BUSINESS LAW

Department Code: BSL

Introduction

Doing business – from managing people and daily operations to formulating business policy and strategy – requires critical thinking and a keen awareness of the legal and regulatory environment. Effective decision-making also requires an appreciation of the social, ethical, economic, and political bases of law as they relate to business. Business law courses provide fundamental insight into legal institutions, the role of regulation, and the nature of legal discourse, as well as an array of substantive principles of law, including contracts, corporate law, intellectual property, employment law, and other areas of government regulation of business. These courses reinforce critical thinking skills in the context of ethical and principled business decision making.

Educational Objectives

The primary goals of the Business Law Department are: (1) to contribute to business-related legal knowledge through scholarly research, (2) to educate undergraduate and graduate business students as well as our greater University, professional, and scholarly communities about business law and ethics issues, and (3) to promote students’ success by sharpening their communication, negotiation, and presentation skills.

These goals both inform and drive the Department’s educational objectives, which focus on:

• instilling in students a strong sense of the legal and ethical issues permeating business;
• aiding students’ comprehension of the legal and regulatory environment as well as the ethical considerations and substantive laws that shape business practices and policies; and
• developing students’ analytical and problem-solving ability, as well as their verbal and written communication skills.
