Ecosystem Science and Policy. 1-4 Credit Hours.
(Not offered: transfer credit only) Courses taken at other institutions but having no direct equivalents here.
Components: LEC.
Grading: GRD.

ECS 401. Internship. 3 Credit Hours.
Students selecting the internship will be required to spend a minimum of 120 contact hours working in an outside firm or agency whose mission is to address environmental issues where science and policy intersect.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ECS 402. Thesis. 3 Credit Hours.
Individual, original research of independent study supervised by a UM faculty member and concluded by formal thesis preparation, public oral defense and submission of the thesis.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 403. Interdisciplinary Approaches. 3 Credit Hours.
Students with diverse disciplinary backgrounds will design an interdisciplinary study focused on an environmental problem with a major science component and significant societal implications. Students will apply quantitative methods, formulate usable policy, and communicate their results.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 405. Applied Research in Ecosystem Science and Policy. 1-3 Credit Hours.
Faculty-mentored applied research in environmental topics. Projects in natural ecosystems, sustainable design and business, and communication of environmental issues.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 415. Research in Private Urban and Suburban Green Spaces. 1 Credit Hour.
Faculty supervised research & application projects in indoor, urban, and suburban green spaces. Topics of focus include green walls, roof gardening, edible gardening, permaculture, sustainable gardening, composting & vermiculture, gardening for wildlife, and backyard ecology.
Requisite: ECS Major or ECS Minor or Prerequisite: ECS 215.
Components: FLD.
Grading: GRD.

ECS 420. Science and Conservation in Practice. 3 Credit Hours.
Section dedicated to exploring the science and conservation in one of the world’s most pristine and fragile ecosystems. Exploration of how tourism offers an alternative to unsustainable fisheries that once drove the local economy, yet has created a new set of pressures on the people and the environment. Mitigation efforts, science, and international conservation mesh with an understanding of local politics, customs, and cultures.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 432. Ecology in the Galapagos. 3 Credit Hours.
Organisms in relation to their environment, with a focus on interactive hands-on learning experiences that connect empirical nature with abstract thinking. Lectures, discussion and field work will help students begin to understand ecosystem ecology, plant dispersal and colonization, organisms’ responses to spatial and temporal variability in their environments, plant/animal interactions. Origins and effects of invasive species and actions of bio-control agents.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 433. Conservation in Practice. 3 Credit Hours.
Section dedicated to exploring the science and conservation in one of the world’s most pristine and fragile ecosystems. Exploration of how tourism offers an alternative to unsustainable fisheries that once drove the local economy, yet has created a new set of pressures on the people and the environment. Mitigation efforts, science, and international conservation mesh with an understanding of local politics, customs, and cultures.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 485. Political Ecology of the Galapagos. 3 Credit Hours.
This course is part of the UGalapagos semester held in the Galapagos and is open only to students who have been accepted by the Department of Biology. Throughout the term, you will engage in civic activities identified in consultation with the people, government and public health facilities of the small, rural village of Villamil, the sole habitation on Isla Isabella. A major aim is to nurture the mutual respect and understanding across the cultural divide that is necessary to make a difference in the civic life of a community.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 501. Interdisciplinary Environmental Theory. 3 Credit Hours.
Theoretical approaches in environmental and social science fields, including conservation biology, ecology, geography, economics, sociology, anthropology, philosophy, and interdisciplinary approaches. Themes include human ecology, historical ecology, landscape ecology, environmental law and ethics, perception of risk and uncertainty, vulnerability and adaptation, and environmental valuation.
Requisite: Plan of Ecosystem Science and Policy.
Components: DIS.
Grading: GRD.
Typically Offered: Fall.

ECS 503. Interdisciplinary Environmental Methods. 3 Credit Hours.
Environmental methods related to core programmatic themes of Urban Ecology, Global Public Health, Climate and Society, Environment and the Media, Integrated Marine and Terrestrial Management, and Regulatory Regimes. The course focuses on the application of Interdisciplinary approaches and methods for addressing complex environmental problems. Students will learn to design and employ interdisciplinary approaches, using qualitative and quantitative methods and analysis, through lectures, reading assignments, discussion sessions, and assignments.
Requisite: Plan of Ecosystem Science and Policy.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ECS 507. Interdisciplinary Environmental Decision Analysis. 3 Credit Hours.
Approaches to studying and interpreting human behavior related to a range of decision making at the level of individual, group, and firm. Multidisciplinary theories and methods informing work in the decision sciences will be covered from fields of psychology, business, economics, political science, and anthropology.
Requisite: Plan of Ecosystem Science and Policy.
Components: LEC.
Grading: GRD.

ECS 515. Private Green Space Management. 3 Credit Hours.
Students plan and manage ongoing and proposed green space projects. Student managers work with supervising faculty; also organize and educate student volunteers and students concurrently enrolled in ECS 215 and 415.
Prerequisite: ECS 415.
Components: FLD.
Grading: GRD.
Typically Offered: Fall & Spring.
ECS 572. Special Topics in ECS. 0-3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 580. Field Studies. 1-4 Credit Hours.
This course will provide participants with the opportunity for intensive field research geared toward an interdisciplinary understanding of environmental issues and conservation concerns.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

ECS 601. Interdisciplinary Environmental Theory. 3 Credit Hours.
Theoretical approaches in environmental and social science fields, including conservation biology, ecology, geography, economics, sociology, anthropology, philosophy, and interdisciplinary approaches. Themes include human ecology, historical ecology, landscape ecology, environmental law and ethics, perception of risk and uncertainty, vulnerability and adaptation, and environmental valuation.
Requisite: Plan of Ecosystem Science and Policy.
Components: DIS.
Grading: GRD.
Typically Offered: Fall.

ECS 603. Interdisciplinary Environmental Methods. 3 Credit Hours.
Environmental methods related to core programmatic themes of Urban Ecology, Global Public Health, Climate and Society, Environment and the Media, Integrated Marine and Terrestrial Management, and Regulatory Regimes. The course focuses on the application of Interdisciplinary approaches and methods for addressing complex environmental problems. Students will learn to design and employ interdisciplinary approaches, using qualitative and quantitative methods and analysis, through lectures, reading assignments, discussion sessions, and assignments.
Requisite: Plan of Ecosystem Science and Policy.
Components: SEM.
Grading: GRD.
Typically Offered: Fall.

ECS 605. Interdisciplinary Environmental Law and Policy. 3 Credit Hours.
Analysis of science-based environmental decision-making and policy implementation at the federal and state levels in the United States, with comparative international perspectives, and an introduction to international institutions that fashion and carry out environmental policy. Case studies will cover authorization, appropriations and over-sight functions of Congress and state legislatures; the role of the executive, federal and state, in initiating and implementing statutes by regulation and other means; and the role of negotiation, litigation, mediation and consensus-building in resolving disputes and advancing or thwarting environmental policy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 607. Interdisciplinary Environmental Decision Analysis. 3 Credit Hours.
Approaches to studying and interpreting human behavior related to a range of decision making at the level of individual, group, and firm. Multidisciplinary theories and methods informing work in the decision sciences will be covered from fields of psychology, business, economics, political science, and anthropology.
Requisite: Plan of Ecosystem Science and Policy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 608. Interdisciplinary ECS Seminar.. 1-3 Credit Hours.
Seminar centering on research and case studies illustrating cutting edge human-environment research, and including both qualitative and quantitative methods. Intensive reading and writing related to relevant topics in the field.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 609. Contemporary Representations of the Environment. 3 Credit Hours.
This course will combine media studies, environmental studies, and critical theory to give students a broad introduction to ways in which screen media are used today to represent both the natural world and also environmental issues such as climate change, animal extinction, and natural resource use. From more conventional media such as feature fiction films (e.g. Wall-e, The Day After Tomorrow, Avatar), documentary films (e.g. An Inconvenient Truth, HBO's Gasland), and television news coverage, to more niche formats like Google Earth's global mapping and in-dash monitors that depict miles-per-gallon, screen technology has long been and is increasingly used to mediate our relationship with surrounding ecosystems. Students will look at mainstream television channels (e.g. Discover, National Geographic, and the Weather Channel) alongside the digital campaigns of agencies and institutions directly aimed at conservation efforts, including the ecotourism industry, non-profit environmental groups, and governmental bodies such as the National Parks Service. In addition, this course will investigate the increasing role of interactive media in museums and science centers, as well as the rising power of social media in disseminating news regarding environmental issues.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
ECS 610. Technology and Human Behavior. 3 Credit Hours.
This course will explore the social aspects of technology use and cultural adaptation through cross-cultural ethnographic research on science and traditional beliefs. From the adoption of chainsaws in Amazonian forestry to the use of smart watches in Japanese cities, technological choice will be examined through psychological theories of behavior, socio-cultural perspectives, and institutional and economic forces. Reflecting the rising social, cultural, scientific, and political importance of emerging digital culture (e.g. virtual reality, smart devices, artificial intelligence), a key focus of the second half of the course will focus on philosophical notions of post-human cyborgism. Students will be introduced to recent research on the cognitive issues of social media use and consumption, including social media addiction and other neurological impacts of chronic screen use. Coursework will connect historical understandings and larger social analysis of digital media use and encourage students to participate in an ongoing exploration of their own technological choices and media practices. Students will also be exposed to multidisciplinary theories and research on risk perception and the psychology and effectiveness of environmental messaging in order to address how various media technologies impact individual and collective thinking and action.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

ECS 611. Nature, the Anthropocene, and Visual Culture. 3 Credit Hours.
Different cultural and historical contexts have conceived of humanity’s relationship to the natural world in vastly different ways, from ‘sacred and part of’ to ‘separate from’ and ‘steward over.’ A culture’s techniques of representation, use of imagery, and ways of seeing are a key part of the shaping of its worldview and cognitive framework of shared ideas and beliefs. This course is an opportunity for students to use an anthropologist’s eye to actively engage with the human production of knowledge about the natural world through visual culture. Rather than approaching visual anthropology with its usual divide between ‘anthropological content’ and ‘aesthetic composition,’ this course will foster both approaches as it examines human perceptions of the environment from prehistoric cave paintings to modern day street art. Key elements of visual anthropology will be introduced, including symbols and symbolism, reflexivity, visual data of everyday life, art analysis, ethics, society-as-text paradigm, urban visual data, and ways of conceiving systems of visual representation. Representations of Other will be analyzed through theories of the exotic, gender, race, post-colonialism, nationalism, and heritage studies.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 612. Environmental Communication, New Media, and Policy. 3 Credit Hours.
Facebook and Twitter to the rhetorical film essay documentaries that have waged ideological wars over the past twenty years, screen and new media are an increasingly powerful force in the shaping of policy, political awareness, and popular ideological views of the environment. This course will draw on critical approaches of media theory, rhetoric, and political science to study and interpret the political use of visual media. Just as FDR’s WPA used film to propagandize the agricultural importance of public works, and Hollywood has been harnessed for ecological causes from natural conservation to climate change, today screen and digital media (e.g. television commercials, podcasts, social media blasts) are the driving force of PR campaigns for both governmental bodies and private companies that greatly impact environmental understanding and policy. From information to misinformation, viral content streams constantly onto screens across the world, whose apps are also used for activism and citizen science—students will look at what strategies of circulation and rhetoric are used to wage digital campaigns to communicate and shape ecological values and policy.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

ECS 614. Environment, Culture, and Media Thesis. 3-6 Credit Hours.
This course is for research culminating in a Master’s thesis. Students will enroll in 3-6 credits while researching and writing their final project for the ECM Masters of Arts.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ECS 615. Environment, Culture, and Media Internship. 3-6 Credit Hours.
This course is for hands-on experience and research culminating in a final Master’s internship report. Students will enroll in 3-6 credits while completing their internship and researching their final project for the ECM Masters of Professional Science.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ECS 672. Special Topics in ECS. 0-3 Credit Hours.
Content varies by semester and is indicated in parentheses following course number and title in class schedule.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 680. Field Studies. 1-4 Credit Hours.
This course will provide participants with the opportunity for intensive field research geared toward an interdisciplinary understanding of environmental issues and conservation concerns.
Components: LEC.
Grading: GRD.
Typically Offered: Spring & Summer.

ECS 725. Problems in Environmental Science and Policy. 1-6 Credit Hours.
Content and prerequisites announced when offered. Course may be repeated for credit if content varies.
Requisite: Plan of Ecosystem Science and Policy.
Components: LEC.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
ECS 790. Directed Readings. 1-3 Credit Hours.
Individually supervised readings on special topics. Offered by arrangement with the instructor. May be retaken for credit.
Components: THI.
Grading: GRD.
Typically Offered: Fall & Spring.

ECS 820. Master’s Research. 0-9 Credit Hours.
Individual study for students exiting the doctoral program without a successful dissertation proposal.
Components: THI.
Grading: SUS.
Typically Offered: Fall & Spring.

ECS 830. Pre-Candidacy Research. 1-9 Credit Hours.
Research for ECS Ph.D. students who have not attained candidacy.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

ECS 840. Doctoral Dissertation. 1-12 Credit Hours.
Required for all candidates for the Ph.D. The student will enroll for credit as determined by his/her advisor but not for less than a total of 13 credits total. No more than 12 hours of ECS 730 may be taken in a regular semester, nor more than six in a summer session.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

ECS 850. Research in Residence. 1 Credit Hour.
Used to establish research in residence for the Ph.D., after the student has been enrolled for the permissible cumulative total in appropriate doctoral research. May be regarded as full-time residence as determined by the Dean of the Graduate School.
Components: THI.
Grading: SUS.
Typically Offered: Fall, Spring, & Summer.

Numerous courses are also offered, including:

EPS 280. Introduction to Family Studies: Dating, Coupling, Parenting. 3 Credit Hours.
Theory and practice of romantic relationships and parent-child relationships, including discussion and skills building. Research based information on how to maximize the quality of these interpersonal relationships will be examined.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 291. Community and Character Development. 3 Credit Hours.
The course covers moral and psychological dimensions pertaining to character development as it occurs in communities. Topics include contemporary theory and research regarding perspectives on virtue and morality, states of character, ethical decision making, and character development. The reciprocal relationships between character and community will be a central theme in exploring ethical issues that arise in working with individuals, institutions, and communities. Theory and research will be linked to relevant applications.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 306. Insanity and Humanity: Mental Illness, Society, Stigma and Services. 3 Credit Hours.
The genesis for this course was the generally poor, inaccurate and stigmatized understanding of mental illness in society based on portrayals in popular media including Hollywood produced films. However, over the past several years the depth and accuracy of awareness and knowledge has changed, as the depiction of mental illness and treatment services in films has improved and the availability of narrative accounts has increased. This course is designed to allow Human and Social Development majors, with a particular interest in wellness and human services, to explore varying portrayals of mental illnesses in popular media. The course will foster critical analysis of narrative and film depictions of illness, as well as connect these depictions to a broader narrative on stigma, social determinants of illness and wellness, prevention and intervention.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 311. Group Processes and Development. 3 Credit Hours.
Research findings concerning the nature of small groups and patterns of behavior associated with them are explored. Students experience an ongoing group process to which theories and concepts can be applied. Emphasis is placed on learning to be a participant observer of group behavior and processes, learning about one’s own behavior in groups, and developing skills to be a more effective member and leader in task groups.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
EPS 321. Understanding Human Service Organizations. 3 Credit Hours.
Focus on unique role of community-based human services organizations in society with an overview and history of community organizations, which provide services, support, advocacy, and organizing in today's communities. Review of the systems, cultures, structures, and processes of community organizations with a special emphasis on promoting well-being in communities. This course has a 10 hours field research experience requirement. This course is a designated Upper Level Communication Requirement; advanced written, digital and/or oral communication proficiencies will be emphasized in this course. Credit for ENG 105 and ENG 106 (or equivalent), is required for this course. Prerequisite: EPS 201 or Co-requisite: EPS 311.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 340. Psychology and Sociology of Sexual Identity. 3 Credit Hours.
History, psychology, and sociology of gay, lesbian, and transgendered populations. Prerequisite: PSY 110 or SOC 101.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 351. Introduction to Statistics and Research Design. 3 Credit Hours.
The course will cover basic statistics relevant to the social sciences (e.g., central tendency, variation, t-tests, correlations), with emphasis on real world applications employing commonly used research designs. Students will acquire the tools necessary to interpret elementary statistical analyses and a foundation in the basic analytic methods used in conducting quantitative research in the behavioral sciences.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 360. Educational Psychology. 3 Credit Hours.
A review of basic educational psychology principles including cognitive and language development, personal, social and moral development, learning theories, and motivation. A review of basic concepts that contribute to effective learning and other aspects of education.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 361. Community Psychology and Development. 3 Credit Hours.
Community psychology is about the prevention of psychosocial problems and the promotion of mental health and well being through the creation of equitable and just social settings, neighborhoods, communities, and societies. Course topics include: stress and social support; oppression and human diversity; primary prevention, social intervention and health promotion; self-help; mediating structures; community mental health; alternative settings; community development and social change.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 365. Psychological Study of Children, Families, and the Law. 3 Credit Hours.
This course will introduce students to the psychological research and practice that has a bearing on legal policy and practice. Psychological research (social, clinical, developmental, and community) will be emphasized along with legal rulings, especially from the Supreme Court. Throughout the course, the underlying question will be, 'How can psychological research and theory inform the law in matters that relate to children, families, and communities?'
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 371. Applied Social Research Methods. 3 Credit Hours.
The study of the ethics, philosophies, designs, methods and techniques of research in the behavioral and social sciences. This course provides a brief orientation to quantitative, qualitative, mixed-methods, and participatory research designs and approaches used in the collection, analysis and interpretation of social research data. This course is a designated Upper Level Communication Requirement; advanced written, digital and/or oral communication proficiencies will be emphasized in this course. Credit for ENG 105 and ENG 106 (or equivalent), is required for this course.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 411. The Psychology of Diversity. 3 Credit Hours.
This course critically examines how diversity and social justice issues impact everyday life. The focus is on how personal, group, and cultural identities (race, ethnicity, gender, sexual orientation, age, disability, religion, immigration status, and social class), and the intersections of these identities influence individuals' lives and experiences. This is primarily a survey course, designed to introduce major concepts, models, theories, and research that emanate from the literature on diversity and multicultural psychology. This is a critical backdrop to prepare students to be multiculturally responsive in this increasingly global society. Borrowing from history, cultural anthropology, social psychology, indigenous psychology, counseling psychology, and general psychology, the curriculum will engage students in theoretical, research-based, and experiential exercises in order to develop a comprehensive understanding that will lead to culturally responsive and ethical mindsets and practice.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 412. Migration, Well Being, and Human Development. 3 Credit Hours.
This course explores the social and psychological processes involved in migration and issues relevant to well-being of diverse immigrant groups including immigration policies, the psychology of immigration and acculturation, ethnic identities, issues in immigrant families, immigrant communities, educational, health, and mental health issues.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.
EPS 420. Introduction to Counseling and Psychotherapy. 3 Credit Hours.
This course is a survey of the theories and practical applications of counseling and psychotherapy. Students will acquire an understanding of a variety of theories of psychotherapy, the basic requirements and skills for effective, ethical counseling, and an appreciation for the role of values and human differences in counseling and psychotherapy. This course does not prepare students for practice in mental health professions.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 430. Intergroup Dialogues. 3 Credit Hours.
The Intergroup Dialogue course will provide an opportunity for students to engage in dialogue across difference. Students will have the opportunity to learn about and discuss social identities and intersectionality in relation to race, ethnicity, and socio-economic status, with a focus on social justice. The course will focus on understanding of perspectives and ideas that facilitate intellectual advancement as well as personal development as members of the UM community, and the larger community in which we are situated.
Components: IDG.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 440. Listening and Helping Skills.. 3 Credit Hours.
Listening and Helping Skills is an introductory course to the foundational skills used in helping relationships. Through lectures, discussions and role-plays, students will learn the rationale behind basic helping skills and their application to diverse settings and contexts.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 452. Community Program Development and Evaluation. 3 Credit Hours.
This course addresses the theoretical and practical principles of designing, planning, implementing, and evaluating programs in community-based settings. The students will learn about prevention, effective program development, program approaches, program components, program evaluation, and cultural proficiency in program development and evaluation. Students will acquire and practice skills for becoming effective workers and leaders in community-based agencies. The course will consist of readings, presentations, and applied knowledge.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 456. Community Consultation and Leadership. 3 Credit Hours.
This course will cover strength based, preventive, empowering approaches to institutional and community change, and will address related skills, stages, processes and outcomes; Conflict resolution, facilitation, strategic planning, visioning, advocacy, change management, and community mobilization will be studied and practiced in class.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 504. Mentored Research Studies. 1-3 Credit Hours.
Under the guidance of EPS faculty and graduate students, undergraduate students will have an opportunity to get involved in various components of research study, gain valuable knowledge and research experience; and expand their undergraduate academic experience.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.

EPS 533. Organization and Administration of Higher Education I. 3 Credit Hours.
Theoretical approaches from organizational analysis. Applications to problems, processes, and patterns of higher education institutions. Consideration given to legal status, governance patterns, and external relations. Administrator, faculty, trustee, and student roles are also explored.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 537. Human and Social Development Practicum. 3-6 Credit Hours.
The practicum serves an integrative function: it allows students to apply their academic training, to further develop their career goals, and to hone their skills while gaining experience in real-world settings. Practica are unpaid, supervised experiences. Students choose from a menu of settings that have been approved as HSD practicum sites and spend a minimum of 120 hours (3 credits) or 250 hours (6 credits) at their chosen setting over the course of the semester. Must be taken concurrently with EPS 481.
Components: PRA.
Grading: GRD.
Typically Offered: Spring.

EPS 559. Human and Social Development Practicum Seminar. 3 Credit Hours.
The Practicum Seminar brings theory and research to bear on the student’s practicum experiences, and provides a forum for further professional skill development and growth. Students will complete a major project integrating their experiences. This course is a designated Upper Level Communication Requirement; advanced written, digital and/or oral communication proficiencies will be emphasized in this course. Credit for ENG 105 and ENG 106 (or equivalent), is required for this course.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 587. Special Topics in Human and Social Development. 1-3 Credit Hours.
This course is designed for students wishing to focus on a specific area of study within the umbrella of Human and Social Development. Topics will be offered based on current trends in the field as well as student and faculty interest. Students will be given supervision and support in a structured seminar setting.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 589. Individual Study. 1-3 Credit Hours.
Individual work on a special project under faculty guidance.
Components: THI.
Grading: GRD.
Typically Offered: Fall, Spring, & Summer.
EPS 592. Workshop in Education. 1-3 Credit Hours.
Study in special interest areas in education.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 593. Workshop in Education. 3 Credit Hours.
Study in special interest areas in education.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 595. Research Project I. 2 Credit Hours.
This course is restricted to students in the SEHD who have been accepted into the Research Honors Program and are working with a Faculty mentor.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 596. Research Project II. 2 Credit Hours.
This course is restricted to students in the SEHD who have been accepted into the Research Honors Program and are working with a Faculty mentor.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 598. Research Project - Seminar. 1 Credit Hour.
This course is restricted to students in the SEHD who have been accepted into the Research Honors Program and are working with a Faculty mentor. Students are required to present at the undergraduate Research, Creativity, and Innovation Forum.
Components: LEC.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 599. Individual Study. 1-3 Credit Hours.
Individual work on a special project under faculty guidance.
Components: THI.
Grading: GRD.
Typically Offered: Offered by Announcement Only.

EPS 601. Field Studies in Education. 1-6 Credit Hours.
Individual study of a school or school system, identifying its strengths and weaknesses, and making positive recommendations.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 605. Regression Methods. 3 Credit Hours.
The aim of this course is to provide a solid foundation in the basic concepts of multivariate statistics, and its application to practical research questions. This course extends the content of EPS 671 (ANOVA methods) and EPS 672 (regression methods) to cover methods used when there are multiple dependent variables to be modeled simultaneously. This course focuses on the traditional multivariate methods (as opposed to the contemporary models of structure equation modeling) that see wide use in the behavioral sciences. The general topics covered in the course include, but are not limited to: introductory matrix algebra, multivariate analysis of variance (MANOVA), factorial MANOVA, discriminant function analysis, and exploratory factor analysis. In all cases, this course is intended to provide a solid conceptual background of these topics, as well as a thorough description/practice of the application of these topics to real data scenarios.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 620. Workshop in Education. 3 Credit Hours.
Study in special interest areas in education.
Components: LEC.
Grading: GRD.
Typically Offered: Fall & Spring.

EPS 622. Community Well-being and Change: Theory and Practice. 3 Credit Hours.
This course is designed to promote an understanding of the factors associated with healthy communities. It provides a comprehensive overview of the relevant skills and theories including: ecological/systems theory/models; community theories (sense of community, social capital, environmental psychology); and critical social theory, social justice, and social determinants of well-being.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 623. Development and Change in Community Organizations: Theory and Practice. 3 Credit Hours.
This course focuses on the unique role of non-profit, community-based organizations in promoting human and community development. Students will engage in an analysis of the range of functions that organizations serve and the various organizational strategies used in community settings.
Components: LEC.
Grading: GRD.
Typically Offered: Spring.

EPS 624. Essentials of Research in Social and Behavioral Sciences. 3 Credit Hours.
Study of the standards methods and techniques of research in the behavioral and social sciences. Brief orientation to quantitative and qualitative procedures used in the analysis and interpretation of research data are emphasized.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 625. Program Evaluation. 3 Credit Hours.
Terminology, models, standards, practices, and common problems associated with program evaluation in Educational and Social Service settings. Prerequisite: EPS 670 and 553 or equivalents.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.
EPS 626. Multicultural Communities in a Globalized Society. 3 Credit Hours.
This course examines the relationship between multiculturalism and globalization and how these concepts impact education and the world at large. Topics include dimensions of human diversity, identities and acculturation; race and class; gender and power; children and youth; social inclusion and social justice; health disparities; poverty and work; racism and inequality.
Components: LEC.
Grading: GRD.
Typically Offered: Fall.

EPS 627. Community Youth Development. 3 Credit Hours.
This course in community youth development (CYD) will focus on the philosophical, sociological, and educational foundations of a youth development perspective that highlights youth as powerful catalysts for change and positive forces in shaping communities. We reflect on how youth development is inextricably linked with family and community development. After reviewing and critiquing traditional adolescent development theories, students will engage with theories and practices of CYD, youth empowerment, youth civic engagement, youth organizing, social justice youth development, youth activism, and critical youth engagement.
Components: LEC.
Grading: GRD.
Typically Offered: Summer.

EPS 628. Social Change Praxis. 3 Credit Hours.
In this course, we will explore the meaning of social change and the nature of power, examine past and present social movements, and learn about the strategies and methods groups have used to build community and deploy collective power in their efforts to change minds, systems, institutions, policies, communities, and nations. Together, we will learn more about critical theories of power, collaboration, systems, and social mobilization, and look at real-life cases to see how theory can be applied in practice. The concept of praxis was chosen as the organizing framework because it requires students to develop an intellectual relationship to their activism. Praxis, simply put, means action informed by theory. In addition to reflecting on our own values and assumptions as agents of change, we will develop skills for facilitating engaging discussions, recruiting and motivating community members, developing a shared social analysis, mobilizing resources, and building coalitions for social change. We will identify common strategies used in successful campaigns and analyze the choices groups have made in their pursuit of the collective power necessary to achieve their social change goals.
